PARTIAL LIST OF CONTRIBUTORS TO VOLUME XVI

ALDEN, RAYMOND M., Ph.D., Litt.D.
Professor of English, Stanford University

LADY OF THE LAKE, THE

ASHER, JOSEPH MAYOR, M.A.
Late Professor of Homilectics, Jewish Theological Seminary of America

JEWS AND JUDAISM — FOOD AND HEALTH LAWS

BAILEY, WILLIAM L., M.A.
Associate Professor of Political Science, Grinnell College

JOURNALISM, AGRICULTURAL

BENNETT, CHARLES E., Litt.D.
Professor of Latin, Cornell University

JUVENAL'S SATIRES

BERRY, GEORGE RICKER, Ph.D., D.D.
Professor of Old Testament Interpretation and Semitic Languages, Colgate University

JOEL, BOOK OF
JONAH, BOOK OF
JOSHUA, BOOK OF

BLAKER, ERNEST, Ph.D.
Assistant Professor of Physics, Cornell University

LABORATORY

BOGART, ERNEST LUDLOW, Ph.D.
Professor of Economics, University of Illinois

LABOR

BOTHNE, GISLE C., A.B.
Professor of Scandinavian Languages and Literature, University of Minnesota

KING RENE'S DAUGHTER

BRADY, CYRUS TOWNSEND, LL.D.
Author of "Life of Paul Jones," etc.

JONES, JOHN PAUL

BREWSTER, WILLIAM T., A.M.
Professor of English, Columbia University

JOHN INGLESANT
LAMB, CHARLES
LANDOR, WALTER SAVAGE

BROOKE, TUCKER, M.A., Litt.B.
Professor of English, Yale University

KING HENRY THE FIFTH
KING HENRY THE SIXTH
KING HENRY THE EIGHTH
KING JOHN
KING RICHARD THE SECOND
KING RICHARD THE THIRD

BUELL, MARCUS D., S.T.B., D.D.
Professor of New Testament Greek and Exegesis, Boston University School of Theology

JUDE, EPISTLE OF

CAIRNS, WILLIAM B., Ph.D.
Associate Professor of American Literature, University of Wisconsin

JOHN WOOLMAN'S JOURNAL

CANFIELD, ARTHUR G., Ph.D.
Professor of Romance Languages, University of Michigan

LA CONFESSION D'UN ENFANT DU SIÈCLE

CHAMBERLAIN, CHARLES J., Ph.D.
Professor of Morphology and Cytology, University of Chicago

LANTERN SLIDES
LATEX

CHANDLER, FRANK W., Ph.D.
Professor of English and Comparative Literature, University of Cincinnati

LABYRINTH, THE
L'AIGLON

CHANDLER, J. A. C., Ph.D., LL.D.
Superintendent of Schools, Richmond, Va.

JEFFERSON, THOMAS

COCHRANE, CHARLES H.
Formerly of the Editorial Staff of "Newspaperdom"

JOURNALISM, CLASS PUBLICATIONS

COHEN, SOLOMON SOLIS, A.M., M.D.
Author, editor and writer on Zionism, Philadelphia, Pa.

JEWS AND JUDAISM — ZIONISM

COUMBE, CLEMENT W.
Technical Art Expert

LACQUERS AND LACQUERWORK, JAPANESE
LAMB IN ART
LAPIDARY WORK

CREIGHTON, JAMES E., Ph.D. LL.D.
Professor of Logic and Metaphysics, Cornell University

KANT, IMMANUEL

CROSS, WILBUR L., Ph.D.
Professor of English, Yale University

KIPLING, RUDYARD
LAST DAYS OF POMPEII, THE

DEIMEL, RICHARD F., B.S., M.A.
Assistant Professor of Mechanics, Stevens Institute of Technology

KINEMATICS OF MACHINERY

DEMBITZ, LEWIS N.
Author of "Jewish Services in Synagogue and Home"

JEWS AND JUDAISM — THE SPIRIT OF RABBINIC LEGISLATION

Contributors to Volume XVI—Continued

DEUTSCH, GOTTHARD, Ph.D.
Professor of History, Hebrew Union College, Cincinnati, Ohio

JEWS AND JUDAISM — JEWISH LITERATURE

DICKINSON, THOMAS H., Ph.D.
Associate Professor of English, University of Wisconsin

LADY WINDERMERE'S FAN
JEW OF MALTA, THE
JUSTICE

DOLE, NATHAN HASKELL, A.B.
Translator of the works of Tolstoi, etc.

KOROLENKO, VLADIMIR GALAKTIONOVITCH
LA VITA NUOVA

DRACHMAN, BERNARD, Ph.D.
Professor Rabbinical College of America

JEWS AND JUDAISM — HEBREW LANGUAGE, THE

DUNN, WALDO H., M.A., Litt.D.
Professor of English Language and Literature, College of Wooster, Wooster, Ohio

JOHNSON, BOSWELL'S LIFE OF

EISERHARDT, EWALD, Ph.D.
Professor of German, University of Rochester

JOURNALISTS, THE

ESTES, DAVID FOSTER, D.D.
Professor of New Testament Interpretation, Hamilton Theological Seminary, Colgate University

JESUS CHRIST
JOHN THE BAPTIST

FINEGAN, THOMAS E., M.A., LL.D.
Deputy Commissioner of Education and Assistant Commissioner in charge of Elementary Education, State of New York

LANCASTERIAN SCHOOLS

FORD, JEREMIAH D. M., Ph.D.
Smith Professor French and Spanish Languages, Harvard University

JOSÉ
LA BARRACA
LA VICTORIA DE JUNÍN

FOWLER, HENRY THATCHER, Ph.D.
Professor of Biblical Literature and History, Brown University

JOB, BOOK OF
JUDGES, BOOKS OF
KINGS, BOOKS OF

GAUSS, CHRISTIAN, Litt.D.
Professor of Modern Languages, Princeton University

LA MARE AU DIABLE
LA NOUVELLE HELOISE

GEDDES, JAMES, Jr., Ph.D.
Professor of Romance Languages, Boston University

LA CITTÁ MORTA
LA GIOCONDA

GEHRING, ALBERT, A.M.
Author of "The Basis of Musical Pleasure," etc.

KEYBOARD

GOTTHEIL, RICHARD, Ph.D.
Professor of Semitic Languages, Columbia University

JEWS AND JUDAISM — THE KARAITES

GRIFFIS, WILLIAM ELLIOT, L.H.D.
Author of "Corea, the Hermit Nation," etc.

KOREA
LAFAYETTE AT BARRON HILL

GUITERMAN, ARTHUR, B.A.
Author and Critic

JUNGLE BOOKS, THE
KIDNAPPED
KIM

HALE, EDWARD E., Ph.D.
Professor of English Literature, Union College

L'ALLEGRO

HALLER, WILLIAM, Ph.D.
Instructor in English, Columbia University

LALLA ROOKH

HALPIN, PATRICK A., Ph.D.
Professor of Ethics, New Rochelle College

JUSTIFICATION

HANFORD, JAMES H., Ph.D.
Associate Professor of English, University of North Carolina

KENILWORTH
KUBLA KHAN
LAMIA
LAODAMIA

HARTMANN, JACOB WITTMER, Ph.D.
Assistant Professor Department of Language and Literature, College of the City of New York

JUNG-DEUTSCHLAND
KELLER, GOTTFRIED
KNOOP, GERHARD JULIUS OUCKAMA
KONRAD VON WÜRZBURG
KUMMER, FRIEDRICH

HERRICK, MYRON T., LL.D.
President Society of Savings, Cleveland

INGALLS, RALPH

LAND CREDIT AND LAND CREDIT INSTITUTIONS

HILL, PATTY SMITH
Associate Professor in Education, and Director of Lower Primary Education, Teachers' College, Columbia University, New York City

KINDERGARTEN

HIRSCH, EMIL G., A.B., A.M.
Professor of Rabbinical Literature and Philosophy, The University of Chicago

JEWS AND JUDAISM — THE CABALA

HODGE, FREDERICK W.
Smithsonian Institution, Washington, D. C.
KERESAN

HOWARD, WILLIAM G., A.M.
Assistant Professor of German, Harvard University
LAOKOON

HUBBARD, HENRY V., A.M., S.B.
Assistant Professor of Landscape Architecture, Harvard University
LANDSCAPE ARCHITECTURE

INGERSOLL, ERNEST
Zoologist and author
LAKE DWELLINGS
LAND-BRIDGES ACROSS THE OCEANS

ISAACS, ABRAM S., Ph.D.
Professor of Semitic Languages, New York University
JEWISH NATIONAL ORGANIZATIONS IN THE UNITED STATES
JEWS AND JUDAISM — THE TALMUD
JEWS AND JUDAISM — ANTI-SEMITISM
JEWS AND JUDAISM — SYNAGOGUE
JEWS AND JUDAISM — THE PRESENT STATUS OF THE JEWS

JASTROW, MORRIS, JR., Ph.D.
Professor of Semitic Languages and Librarian, University of Pennsylvania
JEWS AND JUDAISM — JEWISH PHILOSOPHICAL WRITERS

KARPELES, GUSTAV, Ph.D.
Author of "Jewish Literature and Other Essays."
JEWS AND JUDAISM — THE JEW IN ART, SCIENCE AND LITERATURE

THE ENCYCLOPEDIA AMERICANA

J

JEFFERSON, Charles Edward, American Congregational clergyman: b. Cambridge, Ohio, 29 Aug. 1860. He was graduated from Ohio Wesleyan University (Delaware, Ohio) in 1882, from the School of Theology of Boston University in 1887, was ordained to the Congregational ministry in 1887. He was pastor of the Central Congregational Church at Chelsea, Mass., until 1898, when he became pastor of the Broadway Tabernacle, New York. In 1914 he became chairman of the executive committee of the Church of Peace Union, endowed by Andrew Carnegie. Among his writings are 'Quiet Talks with Earnest People in My Study'; and 'The Broadway Tabernacle of the Past and Future' (1901); 'Doctrine and Deed' (1902); 'Things Fundamental' (1903); 'The Minister as Prophet' (1905); 'Faith and Life' (1905); 'The New Crusade' (1907); 'The Character of Jesus' (1908); 'My Father's Business' (1909); 'The Christmas Builders' (1909); 'The Building of the Church' (1910, 1913); 'Why We May Believe in Life after Death' (1911); 'The Minister as Shepherd' (1912); 'The Cause of the War' (1914); 'Christianity and International Peace' (1915); 'The Land of Enough' (1917).

JEFFERSON, Joseph, American actor: b. Philadelphia, 20 Feb. 1829; d. Palm Beach, Fla., 23 April 1905. He was privately educated and from infancy was upon the stage, appearing as Cora's child in 'Pizarro' when three years old, and among his first public appearances being that as a miniature of T. D. Rice in one of the latter's «Jim Crow» entertainments at Washington, D. C. In 1843 he became a member of a band of strolling players that gave primitive entertainments through Mississippi and Texas, and followed the United States army into Mexico. On his return to the United States he appeared at the Arch Street Theatre, Philadelphia, directed the performances at Peale's Museum in that city, became known as an excellent stock actor, and in 1851 played Marroll in 'A New Way to Pay Old Debts' to the Sir Charles Overreach of Junius Brutus Booth. His prominence began with his creation of Asa Trenchard in 'Our American Cousin,' which eliminated from the stage the traditional caricature of Yankee character. He visited Europe in 1856 and soon after his return joined Laura Keene's Company. He then appeared in the parts he afterward made famous: Newman Noggs in 'Nicholas Nickleby'; Caleb Plummer in 'The Cricket on the Hearth'; Dr. Pangloss in 'The Heir at Law'; Dr. Ollapod in 'The Poor Gentleman'; Mr. Golightly in 'Lend Me Five Shillings'; Salem Scudder in 'The Octoroon'; Bob Acres in 'The Rivals'; and, above all, Rip Van Winkle in the play of that name. Dissatisfied with his own dramatization of Irving's sketch, in which he had appeared at Washington in 1860, Jefferson had the play rewritten by Dion Boucicault, and in Boucicault's version, with slight changes, afterward acted. The drama ran for 170 nights at the Adelphi, London, in 1865, and in the United States was so successful that for years Jefferson appeared there in nothing else. Jefferson's Rip established itself as one of the classic creations of the stage, and outside of Shakespeare probably no character ever attained so wide and permanent a recognition with the American public. In the later years of his life he played but a few weeks annually in a repertoire of favorite parts. He also made a considerable reputation as an artist by his impressionist landscapes in oils. His acting method was distinguished by ease, verisimilitude and perfection of finish. In the plays used by him he, for artistic purposes, introduced several admirable changes and additions. He was a member of the American Academy of Arts and Letters. He published an interesting 'Autobiography' (New York 1890), and a 'Reply to Ignatius Donnelly on the Shakespeare-Bacon Argument.' Consult the 'Autobiography' and Carroll, 'Twelve Americans' (New York 1883); Dole, N. H., 'Joseph Jefferson at Home' (Boston 1898); Jefferson, E. P., 'Intimate Recollections of Joseph Jefferson' (New York 1909); Matthews and Hutton, 'Actors and Actresses of Great Britain and the United States' (ib. 1886); Moses, M. J., 'Famous Actor-Families in America' (ib. 1906); Wilson, Francis, 'Joseph Jefferson' (ib. 1906); id., 'Reminiscences of a Fellow Player' (ib. 1906); Winter, William, 'The Jeffersons' (Boston 1881); id., 'Other Days' (New York 1908).

JEFFERSON, Thomas, American statesman, third President of the United States; b. Shadwell, Albemarle County, Va., 13 April 1743; d. Monticello, Albemarle County, Va., 4 July 1826; student at William and Mary College, Williamsburg, Va., 1760–62; student of law 1762–67; member of house of burgesses 1769–74; member of Virginia Conventions 1774 and 1775; of the Continental Congress 1775–76; of Virginia legislature 1776–79; governor of

Virginia 1779–81; member of Congress 1783–84; Minister to France 1784–89; Secretary of State 1790–93; Vice-President 1797–1801); President 1801–09; in retirement at Monticello 1809–26.

Thomas Jefferson was the son of Peter Jefferson, a planter of Albemarle County, Va. His mother was Jane Randolph, daughter of Isham Randolph, who was a descendant of William Randolph of Turkey Island, the progenitor of that family so well known in Virginia history. Jefferson's birthplace was Shadwell, about four miles from the city of Charlottesville. At this homestead he resided until it was destroyed by fire in 1770; thereupon Jefferson selected a low mountain about two miles from Charlottesville, where he built that now famous mansion, "Monticello." Albemarle County, Va., has the proud distinction of being the section in which Jefferson was born, reared, lived, died and lies buried. Jefferson's early education, as was usually the case with Virginia planters, was entrusted first to a private tutor, from whom he learned Latin, Greek, French and mathematics. At 14 his father died, and after two years in a school conducted by the Rev. James Maury, he entered in 1760 William and Mary College, at that time the best institution of learning in America. The student Jefferson is described as tall and rawboned, with reddish hair and grayish hazel eyes. He was not then regarded as handsome, though in after years he was considered as probably the most attractive in appearance of the great Virginia statesmen. As a youth he was noted for his intelligence, and while at college he was in constant association with such men of culture as George Wythe (q.v.), the eminent lawyer; Prof. William Small, the profound scholar, and Gov. Francis Fauquier (q.v.), the gay and accomplished gentleman. With these gentlemen, many years his senior, he was accustomed to discuss the deepest questions of philosophy and government. In Williamsburg, Jefferson was one of the leaders in all social functions, and always attended the balls given in the Apollo Room of the Raleigh Tavern. Probably his first year at college was spent among too many festivities, but during his second year he is said to have been a most diligent student, often devoting 15 hours a day to his books. After two years of college work he commenced the study of law under George Wythe, but did not apply for admission to practice before the General Court of Virginia till 1767. Jefferson was now 24 years of age; he had a large farm of 1,900 acres (soon increased to 5,000 acres) to which he gave his personal supervision. Though he devoted much time to this farm, he succeeded so well as a lawyer that his profession soon paid him $3,000 annually.

In 1769 he was returned by Albemarle County a member of the House of Burgesses, an honor which his father had had before him. This was Jefferson's beginning as a statesman. He had stood in 1765 in the hallway of the House of Burgesses when Patrick Henry (q.v.) offered his famous resolution against the Stamp Act, and from Patrick Henry he imbibed the spirit of revolution. Just as soon as he became a member of the Burgesses, he joined the party of resistance to England. He was by nature a bold and fearless thinker, and when a mere boy he had had engraved on a seal as his motto, "Resistance to tyrants is obedience to God," a principle to which he held throughout his long and eventful life. Jefferson was present when the House of Burgesses passed the resolutions of 1769. He was one of those who signed the agreement not to import goods from England. He was also a member of the House of Burgesses when, in 1773, it established a Committee of Correspondence between Virginia and the other colonies. Some think that the resolutions for such a committee were drawn by Jefferson, though they were offered in the house by his kinsman, Dabney Carr (q.v.). Of this committee Jefferson was a member. He served again in the House of Burgesses in 1774, and was one of those who voted for the resolution appointing a day of fasting and prayer because of the oppressive measures which England had passed against the city of Boston. When the governor dissolved the assembly, Jefferson met with those discontented members who called for a general congress of the colonies and asked the freeholders of Virginia for a convention to consider the state of the colony. To this convention Jefferson was returned by the people of Albemarle. The convention of 1774 was the first extralegal assembly to meet in Virginia. Jefferson was unable to be present, having been taken ill on his way to Williamsburg. However, his influence was felt through a document called "The Summary View of the Rights of British America," which was intended to be a series of instructions to the Virginia delegates to the First Continental Congress. The instrument marked him as a revolutionist, and as an advocate of independence from England, for in it he distinctly claimed that the colonies had a right to govern themselves without interference from the English Parliament. His views were too radical for the Virginia convention to give them its official stamp.

Jefferson was also elected a member of the convention of 1775, which met at Saint John's Church, Richmond, and when Patrick Henry by his eloquence carried the colony into open rebellion against the mother country, Jefferson was appointed a member of the committee to devise a plan for organizing the militia of the colony. Shortly after this he became a member of the Second Continental Congress. When he entered that body he was 32 years of age, being one of the youngest three members. Here he was placed on such important committees as those which drafted a paper to explain the rebellious attitude of Massachusetts at Lexington and Concord, and to reply to Lord North's "Conciliatory Policy." On each committee he showed such a strong republican tendency that his suggestions were not accepted. The members of the Continental Congress of 1775 were not far-sighted enough to see that independence was the only course. Finally, in the spring of 1776, there came to the Virginia members of Congress instructions from the Virginia convention of 1776 that the united colonies should be declared free and independent States; and accordingly Richard Henry Lee, called the American Cicero, moved that a Declaration of Independence should be adopted. In accordance with the motion, a committee was appointed and the members were elected by ballot. Jefferson's facility for writing was so

THOMAS JEFFERSON

Third President of the United States

well known to the Congress that he received the highest number of votes and was named as chairman of the committee over such men as John Adams, Benjamin Franklin, Roger Sherman and Robert R. Livingston. To him as chairman fell the task of drafting that immortal document which stands in the history of the world as the most revolutionary political paper ever written. On 4 July 1776, the instrument, practically as offered by Jefferson, was unanimously adopted and to it were placed the signatures of all the members of Congress then present, except one. The principles set forth in that document mean a government by and for the people, and show that Jefferson was far ahead of his day; for it is only at the dawn of the 20th century that we are beginning to comprehend the great and universal truths that Jefferson made known to the world. (See DECLARATION OF INDEPENDENCE). Jefferson retired from Congress in 1776, and, on returning to his native State, entered the Virginia legislature with the hope of revising and modifying her laws so that they might accord with republican government. For three years he served in the House of Delegates. During this time he succeeded in breaking down the laws of primogeniture and entail, in practically disestablishing the English Church and in passing one of the best laws that the world has ever seen for public education providing an ideal system from the primary school to the university. Through his influence the legislature appointed a committee to revise thoroughly the laws of Virginia. The committee was composed of Edmund Pendleton, George Wythe and Jefferson. After two years the revision, chiefly done by Jefferson, was submitted to the General Assembly, but was not adopted *in toto*. Finally, however, in 1785, while Jefferson was in France, his faithful friend and political follower, James Madison, secured the passage of nearly all of Jefferson's work. It was at this time that the legislature approved the famous Statute for Religious Freedom, by which the complete separation of Church and State was accomplished, except the taking away of the *glebe* lands, a thing which was done in 1802. Jefferson wished even more radical changes in Virginia, such as the equalizing of representation on population instead of having two representatives from each county. He also desired that the suffrage should not be restricted to landowners, but that it should be extended to all men who might be subject to military duty. He likewise advocated more local self-government in the counties and towns of the State. He even went so far as to advocate the emancipation and the deportation of the slaves from Virginia. These measures were too radical for the Virginia Assembly, and were rejected. It is interesting to note, however, that all of them have since been accomplished save the deportation of the negroes.

Jefferson was governor of Virginia from June 1779 to June 1781. These were trying times; Virginia was invaded by British troops under Cornwallis, and Jefferson lacked money and resources with which to defend properly the State. His administration has often been criticized, some claiming that he was a mere doctrinaire and not a practical man; but close scrutiny shows that he did all that then lay in his power.

In 1783 Jefferson entered the Congress of the United States. To this body he proposed in 1784 a plan for the government of the Northwest Territory which Virginia so generously gave to the Union. One clause of this plan provided for the prohibition of slavery in that territory after 1800, and for this reason the plan was not adopted. In 1787, however, Congress enacted a bill for the government of the Northwest much like the original draft of Jefferson. From him Congress had the plan of our present decimal monetary system. In 1784 Jefferson was sent to France to join Benjamin Franklin and John Adams in negotiating commercial matters with foreign countries, and in 1785 he succeeded Franklin as our Minister Plenipotentiary to the French court. Through his efforts many unjust impositions on American commerce were removed by the French government.

In October 1789 he returned to America and the following year became Secretary of State in Washington's Cabinet, in which position he opposed Hamilton (q.v.), who favored the exercise of extensive powers by Congress. Jefferson believed in a real federal relation between the States, and in a restricting of the congressional powers to purely constitutional authorizations. The final line of cleavage came when Congress passed a bill to establish a national bank. Hamilton submitted to Washington a paper asserting that such a step was legal, while Jefferson made a vigorous written protest showing that the bill was unconstitutional. Washington approved the measure, thus accepting Hamilton's views as correct. The Bank Bill, along with similar congressional acts, caused the establishment of two distinct parties — the Federalist or Loose Construction party, headed by Hamilton, and the Anti-Federalist or Strict Construction party, with Jefferson as its leader. Jefferson's followers were usually called the Democratic-Republicans.

In December 1793 Jefferson resigned from the cabinet and returned to Monticello, where he remained for four years, studying farming. His estate at this time contained 10,647 acres of land, worked by 154 slaves, and stocked with 34 horses, 5 mules and 249 cattle. Among the negroes he had a sort of industrial (manual-training) school, and taught them to be cabinet-makers, bricklayers, masons and smiths.

From his retirement at Monticello, Jefferson was called to become Vice-President in 1797, a position which he held till 1801. During these four years he bitterly opposed the so-called monarchical tendencies of the Federal party as seen in the Alien and Sedition Acts (q.v.), and he boldly asserted the compact theory of State sovereignty in the Kentucky resolutions of 1799. The Kentucky resolutions and Virginia resolutions of 1798–99 (the latter framed by Madison after a copy of the Kentucky resolutions sent him by Jefferson), made the platform, so to speak, of the Democratic-Republican party which elected Jefferson as President in 1801.

From 4 March 1801 to 4 March 1809 Jefferson was President. He was the first President to be inaugurated in Washington City. He believed in rotation in office, and in pursuance of this idea removed a number of Federalists from their positions. His great act, however, was the purchase of the Louisiana Territory from France for the sum of $15,000,000. This vast territory was acquired for two reasons:

(1) In order that the United States might have control of the Mississippi River and the port of New Orleans; and (2) that the United States might not be hampered by European countries in the development of a republican form of government. As Secretary of State in Washington's Cabinet, Jefferson had practically asserted what was afterward known as the Monroe Doctrine, when he claimed that the United States should see that no European countries, other than those already holding possessions, secure a foothold in America. In 1801 Jefferson viewed with alarm the transfer of the Louisiana Territory from Spain to France, for he feared that, with France added to Spain, England and Russia, in control of colonies in America, republican government would have a hard struggle. Jefferson was accused of inconsistency for having sanctioned the Louisiana Purchase (q.v.), for if he had applied the strict construction principle of the Constitution here as in such acts of Congress as the establishment of the national bank, this territory could not have been purchased, there being no provision in the Constitution allowing territorial expansion. But Jefferson's political sagacity kept him from refusing this great opportunity, and his wish of expansion caused him to advocate earnestly the purchase of Florida from Spain. It was 13 years later before his desire was accomplished. The second administration of Jefferson was not so successful as the first. It opened with a war against the Tripolitan pirates who were plundering American commerce. The outcome of this war was to increase our influence among the nations of the world. The last years of the second term were marked with difficult complications arising out of the Napoleonic wars. Napoleon tried to prevent the United States from trading with England, and England retaliated by attempting to cut off all commercial relations between the United States and France. Many American vessels were seized by both England and France. Adding to this indignity, England claimed the right to search American vessels for English seamen, and an English war vessel actually fired on an American man-of-war, killing three of the crew and wounding 18. Jefferson tried to meet the restrictions on American commerce by the Non-Importation Bill and the Embargo Act. To enforce the measures all of the New England ships would have been shut up in American harbors. The New England merchants preferred to run the risk of losing their ships to keeping them without traffic; therefore they began to abuse the President and his policy. The result was that Congress felt forced to repeal the Embargo Act. Jefferson always claimed that had the embargo been enforced the United States would have gained its rights without the second war with England in 1812. See EMBARGO IN THE UNITED STATES.

On 4 March 1809, Jefferson retired from the White House, and spent the remaining 17 years of his life at Monticello. In these latter days he was known as the "Sage of Monticello," and to his home came people of prominence from all parts of the world to consult with him on great questions of politics and economics. Often his housekeeper had to provide beds for 50 guests. The demands which were made on his hospitality were so great that he died a bankrupt. During this period of his life he did all that he could to encourage better methods in agriculture, to reform the government of Virginia and to develop in it a better system of education. The crowning event of his life was the establishment of the University of Virginia (q.v.) in 1819. He died on 4 July 1826, just 50 years from the day that has made him famous in all history, and by a singular coincidence his old rival and political antagonist, John Adams, passed away on the same day. Jefferson asked that three things be inscribed on his tomb: "Author of the Declaration of Independence; of the Statute for Religious Liberty in Virginia, and Founder of the University of Virginia,"—three acts which have made him famous.

Jefferson stands in history for (1) Republican government and the sovereignty of the people; (2) Opposition to privileged orders of nobility and the entail system; (3) Universal education and local circulating libraries; (4) Separation of Church and State; (5) Freedom of thought and speech; (6) Local self-government; (7) Economy in government and small public debt; (8) A policy of peace; (9) Political equality and universal suffrage: (10) Strict construction of the Constitution and the sovereignty of the States; (11) Well-trained militia and small standing army; (12) Metallic money, either gold or silver, as a standard, and no paper legal tender; (13) Opposition to bounties and monopolies; (14) Emancipation and deportation of slaves; (15) Expansion of the United States to include Louisiana, Florida, Cuba and Canada; (16) Maintenance of Indian reservations; (17) Judiciary beyond the control of the legislative or executive branches of government; (18) Small navy; (19) Opposition to nepotism; (20) Rotation in office; (21) Opposition to all secession movements, North or South. This review will show that Jefferson probably gave to the world more broad principles of government than any other man. Whenever republican forms of government exist there the name of Jefferson will always be uttered with reverence and respect. Important monuments to Jefferson are as follows: by David d'Angers in the Capitol, Washington, a copy in the New York city-hall, and one at Angers, France; by Galt, at the University of Virginia; by Ezekiel, in Louisville, Ky.; by Hiram Powers, in Hall of Representatives, Washington; by Partridge, at Columbia University; and by Valentine, in Richmond, Va.

J. A. C. CHANDLER,
Superintendent of Schools, Richmond, Va.

JEFFERSON, Tex., city, county-seat of Marion County, on the Cypress Bayou, and on the Missouri, Kansas and Texas, and the Texas and Pacific, and the Jefferson and Northwestern railroads, about 20 miles from the eastern boundary of the State and 142 miles east of Dallas. It was settled in 1850 and incorporated in 1866. It is situated in an agricultural and stock-raising region with rich iron ore deposits in the vicinity. Some of the principal industrial establishments are furnaces, machine-shops, foundries, sawmills, cottonseed-oil mills and large storage houses. The shipments are chiefly articles manufactured in the city, vegetables, grain, cotton, livestock and fruit. The principal buildings are a government building, the city and county buildings. An iron bridge across the Bayou and good roads assist in making Jefferson the trade centre for a large part of Marion and Cass counties. The government is vested in a mayor and council. The waterworks are the property of the municipality. Pop. 2,515.

JEFFERSON, Wis., city and county-seat of Jefferson County, at the junction of the Rock and Crawfish rivers, 50 miles west of Milwaukee and on the Chicago and Northwestern Railroad. It was settled in 1837 and is governed by a mayor and a council elected every two years under a charter of 1893. It has pork-packing plants, flour-mills, tanneries, brick and tile works, carriage and wagon factories and other industries. The city owns and operates the waterworks and the electric-lighting plant. Pop. 2,582.

JEFFERSON, State of, the name proposed for what is now the State of Colorado. In 1859 delegates met in an endeavor to establish a provisional government. A constitution was adopted for the "State of Jefferson" with an area somewhat larger than that of Colorado, extending from 37° to 43° north latitude and from 102° to 110° west longitude. The opposition to a State led to a second convention which, under the fiction of erecting a territory, established a new state and called it the "Territory of Jefferson." The constitution adopted by the first convention was ratified but never went into effect. The constitution adopted by the second convention was almost unanimously ratified 24 Oct. 1859, on which day a full complement of State officers was elected. The new territory was constantly embroiled with its neighbor territories, and when it was recognized by Congress in 1861, it was given the name of Colorado.

JEFFERSON BARRACKS, Mo., United States military post and reservation, 10 miles below Saint Louis on the Mississippi River. The site was chosen by Generals Gaines and Atkinson in 1826 and the camp was formally designated "Jefferson Barracks" 23 October of that year. A "School for the Instruction of Infantry" was established there under the guidance of the commander, Col. Henry Leavenworth, but was in existence only a short time. The reservation comprises 1,261 acres and includes a national cemetery. It has a post-office, telegraph and railroad stations and houses the Saint Louis powder depot. It has latterly been known as the Jefferson Barracks Recruit Depot, one of five stations for the initial reception of recruits prior to their assignment to various regiments. The post became a brigadier-general's command in 1898.

JEFFERSON-BURR IMBROGLIO, ĭm-brō'lyō, a disputed Presidential election which resulted from a defective clause in the Constitution and caused its amendment in 1800. By its original provisions, the person who received the highest number of electoral votes should be President, the next highest Vice-President. Each set of electors had informally agreed that to save the pride of the leading candidates (Jefferson and Burr, Adams and Pinckney) each pair should have equal votes, and with one exception never reflected that this meant a tie; one Rhode Island Federalist elector cast his second vote for John Jay instead of Pinckney, and there is an unproven charge that Burr intrigued for an extra vote over Jefferson. They, however, received 73 each, and the Federalist House had to choose between the two Democratic candidates. Rules were adopted for the balloting, among the chief being that the Senate should be admitted, that the balloting should be in secret session and that the House should not adjourn till a choice was made. The Federalists in caucus decided to vote for Burr; perhaps partly to spite the Democrats — Jefferson being their great national leader and the great Federalist terror, and the man the Democrats had intended to vote for as President — and partly because Burr as a New York man would consult Northern commercial interests, which the Virginian Jefferson might antagonize. They were right in this; Burr would not have laid the Embargo. Their solid vote would have elected Burr by one (nine out of 16 States); but they could not hold their members, three of whom bolted and voted for Jefferson to satisfy public feeling in their districts. Thus Jefferson had eight States, Burr six, and Vermont and Maryland were divided. But the Burr electors in the last two secretly agreed with Bayard of

Delaware, who had also voted for Burr, that if there were likely to be bad blood and danger from prolonged balloting, they would stop it by voting for Jefferson. The casting vote thus lay with Bayard, who justly commanded confidence; but as the agreement was not known the situation seemed much more perilous than it was. The balloting lasted a week without change. Some of the Federalists plotted to have it last till John Adams' term expired, and then let the others fight it out, or leave it by special act to Chief Justice John Marshall (Federalist), as a sort of regent trustee. The Democrats countered by resolving either to have Jefferson and Burr jointly (one of them certainly being President) call a special session, or to seize the capital by a militia force, call a convention, and revise the Constitution. Finally, after 34 ballots, the confederate electors decided that if Jefferson would give a guarantee for the civil service, he should have the election after one more ballot; he gave the guarantee, and was elected on the 36th ballot by 10 to 6 (States). Burr became Vice-President; that the attempt to put him at the head was mainly due to real fear for commerce is made probable by the fact that every New England State except the one (Vermont) which had no commerce voted for him to the last. This affair resulted in the passage of the Twelfth Amendment (see CONSTITUTION OF THE UNITED STATES), which obliged the electors to specify their choice for the offices on distinct ballots, and enlarge the range of choice to three candidates in case of tie.

JEFFERSON CITY, Mo., city, capital of the State, and county-seat of Cole County, on the Missouri River, and the Chicago and Alton, and the Missouri Pacific railroads, 125 miles west of Saint Louis. It is the farming and manufacturing trade centre for Cole and adjacent counties; has manufactories of flour, shoes, clothing, beer, brooms, bricks, farming implements, carriages and wagons, and iron foundries. It is the seat of Lincoln Institute, State Capitol building, State penitentiary, State armory, governor's mansion, Supreme Court building, United States courthouse and the Carnegie Public Library. It has gas and electric light plants, street car system, one national bank, four State banks and a trust company, daily, weekly and monthly periodicals, and an assessed property valuation exceeding $2,500,000. Jefferson City was settled in 1826 and was first incorporated in 1839. A mayor and council elected every two years administer the affairs of the city. Pop. 15,000.

JEFFERSON RIVER, Montana, a stream about 200 miles long, formed by the union of the Beaver Head and Wisdom (or Big Hole) rivers in Madison County. It unites with the Madison and Gallatin to form the Missouri.

JEFFERSONTON, Engagement at. Early in October 1863 the Army of the Potomac, under command of General Meade, lay around Culpeper Court House, with the advance of two corps on the Rapidan. General Lee, who was south of the Rapidan, determined to flank Meade's position, seized the Orange and Alexandria Railroad north of the Rappahannock, and intercept his retreat upon Washington. Informed of the movement, Meade withdrew his army to the north side of the Rappahannock, 11 October, his rear-guard of cavalry having a sharp engagement with the Confederate cavalry at Brandy Station. Believing that the Confederate army was moving upon Culpeper, Meade turned about and on the 12th threw three infantry corps and a cavalry division south of the Rappahannock, with instructions to push forward and find and strike Lee, if at Culpeper. When they reached Brandy Station the Confederate army was nowhere in that neighborhood. At this time General Gregg's division of Union cavalry was guarding the upper fords of the Rappahannock and Hazel rivers; on the morning of the 12th Colonel Gregg's brigade crossed the Rappahannock near Sulphur Springs; his pickets at Jeffersonton being driven in, he marched for that place, found it in possession of the enemy, drove them from the town and occupied it. That morning Fitzhugh Lee's cavalry division, leading the Confederate advance from near Madison Court House, crossed Hazel River at Stark's Ford and pressed on toward the Rappahannock. The 11th Virginia Cavalry drove Gregg's skirmishers into Jeffersonton and attacked the two regiments in the town, but was driven out after losing several men. The 7th and 12th Virginia were now sent to the left and right, encircling the town, a combined attack was made, and Gregg was utterly routed and driven across the Rappahannock, with a loss of about 400 men, most of them captured. The Confederate loss was about 40 killed and wounded. When Meade heard of the engagement, and that Lee was crossing the Rappahannock at Warrenton Springs, he hastily recrossed the river, withdrew to Auburn and Catlett's Station and, on the 14th, to Centreville, Lee following closely and attacking his rear at Auburn and Bristoe Station during the day. Consult 'War of Rebellion — Official Records' (Vol. XXIX, Washington 1889–1901); Walker, F. A., 'History of the Second Army Corps' (New York 1886).

JEFFERSONVILLE, Ind., city and county-seat of Clark County, on the Ohio River, the Baltimore and Ohio Southwestern, the Pittsburgh, Cincinnati, Chicago and Saint Louis, and the Cleveland, Cincinnati, Chicago and Saint Louis railroads, 125 miles southwest of Cincinnati, 50 miles northeast of Evansville and 108 miles south of Indianapolis. It is opposite Louisville, Ky., with which it is connected by bridges, ferry and electric street car service, the interurban lines also connecting with Charlestown, New Albany and Indianapolis. It has the deepest harbor between Pittsburgh and Cairo, is "Indiana's Gateway City" and is never affected by any flood rise of the Ohio River. At the head of the Ohio Falls an excellent water supply and superior water power are available. The city has in all 22 industries, 100 retail stores and 100 in trades, professions and miscellaneous callings. It contains United States post-office building, the Indiana State Reformatory, new high school building, Masonic Orphans' Home, Carnegie library, United States quartermaster's supply depot, American Car & Foundry Company's immense works, the Howard Ship Yards Company's plant, and several other large manufacturing plants. It has electric lights, two banks (one national) and daily and weekly papers: 13 churches of various denominations; thoroughly equipped public

school system; paid fire department; paid police force; local company Indiana National Guards; two troops of Boy Scouts, and a Chamber of Commerce, in a flourishing condition. Numerous orders and societies are represented and the population is almost entirely native-born. The total assessed valuation for taxation in 1915 was $4,197,095. It has an area of 81.68 acres; 29.39 miles of streets; 14 miles of sidewalks. The mayor and council is elected every four years. Police commissioners are appointed by the mayor. Pop. 17,000.

JEFFERY, Edward Turner, American railroad president: b. Liverpool, England, 6 April 1843. He came to the United States in 1850 and in 1856 entered the employ of the Illinois Central Railroad Company, of which he became general superintendent in 1877–85, and general manager in 1885–89, when he resigned. He visited the Paris Exposition in 1889 as the representative of the executive committee of the citizens of Chicago, and was chairman of the grounds and buildings committee of the Columbian Exposition at Chicago until 1891. He was president of the Denver and Rio Grande Railroad Company in 1891–1912, its general manager in 1891–1900 and since 1912 has acted as chairman of its board of directors. He was receiver for the Rio Grande Southern Railroad Company in 1893–95, and has since been its president. He is also president of the New Orleans and Northwestern Railroad, and is connected as director, chairman or vice-president with various other railroads and trust companies.

JEFFERY, Walter J., Australian journalist and author: b. Portsmouth, England, 20 Aug. 1861. After having been a sailor for 10 years he settled in Sydney in 1886, where he entered newspaper work and became eventually, successively, sub-manager of the *Evening News, Town and Country Journal* and *Woman's Budget,* and editor of the *Evening News.* Among his published works are 'A Century of Our Sea Story' (London 1900); 'The King's Yard'; 'History of Australia'; and 'English Naval History.' He collaborated with George Lewis Beck in 'A First Fleet Family'; 'Naval Pioneers of Australia'; 'The Mutineers'; 'Admiral Phillip'; 'The Tapu of Bunderah'; and 'The Mystery of Laughlin Isles.' He has written much on naval history of which he is an acknowledged expert; and he has contributed extensively to magazines.

JEFFERYS, Charles William, Canadian artist: b. Rochester, England, 1869. He came to Canada in early life, received his art education in Toronto and New York, and engaged in black and white illustration in the latter city for some years. His pictures of pioneer life are very effective.

JEFFREY, Edward Charles, American botanist: b. Saint Catharines, Ontario, Canada, 21 May 1866. He was graduated at the University of Toronto in 1888 and took his Ph.D. at Harvard in 1898. He was Fellow in biology at the University of Toronto in 1889–92, and lecturer in that subject in 1892–1902. He was appointed assistant professor in vegetable histology at Harvard in 1902, and is now professor of botany there.

JEFFREY, Francis, LORD, Scottish judge and critic: b. Edinburgh, 23 Oct. 1773; d. Craigbrook Castle, near Edinburgh, 26 Jan. 1850. He was educated at the University of Glasgow and Queen's College, Oxford, and was admitted to the Scottish bar in 1794. He assisted in establishing the *Edinburgh Review* in 1802 with Sydney Smith, Lord Brougham and others, and after two numbers had been issued became its editor, a position which he held till July 1829. He showed great talents as an editor, and, although many of his literary judgments have been reversed by posterity, was accounted the greatest critic of his time. In 1831 he was made lord-advocate, and sat for several years as member of Parliament for Edinburgh. He was made a lord of session in 1834, and continued during a period of 16 years to be one of the ablest and most popular judges of the Supreme Court in Scotland. Consult Cockburn, 'The Life of Lord Jeffrey' (1852); Gates, 'Three Studies in Literature' (1899).

JEFFREYS, George, 1ST BARON JEFFREYS, English judge: b. Acton, near Wrexham, Wales, 1648; d. London, 18 April 1689. He was called to the bar in 1668, and soon after was chosen recorder of London. He was appointed chief justice of Chester, created a baronet in 1680 and became chief justice of King's Bench in 1682. He was one of the advisers and promoters of the arbitrary measures of James II; and for his sanguinary and inhuman proceedings against the adherents of Monmouth on the famous "Bloody Assize," was rewarded with the post of lord high chancellor (1685). After the abdication of King James, the chancellor, who had disguised himself as a seaman, was detected by a mob and carried before the lord mayor, who sent him to the lords in council, by whom he was committed to the Tower, where he died. Consult Woolrych, 'Memoirs of the Life of Judge Jeffreys' (1827); Campbell, 'Lives of the Lord Chancellors' (Vol. IV, 1849–57); Macaulay, 'History of England' (Vols. I and II, 1856); Irving, 'Life of Judge Jeffreys' (1898).

JEFFRIES, John, American physician; b. Boston, Mass., 5 Feb. 1744; d. there, 16 Sept. 1819. He was graduated at Harvard in 1763, studied medicine at London and Aberdeen, and returning to Boston in 1769 he entered upon a lucrative practice, which continued until the evacuation of the town by the British troops, whom he accompanied to Halifax. After serving as surgeon-general of the troops in Halifax, he was appointed in 1779 surgeon-major of the forces in America. In the succeeding year he established himself in London in the practice of his profession, but also occupied himself much with scientific studies, and in the prosecution of his experiments in atmospheric temperature undertook, 7 Jan. 1785, a remarkable voyage in a balloon from Dover cliffs across the British Channel, landing in the forest of Guiennes in France. This was the first successful attempt at aërostation on an extended scale, and Jeffries in consequence received many attentions from the learned societies of Paris. In 1789 he returned to Boston, where he practised his profession until the close of his life. He announced a course of lectures on anatomy in Boston in 1789, but so great was the prejudice against the practice of dissecting that on

the evening of the second lecture a mob broke into his anatomical room. The course thus interrupted was never resumed, and the single lecture delivered by Jeffries is said to have been the first public one on anatomy given in New England.

JEHOASH, pseudonym of SOLOMON BLOOMGARDEN, Yiddish poet: b. Verzhbolovo, government of Suwalki, Russian Poland, April 1870. He came to the United States in 1890, and in 1900 he became a regular contributor to *Die Zukunft.* He had written verse from an early age and created a favorable impression with his first volume, published in America in 1907. Other volumes followed, and prior to his visit to Palestine in 1914 a collected edition of his works, including a volume of fables, was brought out in seven volumes. He edited with C. D. Spivak 'The Dictionary of Hebrew Elements in Yiddish' (1911); and besides the works already mentioned is author of 'From New York to Rehoboth and Back' (3 vols., 1917–18). In 1918 he was engaged upon a translation of the Bible into Yiddish.

JEHOIAKIM, the 18th king of Judah, was the second son of Josiah. His name was originally Eliakim. His later name was given him by the Egyptians who placed him on the throne, after deposing his brother Jehoahaz. He encouraged all the abominations and strange worship abolished by his father. He was a man of blood and oppression and reigned 11 years. The country was invaded from Babylon and Jehoiakim taken to Babylon in fetters, but was soon after reinstated on his throne. The prophet Daniel was taken to Babylon at the same time. Later Jehoiakim against the advice of the prophet Jeremiah threw off the yoke of Babylon. The closing years of his reign were full of misery. The land at the instance of the Babylonians was overrun by neighboring peoples. The death of Jehoiakim is veiled in obscurity. At any rate he died during the siege of Jerusalem before Nebuchadnezzar had arrived to conduct the campaign. His body was thrown before the walls and left there.

JEHOL, zhā'hŏl, **(Hot Stream)** or **CHENG-TE-FU,** China, city in the province Chi-li, 140 miles by road northeast of Peking, on the Luan-ho. It is the site of the imperial palace Pi-shu-shan-chuang, "mountain lodge for avoiding heat," built in 1703, in the style of Yuen-ming-yuen, the imperial palace near Peking. The palace formed a refuge for the imperial court during the occupation of Peking by the allied armies of England and France in 1860, and again in 1912 upon the abdication of the Manchu emperor. The inhabitants of the town are prosperous and there are fine shops, a considerable trade and notable productions in inlaid wares. The surrounding district is well wooded, and there are many Lama monasteries and temples, among them the famous Teshi-lumbo, and the Potalasu, which was modeled upon the style of the palace of the Grand Lama of Tibet at Potala. Pop. variously estimated at 10,000 to 25,000.

JEHORAM, or **JORAM,** the name of five Bible characters. Only two are of special importance. Jehoram, king of Israel, was the second son of Ahab and Jezebel and succeeded his brother Ahaziah, becoming the 10th king after the division of the kingdom. He reigned 12 years. Three wars occurred in his reign. Moab revolted. Jehoram with the aid of Jehoshaphat, king of Judah, and the king of Edom, defeated Mesa, the king of Moab, overrun the land and destroyed its cities. Later followed two wars with Syria. In the first the Syrian armies were led by Ben Hadad, and in the second by Hazael, newly anointed king by Elisha. Jehoram lost his throne and his life in the revolt of Jehu. Jehu himself shot the fatal arrow, and Jehoram fell on the very piece of ground which Ahab seized from Naboth, the Jezreelite, and thus fulfilled minutely the prophecy of Elisha. JEHORAM was also the name of the 5th king of Judah, who succeeded his father Jehoshaphat on the throne and reigned eight years. He married the daughter of Ahab and Jezebel, the noted Athaliah. He put his six brothers to death and become an idolater. The Edomites revolted from him and became independent. His kingdom was repeatedly invaded by the Philistines on the west and by the Arabians and Cushites on the east. His last days were filled with suffering as he was subject to a form of malignant dysentery in a most severe type. Because of his wickedness he was refused a place of burial among the kings. Elijah had admonished him from time to time without avail.

JEHOSHAPHAT, 4th king of Judah after the revolt of the 10 tribes. He was characterized as a good king. He brought about co-operative relations with the kingdom of Israel. The marriage of his son Jehoram to Athaliah was intended to cement amicable relations with the other kingdom, but final results were disastrous for the royal line. The king tried to restore the maritime commerce of King Solomon, but his fleet was wrecked on its first voyage. His alliance with Ahab was not a great success and only brought him into difficulty. His campaign, when joining with Jehoram of Israel and the king of Edom his vassal against Moab, was very successful. He received tribute from the Philistines and Arabians. His internal management of the kingdom was admirable. At one time he sent forth a commission to teach "The book of the law of the Lord" in the cities of Judah. He established local judges in every fenced city and a double court of appeals, ecclesiastical and civil, at Jerusalem. His reign was the most prosperous reign enjoyed by the kingdom of Judah. After reigning 25 years he died at the age of 60, and was succeeded by his son Jehoram (q.v.).

JEHOVAH, an erroneous pronunciation of the name of the God of Israel in the Bible, due to pronouncing the vowels of the term "Adonay," the marginal Masoretic reading, with the consonants of the text-reading "Yahweh," which was not altered to avoid the profanation of the divine name for magical or other blasphemous purposes. Hence it is pronounced "Adonay" the "Lord" or "Adonay Elohim," "Lord God." The oldest Greek versions use the term "Kurios" "Lord," the exact translation of the current Jewish substitute for the original Tetragrammation Yahweh. The reading "Jehovah" can be traced to the early Middle Ages and until lately was said to be invented

by Peter Gallatin (1518), confessor of Pope Leo X. Recent writers, however, trace it to an earlier date, being found in Raymond Martin's 'Pugeo Fidei' (1270). It was doubtless due to the fact that Christian Hebraists regarded it as a superstition to substitute any word for the divine name, or, as Professor Moore suggests, they may have been ignorant of the rule that although the consonants of the word to be substituted are ordinarily written in the margin, yet as "Adonay" was regularly read for the ineffable name, it was deemed unnecessary to note the fact at every occurrence. Of the various Yahwah, the commonly accepted spelling for names of God that appear in the Old Testament, Jehovah, occurs the most frequently. There are some divergencies in regard to its use by the Biblical writers which have given rise to the terms Elohist and Jehovist documentary sources. For example, it was made known to Moses in a vision at Horeb (Ex. iii). In Ex. vi 2, 3, it is said the name was not known to the patriarchs. It is not employed in Ecclesiastes and in Daniel is found only in Ch. ix. In many of the Psalms, Elohim occurs much more frequently than Yahweh. To avoid repetition of this name, when the name Adonay precedes, Yahweh is written by the Masorites with the vowels of Elohim and is read Elohim instead of Yahweh. Throughout the New Testament it is rendered like the Septuagint "Lord." It was pronounced by the priests only in the temple service; it was mentioned 10 times on the day of Atonement. Josephus (Antiq. ii, 12) declares that religion forbids him to make known its pronunciation. Philo in more than one passage calls it ineffable, to be uttered only by those whose ears and tongues are purified by wisdom to hear and utter it in a holy place and the penalty of death is to be expected by those who utter it unseasonably. ('De Vita Moses). After the temple services had ceased, rabbinical tradition kept up reverence for the name whose misuse evoked the words of the Mishua (Sanh. x, 1), "He who pronounces the name with its own letters has no share in the future world." It was utilized in those early centuries by healers and magicians — magic papyri preserve it in many places. Attempts at pronunciation were made by some of the Christian Fathers, but without any uniformity. It was not long before the exact pronunciation was wholly lost. There has been much speculation as to the origin and meaning of the term. Attempts to connect it with any Indo-European deity or to trace it to Egypt or China need not be considered seriously or efforts to identify it with other Semitic divinities. Exact scholarship is wanting and sources are very meagre. Even Friedrich Delitzsch was not successful in his labors to read it in Babylonian tablets of its first dynasty, before 2000 B.C. It is no less difficult to interpret its meaning. Oriental languages have a mysticism of their own and present peculiar problems to cooler and less unimaginative Western minds. Merely to give current explanation of the meaning of the word, some derive it from a Hebrew root "to fall" signifying originally some sacred object believed to have fallen from heaven; others from a root "to blow," a name for the God of the storm, and still others, with more probability, see in it the causative form of the word "to be" — he who causes to be, that is the Creator. The passage in Ex. iii, 14, where in answer to the question "What is His name?" the reply is given "I am that I am" emphasizes the idea of God as a living, active being, who was, is and ever will be, as many Jewish commentators interpret the cited phrase, "Ehyeh-asher-ehyeh." Compared with the lifeless gods of the heathen, He is the ever existing source of creation, illustrated by many passages in Holy Writ. In rabbinical tradition it has been the subject of much discussion; but it was reserved for the Cabalist in direct contradiction to the spirit of restraint and reverence that forbade the mention of the divine name to make it and its synonyms an essential part of their cosmology, giving it the power to perform miracles and create life. It was awe at the sacred name not any superstitutious fear that dictated the general Jewish reticence as to its expression by voice or pen, for in letter-writing it is not written out in full, but represented by the letter "he" or a "dalet" with an accent. Nothing could be in more marked contrast to such reticence than the glibness and frequency with which the term is used by the modern world whether as an oath or exclamation. Consult Blau, 'Das altjud. zauberwesen' (1898); Driver, 'Present Theories on the Origin and Nature of the Tetrag.' (in 'Studia Biblica,' 1885).

JEHOVIST, je-hō'vist, sometimes called JAHWIST, a hypothetic author of the Pentateuch, who used the word Jehovah, or Jahweh, as the name of God instead of Elohim, which term denotes the Supreme Being in other passages of the sacred canon. To the writer who employs the latter designation is applied the term Elohist. According to the theories of many modern Biblical critics the present Pentateuch is a compilation from two original records, one made by an Elohist, the other by a Jehovist. The Jehovist history is supposed to be the older of the two (by some critics it is dated 950 B.C.), and to have consisted of an account of Jehovists, dealings with the chosen people up to the conquest of Palestine west of the Jordan. It is a religious history of the attainment of the Promised Land. In this history was emphasized the supremacy of Jehovah as the one God, creator of the world, and the national God and Father of the chosen people, in whose affairs He interposes as He appeared to their early forefathers in the shape of a man or an angel. In the Elohist record, which is supposed to cover the same period and to have been written 700 B.C., there is a more modern interpretation of history attempted. The anthropomorphic suggestions of deity are softened, Elohim interposes merely by a voice, speaking to his people in words of encouragement or rebuke. Through the narrative of the hypothetical Elohist there runs also a tone of sadness, there are anticipations of coming disaster and disappointment.

The Jehovistic or Jahwistic editor who combined these two histories is supposed to have lived in the 7th century B.C., while in the 4th century B.C. a third post-exilic writer added to these combined elements the legal codes which swelled the Pentateuch into the Hexateuch.

JEHU, general of the army of Joram, king of Israel. The prophet Elisha sent one of the school of the prophets to anoint him king over

Israel, and in a sudden revolution Joram was slain and Jehu reigned in his stead. He was the first of a new, the 5th dynasty, and reigned 843–815 B.C. On his accession he massacred all the family of Ahab, including his wretched wife, Jezebel, and put the priests of Baal to the sword. In order to obtain possession of the kingdom of Judah he slew Ahaziah the king, and 42 of his family. But his reign was not a prosperous or successful one, and by an invasion of the Assyrians he lost all the territory east of the Jordan. His name has been found on the black obelisk discovered by Layard at Nineveh, and now in the British Museum. This obelisk was set up by Shalmaneser II, and the inscription refers to the tribute paid by Jehu to the Assyrian monarch.

JEHU, colloquial name for a coachman, or for one addicted to immoderation in driving. Its origin is from 2 Kings ix, 20, "the driving is like the driving of Jehu the son of Nimshi; for he driveth furiously."

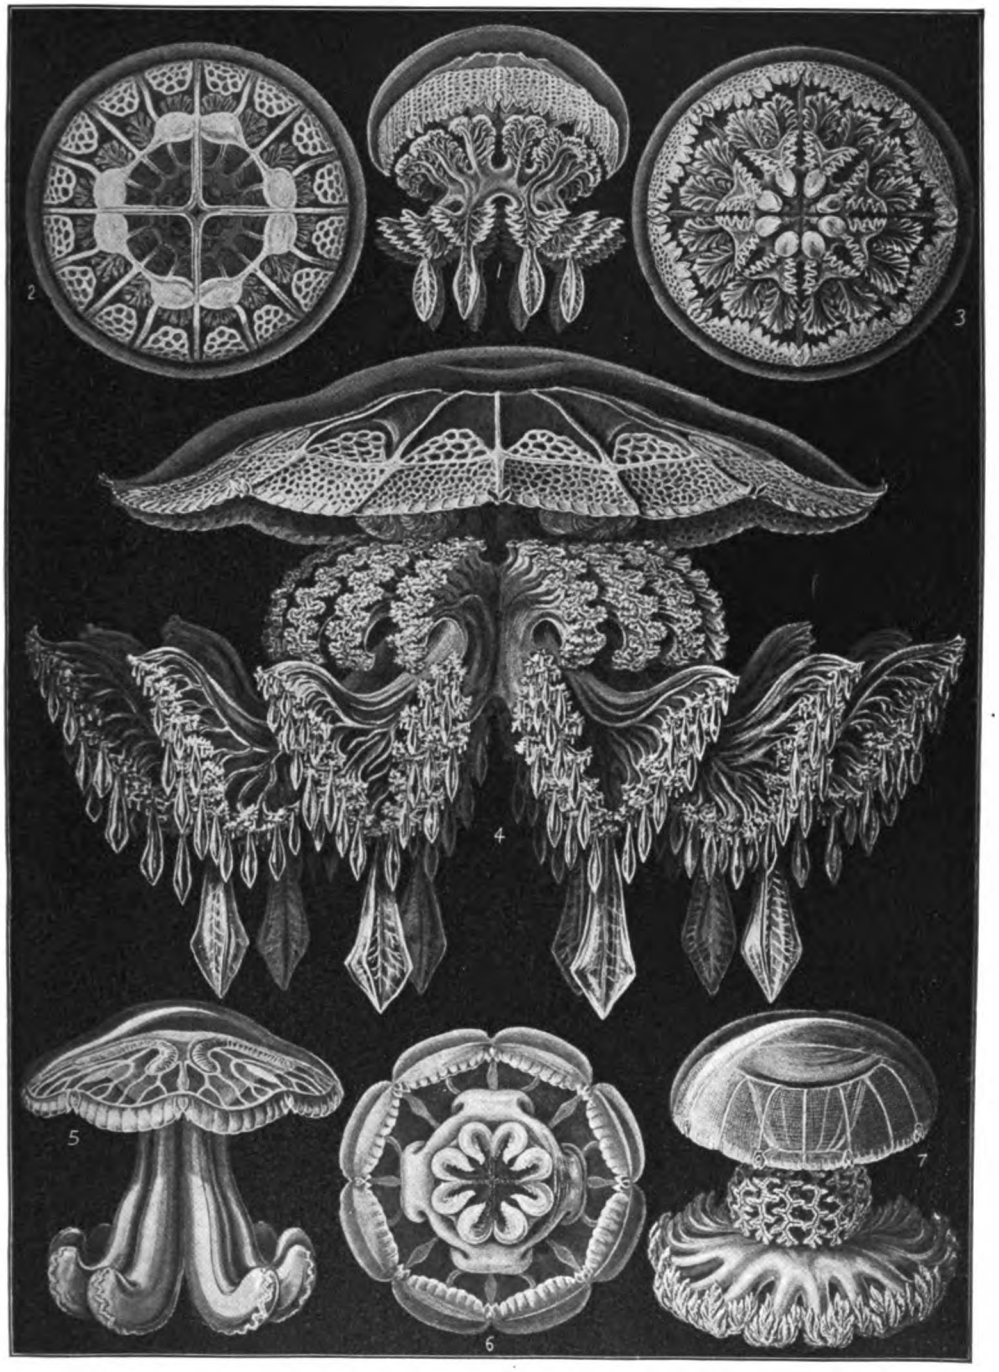
JEJEEBHOY, Sir **Jamsetjee,** Parsee merchant and philanthropist: b. Bombay, 15 July 1783; d. there, 15 April 1859. By his energy and business talents he succeeded in achieving for himself the position of the first native merchant in India, and realizing a fortune of nearly a million sterling. The munificence displayed by him toward all benevolent and public objects, without regard to class or creed, was of the most princely kind, his donations from first to last being estimated at about $1,500,000. Among benevolent institutions founded by him are the great hospital at Bombay which bears his name, the establishment in the same city for the education of poor Parsee children, and the *dhurumsallas,* or places of refuge for travelers in various parts of the country. He also constructed the causeway uniting the islands of Bombay and Salsette, the waterworks at Poonah, the bridges at Earla, Parta and Bartha, and other public works. He was knighted in 1842, and in 1857 made a baronet. A statue was subsequently erected in honor of him in the town-hall of Bombay.

JEJUNUM, jē-joo'nŭm (Latin, *jejunus,* empty), the second portion of the small intestine, succeeding the duodenum, and so named from its generally being found empty after death. The duodenum extends to about 12 inches in length, and the jejunum forms two-fifths of the remaining portion of the small intestine. See Intestine.

JELLICOE, John Rushworth (Viscount Jellicoe of Scapa), British admiral: b. 5 Dec. 1859. His father, Capt. J. H. Jellicoe, was formerly commodore of the Royal Mail Steam Packet Company, and his great-grandfather, Adm. Philip Patton, was second sea lord at the time of Trafalgar. Jellicoe entered the navy in 1872 and served as a lieutenant during the Egyptian War, 1882. About that time he began to concentrate his attention on naval gunnery and came under the influence of Lord Fisher (q.v.), the captain of the gunnery school. In 1888 Fisher, as director of naval ordnance, made Jellicoe his assistant at the Admiralty. Promoted commander in 1891, he was appointed to the training ship *Victoria* and was on that vessel when she was rammed and sunk by the *Camperdown* in the Mediterranean in 1893. As a captain he was chief of staff to Admiral Seymour in China in 1900 and was severely wounded. After a period as naval assistant to the Controller of the Navy, he commanded the cruiser *Drake* and in 1905 became director of naval ordnance. For about 15 years he had served in high commands afloat and alternately in administrative posts ashore. He was rear-admiral of the Atlantic fleet in 1907–08; third sea lord in 1908–10; vice-admiral commanding the Second Division of the Home Fleets, 1910–12; and second sea lord in 1912–14. Early in July 1914 it was announced that he had been selected commander-in-chief of the home fleets, his appointment to take effect at the end of the year on the retirement of Admiral Callaghan. On the outbreak of the European War, however, he was immediately placed in command and hoisted his flag on the *Iron Duke* on 4 Aug. 1914, the day Great Britain entered the war. He retained that high command for two years and four months, during which time he commanded the grand fleet in the important battle of Jutland. In December 1916 Jellicoe was succeeded by Admiral Beatty (q.v.) and appointed first sea lord in place of Admiral Sir Henry Jackson. A year later, in December 1917, Vice-Admiral Sir Rosslyn Wemyss became first sea lord and Jellicoe was raised to the peerage "in recognition of his very distinguished services." See War, European — Naval Operations.

JELLIFFE, jĕl'ĭf, **Smith Ely,** American physician: b. Brooklyn, N. Y., 27 Oct. 1866. He was graduated from the Brooklyn Polytechnic Institute in 1886 and in 1889 the degree of M.D. was conferred upon him at Columbia University. In 1900 he received the degree of Ph.D. from the same university. He was instructor in materia medica in Columbia University and professor of pharmacognosy in the same university. Later professor of psychiatry in Fordham University, New York, and later adjunct professor of diseases of the mind and nervous system in the Post Graduate Hospital and Medical School, New York. In his earlier academic work he was active in botany, chemistry, pharmacognosy and materia medica. Of later years he has specialized more particularly in diseases of the nervous system. Some of his earlier published works included a 'Flora' of Long Island, his Ph.D. thesis; 'A text book on botany,' another on medical chemistry, another on pharmacognosy and a revision of Butler's 'Materia Medica'; a number of translations from French, German and Italian on paranoia; the Wasserman Reaction in Psychiatry, Psychic Treatment of Nervous Diseases; the Semi-Insane, Psychoneuroses and their Treatment; Vagotonia; Dream Problem; the Myth of the Birth of the Hero and numerous minor papers. From 1900–05 he was editor of the *Medical News,* 1905–07, associate editor of the New York *Medical Journal.* In 1913 with D. W. A. White he published a 'Modern Treatment of Nervous and Mental Disease,' in 1915 with the same author a 'Textbook on Diseases of the Nervous System.' In 1907 these two authors founded the 'Nervous and Mental Disease Monograph Series,' of which 22 volumes have appeared, and in 1913 they also founded a new journal, the *Psychoanalytic Review,* a journal devoted to an understanding of human conduct.

JELLYFISHES



FORMS OF DISCOMEDUSÆ

1 Pilema giltschii (¼ natural size)
2 View of the same from above (the organs seen through the transparent convex disk or "umbrella")
3 View of the same from beneath
4 Rhopilema frida (¼ natural size)
5 Brachiolophus collaris (¼ natural size)
6 Cannorrhiza connexa
7 The same from beneath (¼ natural size)

Since 1900 he has been the managing editor of the *Journal of Nervous and Mental Disease.* In 1915 he edited 'Appleton's Medical Dictionary,' was a contributor to the 'Standard Dictionary'; to Osler's 'Modern Medicine'; Forscheimer's 'Modern Therapeutics,' and has contributed largely to the 'Encyclopedia Americana.' Dr. Jelliffe is active in practice, limiting his medical work to diseases of the nervous system, to which he has contributed a large number of smaller and larger studies, the larger of which are here briefly mentioned.

JELLY includes every translucent juice so far thickened as to coagulate when cold into a trembling mass; as the juices of acid or mucilaginous fruits, currants, etc., which, by the addition of one part of sugar to two parts of juice, and, by boiling, have obtained a proper consistence.

1. Animal Jelly.— The soft parts, such as the muscles, skin, cartilage or integuments of animals, when boiled in water, yield a solution which on cooling solidifies to a tremulous jelly. Seventy pounds of bones, when treated with one pound of water in the form of steam, at a pressure of four pounds to the square inch and simultaneously digested in five gallons of water, will yield about 20 gallons of a strong jelly.

Animal jelly seems to be nearly identical in composition with the tissues which yield it, so that we are unable to trace any chemical change, except, perhaps, the assimilation of water during the process of its manufacture. The following analysis shows the average percentage of carbon, hydrogen and nitrogen in animal jelly:

	Carbon	Hydrogen	Nitrogen
(1)	49.0	7.0	19.4
(2)	50.0	6.5	17.5

2. Vegetable Jelly.— When the juice of fruits is heated with sugar, the liquid forms a stiff jelly on cooling. It appears from the researches of Frémy and others that unripe fruits contain a compound of carbon, hydrogen and oxygen called *pectose;* as the fruit ripens, this substance is transformed into *pectin,* the change being brought about chiefly by the influence of a peculiar ferment called *pectase,* which is contained in the fruits. As pectin is soluble in water, the expressed juice of ripe fruits contains a large quantity of this substance, which on heating to a temperature of about 105° F. is converted into one or more substances which have not as yet been completely studied, but which have the property of gelatinizing on cooling. The principal of these substances are *pectosic* and *metapectic* acids. This latter acid, when boiled along with another strong acid, whether mineral or organic, is decomposed, one of the products being pectin sugar, a substance which is closely allied to glucose, so that in all probability there is produced in the very process of manufacturing jellies more or less of this sugar, which certainly is not cane-sugar, and which might, therefore, be by some regarded as an adulteration. The processes which, in the living plant, result in the transformation of pectose into pectin may be imitated on a small scale by heating the juice of unripe fruit with the pulp, which contains the ferment pectase, or with a dilute acid which induces the same change as this substance. Alkalis also produce a similar effect.

JELLYFISH, the medusa-stage of *Hydrozoa* (q.v.), but more especially the common name of *Scyphozoa* (formerly *Discomedusa*), the second class of the phylum *Cœlenterata* (q.v.). A familiar example is the common large jellyfish of the coast of New England, *Aurelia flavidula.* It sometimes reaches the diameter of 10 inches; its umbrella-shaped body is convex and smooth above, and from the under sides hang down four thick oral lobes which unite to form a square mouth-opening also giving off four tentacles. The margin of the umbrella or disc is fringed and bears eight eyes which are covered by a lobe. Just under the surface are seen the water-vascular canals, branching out from four primary canals radiating from the stomach. When in motion, the disc contracts and expands rhythmically, on the average from 12 to 15 times a minute.

The *Aurelia* spawns late in the summer, the females having yellowish ovaries, while the sperm glands of the males are roseate in hue. The eggs are fertilized in the sea and the ciliated pear-shaped larva by October sinks to the bottom, attaching itself to rocks or shells, finally assuming a hydra-like shape, with often as many as 24 long slender tentacles. This is the *Scyphistoma* stage in which it remains about 18 months. From this it passes into the *Strobila* stage in which the body divides into a series of cup-shaped discs, each of which is scalloped on the upturned edge. These discs separate one after the other in March and swim away as miniature jellyfishes called *Ephyræ.* The *Ephyra* is at first about a fifth of an inch in diameter, and becomes a fully formed *Aurelia* in April, reaching maturity in August. Another but less common jellyfish on the coast of New England and in the north Atlantic is the great *Cyanea arctica,* or "blue jelly," which is nearly two feet in diameter, sometimes from three to five, and with very long string-like tentacles, sometimes extending from 20 to 100 feet, which are filled with stinging or lasso-cells (*trichocysts*), so that the animal is poisonous to fishermen and bathers. While these forms undergo a metamorphosis, in fact, an alternation of generation, other kinds, as *Pelagia,* etc., are known to develop directly from the egg, and even the aurelia under exceptional circumstances does not pass through the scyphistoma stage. The jellyfishes are divided into a number of groups. They are most numerous in the tropical seas, comprising forms of great beauty. Consult Agassiz and Mayer, 'Acalephs from the Fiji Islands' (in *Bulletin* of the Museum of Comparative Zoology, Vol. XXXII, Cambridge 1899); Romanes, C. J., 'Jellyfish, Starfish and Sea Urchins' (New York 1885); Packard, 'Zoology' (1897); Arnold, 'The Sea Beach at Ebb-tide' (1902); Mayer, A. G., 'The Medusæ of the World' (Washington 1911).

JELUTONG (Malay), an inferior kind of rubber prepared from a large variety of rubber trees that grow wild in the swamps of Borneo.

JEMAPPES, zhĕ-map', Belgium, city in the province of Hainault, five miles southwest of Mons, on the river Haine. It was here that the French under Dumouriez won a decisive victory over the Austrians under the Duke of Saxe-Teschen, 6 Nov. 1792. It was the first victory won by the French Republic and was followed by the occupation of Belgium.

In the European War it was one of the towns occupied by the German invasion in 1914 and one of the last towns to be reoccupied by the Allied forces before the signing of the armistice 11 Nov. 1918. There are iron mines in the vicinity and the town has manufactories of glass and porcelain. Pop., commune, 14,270.

JEMEZ, hā'mās, N. M., pueblo village 45 miles west of Santa Fé, on the Jemez River, an affluent of the Rio Grande. The inhabitants are of Tanoan stock, law-abiding and prosperous and owners of productive farms. Pop. about 500.

JENA, yā'nä, Germany, town, 12 miles east of Weimar, on the left bank of the Saale. It consists of the town proper and of four suburbs. It contains a famous university which was opened in 1558 and attained its highest prosperity toward the end of the 18th century, when it numbered Schiller, Humboldt, Fichte, Schelling and Griesbach among its teachers and was attended by above 1,000 students; Arndt and Hegel later were professors here. In 1844 the number of students had dwindled to 411, but now averages about 800. It has 98 professors and instructors, who teach the different branches of law, medicine, philosophy and theology; and possesses an anatomical theatre, botanical garden, observatory, good physical and chemical cabinets and a library of 270,000 volumes. Jena lenses and optical manufactures are famous. Pop. 38,500.

JENA GLASS. Jena is one of the chief centres of the glass industry of the world and it is particularly noted for its manufactures of glass adapted to various optical and chemical uses. This industry was initiated by Abbe and Schott under grants from the Prussian government. With a view to improving the quality of the glass, an almost exhaustive study has been made of the properties of various possible mixtures of silicates, borates and phosphates. The Jena optical glasses have indices of refraction between 1.5100 and 1.9626 for the 1) line, mean dispersions for C-F between 0.00737 and 0.04882, and specific gravities between 2.46 and 6.33. Jena resistance tubing for chemical and thermometer use is a sodium-magnesium-aluminum-zinc borosilicate glass. (See GLASS). Consult Hoverstadt, 'Jena Glass and its Scientific Industrial Appliances' (New York 1902).

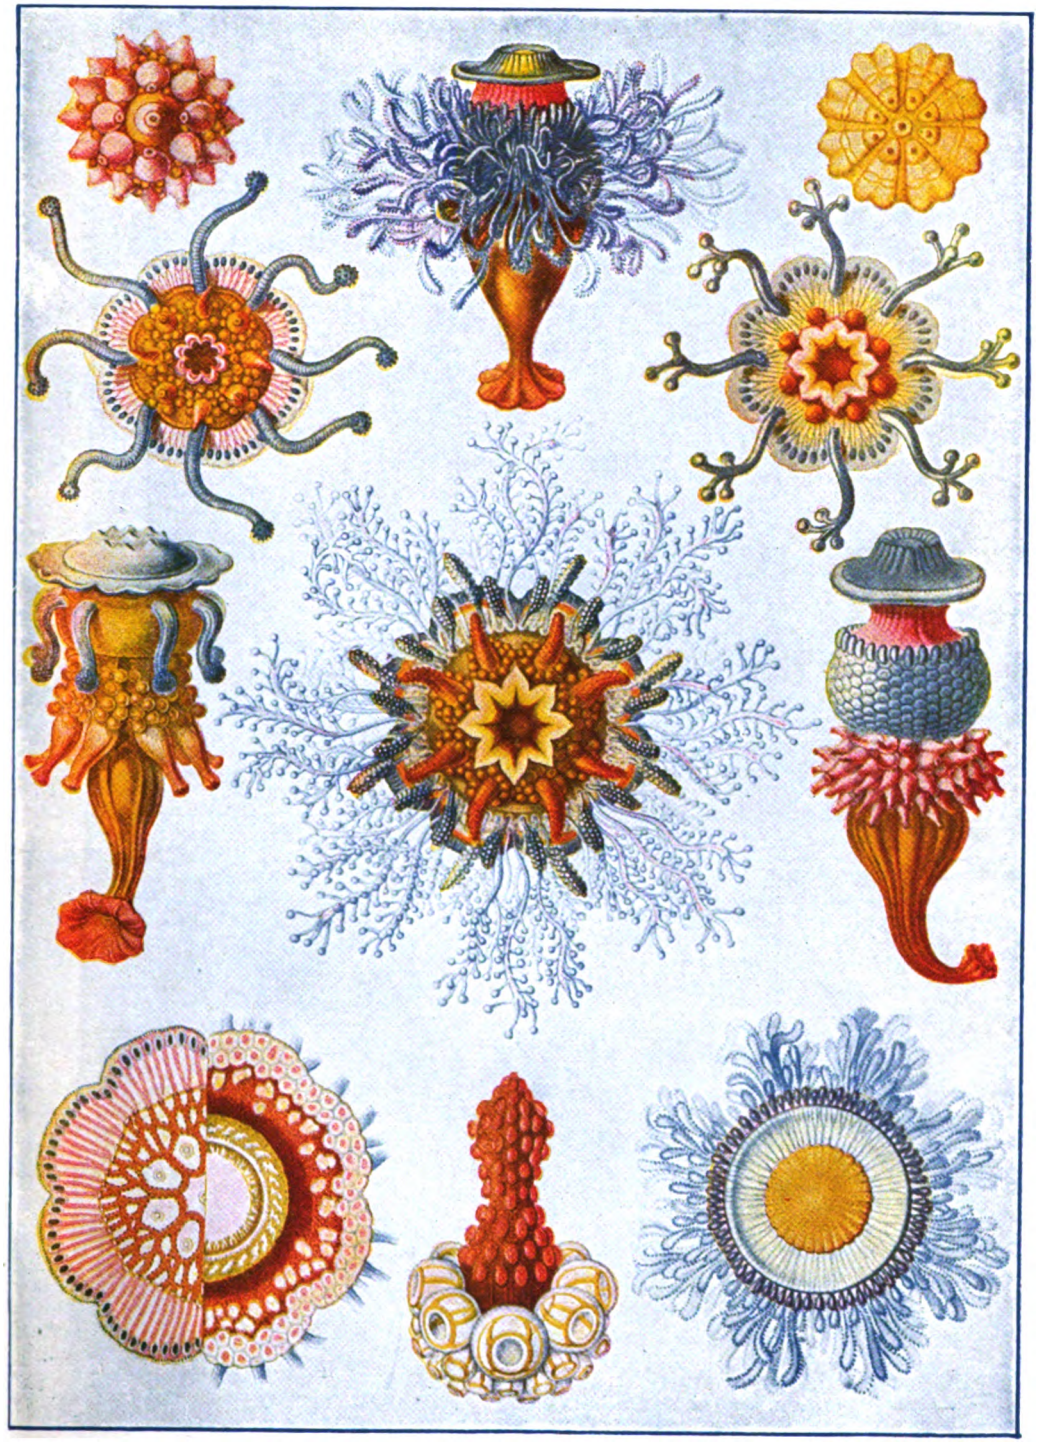
JENATSCH, yā'nätch, **Georg,** or **Jürg,** Swiss political leader and soldier: b. Samaden, 1596; d. Coire, 24 Jan. 1639. He was educated at Zürich and Basel and became pastor of the Protestant church at Scharaus, near Tunis, in 1617. He entered politics, espousing the cause of the Venetian and Protestant Salis family against that of the Spanish and Romanist family of Planta. He was the leader of the body which in 1618 put to death by torture the arch-priest, Rusca of Sondrio, and outlawed the Plantas. In 1621 he was one of the murderers of Pompey Planta, head of the opposition, and was forced thereafter to flee the country, abandoning his pastorate and becoming a soldier in the service of the French. The peace of 1626 between France and Spain left the Romanists in control and destroyed Jenatsch's hope of return to power. After killing his colonel in a duel he again fled from his native land, and joining the forces of the French he ably supported the Duke de Rohan in expelling the Spaniards from the Valtellina in 1635. Upon the failure of the French to restore the Protestant Grisons ascendency he turned Romanist and joined the Spaniards in the plot which led to the downfall of Rohan's power. Again failing to secure ascendency for the Grisons in the Valtellina he approached the French for support, but was assassinated by one of Planta's supporters. Later in the year the Spaniards restored the Valtellina to the Grisons, in whose possession it remained until 1797. His career is important because of its close connection with the long struggle of France and Spain for the Valtellina, one of the most sanguinary phases of the Thirty Years' War.

JENCKES, or **JENKS, Joseph,** American inventor, grandfather of Joseph Jenckes, governor of Rhode Island (q.v.): b. Colbrooke, England, 1602; d. Lynn, Mass., 16 March 1683. He came to America about 1645 and settled at Lynn, where he established the first iron and brass foundry on the Western continent, and manufactured the first domestic utensils, machinery and tools produced here. He was granted a patent "for the making of engines of mills go by water" by the legislature 6 May 1646, and also received patents for a sawmill. He executed the dies for the Massachusetts coinage of 1652, including the famous "pine-tree shilling." In 1654 he is recorded as making a contract with the selectmen of Boston for "an engine to carry water in case of fire," the first to be made in America. In 1655 he received a long-delayed patent for an improved grass-scythe which was vastly superior to any scythe then made and which has been adopted practically throughout the world without material change.

JENCKES, jĕnks, or **JENKS, Joseph,** colonial governor of Rhode Island: b. Pawtucket, 1656; d. 15 June 1740. He was a land-surveyor and was commissioner of the Rhode Island colony in settling boundary disputes with Massachusetts and Connecticut, and was afterward employed by Massachusetts in similar troubles with New Hampshire and Maine. He served in various official capacities in the colony, was member of assembly in 1700–08 and deputy governor in 1715–27. He went to England in 1721 to lay the boundary disputes before the king; and in 1727–32 he was governor of the colony, refusing re-election.

JENCKES, Thomas Allen, American legislator, "Father of Civil Service Reform": b. Cumberland, R. I., 2 Nov. 1818; d. there, 4 Nov. 1875. He was graduated at Brown University in 1838, was admitted to the bar of Rhode Island in 1840, and engaged in practice in Providence. He was retained by the United States government in its suits against the Crédit Mobilier. He was secretary of the landholders' convention in 1841, of the State Constitutional Convention in 1842, and of the governor's council upon its establishment. He was elected to the State legislature in 1845 and gained a notable triumph in his carrying against determined opposition his point that the legislature might order a new trial. He was appointed one of the commissioners to revise the laws of the State in 1855, and in 1862 he was elected to Congress, where he served until 1871. He was chairman of the committee on patents, intro-

A GLASS



MEDUSA LIKE ANIMALS

duced and succeeded in carrying the Bankrupt Law of 1867, and gained the revision of the patent and copyright laws. He was especially prominent in the introduction of measures calculated to reform the civil service on a basis of competition and probation, and after the termination of his service in Congress still worked earnestly for it until its passage in 1883. He also obtained the passage of the bill making admission to West Point dependent upon competitive examination. He engaged in the practice of law in New York after his retirement from Congress.

JENKIN, Henry Charles Fleming, English engineer: b. near Dungeness, Kent, 25 March 1833; d. Edinburgh, 12 June 1885. He took his M.A. at the University of Genoa in 1850 and in 1851 began his career as an engineer at Manchester. He afterward was with the submarine cable-works at Birkenhead. In 1859 he became associated with Sir William Thomson, afterward Lord Kelvin, in experiments on the resistance and insulation of electric cables, and his researches on the resistance of gutta-percha were recognized as of great importance. In partnership with Thomson he worked out many problems in connection with submarine telegraphy, and was connected with the laying of many cables. His services as a consulting telegraph engineer were in large demand and his inventions, upon which he took out 35 patents, brought him large financial returns. He was elected a Fellow of the Royal Society in 1865 and in that year was appointed professor of engineering at University College, London. From 1868 until his death he was professor of engineering at Edinburgh University. He was exceptionally sound as a practical engineer and his determinative work in electricity was invaluable. He took up the work of sanitation with the vigorous thoroughness that characterized all his efforts, promoted the founding of a sanitary association in Edinburgh and materially aided the work with practical articles on the subject. At the time of his premature death he was engaged in completing an automatic electric system for the transportation of merchandise, known as «telpherage». Many of his scientific papers appeared in the *Transactions* of the Royal Society of London and the *Proceedings* of the Royal Society of Edinburgh. He was also author of 'Magnetism and Electricity' (1873); 'Healthy Houses' (1878). His collected writings, with an appreciative 'Memoir' by R. L. Stevenson, were edited by Colvin and Ewing (2 vols., London 1887).

JENKINS, Charles Jones, American jurist and statesman: b. Beaufort County, S. C., 6 Jan. 1805; d. Summerville, Ga., 14 June 1883. He was graduated from Union College, Schenectady, N. Y., in 1824, and after the study of law began practice in Augusta, Ga. He was a member of the Georgia legislature in 1830 and after a short service as attorney-general of the State was a member of the legislature 1836–50, and a leader of his party there. He was State senator 1856–60, and was a judge of the Georgia Supreme Court 1860–65. He became provisional governor of his State in 1865, holding office till 1868, and presided over the Constitutional Convention of 1877. Consult Jones, C. C., 'Life of C. J. Jenkins' (Atlanta, Ga., 1884).

JENKINS, Edward Hopkins, American agricultural chemist: b. Falmouth, Mass., 31 May 1850. He was graduated at Yale in 1872, specialized in chemistry there in 1872–75, studied at the University of Leipzig in 1875–76, and took his Ph.D. at Yale in 1879. In 1877–1900 he was chemist of the Connecticut Agricultural Experiment Station, was its vice-director in 1882–1900 and since 1900 has been its director. He was chairman of the State Sewage Commission in 1897–1903. Author of 'The Small Rock Garden' (1913) and numerous bulletins and reports published under the auspices of the State.

JENKINS, John Edward, English political and social writer: b. Bangalore, India, 28 July 1838; d. London, 4 June 1910. He was educated at McGill University, Canada, and the University of Pennsylvania, was agent-general for Canada in London, 1874–76, and sat in Parliament for Dundee, 1874–80. He became famous by the publication of his 'Ginx's Baby, his Birth and other Misfortunes' (1870), a clever satire aimed at the struggles of rival secretarians to secure control of the religious education of a derelict child.

JENKINS, Thornton Alexander, American naval commander: b. Orange County, Va., 11 Dec. 1811; d. 9 Aug. 1893. Entering the United States navy as a midshipman in 1828, he served therein during the war with Mexico. Appointed to investigate European lighthouse systems he framed the law passed in 1852 under which the existing lighthouse board is managed. He saw active service during the Civil War and was chief of the Bureau of Navigation 1865–69. From 1869 to 1871 he was naval secretary of the lighthouse board and commanded the East India squadron 1871–73. In 1870 he was appointed rear-admiral and retired from active service in 1873.

JENKINS, Ky., town in Letcher County, 129 miles from Ashland on the Sandy Valley and Elkhorn Railroad. It was founded in 1911 by the Consolidation Coal Company and developed into a model town for the operatives in the rich coal mines of the district. It has a Y. M. C. A. and is planned to give ideal housing and social conditions. Pop. estimated 5,000.

JENKINS' EAR, War of, popular name for the war between England and Spain in 1739. Robert Jenkins, an English master mariner, was on a return voyage from the West Indies in 1731 when his brig, the *Rebecca,* was boarded by a Spanish guardacosta, whose commander cut off one of his ears and committed other outrages. The story at first attracked little attention, but repeated by Jenkins before the House of Commons in 1738 it became a contributing cause to the outbreak of war the following year.

JENKINS FERRY, Battle of. During the winter of 1863–64 the Union forces of Generals Steele and Blunt held the line of the Arkansas River, with headquarters at Little Rock; the Confederates, under Gen. Sterling Price, held that of the Washita, with headquarters at Camden, which was strongly fortified. On 23 March 1864 Steele started from Little Rock southward with about 8,000 men to co-operate with General Banks' expedition up Red River, the objective point of both being Shreveport,

La. General Thayer, with 5,000 men, left Fort Smith on the 21st to join Steele at Arkadelphia, and Col. Powell Clayton, with a small cavalry force, marched from Pine Bluff in the direction of Camden, which was Steele's first objective. Steele reached Arkadelphia on the 28th, was joined near Elkins' Ferry, on the Little Missouri, by Thayer, and, after several severe skirmishes, in which the Confederates were defeated, flanked Price out of Camden, 15 April, and occupied it. Here he was fully informed that Banks had been defeated on Red River and was retreating and his own position became very precarious. Gen. E. Kirby Smith, who had been opposing Banks, marched rapidly with three divisions of infantry — 8,000 men and 14 guns — to join Price and crush Steele. Steele was too strongly entrenched at Camden to be attacked, but he was greatly harassed and nearly surrounded by the gathering Confederates, his forage-trains, with their guard, were cut off and captured, and, the loss of a large supply-train at Marks' Mills, 25 April, with nearly an entire brigade and a battery, determined him to fall back to the Arkansas River. He left Camden on the night of the 26th, crossed the Washita, and had hardly begun his movement northward when Smith and Price pressed him vigorously and kept up a running fight, which was particularly sharp on the 29th, when Steele reached Jenkins' Ferry, on the Saline River. The river was swollen, and Steele had crossed only part of his army when his rear brigade, commanded by Gen. S. A. Rice, was fiercely attacked by Price, and yielded some ground. But the brigade rallied, and, supported by a part of Engelmann's that had not yet crossed the river, engaged in a sanguinary fight lasting the greater part of the day. Three times the Confederates charged and were repulsed, and the Union line advancing, the Confederates fell back and did not renew the fight. Steele now crossed the river without further molestation, and moved leisurely to Little Rock, which was reached 2 May, and Thayer's division was sent back to Fort Smith. Price was so badly defeated that he made no effort to follow Steele north of Saline River. The Union loss at Jenkins Ferry was 63 killed, 413 wounded and 45 missing. The Confederates report a loss of 86 killed, 356 wounded and one missing. The Union loss during the entire campaign (23 March–2 May) was 102 killed, 601 wounded and 1,072 missing, a total of 1,775. Consult 'War of Rebellion — Official Records' (Vol. XXXIV, Washington 1889–1901); The Century Company's 'Battles and Leaders of the Civil War' (Vol. IV, New York 1887–88).

JENKINTOWN, Pa., borough in Montgomery County, 10 miles north of Philadelphia, on the Philadelphia and Reading Railroad. It is situated in a well-to-do farming district and has railway supply works. Pop. 3,000.

JENKS, Arthur Whipple, American Protestant Episcopal clergyman and educator: b. Concord, N. H., 9 Aug. 1863. He was graduated at Dartmouth College in 1884, received his M.A. there in 1887, and his B.D. from the General Theological in 1896. He was ordained in 1893, and was rector of Saint Luke's, Woodsville, N. H., until 1895 when he became professor of ecclesiastical history at Nashotah House, Wisconsin. He was appointed professor of that subject at Trinity College, Toronto, Canada, in 1901 and since 1910 has occupied that chair at the General Theological Seminary. Author of 'Beatitudes of the Psalter' (1914); 'Use and Abuse of Church History' (1915).

JENKS, Edward, English publicist: b. Clapham, Surrey, 20 Feb. 1861. He was educated at Dulwich College and Cambridge University; was dean of the faculty of law in the University of Melbourne, 1889–92, and Queen Victoria professor of law in University College, Liverpool, 1892–96. He was reader in English law at Oxford, 1896–1903; and is now principal and director of studies of the Law Society. He is widely known as a writer on English law, his works comprising 'Constitutional Experiments of the Commonwealth' (1891); 'The Doctrine of Consideration in English Law' (1893); 'Outline of English Local Government' (1895); 'Law and Politics in Middle Ages' (1897); 'A Short History of Politics' (2d ed., 1900); 'Parliamentary England, 1660–1832' (1903); 'Digest of English Civil Law' (1907–14); 'Husband and Wife in the Law' (1909); 'Short History of English Law' (1912).

JENKS, Jeremiah Whipple, American political economist: b. Saint Clair, Mich., 2 Sept. 1856. He was graduated from the University of Michigan in 1878, and subsequently studied in Germany, at the University of Halle. He then studied law and was admitted to the Michigan bar. In 1879–83 he was professor of Greek, Latin and German in Mount Morris College, Illinois; in 1886–89 was professor of political science and English literature at Knox College, Galesburg, Ill.; in 1889–91 professor of political economy and social science at Indiana University; and 1891–1912 professor of political economy and politics at Cornell University, Ithaca, N. Y.; in 1912 he became professor of government and director of the division of public affairs at New York University. In 1899–1901 he was expert agent for the United States Industrial Commission on investigation of trusts and industrial combinations in United States and Europe, and consulting expert for the Department of Labor on the same subject. In 1902 he was special commissioner of the United States War Department to investigate questions of currency, labor, internal taxation and police in the Orient. In 1903 he went to Mexico to consult with the Minister of Finance in regard to a change of the financial system. In 1903–04 he was a member of the United States Commission on International Exchange in special charge of reform of the currency in China. In 1907–10 he was a member of the United States Immigration Commission, and in 1906–07 was president of the American Economic Association. He is chairman of the board of directors of the Alexander Hamilton Institute. He has written 'Henry C. Carey als Nationalökonom' (Jena 1885); 'The Trust Problem' (1900; 6th ed., 1912); 'Report Industrial Commission Industrial Combinations in Europe' (Vol. XVIII, 1901); 'Report on Certain Economic Questions in the English and Dutch Colonies in the Orient' (1902). He is editor and part author of 'Reports of the United States Industrial Commission on Trusts and Industrial Combination' (Vol. I, 1900; Vol. XIII, 1901). He compiled 'Statutes and Di-

gested Decisions of Federal, State and Territorial Law Relating to Trusts and Industrial Combinations' (2 vols., 1900), and is part author and compiler of 'Reports of Commission on International Exchange' (1904, 1905); 'Citizenship and the Schools' (1906); 'Great Fortunes, the Winning, the Using' (1906); 'The Political and Social Significance of the Life and Teachings of Jesus' (1906); 'Life Questions of High School Boys' (1908); 'Principles of Politics' (1909); 'Governmental Action for Social Welfare' (1910); 'The Immigration Problem,' with W. Jett Lauck (1913; 4th ed. 1917); 'The Making of a Nation'; 'The Testing of a Nation's Ideals,' with Prof. Charles F. Kent (1915); 'Personal Problems of Boys Who Work' (1913); 'Business and the Government' (1917). He is a frequent contributor to periodical literature on economic and political questions. He is recognized as one of the foremost authorities on the trust question, and his writings are marked by scholarly and accurate investigation, combined with unusual simplicity and clearness of statement.

JENKS, Tudor, American editor and author: b. Brooklyn, N. Y., 7 May 1857. He was graduated from Yale in 1878, from the Columbia Law School in 1880, studied art in Paris in 1880–81, practised law in New York in 1881–87, and in 1887 became a member of the staff of the *Saint Nicholas Magazine* until 1902. His writings include many magazine contributions in prose and verse, and a number of books for young readers. In 1912 he resumed law-practice.

JENKS, William, American Congregational clergyman: b. Newton, Mass., 25 Nov. 1778; d. Boston, 13 Nov. 1866. He was graduated at Harvard in 1797 and was ordained in 1805, serving as pastor at Bath, Me., in 1805–17. In the meantime he was a chaplain in the War of 1812 and was for three years professor of Oriental and English literature at Bowdoin College. He settled in Boston in 1818, engaging in special work among the seamen, and founding a free chapel for them which grew into the Mariner's Church and Sailors' Home, and was the foundation of the City Missionary Society. He was pastor of the church in Greene street in 1826–45. He was a founder of the American Oriental Society, and was for many years corresponding secretary and senior vice-president of the American Antiquarian Society of Worcester, Mass. Author of 'A Commentary on the Bible,' 120,000 copies sold (5 vols., 1834; 6 vols., 1851); 'Explanatory Bible Atlas and Scripture Gazeteer' (1849).

JENNER, jĕn'ẽr, **Edward,** English physician, discoverer of vaccination as a preventive of the smallpox: b. Berkeley, Gloucestershire, 17 May 1749; d. there, 26 Jan. 1823. Having adopted the medical profession, he visited London to attend the lectures of the celebrated anatomist, John Hunter, in whose family he resided for two years. Returning to the country, he settled at Berkeley to practise his profession. His investigations concerning the cowpox were commenced about 1776, when his attention was excited by the circumstance of finding that some individuals to whom he attempted to communicate the smallpox by inoculation were not susceptible to the disease; and on inquiry he found that all such patients, though they had never had the smallpox, had undergone the casual cowpox, a disease common among the farmers and dairy-servants in Gloucestershire, who had some idea of its preventive effect. Other medical men were aware of the prevalence of this opinion but treated it as a popular prejudice; and Jenner seems to have been the first who ascertained its correctness, and endeavored to derive from it some practical advantage. He discovered that the *variolæ vaccinæ,* or cowpox, as the complaint has been since termed, could be propagated from one human subject to another by inoculation, rendering all who passed through it secure from the smallpox. In 1798 he published a short treatise — 'An Inquiry into the Cause and Effects of the Variolæ Vaccineæ' — and in July 1798, Cline, surgeon to Saint Thomas' Hospital, introduced vaccination into that institution. The practice was adopted in the army and navy and in the country generally, and soon spread to other countries, and honors and rewards were conferred on the author of the discovery. In 1802 a parliamentary grant was made to him of the sum of £10,000, and five years later a second grant of £20,000. Besides the treatise already mentioned, and 'Further Observations on the Variolæ Vaccinæ or Cow-Pox' (1799) Jenner also published various letters and papers on the same subject, as well as on others. A famous paper of his on the cuckoo appeared in the 'Philosophical Transactions' in 1788. Consult Baron, 'Life of Jenner'; Creighton, 'Jenner and Vaccination' (1889); Crookshanks 'History and Pathology of Vaccination' (1890). The last-named work contains reprints of the 'Inquiry,' the 'Further Observations,' and other papers by Jenner. See VACCINATION.

JENNER, Sir William, English physician: b. Chatham, 1815; d. London, 11 Dec. 1898. He was educated at University College, London, became in 1849 professor of pathological anatomy, and in 1860 of clinical medicine in that institution, and in 1861 physician to the queen. From 1863–72 he was appointed professor of the principles and practice of medicine in University College and in 1868 was created a baronet. He wrote various papers on specific diseases, and was the earliest to establish the difference in kind between typhus and typhoid fevers.

JENNET, a small Spanish horse with a strain of Arabian blood, of high reputation for its beauty of form and its speed. The name is of English and French usage and was perverted from its original meaning, designating a horseman of a Barbary tribe noted for its splendid cavalry.

JENNINGS, Herbert Spencer, American zoologist: b. Tonica, Ill., 8 April 1868. He was graduated at the University of Michigan in 1893 and studied afterward at Harvard and at Jena. He received an honorary LL.D. from Clark University in 1909. He engaged in teaching botany and zoology, was assistant professor of zoology at the University of Michigan in 1900–03 and at the University of Pennsylvania in 1903–05. He was appointed professor of experimental zoology at Johns Hopkins University in 1906 and since 1910 he has been Henry Waters professor of zoology and director of the laboratory there. He was director of the United States Fish Commission's Biological Survey of the Great Lakes in

1901, and in research work has specialized on the physiology of micro-organisms and animal behavior. He is associate editor of the *Journal of Experimental Zoology*, of *Genetics* and of the *Journal of Animal Behavior*. Author, with Jacob Reighard, of 'The Anatomy of the Cat' (1901); 'Behavior of Lower Organisms' (1906).

JENNINGS, Louis John, Anglo-American journalist, author and politician: b. London, 1836; d. there, 9 Feb. 1893. He was on the staff of the London *Times* in London, India and New York from 1860 until 1867, when he became editor of the New York *Times*. He attacked the Tweed Ring in the columns of the *Times* and was largely instrumental in bringing its activities to an end. In 1876 he resumed his residence in England, where he became reader for the publishing house of Murray and acted as representative of the New York *Herald*. He represented Stockport in Parliament in 1885–86. Author of 'Eighty Years of Republican Government in the United States' (1868); 'Field Paths and Green Lanes' (1877); 'The Millionaire: A Novel' (3 vols., 1883); 'Mr. Gladstone: A Study' (1887), etc. He edited Lord Randolph Churchill's 'Speeches with Notes and Introduction' (1889).

JENNINGS, Samuel, American colonial Quaker preacher: d. 1708. In 1680 he came from Buckinghamshire, England, to Burlington, N. J., and was governor of West Jersey in 1683. Becoming entangled in religious controversy he opposed the Quaker schismatic, George Keith, and in London in 1694 supported the action of the American Friends in regard to Keith. On returning to America he often made preaching tours through the various colonies, and after the recall of the English governor, Lord Cornbury, aided in restoring public order in the affairs of West Jersey.

JENNINGS, Sarah, DUCHESS OF MARLBOROUGH. See MARLBOROUGH, DUKE OF.

JENNINGS, La., town and parish-seat in Jefferson Davis Parish, 40 miles west of Lafayette, on the Mermenteau River and on the Southern Pacific Railroad. It is situated in a productive fruit, rice and lumber district, has rice- and saw-mills, and manufactures oil-well supplies. It adopted the commission form of government in 1913. Pop. 4,000.

JENSEN, Wilhelm, German author: b. Heiligenhafen, Holstein, 15 Feb. 1837; d. Munich, 24 Nov. 1911. He received his classical education at Kiel and Lübeck and studied medicine at Kiel, Würsburg and Breslau, but abandoned the profession of medicine for literature. He engaged in further private study, and for a time lived in Munich where he was in touch with the leading men of letters. He lived in Stuttgart in 1865–69, editing the *Schwabische Volks-Zeitung*, and at Flensburg he edited the *Norddeutsche Zeitung* in 1869–72. He was a resident of Kiel in 1872–76, of Freiburg in 1876–88 and from 1888 lived in Munich. He was the author of more than 100 works, including fiction, narratives and tragedies. Among them are the novels 'Die Braune Erica' (1868); 'Barthenia' (1877); 'Karin von Schweden' (1878); 'Götz und Gisela' (1886); 'Heimkunft' (1894); 'Luv und Lee' (1897); the narratives 'Aus den Tagen der Hansa' (1885); 'Heimath' (1901); the tragedies 'Dido' (1870); 'Der Kampf für's Reich' (1884), etc.

JEOPARDY, a law term covering the peril to a defendant involved in the course of a trial for a criminal offense; generally used in connection with the United States constitutional provision that no person shall twice be put in jeopardy for the same offense. Jeopardy in the legal sense is usually construed to begin for the defendant when a trial jury is impaneled and sworn to try the case and give a verdict. There are, however, some cases in which it has been held that jeopardy does not attach until after a verdict has been reached.

JEPHSON, jĕf'son, **Robert,** British poet and dramatist: b. Ireland, 1736; d. Blackrock, near Dublin, 31 May 1803. He served in the British army, attained the rank of captain of infantry and retired on half pay about 1763. For the succeeding four years he was the guest of William Gerard Hamilton and was highly popular in a circle of friends which included Garrick, Goldsmith, Reynolds, Johnson, Burke, Burney and Charles Townshend. He was appointed master of the horse to the lord-lieutenant of Ireland in 1767, thereupon removing to Dublin, where he held this position under 12 viceroys. From 1778 he held a seat in the Irish Parliament. As master of the horse he was granted a permanent pension of £300 which was afterward doubled. Most notable among his tragedies are 'Braganza' (Drury Lane 1775), which was highly praised by Walpole, and the 'Count of Norbonne' (Covent Garden 1781), in which Kemble later made a great success. Among his other tragedies are 'The Law of Lombardy' (1779); 'The Conspiracy' (1796). A series of articles published in the *Mercury*, defending with much wit and vivacity the administration of Lord Townshend as viceroy, was later published in book form, 'The Bachelor, or Speculations of Jeoffry Wagstaffe.' He wrote several farces, comedies and a musical comedy; the heroic poem 'Roman Portraits' (1794); and a satire on the excesses of the French Revolution, 'The Confessions of Jacques Baptiste Couteau' (2 vols., 1794).

JEPHTHAH, jĕf'thą, in Jewish history one of the judges of Israel (Judges xi, xii). He was a son of Gilead, and was driven from home by his brothers, but when the Ammonites made war against Israel was summoned to defend his countrymen. Jephthah after trying conciliatory measures without success, put himself at the head of the Israelites, and defeated the enemy. He had made a vow that if he was victorious he would sacrifice to God as a burnt-offering whatever should first come to meet him from his house. He was met by his daughter, his only child, whom he accordingly sacrificed to the Lord (Judges xi, 29, 40). The way in which the vow was kept has given rise to much controversy, some authors maintaining that Jephthah put his daughter to death; others that he devoted her to perpetual virginity; others that he actually sacrificed her as a burnt-offering, and that, though prohibited by law of Moses, these human sacrifices occasionally took place. He was judge for six years and was buried in Gilead. The best commentaries on Judges are by Moore and Budde.

JEPSON, Edgar, English novelist: b. London, 28 Nov. 1864. He was educated at Oxford and has published 'Sibyl Falcon' (1895); 'The Passion for Romance' (1896); 'The Keepers of the People' (1898); 'On the Edge of the Empire' (1900); 'The Horned Shepherd' (1904); 'The Lady Noggs' (1905); 'The Triumphs of Tinker' (1905); 'Tangled Wedlock' (1906); 'Arsène Lupin' (1908); 'The Girl's Head' (1910); 'The Gillingham Rubies' (1915); 'The Man Who Came Back' (1915); 'The Night Hawk' (1916); 'Esther Lawes' (1916).

JEQUITINHONHA, zhā'kē-tē-nyō'nyą, or **RIO GRANDE DO BELMONTE,** Brazil, river in the eastern coast country. It rises in the Serra do Espinhaco in the state of Minas Geraes, and flows in a northeasterly direction through the state of Bahia, emptying into the Atlantic near Belmonte, 200 miles below Bahia. The river is about 400 miles long and in the upper three-quarters of its course the current is swift. At Salto Grande, about 100 miles from the coast, is a cataract which is considered one of the grandest in South America. The river is navigable for about 60 miles from the coast.

JEŘÁBEK, yĕr'zhā-bĕk, **František,** Bohemian dramatist: b. Sobotka, 25 Jan. 1836; d. Prague, March 1893. He was educated at Leitmeritz and at Prague, and afterward engaged in teaching, journalism and the writing of plays. He edited *Pokrok* and was at different times a member of the Bohemian Diet and the Austrian Reichsrat. He was author of a history of the beginnings of romantic poetry, 'Stará doba romantickeho básnictvi' (1884). His dramas deal with social problems and include several based upon historical facts. Among them are 'Hana' (1858); 'Vesclohra' (1861); 'Služebnik svého paná,' 'Faithful Servant of His Master' (1870; Ger. trans., 1872); 'Syn člověka,' 'The Son of Man' (1878); 'Závist' (1885), etc.

JERAHMEEL, jĕ-rā-mē-ĕl, the name of a tribe friendly with David when he was in exile in Ziklag. Their founder is supposed to have been the brother of Caleb, the intimate of Joshua. The tribe is supposed to have penetrated Israel quite thoroughly and it is T. K. Cheyne's theory that many corruptions of the Old Testament text came from them. Some other Old Testament scholars have felt that Dr. Cheyne carried his theory to an extreme and saw Jerahmeelites in every Hebrew bush and root. Consult his article in the 'Encyclopædia Biblica,' and his various books on the Psalms.

JERBA, or **GERBI,** Africa, island in the Gulf of Cabes, off the east coast of Tunis, occupied by the French since 1881. Its greatest length is 20 miles and its area is 425 square miles. The land is level and the soil fertile but without either springs or rivers, the water supply depending upon wells and cisterns. The chief town, which forms the capital, market-town and seaport, is Haumt-et-suk, situated on the north side of the market. There is a fort built by the Spaniards in 1824 and a modern French fort with a French garrison. At El Kantara are extensive ruins believed to be those of the ancient Roman seaport Meninx. The island is the Lotophagitis, or Lotus-eaters' Island of the Greeks and Romans. The population consists in the main of Berbers. Industries include the raising and export of dates, olives and other fruits, the manufacture of silk-and-wool materials and a fine white pottery, and there is a sponge market open from November till March. Pop. about 45,000.

JERBOAS, jĕr-bō'ąz or jĕr'bō-ąz, small rodents of the family *Dipodidæ,* found in the sandy plains of Africa, Russia and southern Asia, and represented by a few species in North America. Their most prominent peculiarity is the great length of the hind legs, especially in the metatarsal portion, so that they look like miniature kangaroos. They walk ordinarily on their two hind feet, but when alarmed escape danger by long leaps. They are fawn-colored, as a rule, with long, slender tails, large ears, big eyes and nocturnal habits. They dwell in underground burrows and tunnels, many of which, more or less connected, are likely to be found together. Their food is mainly vegetable, but they also eat insects, eggs, etc.; they hibernate in cold climates, do not store food and are the prey of foxes, jackals, wildcats, serpents and Arab children. The most familiar species of jerboa is the Egyptian form (*Dipus ægypticus*), found in North Africa in arid places. The jumping-hare of South Africa (*Pedetes capensis*), and its ally, the jumping-mouse of North America (*Zapus hudsonius*), are also well-known examples of the family. The latter is a reddish "mouse," white underneath, which abounds all over the temperate parts of the country, and is easily recognized by its bounding gait. It is one of the longest and soundest of winter sleepers, preparing for its dormancy a warm ball-like nest of grass lodged in a bush or among strong weeds. Gerbils (q.v.) of Africa and India are often confused with jerboas, but are a group of true mice. Consult Blanford, W. T., 'Fauna of British India: Mammalia' (London 1888-90); Lyon, M. W., 'Comparison of the Osteology of the Jerboas and Jumping Mice' (Washington 1901); Lydekker, 'Royal Natural History' (Vol. III, 1895).

JERDAN, William, Scottish journalist: b. Kelso, Roxburgshire, 16 April 1782; d. Bushey Heath, Hertfordshire, 11 July 1869. He engaged in journalism in London in 1806, was present in the lobby of the House of Commons when Spencer Perceval was shot, 11 May 1812, and was the first to seize the assassin. He became editor of the High-Tory organ, the *Sun,* in 1813, and was complimented in high quarters for the freshness of his foreign news. He introduced, too, the then uncommon feature of almost daily literary articles in his columns. In 1817 he became connected with the *Literary Gazette* as editor and part owner, acquiring sole ownership in 1842, and until 1850 he edited and directed the periodical with exceptional ability. He was closely associated with many prominent writers of his time. His personal fortunes were impaired through the Whitehead Bank failure of 1808 and the panic of 1826, and the dishonesty of a friend to whom he had entrusted investments finally ruined him financially. His friends subscribed a testimonial of more than £900 and in 1853 he was granted a pension of £100 from the civil list. Among his writings the most valuable are 'Autobiography' (4 vols., 1852-53), and 'Men I Have Known' (1866).

JEREMIAH. A great Judæan prophet. He seems to have been born at Anathoth, the modern Anat, three miles north of Jerusalem, c. 650 B.C., and belonged to a priestly family residing there. His father Hilkiah has been identified with the discoverer of the law (2 Kings xxii, 28) by Clement of Alexandria, Pseudo-Jerome (c. 800), Joseph Kimchi, Paul of Burgos, Abarbanel and a number of other interpreters; and V. Bohlen supposed that father and son collaborated in the production of the code promulgated in 620 B.C. This identification was rejected by Lyranus, Calvin, Junius, Piscator and others, because he is not described as the high-priest; Castro, Sanctius, Ghisler, Sebastian Schmidt, Carpzov, Calmet, Venema, Blayney and most recent exegetes have assumed that he was a descendant of Abiathar, the priest deposed by Solomon and relegated to Anathoth (1 Kings ii, 26), and Ryssel thinks the opposition of Jeremiah to the priesthood in Jerusalem was a continuation of the rivalry between the sons of Eli and the Zadokites. It is possible, however, that in the course of four centuries members of other priestly families had moved into the town so conveniently near the capital. Jeremiah had an uncle by the name of Shallum, and a cousin named Hanamel. From Jer. xvi, 1 it may be inferred that he never married. He probably began his prophetic ministry in 625 B.C. When he heard the divine voice calling him to be a prophet to his people, he was first reluctant because of his youth, but was reassured by a vision of an almond tree the name of which suggested that Yahwe would watch over his oracles to bring them to early fulfilment, and forced to speak by a vision of a seething caldron whose smoke was blown from the north, indicating the direction whence the evil would break forth. Until recent times it was generally supposed that the enemy whose advance into Judah Jeremiah expected was the Chaldæan. Allusions to the Scythian invasion described by Herodotus (i, 105) by his contemporary Zephaniah were suspected by Pezron ('Essai sur les prophètes,' 1693), Hermann v. der Hardt ('In Iobum,' 1728) and F. C. Cramer ('Scythische Denkmäler in Palästina,' 1777). Volney ('Recherches nouvelles,' 1814) and Eichhorn (1819) identified Jeremiah's northern enemy with the Scythians, and this opinion has been adopted by the majority of critics and historians. But the older view has been maintained, not only by Kueper, Hävernick, Neumann, Tholuck, Nägelsbach, Keil, Vigouroux, Trochon, Schneedorfer, Knabenbauer and Myrberg, but also by Graf, Reuss, 1814) and Eichhorn (1819) identified Jeremiah himself and many of his hearers looked upon Yahwe's oracles of doom as conditional, so that if the conduct of the people warranted it, he would repent him of the evil he had spoken (xxvi, 17–19). With their ignorance of the secret treaties in the chancelleries of the allied nations, their narrow escape from the Scythians who naturally spared Assyrian territory must have seemed to them more marvelous than it does to us. An increased fear of Yahwe and gratitude toward him, in consequence of his deliverance, may have prepared the way for the reform of 620. Some scholars have supposed that Jeremiah went about preaching in the interest of the centralization of the cult in Jerusalem, and was persecuted by his townsmen because of his advocacy of the Deuteronomic Code. His attitude toward the temple, the sacrificial system, and the written law renders this improbable. It is significant that the prophetess Huldah, and not Jeremiah, was consulted after the discovery of the law-book. If his declaration that "the false pen of the scribes has wrought falsely" (viii, 8) referred to some other code then being prepared in priestly circles, he would have laid himself open to serious misapprehension, since those who said "the law of Yahwe is with us" undoubtedly had in mind the Deuteronomic Code that had been discovered and officially adopted (2 Kings xxii, 8; xxiii, 3). To the covenant of Yahwe, involving obedience to his commandments when he led his people out of Egypt, he sincerely answered Amen (xi, 5); but he was convinced that on that day Yahwe had not spoken concerning burnt-offerings and sacrifices (vii, 22). If the people of Anathoth conspired to put him to death (xi, 19), it was because he had rebuked them for worshiping other divinities, among them probably the goddess Anath. He may at this time have removed to Jerusalem. Practically nothing is known of his life during the next fifteen years. It is strange that the battle of Megiddo and its tragic outcome have left no echo in his extant prophecies. Like Isaiah, he was strongly opposed to any alliance with Egypt; but neither does he seem to have favored a pro-Assyrian policy (ii, 18). His silence may indicate disapproval of Josiah's course, whether it was dictated by loyalty as a vassal or ambition for additional territory as a reward for service. The Chronicler charges Josiah with having disregarded the warning of a pagan oracle not to interfere in a quarrel that was not his (2 Chron. xxxv, 21ff); and even if the story was invented to account for the fate of a good king, it nevertheless reflects a position that may well have been Jeremiah's. He ascribes to the prophet an elegy (vs. 26) which is lost and can scarcely be thought to be genuine. The Assyrian empire fell in 606, and the eyes of Jeremiah turned once more to the north to discover what Yahwe's purpose was. It was probably his unshaken faith in the oracles Yahwe had given him to utter that made it certain to his mind that the real evil would not come from the south (Egypt), but from the north. Nebuchadnezzar's march through Mesopotamia, his victory over Necho at Carchemish in 605, and his descent to the border of Egypt revealed to Jeremiah that it was not Media, into whose power Assyria proper had fallen, but Chaldæa, that was to be the scourge in Yahwe's hand to bring his people to a genuine reformation or to utter ruin. The moral condition of Judah and the character of Jehoiakim rendered the need of such a visitation obvious. It may have been when the defeat of Necho's arms had driven the people with renewed zeal to the Yahwe-cult in the temple that Jeremiah appeared with an oracle predicting the destruction of the great sanctuary in whose inviolability they believed (vii, 1ff).

In 605 Baruch is said to have written in a roll from the mouth of Jeremiah all the words

that Yahwe had spoken to him. The reason for this procedure was probably not that Jeremiah was unacquainted with the art of writing, as Buttenwieser thinks, or as a man of letters found it convenient to dictate to his private secretary from a note-book kept by him for many years, as is generally supposed, but rather, as Stade has pointed out, that he was an inspired oracle-giver whose utterances in a state of ecstacy might be written down by another. The new word of Yahwe contained, no doubt, the substance of many an oracle in the past, but the burden of its message was that the enemy from the north, long ago announced by Yahwe, now distinctly named as the king of Babylon, would come and destroy the land and its inhabitants (xxxvi, 29). When the roll was the following year cut up and burned by Jehoiakim, Jeremiah hid himself, but continued to denounce the king, e.g., for his failure to pay his workmen, and to predict for him an evil death. Nor did he think that Yahwe would help Jehoiachin, who was actually deported in 597. In the time of Zedekiah (597–586), he strenuously opposed the Egyptian party which advocated independence, and finally persuaded the king to open rebellion against Nebuchadnezzar. Another prophet, Hananiah, announced in the name of Yahwe that Jehoiachin and the exiles would return in two years; Jeremiah declared that the exile would last 70 years, and is said to have threatened Hananiah with death within a year. In 587, when Nebuchadnezzar temporarily raised the siege of Jerusalem, Zedekiah requested the prophet to consult Yahwe, and received the advice to surrender. At this time his indignation was aroused by the reduction to slavery again of freedmen emancipated at the approach of the Chaldæans. As he counseled desertion to the enemy, and by his speeches "weakened the hands of the men of war," he was imprisoned, and an attempt was apparently made to put him to death. When the city was captured he was allowed to remain in Palestine with his people. How long he survived the fall of Jerusalem is not known. After the murder of Gedaliah he is said to have been forced to accompany a number of fugitives into Egypt, and to have predicted at Daphnæ the conquest of Egypt by Nebuchadnezzar, the massacre or deportation of its people, the burning of its temples and the destruction of all the Jews in Migdol, Daphnæ, Memphis and Upper Egypt. The Elephantine papyri, discovered in 1904, have revealed the fact that there was a Jewish military colony on the island opposite Syene, having a temple of its own in 526 and continuing its existence throughout the 5th century. It probably was brought into the country by Psammetichus I. This colony was certainly not destroyed by Nebuchadnezzar. We possess no evidence of a conquest of Egypt by this king. The account of Nesu Hor, governor of Syene, was once supposed to allude to it, but it is now generally recognized that it refers to a rebellion of Libyan, Greek and Syrian garrisons in the cataract district. A badly mutilated cuneiform inscription from the 37th year of Nebuchadnezzar mentions a conflict with a king of Egypt of whose name only the syllable *su* is legible. Wiedemann and others thought that the original text must have told of a raid into Egypt. But Maspero, 'Histoire ancienne' (1899) and Breasted, 'History of Egypt' (1905) seem to be right in maintaining that no inference can be drawn except the dispatch by Amasis of naval and land forces to meet the Chaldæans and a probable loss of Syrian territory. We now know that the colony at Elephantine was not annihilated or carried away by Nebuchadnezzar, and that it continued to worship other gods besides Yahwe in a temple which was not destroyed even by Cambyses, but ruined by the priests of Chnub from Syene in 411. It may have been broken up when Egypt recovered its independence in 404; and it is not improbable that a later Palestinian writer, knowing that there had been exiles in various parts of Egypt in the time of Jeremiah, but as ignorant in regard to the history of the Jews of Elephantine as the modern world was until 1904, supposed that the earlier colonies had been destroyed by Nebuchadnezzar, and put upon the lips of the prophet oracles announcing their doom. Some interpreters who, like Duhm, are strongly convinced that as a whole these oracles cannot have come from Jeremiah, nevertheless assume a small genuine nucleus. If they are right, Jeremiah's latest prognostications were no more destined to a literal fulfilment than some of the earlier ones. Most students recognize to-day that his greatness as a prophet does not depend upon the accuracy with which he was able to foretell future events. History does not record when, where and in what manner he died. According to a legend preserved by Tertullian, Jerome, Epiphanius and Isidore of Pelusium, he was stoned to death by his people in Daphnæ, while others relate that he was brought from Egypt to Babylon by Nebuchadnezzar or returned with Baruch to Palestine. In 2 Macc. ii, 4ff, he is said to have hidden the tabernacle, the ark and the altar of incense in Mount Nebo, and in 2 Macc. xv, 12ff he appears to Judas Maccabæus, presenting him with a sword. Numerous other stories have been collected by Neumann ('Jeremias von Anathoth,' 1856) and Ginzburg ('Jewish Encyclopædia,' 1904).

The estimate of Jeremiah is necessarily affected by the evidential value assigned to the various parts of the book that bears his name. Renan considered him as a fanatic filled with hatred of the human race; but this judgment was based upon oracles against foreign nations which probably are not his. The opinion of Maurice Vernes that a prophet who gave his people the counsel to surrender is a historically impossible character arises from a failure to recognize the highest type of patriotism, and the tendency of religious genius to subordinate all considerations of state to the demands of the divinity. Certain charges of cowardice, disingenuousness, partisanship and personal animosity are in a large measure based on stories which are perhaps too unquestioningly accepted as in every detail accurate. His physical courage may not have been always equal to his spiritual boldness; he may not have been altogether free from vindictiveness, and Bennett wisely warns against picturing Hananiah and the Egyptian party as absolutely black, Jeremiah and the Chaldæan party as absolutely white. His strong sense of being in the right made him firm as a wall when the occasion de-

manded it, and also made the patriotic ardor of his opponents seem like treason against Yahwe. The popular conception of him as the «weeping prophet» is largely derived from Lamentations. There is no mistaking, however, his prevailing sadness and his tenderness of heart. The idea that he foretold a new covenant, the restoration of the monarchy, and a boundless material prosperity is based on oracles that probably were not uttered by him. It was given to this prophet to see more clearly than his predecessors how independent real religion and true morality are of the ceremonies of a temple cult, the external authority of a written law, and the shifting fortunes of political society, to enter fresh fields of spiritual experience and to open new paths of personal piety.

NATHANIEL SCHMIDT,
Professor of Semitic Languages and Literatures, Cornell University.

JEREMIAH, Book of. One of the canonical books of the Old Testament. In the Hebrew Bible it once occupied the first position among the later prophets. A tradition preserved in 'Baba bathra,' 14b, 15a, gives the following order of these prophets: Jeremiah, Ezekiel, Isaiah and The Twelve. Vitringa suggested that Jeremiah was made to follow the books of Kings, because these were also ascribed to the prophet. Some modern scholars have thought that Isaiah was put in the third place because it contains many late additions; but these were not recognized as such, and the whole book was clearly assigned to the age of Hezekiah. The Babylonian Talmud explains the order by declaring that "the book of Kings ends in desolation, Jeremiah is all desolation, Ezekiel begins with desolation and ends with consolation, and Isaiah is all consolation." ('Baba bathra,' 14b). A manner of reasoning that would thus account for an existing order is not unlikely to have influenced the original arrangement, since the principle of placing words of comfort after words of reproof is characteristic of editorial activity not only in the larger volumes but also in the smaller collections that were gathered together to form them. But as late as the 1st century A.D. each book seems to have been written on a separate roll (Luke iv, 17), and in enumerating them the order apparently varied, as is seen in the Greek Bible and its daughter-versions where Isaiah precedes Jeremiah and Ezekiel and even Daniel is still counted among the prophets.

The Hebrew text found in our extant manuscripts presents substantially, so far as the consonants are concerned, the book as it was officially recognized in the Palestinian synagogues in the 2d century A.D., while the vocalization exhibits the tradition prevalent in the 7th. The translations into Syriac, into Greek by Aquila, Symmachus and Theodotion, and into Latin by Jerome, as well as the Aramaic Targum, testify in the main to this type. On the other hand, the earliest Greek translation, from which the Old Latin, Coptic, Ethiopic, Armenian, Georgian, Slavonic and Syro-Hexaplaric versions were made, seems to bear witness to a Hebrew text considerably shorter and in part differently arranged. Passages of some length, such as xvii, 1–4, xxvii, 19–22, xxix, 16–20, xxxiii, 14–26, xxxix, 4–13 and lii, 28–30, and others are not represented in it, and numerous duplicated utterances, single verses and words are lacking. It has been estimated that the Greek version is about one-eighth shorter than the Hebrew text. The prophecies against foreign nations, xlvi–li, are placed in the middle of the volume between xxv, 13 and xxv, 15, and the order of the nations is different. These facts have been explained in various ways. The substantial accuracy of the masoretic text has been defended and the translator himself or later copyists charged with wilful alterations, omissions and blunders by Jerome, Grabe, Spohn, Kueper, Hävernick, Wichelhaus, Nägelsbach, Graf, Keil, Frankl, Vatke, Reuss, Orelli, Payne Smith, Kühl, Strack, Kaulen, Trochon, Schneedorfer and Cornely. That the Greek version actually represents a briefer and more original Hebrew text has been the opinion of J. D. Michaelis, Eichhorn, Dahler, Movers, De Wette, Hitzig, Bleek, Neteler, Scholz, Workman, Streane, Stade, Schwally, Coste, Cheyne, Giesebrecht, Schmidt, Duhm, Baudissin, Erbt, Thackeray, Gautier, Gigot, Cornill, Peake, Sellin and Moore. Some Catholic scholars have not improperly compared the additional material in the Hebrew text with the additions to Daniel and Esther in the Greek text. In both instances we have probably to deal with interpolations and expansions already extant in the language of the original, preserved in one case by the Hebrew and the later versions, in the other by early as well as late Greek translations, but not in the Hebrew or Aramaic. The question has been raised whether there was only one Greek version of Jeremiah before the days of Aquila, Symmachus and Theodotion. Not only Justin but also Josephus and some of the New Testament writers seem to have used a translation more in accord with the masoretic text than that presented by the great uncials. It is almost certain that the author of Rev. xviii, 20, knew and imitated Jer. i, 48, and that Matt. xxvii, 32,

betrays an acquaintance with Jer. x, 7, 10. Probably Theodotion made his translation on the basis of a version already extant in the 1st century A.D. The theory of an Egyptian and a Palestinian recension, advocated by Michaelis, Eichhorn, Movers and others, has now been generally abandoned, and recent critics simply assume that we possess in the Old Greek and the Hebrew two phases, both of them relatively late, of the development of the same text.

These conclusions have naturally strengthened the suspicion of other additions to the original made before the first translation appeared. David Kimchi, Abrabanel, Luther, Calvin, Grotius and Huet considered the statement "Thus far are the words of Jeremiah" in li, 64, as showing that no part of lii was written by the prophet, and Richard Simon inferred that Jeremiah was not the only author of the book. It is generally held to-day that this chapter was either copied from 2 Kings xxv or from a source also used by the author of this work. The prophecy against Babylon, l–li, has been regarded as coming from a later hand by Eichhorn, v. Coelln, Gramberg, Maurer, Knobel, Ewald, S. Davidson, Rowland Williams, Kuenen, Herzfeld, Budde, Cheyne, Reuss, König, Driver, Kautzsch, Strack, Vatke, Wildeboer, A. B. Davidson, Schmidt, Duhm, Erbt, Baudissin, Bruston, Cornill, Bennett, Gigot, Findley, Peake, Moore, Fowler, Sellin and Creelman. Its genuineness has been defended by Kueper, Umbreit, Hävernick, Bleek, Riehm, Nägelsbach, Keil, Graf, Trochon, Kaulen, Knabenbauer, Cornely, Myrberg and Orelli. Movers, De Wette, Hitzig, Scholz and others have assumed a small Jeremianic nucleus, but the evidence seems to be strongly against this assumption. Eichhorn also expressed grave doubts as to the prophecies against foreign nations in xlvi–xlix, and they have been assigned to a later period by Vatke, Stade, Schwally, Wellhausen, Smend, Budde, Schmidt, Duhm and Marti. Many scholars, like Hupfeld, Kuenen, Rowland Williams, Cheyne, Giesebrecht, Bleecker, A. B. Davidson, Cornill, Driver and Peake, have attempted to vindicate for Jeremiah some part, greater or smaller, in the composition of these chapters, while others have sought to maintain that they are altogether his, but there is a growing impression of an irreconcilable conflict between the spirit animating them and the tone and tenor of the universally recognized utterances of Jeremiah. A sense of this contrast seems to have been felt in early times when the promises of restoration were added, xlvi, 26, xlviii, 47, xlix, 6, and xlix 39 which were still absent (probably also in xlix, 39) in the copy the first translator used.

Movers, De Wette and Hitzig noticed in xxx–xxxi a strong affinity to Isaiah xl–lxvi, and suggested that the author of the latter had edited and interpolated the former. Hupfeld ('Einleitung in das Alte Testament,' 1859; MS. in the writer's possession) suspected the two chapters of being altogether spurious "because of their close kinship to Pseudo-Isaiah"; Vatke, Stade, Smend, Schmidt and Hölscher reached the same conclusion, partly for other reasons, and Duhm and Cheyne rejected most of this work, including xxxi, 31–34, which is looked upon by many others as the Jeremianic kernel. The Aramaic verse, x, 11, was supposed by Houbigant and Venema to have been added by a later hand; the secondary character of the whole section, x, 1–16, has since then been recognized by many; and the same applies to iii, 16–18, xii, 14–17, xvii, 19–27, and other passages. A number of minor poems, psalm-fragments and elegies were marked by Stade ('Geschichte Israels,' 1889) as interpolations. Some of them have been claimed for Jeremiah by Duhm on metrical grounds. Seeing that these "confessions" have been widely used in the characterization of Jeremiah's inner life, a more searching examination of them is greatly needed. As to the historic parts, Hupfeld considered xl, 2–xlii, 6, as a later insertion, and A. B. Davidson declared xlii, 7–22, "on account of its rather debased style and other peculiarities" to be "a free construction from the hand of the historian." This sketch has been much admired for its life-likeness, and in its original form may have revealed more of the narrator's art, though this is not considered by all critics as in itself vouching for its accuracy. Pierson pointed out many apparent inconsistencies and improbabilities in the various narratives. Several interpreters have suggested that the account of the prophet's journeys to the Euphrates (xiii) is an allegory or dramatization of an oracle. Schmidt (1900) looked upon xxxv as having a similar origin, its purpose being to explain the elevation of some Rechabites into a position in the lower clerus, and questioned the age and strictly historical character of some of the other stories. In many instances Duhm (1901) independently reached similar conclusions, and they were in the main approved by Kieser. The effect of the discovery of the Elephantine papyri on this line of investigation has been discussed in the preceding article.

Already Origen and Jerome observed the lack of orderly arrangement in the book. The absence of any chronological or logical sequence seems to preclude the idea of a single author or an intelligent and painstaking editor. The superscriptions assign xxi to the reign of Zedekiah, xxv to that of Jehoiakim, xxxii and xxxiv to that of Zedekiah, xxxv and xxxvi to that of Jehoiakim, xxxvii–xxxix to that of Zedekiah, and xlv to that of Jehoiakim. Even the shorter text contains numerous duplicates. From i, 3 Grotius inferred that xl–li once formed a separate book. Spinoza assumed that the prophecies are scraps collected without arrangement from different historians, and pointed to a problem in the relations of xxi and xxxviii that has not yet been satisfactorily solved. Eichhorn (1777) supposed that as late as in the time of Josephus ('Antiquities,' x, 79) there were two distinct books of Jeremiah, viz., (1) i–xxiv and xlvi–li and (2) xxvi–xlv. The passage in Josephus is obscure, and another in Sifre debe Rab seems to refer to the book of Jeremiah and Lamentations. Thomas Paine ('The Age of Reason,' 1798) added to Spinoza's difficulties and concluded that the book is "a medley of detached and unauthenticated anecdotes." Bertholdt (1816) assumed that there were three collections, viz., (1) i–xxiv, (2) xxv, xlvi–li and (3) xxvi–xlv. De Wette and others called attention to the uncertain and sometimes even un-Hebraic character

of the many subheadings. Aside from the prophecies against foreign nations, Ewald counted 23 such headings and regarded them as marking divisions of the book. Schmidt (1900) considered them, like the titles in Isaiah and the Psalms, as clues to the smaller collections, often indicated also by additions at the end. Thackeray (1903) reached the conclusion that i–xxiv and the prophecies against Elam, Egypt and Babylon once formed a book that was first translated into Greek, the prophecies against the lesser nations and the rest of the volume forming another which was subsequently rendered into Greek by the same hand that translated the first part of Baruch. In the light of these investigations the larger collections from which the book was formed appear to have been (1) i–xx; (2) xxi–xxiv; (3) xxv, 1–13, xlvi–li, xxv, 15–38; (4) xxvi–xxix; (5) xxx–xxxiii; (6) xxxiv–xxxix; (7) xl–xlv, and the appendix lii. Of these (1) was no doubt the earliest, itself composed of several smaller collections, but united into a book of which i, 1f. was the superscription, ascribing it to the 13th year of Josiah. When (2) was added the title was probably supplemented with i, 3. There were apparently two collections of oracles against foreign nations, viz., (1) xlix, 34–39, xlvi, 1–li, with its prologue, xxv, 1–13, and (2) xlvii, xlix, 1–33, xlviii, with its epilogue xxv, 15–38, of which the former was attached to the book first translated, while the latter, once circulating separately, was made the beginning of another large volume. In (4) xxvii–xxix by peculiarities of spelling that cannot have been arbitrarily limited by the copyist of the whole book to this section shows a separate origin; in (5) xxx–xxxi is referred to as a book; and in (7) xlv is clearly an appendix. Before the end of the 2d century B.C. the entire work, including lii, was available in Greek, while probably in the next century all the oracles against foreign nations were placed in some standard codex toward the close and in a somewhat different order between xlv and lii, and many more words were added in various parts. Even if this conception of the growth of the book, in some respects analogous to that now generally held in regard to the book of Isaiah, is accepted, the problem remains how genuine Jeremianic oracles and trustworthy accounts of the prophet's life found their way into these collections. It is supposed by many scholars that Baruch's roll (xxxvi, 1 ff.) can be reconstructed by selecting those passages in the present book that may be considered as earlier than the 4th year of Jehoiakim, removing from them later accretions, and arranging them in a probable chronological order. But that roll, read three times in a day, cannot have been very extensive, and obviously had a special purpose. The only words that we know to have been in it (xxxvi, 29), and to which Jehoiakim strenuously objected, are not found anywhere in the sections that can be considered. Dahler and Herbst, therefore, maintained that it is in vain to look in the earlier chapters for the particular message of Baruch's roll. Grätz and Cheyne thought of xxv as containing its substance, a chapter now regarded by many as secondary; and Schmidt also considered it impossible to discover its precise contents. But as on this occasion the inspired utterance was taken down by Baruch, it is reasonable to suppose that on other occasions this friend or other disciples committed to writing oracles that fell from the prophet's lips. The existence of such reports, afterward expanded by many words like unto them, would account for the lack of any chronological or topical arrangement. It has been thought that a sketch of the prophet's official career was written by Baruch. The manner in which he is mentioned in xxxvi, xliii and xlv and his reputed authorship of other books have made this conjecture appear quite natural. It is altogether likely that Baruch wrote down some words of the prophet even after 605–604, and not impossible that some communications coming from him formed the nucleus of the historical sketch that existed in later times and was used by the compilers. But there is no claim or suggestion of either in the book itself. Some scholars have found a hint of it in xlv, the scribe adding to his work a rebuke and a promise that no one but himself could have known. Cornill has ingeniously suggested that the great thing he sought for himself was the deliverance of Judah from the doom announced in the roll. From Jeremiah's standpoint that was not possible except through the conversion of Jehoiakim and his people to the policy of nonresistance and subjection to the Chaldæans. But why should he not seek this, what other purpose can Jeremiah have had in sending him with the roll, and how could this be described as a selfish design? Giesebrecht, Duhm and Erbt reject the date given and place the incident after the destruction of Jerusalem, without making it more intelligible. Reuss questioned it, and Schwally regarded it as spurious. It is natural that a private oracle, designed to account for Baruch's escape, should have been placed at the end of the 7th collection, just as a similar oracle (xxix, 15–18) was placed at the end of the 6th. While it is, therefore, impossible to affirm dogmatically, what is at best only a theory, that certain parts of the present book have been copied from Baruch's roll and others taken from a biography written by him, it is wholly probable that we owe to him and such as he the preservation of some of the oracles uttered by Jeremiah, in 625 when the Scythian came down from the north and later in the reign of Josiah, as well as in the days of Jehoiakim, Jehoiachin and Zedekiah, and also of some facts in regard to his career, sufficient to give us a relatively clear idea of this prophet's message and character.

Jerome described the style of Jeremiah as rustic and inferior to Isaiah's. Lowth observed in some parts of the book the parallelism characteristic, as he saw, of Hebrew poetry. Blayney printed the text so as to bring out this feature, and it has been accepted by most modern interpreters. Thus a line was drawn between the parts written in an easily flowing prose and those having a poetic form. More recently it has been seen that a certain regular recurrence of stressed syllables, consequently a metre, also characterizes, not only such books as Job, Proverbs and Psalms and the poems interspersed in the historic records, but also the oracles of the prophets given in an exalted style. This has been applied to Jeremiah by Müller and Sievers, and more in detail by

Duhm, Cornill and Giesebrecht. A metre that without a question was used predominantly by Jeremiah has been regarded by Duhm as a criterion of genuineness. To some extent this is no doubt legitimate. But when it is considered how readily such a poetic form lends itself to imitation and how easily later scribes may have concealed it by innocent changes and additions, this test must be handled with great delicacy. The temptation to conjectural emendation on purely metrical grounds is strong, but the ancient witnesses to the text always have a first claim to consideration. Yet even this recent study of the prophet as a poet has tended to bring out more fully the force and beauty as well as the grandeur and significance of his oracles. Like the book of Isaiah that of Jeremiah is to modern scholarship a thesaurus of things old and new. Here, also, the great prophet who has given his name to the volume stands out pre-eminent, unrivaled in spiritual insight and power by those whose voices have become blended with his. Just as the seer who was called to meet the needs of his time by speaking comfortably to the heart of Zion, though the influence of his ideas has been very great, by no means has outstripped in power the mighty son of Amoz, so Jeremiah, as we are beginning to see him, is more truly a prophet to the nations than any seer pouring out his cup of fury on the pagan peoples or prognosticating for Judah a new régime of material prosperity, inspiring loyalty to king and law-book. It is doubtful whether without Jeremiah's teaching the idea of a new covenant could have been suggested, which showed its tendency when the Zadokite covenanters emigrated to Damascus, and its real strength when early Christianity went forth to establish a different type of religious communion. But the man himself who strove to free religion from the fetters of ceremonialism and the bondage to nationalism and put it on a foundation that could not be shaken by the fall of temples and of thrones, is likely to be remembered with honor when the pomp of empire and the savagery of war and the middle walls of national partition shall have passed away and given place to the nobler life of man's maturity.

Bibliography.— Commentaries by Origen, Ephraem, Theodoret, Jerome (only i–xxxii), Rhabanus Maurus, Thomas Wallensis, Nicolaus Lyranus, Joseph ben Simeon Kara, Ibn Ezra, Rashi, David Kimchi, Abrabanel, Solomon ben Melek, Zwingli, Oecolampadius, Bugenhagen, Calvin, Strigel, Vatablus, Capella, Sa, Figueiro, Broughton, Polanus, Piscator, Castro, Sanctius, Maldonat, Ghisler, Cornelius a Lapide, Grotius, Malvenda, Hülsemann, Sebastian Schmidt, Alting, Lowth, Calmet, Clericus, Venema, Blayney, Dathe, Rosenmüller, Dahler, Maurer, Hitzig, Ewald, Henderson, Umbreit, Graf, Neumann, Nägelsbach, Le Hir, R. Williams, Payne Smith, Keil, Scholz, Trochon, Plumptre, Cheyne, Schneedorfer, Giesebrecht, Ball and Bennett, Myrberg, Knabenbauer, Duhm, Cornill, Driver, Orelli, Peake. Introductions by Sixtus Senensis, Richard Simon, Carpzov, Eichhorn, Jahn, Augusti, Bertholdt, Horne, De Wette, Hävernick, Herbst-Welte, Glaire, Keil, Davidson, Hupfeld, Bleek, Fürst, Kuenen, Kaulen, Strack, Cornill, Driven, Wildeboer, Baudissin, Mann, Bennett-Adeney, Budde, Gautier, Gigot, Gray, McFadyen, Flower, Moore, Creelman. NATHANIEL SCHMIDT,
Professor of Semitic Languages and Literatures, Cornell University.

JEREMIAH, Lamentations of. A canonical book of the Old Testament. In the Greek Bible and its daughter versions, as well as in the Syriac and the Latin Vulgate, it is designated as the 'Lamentations of Jeremiah,' and it is also described in the Babylonian Talmud as 'Qinoth,' or 'Lamentations'; but in earlier times it was only referred to as 'Ekah,' 'How!' and this has remained its title in the

Hebrew Bible. In the versions it follows the book of Jeremiah, while the tradition preserved in 'Baba bathra' 14b assigned it a position among the miscellaneous writings, or hagiographa, between Canticles and Daniel; when the group of five rolls was formed, it was generally placed between Ruth and Ecclesiastes. Since it was originally anonymous, as it has continued to be in the Hebrew, and the practice grew up of reading it on the 9th of Ab, the anniversary of the capture of Jerusalem by Nebuchadnezzar, it was kept separate in the Palestinian synagogue and not connected with the book of Jeremiah, and consequently could in course of time be united with other rolls also more or less regularly read in public on certain fast and feast days. There is no very marked difference between the masoretic text and the ancient versions, though these are often of considerable value in establishing the original. Only the late Aramaic Targum shows a strong tendency to expansion, not always in good taste. Origen apparently did not have before him the translations of Aquila and Theodotion, though there can be no doubt that this book was also rendered by them, and some readings of Aquila have indeed been recorded in manuscripts (cp. Field, 'Origenis Hexapla,' 1875).

That these lamentations are written in a poetic form is too obvious not to have been observed at all times; but the precise character of this form has only gradually been discerned. The fact that four of the five chapters employ the device of an acrostic invited comparison with the alphabetic psalms, and the peculiar circumstance that ii, iii and iv exhibit in one respect a different order of the letters, Pe preceding Ayin (P before O), was as puzzling to Jerome and Lyranus as to us. It can scarcely be due to a scribal error, as it is thrice repeated, or to forgetfulness on the part of the poet, as he set out deliberately to follow the alphabet, or to an esoteric motive so carefully hidden as to be of no didactic value, or to a different order in Babylonian Aramaic preferred by the Chaldean government, as Grotius thought. At a time when the letters had not yet been used for numerical purposes, a transposition of the two letters may have been in vogue in certain circles, since it seems to be found also in Ps. ix–x, and possibly in Ps. xxxiv. In i and ii each verse consists of three members, and the verses begin severally with the successive letters of the alphabet; in iii the verses consist of single members, and three verses in succession begin with the same letter, the chapter having thus 66 verses; in iv each verse has two members only, and v is not alphabetical, but has 22 verses. Maldonat (1611) found a prevalence of 12 syllables to the stichos, but also verses of 16 and 14. Lowth recognized an unusual poetic structure and supposed the verse to be dodecasyllabic; and more recently Bickell has also spoken of the dodecasyllabic metre. De Wette observed that each member of the verse has a caesura corresponding both with the accent and with the sense; Keil noticed that this caesura divides the verse into two unequal parts; Ley discerned that the second is shorter than the first, and designated this form as elegiac pentameter; Gietmann called it endecasyllabic verse, with the arsis after the third syllable. Budde described most clearly the peculiar Qinoth metre: the verse may consist of one or more members, but each is divided by a caesura into two unequal parts, the second being shorter than the first. There is no doubt that this "limping metre" was frequently used in funeral dirges sung by "cunning women" at the wake of the dead, but it is not employed in David's elegy, and does not seem to have been reserved originally for elegiac poetry. It is the death-wail of Jerusalem, represented as a widowed and disgraced princess, that is heard in i, ii and iv; iii appears to be a poetic monologue of Israel, represented as a man, rather than an elegy, and v is not so much an elegy as a prayer, and is not in the elegiac metre, but has a peculiar assonance or rhyme, the same vowel or syllable being repeated.

In the Hebrew Bible neither title nor text contains any claim or direct indication of authorship. But the Greek version begins "after Israel was taken captive and Jerusalem laid waste, Jeremiah sat down and wept, and sang this elegy over Jerusalem." This was somewhat expanded in the Latin Vulgate; and the superscription in the Targum runs, "Jeremiah the prophet and chief priest said thus." The Babylonian Talmud also declares that Jeremiah wrote 'Lamentations.' It is interesting to observe that Bonaventura, Lyranus, Sanchez, Castro, Bellarmin, Lucas and Cornelius a Lapide attributed no canonical value to the introductions in the Greek and Latin texts. In 2 Chronicles xxxv, 25 Jeremiah is said to have sung an elegy over Josiah, according to custom chanted by singing men and women, and preserved in written form among the 'Lamentations.' It is by no means certain that the author referred to our present collection; nor would an interpretation of the extant threnodies as a funeral dirge over Josiah command much weight either by virtue of age, being centuries later than the prophet's time, or intrinsic probability. The decision rests wholly upon internal evidence. It was very natural to think of Jeremiah, the prophet who foretold and witnessed the destruction of temple, capital and state, as lamenting the fall of Zion; there was an unmistakable similarity to his style in some passages; he was a man of poetic temperament, and the peculiar metre had occasionally been employed by other prophets. Those who assumed that Jeremiah was the author assigned as the date of composition either 608, immediately after the death of Josiah, or 605, when Baruch's roll was written, or 586, in the months between the capture and destruction of Jerusalem, or the time between 586 and 570. The first view was maintained by Josephus, Jerome, Rhabanus Maurus, Bonaventura, Vatablus, Junius, Maldonat, Figueiro, Tarnovius, Calovius, Michaelis and Dathe; the second was suggested by Rashi, but rejected by Ibn Ezra; the third or fourth has been adopted by Theodoret, Procopius, Olympiodorus, Ghisler, Calmet, Blayney, Henderson, De Wette, Gerlach, Orelli, Keil, Bleek, Kaulen, Knabenbauer, Kay. Hermann von der Hardt in 1712 declared that he could not believe that Jeremiah, with his experience, had written a lamentation so diffuse and composed in such a literary fashion, but on account of the differences of style thought of Daniel, his three companions and Jehoiachin as the authors. The theory of a Jere-

mianic authorship was also abandoned by Augusti (1806), an anonymous writer in *Tübingische Quartalschrift* (1819), Kalkar, Bunsen, who thought of Baruch as author, Ewald, Nöldeke, Kuenen, Schrader, Nägelsbach, Vatke, Wellhausen, Cornill, Löhr, Budde, Cheyne, Driver, Strack, Selbie, Baudissin, Gigot, Gautier, Sellin, Moore, Beer, Gunkel, Creelman, Peake. They have urged important divergencies from the peculiarities of Jeremiah in language, style and thought, and especially in the attitude toward the monarchy, the Egyptian alliance, the priesthood and the temple cult. Thackeray called attention to the fact that Lamentations was not translated into Greek by either of the two men to whom we owe the version of the Prophecies. Thenius regarded ii and iv as coming from the prophet's pen, the remaining chapters as later; Fries thought that i–iii were Jeremianic, iv–v Maccabæan. There is a tendency at present toward ascribing ii and iv to the same author and to the latter part of the Persian period, i and v to different authors at the end of this period and iii to a poet living in the 3d century. Reuss justly observed that the profound impression these lamentations make on the reader is due to the nature of the subject rather than to any literary qualities shown in its treatment. The interest that always attaches itself to misfortune excites our sympathy in the highest degree, and we can but admire the touching personification of Jersualem as a widow seated by the wayside, reminding of the *Capta Judea* figured as a woman in mourning on the Titus arch, or of the people as a man of sorrows, recalling the suffering servant of Yahwe in the anonymous additions to Isaiah. This impression is somewhat weakened by the numerous repetitions, the monotonous length, the lack of logical development and the restraints imposed by a mechanical form. It is probable that the elegies were produced for liturgical purposes in connection with the commemoration of the great calamity.

Bibliography.— Commentaries by Ephrem, Theodoret, Olympiodorus, Rhabanus, Lyranus, Bonaventura, Hugo of Saint Victor, Rashi, Ibn Ezra, Kimchi, Tanchum ben Joseph, Menahem ben Shelbo, Tobia ben Eliezer, Calvin, Oecolampadius, Bugenhagen, Petrus Martyr, Sanctius, Maldonat, Ghisler, Tarnovius, Grotius, Calovius, Cornelius a Lapide, Calmet, Blayney, Herder, Rosenmüller, Maurer, Dathe, Ewald, Henderson, Kalkar, Thenius, Keil, Nägelsbach, Gerlach, Payne Smith, Streane, Plumptre, Cheyne, Oettli, Löhr, Budde, Minocchi, Peake; the introductions enumerated at the end of the preceding article; Lowth, R., 'De sacra poesi Hebraeorum' (1753); Lessing, J. T., 'Observationes in tristia Jeremiæ' (1770); Pareau, J. H., 'Threni Jeremiæ philologice et critice illustrati' (1790); Meier, E., 'Geschichte der poetischen Nationalliteratur der Hebräer' (1856); Nöldeke, Th., 'Alttestamentliche Literatur' (1868); Rohde, E. H., 'Num Jeremias threnos scripserit' (1871); Montet, F., 'Étude sur le livre des Lamentations' (1875); Merkel, H., 'Ueber das Alter des Buches der Klagelieder' (1881); Fries, S. A., in *Zeitschrift für alttestamentliche Wissenschaft* (1893); Löhr, M., (ib. 1894); Budde, K., in *The New World*, 1893; Selbie, J. A., in 'A Dictionary of the Bible' (1900); Cheyne, T. K., in 'Encyclopaedia Biblica' (1902); Beer, G., in 'Kurzes Bibelwörterbuch' (1903); Kay, D. M., in 'Dictionary of the Bible' (1909); Ball, J. C., in 'Encyclopaedia Britannica' (1911); Gunkel, Hermann, in 'Die Religion in Geschichte und Gegenwart' (1912); Fowler, H. T., 'A History of the Literature of Ancient Israel' (1912).

NATHANIEL SCHMIDT,
Professor of Semitic Languages and Literatures, Cornell University.

JÉREZ DE LOS CABALLEROS, hā'rāth dā lōs ká-bą-lyā'rōs (JEREZ OF THE KNIGHTS), Spain, town in the province of Badajoz, situated on the hills overlooking the river Ardila, a tributary of the Guadiana, 12 miles east of the Portuguese frontier, and 39 miles south of the city of Badajoz. The older part of the town has a Moorish wall with six gates, and there is a fortress with three imposing towers. The situation is picturesque and the newer sections are well built. The town has no railway connection and its trade is chiefly in the products of the rich farming and fruit district surrounding it, the district being especially noted for hams and bacon. The town is thought to have been founded by the Phœnicians, and was taken from the Moors by Alfonso IX, of Leon, in 1229. It was enlarged by his son, Saint Ferdinand, in 1232, and given to the Knights Templar, whence its name. Pop. 10,271.

JÉREZ DE LA FRONTERA, hā'rāth dā lä frŏn-tā'rą, or **XÉREZ,** or **XERES,** Spain, city in the province of Cadiz, about seven miles from the Atlantic Coast and 33 miles by rail from Cadiz, near the river Gaudalete and on the Seville-Cadiz Railroad. It is famous for its vast vineyards and the manufacture of sherry wine, which takes its name from the town. The surrounding district comprises a fertile plain of wide extent, and besides the vineyards there is a large production of grain, fruit and livestock. There is a 15th century church of San Miguel, a 16th century townhall, which, however, is officially superseded by a modern building, a bull-ring, academies of law, medicine and commerce, and modern hospitals and charitable institutions. The great *bodegas,* or wine cellars for the manufacture and storage of wine, are among the chief objects of interest in the town. Jerez was at one time a Roman colony but fell into the hands of the Moors, from whom it was captured by Ferdinand III of Castile, but the Moors twice recovered it before it came permanently into Spanish possession upon its capture by Alfonso X in 1264. In 711 it was the scene of the victory of the Saracens under Tarik over the West Goths under Roderick. In earlier times the town suffered heavily from yellow fever but purification of the water supply in 1869 practically eliminated the trouble. Pop. 10,940.

JERFALCON, jĕr'fâ"kn, or **GYRFALCON,** a large and bold falcon of the Scandinavian mountains (*Falco gyrfalco*), represented by closely allied species or varieties in Iceland, Greenland and the Hudson Bay region, whose plumage is prevailingly white, with more or less blackish markings, especially about the face. It is one of the largest, strongest and most impetuous of its race; and has always been highly prized by falconers, among whom, by ancient laws, its use was restricted to men of ducal and

princely rank. The bird is a rare winter wanderer to the United States from Arctic Canada, where it breeds, and survives the winter mainly by killing ptarmigan.

JERICHAU, jā'rē-kow, **Jens Adolf,** Danish sculptor: b. Assens, Funen, 17 April 1816; d. Copenhagen, 25 July 1883. He studied at Copenhagen and under Thorvaldsen at Rome. His first notable production was a frieze in the Royal Palace at Christiansborg, its subject being the marriage of Alexander the Great and Roxana; and in 1846 he produced the heroic group 'Hercules and Hebe.' He was appointed professor at the Academy of Copenhagen in 1849. He was married to Elizabeth Baumann, a genre painter of distinction: b. Warsaw, 21 Nov. 1819; d. Copenhagen, 11 July 1881. Their son, Harald, became a landscape painter: b. Copenhagen, 17 Aug. 1852; d. Rome, 6 March 1878. Jerichau's further works include monuments to Oersted and Anderson at Copenhagen; 'Penelope'; 'Adam and Eve after the Fall'; 'Christ'; 'David,' etc.

JERICHO, jĕr'ĭ-kō, a once important city of ancient Palestine, near the foot of the mountains, on the west side of the Jordan plain, northeast of Jerusalem. Its name means «city of palms.» The site is marked by mounds of sun-dried bricks, and called Tel es-Sultan; gardens and a fine spring are found there. The palms and balsams for which Jericho was formerly famed have disappeared. At the conquest of Palestine by Joshua, Jericho was the key to the country and was miraculously captured, destroyed by fire and its rebuilding forbidden under a curse. Excavations carried on by Sellin and Watzinger have revealed interesting caves and ruins. It is now a poor village, much visited by tourists. It has two hotels, a Russian monastery and church. During the European War Jericho was captured by British troops under General Allenby on 21 Feb. 1918. Under its modern name of Eriha, the village that now stands on the site of ancient Jericho consists of some 300 wretched hovels and huts. Pop. about 300.

JERKED BEEF, beef cut into strips of about an inch thick, and dried in the sun. This method of preserving meat has been largely adopted in South America and Australia. Cut from the animals when in good condition these strips of flesh dry in the sun before decomposition commences, and will keep for any length of time. In the United States, jerked beef is common in the Southwest.

JERMYN, jer'mĭn, Pa., borough in Lackawanna County, 12 miles northeast of Scranton, on the Lackawanna River, and on the Delaware and Hudson, and the New York, Ontario and Western railroads. It is located in a rich coal mining region, has powder mills and other manufacturing interests. Pop. 3,158.

JEROBOAM I, the first king of Israel, the northern kingdom. Having conspired against Solomon, he was obliged to escape to Egypt, where he remained until the monarch's death. He then returned to lead an insurrection against Rehoboam, which ended in the formation of the kingdom of Israel, composed of the 10 revolted tribes. These tribes worshipped at Bethel and Dan, instead of going to Jerusalem. Jeroboam reigned from about 937 B.C. to 915 B.C.

JEROBOAM II, king of Israel. He was the son of Joash. He reigned from about 782 B.C. to 741 B.C. His reign was evidently an active one. He was a skilful warrior, and regained territory which had been captured by the king of Aram in previous reigns. It was during Jeroboam's time that Hosea and Amos announced their prophecies.

JEROME, jĕ-rom' or jĕr'ōm, **Saint** (EUSEBIUS HIERONYMUS SOPHRONIUS), a father of the Latin Church: b. Stridon, between Styria and Hungary, about 331; d. Bethlehem 420. His parents educated him with care in literary studies and he read the Greek and Roman classics at Rome under the famous grammarian Donatus. He did not escape uncontaminated by the licentiousness of the capital; but soon became inclined to the Christian faith. The catacombs and tombs of the martyrs first excited his devotion. His travels on the Rhine and in Gaul made him acquainted with several Christian preachers, and he was eventually baptized. After a long residence at Aquileia he went in 373 to Antioch in Syria, where he passed through a spiritual crisis and renounced pagan learning, and in 374 retired to the deserts of Chalcis. There he spent four years as a hermit in the severest mortifications and laborious studies. He left his solitude again to be ordained priest at Antioch, but soon after went to Constantinople to enjoy the instruction of Gregory Nazianzus. In Rome, where he became literary secretary to Pope Damasus, he made his appearance as a teacher. His expositions of the Holy Scriptures found favor with the Roman ladies, and many placed themselves under his spiritual direction. Marcella and Paula, rich patricians, are celebrated for the learned and ingenious theological epistles he wrote them, and for their rare monastic piety. Paula accompanied him to Palestine in 386, where he founded a convent at Bethlehem; here he remained till his death. His writings show his active participation in the controversies of his day, and his letters give a very vivid idea of the condition of society at Rome. They are full of satiric strictures on the corrupt clergy, and are often as biting as Juvenal or Martial. Many of them are profoundly touching and full of fervent piety; others are lampoons traversed with vehement invective with the spirit of Plautinian ribaldry. His Biblical labors are highly valuable; his Latin version of the Old Testament from the original language is a marvelous achievement, and it may be said that ecclesiastical Latin, originated with Jerome's Vulgate. His principal claim to the gratitude of the Church is that he was the founder of Latin monasticism. Consult Farrar, 'Lives of the Fathers' (1889); Largent, 'Saint Jerome'; Sanders, 'Etudes sur Saint Jerome' (1903), and the English translation of the works in the 'Library of the Nicene and Post-Nicene Fathers' (1892).

JEROME, Jerome Klapka, English humorist: b. Walsall, 2 May 1859. He was at first a clerk in a railway office, afterward actor, school-master and journalist by turns. After many discouragements he succeeded in making a popular hit with his book, 'On the Stage — and Off' (1888), largely autobiographical. His

'Idle Thoughts of an Idle Fellow' (1889) and 'Three Men in a Boat' (1889) made him famous in America as well as at home. He edited the 'Idler' with Robert Barr (q.v.) (1892–97); 'To-Day' (1892–97); and has published several successful comedies: 'Sunset' (1888); 'New Lamps for Old' (1890); 'Miss Hobbs' (1900), etc. He is also author of 'John Ingerfield' (1894); 'Sketches in Lavender' (1897); 'Observations of Henry' (1901); 'Paul Kelver' (1902); 'Susan in Search of a Husband' (1906); 'The Passing of the Third Floor Back' (1907), the stage adaptation of which was most successfully produced by Sir Johnston Forbes-Robertson; 'They and I' (1909); 'The Master of Mrs. Chilvers' (1911); 'Esther Castways' (1913); 'The Great Gamble' (1914); 'Poor Little Thing' (1914); 'The Street of the Blank Wall' (1916); 'Malvina of Brittany' (1917); 'Cook' (1917), etc. He gave a series of readings in the United States in 1914.

JEROME, Thomas Spencer, American classical scholar: b. United States, about 1863; d. Capri, Italy, 1914. He was the son of David Howell Jerome, 18th governor of Michigan, and was graduated at the University of Michigan in 1884, later studying law at Harvard. He engaged in the practice of law in Detroit; but, possessed of abundant means, he went to live at Capri, where he devoted himself to the critical study of Roman history and acted as consular agent. His premature death prevented the completion of his work, of which the only published effort is 'Roman Memories in the Landscape Seen from Capri' (1914), which was published posthumously but was finished at the time of his death and is considered of exceptional value.

JEROME, William Travers, American lawyer and politician: b. New York, 18 April 1859. He entered Amherst College, but indifferent health compelled him to leave. He graduated from the Columbia Law School in 1884. In 1888 he was appointed assistant district attorney, in which position he saw much of the political corruption prevailing in the city. In 1890 he was active in the Municipal League, which opposed Tammany; in 1893 was assistant counsel of the Lexow Committee, in 1894 a member of the committee of 70 and manager of the campaign which resulted in the election of Mayor Strong. In the same year the mayor appointed him judge of the Court of Special Sessions. In 1901 he was active in the Fusion campaign against Tammany; and in 1902 was elected district attorney of New York County; immediately after his election he established headquarters in the East Side of New York, in order to be within easy reach of the people who most needed his assistance; in this official position he has done very effective work in the breaking down of the system of protection of vice and maladministration of justice. In 1905 he was again elected district attorney on an independent ticket by 16,255 plurality. In this capacity he conducted the prosecutions of Harry K. Thaw for the murder of Stanford White; and he was retained as counsel for the State of New York in the subsequent legal proceedings.

JEROME, Ariz., town in Yavapai County, 28 miles northeast of Prescott, and on the United Verde and Pacific railroads. There are extensive mining interests, including copper and gold; and the town has copper smelters and kindred industries. Pop. 2,393.

JEROME OF PRAGUE, Bohemian religious reformer: b. Prague, about 1370; d. there, 30 May 1416. He was educated at the universities of Prague, Paris, Oxford, Cologne and Heidelberg; and was in faith and sufferings the companion of the famous John Huss, whom he excelled in learning and eloquence, and to whom he was inferior only in moderation and prudence. His reputation for learning was so great that he was employed by Ladislaus II of Poland to organize the University of Cracow; and Sigismund of Hungary caused Jerome to preach before him in Buda. He took a zealous part at Prague in the contest of his friend Huss against the authorities, and not unfrequently proceeded to violence, causing the monks who opposed him to be arrested, and even had one thrown into the Moldau. He publicly burned in 1411 the bull of the crusade against Ladislaus of Naples and the papal indulgences. When Huss was imprisoned in Constance he could not remain inactive, and hastened to his defense. But attempting to return to Prague the Duke of Sulzbach caused him to be arrested in Hirschau and carried in chains to Constance. After an imprisonment of half a year he consented on 11 Sept. 1415 to recant the heresies with which he and Huss were charged. But this recantation did not deliver him, and after languishing a year, he solemnly retracted his recantation. On 30 May he was burned at the command of the council and his ashes thrown into the Rhine.

JERRARD, jĕr'ärd, **George Birch,** British mathematician: b. about 1803; d. Long Stratton, Norfolk, 23 Nov. 1863. He was graduated at Trinity College, Dublin, in 1827 and became known for his work in connection with the theory of equations, especially his contributions toward the solution of the general quintic equation, which was afterward developed along the lines followed by Jerrard, Arthur Cayley and Sir James Cockle. Author of 'Mathematical Researches' (1832–35)' 'An Essay on the Resolution of Equations' (1859).

JERROLD, jĕr'ŏld, **Douglas William,** English dramatist and humorist: b. London, 3 Jan. 1803; d. Kilburn Priory, near London, 8 June 1857. He was a midshipman in the navy 1813–15, and then quitting the service, was bound apprentice to a printer in London. By hard study he made himself master of Latin and Italian, besides acquiring an extensive knowledge of general literature, and at first attempted dramatic criticism. The bent of his genius, however, lay mainly in the direction of dramatic writing. Numberless pieces were produced by him before he was 20, but the first which won decided popularity was 'Black-eyed Susan,' presented for 300 successive nights at the Surrey Theatre in 1829. Fortunes were made out of the play; but the author only got $300 for it. Among Jerrold's subsequent dramas were the 'Rent-day'; 'Nell Gwynne'; 'The Housekeeper'; 'Prisoner of War'; 'Bubbles of a Day' and 'Time Works Wonders,' the last named one of the most successful comedies on the English stage. He founded and conducted successively the *Illuminated Magazine* and *Douglas Jerrold's Shilling Magazine,* was

a member of the literary staff of *Punch*, and in 1852 became editor of *Lloyd's Weekly Newspaper*. To this he contributed 'Mrs. Caudle's Curtain Lectures'; 'Punch's Letters to his Son'; the 'Story of a Feather.' He wrote several novels, among which are 'The Mad Mode of Money', and 'Chronicles of Clovernook' (1846). A selection of his essays, edited by his grandson, Walter Jerrold, appeared in 1903. Though a powerful master of satire, he never allowed his wit, whether as an author or in private life, to be tinged with malevolence. Consult Jerrold, W. B., 'Life and Remains of Douglas Jerrold' (1859); Jerrold, W. C., 'Douglas Jerrold and Punch.'

JERROLD, William Blanchard, English journalist and miscellaneous writer, eldest son of Douglas Jerrold (q.v.): b. London, 23 Dec. 1826; d. there, 10 March 1884. He succeeded his father in 1857 as editor of *Lloyd's Newspaper*, and as such strongly espoused the cause of the North in the American Civil War. Some of his leading articles on this subject were, by instruction of the American authorities, placarded and displayed in New York. He was the author of a very successful farce, 'Cool as a Cucumber' (1851), and other plays. He also wrote 'Swedish Sketches' (1852); 'Life of Douglas Jerrold' (1858), and 'Life of Napoleon III', his greatest work, which was completed in 4 vols. between 1874 and 1882.

JERSEY, Island of, the largest, most important and most southerly of the Channel Islands, lying in the English Channel, and belonging to Great Britain. It is 12 miles long and from four to seven miles wide, and has an area of 45 square miles. The distance to the coast of France is about 15 miles. Rugged and precipitous in the north, the interior is mostly table-land and is well-wooded. The principal town is Saint Helier. Pop. 28,000. The island is famous for a breed of cattle. Fruit and potatoes are largely grown, and are exported in enormous quantities. The island was part of the old Norman provinces brought with the Conquest to the Crown of England. The speech of the farming population is a *patois* Norman French, but English is spoken everywhere, while the use of modern French and English is a bi-lingual feature of the courts and states governing body. Pop. 52,000.

JERSEY CATTLE. See CATTLE.

JERSEY (jėr'zĭ) **CITY,** N. J., the most important suburb of New York since the annexation of Brooklyn, the second largest city in New Jersey, and seat of Hudson County. It occupies about five miles of the Hudson River frontage opposite lower New York: Paulus Hook, its starting point, is exactly opposite the Battery. It lies on a peninsula between the Hudson and New York Bay on one side, and the Hackensack and Newark Bay on the other; and is limited on the south by Bayonne, which takes up the lower end of the peninsula, and on the north by Hoboken. It has several ferry lines to different portions of New York, operated by the great railroads which have their terminals here — all the roads from the south and west: the Pennsylvania, Erie, Baltimore and Ohio, Lehigh Valley, Delaware, Lackawanna and Western, New York, Susquehanna and Western, Central of New Jersey, and the West Shore line of the New York Central. The Morris Canal ends here. Jersey City is also the terminal of several of the most important steamship lines between New York and Europe. Its area is 12,228 acres, or 19.1 square miles.

The city lies on a flat meadow about a mile wide from the river back to a sharp bluff; the business section occupies the former, the residence district the latter, with some very handsome streets of costly dwellings. The municipal improvements are of a high and thorough grade: paving (nearly all the streets are paved, largely with granite and asphalt), sewerage, water supply, etc. The trolley service extends to all the neighboring section of New Jersey. The parks are few and very small, less than in almost any other large American city; but along the ridge in the western part extends the magnificent Hudson County boulevard, 19 miles long (the entire length of that county from Bayonne up, and five miles of Bergen County), 100 feet wide, and with a noble view of the river and upper New York, as well as the country west. The city hall with the soldiers' monument, the public library, the courthouse, the Dickinson high school and the Fourth Regiment armory, are among the conspicuous buildings. The intellectual facilities of the city are good, aside from its proximity to New York. It has 37 public schools, besides 16 Roman Catholic parochial schools, and for higher education two public high schools, Hasbrouck Institute (1856), Saint Peter's (Roman Catholic) College (1878), Saint Aloysius Academy. There is a public library with over 100,000 volumes. The hospitals are the City, Saint Francis, German and Christ; there are several homes and asylums, and some convents.

The immense commercial and shipping interests of the city, though second only to those of New York, have no separate statistics, the customs report being included in that of the latter city. Its position on the great river, with Newark Bay in the rear and the entrance of Kill van Kull on the south, give it a most favorable commercial position, which has been improved by properly equipped wharves. There is a steady and concerted movement to increase still further these port facilities by co-ordination of railroads, piers and terminal yards and buildings, with a belt line railroad. The Pennsylvania and Erie roads have large grain elevators here. Among the leading industries are those of slaughtering and meat-packing: Jersey City is the meat depot of New York, and has several huge abattoirs on the river front on the Hackensack meadows in the northwest. Its slaughter-house products in 1910 amounted to $22,314,000. Its other manufactures are enormous, the total amounting to $128,775,000 in 1910. They are exceedingly varied, no one having a great predominance except slaughtering and meat packing and tobacco manufacture with over $11,065,000 a year; other important branches are iron and steel goods, locomotives, boilers and heating apparatus; bridges, ships and windmills; planing-mill products, cars, carriages, boxes and cooperage; brass, copper and zinc goods, electrical and scientific apparatus; pottery and glass; lead-pencils and famous crucibles used in all chemical laboratories and smelting works; watches, jewelry and musical instruments; sugar and confectionery; mineral waters and patent medicines; soap and candles (a natural annex to the abattoirs), and per-

fumes; compressed gas; chemicals, paints and roofing materials; paper and window-shades; rubber goods; silk thread and goods; oakum; fireworks; printing and writing inks and varnish; and hundreds of others. There are three national banks, and 10 State and private banks, with loan and trust companies. The city has an active and progressive Chamber of Commerce of the modern type.

Since June 1913 the city has had a commission form of government with five commissioners; most of the other officials are appointed by the commission except the school board which is appointed by the mayor. The assessed valuation in 1915 was $292,796,827; the total public debt, excluding the water debt, 30 Nov. 1915 was $10,350,625; the sinking fund is above $5,000,000. The expenditures are about $6,000,000 a year. The largest single item is $1,809,402.65 for schools.

The population in 1850 was 6,856; 1860, 29,226; 1870, 82,546; 1880, 120,722; 1890, 163,003; 1900, 206,433; 1910, 267,779. Of these 3,704 were colored, 58,224 foreign-born, 19,314 Irish, 18,820 German, 4,642 English, 3,832 Italian.

The site of the city was used only as farming land till into the 19th century despite its remarkable position. In 1802 the entire population was 13 in one house with outbuildings; this was on Paulus Hook, the point opposite the Battery, named after the Dutchman Michael Pauw, who formerly owned it. Here in the Revolution the American fortifications had been taken by the British, and retaken and destroyed in a most brilliant action by "Light Horse Harry" Lee. In 1804 the "Associates of the Jersey Company" bought the land, and laid it out in streets, incorporating it as a village with a board of selectmen. In 1820 it was incorporated as the "City of Jersey," still with a board of selectmen; in 1838 it was reincorporated as Jersey City, with a mayor and aldermen. Repeated annexations have brought it to its present territory: Van Vorst in 1851, Hudson City and Bergen in 1869, Greenville in 1873. It obtained a new charter in 1889. Consult McLean, 'History of Jersey City' (1895); Eaton, 'Jersey City and its Historic Sites' (1899).

JERSEY SHORE, Pa., borough in Lycoming County, on the Susquehanna River, 15 miles southwest of Williamsport, on the Pennsylvania and the New York Central and Hudson River railroads. It is situated in a fertile agricultural district and has machine shops, foundries, electric works, a silk mill and other industries. Pop. 5,381.

JERSEYVILLE, Ill., city and county-seat of Jersey County, on the Chicago and Alton and the Chicago, Peoria and Saint Louis railroads, 66 miles southwest of Springfield. It was settled in 1839, incorporated in 1867, and adopted a new city charter in 1897. It has a public library and courthouse, and being the centre of a rich agricultural district, has an established trade in produce, fruit, grain and live-stock and has manufactories of shoes. The waterworks are owned by the city. The government is vested in a mayor and council. Pop. 4,113.

JERUSALEM, Wilhelm, Austrian psychologist and educator: b. Drěnic, Bohemia, 11 Oct. 1854. He was educated at Prague, engaged in teaching, and in 1907 became lecturer in philosophy and pedagogy at the University of Vienna. His works offer many valuable contributions to the study of philosophy. Author of 'Zur Reform der philosophischen Propädeutik' (1885); 'Lehrbuch der empirischen Pyschologie' (1888; 5th ed., 1912); 'Die Urteilsfunktion' (1895); 'Einleitung in die Philosophie' (1899; 6th ed., 1913; eng. trans., 1910; trans, into Russian, Polish and Japanese); 'Gedanken und Denker' (1905; trans. of William James' 'Pragmatism'); 'Die Soziologie des Erkennens in der Zukunft' (1909).

JERUSALEM (Greek *Hierousalem;* Old Hebrew pronunciation, *Yurushalem.* Tel-el-Amarna tablets, *Uru-sa-lim* "city of peace"; Assyrian monuments, *Ur-sa-li-im-mu.* The Greek and Latin *Hierosolyma* is a corruption, from the erroneous supposition that the first syllable is Greek *hieros,* sacred. Hadrian renamed it *Ælia Capitolina,* and its official name was long *Ælia,* even Arabicized into *Iliya;* the Greeks called it *Kapitolias.* Arabic name, *Beit el-Makdis,* or simply *el-Mukaddas,* modern vernacular *el-Kuds,* "the sanctuary," or *el-Kuds esh-sherif*).

The "Holy City" is 33 miles from its port of Jaffa on the Mediterranean, 15 from the Dead Sea, 18 from the Jordan, 19 from David's first capital, Hebron, and 34 or 35 from the old kingdom of Samaria: the pregnant Hebrew history was transacted in the space of a county. It is 126 miles from Damascus. The position of the dome of the Church of the Holy Sepulchre is lat. 31° 46′ 45″ N., long. 35° 13′ 25″ E. The city lies in the midst of an infertile, ill-watered district, once (under good government) made prosperous by irrigation, later blighted by Turkish possession. The rainfall is about 23 inches. The climate is hot and irregular — rising to 112° and not sinking below 25°, with an annual mean of 62° — but not malarious; the city is insanitary and plague-stricken, but from dirt, lack of sewerage, bad water, and the unhygienic habits of the people. The only natural water-supply (the drainage sinking in the soft limestone) is from the Virgin's Spring (Gihon), an intermittent natural siphon on a dolomite floor, in a rocky cave 12 feet deep in the face of the eastern ridge; this was carried by a rock and masonry conduit to the rock and masonry Pool of Siloam, 52 x 18, and thence to another, the Old Pool; a shaft within the walls led down to a rock channel communicating with the spring. At present the water-supply is from rain-tanks or "pools," in and out of the walls. The remaining one of three old aqueducts, which carries water when in repair, was built by Pilate. There is little trade except that of local shops for supplying tourists; and the manufacture is chiefly of souvenirs, as olive-wood and mother-of-pearl articles. Indeed, as a commercial location it never possessed any merits, and its greatness was due to original religious and political status. It is connected with Jaffa (west), Bethlehem and Hebron (south), and Jericho (north) by carriage-roads; and in 1892 a narrow-gauge railroad to Jaffa, with a circuitous course of 54 miles, was opened by a French company.

Jerusalem was built on several hills. "This group of hills, now represented by a nearly level plateau, as the inner valleys have been filled up

with the accumulations of ages, forms an outlying spur of the mountains of Judea, and has a general direction of north and south. On the north side the ground is comparatively level; two valleys, on the west, south and east, encircle the site, and gradually getting deeper, unite near the Pool of Siloam, forming one valley which runs down to the Dead Sea.» The modern city, much less extensive than the old in its best estate, is a rough quadrangle surrounded by a very irregular wall, built in the 16th century by Solyman I, on the lines of the Crusaders' fortifications. It has nominally eight gates, two on each side; the Jaffa and Abd-ul-Hamid on the west (the latter very recent), the Zion and Dung on the south, the Golden (closed up) and Saint Stephen's on the east, and the Damascus and Herod's on the north. The city is unevenly divided, by the main street running from the Damascus gate south to near the Zion gate, and that running east from the Jaffa gate to the Haram-esh-sherif, into four «quarters» in which the great religious divisions are segregated: the Mohammedan, much the largest, on the northeast, adjoining the original holy places; the Christian next, on the northwest, where is the Church of the Holy Sepulchre; the Armenian on the southwest; the Jewish on the southeast. The streets are crooked, narrow, ill-made, and dirty, and the city has few except historical attractions; the stream of tourists, however, has developed civilized conveniences such as hotels, banks, mercantile establishments, etc. Several Jewish colonies have been settled in the environs; and since 1858 a quarter has grown up outside the walls on the northwest, approached by the Jaffa Gate, and containing consulates, Christian churches, schools, charitable institutions, etc., but not more sanitary than the old. The city prior to British occupation in 1917 was the capital of an independent sanjak, subject to the government at Constantinople. It has an executive and a town council with representation of the great religious divisions. It is the seat of Roman Catholic, Greek Catholic and Armenian patriarchs; the smaller eastern churches have resident bishops; and till 1887 a joint Protestant bishopric was supported by England and Prussia, with alternate bishops, but on the death of the then incumbent Prussia withdrew from the arrangement, and England continued it alone. Pop. in 1911 about 68,000, made up of 8,000 Mohammedans, 10,000 Christians and 50,000 Jews. In addition, there is a floating population of pilgrims to the sacred sites.

The intense historical interest is centred on memorials of the time or localities of David and Solomon, and of the life and death of Christ. Of the former, the supreme interest is in the Haram-esh-Sherif, the site of the temple, and palace of Solomon and of the later temples. It is a walled area about 527x330 yards, with an elevated platform in the centre reached by steps; in the centre is the beautiful Kubbet es-Sakhra, or Dome of the Rock — a wooden octagon with sides of 66 feet 7 inches, decorated on the outside with marble and porcelain tiles, each of the four sides which face the cardinal points having a square gate surmounted by a vaulted arch. Just east of this is the Chain Dome, or David's Place of Judgment. Other domes of interest are near; but the next most notable structure in the Haram is the mosque El Aksa, at the south end. Within it are also a beautiful 15th century fountain, a pulpit of the same date, a modern mosque called the Throne of Solomon, and the fortress of Antonia. Of the Christian monuments, the most noteworthy is the Church of the Holy Sepulchre, in the Christian quarter, originally built by Constantine the Great over the traditional site of the Crucifixion. (See HOLY SEPULCHRE). There is a rotunda, with a dome 65 feet in diameter, above a small Chapel of the Sepulchre; a number of church buildings, said to include the site of Golgotha or Calvary; and 22 chapels. The Via Dolorosa, along which Jesus is said to have carried the cross to Calvary, follows the present street Tarik Bab Sitti Maryam from Saint Stephen's Gate. Several modern churches and other institutions are also worth visiting; but the thronging Scriptural associations — besides those mentioned above, the Mount of Olives, the Pool of Bethesda, the Vale of Hinnom, etc.— overshadow all else.

Topography and History.— About a mile north of Jerusalem, the main north and south watershed ridge of Palestine turns to the west; while a spur called Olivet, having three pinnacles, runs first southeast one and one-half miles, and then south one and one-fourth miles. The space between the two is occupied by a plateau sloping southeastward, and separated on each side from the bounding ridges by a ravine 300 to 400 feet deep, with steep and often precipitous sides. The eastern ravine, separating it from Olivet, is the «brook» Kedron or Kidron (Cedron), which was always a dry bed; the western is the Wady el-Rabâbi (probably the vale of Hinnom), which after skirting it on the west, turns east along the southern scarp of the plateau and joins the Kedron. Through this plateau from north to south runs a broader and much less deep and precipitous valley, the Tyropœon («cheese-makers' place») 100 to 150 feet deep, thus dividing it into two uneven sections: the east ridge is continuous, and its northern part was the first occupied; the western part, the «new city,» is divided by a lateral branch of the Tyropœon into two summits, a north and a south, connected by a narrow saddle separating also Tyropœon from el-Rabâbi. The general height may be stated as about 2,500 feet; the eastern ridge is 2,440 feet at the north, and descends southward; the western north summit is 2,490 feet, south summit 2,520. The accumulation of the rubbish of 3,000 years, however, has greatly modified the contours of the hills and ravines, obliterating some minor ones altogether. The average depth over the rock levels is 30 to 40 feet, and in the valleys 70, in one case reaching 120.

This plateau, surrounded on three sides by steeply scarped bluffs and crested with hills, was a natural fortress; but it had two defects — it commanded nothing in particular, and its water-supply (one spring intermitting for hours or even a day or two, and that at the foot of a bluff) was very scanty. Probably at the first, as many times since, army after army marched around it, and left it untouched as of too little military significance. We first hear of it on the Tel el-Amarna tablets (about 1400 B.C.) when it is seemingly a little hill fort with a small gar-

rison, possibly with a village also, and the capital of the "land of Jerusalem," apparently a small territory along the watershed. The king, Abd-Khiba, is a vassal of the king of Egypt, and begging assistance against the Khabiri (Hebrews?). Later it is a minor "Jebusite" citadel: Hebron, Bethlehem, Bethel, Gibeah, Jericho, are all more important. But when David undertook to form a consolidated Hebrew kingdom, Jerusalem had the transcendent merit that it lay on the border between Judah and the northern tribes, not historically identified with either; it was also fairly on the central line of communication, and convenient for action against the Philistines and the desert tribes at once. He made terms with the Jebusites and occupied the hill-fort of Zion on Ophel, near the only available water-supply. Possibly a village grew up on the eastern slope of the hill; but it was small, for the whole levy of Palestine was but 30,000 men (2 Sam. vi, 1), and other places held the trade. Solomon greatly increased the size of the town, and built a stone temple for Yahweh and a great palace. Under Rehoboam the place was captured by Shishak of Egypt; under Amaziah by Jehoash, and its walls partly leveled. During the palmy times of the northern kingdom it was held of small account except by the Judahites: it was only one of many places of pilgrimage down to Hezekiah's time, and the northern prophets ignore it and speak of Bethel, Gilgal and Beersheba. With the fall of its northern neighbor, for the moment its importance and wealth increased; it became the one shrine which had never been defiled with the rites of the native religions, the centre of Jewish religious life, the one place where sacrifice might be offered In the later days of the monarchy the town spread beyond the east ridge into the Tyropœon; a second town and a trading quarter grew up. For a long time after its destruction by Nebuchadnezzar in 586 the history is scant and dubious. It suffered heavily under the Persian Empire; under Artaxerxes Ochus the temple *may* have been destroyed. Alexander's sacrificing in the temple is mythical; and in 320, Appian says, Ptolemy Soter destroyed the city. Then there was a time of peace and prosperity, culminating in the high-priesthood of Simon II (219–199 B.C.); after a series of struggles between the Ptolemies and the Seleucids, in which the former took and garrisoned the place and the Jews helped drive out the garrison, the Seleucids obtained Palestine by treaty in 197. When Antiochus Epiphanes undertook to Hellenize Palestine in 169, he took the city, destroyed the walls, plundered the temple, and erected an altar to Zeus in place of that to Yahweh. Judas Macabæus rebuilt the temple and the walls; again razed by the Greeks, they were again rebuilt by Jonathan. Under the Hasmonæan dynasty it extended to the western ridge; there was a new palace and royal quarter of great splendor; the city became the metropolis of the Jewish world, and the one great pilgrim shrine. Then it became tributary to Rome, but at least still a kingdom governed by its own sovereigns; such it was when Jesus was born; but it shortly after became a province governed by a Roman procurator. The Roman system of repression and Jewish national feeling were brought sharply into conflict, aside from any actual misgovernment; and a grand national revolt took place, which in 66 A.D. gained possession of Jerusalem. Vespasian was appointed to repress it; and in 70 A.D. his son Titus, after one of the most frightful sieges in history, with unimaginable horrors, took it, burned the temple, and leveled the city to the ground. Josephus says the city's population was 1,000,000, and Tacitus (probably from Josephus) 600,000. Both are absurd, those of Josephus are Oriental in their exaggeration. From 30,000 to a maximum 45,000 may be estimated. It remained a ruin for many years. In 131 Hadrian visited the site and ordered the rebuilding of the city, apprehending a restoration of pagan worship, the Jews broke out in rebellion under Bar-Cochba; and Hadrian, not caring to set up a new centre of Jewish propaganda, made it a Roman colony called Ælia Capitolina, and forbade Jews to enter it on pain of death. Thence till the time of Constantine nothing is known of it; except as a Jewish shrine it was nothing. When the empire became Christian, Constantine's mother, Helena, induced him to cherish the seat of Christ's ministry and death; and he built the Church of the Holy Sepulchre. Pilgrims flocked to Jerusalem from all parts, and it became the shrine of Christendom. Captured by Khosru of Persia in 614, it was retaken by Heraclius in 628; but in 637 was taken by the Moslems under the caliph Omar. The line of Arabian caliphs of different dynasties was succeeded by the Seljuk Turks. The Christians were oppressed, the sacred places defiled; to crown all, the overland caravan trade was cut off. Religious feeling and mercantile interest together roused Europe to the crusades, and Jerusalem was taken by Godfrey of Bouillon in 1099, becoming the capital of a Christian monarchy. This maintained a precarious existence till 1187, when Saladin recaptured the city and it remained in Mohammedan possession again for 730 years, up to Dec. 1917 when in the Palestinian campaign of the World War it surrendered after a short siege to British troops under General Sir E. H. Allenby.

Bibliography.— Among the many excellent works on the subject, consult, for topography and ancient history, the article Jerusalem in the "Encyclopædia Biblica," by W. R. and G. A. Smith and Colonel Conder; also for topography, Colonel Conder in Hastings' 'Dictionary of the Bible.' Consult also Warren and Conder's 'Jerusalem' (1884, Palestine Exploration Fund), containing a large portfolio of plates; Wilson's 'Ordnance Survey of Jerusalem' (1868), the basis of all modern work; De Vogue's 'Temple de Jérusalem' (1864); Le Strange's 'Palestine under the Moslems' (1890, Palestine Exploration Fund), the only book based on Arabic writers; Besant and Palmer's 'Jerusalem, the City of Herod and Saladin' (4th ed., 1899); Atkins, G. G., 'Jerusalem: Past and Present' (1918); G. A. Smith's 'Jerusalem from the Earliest Times to A.D. 70' (2 vols., 1908); also his 'Historical Geography' of Palestine; Watson, 'Jerusalem' in the Mediæval Towns Series; the 'Quarterly Statements' of the Palestine Exploration Fund and the proceeding of the German Palestinian Society.

JERUSALEM, Councils or Synods of, a number of councils held at Jerusalem after the meeting of the Apostles (Acts xv), of which

six are of prime importance. (1) The first ecclesiastical council, believed to have been held about 47 and mentioned in Acts xv, discussed the extent to which Judaic law should be followed in the Christian Church. The council gave three decisions: (a) abstention from meats which had been offered to idols; (b) from blood and strangled things; (c) from fornication. (2) In 335 an attempt was made to heal the differences in the church at the time of the meeting of the bishops to consecrate the church of the Holy Sepulchre, and Arius was restored to fellowship and permitted to return to Alexandria. (3) In 349 Maximus, bishop of Jerusalem, and 60 other bishops met upon the return of Athanasius to Alexandria, rescinded the decree published against him and dispatched a synodal letter to the church in Alexandria. (4) In 399, held in response to an appeal from Theophilus of Alexandria to sustain the decree against the Origenists; the decree was confirmed and the resolution to hold no communion with those who denied the equality of the Father and the Son was passed. (5) In 553 the acts of the fifth Ecumenical Council of Constantinople were received by all the bishops of Palestine except Alexander of Abilene, who, being absent, was deposed. (6) In 1672 the most notable council was held, convened by Dositheus, patriarch of Jerusalem, with the object of eradicating Calvinism. It was attended by 53 prelates, six metropolitans and other officers and members of the church. It rejected unconditional predestination and justification by faith alone, and advocated the Roman Catholic doctrines of transubstantiation and of purgatory. Its decisions were the cause of considerable trouble in the Eastern church, charges of leanings toward Romanism being made, although the council had specifically pronounced against the Roman Catholic affirmation that the Holy Ghost proceeds from both Father and Son. The pronouncements of this council are regarded on the whole as one of the most important expressions of f ith of the Eastern church.

JERUSALEM CHAMBER, a large hall in the deanery of Westminster, noted for its historical associations. It was built for Abbot Littlington, 1376–86. Henry IV died in it, 20 March 1413. It was the meeting place of the Westminster Assembly in 1643, also of the company of revisers of the New Testament of 1881. The Old Testament Company also met there part of the time. Before they were buried in Westminster Abbey, Addison (1719) and Congreve (1728) lay in state in the hall. The name of the hall was probably given because of the tapestries on the walls depicting scenes from Jerusalem.

JERUSALEM CHERRY, an ornamental house plant of the nightshade family, *solanum capsicastrum* and *solanum pseudo-capsicum,* of which the latter species is a native of Madeira. The plant attains a height of from one to three feet with oblanceolate leaves borne on short stems and small white flowers followed by bright red or yellow berries the size and appearance of cherries. It is readily propagated by either seed or cuttings. It is sometimes called "winter cherry," and its fruit is inedible.

JERUSALEM CREED, the confession of faith generally believed to have been taught by Saint Cyril of Jerusalem in his catechetical lectures about 347 A.D., based upon the Nicene creed of 325 A.D. and amplified by Cyril upon his return from exile in 362 A.D. It reads: "I believe in one God, the Father Almighty, maker of heaven and earth, and of all things visible and invisible; and in one Lord Jesus Christ, the only begotten Son of God, begotten by the Father before all worlds, very God, by whom all things were made, who was incarnate and made man, crucified and buried, and the third day ascended into the heavens, and sat down at the right hand of the Father; and is coming to judge quick and dead. And in the Holy Ghost, the paraclete, who spake by the prophets; and in one baptism for the remission of sins; and in one holy catholic church; and resurrection of the flesh; and in life everlasting." It forms the basis of the creed adopted by the council of Constantinople, 381 A.D. Consult Schaff, Dr. P., 'The Creeds of Christendom' (3 vols., 1877); 'The Library of the Fathers' (Vol. II, Oxford translation, 1832); Riddle, 'Christian Antiquities'; Curtis, 'Creeds and Confessions' (1911).

JERUSALEM DELIVERED. In dealing with the 'Jerusalem Delivered' (1581), critics have the advantage of knowing from Tasso's dialogues and from his later version of the poem ('Jerusalem Regained,' 1593), the considerations which determined for the author its content and its form. In his critical theory "plot" and "ornament" are basic and distinct categories; while prominent before his mind were the successful examples of Ariosto, Boiardo and Pulci. These chivalric romances were loose agglomerations of episodes related but tenuously to a central theme. Tasso consciously strove to build a poem of the same kind that would conform however, as regards the category of plot, to the canons of Aristotle's 'Poetics' as modified by himself. It would have a unified theme to constitute a major interest. To this the episodic would be subject in the category of ornament. As an Italian of his time, Tasso conceived of religion, rather than patriotism as the subject of most lasting interest (the traditional motive of the ancient epic). But the imaginative tale, whether patriotic or religious, must, to convey its message to the reader, carry the conviction of historical narrative (doctrine of *verisimilitude*). Actual history does not leave room for the distinctive act of the poet: invention. He must select accordingly a subject which, recognized as history, will be but so vaguely known in detail that the fictitious will be accepted as true. The Turkish menace was the terror of Tasso's time; and one of the poetic commonplaces was to incite Christian Europe to a new Crusade. The subject of the holy wars thus imposed itself upon him for reasons of piety, present interest, and theoretical suitability. He chose the conquest of Jerusalem by Geoffrey of Bouillon (First Crusade, A.D. 1096–99); its epic motive was to be the triumph of the just man through God over the wiles of sin and the obstacles set by evil fortune.

The operation of Tasso's pious purpose and of his critical theory can be traced through the 'Jerusalem Delivered' in the parts that are worthless. The theme that gives his much sought logical unity is mechanical and unimaginative. His just man, Geoffrey, is a lifeless

2 Solomon's Temple

The famous Scheck Models

abstraction, his Divinity a dull magician working in roundabout ways to produce miracles not worth the trouble. The preoccupation of the moral purpose contributes some allegory that is shallow if geometrically logical. The episodes gain nothing from their dependence on the plot; while the theory of ornament as applied to style carries metaphor-making to extremes that have interest only historically as setting a fashion henceforth current in the most decadent period of Italian letters. So far as the 'Jerusalem Delivered' is a regular epic, it is dead. It lives only as a fantastic romance that gave free play to Tasso's supreme genius in the moods associated with the elegy and the idyll.

As the religious spirit overrides Tasso's biography so it overrides the strong passions of his soul. He felt intensely the beauty of life; he was deeply attached to the exterior world; he knew the inspirations of love, the allurements of sensuous pleasure. He never surmounted entirely the thought of death; rather he knows to the full what delusion means, the anguish of separation from loved objects and people, solitude, helplessness, despair. So he knows also the value of the Christian promise; and paying submissive tribute to the anthropomorphic aspects of dogma, he rises through faith to a vivid realization of true Christian experience. These are the elements of the lyric exaltation that has made some of his episodes immortal. In Sophronia he incarnates a mood of religious rapture indifferent to death and to worldly love, so completely does the martyr feel herself safe with God; whereas her lover, Olindo, snatches at the last consolations of life, rebelling in despair at the thought of what death makes forever impossible. Death and love are once more set in contrast in the death and conversion of Clorinda. Here is a violent sob of farewell accentuated by the bitterness of avoidable error — the great motive that romanticism has always played on to rouse extreme effects of pathos. But love struggles over the grave to console with the softening and sweetening hope in the Resurrection. Clorinda's mute benediction on Tancred is one of the most moving touches in all poetry. Erminia's flight to the Christian camp over a moonlit solitude is a complex experience of humility, surrender, devotion, expressing in words filled with beautiful Vergilian echoes, a suffocated lament for unrealizable yearnings. In the story of 'Armida' the idyllic sweetness, the sensuous suppressions of the 'Aminta' return, to suggest behind a graceful veil of modesty the fascination of sex allurement.

Tasso's orthodoxy in religion and in critical theory, his development of ingenuity in metaphor, his impeccable Petrarchism, his urbane preciosity, his skill in classic allusion, his elegant fancy, conquered the aristocratic circles of the next two centuries in Europe, when everyone ranked him as superior to Petrarch and Dante — this, in spite of a fatuous pedantic quarrel over the theory of the epic, which embittered the poet's later years and lasted for several decades after his death. The Romantic movement of the 19th century, rejecting most of the critical tradition from which Tasso drew, justly relegated him to a more modest position in the literary hierarchy of Italy. In virtue of his story-telling gift, the common people of all regions of that country have accorded to the 'Jerusalem Delivered' a popularity, as a code-book of rustic chivalry, second only to the legends of Roland and Charlemagne still so current in the South. The poem endures in literature as the best expression of the ideals and mental traits of the Italian Counter-Reform and as the greatest product of the preceptual æsthetics of the Renaissance. Tasso's only equals among Italians in religious literature are Dante and Fogazzaro.

ARTHUR LIVINGSTON.

JERUSALEM OAK. See GOOSEFOOT.

JERUSALEM PLANK ROAD, Engagement near. After the battle of Cold Harbor (q.v.), 1–3 June 1864, General Grant crossed to the south of James River, made unsuccessful assaults upon the Petersburg intrenchments, 15–18 June, and then determined to invest the city partially by a line of works toward the South Side Railroad, and by the evening of the 21st the Fifth corps rested its left on the Jerusalem Plank Road. The Second corps, followed by the Sixth, was moved across the road with the intention of seizing the Weldon Railroad at a point near Globe Tavern next day, and with the expectation of seizing also the South Side Railroad, and cutting Lee's communication with Lynchburg. At night the Sixth corps was in rear of the left of the Second. The orders for the 22d were that the Fifth corps should hold fast its position in front of the Confederate intrenchments, while the Second and Sixth swung to the right, and forward on its left, each division intrenching as it came into line. In the movement the corps commanders at first were directed to keep up connection, then they were ordered to move without regard to each other, each taking care of his own flanks. The Second and Sixth corps moved chiefly through densely wooded thickets; the Second on the right and near the Confederate works; the Sixth at right angles to the Second toward the Weldon Railroad. Gibbon's division of the Second corps had swung in on the left of the Fifth and intrenched, Mott's division was intrenching, and Barlow's division, on the left, was not yet in position, when the last named was attacked. Gen. A. P. Hill had been sent down the Weldon Railroad to oppose Meade's attempt upon it. He had the three divisions of Wilcox, Mahone and Bushrod Johnson. Leaving Wilcox to oppose the Sixth corps, which had not come up on the left of the Second, Hill, about 3 P.M., passed Mahone and Johnson through the opening between the two corps and struck Barlow in flank and rear, driving him back in confusion to the position from which he had advanced in the morning, and taking many prisoners. Mott's division, on Barlow's right, fell back precipitately, and then Hill struck Gibbon's left brigade in front, flank and rear, causing it to give way and abandon a battery of four guns. So sudden and unexpected was this attack upon Gibbon that the greater part of several regiments were captured with their colors. Gibbon made an unsuccessful effort to recover the lost portion of his line. Hill returned to his intrenchments, leaving some force on the railroad, and toward evening the Second corps was thrown forward; but it was

not until next morning that it occupied the ground from which it had been driven, the Sixth corps, forming on its left, thrown back facing the Weldon Railroad, and about a mile from it. The Union loss on the 22d, confined almost entirely to the Second corps, was nearly 2,000, of whom about 1,700 were prisoners. The Confederate loss is unknown. Consult 'War of Rebellion—Official Records' (Vol. XL, Washington 1889–1901); Humphreys, A. A., 'The Virginia Campaign of 1864–65' (New York 1883); Walker, F. A., 'History of the Second Army Corps' (New York 1886).

JERVIS, jĕr'vĭs or jär'vĭs, **John,** EARL OF ST. VINCENT, British admiral; b. Meadford, Staffordshire, 9 Jan. 1735; d. 14 March 1823. He entered the navy 4 Jan. 1749, was promoted lieutenant 19 Feb. 1755, took part in the capture of Quebec, and in 1759 was appointed to the command of the sloop *Scorpion*. He became post-captain in 1760, and in 1769–72 he commanded the *Alarm*, stationed in Mediterranean waters. He was then put on half-pay and traveled extensively in Europe and European waters, making many valuable notes on naval affairs. During the American Revolution he commanded the 80-gun *Foudroyant*, participated in the battle of Ushant on 27 July 1778, in the relief of Gibraltar, and on 19 April 1782 he captured the French man-of-war *Pégase*, for which achievement he was made K.B. He was sent to Parliament for Launceston in 1783 and for Yarmouth in 1784. He became vice-admiral in 1793 and until 1795 commanded the naval operations against the French in the West Indies. He was appointed to the command of the Mediterranean fleet in 1795, receiving rank as admiral, and successfully maintained the blockade of Toulon. Upon the alliance of Spain and France and the occupation of Italy by the French he was obliged to withdraw his fleet to the Atlantic, and on 14 Feb. 1797 he engaged the Spanish fleet off Saint Vincent at heavy odds and completely routed it. For this victory he was granted his earldom and a pension of £3,000. In 1797, during the general mutinies at Spithead and Nore, his prompt measures and the high state of discipline in which he maintained his command were successful in keeping his ships free from the trouble. He was often bitterly criticized as a disciplinarian, his firmness extending to his officers' conduct as well as that of the sailors; but Lord Nelson, whose methods were wholly different, acknowledged the efficiency of Lord St. Vincent's measures and the necessity for them at the time. Nelson's victory at the battle of the Nile was largely due to the high discipline which St. Vincent had inaugurated. He resigned his command because of ill health in 1799 and upon return to duty in 1800 he took command of the Channel fleet, where he instituted his usual disciplinary methods to the great indignation of his officers and crews, but with salutary results so far as the efficiency of the fleet was concerned, as he was able to maintain the blockade of Brest for 121 days. He was First Lord of the Admiralty in 1801–03 and was fearlessly dictatorial in the institution of reforms at the dockyards, but was opposed by Pitt on the grounds that he failed to see the necessity of preparing the fleet for war. He refused the command of the Channel fleet under Pitt's ministry in 1803, assumed it after Pitt's death in 1806, but asked to be relieved in 1807. The rank of admiral of the fleet was conferred upon him by George IV at the time of his coronation. Lord St. Vincent ranks high among the commanders of his time, through whom the supremacy of British naval power was established. The biographies by Tucker (2 vols., 1844) and Brenton (1838) are not considered authoritative in the best sense. Consult Laughton, 'From Howard to Nelson' (1899); Mahan, A. T., 'Types of Naval Heroes' (1901); Anson, 'Life of John Jervis, Admiral Lord St. Vincent' (1913).

JERVOIS, jĕr'vĭs, SIR **William Francis Drummond,** British general and engineer: b. Cowes, Isle of Wight, 10 Sept. 1821; d. Bitterne, Hampshire, 16 Aug. 1897. He was educated at the Royal Military Academy at Woolwich and was commissioned second lieutenant in the Royal Engineers 19 March 1839. He was ordered to the Cape of Good Hope in 1841, where he remained on engineering duty and in active service against the Boers and Kaffirs until 1848. Returning to England he continued in the engineering service. He was appointed assistant inspector-general of fortifications at the War Office 7 April 1856, and in 1857 became in addition secretary to the defense committee. He prepared the plans for the defense of London in case of invasion during the period when war with France was threatened in 1857, and in 1859 drafted a report and recommendations for defenses calling for an appropriation of £7,000,000, which was granted by Parliament. He was appointed director of works for fortifications in 1862, and in 1863 made an official tour of inspection of the fortifications of Canada and Bermuda, also visiting those of eastern United States. He afterward inspected the progress of fortifications in all parts of the British Empire, and upon the completion of the work in 1874 it was found that he had carried out the plans submitted to Parliament and kept within the £7,460,000 appropriation by a margin of £40,000. He was governor of the Straits Settlements in 1875–77, of South Australia in 1877–82, retiring from military service with the rank of lieutenant-general 7 April 1882. He served as governor of New Zealand in 1882–89, when he returned to England with an enviable record for both ability and popularity. He served on the consultative committee on coast defense duties under Edward Stanhope in 1890. He was a member of the Royal Society, a knight commander of the Orders of Saint George and Saint Michael, and author of numerous valuable reports on problems of defense.

JESHURUN is a tender and affectionate poetical term applied to the people of Israel occurring four times in the Old Testament. It is variously interpreted. Kimchi says "Israel is so called as being just among the nations." Gesenius translates it as "a righteous little people."

JESI, yā'zē, or **IESI** (anc. Æsis), Italy, city and episcopal see of the Marches in the province of Ancona, on the River Esino, 17 miles by rail southwest of Ancona. Its walls date from mediæval times and are well-preserved. The cathedral of Saint Septimius was built in 308, and the Palazzo del Commune in 1487–1503. There is a library containing paintings by Lorenzo Lotto, and a castle built by

Baccio Pontelli in 1488. The town takes its name from the river, which from 250 B.C. to about 82 B.C. formed the boundary of Italy. The ancient town Æsis was a colony used by the Romans as a recruiting ground. It was the birthplace of Emperor Frederick II, as well as of the composer Giovanni Battista Pergolesi. Pop. commune, 24,777.

JESPERSEN, yĕs'pĕr-sĕn, **Jens Otto Harry,** Danish philologist: b. Randers, 1860. He was educated at the University of Copenhagen where he became professor of English in 1893. He was associate editor of *Dania* in 1890–1903, and in 1906 he received the Volney prize of the French Institute. He lectured at Saint Louis in 1904 and at Columbia University and the University of California in 1909–10. His literary works deal chiefly with phonetics. Author of 'The Articulation of Speech Sounds' (1889); 'Chausers Liv og Digtning' (1893); 'Fonetik Læren om Sproglyd' (1897–99); 'Sprogundervisning' (1901; Eng. trans., 1904); 'Growth and Structure of the English Language' (1905); 'Modern English Grammar' (1909); 'Lehrbuch der Phonetik' (1913); 'Större engelsk grammatik på historisk grundlag (1909–14); 'Engelske Laessestykker' (1914), etc.

JESSAMY BRIDE, The, name given in compliment by Goldsmith to Mary Horneck, a relative of Reynolds and a member of a family with whom the author was on terms of intimacy. Miss Horneck was thought to be the object of affection on the part of Goldsmith. She became Mrs. Gwynn and afterward gave to Prior her recollections of the author. «Jessamy» is a poetic name for jasmine.

JESSE, jĕs'sĕ, in the Bible stands at the head of the house of David, who was his son. While Saul was persecuting David he took refuge in the land of the Moabites, where Ruth the Moabitess, his grandmother, had lived. In the genealogy of Jesus Christ as given in the Gospels of Matthew and Luke he is mentioned as one of the ancestors, as Christ in the New Testament is hailed «Son of David.» This fact has suggested some of the most interesting creations of mediæval art, and what is called a «Jesse window» is a stained glass church window in which Jesse is depicted as the root of a tree which bears as its fruit David and other heroes and saints of the Old Testament, with the infant Jesus in the arms of his mother on the highest branch.

JESSE, Edward, English author and naturalist: b. Hutton Cranswick, Yorkshire, 14 Jan. 1780; d. Brighton, 28 March 1868. He was secretary to Lord Dartmouth and was appointed successively to a clerkship in the woods and forestry office and deputy surveyor of the royal parks and palaces. His love for natural history was fostered by his residence in Richmond Park, and later in Bushey Park, and at Hampton, where he was connected with the restoration of the Hampton Court Palace. While not possessed of scientific training Jesse's powers of observation and facility in expressing himself gave a considerable popularity to his writings. Author of 'Gleanings in Natural History' (1832–35); 'An Angler's Rambles' (1836); 'Anecdotes of Dogs' (1846); 'Lectures on Natural History' (1863). He edited Izaak Walton's 'Compleat Angler'; Gilbert White's 'Selborne'; and L. Ritchie's 'Windsor Castle.' He also wrote handbooks to Windsor, Hampton Court and other places of note.

JESSE, John Henaage, English historian, son of Edward Jesse (q.v.): b. 1815; d. London, 7 July 1874. He was educated at Eton and afterward became a clerk in the admiralty, where he served for many years. He early developed a taste for literature and while his initial attempts at verse and drama were of little moment his later work possesses considerable value as presenting the times of which he wrote from the social and anecdotal side of history. Author of 'Memoirs of the Court of England During the Reign of the Stuarts' (1840); 'George Selwyn and His Contemporaries' (1843; new ed., 1882); 'Memoirs of the Pretenders and their Adherents' (1845); 'Literary and Historical Memoirs of London' (1847); 'London and Its Celebrities' (1850); 'Memoirs of the Life and Reign of King George the Third' (1867); 'Memoirs of Celebrated Etonians' (1875), etc. A collected edition of his works was published (30 vols., London 1901).

JESSE, Richard Henry, American educator: b. Epping Forest, Lancaster County, Va., 1 March 1853. He was graduated from the University of Virginia in 1875. He studied at Leipzig in 1885. Inspected German schools in 1890. Studied at Munich, spring and summer semester, 1905; at Berlin, fall and winter semester, 1905–06; was dean of the academic department of the University of Louisiana from 1878 till its union with Tulane University in 1884, in which institution he was professor of Latin till 1891. From July 1891 to July 1908 he was president of the University of Missouri. From ill-health he resigned as university president and entered by invitation upon The Carnegie Foundation. He has served as president of the Missouri State Teachers' Association, the Southern Association of Colleges and Secondary Schools, the National Association of State Universities and the Baptist Congress. In 1904 he was awarded a commemorative diploma and medal at the Saint Louis Exposition for his services to education. He is author of 'Missouri Literature' (1901), with E. A. Allen, and of papers in the transactions of various societies.

JESSEL, jĕs'ĕl, **Sir George,** English judge: b. London, 13 Feb. 1824; d. there, 21 March 1883. He was of Jewish parentage and was educated at University College, London, where he became a fellow in 1846. He was called to the bar at Lincoln's Inn in 1847, was called within the bar and became a bencher in 1865, and in 1868 he was elected to Parliament for Dover. He attracted Gladstone's favorable notice in 1869 by two sound speeches on the Bankruptcy Bill, and in 1871 he was appointed Solicitor-General. He succeeded Lord Romilly as Master of the Rolls in 1873, was sworn a privy councillor and resigned his seat in Parliament. The Judicature Act of 1881 made him president of the First Court of Appeal where he served the remainder of his life. He was notable as a judge for his wide learning, his quick, accurate judgments and the rapidity and thoroughness with which he cleared his calendar. He was the first Jew to take a share in the

executive government of England, to become a regular member of the Privy Council and to take a seat on the judicial bench of Great Britain. He was vice-chancellor of the University of London from 1880, a trustee of the British Museum and a fellow of the Royal Society.

JESSOPP, Augustus, Anglican clergyman and author: b. 20 Dec. 1824; d. 12 Feb. 1914. He was educated at Cambridge and after taking orders in the Anglican Church was curate of Papworth Saint Agnes, Cambridgeshire, 1848–54; head master of Helston Grammar School, Cornwall, 1854–59; was headmaster of King Edward VI's School, Norwich, 1859–79 and from 1879 rector of Scarning, Norfolk. He was an authority on archæological subjects, wrote largely on past and present village life in England; and contributed many articles to the 'Dictionary of National Biography.' His works include 'Arcady for Better for Worse' (1881), studies of agricultural life in Norfolk; 'Studies by a Recluse'; 'Trials of a Country Parson'; 'The Coming of the Friars,' etc.

JESSUP, Henry Harris, American Presbyterian missionary and author: b. Montrose, Pa., 19 April 1832; d. 28 April 1910. He was graduated at Yale in 1851, at the Union Theological Seminary in 1855, and was ordained in that year. He served as a missionary in Tripoli and Syria in 1856–60, and from 1860 until his death was at Beirut. He was missionary editor of the Arabic journal *El-Neshrah,* and was professor of theology and homilitics in the Syrian theological Seminary at Beirut. He was moderator of the General Assembly at Saratoga in 1879. Author of 'The Women of the Arabs' (1874); 'Mohammedan Missionary Problem' (1879); 'The Greek Church and Protestant Missions' (1885); 'Autobiography and History of the Syria Mission' (1909); 'Fifty-three Years in Syria' (1910); etc.

JESTER, a professional «fool» or humorist, an entertainer such as were formerly employed by European monarchs and wealthy nobles. Originally the jester was a court minstrel whose duty it was to tell and sing of *gestes,* heroic deeds (Lat. *gesta*), but with the decline of minstrelsy the word *geste* changed in meaning and the *gestour* developed into a domestic buffoon (Fr. bouffon), a retailer of witty stories. They usually wore a motley dress and a cap surmounted with bells and asses' ears or a cock's comb, hence the modern word «coxcomb,» a showy fool or vain pretentious person. The emblem of the jester was the fool's bauble or *marotte.* Consult Chambers, E. K., 'The Mediæval Stage' (London 1903); Doran, J., 'History of Court Fools' (London 1858); Douce, F., 'Clowns and Fools in Shakespeare,' in *Illustrations of Shakespeare* (London 1839).

JESU DULCIS MEMORIA ('Jesu! the very thought of thee'), the first line of a poem dating from the 12th century. In the earliest manuscript it consists of 42 stanzas of four lines each with a single rhythmic scheme for each stanza. Twelve stanzas of this poem have been taken to form three hymns of the Office of the Holy Name in the Roman Breviary, namely, 'Jesu dulcis memoria' (Vespers), 'Jesu rex admirabilis' (Matins) and 'Jesu decus angelicum' (Lauds). The 'Dictionary of Hymnology' (1892) states that «this hymn has been (and there seems little reason to doubt, correctly) ascribed to Saint Bernard and there are many parallels to it in his prose works, especially that on the Canticles. It has been variously dated 1130, 1140 or 1153, but as positive proof is lacking that it is unquestionably the work of Saint Bernard, it is manifestly impossible to fix a date for its composition.» Although Dom Guéranger contends that there are «incontestable manuscripts» to prove that the three hymns of the Holy Name were written by a Benedictine abbess of the 14th century, he does not give the date and location of these manuscripts, and the existence of the 12th century manuscript seems to preclude that possibility. Hymnologists of the present day, including Schaff, Trench, March and Duffield, seem to be unanimous in following the tradition of Saint Bernard's authorship. Mearns in the second edition of the 'Dictionary of Hymnology' (London 1907) retains this opinion as correct. The 'Jesu dulcis memoria' has been translated into English many times, notably by Bagshawe, by Donahoe and by Caswall, the latter's being perhaps the best known of the English translations. A fine translation, preserving the metre and rhymic scheme of the original, was published by Hugh T. Henry in the *American Ecclesiastical Review* (January 1900).

HERBERT F. WRIGHT.

JESUIT ESTATES ACT. See CANADA — JESUIT ESTATES ACT.

JESUIT RELATIONS AND ALLIED DOCUMENTS, The, a series of 72 volumes on the travels and explorations of the Jesuit missionaries in New France (1610–1791). The original French, Latin and Italian texts, with English translations and notes; illustrated by portraits, maps and facsimiles, have been edited by Reuben Gold Thwaites. The very great value of the work is that of original materials of the most interesting character for the history of North America from 1611, the date of the first landing of Jesuit missionaries on the shores of Nova Scotia. The reproduction of documents takes them in chronological order. The execution of the work by translators, editors and printers (at Cleveland, Ohio) is in every way admirable; and its completion makes a monumental addition to American historical libraries.

JESUITS, a religious order of the Catholic Church whose members, like those of similar societies, solemnly bind themselves to aspire to perfection by leading a life of chastity, by renouncing the possession of all personal property, and by obedience to lawful superiors in all that does not contravene the law of God. A certain number of them add a special vow of obedience to the Pope. They are called the Society or Company of Jesus, the latter designation expressing more correctly the military idea of the founder, which was to establish, as it were, a new battalion in the spiritual army of the Catholic Church. There are no female Jesuits, nor are there crypto or secret Jesuits. Romances are mostly responsible for such myths. Nor does the society form, as is sometimes fancied, a sort of sect within the Church. R. W. Thompson, ex-Secretary of the United States navy, in his 'Footprints of the Jesuits,'

asserts that they are such, and independent of the Pope, and in one instance he accuses them of being idolaters. As a matter of fact the Society of Jesus has always inculcated ardent devotion to the Pope, the most uncompromising orthodoxy and an intense Catholic spirit. The descriptions of Jesuits as crafty, unscrupulous men constantly engaged in dark plots against all who stand in their way, are inventions of their enemies and have no foundation in fact. Finally they are not monks, as they are sometimes described. Technically they are classed among churchmen as clerics, living according to a rule and are properly regular clerics.

The special object of the society beside the personal sanctification of its members is to propagate the Christian faith chiefly by teaching and preaching. Their teaching is restricted mainly to the higher studies, and includes literature, mathematics, science, philosophy, theology and the cognate branches. Their preaching addresses itself to all classes, but, by predilection, and at stated periods in a Jesuit's life, by express injunction, it concerns itself with catechizing the ignorant and instructing the inmates of hospitals and penal institutions, while it addresses itself also to more cultured and spiritual audiences. One special and characteristic feature of its ministry is known as the "Spiritual Exercises" or "Retreats" which it may be regarded as having introduced, or revived in the modern church, and are now a universal ascetic practice with the clergy and religious communities as well as with a considerable number of the laity. A "Retreat" is a withdrawal from worldly occupations for a more or less protracted period in order to scrutinize the state of the soul and to take means to amend one's life, or to strive for higher Christian perfection. The method of these "Exercises" is laid down in a small manual written by the founder of the society. The book itself, which is at first sight fragmentary, and only suggestive in its character, is not easily understood or explained except by those who are trained to interpret it.

The society was founded by Ignatius Loyola, a Spanish nobleman, who after being disabled in fighting for his country, betook himself to the solitude of a cave near the little town of Manresa, Spain, where he passed some months in prayer and severe bodily austerities. Later, desirous of working more effectively for the salvation of his fellow men, he determined to become a priest, and for that purpose studied in the universities of Alcala and Salamanca, and finally in Paris, where he gathered about him six companions, among whom were Francis Xavier, the future Apostle of Japan, Peter Faber, whom, with Ignatius and Xavier, the Church was to honor subsequently as a saint, and also Salmeron and Laynez, who were conspicuous luminaries at the Council of Trent which was then about to be convened against the doctrines of Luther, Calvin and others who had just then arisen.

On 15 Aug. 1534 these seven men organized themsleves into a society and pronounced their vows in the crypt of a little chapel in what is now Rue Antoinette, a short distance below the crest of the hill of Montmartre in Paris. It was only six years afterward that Pope Paul III gave them and the others who had joined them meantime his solemn approval.

The peculiarities of their organization were the occasion of much antagonism at the very outset on the part of some of the most eminent men of the Catholic Church. The Inquisition strongly suspected its purposes and doctrines. The name of the "Society of Jesus" was objectionable to Pope Sixtus V. Unlike other orders they were to be dispensed from reciting the divine office in common, and were to wear no distinctive habit. The length of probation and the general structure of the society were unusual. The members were first the professed who were relatively few. In them the governing power resided, and they were distinguished by a special vow of obedience to the Pope. Then came the spiritual coadjutors, or priests, who did not take the special vow of obedience to the Pope. Preparing for either category were the students or scholastics, and lastly there were lay brothers who were to devote themselves to domestic duties. Those who applied for admission were to pass two years of noviceship, and not one as in other religious orders, and were then admitted to what are called simple vows which could be easily dispensed with by proper authority if the subject were subsequently found unfit. Following the noviceship, two years were given to a review of the classical studies; then came three years of philosophy, mathematics and the physical sciences; five years of college teaching and four years of theology, to end only with another year of seclusion and prayer, after which the candidate was permitted to take the solemn vows which bound him irrevocably to the order as a spiritual coadjutor or professed. The probation of the lay brothers was protracted to 10 years. The Jesuit renounces by vow all ecclesiastical dignities, and accepts them only in unusual circumstances and by express command of the Pope, under pain of sin in case of refusal. As the establishment of the Society of Jesus coincided with the Protestant Reformation the efforts of the first Jesuits were naturally directed to combat that movement. Under the guidance of Canisius so much success attended their work in Germany and other northern nations, that, according to Macaulay, Protestantism was effectually checked. In England where Elizabeth had inaugurated a movement against her Catholic subjects, and previous to that under Henry VIII the Jesuits stopped at no danger to go to the rescue of their brethren in the faith; and what they did there was repeated in other parts of the world. "In spite of oceans and deserts, of hunger and pestilence, of spies and penal laws, of dungeons and racks, of gibbets and quartering blocks, the Jesuits were to be found under every disguise, in every country; scholars, physicians, merchants, servingmen, in the hostile court of Sweden, in the old manor houses of Cheshire, among the hovels of Connaught arguing, instructing, consoling, animating the courage of the timid, holding up the crucifix before the eyes of the dying."

Such is the testimony of Macaulay, a Protestant historian. Though many died as martyrs on the scaffolds and in the prisons of England and elsewhere, yet their skill in evading detection as well as their courage in living in the midst of their enemies and their great success in winning converts well explain the hatred with which they were regarded in Protestant

countries from the beginning, while it gives us the historical origin of the tradition of cunning and deceit which has always been associated with the name of Jesuit.

Under James I they were accused of complicity in an alleged attempt to blow up both houses of Parliament, and though clearly proven to be innocent of the charge, Father Garnet, who was said to have been cognizant of the plot, was executed, and the accusation is still believed. Guy Fawkes' Day commemorates the event and perpetuates the calumny. It is probably in connection with this occurrence that the supposed Jesuit doctrine of "the end justifying the means" was first accredited to them and the accusation made that "it was their office," as Macaulay assures his readers, "to plot against the thrones and lives of apostate kings, to spread evil rumors, to raise tumults, to inflame civil wars and to arm the hands of the assassin." The first one who is accused of formulating the doctrine of the end justifying the means is Father Wagemann of Innsbruck 1762. Even the murders of Henry III and Henry IV of France were ascribed to them, and under Charles II of England six Jesuits were accused by Titus Oates of conspiracy and put to death. These and other charges have been repeatedly disproved, yet writers of romance, and even writers of history, never fail to find readers credulous enough to accept them as true.

While the Jesuits were propagating the faith in Europe they were sending missionaries to every part of the world to preach the Gospel to heathen nations. Greatest of all these apostles was Saint Francis Xavier whom all Protestant writers unite in glorifying and whom the pagans almost worshipped as a deity. His name is still mentioned with enthusiasm among the pagans in Japan and the Occident. The conversions which he effected and the miracles he wrought almost defy belief. It is a testimony to the solidity of his teaching that although Catholicity was apparently obliterated in Japan by a series of bloody persecutions, the French missionaries who entered the country in 1860 found 30,000 Japanese Christians there. In spite of the absence of priests, the doctrines and practices received from Francis Xavier which meant death to profess openly had been handed down from father to son for a period of nearly 300 years. One blot on the reputation of the society in this field was the shameful apostasy of one of their superiors; but he atoned for his sin by a subsequent martyrdom.

In America the French Jesuits undertook the task of evangelizing the Indians, and at one time had 3,000 civilized and christianized Hurons under their control. In what is now New York, Father Jogues was cruelly tortured and slain on the banks of the Mohawk in 1646. In 1649 Garnier, Daniel and others were shot to death; and at the same time De Brébeuf and Lallemant were burned at the stake while their flesh was slashed with knives and their hearts cut out and eaten by the Indians of Lake Superior. Others died from want and exposure. It was Jogues who discovered Lake George to which he gave the name of Lac du Saint Sacrement. Later on Le Moyne came upon the salt springs near Syracuse. Marquette discovered the Mississippi which he named the River of the Immaculate Conception. He explored it as far as the mouth of the Arkansas, and returning home was the first white man with his companions to travel over the territory of what is now the city of Chicago. Wisconsin has erected a statute to his honor. Other Jesuits reached the Pacific coast and established the missions of California which they handed over to the famous Franciscan Junipero Serra when the society was suppressed. English Jesuits had come over with Lord Baltimore; and before that five Spanish members of the order had been slain by the Indians on the banks of the Rappahannock. The "Relations" of the French Missions have been recently published by an American publishing house and form 72 volumes of missionary and scientific information which the *Atlantic Monthly* considers the most precious material that could be desired for the history of this country. Similar records have been kept by the Jesuits of other nationalities. Marquette's diary and maps of the discovery of the Mississippi decided the controversy between France and England about the possessions of the western territory.

The missions of South America conducted by the Spanish and Portuguese Jesuits were remarkable in their character and extent. Father Anchieta, a native of Brazil, was particularly distinguished for his missionary success as well as his gift of miraculous powers. Peter Claver devoted himself to the thousands of negro slaves who were brought to the port of Cartagena. Other Jesuits traveled through Chile and Peru. Seventy of them on their way thither were said to be killed by Calvinists who intercepted them at sea. But their most famous work was what are known as the 'Reductions' or Christian Commonwealths of Paraguay. The description of these missions forms one of the most brilliant chapters of Chateaubriand's 'Génie du Christianisme'; but a recent work entitled 'A Vanished Arcadia' by Cunningham-Graham gives a more reliable and scholarly account of what was accomplished there. Voltaire says: "When in 1768 the missions of Paraguay left the hands of the Jesuits, they had arrived at perhaps the highest degree of civilization to which it is possible to conduct a young people."

"For nearly 200 years they controlled a district as large as France," writes Cunningham-Graham, "where they had established 32 towns in which there were 160,000 Indians whom they had converted and civilized, teaching them agriculture, the mechanical arts, commerce and even forming among them a small army of defense. The annual income of the country was about 1,000,000 reales. The missionaries were finally expelled by Charles III, and the country fell back into its primitive condition of a tangled wilderness."

The reasons of their expulsions were first the jealousy of the Spaniards at being excluded from the territory, secondly the anger of the colonists at being prevented from enslaving the Indians, and thirdly the ungrounded suspicion that there were gold mines in the missions. An impression in the royal mind that the Jesuits had reflected on the circumstances of his birth made him an easy instrument in the hands of the enemies of the society. "Curious as it may appear," writes Cunningham-

Graham, "the bitterest opponents of the Jesuits were Catholics, and Protestants have often been their apologists. Buffon, Raynal and Montesquieu with Voltaire, Robertson and Southey have written favorably of the internal government of the mission and the effect it produced. When the Spanish general was sent to dispossess them, he set about it with more preparation than Cortes or Pizarro made for the conquest of Mexico or Peru. But there was no resistance, and all the wealth the fathers had was the poor clothes on their backs." The destruction of these missions was probably a part of the prearranged plan for the annihilation of the whole society.

The missions of Japan which Francis Xavier had inaugurated continued after his death in spite of the fierce persecutions in which many Jesuits perished. He had been unable to reach China and died on a lonely island off the coast. Ricci, Verbiest, Schall and others carried out his project and became the advisers of the emperor as well as his astronomers, mathematicians and mechanicians. The great bronze astronomical instruments carried off by Germany on the occasion of the invasion of that country by the allied powers of Europe were the work of the Jesuits of the 17th century. As soon as the mission was started, great numbers of Jesuits came from Europe, half of them generally dying on the passage. In 1661 they possessed 151 churches and 38 residences there, and had written as many as 131 works on religion, 103 on mathematics and 55 on physical and moral sciences.

Numberless other missions were established elsewhere; de Nobili for instance lived like a Brahman in India to reach that particular caste, and was almost suspected of apostasy for doing so. He is said to have made 100,000 converts. Jesuits overran the whole Indian peninsula and crossed the Himalayas into Tibet. Africa had long before been penetrated, and one of the first members of the society was Patriarch of Ethiopia. The present explorers of the Dark Continent find remnants of former missions far in the interior. They had gone from Mexico to the Philippines in the earliest days; they had entered Tartary and Lebanon, and when their own efforts were thwarted they induced others to take their places. Thus De Rhodes, a Jesuit expelled from Japan, founded the Société des Missions Etrangères, a body of secular priests who have given a great number of saints and martyrs to the Catholic Church.

While the Jesuits were engaged in missionary work among the uncivilized peoples of the world they erected splendid churches all over Europe, and furnished such orators to the pulpit as Bourdaloue in France, Vieyra in Portugal and Segneri in Italy. The 'Book of Spiritual Exercises,' according to Saint Francis de Sales, "has converted as many souls as it has letters." But their apostolic work was not restricted to preaching, and we hear of a single French Jesuit who during his 40 years of ministry had established as many as 146 hospitals for the poor. They founded orphan and Magdalen asylums. They were the confessors of kings and princes and delegates of the Holy See, but they extricated themselves from these honorable charges as soon as it was possible to do so. At the time of the suppression they controlled and directed the majority of the ecclesiastical seminaries of Europe.

The success of the society in the work of education forms a great chapter in its history. Their method is found in what is known as the 'Ratio Studiorum' or Plan of Studies. It is a complete system of pedagogy and covers the whole field from the lowest class of grammar up to philosophy and theology. The plan was first conceived by Ignatius himself, and subsequently elaborated by one of his successors, Claudius Aquaviva. Compayré, one of the chief pedagogists of the present time, denounces it as a mere system of memorizing. Bacon says of it: "Never has anything more perfect been invented." Their colleges at one time covered all Europe, and in the single school of Louis le Grand they had as many as 3,000 students. Kings assisted at its public academic exercises. Among their scholars they can claim some of the greatest men of modern times, as for instance Popes Gregory XIII, Benedict XIV, Pius VII, Saint Francis de Sales, Bossuet, Fleury, Flechier, Montesquieu, Malesherbes, Tasso, Galileo, Corneille, Descartes, Molière, Mezzofanti, Muratori, Buffon, Gresset, Canova, Tilly, Wallenstein, Condé, the Emperors Maximilian, Ferdinand and others. Even Voltaire was one of their pupils. The disturbed conditions of modern times prevent a similar brilliant showing, but many of the most distinguished Catholic churchmen of to-day have studied in their schools, and notably Leo XIII who was trained by them from his college classes to the end of his theological course.

Within their own ranks they have furnished great scholars in all branches of philosophy, theology, history, philology, literature and science. It is sufficient to name such men as Suarez, De Lugo, Bellarmine, Toletus, Lessius, à Lapide, and to note that the treatises of Jesuit writers form the textbooks in all the theological seminaries of the Catholic Church to-day. They have written in almost every language and on every conceivable subject, and the mere catalogue of their writers, though not yet complete, already fills more than seven large quarto volumes. Their missionary enterprises were never disjoined from scientific investigation.

Their history is marked by ceaseless activity in launching new schemes for the spread of the Catholic faith, and by absolute fearlessness in opposing error regardless of any consequences to themselves. These two characteristics may explain why even by some Catholics they are regarded as a disturbing element in the Church. One of their most noted disputes with churchmen was with the Dominicans on grace, during which the Jesuit doctrine of grace was formulated. The contest lasted for nine years, and although great theological learning was adduced on both sides a truce was imposed by the Pope without any decision being arrived at. Of far greater consequence was their war with the Jansenists. It was chiefly on this occasion that the society was accused of laxity in their moral code and that their great antagonist Pascal won fame by his 'Lettres Provinciales' which like the famous 'Monita Secreta' of former times purported to be the private instruction of superiors to members of the order. After this contest their expulsion from France was an easy

task, as the Jansenists wielded great political influence and were backed by the irreligious element which was growing rapidly there.

They have been expelled over and over again from almost every Catholic country in Europe, always, however, coming back again to renew their work when the storm had subsided; and this fact has been adduced as a proof that there is something iniquitous in the very nature of the organization. Worse still in 1773 the entire order was suppressed by a brief of Pope Clement XIV and all their goods confiscated. They then numbered 24,000 members and had establishments in all parts of the world and flourishing missions, all of which were immediately destroyed, but not one Jesuit uttered a word of complaint or protest. What is remarkable is that while Catholic Popes expelled them they were protected by the schismatic Catherine of Russia, and the Protestant Frederick of Prussia, the friend of Voltaire. This very protection was urged as a reproach against them and as a proof of their guilt.

With the exception of the disastrous financial speculation of Lavalette, which was the sin of an individual and not imputable to the entire society, as commercial transactions were absolutely prohibited by the statutes, the society is proved to be guiltless both in its partial suppressions and in its total abolition. This is clear from the very brief of Clement XIV which dealt the blow. In that document all the charges are enumerated, but not one is pronounced to be true. The society was suppressed as a political necessity and for nothing else. The encyclopædists of France regarded it as their most redoubtable opponent and had vowed its destruction. "Destroy the Jesuits," said Voltaire, "and we shall make an end of the beastry Church." In this work the Bourbon kings had to be enlisted. Madame de Pompadour, the king's mistress, whom the Jesuits had refused to absolve, influenced Louis XV; the Spanish and Portuguese ministers wrought on the fears of their sovereigns by forged documents containing threats and plans of assassination, and when all was ready the monarchs gave the Pope a choice of suppression of the society or schism. The Pope yielded, and is said by Pius VI and Pius VII to have lost his mind in consequence. The vindication of the society came immediately. The very Pope who suppressed them approved of their corporate existence in Russia. Pius VI who succeeded him in the following year readmitted them into Italy, and Pius VII on the fall of Napoleon re-established the society in all its integrity on 7 Aug. 1814.

Since its rehabilitation the society has continued to increase in spite of constantly increasing difficulties. In the beginning of 1916 it counted 17,008 members, of whom 8,448 were priests, and 4,413 scholastics in preparation for the priesthood. The general of the society is Uledimir Ledochowski, who was elected 11 Feb. 1915. In the United States the beginning of 1917 there were 2,626 Jesuits, with colleges and churches in the principal cities and with flourishing missions among the Indians of the Rocky Mountains and Alaska. In Cuba and the Philippines their schools have achieved remarkable success, and the great meterological observatories of Havana and Manila were established and are at present controlled by them. The chief houses for studies for the American members of the order are at Woodstock, Md., Saint Louis, Mo., and Montreal, P. Q.

In some countries of Europe the same hostility still pursues them. In the revolutions of 1830 and 1848 their houses were closed and the members driven out of the country. In the Kulturkampf inaugurated by Bismarck they were the first victims, and all the efforts of the Centre party have hitherto failed to secure their re-entrance into Germany. Similarly they were the first to be struck in the present religious persecution in France. On the other hand they have been the recipients of countless marks of esteem and affection on the part of Leo XIII, and he placed the stamp of his approval on the society by adding many new names to its already long list of canonized saints and martyrs.

T. J. CAMPBELL, S.J.

JESUP, Morris Ketchum, American banker: b. Westport, Conn., 21 June 1830; d. New York city, 22 Jan. 1908. He was engaged in banking in New York 1852–84, but retired from business in the latter year. In 1881 he became president of the New York City Mission and Tract Society, for which he subsequently erected the DeWitt Memorial Church in Rivington Street, in memory of Rev. T. DeWitt, his father-in-law. He was made president of the Five Points House of Industry in 1872; was a founder of the Young Men's Christian Association, of which he was president in 1872. He was also president of the Metropolitan Museum of Natural History in 1881, and of the New York Chamber of Commerce 1899–1907. To the Metropolitan Museum of Art he gave a collection of native woods valued at $100,000; to the Woman's Hospital in New York city, $100,000; and to Yale University and Williams College, also large sums. He endowed the Jesup North Pacific Expedition (q.v.), and gave liberal sums as well as much time and thought to the establishment of schools for the colored population of the South. In 1905 he received the order of knighthood from the Czar of Russia for his philanthropic work. Consult Brown, W. A., 'Morris Ketchum Jesup' (New York 1910).

JESUP NORTH PACIFIC EXPEDITION, The, an American organization for archæological research, supported by Morris K. Jesup (q.v.), and conducted under the auspices and direction of the American Museum of Natural History. The work began in 1897 in British Columbia. In that year Prof. Harlan I. Smith began to dig in the Thompson River district. In successive years he worked a little

farther east, and also around Puget Sound, and down the west coast of Washington. Results of these explorations have been compared and conclusions drawn as to the class of people who inhabited these regions in prehistoric times. Very interesting differences were found among them. Some were more highly developed than others. In particular, one small section east of the city of Vancouver was found to reveal traces of a people much more highly developed than any others of the section, and interesting in many ways to the archæologist. Some of the regions explored revealed the remains of coast tribes; others of interior tribes. At some points these characteristics merged, producing a different type. New discoveries of one season explained things not understood in previous explorations. So to gather up missing links and further elucidate the whole region, especially that interesting little people near Vancouver, it was necessary to take up some new territory and thoroughly explore it. Professor Smith, therefore, went into the Yakima Valley in northern Washington in 1903. On the map this section does not look far from the Thompson River district in British Columbia. And when one reflects how very similar are the white people now inhabiting the two sections and how near the two districts are, it is interesting to find that the prehistoric peoples inhabiting them differed at least as much as the Spanish and the Germans, according to Professor Smith's conclusions. Not only their culture, but their skulls were different, as shown by the skeletons brought back by the expedition. These ancient tribes seemed to have lived, each in its little nook of coast or river valley, for unnumbered ages, never going to see what was on the other side of the mountain; developing each its own little morsel of civilization in its own little way, its life and culture and development modified by the little corner of the earth's surface in which it sat down, seemingly to stay forever. Sometimes shell heaps are found miles in length, and with tree stumps six feet in diameter standing on nine feet of these layers, of which each is only an inch or two in thickness. It took a good many generations of Indians to pile up those successive layers with the shells from their shell-fish dinners. A stump of Douglas fir, over six feet in diameter, stood on a shell heap eight feet below the surface which contained human remains. The tree indicated an age for the top layers of more than 500 years. The material brought back included carved and sculptured pipes, stone mortars, pestles, and sinkers, bone implements used on spears, deer antlers used as handles, stone adzes differing from those found anywhere else, bone needles, shell ornaments, and the like. The expedition also found many paintings and sculptures on rock walls, which were photographed.

JESUS, SON OF SIRACH, mentioned in the book of Ecclesiasticus (l, 7) as the author of that book. In the Septuagint Ecclesiasticus is called the "Wisdom of Jesus, Son of Sirach," or the "Wisdom of Sirach." He was a native of Jerusalem, the son of Eleazer, and the book reveals its Palestinian origin. He was a scribe and G. Margoliouth argues (from li, 23) that he was "in the latter part of his life the head, and probably founder and sole teacher of an academy for the moral instruction of youth at Jerusalem."

JESUS CHRIST, the founder of the Christian religion. Four documents dating from the second half of the 1st century, the "Gospels," give some account of the life of Jesus, chiefly confined to his brief public work and death. Beyond what they give little is known as to his history. Some of the most important facts are referred to in other writings of the New Testament, especially in the letters of Paul; secular history contains mere references to him; a number of later writings, the so-called "Apocryphal Gospels," purport to give additional information, but they are fictitious and worthless; and beyond a very few sayings which were probably rightly attributed to Jesus, called "Agrapha," tradition has preserved nothing of value which was not embodied in the Gospels. These narratives vary, but are rarely inconsistent: usually they may best be regarded as complementary, and the picture of the life and work of Jesus which may be drawn from them has been accepted as trustworthy throughout Christendom in all centuries, and while on many points confirmation from other sources cannot be expected, the investigations of impartial scholars have rather confirmed its accuracy than invalidated it.

Birth and Parentage.— According to the Gospels, Jesus was born in the family of a carpenter, named Joseph, living in Nazareth (q.v.), a small town in southern Galilee. Descent from the line of kings of Judah which began with David is positively claimed for Joseph, and, as some understand the genealogical tables, for Mary, his wife, as well, but during the centuries of national disaster the descendants of David seem to have sunk into poverty and inconspicuousness. While Nazareth was the family home, the birthplace of Jesus was Bethlehem (q.v.), the village of Judea in which David himself was born, a fact which is explained by mention of a census said to have been made under Roman authority while Quirinius was Roman representative in Judea, and to have required that all citizens should be enrolled at the original home of the family. Though no other record of this enrollment has yet been discovered, late discoveries make the fact seem more plausible than it was formerly regarded by some scholars.

The Gospels represent Jesus as born of a virgin, conception having been due to special divine power. The date of his birth cannot be given with certainty as to day, month or even year. Since it must have somewhat preceded the death of Herod (April 4 B.C.), it probably occurred sometime in the year 5 B.C. (possibly 6). It is reported that Mary, in a village strange to her, and at the time overcrowded with visitors, could find no place to lay her new born babe but in a manger. But at the presentation in the Temple for the offering of the sacrifices which Jewish ritual prescribed after child-birth, the infant was joyously hailed by Simeon and Anna, aged saints profoundly possessed by the common Messianic expectation of the nation at that time, and, as shepherds from not far away had come in the night of his birth in obedience to a vision of angels, so, later, the Magi (q.v.) from afar guided by a star sought the child to offer him obeisance and rich gifts. This visit of the

Magi, however, made Herod aware of the birth of a child who might grow up to be a dangerous rival of the dynasty which he hoped to found, and it is handed down to us that unable to trace it he ordered the slaughter of all the infants of the village up to the age of two years. But his parents, divinely warned, had taken the child to a safe refuge in Egypt, where they remained till the death of Herod, presumably only a short time. If they returned in the expectation of bringing him up in the ancient home of his line, they were deterred by fear of Archelaus who had succeeded his father as ruler in Judea, and consequently they turned aside to Nazareth where they were secure under the milder rule of Antipas.

Early Manhood.— Of the life of Jesus up to manhood nothing is known, except the mere mention of his visit to Jerusalem when 12 years old. It can be supposed only that He was subjected to the natural influences of a religious Jewish family of the time, of synagogue and of school, of a village at once quiet and yet close to the thronging traffic on one of the great thoroughfares of that age, and finally of the work of a carpenter, for such he is said to have been, till 30 years of age. It was about this time, possibly in the year 26 (or 27) that John the Baptist (q.v.) began his public career, and at once aroused great religious and patriotic fervor in the nation.

The careers of neither John nor Jesus are intelligible without an understanding of the expectant attitude of the Jewish people in the first century. The ancient prophets of the nation had centuries earlier foretold a renaissance of the Hebrew kingdom under a descendant of David, through the generations this hope smouldered in the hearts of the people, only fanned to a brighter flame by blasts of persecution and national disaster, and the whole influence of the sect of the Pharisees (q.v.), popular and powerful out of proportion to their numbers, increased its intensity under Herod and his successors. The people were ready to be fired by the proclamation so strikingly made by the gaunt desert-dweller that the fulfilment of the national hopes and dreams was near: "The kingdom of heaven is at hand." The preaching of John was, however, no less moral and religious than patriotic. His message was "Repent"; let the nation prepare by penitence to meet the king coming in his kingdom. This prophetic voice set the country in a blaze. Throngs gathered to listen to the new preaching and by a striking symbol, a plunge in the rushing Jordan, to pledge themselves to the new movement. After a time Jesus joined the crowds which attended the ministry of John. It is impossible to say what connection may have existed between John and Jesus. Not only were their families related, but there may have been constant intimacy. John, however, based his later testimony as to Jesus, not at all on his own knowledge of him, but entirely on the divine revelation which was his commission. Jesus offered himself for baptism, insisting that the reluctant preacher should perform the rite, and thus pledged himself to the Coming Kingdom. While it is not claimed that the wonders which attended the baptism were known to others than John and Jesus himself, the story of the Gospels is that a heavenly voice asserted the Messiahship of Jesus, and that with the appearance of a dove the Divine Spirit came to him. The conviction of his mission to his nation and the world was no new thought to the carpenter of Nazareth, and it was with this thought in mind that he recognized the significance of the Baptist's public appearance, joined his auditors, and submitted to the ordinance which he administered. Yet it is not surprising, on the other hand, that he felt constrained, when his own conviction was confirmed, to seek the desert of Judea that alone he might adjust himself to the new responsibilities and burdens of the mission which he must undertake. Amid the solitude of the barren rocks and gloomy caves of that desolate region he meditated and struggled. Of this period we know only the striking story, necessarily autobiographic in origin, in which he depicts the struggles which he underwent as due to Satan's influence. Temptations thus forced in upon him to selfish use of his power, to sensational fanaticism and to compromise with evil in order to advance his ends, were successively resisted, and at the end of 40 days he came forth the victor in all these spiritual conflicts, ready to enter actively on his ministry.

The Ministry.— Jesus returned to the Jordan where John was still at work, and aided by his testimony associated with himself a little group who instinctively recognized in him a future leader of the nation. He went from there first to his home district, where he and his companions were guests at a wedding at Cana, a little town which has been hallowed in all the Christian centuries by John's report of the changing of the water into the wine needed for the entertainment of the company in the prolonged merrymaking incident to such an occasion. Then, as it was near the Passover time, Jesus, accompanied by his mother and brothers as well as his few followers, after staying a short time at Capernaum, went on to Jerusalem. How long he remained in or near the capital city must continue a matter of inference from a few doubtful phrases, but it seems most probable that he remained in Judea for some months, perhaps from April to December. The chief events ascribed to this period are the first cleansing of the Temple and the night interview with the influential rabbi, Nicodemus, and while the effect on city or nation was not great, it was presumably at this time that Jesus formed the strong friendships in Judea, to which incidental reference is often made afterward. The closing of this portion of his ministry seems to have been due on the one side to the hostile jealousy of the dominant Pharisees which would hinder success in Judea, and, on the other, to the imprisonment of John the Baptist which made it possible for Jesus to work in Galilee without what might have seemed competition, and, indeed, made it advisable for him to take up the work which John had been obliged to drop.

On his return to Galilee Jesus soon recalled his disciples, who, if they had accompanied him throughout his work in Judea, had scattered for a time to their homes, and associated himself with them in a companionship which was thereafter unbroken till his death. He made Capernaum the central point of his ministry, returning thither from each of his repeated tours throughout the many scores of cities and villages which then existed in Galilee. Wher-

ever he went the keynote of his preaching was the same as John's had been, "Repent, for the kingdom of heaven is at hand"; but as time passed his instructions, exhortations and warnings swept throughout the whole scale of human experience and touched every note of religious and moral truth. The keynote of his teaching about God was his love, infinite, untiring, eternal. On the ground of this love he proclaimed pardon to every penitent, even though a harlot or an outlaw. But this certainty and freeness of forgiveness was not allowed to diminish the loftiness and imperativeness of the standard of duty which he held up. Indeed, the high moral tone of his teaching, accompanied as it was by a constant and insistent demand for absolute sincerity, and his disregard for all mere forms, without the spirit in particular, his teachings and practice in reference to fasting, ceremonial purifications and Sabbath keeping, combined to set against him the Pharisees and through their influence the leaders and officials of the nation.

Popularity.— For a long time his popularity was great and throngs gathered to see and hear him, attracted in part by the reports of his miracles. Far and wide the stories were told that diseases yielded to his command, that the fevered, the palsied, the blind, the deaf and dumb, the lepers, the demonized, were restored to soundness, and, later that on repeated occasions he brought the dead to life. But these great works were distinctly secondary. He was first and foremost the Prophet of Nazareth, the Preacher. As such he spoke with peculiar attractiveness and power. His style was simple and direct, and his discourse was frequently adorned with unequaled parables, illustrations drawn from nature or common life, which, though sometimes veiling the truth from the thoughtless, sometimes added immensely to its clearness and effectiveness. His activity as a preacher at first won him steadily increasing popularity among the people at large, until, about two years after his work began, 5,000 men, whose hunger had been satisfied by his power on the lakeside, determined to make him king. But in this purpose they lacked all real sympathy with the character and aims which Jesus exemplified. The kingdom which centuries before the prophets of the nation had foretold was a kingdom to be sure, but a kingdom which should be based on a right relation of its subjects to God and existing only to serve the divine ends. The Jews as they read these prophecies had seen in them, only something political, worldly and selfish. Now when Jesus in fulfilment of prophecy had come to offer himself to the nation as its promised king, he would be king only as his kingdom might be the expression and instrument of a religious people, deeply, purely, unselfishly religious. So at the very climax of popular favor his clear vision instantly recognized how widely their ideals and purposes differed from his.

The Twelve Apostles.— For some time this condition of affairs had been anticipated, and Jesus had laid his plans and shaped his work accordingly. Since the Jewish people would have no such kingdom as he was about to establish, he had several months previously organized under the name of apostles a group of 12 of his disciples, to whom he would impart himself, and on whom he would so far as possible stamp himself, that they in turn might repeat his activity in their relations to others. Although he retained the name kingdom, what he looked forward to establishing was not a political but a spiritual community or body.

After the choice of the apostles the discourses of Jesus had been largely shaped for their special benefit; after his rejection of the offer of kingship from the unappreciative multitude, who in turn instantly deserted him when they saw that he would refuse to gratify their selfish hopes, his work was mainly for the benefit of the twelve, although he neglected no opportunity which came within his reach of trying to touch the soul of the nation or of individuals. Much of the last year of his life Jesus spent in seclusion. He made a journey, doubtless traveling in leisurely fashion, northwest from Capernaum to Sidon, returning as it appears by a roundabout route through the Decapolis, and another journey northeast to Cæsarea Philippi; some time was spent in Perea to the east of the Jordan; and though he seems more than once to have shown himself conspicuously in Jerusalem or its immediate neighborhood, yet during most of the time which he spent in Judea he secluded himself in an obscure village named Ephriam.

So far as the work of Jesus was concerned, the most significant event of the last year, if not of all the three years of his ministry, was the conversation with the apostles near Cæsarea Philippi as to the opinion of him which generally prevailed and as to their own convictions. While Jesus is reported at least once to have claimed to be the expected Messiah, and while this claim was necessarily implied in much that he had said of himself, and while some of the twelve had very early expressed the opinion that they had found the one of whom Moses and the prophets had spoken, yet this view had never found expression as their matured conviction. Such expression Jesus at last sought. His first question was as to the common sentiment concerning him, and the frank answer was that while he was generally recognized as one far beyond the ordinary, he was not at all recognized as the Promised One. In face of this answer Jesus pressed the further question, "What am I to you?" and the answer of Peter, one speaking for all, was that he was the Christ. This answer assured the ultimate success of his mission, for these followers would win more. But he could not fail at the same time to foresee the irrepressible conflict between himself and the leaders of the nation, and so, relying on their faith in him as the Christ, he immediately began to familiarize them with the fact of his death, though this only confused and offended them, and at the same time to add promises of resurrection which they do not seem to have grasped at all.

The apparent failure of the mission of Jesus which he thus foretold, culminating as it did in his rejection and death, was due alike to what he was, what he taught and what he demanded. He himself was devoted with absolute singlemindedness to his work. sincere, unselfish, loving, beneficient, and pure with such perfect and manifest purity that only a few voices of detraction have ever been out of harmony with the almost unanimous recognition and assertion of the sinlessness of his whole life. His teaching, while not in all respects original

in matter or form, was in spirit and effectiveness such an advance on the Old Testament which he confirmed or the rabbis with whom he largely agreed that it seemed "a new teaching." He demanded of others the same perfection of sincerity, altruistic self-forgetfulness and supreme devotion to the will of God which he himself practised, and he as sternly denounced hypocrites as he tenderly welcomed penitents. All his teaching came with a unique tone of authority and this was made more significant by the claims which he advanced for himself. He occasionally asserted and constantly implied that he was a special messenger from God and unique representative of Him, and from time to time he distinctly claimed divine attributes and powers. Thus he spoke; to confirm this he pointed to his miracles; as such he held himself up as the proper object of supreme and absolutely limitless devotion; the recognition of this supremacy he demanded of all and gladly accepted from his disciples, a self-assertion which in view of his sincerity and simplicity of soul is as significant as in view of his transparent honesty coupled with unsurpassed sensitiveness to evils is the absence of ever confessing a fault. Between such a one with such a message and such demands and the rulers of the nation at the time there was necessarily an irreconcilable antagonism which could end in no way but in his death.

The Messiah.— In the spring of the year 29 (possibly 30), after Jesus had been before the public for three years, the task of implanting the spiritual kingdom in the hearts of the select 12 was so far completed that it would be permanent, and at the same time the conflict with the authorities could not wisely be longer postponed. Accordingly Jesus went up to Jerusalem to the Passover with the throngs which assembled at that time from every part of the country. While he gave repeated proofs that in spirit he was walking in the shadow of the cross which he foresaw at the end of the road, yet this journey, unlike those which had preceded it, was intentionally made, by the sending of 70 messengers before him to proclaim his coming, a significant progress through the country. Reaching the neighborhood of Jerusalem, he stopped for the Sabbath at the neighboring village of Bethany, to which he returned each night till the end, and then on the following day he made a somewhat formal entry into the capital city. It needed only that he should mount a riding ass that those who accompanied him should be reminded of an ancient prophecy, and they, with another throng which came out from Jerusalem to meet him, acclaimed him as the promised and coming king, carpeting the road before him with green branches from the trees at the roadside and with their own clothes thrown before him in the zeal of their loyalty. Thus they led him to the Temple, where the procession dispersed. While informal and at first thought only a failure in its lack of definite result, this "triumphal entry" had deep significance as a public claim to his right to rule the nation as God's appointed representative, and he stopped short of assuming this office only because he desired and demanded first the acceptance of him by the nation. During the days that followed he repeated this claim in various ways; again he drove out of the Temple the huckstering crowds so out of harmony with its proper use, and in prolonged controversy with the representatives of all the parties of the time he bore himself as their Master and proved himself such. All this goaded his enemies at last to action, and through the treachery of Judas Iscariot, one of the inner circle of 12 disciples, almost at once an unlooked-for opportunity presented itself to them.

The Last Supper.— On Thursday evening of Passover week, after special precautions to keep secret the place of their assembling, Jesus sat down at a last supper with his apostles to what he knew would be his last interview with them before his death. While the traitor has gone out to secure his arrest, he pours out his soul to the others in words too tender and profound for their comprehension; he warns them that they will speedily desert him to go alone to his fate; he tells them something of the unique significance of his death in language which contains in germ the later doctrines of the Church, on this point; presenting them bread and wine, he instituted the second of the two rites of the universal church and finally commends them and all future believers in him to God in a prayer of incomparable elevation and pathos. He then went out to a resort familiar to him and his friends, an olive grove named Gethsemane in a valley close to the walls of the city. There the horror of the coming hours, not craven fear of death, but distress at the very thought of the tremendous experience which he must undergo in soul, drew from him a thrice repeated prayer of such intensity that the very blood was forced through the pores of the skin, but on the prayer followed serenity of resignation and purpose which continued unruffled to the end. Then he awakened his disciples who to his disappointment had repeatedly been overcome by sleep and so had left him to his spiritual distress without even the sympathy of his friends, and went to meet the force of Roman soldiers and Temple guards which in needless precaution the officials guided by the traitor brought to seize him. He quietly submitted to arrest, and his followers struck but a single blow in his defense and then scattered in the darkness, two of them, however, John and Peter, followed at a distance, the latter only to deny later all discipleship and even acquaintance.

Trial for Blasphemy.— While some details of the four accounts of the trials of Jesus are obscure, if not inconsistent, yet their general course may easily be made out. At the house of the high priest Caiaphas, or of the still more influential Annas, his father-in-law, and an ex-high priest, there was before daylight an informal session of all the Sanhedrin who could be gathered. Unable to find even perjured testimony which was sufficiently consistent to warrant his condemnation, the high priest as president of the great court of the nation put Jesus under oath and asked him if he claimed to be the Christ. Firmly and positively Jesus answered that he was, whereupon his enemies without even pretense of investigation declared this claim to be blasphemy for which according to Jewish law he must die. But this verdict would be legal only if rendered in the daytime, and so, having been left during the interval to be the object of mockery by the guards, as soon as the day broke, he was formally arraigned and

condemned. As, however, the right to inflict the death penalty had been reserved to himself by the Roman procurator, in order to accomplish their purpose they must secure his condemnation of Jesus in addition to their own, and accordingly the Sanhedrin conduct him to Pilate and demand his execution. But Pilate refused to order his execution without investigation, and when they charged him with instigating sedition against the Roman government, the judge instantly recognized their malicious insincerity and the innocence of the prisoner. In his consequent desire to release him Pilate in turn pronounced him innocent; sent him to Antipas, who only made sport of him and returned him; vainly tried to stir up the populace to demand his release according to the custom that a prisoner should be released at Passover time; ordered him scourged in hope that that cruelty would satisfy his enemies; displayed him bloody from the torturing lash and crowned by the soldiers with thorns in cruel jest, fancying that this sight would surely evoke pity; but finally, terrified at the mutterings of the crowd and fearing lest should he persevere charges might be made to the emperor against himself, Pilate ordered the crucifixion of Jesus.

The Crucifixion.— The execution took place at once, scarcely later than the middle of the forenoon. Although so far weakened by the sufferings of the night and morning that the sufferer fainted under the cross which, as was customary, was laid on him to bear to the place of execution, he bore himself throughout with majestic patience and dignity. Under the jeers of his triumphant enemies, in sight of his mother and friends, in the unexplained and portentious darkness which beginning at noon lasted for hours, amid the indescribable physical tortures of the cross, he spoke but to pray forgivingly for those who were the agents of his suffering, and to commend his mother to John, her nephew and his most intimate and beloved disciple. At mid-afternoon he uttered a cry to God, "Why hast thou forsaken me?" which can be understood only as expressive of intensest soul agony. As if this agony culminated and ended with the cry, he then spoke calmly of his thirst and took the drink which a sympathetic bystander pressed to his lips, then commended his spirit to God, and with a loud shout expired, it would seem with a literally broken or ruptured heart. Although death seldom came so soon to the crucified, yet the fact is undeniable in the case of Jesus, for when somewhat later the criminals who had been crucified with him received a blow intended to hasten their death, the soldiers recognized that he was already dead, and yet one of them thrust a spear deep into his side, apparently touching the heart, and on Pilate's inquiry the officer in charge certified to his death. By leave of the governor two members of the Sanhedrin, who were secretly disciples, took down the body and hurriedly but reverently buried it at the close of day not far from Calvary, where he had been crucified, in a rockhewn tomb, which later was officially sealed.

Of the facts relating to Jesus during the next few weeks, no less than five (if the last verses of Mark are by another hand, then six) separate accounts are preserved, no two precisely agreeing, but, on the other hand no two being mutually contradictory, and one of these accounts, that of Paul, was written within 25 years of the events narrated. It is told that first women going at the dawn of Sunday entered the open tomb but found not the body of Jesus; that later Peter and John also found it empty; that Peter, then 10 of the apostles together, and also two other men miles from Jerusalem, as well as Mary Magdalene, saw Jesus that same day in recognizable human form and talked with him; that these appearances and conversations were repeated at different places and in varying circumstances for about six weeks; that on one occasion he was seen by as many as 500 at the same time, some of whom were at first doubtful as to the facts; and that then these manifestations entirely ceased, except for the experience of Paul. It is certain that the disciples in these few weeks had come to be convinced that Jesus had actually been with them and that consequently they passed out of a state of gloom and despair into joyous and unflinching boldness; that the belief in the physical resurrection of Jesus was an essential part of the creed and preaching of the primitive Church; and that the first day of the week became the Christian day of worship. No plausible explanation of these facts, of the empty tomb; of the reports and convictions of the disciples; who claimed to have seen and talked with Jesus in human form, especially of the case of Paul; of the revulsion of feeling on their part; of the consequent foundation of the Christian Church and of the consecration of the first day of the week, has ever been given except that after his death Jesus, in this as in so much else unlike all other men, entered by resurrection and later ascension upon a new course of life and a new course of activity. Without the resurrection as well as the life and death of Jesus historical Christianity could never have come into existence; by it he became the founder of the Church and the dominating personality of the ages.

DAVID FOSTER ESTES,

Professor of New Testament Interpretation, Hamilton Theological Seminary, Colgate University.

JESUS CHRIST, Logia of, the sayings of Christ, a title given to certain 1st century papyri, discovered in the course of excavations at Oxyrrhynchus carried on under the direction of Professors Grenfell and Hunt. The name

'Agrapha' is generally applied to these sayings. See AGRAPHA.

JESUS COLLEGE, Cambridge, England, founded by Alcock, bishop of Ely, in 1496. It has 16 foundation fellowships, open without restriction to all the king's subjects. Five were of the original foundation and the others have been added by subsequent benefactors. Six of the fellows are required to be in orders. The mastership and one fellowship are in the absolute appointment of the bishop of Ely. To the other fellowships on a vacancy the master and fellows nominate two candidates, one of whom is elected by the bishop. There are numerous scholarships. The college in 1913–14 — the last date for which statistics are of any value — consisted of a master, 10 fellows, 34 scholars and 186 undergraduates. It was founded on the site of the Benedictine nunnery of Saint Radigund, and its buildings, some of them dating from the 12th century, are of great interest.

JESUS COLLEGE, Oxford, England, founded by Queen Elizabeth in 1571 on the petition of Dr. Hugh Price, treasurer of Saint David's, Wales, who left lands for the maintenance of a principal, eight fellows and eight scholars. It was intended to be the Welsh college and a number of the scholarships are (unless in default of suitable candidates) restricted to natives of the principality. A fellowship founded by Charles I for natives of Guernsey and Jersey has been converted into two scholarships for natives of these islands or persons educated at Elizabeth College, Guernsey, or Victoria College, Jersey. This was the first college founded under the Protestant régime. The college faculty now comprises a master, 12 fellows, 30 scholars and an average attendance of over 200 undergraduates.

JESUS ISLAND, Canada, an island in the Saint John River, not far from where it joins the Saint Lawrence River; area, about 1,200 square miles.

JET, a mineral, which is found in compact masses so hard and solid as to be susceptible of being turned on a lathe and manufactured into ornamental articles. It has been worked for centuries in Whitby, England. It is found in thin laminations, which subsequently thicken out to two or three inches in the upper lias strata in that neighborhood; a lower bed, from which the best quality is obtained, has a thickness of 20 feet and is known as jet rock. Jet is supposed to have been worked in England as far back as the time of the Romans. Jet rosaries and crosses were common in the Abbey of Whitby when it was a resort of pilgrims. The jet manufactures of Whitby fell away about the time of Queen Elizabeth and were revived in 1800. It is also manufactured at Scarborough, England.

JETSAM, jĕt'săm, merchandise lost at sea either through being thrown overboard in the act of "jettison" (q.v.), or through the sinking of the ship. The term differs from "flotsam," goods which float after being thrown overboard; and from "lignan," when they are sunk but secured to a cork or buoy to permit future recovery. Goods lost in this way come under the law of "average" (q.v.) and their value may be recovered by the owner.

JETTÉ, zhĕ'tā', **Sir Louis Amable**, Canadian editor, jurist and statesman: b. L'Assomption, Province of Quebec, 15 Jan. 1836. He was educated at L'Assomption College and was called to the bar in 1857. He engaged in the practice of law at Montreal and also in journalism, becoming editor of *L'Ordre*, at Montreal. He was elected to the House of Commons for Montreal (East) in 1872–78. He became professor of civil law in Laval University in 1878 and in that year was appointed judge of the Superior Court of Montreal. In 1898–1908 he was lieutenant-governor of Quebec, and in 1901 he was knighted. He was a member of the Alaskan Boundary Commission in 1903 and since 1909 he has been Chief Justice of the Court of King's Bench, Montreal. He served on the commission for the revision of the Civil Code of Quebec, and is a commander of the Legion of Honor of France. Author of 'Observations relatives au code de procédure civil' (1888).

JETTIES are dikes at the mouth of a river or across a harbor bar to increase the riverine or tidal current by narrowing the channel and thus scour out a deeper bed, to accommodate navigation. Single jetties are solely at the mouths of rivers with strong currents, to deflect these to one side of its natural channel, but in most rivers and in all harbors they are double, forming an entire artificial channel. Briefly, the physical principles are: The power of water to transport solid matter varies as the square of its velocity, so that increasing the strength of current two-fifths will about double its sand-carrying capacity; the velocity increases with increase of slope and decrease of friction; the slope is increased by narrowing the channel, since it forces flood waters inside or outside to rise higher at the entrance, and the friction decreases as the width of the channel; and lastly, if a channel of a given depth and width passes a given quantity of water, then a narrower channel involves either a permanently greater height of water if the bed were rigid, or the scouring of the bed to a depth which, multiplied by the new width, will produce an equal cross-section with the old. The increased slope and the correspondent velocity vanish as the water cuts a deeper basin; but the velocity due to lessened friction does not, nor do the deepened channel, the greater discharge through it and the greater tidal fluctuation due to the larger basin. The channel is scoured along until the deepening sea establishes an equilibrium of action.

The system is not new. A number of important European rivers were jettied even before the middle of the last century, and others not much later. The Danube at Sulina had been deepened to 21 feet, from 8 feet before; and in 1874 Eads found seven German rivers, including the Oder and Vistula, improved so that with initial channels of 4 to 7 feet, they then had 13 to 23.5. Several of these are still deeper now, the result increasing somewhat for many years under the same conditions. The Neva in Russia has also such works; as also the harbors of Calais and Dunkirk in France. In the United States a very great number have been constructed, both for rivers and harbors; the greatest of all are the jetties at the mouth of the

Mississippi, and as the general principles are alike in all, these may be briefly described.

The Mississippi discharges its waters to the gulf not by one channel, but in the main by three, running through «passes» 12 to 17 miles long from the delta land to the sea and widely divergent. The largest is the Southwest Pass; next the easternmost, Pass à l'Outre, with two branches. In the middle is the smallest, South Pass, 600 to 800 feet wide, and taking not over a 10th the total discharge, with a shoal at its head only 15 feet deep, and a bar at its mouth only 8 feet; so that, with 30 feet of water through the delta, it was unserviceable for deep-water navigation. Capt. James B. Eads offered to build jetties to deepen the bar at Southwest Pass from its then 13 to 28 feet; but Congress preferred South Pass as cheaper and simpler, needing work only at the head and foot. Work was begun in June 1875 and within nine months the water was 13 feet on the bar; by 1879 it was 29 feet; it is now over 30.

The west side of the pass had silted up into land 4,000 feet farther out than the east, so that the west side of the two parallel dikes built out to 30 feet depth in the Gulf was about 7,800 feet, while the east was 11,800. First piles were driven in two rows 1,000 feet apart (the piles 12 feet apart) to mark the lines of the projected jetty-walls. Then mattresses were built, of willow branches, or young willows 15 feet long, cut with the leaves on, laid in four courses, each crosswise to the next and fastened together at top and bottom by pine planking 2½ inches thick, doweled with hickory pins; this compressed the willows to a thickness of about 2 feet and their brush-ends projected 3 or 4 feet. These mattresses were 100 feet long; for the bottom course they were made 50 feet wide, but steadily narrowed for each of the four courses at first needed to bring them to the surface of the water, the top one being 20 feet wide. Wider ones were used in deep water. These were built on shore, on ways as for launching boats; towed by tugs to the places indicated by the line of piles and sunk by loading one or two tons of stone on top. Once down, they speedily filled with sediment and became solid. At the sea end foundations of mattresses 200 to 300 feet broad were laid. For two or three years these stone-laden mattresses gradually sunk in the soft bottom and new ones were added at the top to bring the surface even. The willows not imbedded in sediment were riveted with stone. Where exposed to storms, they were considerably sloped and more thoroughly riveted. The sea ends were afterward capped with concrete blocks. The jetties have undergone considerable repairs since then, but have essentially done their work of making the river navigable for large vessels.

One of the difficulties was this: If obstacles were placed in the way of a free flow of water, the river would by so much at least desert this pass and run through the others; so that their heads had to be closed up to a sufficient extent to prevent this. Plans for improving the Southwest Pass in like manner were submitted by United States army engineers. Construction was begun toward the end of 1903 and completed five years later at a cost of about $2,625,000. The east jetty was extended for 3,000 feet and the west for 3,750 feet in 1909–12. The final depth gained is 35 feet.

At the mouth of the Brazos, west of Galveston, Tex., an ingenious plan was adopted for avoiding interference in the work by flood-tides: A long trestle was built out to deep water above high tide, the mattresses hung under it by ropes and the stone dropped on them from above to sink them. Instead of being launched from shore and towed, they were carried on a portable railway running on top of the trestle and let down.

The Columbia River jetty is the most conspicuous example of the single instead of the double dike. It is 42¾ miles in length, the longest in the world. The bar at the mouth of the river, ever shifting and sometimes not over 12 feet deep, had half spoiled this superb river for navigation, and was greatly dreaded. But the river has a mean high-water discharge of 60,000 cubic feet per second, a mean tidal ebb of 1,000,000, with tides of 6.2 feet; and in 1884 a single curved line of brush mattresses with rubble-stone copings was begun, completed in 1894, to turn the current away from spreading itself on both sides and scour out the channel on one. This was finished in 1894 with a channel 30 feet deep and made the river a highway of the heaviest ocean commerce, with lines to all Pacific lands. The improvement was not permanent and in 1902 the channel was only 21 feet in depth. In 1903 a north jetty 2½ miles long was projected, together with a 2½ mile addition to the south jetty. These additions were completed in 1913.

Others are too numerous for more than brief mention. At Yaquima Bay, Ore., 115 miles south of the Columbia — an estuary 20 miles long discharging into the sea through a narrow, tortuous, shifting channel, and over a sand-bar with 7 feet of water — parallel jetties about half a mile long, one of rubble-stone on a rock bed, one of brush and stone on a sand bed, have doubled the depth of water and made the channel calculable. At Galveston, the single jetty was a relative failure, it needing a double one to converge the tides; and in 1896 the government completed it, with sides of 35,000 and 25,000 feet, costing over $8,000,000, and furnishing 27 feet of water between the island and the mainland. Other notable ones are at the mouth of Saint John's River, Florida, beginning at the sides of the river-mouth and converging to 1,000 feet apart at the crest of the bar. Charleston's double one has sides of 15,000 feet each.

M., 'Jetties for Improving Estuaries' in *Journal* of Franklin Institute (Philadelphia 1888); Perilli, «Jetties of Armored Concrete,» in 'Report of International Congress on Navigation' (Brussels 1905), and 'Transactions of the American Society of Civil Engineers' (Vol. LIV, Part A; New York 1905). Consult also *Engineering News* (New York 1874 et seq), especially nos. of 23 Aug. and 4 Oct. 1900, and 'Reports' of Chief of Engineers, United States Army (Washington, D. C.).

JETTISON, the throwing overboard of goods constituting a ship's cargo in order to lighten the load of a ship in distress, to save her from foundering, float her when stranded, or permit her to escape from an enemy. In such cases the loss to the individual owner is compensated by a general contribution levied

upon the owner of the remaining cargo, freight and ship, for whose benefit the merchandise was sacrificed. If, instead of being thrown overboard, goods are placed in small boats, or lighters, in order to ease the ship, and are subsequently lost, it still constitutes jettison. In case of insured goods the company with whom the jettisoned goods are insured is entitled to recompense through the law of average.

JEUNESSE DORÉE, La., lä zhĕ'nes dō'rā (Fr., "Gilded Youth"), sobriquet given to a band of counter-revolutionists against the Jacobins formed after the fall of Robespierre. Its members were youthful scions of aristocratic families and their warfare against the temporarily scattered Jacobins constituted rough physical handling wherever they were met. The term was originated by François Xavier Pageés in 'Histoire secrète de la revolution française.' The name and its English translation, "gilded youth," has come to be a common designation for wealthy young idlers.

JEVONS, Frank Byron, English educator and religious writer: b. 9 Sept. 1858. He was graduated at Wadham College, Oxford. He was connected with the staff of Durham University in various capacities from 1882, was vice-chancellor there in 1910–11, since when he has been pro-vice-chancellor, and from 1910 he has been professor of philosophy. Author of 'The Development of the Athenian Democracy'; 'The Prehistoric Antiquities of the Aryan Peoples' (1890); 'An Introduction to the History of Religion' (6th ed., 1896); 'Study of Comparative Religion' (1908); 'Personality' (1913); 'Philosophy: What is It?' (1914).

JEVONS, William Stanley, English logician and economist: b. Liverpool, 1 Sept. 1835; d. Bexhill, near Hastings, 13 Aug. 1882. He was graduated from University College, London. Having obtained an appointment in the Royal Mint, he went to New South Wales in 1854, but afterward returned to England, and in 1866 became professor of logic, philosophy and political economy in Owens College, Manchester, and this post he held until his resignation in 1876 in order to accept the chair of political economy in London University. He retired from this position in 1880 for the purpose of devoting his whole time to literary pursuits. He was drowned while bathing at Bexhill, Sussex. His writings include 'Pure Logic' (1864) and 'The Substitution of Similars' (1869), in which he sought to popularize symbolic logic through a modification of Boole's mathematical methods; 'Elementary Lessons in Logic' (1870); 'Theory of Political Economy' (1871); 'The Principles of Science' (1874); 'Money and the Mechanism of Exchange' (1875); 'Primer of Logic' (1876); 'Primer of Political Economy' (1878); 'Studies in Deductive Logic' (1880); and 'The State in Relation to Labour' (1882). Among works published posthumously are 'Methods of Social Reform' (1883); 'Investigations in Currency and Finance' (1884); and 'Pure Logic' (1890); 'Principles of Economics' (1905), parts of an unfinished treatise on economics with a number of essays contributed to periodicals. In a pamphlet on the 'Coal Question' (1865) he presented a mass of evidence to show that England's progress would be checked by want of coal; in his work in political economy he attempted to put the chief definitions in the form of mathematical quantitative formulæ, and in this way did important work in revealing the nature and relations of economic facts; he also developed the theory of marginal utility. His 'Life and Letters' edited by his wife were published in 1886.

JEW, The Wandering, a poetical personage of popular traditions, who owes his existence to a story connected with the well-known scene in the history of Christ's passion. As Jesus was on the way to the place of execution, overcome with the weight of the cross, he wished to rest on a stone before the house of a Jew, whom the story calls Ahasuerus, who drove him away with curses. Jesus calmly replied, "Thou shalt wander on the earth till I return." The astonished Jew did not come to himself till the crowd had passed and the streets were empty. Driven by fear and remorse, he has since wandered, according to the command of the Lord, from place to place, and has never yet been able to find a grave. Shelley, Lewis, Croly and Mrs. Norton in England, Schubart and Schlegel in Germany, and Sue in France, have turned this legend to account. Goethe has sketched Ahasuerus with great spirit and humor as a philosophic cobbler at Jerusalem who opposes Christ with a cold worldly logic which will not look above the things of earth. See WANDERING JEW, THE.

JEW OF MALTA, The. Marlowe's 'Jew of Malta' is memorable for at least three reasons. It was the most popular play of its period, if not the most popular English play up to that time. So far as is known, the plot was entirely original. Its chief character Barabas is the English prototype of a series of popular English characters, of which Shylock, Volpone and Sir Giles Overreach are noteworthy.

As Marlowe proceeded in the handling of plot he laid aside that "alchemy of eloquence" upon which he had depended. The main situation of 'The Jew of Malta' arises still from a vaunting spirit. Barabas in his opening soliloquy shows "infinite riches in a little room" to be his ambition. But the ambition is so crowded in the action that it is difficult to distinguish it from the blood lust so popular in the plays of the day.

The play was probably produced about 1589 at the Court and the Cock-Pit, the part of the Jew being taken by Edward Alleyn. It is first mentioned in Henslowe's diary in 1592, and was not printed until 1633, when it was given to the world in an edition by Thomas Heywood. As the play comes down to us it reveals very hurried composition. The first two acts are as precise as is the following play 'Edward II.' Thereafter the action becomes confused and crowded. Action follows action with little regard for motive and sequence. Barabas outlives a dozen deaths. More strangely still this portion lacks the magic of Marlowe's line. And yet there is no doubt that this second portion gave the play its popularity. Two characters stand out to appear again in the plays of later writers, Barabas, villain beyond nature, and Abagail, his daughter, who by her virtues shames the house that reared her. Editions: Dyce, A. (1850, 1858); Cunningham, Lt.-Col. F. (1870–71); Bullen, A. H. (1885); Mermaid Series, ed., Havelock Ellis (1887, 1903); Every-

man's Library, ed., Edward Thomas (1909). Consult Symonds, J. A., 'Shakespeare's Predecessors in the English Drama' (1881); Ward, A. W., 'A History of English Dramatic Literature' (3 vols., 1899); Ingram, J. H., 'Christopher Marlowe and His Associates' (1904).

THOMAS H. DICKINSON.

JEWEL, John, English bishop: b. Bude, Devonshire, 24 May 1522; d. Moncton Farleigh, near Laycock, Wiltshire, 23 Sept. 1571. He was educated at Merton and Corpus Christi Colleges, Oxford, and was elected a fellow of Corpus Christi in 1542. He was greatly influenced by the teachings of John Parkhurst, later bishop of Norwich, and he was a follower of Peter Martyr. He is known to have been a licensed preacher in 1551 and he had made a considerable reputation as a teacher. Upon the accession of Mary in 1553 all those suspected of Protestant leanings were weeded out of Oxford and Jewel was deprived of his fellowship. He made his way to the Continent, reaching Frankfort in 1555. He was associated with Coxe in his controversy with Knox, and later joined Peter Martyr of Strassburg, with him visiting Zurich and Padua. He returned to England on the accession of Elizabeth and was one of the Protestant clergymen selected as a disputant at the Westminster conference with the Romanists in 1559. He was consecrated bishop of Salisbury 21 Jan. 1560, and became recognized as the literary apologist of the Elizabethan settlement. He engaged in a controversy concerning the case of the Church of England as against that of Rome, first with Cole and later with the more formidable Harding. His 'Apologia ecclesiæ Anglicanæ' (1562) was stated by Bishop Creighton to be the "first methodical statement on the subject" and to "form the groundwork of all subsequent controversy." Harding published a bitter 'Answer' (1564), and Jewel followed with a 'Reply' (1565). Later developments were Harding's 'Confutation' and Jewel's 'Defence.' Jewel's theology was officially endorsed and enjoined upon the Church by Archbishop Bancroft in the Reign of James I. The 'Apologia' was condemned by the Council of Trent but its English translation was chained to the lectern in all Anglican churches by the order of Bancroft. His collected works were published under the direction of Archbishop Bancroft (1609); Cambridge (4 vols., 1845–50); Oxford (8 vols., 1848). Consult Le Bas, 'Life of Bishop Jewel' (London 1835).

JEWEL-WEED, TOUCH-ME-NOT, or SNAP-WEED, popular names for two plants, *Impatiens pallida* and *I. biflora,* of the family *Impatientaceæ,* well known in damp shady places throughout the cooler parts of North America, where they form dense masses. They are characterized by sac-like, pendulous, yellow or orange, more or less spotted flowers, and by their sensitive seed pods which when mature burst with the slightest touch and throw the seeds to a considerable distance. Hence the second and third names above. The first name is probably a survival of their use as antidotes for so-called Rhus poisoning.

JEWELL, Theodore Frelinghuysen, American naval officer: b. Georgetown, D. C., 5 Aug. 1844. He was graduated at the United States Naval Academy in 1864. He was appointed acting midshipman 28 Nov. 1861, and in June and July 1863 he commanded a naval battery of field howitzers in defense of Washington. He was commissioned ensign in 1866, served at various foreign stations, was commander of the Naval Torpedo Station in 1890–93, and of the naval gun factory in 1893–96. He was in command of the United States protected cruiser *Minneapolis* in the Spanish War and later commanded the armored cruiser *Brooklyn* in the Philippines. He served as a member of the Naval Examining Board and in 1904 was commander-in-chief of the European squadron. He was retired 22 Nov. 1904. Author of various articles on naval matters, particularly torpedoes and ordnance.

JEWELRY, ornaments for personal adornment, usually made of gems and precious metals. At some remote period primitive man gradually migrated northward from the tropical belt in which the species probably first came into existence, and as he felt the colder temperature severe and trying, especially at night, he was induced to invent some sort of covering or clothing, by means of which he could secure warmth. What the first clothing was, it is of course impossible to determine, but it may be conjectured to have consisted of belts of grass or leaves, knotted together either by their own stacks, or by accessory vegetable fibres. When men became hunters, which they did not do until they had progressed far enough to have invented offensive weapons, they no doubt soon used dried skins for clothing. A rough tanning of such skins could have been managed by rubbing them with fat. Then came the difficulty of fastening them. Some savage tribes still wear cloaks which have only a hole cut for the head to go through, and this is likely to be a primitive type; then, also, they might have been tied up with strips of sinew, but at an early stage they were pinned together with a bone or large thorn. Here is the germ of the brooch. Numbers of such pins have been found in all places where the remains of primitive man exist, and they range from the simplest forms to quite ornamental ones. The heads of the carved specimens show a certain amount of progression, and are often decorated with engraved lines, dots and circles. Ivory, wood and bone are all commonly used, and in time, as metal working became known, these early pins are imitated in bronze and gold. From the Stone Age, through the Bronze Age, up to the Iron Age, in which we are still considered to be, pins and their derivatives, brooches and buckles, have been universally used, and it is an interesting study to endeavor to trace their utilitarian development, as well as that of their artistic and technical beauties. Starting with the earliest metal pins, it soon appears that the head, or thickened end, is treated ornamentally, hammered flat, and pierced. Through the pierced hole in the top of the pin are often found wire rings coiled several times, or single rings, as in a number of specimens from Ireland. In the case of Roman jewels found in Britain, there are chains of which a few links only are left, and in one instance at least a pin, the head of which was threaded with a chain of several links, was taken from among the débris of one of the Swiss lake-dwellings. The modern safety-pin is quite the same in all essential re-

spects as one which was found by Dr. Schliemann at Mycenæ, and the same form, with the arch more or less specialized in design, has been very largely used north and south, east and west. The Greeks made the arch short, and enlarged and ornamented the nose or hollow for the pin to rest in; the Romans made the arch big. set it with beads of amber and bronze, and fretted it out in innumerable ways, with curves, spirals and all sorts of twists and turns which the fancy of the artist could devise. The Roman *fibulæ* are more usually made of bronze or silver, but the Greek are largely of gold, and of exquisite workmanship.

Of the principal tools that have been and are still used in the production of jewelry, the hammer in some form, at first of flint or some other hard stone, and later of metal, was probably the earliest employed, then we have the chisel and later the pointed graver, for engraving a design, and the drill for perforation, either the simple pointed drill, or else the bow-drill that has been used from the North Pole to the South Pole, by Hindus and Chinese, by civilized and semi-civilized peoples. Another essential article is a small crucible of clay, or even hardened sand, in which the metals to be used for soldering can be melted. It is important that only easily fusible metals be employed for this purpose, as those less easily fusible would be liable to make an imperfect joining and would probably break down. Setting precious stones in points, or galleries as they are called, initiated about a century ago, has led to machine stamping, the galleries being cut off, the settings stamped out and the stones fitted to the points which are then bent over. The free use of machine work has done much to lessen the artistic beauty of jewels. On the other hand we have to recognize that the employment of platinum settings, which has been general since 1900, has marked a notable advance. Large pieces of platinum, carefully drilled, with the metal filed away in the clear spaces between the platinum and the stone, make the latter stand out for itself, while in the gold settings formerly used the yellow metal was apt to obtrude itself too much. Sometimes precious stones are set in platinum worked into a weblike texture.

The first prehistoric necklaces were those made of the pierced teeth of animals. In a burial, situated at La Barma Grande, near Mentone, France, there was found in 1884, on a male skeleton, a necklace of 14 stags' teeth, pierced and strung, accompanied by pierced vertebræ of a fish, and having little ornamental pendants of carved bone; animals' claws were also pierced and strung in a like manner to form necklaces. But out of such small beginnings have developed the wonderfully-wrought necklaces of Egyptian and Greek art, and the splendidly designed works of the Renaissance and modern jewelers, as well as the marvelous variety of those produced in the Far East.

The evolution of ring forms covers as wide a range chronologically and geographically as does that of any of the types of jewelry. The origin of the ring has sometimes been ascribed to the knot, in connection with the supposed magic or binding virtues of a piece of string or wire twisted around the finger. Here as in some other cases, however, the comparative facility with which an ornamental effect could be attained was probably the main, if not the exclusive, cause for the wearing of rings. Hence we meet in the course of ages with an almost infinite variety of forms and materials, from a plain round hoop, to an elaborately chased metal ring, or one set with one or more precious stones.

The brooch in its manifold forms was a favorite ornamental object from an early period down to the 17th century, and even later. In mediæval times, the Irish and Anglo-Saxon brooches were made with an unhinged pin, which, after having traversed the material to be attached, was turned about until it could be passed through an opening formed on one side of the ring. Later. about the 11th century, the ring was flattened, the opening closed, the pin reduced in length so as to accord with the ring's diameter, and attached to the ring by a hinge. In this style the pin was held down on the ring by the pressure of the article of clothing it had passed through. The importance of the plaid among the Highlands of Scotland, as a badge of clannish devotion, served to retain the brooch longer in favor in the Highlands than elsewhere, since it both attached the prized garment and adorned it. A famous jewel of this kind is the Loch Buy Brooch. This is set with a Cabochon-cut rock crystal; along the ring are 10 projecting turrets, at the apex of each of which is a pearl. Originally in the possession of the Macleans of Loch Buy, this brooch was eventually acquired by a private collector, and was purchased by the British Museum at the disposal of his collection.

The earliest dated of the great jewel finds in Egypt were those discovered by Flinders Petrie in 1901 at Abydos in the royal tombs there. Among them the bracelets of the queen of Zer, a sovereign who reigned toward the beginning of the 1st dynasty, about 5400 B.C., give eloquent testimony of the skill of the Egyptian goldsmiths at this remote period. In one of these bracelets are a series of golden hawks surmounting alternate blocks of gold and turquoise; in another are groups of three dark beads of lapis lazuli, on either side of which are triple gold balls, beaten hollow and soldered together so cleverly that neither excess nor difference of color can be perceived. What is pronounced to be the richest of all Egyptian royal tombs is that found at Dahshur in the southern part of the great necropolis of Memphis, wherein had been sepultured several princesses of the family of Amenemhat II of the 12th dynasty (2716–2684 B.C.). The mummy of Princess Knoumit was adorned with a serpent necklace, composed of beads of gold, silver, carnelian, lapis-lazuli and emerald, as well as hieroglyphic signs wrought in gold and inlaid with gems. She had anklets, bracelets and armlets of gold with precious stone settings. To a later period, but still to one sufficiently remote, belong the jewels of Aah-hotep, queen of Sekenenra III (1610–1597 B.C.), of the 17th dynasty. This queen lived to be almost if not quite a centenarian, and in her tomb was discovered a wealth of jewels, a richly adorned diadem and a pectoral, splendid chains, necklaces, bracelets, armbands, etc., and also her gold signet ring. This discovery was made by Mariette in 1859, in the northernmost part of the Theban necropolis.

Although much valuable jewelry must have been produced in Babylonia and Assyria, the fact that the ancient peoples of these regions did not pay the same devout reverence to the remains of the dead as was done in Egypt, and the differences in architectural construction as well as in climate between Egypt and Mesopotamia, have combined to prevent the preservation of any considerable part of the jewels. The earliest works of the kind appear to have been executed of copper, and molds for casting metals seem to have been made in a very remote age. At a later time, the discovery of making bronze by alloying copper with tin rendered another metal available, and in the Assyrian period ornaments of this material to a great degree take the place of copper ones. Some of these bronze ornaments that have been preserved are highly decorated; one of them, a plaque which was evidently used to exorcise the demons of disease, bears, in an upper row, nine symbols of the gods; beneath them appear figures representing the seven evil spirits causing diseases, and below this is shown the patient stretched out on a couch, the god of the waters Ea, who is said to have instructed mankind in the arts, being figured in the act of pronouncing the magic formula destined to banish the disease. Underneath this again is depicted the fearful demon Labartu, who is being driven away by another demon, in obedience to the mighty words spoken by Ea. For earrings and necklaces gold and silver were much in use, some finely wrought gold necklaces from early Babylonian times being in existence.*

As to Hebrew jewelry before the time of the Kings, our very slight information is derived from the account of the offerings made by the children of Israel in the Wilderness for the decoration of the Tabernacle and for the forming of the Golden Calf. In the former case we are told (Exod. xxxv, 22) "the men and women brought bracelets and earrings and rings and tablets, all jewels of gold," and for the Golden Calf mention is made of gifts of earrings by men and women. The famous "Breastplate of the High Priest," if we regard this as a jewel, was of course the greatest work of the kind noted in Scripture.† In any case, however, these accounts are not contemporaneous, having rather a legendary than an historic value. The same may be said of the ring (probably a cylinder) given by Judah to Tamar (Gen. xxxvii, 12–26). Of course, Joseph's ring, a gift of Pharaoh, would have been a piece of Egyptian jewelry; indeed, in all probability this was the case also with the jewels contributed by the Hebrews in the Wilderness. At the battle of Gilboa, where King Saul met his death, he is said to have worn his royal crown, which was brought to David by the Amalakite who slew Saul (2 Sam. i, 10). In about 1030 B.C., David carried off from the statue of the Ammonite god Milcom a crown weighing, with its precious stones, a talent of gold, worth about $33,325; as David placed this crown on his head, he bore rather a heavy burden, for such an amount of gold would weigh some 110½ pounds avoirdupois. In the reign of Solomon, when the temple was to be built, the "Wise King" called in the aid of Phœnician craftsmen for its adornment, and probably the Hebrew jewels of this and a later time were made by Phœnicians, or by those who had received instruction from them. In Isaiah's age we learn from this prophet (iii, 16–26) that the "daughters of Zion" wore metal anklets, making "a tinkling about their feet," also circlets (tires) like the moon, as well as chains and bracelets, ornaments for the legs, headbands, tablets, earrings, rings and nose jewels. Undoubtedly in the case of the wealthy, these adornments were all made of gold.

In the development of the jewelers' art, Phœnicia played a similar part to Etruria, indeed the latter country was in many instances directly dependent upon the former. Little originality is to be noted in Phœnician work, but the Phœnicians, as the great trading-folk of the time between 1000 or 1200 B.C., and about 500 B.C., or earlier, when the Greeks first challenged their supremacy and then supplanted them, had been active carriers of foreign jewelry from land to land, besides producing a considerable quantity of their own workmanship based on foreign models. This was of course supplemented by the inland trade between the Greek colonies of Asia Minor and the Asiatic and Egyptian sources to the southward and eastward.

Etruscan jewelry was mainly of eclectic types combining, or copying, models of Egyptian or Assyrian origin, transmitted in a modified form by the Phœnicians and by the early Greeks. It was evidently through the Etruscans that the art was brought to the Romans. However, in spite of the fact that the Etruscans were essentially copyists, they evolved many beautiful decorative designs and so successfully developed their originals as to produce a clearly marked national jewelry.

Probably the earliest Greek jewels of elaborate workmanship are those unearthed by Schliemann at Mycenæ in 1876–88, and those brought to light by him a few years earlier in the Troad. Whatever we may think of his attribution of many of them to Homeric personages, there can be no doubt that they belong to the peoples and the localities celebrated in the Iliad and the Odyssey, and represent at its best the Greek art in jewelry of from 1600 to 1400 B.C., and a few centuries later. The so-called Minoan gems, specifically those of Crete, and by extension those of other Ægean islands (hence sometimes called "Island gems"), are less impressive, though they are of slightly earlier date, as are also those from Ilysus on the island of Rhodes. The latter jewels, now in the British Museum, comprise necklaces of irregularly-cut beads of amber, amethyst, agate or rock crystals, very rarely polished, and of polished carnelian beads. There are also many small bead-pendants of porcelain, some of them glazed.

The finest jewel found by Dr. Schliemann at Mycenæ is a gold brooch, having an elaborate centre boss of gold and silver plates worked into the form of a full-blown flower. Here were also unearthed several small earrings set with amethyst, as well as objects having inlays and beads of glass, amethyst or carnelian. Intaglio gems with gold settings were also found. Besides some curious earrings the Troad furnished plaques made of gold wire fashioned

† G. F. Kunz, 'The Curious Lore of Precious Stones,' (Philadelphia 1913, chap. viii, pp. 275–306).

into a kind of basket-work, and provided with a hook for attachment to the lobe of the ear; from the plaque depended little golden chains, on which in many cases small gold leaves were soldered as ornaments.

The best Greek jewelry dates from the 5th century before Christ, when Greek art of all kinds stood at the very highest point, and this branch of art continued to flourish among the Greeks for many centuries. The goldsmiths used their precious metals in a manner showing their appreciation of the fact that any material, however precious, was subordinate in the artist's mind to the design and workmanship that gave it life and grace. Of all forms of ornamentation, delicate filigree work was most highly favored, and for color, which was sparingly employed, reliance was rather placed upon enameling than upon precious stones. The designs were preferably of fruit or flower themes, or else of the more graceful of the animal forms. Virtually all the beautiful types of jewelry that had so far been evolved in the world known to them were laid under contribution by the Greek jewelers, and elaborated by them. But although splendid crowns, diadems, necklaces, bracelets, armlets, funeral wreaths, pins and rings were made, the greatest variety of design is perhaps exhibited in the wealth of earrings that still exist, although so many must have been destroyed or lost. So potent was the tendency to create beautiful forms and to enrich the decoration, that the size of the earrings was progressively increased, so that some of them greatly exceed the normal dimensions of this jewel, and must have been worn suspended from a bandeau, or some such support, bound on the head, as they are much too heavy to be sustained by the ear.

A most extraordinary assemblage of jewels belonging to the Persian period of the latter part of the 4th century B.C., was uncovered by M. Henry de Morgan near Susa, on 10 Feb. 1901, when he brought to light from six meters below the surface a bronze sarcophagus containing the skeleton of a woman. Heaped upon the breast of the skeleton, and strewn about the head and neck, was a mass of finely-wrought and artistic jewels, comprising: a gold torque weighing nearly a pound troy, decorated with lion's heads, the gold inlaid with turquoise and lapis-lazuli; bracelets of like design; several long and valuable stone-set necklaces, and a three-row pearl necklace, originally consisting of from 400 to 500 pearls, of which 238 were still in a fair state of preservation after a lapse of more than 22 centuries. The stones in the other necklaces comprised turquoise, lapis-lazuli, emerald, agate, various jaspers, red and blond carnelian, feldspar, jade (?), hyaline and milky quartz, amethyst of a pale violet hue, hematite, several marbles and breccia.*

The Scytho-Greek art of which so many examples have been found in the tumuli of the Crimea, more especially in those about Kertch, the ancient Panticapæum, settled by Greeks from Miletus in the 6th century B.C., represents in many of its specimens a Proto-Russian art. Others again are purely Greek and the rest are either the work of Greek artists or were executed by those whom they had instructed. The finest specimens were gathered together in the Kertch Museum at the Hermitage in Petrograd. The largest and richest of these tumuli is that known as Koul-Oba (Tartar for "ash-heap"), situated about four miles west of Kertch, and which when first excavated in 1831 had escaped the plundering to which so many other of the grave-mounds had been subjected. A great variety of jewels was found in this tomb, which must have been that of one of the richest kings of the region, and it has been approximately dated at about 300 B.C., at which time there flourished a Bosporian king named Pairisades. Within the tomb were found the moldering remains of a king, his queen, his servants and his horses, and upon the royal person, as well as around it, were the royal treasures. On the king's neck was a massive gold torque, the ends terminating in figures of Scythians on horseback, partly in green and blue enamel. Encircling his wrists and arms were penannular bracelets and armlets, wrought most beautifully of a massive cable of gold, the ends figuring sphinxes. Adorning the head of a woman, evidently belonging to the royal house, and who had been sepultured near-by, was a mitre-shaped diadem similar to that worn by the king; a gold torque with lion-forms at its ends was around her neck, and also a magnificent necklace in filigree work with medaillions in repoussé, and bearing many exquisitely delicate chainlets, on which hung as pendants a number of vase-shaped ornaments and others in granulated work resembling those met with in some of the finest Etruscan necklaces. Unfortunately, although this splendid sepulture had remained undisturbed for more than 20 centuries, it was carelessly guarded after it was opened, and golden ornaments to the weight of 120 pounds were stolen by the neighboring peasants, only about 15 pounds' weight of them being eventually recovered by the authorities.

Before the Christian era the Roman world was indebted to Greece and Etruria for all but the plainest jewelry forms, and in the palmy days of Imperial Rome, the expert jewelers were either Greeks themselves or had learned the art under Greek influence. The specifically Roman work was more massive, seeming to lay as great stress upon the intrinsic value of the precious metal used for a jewel, as upon its artistic character. At the same time the tendency to produce a striking effect was displayed in the free use of the more brilliantly-colored stones. Reds, yellows and blues were favored, and the contrast is emphasized by the addition of pearls, which enjoyed immense favor in Imperial Rome, when the pearl-fisheries of the East were laid under contribution to satisfy the luxurious tastes of the wealthy Romans. Drawing to herself as she did the finest fruits of the world's culture in every direction, Rome offered a rich variety of all known forms and designs of jewelry, this wonderful variety of borrowed or adapted types hiding her lack of originality. As the power and wealth of the state declined there was a progressive decline in the artistic merit of the ornamental objects produced, until toward the end the quality and value of the materials used for the jewels much surpassed the skill displayed in their workmanship and decoration.

* Consult G. F. Kunz, 'The Magic of Jewels and Charms' (Philadelphia 1915, pp. 323-325: pl. opp. p. 334).

The most remarkable examples of the Visigothic art of Spain that have been preserved for us are the gold crowns and coronets found in 1858 at the Fuente de Guarrazar, near Toledo, and now preserved at the Musée Cluny at Paris. Of these the one bearing the name of the Spanish-Gothic king Reccesvinthus (649–672) is the finest. It consists of a broad, massive gold band, about four inches high, the diameter being about eight inches; along the upper and lower edges runs a bordering of cloisonné incrusted with almandine garnets, and on the band are set in relief 30 Oriental sapphires of great beauty and of large size; alternating with the sapphires are 30 large pearls. From the band hang 24 golden chains, supporting as many letters in gold cloisonné, reading *Reccesvinthus rex offeret.* Each of these letters terminates with a gold pendant from which hangs a pearl and a pear-shaped sapphire. The crown is suspended by a quadruple chain of fine workmanship, which attaches it to a double fleuron of massive gold, enriched with 12 pendent sapphires. The cross which occupies the centre of the crown, and is attached to the fleuron by a long golden chain, is remarkable both for the richness of its material and the elegance of its form. It is of massive gold and is decorated with six beautiful sapphires and eight large pearls. The letters depending from the crown proclaim it to have been a votive offering, and the church to which it and the other crowns were dedicated was that of Sancta Maria in Sorbaceis, near Toledo.*

The two most striking types of jewelry characteristic of Celtic art are the crescent-shaped head ornaments and the massive gold torques. The former are made of thin plates of gold, usually with a simple decoration of parallel lines; they were probably attached near the ears by extensions on either side, so that the moon-shaped ornament could project upward above the head; but some of them may have been adapted to be worn suspended from the neck. An exceptionally rich example in the Dublin Museum has a weight of 16 ounces, giving a metal value of $330, as the gold is probably nearly if not quite pure. The gold torques are twisted lengths of the metal, turned to a circular form, so as to be worn around the neck; but many of the metal torques were worn passing over the shoulder and across the breast. Splendid gold *fibulæ,* or clasps, from prehistoric times, have also been found in Ireland; some of those of penannular form, with cup-shaped terminations, are very large and heavy, one in the Dublin Museum weighing as much as 33 ounces, the intrinsic value being $680. Armlets of gold were also made, as were plates of gold for adorning garments.

Anglo-Saxon jewelry was essentially of the same type as the Merovingian. The Anglo-Saxon jewelers possessed a strong individuality, so that the personal note is very pronounced in their work. The execution was artistic and the jeweler's sense of color in the choice of stone adornments was highly developed. As it was the custom to bury many ornaments with the dead, the sepultures, especially those of Kent, have afforded a bountiful harvest of fine jewels. Examples of almost all types have been unearthed. Bead necklaces are present in great variety, the materials ranging from glass up to amber and amethyst, while for the wealthy there were gold necklaces with more precious settings. Hairpins, with fantastic bird or animal forms, or with garnets, were much in favor. The well-known jewel of Alfred the Great, now in the Ashmolean Museum at Oxford, was found at Newton Park, three miles from Athelney, county of Somerset, where Alfred sought refuge during the Danish invasion in 878. It measures two inches in length, one and one-fifth inches in width and half an inch in thickness, and is considered to represent Anglo-Saxon jewelry at its very best. In shape it is oval, the front and the back being flat. On the obverse, beneath a plate of rock crystal, two-fifths of an inch thick, there is a plaque of semi-transparent cloisonné enamel, blue, white, green and brown, figuring a man's form. At the smaller end of the oval a prolongation is shaped like a boar's head. An Anglo-Saxon inscription in gold letters, along the edge of the jewel, reads: Aelfred mec heht gewyrcan (Alfred ordered me to be wrought). The gold is delicately fashioned in filigree and granular work; the enamel figure has been variously considered to represent Christ, Saint Neot, Saint Cuthbert, or Alfred himself. Of Anglo-Saxon gold rings, the most noteworthy are three, bearing respectively the names of Ahlstan, bishop of Sherbourne (824–67); of Ethelwulf, king of Wessex (836–58), the father of Alfred the Great, and of Ethelswith, queen of Murcia, Alfred's sister. Ethelswith's ring was tied to a dog's collar by the farmer who found it, and served this ignoble use for six months, until to his surprise and joy the man learned that it was of gold.

For the jewelry of the early Middle Ages we have to depend largely upon the treatise by the monk Theophilus (or Rugerus) called 'Schedula Diversarum Artium,' written about 1000 A.D., in which are quite fully described the technical processes of the goldsmiths and jewelers of the time. It evidently records the practices of Byzantine workers. Of Merovingian ornaments one of the most valuable finds was that made accidently at Tournai in 1653, when the regalia of Chilperic I (d. 481), the founder of the Merovingian dynasty, were brought to light. These included a bracelet, clasps, buckles and the royal signet of gold, engraved with the bust of the king; there were also some 300 golden bees, which had served for the adornment of a mantle. Each piece of the treasure is inlaid with thin slices of garnet, or red glass, held between gold partitions. From the succeeding Carolingian period fewer examples of jewelry have been preserved, because Charlemagne (742–814) discouraged the practice of burying jewels with the bodies of their late owners, lest by this means too great a quantity of the precious metals should be withdrawn from use. Nevertheless, many of Charlemagne's own treasures were placed with his body in his tomb at Aix-la-Chapelle. His pendent, gold reliquary, set with a large *cabochon*-cut sapphire in front, and a square-cut sapphire at the back, between which was inserted a small cross made from wood of the True Cross sent him by Haroun al-Raschid, was found when

* Consult 'The Book of the Pearl' by George Frederick Kunz and Charles Hugh Stevenson (New York 1908, pp. 415, 416, pl. opp. p. 416).

his tomb was opened in 1169. In 1804 Napoleon directed the custodians of the treasure in the cathedral at Aix-la-Chapelle to present this reliquary to Josephine on the occasion of a visit she made to Charlemagne's tomb. It passed into the hands of Hortense, Josephine's daughter, who gave it to her son, Napoleon III. What has become of it since his downfall and death is rather doubtful, but it is said to be in a private French collection.

With the Renaissance begins the revival of the jeweler's art in sympathy with that of all the other fine arts, and, as in most of these, it was Italy that moved in the vanguard, the Italian goldsmiths and jewelers leading the way here also. While the larger part of the early works has disappeared in the course of centuries, we are fortunate in having many exact representations of them in contemporary portraits, which are often very trustworthy witnesses, since a number of the 15th century painters began their careers as goldsmiths and jewelers, as, for example, Tommaso de Fimiguerra, Antonio Pollaiuolo, Botticelli, Domenico Guirlandajo and Francia. To these must be added, as great jewelers of the 15th and 16th centuries, Ambrogio Foppa (Caradosso) and Michelangelo di Viviano, the former of whom worked in Milan and Naples, and the latter in Florence, patronized by Lorenzo and Giuliano dei Medici. All these workers were, however, surpassed by the great master of the craft, Benvenuto Cellini (1500–71).

Among the innovations introduced in European jewelry by the Renaissance artists was a pendent jewel worn on the forehead, which may remind us of the favorite Hindu custom of wearing such an ornament, although this latter is often a jeweled disc, suspended from the large veil worn over the head and shoulders. The Renaissance ornament was known in France as the *ferronière,* from the famous Louvre portrait 'La Ferronière,' presumably by Leonardo da Vinci and formerly reputed to be that of one of the latest flames of François I, the beautiful wife of an ironmonger. The face depicited is, however, in all probability that of Lucrezia Crivelli, a mistress of Ludovico Sforza, "Il Moro," Duke of Milan.

As might be inferred from a contemplation of the paintings of the period, the jewelers indulged in a rich use of color, both in precious stones and in enameling, and these colors were so artistically blended and so wonderfully combined with the most delicately beautiful goldwork that the result was an object in which the value of the materials was exceeded by the art exercised in its production. It is noteworthy that the diamond, so greatly favored in later times, was at this period less prized than the emerald and the ruby. This appears in the scale of values for the four precious stones given by Cellini in 1568, although he places the sapphire far down the scale. On faultless, one-carat stones he sets these prices: ruby, 800 gold crowns; emerald, 400; diamond, 100, and sapphire but 10 crowns. The stones were usually table-cut, and in many cases the elaborate enameling of the jewel almost hid the gold substratum, except where it was left free to figure some details of the decoration.

French jewelry of the 16th century is illustrated by a large number of designs of the highest artistic merit. Among the foremost of those designers whose ideas are skilfully worked out, either by themselves or by highly-trained goldsmiths, may be mentioned Jacques Androuet Ducereau (c. 1510–c. 1585), Étienne Delaune (1518–95) and Pierre Woeriot of Lorraine (1532–aft. 1589). Of course their art owed much to the stimulus given by Cellini's activity in France under François I, and the fondness for jewels increased greatly under the last Valois kings, the contemporary chroniclers giving graphic descriptions of many costly ones possessing extraordinary beauty. In Spain great favor was bestowed upon elaborate reliquaries, and a characteristically Spanish decoration of these was with painted glass, termed in French of a later time *verre églomisé,* perhaps after a certain clever 18th century jeweler named Glomy. In this process the underside of a plate of glass, or of rock crystal, was covered with gold leaf; on this was traced the design, so that the part of the gold leaf to be left untouched was defined. Where it was removed, pigments were applied to bring out the design, and the proper degree of light and shade was attained by the application of varnishes of various thicknesses. Pendants were favorite ornaments in Spain, as were also bow-shaped jewels for breast ornaments. For the settings emeralds were very often used, a great variety of these stones, of various degrees of excellence, having been brought to Spain from Peru after the Spanish Conquest. The mines whence they came have not been traced, and they were perhaps already exhausted when the Spaniards invaded the land.

In Germany, great centres of the goldsmiths' art in the 16th century were Augsburg, Munich and Nuremberg. The Fuggers, the great bankers of Augsburg, did much to encourage the production of fine jewelry, indeed they combined dealing with precious stones and splendid jewels in a remarkably clever way with their banking business. Naturally the Italian influence was potent in these German cities, although the striking and original work of such masters as Albrecht Dürer and Hans Holbein, the former the son of a goldsmith, occupies a very high place in the history of jewelry. Holbein's numerous designs, made in England, preserve for us a record of his excellence in the art.

To the 17th century belongs the reign of the aigrette, consisting of clusters of precious stones set in enameled gold and mounted on movable stalks; another favorite jewel of this century was the bow or rosette to be worn on the breast, named a sévigné, after the world-famous letter writer, the Marquise de Sévigné. A splendid English jewel of the early part of this century is that known as the "Lyte Jewel," in the British Museum. It was a gift of James I to a Mr. Thomas Lyte, as a reward for the latter's zeal in drawing up a pedigree of the sovereign. An openwork cover has diamonds on the outside and brilliant enamel on the reverse, while on the back of the jewel is a white enameled plate on which is a design done in alternate lines of gold and of ruby enamel; the enamel bordering is of ruby-red and sapphire blue.

Toward the end of the 17th century, pendants are found made of gold only, and some

specimens of Portuguese work are remarkable for delicacy of execution; these are sometimes set with very small diamonds. Sprays of leaves and flowers and knots of ribbon are made in metal during the 17th century, and are thickly set with crystals — paste or real precious stones — particularly by Venetian, French and Portuguese, followed at a safe distance by English workmen. The best of these are by Giles Legare, and in the 18th century by his follower, Pierre Bourdon.

The search for new styles of ornamentation led at the end of the 17th century to the development of the variety of decoration and design to which the name «rococo» has been given, and this became gradually the dominant tendency in the first half of the 18th century. Among the masters of this style in France may be noted Jean Bourget and Pierre Bourdon, and in Italy Gian Battista Grondoni and Carlo Ciampali. More potent, however, was the activity of Melchior Dinglinger who, after working for a time at Augsburg, came to Dresden in 1702 at the invitation of Augustus II, surnamed «The Strong,» Elector of Saxony, and king of Poland as Augustus I, at whose court he was employed for 30 years as court jeweler, together with his brother, and with his son, Johann Melchior Dinglinger. The elector availed himself of their services in planning and enriching the famous Green Vaults in Dresden, wherein is assembled a most remarkable collection of the ornamental objects produced in this period. The discovery of the remains of Pompeii in 1755 gave a new direction to taste, and signaled the downfall of rococo and a revival of classic models. However, although much of the jewelry wrought by the goldsmiths of the first half of the 18th century is too extravagant and eccentric in style to please a truly refined artistic appreciation, many single objects testify to the skill and technical ability of those who produced them.

In France, during the Directory, the aim of the ladies of fashion was to resemble as much as possible the statues of the Greek goddesses, and this led to a rejection of elaborate jeweling. Indeed, many women discarded jewels almost entirely, and even the frail ladies popularly called *merveilleuses,* who wore too many, wished them to be of very simple design, so that they might not detract from the effect produced by perfection of physical form. In 1800, when the Egyptian campaign was in everyone's mind, the dandies regarded it as the height of good taste to wear turbans *à la Mameluck,* adorned with scarabs, sphinxes and obelisks. At this time and through the First Empire public taste was dominated in the matter of personal adornment by the painter David, and unfortunately his ideas in this respect were not on a level with his general artistic ability, for he was tyrannized over by the influence of classic tradition. The Restoration marked a decided reaction against the tendency to severity and rigidity generally characterizing the early part of the century as to jewelry. In sympathy with the later rise and triumph of Romanticism in literature and painting, jewelers sought to create works of art at once striking and graceful. The reaction against exclusively classic models brought about a revival of Gothic forms, which gained popular favor to a high degree. Still this was only an artificiality of another type, and it was reserved for the latter half of the 19th century to seek for inspiration directly in the realm of nature.

The jewelry of modern times has developed along the lines of eclecticism, the general trend being toward gracefulness and delicacy. In Italy the Castellanis in the first half of the 19th century renewed the use of the granulated gold ornamentation of the finest Etruscan jewelry, and somewhat later Lucien Falize, who flourished during the Second Empire in France, contributed much to the success of the modern movement. Whatever may be the inevitable errors resulting from the striving after novel effects, the tendency has been, on the whole, to maintain all that is best in the examples of classic as well as of Renaissance art, while welcoming such original forms as recommend themselves because of their tastefulness and beauty. Probably no single name has been so freely mentioned in connection with modern French jewelry as that of René Lalique, and the «Art Nouveau» style, despite some vagaries, has found favor both in Europe and America. Indeed, it may truly be said that the jeweler's art was never more international than it is to-day, and in no age has there been a greater variety of objects produced, or a higher average standard of excellence attained than at the present time.

For Chinese jewelry filigree work is highly favored, and the native jeweler is exceedingly expert and artistic in this branch of his art. Enameling is also greatly fancied in dark blues and pale blues. When precious stones are set they are usually cut rounded, *en cabochon,* not in facets, but in many cases imitation stones are used, prepared to the hue required by the enamel setting. Pearls are much in request, and they, as well as the stones that are employed, are drilled and attached by fine wire to the setting. Delicately wrought hairpins and earrings are greatly in vogue among Chinese ladies.

India has produced an immense variety of jewels of all kinds. Indeed the forms are so many and so beautiful, the designs produced so attractive, and the love of personal decoration so widespread among the peoples of India, that a great many inferior metals and imitation precious stones are used by the jewelers, although of course the jewels of the noble and wealthy are of gold and silver, adorned with costly genuine gems. Naturally, as India might be called the home of the pearl, this gem of the sea constitutes one of the most prized decorations of the richest jewels. Among the more specifically Hindu forms of personal adornment must be noted the ever-present bangle-bracelet, untold thousands of which have been produced. Glass and lac bangles are made in all parts of India, the choicest at Benares, Lucknow, Delhi and other towns of Upper India. Bracelets of dyed circles of shell are also in favor, and occasionally ivory bracelets are manufactured. Chains, armlets, crosses, etc., are part of the characteristic Indian jewelry and more especially national and attractive are the forehead ornaments, of painted glass for the poorer and of gold with a pendent gem for the richer.

In many Oriental countries there has been but little change in form or variety of workmanship for more than two millenniums. A close similarity of design may be remarked in the decoration of the Hindu work of to-day and in that of the Egyptians and Phœnicians many hundred years before the Christian era. The bracelets, earrings, rings, etc., are still frequently ornamented with little gold beads, with filigree work or with delicate chainwork. It has indeed been conjectured that India was really the source of these designs in view of the active commercial intercourse with Western lands dating from the campaigns of Alexander the Great.

The Aztecs of Mexico and the aboriginal peoples ruled over by the Incas in Peru had developed a considerable and complex civilization at the time of the Spanish Conquest in the early part of the 16th century, and their love of luxury and adornment, as well as the skill of their craftsmen, must have resulted in the production of many jewels. However, the reports of the Spanish chroniclers as to these objects are in many cases far from trustworthy, as for instance those concerning the "emerald" ornaments which had belonged to Montezuma, and were given by Cortés to his bride on his return to Spain in 1529. According to Gomara's recital, one of these had been carved by a Mexican lapidary into the form of a rose, another was shaped like a horn, a third had been fashioned as a fish with golden eyes, still another had been formed as a bell, having for the tongue a pearl, while the fifth was cut into a small cup, with foot of gold and having attached four little golden chains, each supporting a splendid pearl. These ornaments or jewels cannot have been of emerald, as this stone does not occur in Mexico, but were probably either of jade, or else of greenish torquoise, or some other of the green or greenish stones known to the ancient Mexicans, rather indiscriminately, as *chalchihuitl*. The five objects brought by Cortés are said to have been lost at sea in 1541, during the disastrous Spanish expedition against Algiers, in which he took part. As the richest of the Peruvian jewels were of gold, with or without precious stone settings, the avidity of the Spaniards for the precious metal caused them to melt down the ornaments without regard for their value as objects of art, or of historic interest. In modern times the graves of Peru have yielded some examples testifying to the skill of the early Peruvian goldsmiths, but undoubtedly the chief treasures of the Incas are irrecoverably lost.

Summarized briefly: (1) Savage tribes have used for their ornaments natural objects easily worked. (2) The cultured nations of antiquity have generally made their finest pieces of personal ornament of gold. (3) During the period of the Renaissance gold and silver, colored precious stones and vitreous enamels were very largely used. (4) During the 19th century the diamond particularly claimed the attention of jewelers, and the 20th century has been marked by a strong preference for platinum in settings, especially for diamonds. See DIAMOND; GEMS, ENGRAVING OF; PEARL; PRECIOUS STONES, etc.

GEORGE F. KUNZ.

JEWELRY TRADE, The. The making of jewelry is one of the oldest trades of which the American historian can find record, for while the manufacture of such articles of adornment occupied a position of little commercial importance until several years after the settlement of this country by the colonists, the fact remains that jewelry was made by the native Indians many years before the first Europeans set foot upon American soil.

Prim and precise as the Puritans are supposed to have been, it is a mistake to imagine that they were too primitive in their opinions to appreciate the advantages of a little jewelry in the adornment of their persons. Both the Dutch and the English brought such ornaments with them to the new world, and one's personal attire was considered incomplete without the buckles, brooches and rings which were in vogue at that time. As the natural result gold and silver smithing was one of the first industries to be established in the colonies, and every large town had its smiths who produced the most popular articles of jewelry, as well as certain kinds of trinkets for the Indians, medals, snuff-boxes, etc.

One of the most important products of the early silversmith's art was the making of elaborate boxes from rare woods, or, sometimes, shell, inlaid with gold or silver. Snuff-boxes were manufactured in this way, while other boxes were made to contain the parchments which conferred the freedom of the city upon distinguished guests. Sometimes these boxes were made entirely of silver and were lined with gold. Occasionally the metal was gold, studded with precious stones. It was such a box as this in which the people of New York presented the "freedom" to Alexander Hamilton, after his elaborate defense of the liberties of the press in New York, in 1784; while similar boxes were later conferred upon Lafayette, Washington and General Scott. The making of such boxes and other ornamental insignia conferred upon distinguished men represents but one of the branches of the art of the smith, for there were so many demands made upon the craft that its ranks were constantly extending. In

1788, when the adoption of the Federal Constitution was celebrated in Philadelphia, there were no less than 35 goldsmiths and jewelers in the procession, while, more than 20 years before, it had been the profuse display of jewelry, silverware, etc., in the homes of the prominent New Yorkers that had incited Townshend to introduce the historic bill known as the "Stamp Act," which was undoubtedly the entering wedge in the struggle which finally separated the colonists and the Crown. At this period in the history of the nation the colonies that could boast of the richest inhabitants, and which could, therefore, afford to spend the greatest amount of money for jewelry and other articles of personal adornment, were South Carolina, Virginia, Maryland, New York, Pennsylvania and Massachusetts.

When compared to the facilities afforded to jewelers at the present day the tools of the old-time silversmiths were crude enough. The only noticeable difference between them and those used by workers in other metals was in their size, a factor which fitted them for finer work. The extreme tenuity and the lack of brittleness of gold and silver gave room for the exhibition of great ingenuity on the part of the artist who aspired to forget the ordinary patterns in the creation of more fanciful designs, while the attainment of the polished, or burnished, surface made a more tender treatment imperative. In the beginning of the century the art of frosting gold, like that of satin-finishing silver, was unknown. Gold and silver both came from the workshop with a glittering surface, and such ornamental and decorative work as may then have been attempted was either crude enameling, applied work or engraving. Later, of course, came all the new processes by means of which the precious metals have been used conjointly with other metals, or with wood, mother-of-pearl, glass, porcelain, pearls and gems.

In those days everybody who engaged in the industry of jewelry-making learned his trade so thoroughly and in such an old-fashioned manner that it was impossible to draw the close distinctions between the several different but associated occupations that are so clearly drawn to-day. At that time, to say that a man was a "jeweler" indicated that he was a goldsmith and silversmith, a watchmaker and clockmaker and a maker of fine mechanical instruments, for each of these branches involved a knowledge of the others. At the same time the trade was thoroughly a mechanical one, and any attempt to realize a higher ideal in the making of jewelry and other ornaments was most unusual. Instead of "wasting his time" over such inventions the artisan devoted all the hours of labor to such work as might be assigned to him, even dividing his time and skill between his own and kindred trades. To a similar degree the seller of such goods was more frequently a workman than a dealer. While a merchant in the strict sense of the word, he was usually a person who could take his place at the bench if necessity required, and who owed his success as a salesman to his knowledge of the various kinds of metal and fancy work for the adornment of the person. Gradually, as the demand for such goods increased, the more progressive of these merchants began to manufacture the simple articles which they sold, although it was some time before this branch of the industry had extended beyond the making of spoons, forks, rings and similar small pieces.

The first American manufactory of jewels is said to have been that established in Newark, N. J., in 1790, by Mr. E. Hinsdale, who died 20 years later, and was succeeded by his partner Mr. Taylor. The New York of 1820 could boast of but two manufacturing jewelers, Mr. G. F. Downing and a Frenchman by the name of La Guerre. The revolutionary hero, Paul Revere (1735–1818) was originally trained as a goldsmith and silversmith, and he practised his art in Boston before the Revolution. The *Knoxville Gazette* of 20 Oct. 1792 contains the advertisement of a local goldsmith and jeweler, who declares that he also makes rifles in the neatest and most approved fashion.

From the earliest days in the history of the jewelry trade, Providence, R. I., has been one of the great centres of this industry. It was shortly after the close of the Revolutionary War that Messrs. Sanders and Pitman and Cyril Dodge began to make silverware in that city. As early as 1805 there were no less than four establishments located there. They were operated by Nehemiah Dodge, John C. Jenckes, Ezekiel Burr, and Pitman and Dorrance, and their product, to make which they employed about 30 men, included silver spoons, gold beads and the simplest designs in finger rings. A few years later some of these manufacturers began to turn their attention to cheap jewelry in which silver and other alloys were used with a small fraction of gold. These included many small articles like breast-pins, ear-rings, key-rings, sleeve-buttons, etc., as well as some large articles which were plated by the hammering process. The first jewelry establishment at Attleboro, Mass., a town which has continued to hold a prominent place in the trade, was opened about 1805, while the establishment of the business in Newark, N. J., by the firm of Hinsdale and Taylor dates from about the same time. Philadelphia also became identified with the early jewelry interests. The firm of Bailey and Company, a house which is still conducting business, although under another name, was one of the first manufacturers in that city, and its trade with the West and South soon became so extensive that the concern became known as one of the most prosperous in the business.

Maiden Lane, New York, did not become the centre of the American jewelry trade until about 1830. The demand for jewelry inspired new ideas in manufacture, and, as much of the desire for novelties originated in New York, that city naturally became the market for the introduction of such products. In the New York *Mercantile Register* for 1848–49 one may find the advertisements of the following houses, which were then prominent manufacturers of jewelry, watches and silverware: Ball, Tompkins and Black (late Marquand and Company), 247 Broadway; Allcock and Allen, 341 Broadway; Gale and Hayden, 116 Fulton street; Tiffany, Young and Ellis, founded in 1837, Charles L. Tiffany, founder, the forerunner of Tiffany & Co., 271 Broadway; Wood and Hughes, 142 Fulton street; Samuel W. Benedict, 5 Wall street; George C. Allen, 51 Wall street; Squire and Brother, 92 Fulton street and 182 Bowery. Some of these

houses have since gone out of existence; only one now retains its original name, but three are still conducted under firm names which retain some portion of the early title.

Although great advances have been made in every branch of American art there is no particular in which it is more pronounced than in the metal work which is so conspicuous a part of the art of the gold and silver smiths, and the fact that the American product is now regarded as superior to that of any other country of the world is not only due to our knowledge of the art in itself, but is largely the result of our wider knowledge of the articles into whose manufacture good taste enters. To-day the designers employed by the great gold and silver smiths of America are not only men of refinement and liberal education, but they are so truly artists, in the best sense of the word, that they could, if required, draw or model from life, or paint in oils or water-colors. It is largely due to the efforts of such men that so much advance has been made in the making of ornamental gold and silver ware during the past half century, a progress which is indicated by our exhibitions of such articles as loving-cups, vases and presentation pieces, among which one may mention the gold medals, valued at $1,000 and $500, which were presented by the State of New York to Dr. E. K. Kane and Commander H. S. Hartstein, the Arctic explorers, in 1858; the silver vase made in honor of William Cullen Bryant, now a part of the exhibit at the Metropolitan Museum of Art, and the several testimonials presented to Cyrus Field, upon the completion of the trans-atlantic cable, in 1866. Among the other conspicuous specimens of this art are the silver service which was presented to the arbitrators of the Alabama Claims, in 1873, the silver centrepiece duplicating the statue, "Liberty Enlightening the World," which was presented to August Bartholdi, in 1886; the elaborate testimonial presented to William Ewart Gladstone, in 1877; the Edwin Booth loving-cup, and the many yachting trophies that have been manufactured on the occasion of international and other important regattas.

The discovery of gold in California, in 1848, naturally gave a great impetus to the manufacturing jewelry industry, for it gave assurance of an ample supply of metal needed for all purposes without the cost of importation, and if, at that time, we were lacking in knowledge as to the various forms in which the art of the smiths had been developed, it needed but such expositions as those at London and Paris to perfect our education in that respect. With such secrets revealed to us, however, it took but a comparatively short time for us to acquire the inventions in machinery and tools necessary to the reduction of the cost of production, and it is largely due to our success along these lines that we have been able to lead the nations of the world in this branch of the fine arts.

The process of electro-metallurgy was introduced about 1860, and since that time all kinds of goods in which plating has been employed have been made by this method, the centres of production being located chiefly throughout Connecticut, although there are other large plants at Newark, N. J., and Providence, R. I. Speaking from a strictly commercial point of view it is almost impossible to overestimate the value of this process, for it has brought within the reach of people of limited means an attractive line of tableware and other articles of utility that are now deemed indispensable in every household. If not as artistic and as highly finished as solid silverware they are extremely serviceable and there can be no question but that the better grades of such goods possess considerable artistic merit. In fact, for a time at least, the silver-plated ware encroached upon the province of solid silver, but during more recent years the low valuation of silver bullion, and the mechanical inventions which have further reduced the cost of production, have tended to reverse the tables.

The production of watches is so closely related to the jewelry trade that some reference must be made to it in any review of that industry. It was but a comparatively short time ago that all watches were imported, whereas to-day we have progressed so far it is only some very small watches for ladies' use and some particularly complicated chronographs that are now obtained in Europe. All others are made in this country, the industry being largely centred in New Jersey, Massachusetts and Illinois. In its consumption of diamonds and other precious stones America will also compare favorably with other nations, New York being the largest market for such gems in the world. Although it was but a few years ago that the art of diamond cutting and polishing was established in the United States, our wise tariff regulations have given such an impetus to this branch of the trade that some of the most expert cutters from Holland have now located in this country.

So far as statistics go we have but little material concerning the early history of the jewelry industry. We know that, in 1812, the value of the Providence product was but $100,000, and that, as late as 1860, the returns from all parts of the country were small as compared to those of the present day. In that year, for example, the jewelers and watchmakers of Philadelphia produced but $691,430 worth; the silverware manufacturers, $516,000 worth, and the makers of watch-cases and chains, $1,714,800. The production of gold chains and jewelry at New York was $2,497,761; of gold watch-cases, $337,690, and of silverware, $1,250,695. In Newark, the total product was $1,341,000, while Providence produced $2,251,382 in jewelry and $490,000 in silverware. The following census statistics, covering the years from 1880 to 1905, indicate the great advances which have since been made in the trade:

	1880	1890	1900
Establishments	739	783	851
Capital	$11,431,164	$22,246,508	$27,872,000
Employees	12,697	13,880	20,468
Wages	$6,441,688	$8,038,327	$10,644,000
Value of product	$22,201,621	$34,761,458	$46,129,000

	1905	1910	1915
Establishments	1,023	1,537	1,914
Capital	$39,678,956	$63,811,000	$72,404,000
Employees	22,080	30,347	28,289
Wages	$12,593,000	$18,358,000	$18,302,000
Value of product	$53,225,000	$80,350,000	$81,006,000

Unfortunately, however, such statistics cannot indicate what great things have been accomplished from an artistic standpoint, for the time has now come when the American jeweler,

instead of going to Europe for his ideas and models, leads the best European producers in both correctness and originality of designs and workmanship.

The following figures are given by the census bureau as to the value of the jewelry product in the four cities producing the largest quantity:

	Total value of product		Percentage of total in the United States	
	1909	1914	1909	1914
Providence, R. I.	$20,166,003	$20,933,990	25.1	25.8
New York, N. Y.	19,236,368	20,467,868	23.9	25.3
Newark, N. J.	13,152,340	11,215,214	16.4	13.8
Attleboro, Mass.	7,396,558	8,353,935	9.2	10.3

The four leading States show the following figures of product:

	1909	1914	1909	1914
New York	$20,362,620	$21,810,245	25.3	26.9
Rhode Island	20,685,100	21,522,251	25.7	26.6
Massachusetts	15,210,738	14,175,857	18.9	17.5
New Jersey	13,272,004	11,347,455	16.5	14.0

In 1914, Chicago produced jewelry to the value of $3,135,945, being 3.84 per cent of the total product in the United States. The entire State of Illinois produced $3,264,465 worth of jewelry.

The reports regarding two of the leading centres of jewelry production, Attleboro and North Attleboro, Mass., for 1913 and 1917, show the slightly unfavorable effect of war conditions upon this industry:

	Attleboro		North Attleboro	
	1913	1917	1913	1917
Establishments	81	64	37	34
Capital	$8,581,425	$8,553,611	$4,235,937	$3,993,372
Employees	3,931	2,871	1,875	1,516
Wages	$2,536,658	$2,166,661	$1,249,397	$1,161,109
Value of product	$9,364,159	$11,308,913	$3,968,810	$4,259,834

The increase in value of product was probably due to the higher prices realized.

GEORGE F. KUNZ.

JEWETT, Charles Coffin, American librarian: b. Lebanon, Me., 12 Aug. 1816; d. Braintree, Mass., 9 Jan. 1868. He was graduated at Brown University in 1835 and from the Andover Theological Seminary in 1840. He was librarian at Andover while studying there and prepared a catalogue of the library. He was appointed librarian at Brown University in 1841 and professor of modern languages there in 1843. He was librarian of the Smithsonian Institute at Washington in 1848–58, and thereafter until his death was superintendent of the Boston Library. His work in rearranging and cataloguing the library at Brown University attracted wide attention, the merits of his system being recognized in Europe as well as in the United States; and he established in the new library at Boston one of the first library card catalogues. His work was largely pioneer in modern library method and his system has served as a model in both United States and Canada. His writings on the subject of library economy are of importance. Author of 'Facts and Considerations Relative to Duties on Books' (1846); 'On the Construction of Catalogues of Libraries and their Publication by Means of Separate Stereotyped Titles, with Rules and Examples' (1852); 'Notices of Public Libraries of the United States' (1854).

JEWETT, Sarah Orne, American novelist and writer of short stories: b. South Berwick, Me., 3 Sept. 1849; d. 1909. She was educated at Berwick Academy and became a contributor to the *Atlantic Monthly* in 1869, in which periodical the larger part of her work appeared. Her usual theme was the New England character seen from its most attractive side, its gentler aspects given greater prominence and its harsher ones not unduly emphasized. Her works include 'Deephaven' (1877); 'Play Days' (1878); 'Old Friends and New' (1879); 'Country By-Ways' (1881); 'The Mate of the Daylight, and Friends Ashore' (1883); 'A Country Doctor,' a novel (1884); 'A Marsh Island,' a novel (1885); 'A White Heron and Other Stories' (1886); 'The Story of the Normans,' an historical work (1887); 'The King of Folly Island, and Other People' (1888); 'Betty Leicester' (1889); 'Strangers and Wayfarers' (1890); 'Tales of New England' (1890); 'A Native of Winby, and Other Tales' (1893); 'The Life of Nancy' (1895); 'The Country of the Pointed Firs' (1896); 'The Queen's Twin and Other Stories' (1899); 'Betty Leicester's Christmas' (1899); 'The Tory Lover' (1901). Consult her 'Letters,' edited by A. Fields (Boston 1911), and Thompson, C. M., 'The Art of Miss Jewett' (in *The Atlantic Monthly,* Vol. XCIV, Boston 1904).

JEWFISH, a huge Californian game-fish (*Stereolepis gigas*) of the sea-bass family (*Serranidæ*). It has a single dorsal fin, the soft part of which is shorter than the spinous portion, and is brown with black blotches and becomes much darker with age. Among the dense growth of kelp in moderately deep water along the coast of southern California the jewfish finds a congenial home. Belonging to a family of game-fishes and reaching a weight of 300 to 500 pounds, it has long been a favorite object of sport for ambitious anglers.

Two other fishes of the same family but more closely related to the groupers are known as the Florida or black jewfish (*Garrupa nigrita*) and the spotted jewfish (*Promicrops guttatus*). The former ranges from Florida to Brazil, and the latter widely through the warm parts of both Atlantic and Pacific oceans. The black jewfish is quite common about the coral reefs, in the caverns of which it lurks. Although not especially gamy, its enormous size and weight, sometimes reaching even 1,000 pounds, have induced a few anglers to essay its capture with rod and reel. It is easily distinguished from the Californian jewfish by its greater robustness, strong canine teeth and rounded caudal fin. Consult Jordan and Evermann, 'American Food and Game Fishes' (1903); Holder, 'Big Game Fishes of the United States' (New York 1903).

JEWISH CALENDAR. The Jews date their era from the Creation, which according to their tradition was 3760–61 years before the Christian era. The Jewish year is a lunar year and consists of 12 months with an additional one for leap year. The months have alternately 29 and 30 days, the 1st and 30th days being called New-moon. Each cycle of 19 years has 7 leap years, the 3d, 6th, 8th, 11th, 14th, 17th and 19th. The spring months are called Nisan (in which the Passover is celebrated). Iyar, Sivan; summer includes Tammuz, Ab, Elul; autumn, Tishri,

Heshvan, Kislev; and winter Tebeth, Shebat, Adar, with 2d Adar for leap year. The civil year began with the month of Nisan; the religious with Tishri. Rules for the computation of the calendar were issued, after various methods had been employed in earlier centuries, by Hillel II (330–365). The date usually assigned by Jewish writers to the year when Hillel fixed the calendar is 670 of the Seleucidan era, or 4119 A.M., or 359 of the Christian era. Consult 'Jewish Encyclopedia' (Vol. III, New York 1912).

JEWISH CHARITIES. See JEWS AND JUDAISM.

JEWISH CHAUTAUQUA. See CHAUTAUQUA, JEWISH.

JEWISH EXCHEQUER, a special division of the Court of Exchequer of England (1200–90) which dealt with lawsuits between Jew and Christian, chiefly in reference to debts due the former, and recorded the taxes imposed on the Jews. The fact that it was found necessary to have a centre for Jewish business indicates the prominence in trade and finance of the Jews in England from the reign of Henry II to the period of their expulsion (1290). The court did not long survive their departure. Many important data from its records have been jointly published by the Selden Society and the Jewish Historical Society of England.

JEWISH FRATERNITIES. While societies for mutual benefit exist in large numbers among the Jews in every land, in the United States the fraternities or orders have acquired special popularity, and promote not alone Jewish solidarity but aid in maintaining many charitable institutions. These organizations as a class give pecuniary benefits in case of illness, and death-endowments, which latter insurance feature is now being made optional. The oldest and most influential is the Order of Benai Berith ("Sons of the Covenant"), formed 60 years ago, and having a membership of 35,000. Its 330 lodges extend over the entire country, and it has 13 lodges in Algeria, Bulgaria, Egypt, Turkey and Palestine, 42 in Germany, 16 in Rumania and 10 in Austria. It supports orphan asylums in Cleveland, Ohio, Atlanta, Ga., San Francisco, Cal., a home for the aged at Yonkers, N. Y., a free library in New York, while it cooperates with an orphan home in New Orleans, a technical school in Philadelphia and a hospital for consumptives in Denver, Colo. The next leading order is the Free Sons of Israel, founded in 1849, with 97 lodges and 9,810 members. The Free Sons of Benjamin (1879) has 192 lodges, 14,088 male and 1,361 female members. The Berith Abraham (1859) has 365 lodges and 70,000 members. The I. O. Berith Abraham, with 302 lodges and 56,949 members, was founded in 1887. The Ahavas Israel Order (1890) counts 124 lodges. In addition there are seven other fraternities which have been recently started. The Order of Kesher Shel Barzel, founded a home for the aged at Cleveland. Special efforts are now being made by the Benai Berith to institute lodges among the Russian and Rumanian immigrants.

JEWISH NATIONAL ORGANIZATIONS IN THE UNITED STATES. With the rapid increase in recent decades of the Jewish population, due chiefly to enforced emigration from parts of Europe where anti-Jewish legislation and unfavorable economic conditions have long prevailed, Jewish communities have markedly developed in numbers and influence with the general growth of American cities, large and small. Hence the more urgent need of religious, educational and social organizations to cement more firmly scattered elements and create greater attachment to their traditions. Such societies, too, ensure efficiency in the education of the young, in the relief of the poor; and in any co-operation with similar foreign organizations in times of danger and distress. Their activity is not exceptional, but is no less true practically of all religious or racial elements. To mention concisely the character and work of the most important Jewish national organizations, the various fraternities are powerful factors in Jewish solidarity. The oldest and most influential, the I. O. B. B., had its 10th quinquennial convention in 1915, with 40,083 members, 442 lodges (in North America, Europe, Asia and Africa), 11 districts, and three hospitals in Denver, New Orleans and Hot Springs, Ark.; orphans' homes in New Orleans, Cleveland, Los Angeles, Erie, Pa.; Home for Aged in Yonkers, N. Y.; six Sabbath and immigrant schools, a club at San Francisco, and employment bureaus at Chicago and Pittsburgh, with other agencies. The I. O. Brith Abraham had its 32d annual convention in 1918; it has over 200,000 members and 760 lodges. The order Berith Abraham, founded in 1859, has 58,000 members and 365 lodges. The I. O. Berith Sholom had its 14th annual convention in 1918; it has 54,000 members and 371 lodges. Other orders are the Free Sons of Israel, 8,000 members, Free Sons of Judah, 25,000 members, Independent Western Star Order, 22,000 members, the I. O. of True Sisters, in its 68th year, about 6,000 members. The Jewish Chautauqua was formed in 1893, has 5,000 members, with correspondence school faculty and about 60 circles of students. Of imposing numbers are various labor organizations, all founded within recent years and extending over the entire country. The Jewish Socialist Federation has over 5,000 members — its purpose is "socialist and political agitation and organization of the Jewish working class," with about 90 branches. The Poale Zion Socialist Labor Party is 12 years old, has 3,800 members and 77 branches. The Socialist Territorialist Labor Party is 12 years old, has 3,200 members and 45 branches. In the field of religion is the Union of American Hebrew Congregation, organized 1893, composed in 1918 of over 200 congregations, the largest and most prominent in the country, with four departments, executive and financial, board of governors of the Hebrew Union College, board of delegates on civil rights, board of managers of synagogue and school extension. The Hebrew Union College has about 150 graduates in office, with a full staff of professors and a large body of students. In the same field of religion are the Union of Orthodox Jewish Congregation, founded in 1898, of limited numbers, the United Orthodox Rabbis, organized in 1907, 120 members, and the United Synagogue of America, founded in 1913, with a small but growing constituency. Zionistic in character are the Order Sons of Zion (1908), 4,000 members and 87 camps; the Socialist

Young Poale Zion (1915), 800 members and 19 branches; Young Judæa (1908), nearly 350 circles, to popularize Jewish education and spread Zionism among Jewish youth; the Mizrahi of America (1912), 4 bureaus, 100 organizations and 10,000 members, whose aim is "the land of Israel, for the people of Israel, guided by the law of Israel"; the Knights of Zion (1893), affiliated with the Federation of American Zionism. Hadassah is the women's Zionist society, founded 1912, nearly 30 chapters, affiliated with American Federation of Zionists. Its purpose in America is to foster Jewish ideals and make Zionist propaganda; in Palestine, to establish a system of district visiting nursing. The Federation of American Zionists, organized 1897, has 50,000 shekel payers and 156 societies, issues a magazine, leaflets, etc. The various Zionist Societies were merged in 1918 into one organization and a Jewish Congress was called in December to uphold Jewish rights abroad.

In the special line of aiding the immigrant the leading society, Hebrew Sheltering and Immigrant Aid, had its 29th annual convention in 1918. Its membership is over 76,000, and its purpose is to facilitate the lawful entry of Jewish immigrants, to provide temporary help, to discourage their settling in cities and encourage agricultural pursuits, to foster American ideals It has many affiliated societies, East and West. The Federation of Jewish Farmers (1909) has about 1,200 members and 45 societies, and promotes admirably the interests of its adherents. Effective societies to encourage agriculture are the Jewish Agricultural and Industrial Aid Society (1900), which maintains a bureau of information and farm labor office, helps Jewish farmers by counsel and loans, publishes the *Jewish Farmer*, supports itinerant agricultural lectures, grants free scholarships at agricultural colleges and it was the first to organize agricultural credit banks in America.

The Council of Jewish Women (1893), has developed to over 90 sections in nearly all the States, and many junior auxiliaries. Its work is conducted under committees of religion, religious schools, philanthropy, reciprocity, peace and arbitration, education and immigrant aid, the latter a national feature, while the sections engage in religious, benevolent and educational work. The National Federation of Temple Sisterhoods (1913) co-operates with the Union of American Hebrew Congregations, has over 180 constituent societies and aids in the synagogue's social and educational activities. The Council of Y. M. H. A. and similar societies (1913) promotes the education, religious and otherwise, of its 372 component parts and acts as organizer and adviser. The National Conference of Jewish Charities (1899) has a membership of nearly 200 societies from all sections, with regular conventions and other helpful features. The 11th annual session of Jewish Social workers at Pittsburgh in June 1917 had 300 delegates from every large city in the United States. It was there stated that the sum of $10,000,000 is spent yearly on Jewish organized charitable work. Among the subjects discussed were the needs of federation, social problems, child caring, art in settlements, mental hygiene, wife desertion and child abandonment. The National Farm School (1896), with over 230 graduates and 2,500 members, conducts an agricultural school and farms, at Doylestown, Bucks County, Pa., to promote scientific farming and a taste for agriculture among young people, particularly recent immigrants. The American Jewish Publication Society (1888), 15,000 members, distributes 50,000 volumes yearly, issuing works in Jewish history and literature for its readers, old and young. In 1917 it published a new translation of the Old Testament, and has planned a number of scholarly works, original and translated, in various departments. It is aided appreciably by a number of important endowments. The Intercollegiate Menorah Association (1913) has branches in various colleges, publishes a magazine, and aims to study and advance Jewish culture and ideals among college men and women. The American Jewish Historical Society (1892), 400 members, has issued 26 volumes. It maintains a collection of books, manuscripts and historical objects, and publishes volumes of Jewish historical interest from year to year. The American Jewish Committee (1906) with a comparatively small membership, but fairly representative of American Jewry, aims to prevent the infringement of Jewish civil and religious rights and to alleviate the consequences of persecution. Its functions are executive as well as advisory. It maintains a bureau of statistics, co-operates with other organizations at home and abroad in Jewish interests, takes a leading part in securing relief funds in emergencies, and issues publications from time to time bearing on its activities and related subjects. Consult the Year Books of the American Jewish Publication Society (Philadelphia 1900–18).

ABRAM S. ISAACS.

JEWISH SECTS. See SAMARITANS; PHARISEES; SADDUCEES; ESSENES; KARAITES (JEWS and JUDAISM); SABBATIANS.

JEWISH WAR, The (*περὶ τοῦ Ἰουδαϊκοῦ πολέμου*), a work of Flavius Josephus (b. c. 37; d. c. 96 A.D.) and the earliest of his writings which have been preserved. Its composition has been fixed in the latter years of the reign of Vespasian (69–79 A.D.). The Aramaic original has disappeared but the Greek version prepared by the author and some Greek scholars has survived. The author was a friend of the Romans in his later years and the object of 'The Jewish War' appears to have been an attempt to convince the Babylonian Jews of the invincibility of Roman arms and so deter them from revolt.

JEWISH WOMEN'S COUNCIL. Founded September 1893, this organization has been of marked value in awakening the interest of American Jewesses in the history and literature of their creed as well as in developing among them modern methods in educational and charitable work. Affiliating with the National Council of Women it has arrayed on a common platform its representatives. The Council has a large increasing membership. Besides studying Jewish history and literature, it carries on activities in philanthropy, with settlements, sewing and industrial schools, kindergartens, manual training school, gymnasiums, free baths, day nurseries, personal service groups, kitchen gardens, and other forms of useful activity, often open to all creeds. Co-operation is encouraged with the various other Jewish societies.

JEWS AND JUDAISM. Jews (from Heb. *Yĕhūdī*, man of Judah; Greek, *Ἰουδαῖοι*; Latin, *Judaei*) is the general name for the Semitic people which dwelt in Palestine from the earliest times. At first the name was confined to the members of the tribe of Judah, but was later extended to include all subjects of the kingdom of Judah, and, after the Babylonian captivity, to all who professed the Jewish religion, whether dwelling in Palestine or elsewhere throughout the world, provided they traced their origin to the tribes of Israel or were converts to the Jewish faith. In modern times the words Jew, Hebrew and Israelite are used indiscriminately of the same people. In succeeding pages the ethnology, history, language, literature, religious life, racial characteristics, etc., of this ancient people are treated under the following headings:

1. History and Principles of Judaism.
2. Jewish History.
3. The Hebrew Language.
4. Jewish Literature.
5. Jewish Philosophical Writers.
6. The Jew in Art, Science and Literature.
7. The Talmud.
8. The Masorah.
9. The Cabala.
10. The Karaites.
11. Anti-Semitism.
12. Zionism.
13. The Spirit of Rabbinic Legislation.
14. A Century of Emancipation.
15. The Synagogue.
16. Reform Judaism.
17. Education and the Jews.
18. Commerce and the Jews.
19. Food and Health Laws.
20. Jewish Charities.
21. Jews in America.
22. Present Status of the Jews throughout the World.
23. Alliance Israélite Universelle.

1. THE HISTORY AND PRINCIPLES OF JUDAISM. Judaism is the religion of the Hebrew people and of that portion of the same to-day known as Jews.* A religion which has been active in the world for so many centuries has naturally undergone modification as to details from age to age, both by growth from within and by adoption from without; but in essentials, Judaism has been characteristically staunch to its principles from its earliest days. The objects of this article is to outline, historically and concisely, the essentials, and briefly to mention the successive secondary points of accretion and modification. There are five ages of development to be distinguished.

I. The Patriarchal Age.— Judaism's fundamental conception is its earliest: the spiritual nature of the Deity and His consequent elevation above all human forms, methods and attributes. Though not clearly expressed in Genesis, this seems to be at bottom the lesson taught by the first Hebrew, Abraham, who, in the land of Canaan whither the divine call had summoned him from his home in Mesopotamia, built altars to the Living God and "called upon His name." These altars, built without images, taught the first principle of the spirituality of God, not to be represented by stock or stone. What Genesis omits, Jewish legend as recorded in Talmud and Midrash abundantly supplies, in the shape of tradition — no doubt with sufficient substratum of truth — as to who Abraham came to the conception of an invisible spiritual God, and how he preached his first convictions of the new truth by vigorous assault upon the idols of his father, an image-carver, and his neighbors. Most scholars see in the abortive "sacrifice of Isaac" (Gen. xxii) also an object-lesson of protest against the prevalent Canaanitish practice of human sacrifices, and especially of sacrifices of children. For the rest, we have, beyond the institution of Circumcision (Gen. xvii, 9) as protest, and possibly as physical aid against the current temptations to the immoralities which formed essential features of Canaanite idolatry, no trace of any code of observance connected with this early form of Judaism; no regulations as to ceremonies or food-laws (compare Gen. xviii, 8, in contradiction to Ex. xxiii, 19), unless indeed the Noachide prohibition of blood (Gen. ix, 4) is to be understood as current among this branch of Noah's descendants.

II. The Formative National Age.— With the advent of Moses and the contact with a much more highly developed religious culture, that of the Egyptians, a more elaborate Judaism came into being. A definite central shrine as a visible mark of God's presence among men (Ex. xxv, 8), but still without any central image or idol; and above all, the direct and formal acceptance by the Hebrews of a mission of enlightenment to the nations on behalf of "the Holy God," i.e., the Pure (Ex. xix, 5, 6), prepared the way for the adoption of a somewhat complex religious ritual — cast in the universally prevailing form of animal sacrifices and burnt offerings — together with a system of fasts, feasts and holy days, food-laws and health-laws, regulations political and agricultural, the whole forming a body of legislation, set down in the later books of the Pentateuch, admirably suited both to Israel's formative desert-sojourn and to the promised period of reoccupancy of the land of Canaan, the old home of the patriarchs. Of fundamental principles we note in Moses' age, the Eternity of God (Ehyeh asher Ehyeh "I shall be what I am," Ex. iii, 14); the Unity of God, in contraversion of the multitudinous, circumscribed and mutually antagonistic gods of Canaan and Egypt; the duty of uprooting the foul idolators and idolatries of the land of Canaan (Ex. xxiii, 24, 33; Deut. vii, 1, 6); the fact of the divine revelation of religious and ethical fundamentals (Deut. v, 22); the duty of serving God by acts of love and obedience to His revealed will (Deut. x, 12) and of training children in this practice (Deut. xi, 19); love of the neighbor — the "Golden Ethic"—(Lev. xix, 18); love of the foreigner, "for strangers were ye in the land of Egypt" (Ex. xxii, 21; Lev. xix, 34; Deut. x, 19), etc.

III. The Age of National Independence.— In spite of the loving warnings and wise safeguards of the Mosaic legislation, the Hebrews when restored to the occupancy of Canaan did not remain faithful to their local mission, but, to a greater or less degree, fraternized with heathen nations to the extent of adopting their idolatrous ways and principles. The prophets urged to higher conceptions, but not always successfully: a superficial ceremonialism seems to have been the highest point attained by the yet uncultured people. "To obey is better than sacrifice, and to harken than the fat of rams!"

*The Jews known to civilization to-day are the descendants of only the smaller kingdom of Judah, which consisted of the two tribes of Judah and Benjamin (with a sprinkling of priests and Levites of the tribe of Levi) and which, in the year 586 B. C. E. was transported to Babylon by Nebuchadnezzar and allowed to return to Palestine by Cyrus, king of Persia in 536. The members of the larger kingdom of Israel — the Ten Tribes — were deported in the year 720 by Salmanassar, king of Assyria, to unknown regions in the interior of Asia, and have since disappeared from history.

(1 Sam. xv, 22) was Samuel's reproof to Saul. It was not until David ascended the throne and brought to the national ceremonialism the element of reverential, spiritual elevation that Judaism at all approached the higher plane to which Moses inspired it. An elaborate central worship was planned and prepared for by David, with accessories of music and psalmody, and found its grand culmination in the stately temple of Solomon (B.C.E. 1018). But although the lofty religious spirit of David and the other psalmists found expression in this elaborate public ritual and exerted due influence over the popular mind, it needed all the energy and devotion of the prophets during the reigns of Solomon's successors in the twin-kingdoms into which the Hebrews then divided, to maintain these lofty ideals. The golden age of a spiritually exalted Judaism was surely reached when its preachers held up as the religion's highest teachings God's desire that men should be just and merciful, upright and generous, in preference to being ceremonially observant and ostentatiously pious (Isa. i, 12–17; Hos. v, 14, 15, 24; Micah vi, 6–9); God's willingness to extend forgiveness to repentant sinners (Isa. lv, 7; Jer. iii, 22, iv, 1, 2; Ezek. xviii, 21–32; Hos. xiv, 2); God's exalted spiritual nature, above all picture or comparison (Isa. xl, 18–25); the ineffable superiority of His thoughts and His ways to men's thoughts and ways (Isa. lv, 8, 9); and His intimate, interested knowledge and supervision of men's deeds (Ps. xciv, 7–11; Jer. xx, 12, xxiii, 24).

Political independence of other nations, however, might have had the evil result of suggesting that Israel's religion was the exclusive prerogative of Israel's people. Against this narrow conception, too, the prophets contended, with their teachings of the Fatherhood of God unto all men (Isa. xlv, 22–24; Jer. x, 6, 7; Zech. xiv, 9, 16; Mal. ii, 10) and with the description of a glorious epoch to come when "many nations should go up to the mountain of the Lord, to the house of the God of Jacob, to learn of His ways and to walk in His paths" (Micah iv, 1, 2). The strongest opposition to the growth and maintenance of all such ideals centred in the political ambitions of the people, and their frequent approximations — for political reasons fundamentally — to the paganism of one or other of their powerful neighbor-states; so that the history of the Hebrews under their own kings is a record of continual relapses into idolatry and heathen immorality, together with revulsions, now and again, back to purer Judaism. The most enduring and prominent contribution to Judaism traceable to this age of religious storm-and-stress is the belief in the coming of a Messiah ("anointed one, king"), who was to be a descendant of the royal house of David, and, as earthly monarch over a reunited Israel, would restore the pure worship of the spiritual One God of their fathers (Isa. xi, 1–10).

IV. The Age of Exile and Oppression.— When the above-mentioned political ambitions of the sister-kingdoms culminated in the destruction of both (Israel in 720 and Judah in 586), the population of the smaller one, Judah, deported to the plains of Babylon, found there leisure and inclination for a closer and more devoted attention to their religion, which resulted in the growth of a minute formalism of observance and petty precept, substantiated and elaborated upon the foundation of the Mosaic law. Its multitudinous details are collected in the Talmud (see article THE TALMUD in this section), and for many generations after the Jews' return to Palestine (536), the rabbis and sages of this epoch, both in Palestine and among those remaining in Babylonia, impressed their extremist piety upon the people; not altogether, however, without protest. Not that the lofty ideals of the prophets were ignored; to the contrary, they were treasured and still further developed in many a noble dictum and many a shining example. But the popular sentiment threw itself by preference into the religion of ceremonial and observance, and when, after a brief period of independence under the Asmoneans, the Jews succumbed to the military might of Rome in 70 C.E., this ceremonial bent proved the chief source of spiritualizing strength to teachers and people alike in the ensuing centuries of exile and oppression. A most elaborate accumulation of ritual observance grew up in their new homes, in North Africa, Spain, France, Germany and Poland, codified from time to time by such Talmudical experts as Isaac of Fez, usually called "alfazi" (died at Lucena 1103); Moses Maimonides, lived in Spain and Egypt, 1135–1204; Jacob ben Asher, died in Spain, before 1340, author of the 'Arba Turim' ('Four Rows'); Joseph Karo, lived in Spain and Turkey (1488–1575), author of the 'Shulchan Aruch' ('Arranged Table'). Obedience to these voluminous codes of ceremonial law constitutes to-day the chief difference between Jews of the "Orthodox" and "Reform" wings of modern Judaism, the former accepting, the latter rejecting, their binding force.

But while ceremonial formalism absorbed the religious thought and activities of the masses of the people in all their foreign homes, the growing culture of the ages appealed forcibly to the superior intellects of the Jews, especially in such countries as Spain (both Moorish and Christian), southern France, Italy, etc., and deep philosophical expositions became numerous (see article JEWISH PHILOSOPHICAL WRITERS). Their chief aim was still to maintain and fortify the doctrines of that spiritual sole God whom Abraham and Moses taught, not so much now in contravention of heathenism as in protest against the doctrines of the Christian Church. Perhaps as complete a presentation as is possible of Judaic tenets in this age may be found in the 'Credo' drawn up by Maimonides, 13 articles of belief, which to-day are printed in the Orthodox Hebrew prayerbook, both in a prose version (they were written originally in Arabic), and in a metrical form composed by Daniel ben Judah Dayyan in 1404, the "Yigdal." The modern school of Reform-Judaism adopts these in the main, likewise including the Yigdal in its ritual (consult Union Prayerbook, compiled by the Central Conference of American Rabbis, Cincinnati 1894, Vol. I, pp. 162–163; Vol. II, pp. 120–121). They include the unity, omniscience and incorporeality of God, the truth of the prophecy of Moses and the prophets, future reward and punishment, the coming of Messiah, immortality of the soul.

V. The Modern Age.— The divergences between the two wings of modern Judaism, the

«Orthodox» and the «Reform,» rarely trench upon fundamental principles, but are mainly concerned with the observance or non-observance of precepts and practices that have added themselves in the course of time and in various countries of sojourn, to the ritual features of the religion. The only serious approach to a fundamental difference is concerned rather with the political side of the religion, namely, the belief in a personal Messiah to come, a factor originating, as shown above, in the age when impending loss of national independence and the stress of national politics stirred the hope in superior minds for restoration of a Davidic kingship, with God's law of mercy and justice, coupled with complete reverence, more potently in sway than ever before. Reform Judaism deems that restored Jewish nationality in Palestine is by no means an essential feature of the Messianic age of universal peace and righteousness, and therefore looks coldly to-day upon such nationalistic endeavors as Zionism (see article ZIONISM in this section). It does not seem attracted even to the Jewish Territorial Organization (familiarly called the Ito, from its initials), originating in 1905, having for its object the establishment of a Jewish state outside of Palestine. It agrees with Orthodoxy in refusing to make propaganda for the dissemination of Jewish principles other than by the passive policy of example and their inherent truth. In religious practice it rejects the minutiæ of ceremonial observance, household and synagogal. Reform Judaism is represented to-day in the matter of seminary-instruction in America, by the Hebrew Union College at Cincinnati; in Germany by the Jewish Theological Seminary at Breslau, by the Hochschule (now Lehranstalt) für die Wissenschaft des Judenthums, at Berlin, and in Austria-Hungary by the Landes-Rabbiner Schule at Buda-Pest. Orthodox Judaism counts, among others, the following seminaries: The Paris Seminaire Israelite de France, the London Jews' College, the Berlin Rabbinical Seminary, the New York Jewish Theological Seminary, and the Rabbinical College of America.

FREDERICK DE SOLA MENDES,
Rabbi and Author, West End Synagogue, New York City.

2. JEWISH HISTORY. I. Pre-Exilic Times.— Although the title «Jew» is not known until Israel's return from the Exile, 536 B.C. (Ezr. iv, 12), Jewish history precedes the Exile by 2,000 years. The progenitor was Abraham, who, hailing from Ur of the Chaldees, is known, not as a «Jew,» but as a «Hebrew» (Gen. xiv, 13). As patriarch of his tribe, he was succeeded by his son Isaac; Isaac, in turn, by Jacob, surnamed «Israel,» and Israel by his 12 sons, who, after the slavery of their descendants in Egypt, became the heads of 12 tribes, known collectively as «Israel» or «the Children of Israel» (Ex. i, 1). Among the 12 tribes, neither Levi, who was destined for the service of God, nor Joseph, who was supplanted by his two sons, Ephraim and Menasseh, is represented. With the conclusion of Egyptian servitude, the Children of Israel were formed into a nation by Moses, their liberator. Moses led Israel, by a circuitous route, through the desert, toward Canaan. Forty years were consumed in making that journey, during which time Israel's appointment as «a kingdom of priests and a holy nation» with the establishment of a theocracy as highest aim was made known; religious tenets, ethical precepts, hygienic laws and social principles were promulgated; a tabernacle, with an elaborate sacrificial cult, was established; countless hardships were endured; frequent rebellions were instituted and numerous battles were fought.

Upon his death, Moses was succeeded by Joshua, a warrior chieftain, who, crossing the river Jordan, and vanquishing many of the native tribes, divided Canaan, by lot, among the tribes, and set up the tabernacle at Shiloh. The natives who were not vanquished proved sources of annoyance to the invading Israelites, and often made certain portions of Israel tributary to them. This condition called for the «Judges» who, by means of battle, succeeded in regaining for the Israelites their independence. Of these there are 15 most celebrated, among whom are Deborah, Gideon, Samson and Samuel, also the first of the prophets, a class of men whose principal aim was to keep Israel free from the contaminating heathen influences of the natives, and loyal to the higher worship of the one God. It was in Samuel's days, about the middle of the 11th century B.C., that democratic Israel became a monarchy. Saul was made king. His throne did not pass over to his son, but to David, who had proved victor in many battles against the harassing

Philistines. Upon the close of David's life, replete with warfare, his son, Solomon, who became the architect of a powerful kingdom, succeeded him. He beautified Jerusalem, the capital, built the first temple, constructed palaces, extended commerce and made many alliances with foreign nations. Although his was a golden age, it was in his time that idolatry was introduced into Israel. Upon his death (977 B.C.) a revolt broke out. Solomon had taxed the people heavily, to further his many expensive ventures. The people wanted the taxes decreased. Rehaboam, his son and successor, refused to listen to the clamors of the people. Ten tribes seceded and formed an independent kingdom, called the "Kingdom of Israel," leaving to Rehaboam only Judah and Benjamin, termed the "Kingdom of Judah." Israel had 19 and Judah 20 kings. Jeraboam, the first king of Israel, desirous of weaning the tribes of their attachment to Jerusalem, the common sanctuary, introduced the calf worship in Dan and Bethel. Israel, through the example of its kings, went from bad to worse, until, in 719 B.C., Samaria, Israel's capital, was destroyed, and the people constituting the 10 tribes were deported to Assyria by Shalmanezer IV, to become lost forever. Judah, too, entered upon the downward path. With the exception of occasional and temporary reforms under Asa (954), Hezekiah (720) and Josiah (627), Judah was idolatrous, always reflecting the fetichism of surrounding nations. The exhortations of such prophets as Elijah, Elisha, Jonah, Amos, Joel, Hosea, Zechariah, Micah, Isaiah, Zephaniah, Jeremiah and others, were of no more avail with Judah than with Israel, so that in 586 B.C., Jerusalem was razed to the ground, the temple destroyed and the people taken captives to Babylonia by Nebuchadnezzar.

II. From Exile to Dispersion.— The captivity lasted 70 years. Many of the Judeans hoped for a return to their land and for a resurrected commonwealth. They met with encouragement at the hands of the prophets Ezekiel, the Babylonian Isaiah, and Haggai. In 538 B.C., Cyrus, king of Persia, taking Babylonia, permitted the Jews to return to Jerusalem, in order to rebuild it and erect a temple. Only a part took advantage of the privilege to join the first pilgrims, under Zerubabel. The building of the temple was interrupted, as a result of the charges brought against the Jews by the Samaritans, Assyrian settlers of Samaria. However, in 516 B.C., the Temple was completed. In 459, Ezra, a scribe well versed in the law, who was, in course of time, followed by Nehemiah, came to Jerusalem. Nehemiah regenerated Judah physically, and Ezra culturally. Ezra was responsible for the formation of the Great Assembly, the study of the law, the rejuvenation of the literary genius, and the beginnings of the synagogal service. With the invasion of Alexander the Great into Asia (332 B.C.), Jews came into contact with Greek thought, which did not leave them altogether unaffected. Judah had become tributary to Egypt, whither the Greek civilization was transplanted, and two parties, Hellenists and Hassidim arose: the Hellenists admitting philosophy as man's guide, and the Hassidim recognizing only the law of Moses (Torah).

While these two parties were in dispute, Syria gained control of Palestine, and, in course of time, aimed at the destruction of Israel, the confiscation of the Temple and the destruction of Israel's faith, under Antiochus Epiphanes (168 B.C.). Thus came into existence the Maccabees. They took up arms against Syria, regained the Temple and eventually won for the Jews national independence, so that when Judah allied itself with Rome (140 B.C.), it once more had a king in John Hyrcan (135 B.C.). It was at this time that Biblical literature, which had begun to thrive with the return of the Exile from Babylonia, flowered most luxuriantly. However, Jewish independence was not to endure very long. The Jews were divided by parties, such as the Pharisees, Sadducees and Essenes (qq.v.). The Idumæans were converted to Judaism. One of their number, Herod I, obtained control of the Jewish state and was proclaimed king by the Roman Senate (37 B.C.). In their political and religious hostilities, Rome was called in to act as arbiter and assumed the dictatorship. Rome, the friend, soon turned enemy. It tried to get possession of Jerusalem and succeeded in its undertaking under Titus (70 A.D.). After a long siege, the city was burned, the Temple destroyed and thousands of Jews were carried away captives to Rome.

III. From Exile to Close of Oriental Schools.— Many foresaw the doom of the Holy City. The law of Israel had grown to be more than the Bible, and Israel's life was no longer thought to be dependent upon the possession of Palestine. An attempt was therefore made to save the law and life. Rabbi Johanan ben Saccai requested of Rome,— and the request was granted — to be allowed to remove from Jerusalem to Jabneh, in order to establish there a school, whose purpose would be to keep intact the teachings which had grown up in the earlier schools of Palestine. Thousands of pupils followed the teacher and soon the Sanhedrin, the religious court of the Jews, was transplanted thither. Although Rome permitted Johanan to found a school in Jabneh, Rome did not look with favor on Israel's new lease on life. It interdicted the study of the law, the secret of Jewish preservation and seconded its interdictions by persecutions and massacres, among which the death of the 10 martyrs, participants in the Bar-Cochba revolution, during the reign of the Emperor Hadrian, was undoubtedly one of the most bloody (135 A.D.). Unable to enjoy the rest and peace on Palestinean soil, the Jews soon found their way to ever friendly Babylonia, where many of their brethren sojourned. The Rabbis, who had been forbidden to erect schools in the Holy Land, established them in Babylonia. It was in the very midst of the constantly shifting centre of Jewish gravity and the uninterrupted stream of persecution, that Rabbi Jehudah, a Palestinean rabbi (190), deemed it necessary to collect, in permanent, systematic form, all the civil, criminal, religious and ethical principles which the new surroundings had brought into existence, calling the name of this collection "Mishnah," which was studied and explained in all schools, so that with it as a foundation two works were eventually produced, the Palestinean Talmud (375) and the Babylonian Talmud (550); the two Talmuds containing the discussions of the schools on the teachings of the Mishnah. (See

article TALMUD in this section). Residence in Palestine was made more and more impossible for Jews. In Palestine, beginning with the Council of Nice (325), Jews were exposed eventually to the hostilities of the Church, as well as to those of imperial Rome; whereas on the other hand, they were granted fair treatment in Neo-Persian Babylonia. In Babylonia they had a political head in the "Exilarch", and religious authorities in the "Gaons" of the academies. It was in these schools that the Bible was given its present canonical form, that the vocalization of the Hebrew text of the scriptures was fixed, that the many Midrashim were created, that additions were made to the prayer-book, and that numerous ceremonies were established.

That the positions of honor held out to the Jews of Babylonia filled the more prominent among them with ambition goes without saying. Anan ben David (761) expected to be promoted to the Exilarchate, but was disappointed. Incensed by his disappointment, and later imprisoned for having himself proclaimed anti-Exilarch, he, as soon as released, assumed the aggressive toward the prevailing Jewish thought current of Babylonia, instituting a movement called "Karaism." (See article THE KARAITES in this section). In justice it must be confessed that the movement was beneficial as well as detrimental to the Jews of those times, for it helped to check their imagination which had often run riot in their understanding of scriptures. Rabbinism was recast, and in its recast form found an ardent champion in Saadia ben Joseph (892–942) who, though a native of Fayum in upper Egypt, attained to the Gaonate of Sora, because of his Biblical, Talmudical, and grammatical knowledge and his religio-philosophical genuis. As long as his school of Sora had at its head a man like Saadia, the wrangles between the Jewish scholars of Babylonia and the growing Mohammedan antagonism to Jews and Judiaism, both disintegrating influences of the Babylonian academic life, did not make themselves markedly felt; but when once Saadia was no more, the decline of the schools of the East was inevitable. To prevent the closing of the schools, four scholars (948), Shemarya ben Elchanon, Chushiel, Nathan ben Isaac Cohen and Moses ben Chanoch, were despatched to scattered Jewry, to collect funds for the maintenance of Sora. They embarked on the same vessel, which was captured by a Spanish-Arabic admiral, and thus became separated forever; Shemarya going to Alexandria, Chushiel to Cyrene, Nathan to Narbonne and Moses to Cordova. Thus was the last hope of Babylonian Jewry defeated and the Jews began to make history in European countries.

IV. From Close of Oriental Schools to Close of 16th Century.— Although Jewish history now takes us into European countries, Jews lived in Europe long before the middle of the 10th century. Already in the earliest centuries of the Common Era, Jews, who soon grew into fair-sized communities, contributing to the prosperity of the various governments, were found in all countries, in consequence of the Jewish dispersion. Welcomed upon their arrival wheresoever they settled, they did not anywhere continue to live long in the enjoyment of peace. Europe made suffering the badge of all their race. They were misunderstood and misrepresented; they were regarded unbelievers and infidels. Not only during the Crusades did they suffer, as for instance in Rouen, Treves, Speyer, Worms, Cologne, Ratisbon, Prague (1096), in South Germany and France (1147), in Toledo (1212), in Anjou and Poiton (1236), but also in times and amid conditions which held out peace to others. Time and time again edicts restricting them were unjustly promulgated, as, for example, by Pope Gregory VII (1078), by the government of France (1198), by the Council of Avignon (1209), by Pope Innocent III, instituting the "Jew Badge" (1215), by the Council of Zamora (1313), by Juan II (1412), by the Council of Basle (1434), by Eugenius IV (1442), by Paul IV (1555), and in Russia in 1881 and still later. Time and again they were crowded into Ghettos, as for example in Rome, Prague, Frankfort and the Russian Pale. Time and again their literature, especially the Talmud, because not understood, was either unjustly burned, as for instance in Paris (1242), in Cremona (1559), or publicly attacked, as by the Dominicans (1507), or forbidden to be studied, as by Pope Benedict XIII (1415). Time and again the Jews were unjustly accused of the use of Christian blood for ritualistic purposes, as in Blois (1171), all over Germany (1283), in South Germany (1431), in the case of Simon of Trent (1475), which brought a Jewish persecution in its train in Ratisbon, in Damascus (1840) and in Tiszla Eszla, Hungary (1882). Time and again they were unjustly imprisoned, as in England by King John (1210), and again in 1278. Time and time again they were unjustly banished from their homes, as from Granada (1066), from France (1254), from England (1290), a second time from France (1306), and a third time (1394), from Cologne (1426), from Spain (1492), from Portugal (1497), from Prague (1561), from the Papal States (1569), from Italian principalities (1597) and from Worms (1615). Time and again they were unjustly persecuted and massacred by the thousands, as in London (1189), in Germany all the way from the Rhine to Vienna (1190) and again in Germany in 1298 and frequently thereafter in France (1321), all over Europe on account of the "Black Death" (1348), in Spain (from 1391 to 1492), in Silesia and Poland (1453), in Portugal (1530), again in Poland (1648), and in Germany, Austria and Russia as late as our times, on account of anti-Semitic agitations.

That all of this suffering stunted the Jews physically is self-evident, and that it, to a certain extent, prevented the broadest spiritual unfolding, in accordance with the brighter light of their religious genius, is therefore not surprising. The spiritual offspring of persecution was that mysticism known as the Cabala (see article THE CABALA in this section), and the belief in such pseudo-Messiahs as Serene (720), David Alroy (1160), Abraham Abulafia (1279), Asher Lemmlein (1502), David Reubeni and Solomon Molko (1558), Isaac Luria (1569), Sabbatai Zevi (1665) and others. However, barring these vagaries, the Jews developed a phenomenal intellectual activity, not merely along religious, but along all lines of thought.

With the arrival of Moses ben Chanoch in Cordova (945) the Jews took an active part in

the development of far-famed Andalusia. Apart from the celebrated Spanish seats of learning they helped to create, they also cultivated a many-sided specific Jewish literature. Versed as the Spanish Jews became in Arabic lore, and acquainted as they were with the work done by the Moors in Arabic philology, they soon began to apply the science of philology to Hebrew grammar and lexicography. Biblical criticism found in them champions. Philosophy and poetry were cultivated among them by famous men. Simultaneous with the Jews in Spain, those of France also were intellectually active. The Jews of Italy, too, were bound to grow likewise. In Germany and Poland, the specific literature produced by the Jews covered, for the most part, the ritual, Biblical interpretation and legal codes.

V. From Settlement of Jews in Holland Until the Present Time.—Although the flowering of Spanish-Jewish life, which came to an end in the reign of Ferdinand and Isabella of Spain, through the intrigues of their chief inquisitor, Torquemada, in 1492, was noticeable in Italy and Turkey in consequence of the welcome these countries extended to the hapless fugitives, that flowering was most apparent in Holland. Holland had become the most ardent champion of the broadest liberty, from the time that it threw off the yoke of Philip II of Spain. Thither, therefore, countless Jews, more particularly the Marranos, who were obliged to profess Christianity outwardly and practice Judaism only secretly, found their way, and soon made of Amsterdam a second Cordova. Being unchecked and unhampered by restrictions of any kind, it was only natural that the Jews of Holland became, in due course of time, exponents of a comparative rationalism in religion, to the extremes of which as preached by Benedict Spinoza, the Amsterdam Rabbinate, Saul Levi Morteira and Isaac Aboab, objected. The Jews of Holland, never very numerous, contributed no little in defining the trend of Jewish history; and yet, however otherwise valuable their contribution to the happier and higher life of the Jews may have been, one event, for the occurrence of which Menasseh ben Israel is responsible, stands out in bold relief. That event is the readmission of Jews into England under Cromwell (1655), they having been forbidden to dwell there for several centuries. The rationalism of Holland Jewry may not have influenced Jewry immediately all over Europe, but it worked with telling subtlety and effected sure results the moment the Jews began to be treated with more justice than they had been previously accorded. Now a pseudo-Messiah like Berachyah may have deluded the people; now an enemy like Eisenmenger (1700) may have misrepresented them; and now Chassidism (an unnatural piety) may have claimed to be the ideal conduct for the Jew, as was the case at the time of Israel Baalshem (1750), the founder of the movement; still, it was a question of only a short time, how soon the bars hemming the Jews in from without and the bolts hemming them in from within would be broken.

The year 1729 witnessed the birth of Moses Mendelssohn (q.v.) in Dessau, Germany. Having gone from his native town to cultured Berlin, having learned the sciences, philosophy and ethics and having become acquainted with Lessing (q.v.), whose "Nathan the Wise" he became, he attempted to explain the Jew and his faith to the Jew himself and to the world, so as to prove the Jew's right to the privileges of citizenship. The first attempt he made in this direction was to translate the Pentateuch (1778) and other Biblical books into German for the Jews, in order to wean them of the jargon, which translation was soon followed by his 'Jerusalem' and 'Morgenstunden.' He was called upon to answer not only attacks made upon his people by non-Jews, but also those made upon him by his own people, to whom the jargon had become a sacred tongue and the narrow Ghetto life the natural Jewish life. Unwelcome as his good offices were in many quarters, they soon began to tell without and within Jewry, in France, Batavia, Westphalia, Hamburg and Mecklenburg. In the meantime, Jews were permitted to enter German gymnasia and universities. Leopold Zunz and Isaac Markus Jost availed themselves of the opportunity, with others, built on the foundation laid by Mendelssohn, and hence are the fathers of the movement which is known as the "Science of Judaism," and has made itself felt all over the world, more especially Europe and America. Although these men and their followers worked unceasingly to place the Jew, his faith and ideals before the world in their true light, prejudice and persecution against the Jews still continued to live. The year 1819 witnessed persecutions whose tocsin was the shout "Hep-Hep" (Hierosolyma est perdita, i.e., "Jerusalem is destroyed"). The Jew's rights had to be won by incessant fighting. The emancipation of the Jews of German states, won in 1848, required the constant defense of a Gabriel Riesser, Ferdinand Lasalle, Eduard Lasker and Karl Marx in Germany, of an Isaac Adolphe Crémieux in France, of a Moses Montefiore in England, of an Alliance Israelite Universelle in the Orient and of a Union of American Hebrew Congregations, with Isaac M. Wise as creator, in the United States. To-day the Jews live in almost all parts of the world. They number about 11,000,000, the greater part being in Russia, and 3,000,000 in the United States. Wheresoever sufficiently numerous, they worship in large and stately synagogues. Their mode of worship varies in degree of ceremonialism, ritualism and the language of prayer, though the Hebrew is heard in all synagogues. In every country they have one or more theological seminaries, the first of the modern type having been founded at Breslau in 1854. A movement which has, in recent years, become prominent on account of Russian persecutions, but has been variously interpreted by its several factions, is "Zionism," which primarily aimed to establish, for persecuted Jews, a legally assured home in Palestine. As a humanitarian movement, if feasible, it appeals to all Jews. As a national movement it has opponents as emphatic in their opposition, as are its champions emphatic in their propaganda. Though the Jew is justly called the "Wandering Jew," he is not any the less justly termed, because of his life, despite persecutions and massacre, the "Eternal Jew."

Associate in Post Biblical Hebrew, Johns Hopkins University; and Rabbi of Congregation Cheb Shalom, Baltimore, Md.

3. THE HEBREW LANGUAGE. Origin and Name.— Hebrew is the language of the ancient Hebrew nation. It is a Semitic language, that is to say, one of the great group of languages spoken in antiquity and to a great extent in modern times also, in southwestern Asia and contiguous regions by the nations descended, according to the account given in Gen. x, 21–31, from Shem, the son of Noah.* The Semitic tongues are divided into four great divisions or branches, the South Semitic or Arabic, the Middle Semitic or Canaanitic, the North Semitic or Aramaic and the East Semitic or Assyrio-Babylonian. The Hebrew belongs to the second or Canaanitic branch and has, as its sister dialects, the Canaanitic tongues, the Phœnician of the coast cities and the Punic of Carthage and its colonies. The name Hebrew language does not appear to have been its original designation. In Isaiah xix, 18, it is called "the language of Canaan" and in 2 Kings xviii, 28, Isaiah xxxvi, 11, 13, Neh. xiii, 24, it is called "Judean" or "Jewish." † In the Talmud it is called "the language of the sanctuary" (Sanh. 21 b. et-alia). By modern writers it is called "the language of Eber" or "Hebrew." ‡

Old Testament Hebrew.— With the exception of parts of Daniel, Ezra and one verse in Jeremiah, Chap. x, vii, the entire Old Testament is written in Hebrew. Considering the long period of time over which the composition of the Biblical books extends one would naturally expect great variations in their linguistic and grammatical forms. As a matter of fact there is a most surprising uniformity and homogeneity. The Hebrew of the earliest is practically identical with that of the latest books. The probable reason of this is that in the Biblical writings we have the literary idiom, which is fixed, as distinguished from the spoken language, which undoubtedly varied greatly in different times and regions. The fact that the Biblical books were revered as sacred also undoubtedly contributed to this uniformity of diction. However, a progressive variation, due to historic influences, is clearly discernible also in the Biblical Hebrew. The language tends constantly to become Aramaized. The earlier writings are purest in their language, the later writings contain many Aramaic nouns, verbs and terms of expression. Such books as Ecclesiastes and the Song of Songs are closely approximate in their language to the Mishnah Hebrew. Job shows a strong Arabic influence.

Other Sources of Hebrew.— Outside of the Bible the ancient Hebrew is only preserved in some few inscriptions. These are chiefly the celebrated Mesa stone, an inscription found in 1880 near the Pool of Siloam at Jerusalem and the coins of the Maccabean princes and of the revolts against Vespasian and Hadrian.

Grammatical Structure.— The Hebrew, in its grammatical structure, exhibits in general the characteristics of the Semitic family of languages, which differs greatly from the Indo-Germanic, its most prominent neighbor. Its most striking characteristic is its root-system. All the parts of speech are derived from roots or word-stems which are almost invariably triliteral. Modifications, such as conjugation in verbs and declension in nouns, are indicated generally by internal or vowel changes. The verb has but two tenses, the uses of which vary in accordance with peculiar rules. The noun has only two genders, masculine and feminine, and no direct method of indicating case relations for which purpose pronominal prefixes are usually employed. Possessive pronouns and pronominal objects of the verbs are indicated by suffixes. Compound nouns are almost unknown, except in proper nouns. The syntax is extremely simple and direct co-ordination of clauses, without periodic construction, is the rule. These facts would seem to indicate poverty and lack of development in Hebraic expression. But it rather indicates directness of grasp of ideas which are presented with the picturesque clearness of word-photography, rather than in the vagueness of involved relationships. This is strikingly exemplified by the Vav conversive or consecutive, as it is termed by modern grammarians. This peculiar usage of the conjunction, unknown in the other Semitic tongues, enables the Hebrew to picture the sequence of events, past or future, with a clearness and directness of connection impossible in other languages. Another example of the realistic directness of Hebrew speech is the fact that in it the so-called *ratio obliqua* or indirect

* The Canaanites and Phœnicians are stated in this chapter to have descended from Ham. Their language, however, undoubtedly belongs to the stock now designated as Semitic.

† This may signify either the speech of the tribe of Judah or of the whole nation which afterward was thus called.

‡ The term *Εβραϊστί* Hebrew is used in the New Testament to designate the Aramaic vernacular of Palestine rather than the true Hebrew.

discourse is unknown. All quotations are made in the very words of the speaker.

Relation to Indo-European.— The Hebrew grammar shows, as has been stated, no evidence of relation to the Indo-European tongues.* Lexicographically there is much more agreement. A great number of Hebrew word-stems agree in sound with Indo-European terms of the same sense. But these are largely confined to onomatapoetic words or to such whose similarity may be explained as merely fortuitous. They do not establish any historical or generic relation which is inconceivable without agreement in grammatical structure.

Loan-Words.— The Hebrew, even in its purest state, contains numerous loan-words, derived from the languages of the peoples with whom the Hebrews came into contact. Examples of such are: from the Egyptian, *Yeor*, "the Nile"; from the Persian, *Pardes*, "a park"; *Darkemon*, "a daric"; from the Hindustani or Malabari, *Tukiim*, "peacocks," *Kof*, "an ape." In the later stages of the language these foreign terms increase greatly in number. The Mishnah Hebrew, for instance, contains several hundred terms derived from the Greek and Latin. Conversely, Hebrew loan-words are found in Greek and Latin, notably the former, as for example χρίσος, gold, Heb. חרוץ *Harus*. Many of these terms occur in early Greek writings, thus showing contact of the two peoples at a much earlier date than it is known historically to have occurred. These Semitic terms in the classic tongues may, however, have been introduced by the Phœnicians in their commercial expeditions and not be due to direct contact with the Hebrews.

Mishnah Hebrew.— It is a somewhat general, but erroneous, supposition that during the Babylonian exile the Jews entirely unlearned the colloquial use of the Hebrew, and that the Hebrew of the Mishnah is an artificial tongue, the product of the schools. As a matter of fact the Hebrew continued to be a living language throughout the period of the second temple, though limited to narrowing circles of the people. Because of its being chiefly represented in the Mishnah and other Halachic works, the language of the second Jewish commonwealth is known as Mishnah or Mishnaic Hebrew. It differs greatly from the Biblical Hebrew; but these differences are only sufficient to stamp it as a different dialect, not a different tongue. The main differences are as follows: the Mishnaic Hebrew contains a much greater number of foreign terms than the Bible language, its syntax is considerably modified by Aramaic influence, the feminine future or imperfect plural forms and the Vav conversive have disappeared, the plural ending ים = *im* has become ין = *in*, the suffix ם = *am* is changed to ן = *an*, the participles are more extensively used, the particle shel = של frequently preceded by the possessive suffix is often employed as a substitute for the construct state, prepositions and conjunctions are more numerous and are used differently than in the Biblical Hebrew and many new terms have been coined from existing Hebrew roots. In all this the influence of the schools was no doubt very potent. In the liturgy the language used is much closer to the Biblical model.

The Neo-Hebraic.— With the destruction of the second temple and the scattering of the Jews throughout the world influences disruptive of the Hebrew increased greatly in intensity. As a medium of spoken intercourse it almost ceased to exist, but as a literary medium it has been cultivated and used continuously up to the present day. This later form of the language is known as Neo-Hebraic or New Hebrew. It is not a uniform language but differs greatly according to the capacity of the writer and the nature of the subject treated, in some compositions being almost classic in beauty and correctness, while in others it degenerates into a mixed and corrupt jargon. At present the Hebrew is experiencing considerable of a Renaissance, principally in Russia and Palestine. Works on all possible subjects are written in it and a systematic effort is made to qualify it for all the purposes of a modern tongue by the introduction of new terms, coined mainly from the old Hebrew roots, for all modern concepts. Efforts are also made to rehabilitate it as a medium of spoken intercourse by the formation of societies whose members are pledged to speak only Hebrew with each other. In Palestine, where not only historic sentiment but the existence of diverse Jewish elements side by side have made the revival of the Hebrew not only desirable but necessary, these efforts have been most successful and the Hebrew has become again to a great extent the spoken language of the Hebrew people.

For Aramaisms consult Kautzsch, 'Die Aramäismen im Alten Testament.' For the relation between Hebrew and Indo-European tongues consult Abel, 'Einleitung in ein ägyptisch-semitisch indo-europäisches Wurzelworterbuch,' and Lewy, H., 'Die semitischen Fremdwörter im Griechischen'; also Muss-Arnolt, 'Semitic Words in Greek and Latin' (in 'Transactions' of the American Philological Association, XXIII). Of introductory grammars the best are Davidson, 'Introductory Hebrew Grammar' (9th ed., Edinburgh 1888); id., 'Hebrew Syntax' (ib. 1894); Gesenius, 'Hebräische Grammatik' (ed. Kautzsch, 28th ed., Leipzig 1909; English trans., Oxford 1910). Standard lexicons are the following: Brown, Briggs and Driver, 'Hebrew-English Lexicon' (Oxford 1892–1906), and Gesenius, 'Thesaurus philologicus' (Leipzig 1829–58); id., 'Hebräisches Handwörterbuch' (15th ed., by Zimmern and Buhl, Leipzig 1910). For later Hebrew consult

* An exception must be made in the case of the German causative verbs, produced by modification of the original vowel of the verb, e.g., *schwimmen*, to float, *schwemmen*, to cause to float, *sinken*, to sink, *senken* to cause to sink. This is exactly in the manner of the Semitic tongues and is a peculiar phenomenon.

Levy,' 'Neuhebräisches Wörterbuch' (Leipzig 1876–89), and Jastrow, 'Dictionary of the Targumi, etc.' (New York 1886). For Mishnah Hebrew consult Siegfried and Strack, 'Lehrbuch der Neu-hebräischen Sprache und Literatur.'

4. JEWISH LITERATURE. I. The Hebrew National Literature to 70 A.D.— The former belief that in patriarchal times Israel could have had no literature is now disproved. The code of Hammurabi has established the fact that already in the age of Abraham the art of writing was known, and records of events kept. Still, the oldest remains of Hebrew literature are only found in fragments of ancient songs and in parables, such as the war-song of Lemeh (Gen. iv, 23–24), and the Song of the Well (Numbers xxi, 17–20). Collections of such songs existed, and are alluded to under the title of 'Book of the Wars of the Lord' (Numbers xxi, 14), and 'Book of the Righteous' (Joshua x, 13; 2 Sam. i, 18). At a later period codifications of laws were begun, and still later, recollections of the history of the past, naturally overgrown with legends, were written down. It is impossible to give their date or that of the compilation in which they have been brought down to us. The nature of such investigations will always lead only to negative results with some degree of certainty. As to the positive inferences, drawn from these results, differences are bound to exist, especially as religious prejudice enters largely into this controversy.

It may be laid down as a generally accepted opinion, that the entire Pentateuch, as we have it, cannot have been written by Moses, and that the oldest part is the so-called book of the covenant (Ex. xxi–xxiv). Then follows the Jehovistic code, named so, because in it the name of God is given as Jehovah (or rather Jahveh). Then followed the Elohistic code, named from the employment of the word Elohim, for God. After that came the compilation of Deuteronomy, and finally the priestly code, chiefly found in Leviticus. This arrangement does not exclude the fact that some older passages are found in the younger codes, and that some of the older codes contain additions from the hands of the last compiler, who, naturally, lived after the priestly code had been written. The date of these books is always hypothetical. Still, it may be considered as the prevalent opinion, that the Jehovistic code comes from the 9th century, because it contains references to the sacred places of Bethel, which presupposes an author who lived in the kingdom of Israel. The Elohistic code may be dated from the 8th century. In the period, characterized by the revival of religious sentiment under King Josiah the book of Deuteronomy was discovered, according to the testimony of the Bible. It is, therefore, to be dated from about 600. The ideals evolved during the exile, when the past of Israel was gilded with reminiscences and the ideals of a strictly uniform ritual and an organized hierarchy were formed, were laid down in the priestly code during the 6th century, but the final adoption of the Pentateuch, with its attempts to fill some lacunæ and to harmonize some discrepancies, did not take place until about 400.

Prophetic literature began with Hosea and Isaiah during the 8th century. Micah, Nahum, Zephaniah and Jeremiah followed during the succeeding century. Again here, the dating is difficult. One of the clearest facts is a reference to King Cyrus of Persia (Isaiah xlv, 1), which indicates, beyond a doubt, that the prophet who wrote the passage was a contemporary with this Persian king, and, therefore, lived nearly two centuries after Isaiah, who lived at the time of Ahaz. Chapter 66, which denounces the rebuilding of the Temple as something heathenish, is of still later origin.

The Babylonian exile naturally stimulated literature in various ways, and still more so, the return of the exiles, to whom Cyrus gave permission to settle again in the land of their fathers (538). Of this time we possess the prophesies of Haggai and Malachi, and the beautiful idyl of Ruth, with its clearly indicated polemic against Ezra's prohibition of intermarriage with the heathen. The book of Jonah, although, as the language would seem to indicate, of very late origin, clearly presents a universalistic tendency which is the opposite of the strongly nationalistic ideas expressed by Ezra and Nehemiah. From the same period we must date a large number of the Psalms which form the hymnbook of the congregation of Israel. Here again the dating is exceedingly difficult, as a great many of the Psalms have no clear historical references. Others, such as Psalm 51, show that they have been interpolated by later hands, as the whole Psalm denounces sacrificial worship, while the last two verses pray for the restoration of the sacrifices. Some again, as Psalm 74, speaking of the destruction of the synagogues, clearly point to the time of Antiochus Epiphanes (175). Quite a number of the Biblical books cannot be dated at all, except in so far as the linguistic reasons will give a vague indication of their origin. Such is the case with Canticles, Ecclesiastes and Job, in reference to which various scholars differ widely, and only agree that Canticles and Ecclesiasties cannot have been written by Solomon, and that Job, which the Talmud places in the days of Moses, is of much later origin.

A clear indication of the origin, even to the month, is given in the book of Daniel. Here, in apocalyptic form, the world's history, as far as it affected the Jews, is reviewed, from the days of Alexander the Great to the death of Antiochus Epiphanes (164). It is evident that the author wrote under the impression produced by this important event, which he expected would inaugurate the kingdom of heaven. Less certain, although very likely, is the assumption that the book of Esther was written at the same period, because its author starts from the same point of view, presenting Israel's deliverance from a cruel persecution, although his idea is just the opposite of that of his supposed contemporary. Daniel pleads for a religious solidification, and the author of Esther for an amalgamation with the non-Jewish world. It is very difficult to say when the Bible, as such, was formed into a canon. It is probable that this never took place, but that the various books and fragments of such were collected as a library of ancient Hebrew literature. and only later on considered as

divinely inspired. The collection may have taken place in the 1st century B.C., and the belief that these books were written under special divine guidance was more and more crystallized a century later.

The conquest of the Orient by Alexander the Great had a far-reaching influence on the spiritual life of the Jews. Through the medium of Greek, which now was generally adopted in the Orient, the Jews became acquainted with an entirely different realm of thought. This widened their horizon and stimulated their pride, because, while the Greeks looked down upon them as barbarians, they were zealous to show that whatever was good in Greek thought was borrowed from the Jews. They conceived for the first time an idea of secular literature. There is only one book in the Hebrew Bible which could be definitely classed as secular, and this is the book of Canticles, almost certainly modeled after the Idyls of the Greek Theocritus.

The influence of Greek thought on the Jews is manifested in the so-called Septuagint (q.v.), a translation of the Bible, which, according to the legend, was undertaken by 72 Jewish scholars, designated by the High Priest, upon the request of the Egyptian king, Ptolemy III (283–87). This translation became very popular among the Jews outside of Palestine, and in some instances superseded the Greek original, as was also the case with the book of Sirach, written in Hebrew about 180 and translated 50 years later by the author's grandson into Greek. The Hebrew text was entirely lost until 1896, when remnants were discovered in the garret of an old synagogue. The book of Sirach is an imitation of the Biblical book of Proverbs. So is the Wisdom of Solomon, and a great many authors tried their hands at writing books after Biblical patterns, and at interpolating the existing Hebrew books of the Bible. These books form the collection of Apocrypha, which means hidden books or books excluded from the canon of holy writ. Some were devoted to contemporary history, as is the case with the first and second books of the Maccabees, written most probably in the 1st century B.C. Others were amplifications of existing Biblical books, as is the case with the fourth book of Ezra, or the book of Jubilees and the book of Enoch. Finally, a great number were apologetic, prompted by a desire to show to the Greek-speaking world the superiority of Jewish thought and life. To this class belong the third and fourth books of the Maccabees; the latter the work of the historian Josephus.

The desire to prove that Judaism was the only true philosophy and tended to elevate man to the highest attainable level prompted the writing of quite a number of Jewish books. The most prominent authors of this type are Philo of Alexandria and his younger contemporary, Flavius Josephus of Palestine. Both wrote historical and philosophical works. Josephus is known to us as a classic historian and is especially valuable for the history of his own time and the century preceding his days, for which he is the only complete source extant. In his book against Apion he defends Judaism against charges preferred by a Greek author. Similar is the work of Philo, the most classic representative of the Jewish Alexandrian school, on whose work Christian ideas are, to some extent, based. Besides theological writers, we find among the Jews a number of authors who, prompted by the Greek classics, tried to present Jewish ideas in the poetical form, borrowed from the Greeks. The most prominent are Ezekiel, who wrote a dream based on the Exodus, and another Philo, who wrote an epic on Jerusalem. Another peculiar feature of this welding of the Jewish and Greek spirits is presented in the Sibylline oracles. Here Jewish authors adopted the mythical idea of a Sibyl, who in remotest antiquity had predicted events of later times by putting into the mouth of the Sibyl the glorification of Israel and the prediction of its final triumph. Christian authors have partly interpolated some of these Jewish works and partly imitated them, making the Sibyl predict the coming of Christianity as the final solution of the world's problems.

II. Talmudic Period.—The Maccabean revolt (165 B.C.) was undertaken by a small band of people determined to die rather than give up their ancestral religion. When the victory was obtained their utmost care was devoted to the preservation and the development of the visible symbol of their religion, the Law of God. Thus the Scribes, who are traced back to Ezra, became the undisputed spiritual leaders of Israel. It was one of their number who composed the 119th Psalm, arranged so that eight acrostics are devoted to every one of the 22 letters of the Hebrew alphabet, praising in 176 verses the one all-important topic of the devotion to God's statutes, commandments, laws, ordinances and testimonies. This devotion to the law became still stronger after the destruction of the Temple of Jerusalem (70 A.D.). The law now was the one bond which united the scattered people of Israel. The study of the law was undertaken first with a practical end in view. It was the endeavor of the Scribes to clarify all possible details, and to answer all the questions which emergency might bring before the observant Jew. This habit of going into the minutiæ of the law, whose infiniteness was a matter in which the pious scholars prided themselves, led to the habit of developing the law, for the law's sake. The most unlikely, and even impossible, consequences were discussed in the schools, because it was meritorous to devote one's life to the expounding of God's will, laid down in his Thorah. Over these hair-splitting decisions the rabbis did not forget the spiritualizing ideas which were the real object of their Alexandrian coreligionists.

There were two principal methods of studying the word of God. The first, looking upon the law and its practice, is called Halachah, literally, the Walk, meaning the practice. The second method is called Hagadah, preaching, and is devoted to the finding of edifying thoughts in the Bible. For a long time these studies were confined to the schoolroom, the teacher expounding the law to his pupils as he had learned it from his teachers, or as he saw fit to present it. The mass of these laws grew. Originally, some made brief notes of their lessons, called Meggillath Setarim, "secret scroll," or named after the teacher in whose school the notes were taken, as Mishnah of Rabbi Akiba, of Rabbi Meir, of Rabbi Nathan. The name Mishnah became then the technical term for a collection of rabbinical laws. The word means the Second Law, or, more properly, although

not literally, a compendium of the law. According to reliable tradition the first one to compile these scattered laws into one code and to arrange them according to the subject matter was Judah Hanasi, head of the school of Tiberias, 200. His compendium of what may be called partly rabbinical law and partly Mosaic law, in rabbinical conception, was called Mishnah, and forms the textbook of the Jewish law, comprising the ritual as well as the civil laws and the penal code. The Dogma is almost entirely missing.

Judah Hanasi's first effort stimulated others into imitation. Other codes were compiled, either following the example of the Mishnah, and arranging the text according to subject matter, or taking the Pentateuch as text, and commenting upon its laws, showing the rabbinical interpretation. A work belonging to the first class is the Tosefta (literally, addition), and to the latter class belongs the Mekilta (literally, methods, namely of scriptural interpretation), a rabbinical commentary on Exodus, Sifra (The Book), a rabbinical commentary on Leviticus, Sifre (The Books), a commentary on Numbers and Deuteronomy. Legal discussions continued even after the Mishnah had been recognized as the authorized code of laws. The disciples and successors of Judah Hanasi continued to discuss the text of the Mishnah in the same way in which the text of the Bible had been treated by their predecessors. These glosses soon greatly exceeded the text in volume, and they were called Gemara (completion). Together with the Mishnah, the Gemara formed one book, called the Talmud. (See article TALMUD in this section). With the growing influence of Christianity, the condition of the Jews in Palestine became more and more unfavorable, and a great many emigrated to the more congenial Parthian kingdom in Mesopotamia, which, from the time of the Exile, had had Jewish settlements and so two schools were formed, one being in Palestine, notably in Tiberias, and the other in southern Mesopotamia. Both schools used the same Mishnah as a textbook, but the glosses naturally differed, although there was a considerable interchange of ideas owing to the fact that some noted Palestine scholar would settle in Babylonia, or some promising Babylonian student went to Palestine to continue his studies. Thus two Gemaras were compiled, one containing the glosses of the Palestinian rabbis, called the Talmud of Jerusalem, and the other containing the glosses of the Babylonian rabbis, called the Talmud of Babylon. The former was closed about 350, and the latter about 500. These dates, however, are not accurate, just as the tradition that Judah Hanasi compiled the Mishnah is not accurate when taken literally. All of these codes have been handled freely, and some of them have been interpolated by authors as late as the 8th century.

The fundamental conception of the Jewish student was that everything worth knowing was contained in the Bible, and notably in the Pentateuch, and so they looked to the Bible, and especially to the Pentateuch, for a confirmation of their conceptions. The controversies with Christianity, which especially affected the Jews in Palestine, produced quite a literature of homiletical explanations of the Bible. This is called the Midrash (literally, investigation). While the Midrash originally applies to both Halachah and Hagadah, it is more specifically understood with regard to the latter. The expositions of the Scripture delivered by various prominent teachers were collected, and so a vast number of Midrashim were compiled, the oldest of which is the Genesis Rabba, about 600. This literature was still more subject to arbitrary interpolations and additions, because the subject always disappeared behind the object, which was to teach the fear of the Lord. Who had first made a certain statement, and in what form he had made it, was from this point of view of no consequence.

The 6th and the beginning of the 7th century were sad times for the Jews, both of Palestine and of Babylonia. Their coreligionists, living outside of these two countries, scattered all over the northern coast of Africa, over Italy, France and Spain, and perhaps, already over Germany, were numerically so insignificant that their spiritual life left no traces behind. The conquest of the Orient by the Mohammedans brought new impulses to the Jews. First of all the schools of Babylon were revived, and devoted themselves to talmudical literature, to the composition of a liturgy, and by and by, also, to a more systematic study of theology, resulting in works on Biblical exegesis, on Hebrew grammar, on philosophy, and, finally, on theosophy. The spiritual leaders of this age were the men who presided over the schools of Babylon, and were called Gaon, and therefore this period, extending from 630 to 1040, is called the period of the Geonim.

Their most important object was to codify the law, and to make their decisions in individual cases as accessible as possible. So a number of codes were composed, either arranged according to subject matter, like the Halachoth Gedoloth of Simeon Kahira (700), or arranged according to the lessons from the Pentateuch, like the Sheeltot of Ahai. Furthermore, the authority of the famous scholars of Babylon was appealed to in difficult cases that came up for decision, in doctrinal questions, or very often for the interpretation of important talmudic passages. A copy of the replies was preserved, and as years passed by compilations of these replies were made, and served, as in our day, the decisions of the Supreme Courts. These decisions were written partly in the Jewish-Aramaic dialect of those days and partly in Arabic, which, since the rise of Islam, had superseded the former dialect spoken by the Jews. Another literary activity was that which was devoted to liturgical needs. The synagogue was strictly congregational, but the desire for unity on the one hand, and the impossibility of having properly qualified congregational leaders in every small congregation on the other, created a need for a uniform liturgy. Amram (800), the Gaon of Sura, was appealed to, and compiled such an order of services. This official liturgy, however, was soon supplemented by what might be called hymns, and is technically called by a word taken from the Greek, «Piyut.» The authors of such Piyuts are called «payetanim.» They amplified the service by dwelling on certain favorite themes, such as the sacrifice of Isaac, or by a poetical paraphrase of the official liturgy.

Their activity lasted from 800 to 1200, although occasional attempts at this kind of poetry extend down to our times. Their most prominent representative is Eleazar Hakalir. They employed both rhyme and acrostic, but owing to far-fetched allusions their style is obscure and the poetical value of their productions meagre.

In 760 a serious schism took place. Political conditions, combined with sectional strife and the growing propensity for the hair-splitting methods of rabbinical legislation, created a sect which rejected every authority but the Bible. The leader of this movement was Anan ben David, and his followers called themselves Bene Mikra ("Sons of the Scripture"), or Karaites. (See article THE KARAITES in this section). This movement produced quite an extensive polemical literature, and led to a deepening of exegetical studies as also to various attempts at presenting the theological conceptions of Judaism in a clear and concise form, while the doctrinal part of theology had formerly been altogether neglected out of preference for the law. The most important defender of the Karaitic doctrine is Salmon ben Jeroham, and on the side of the Rabbanites, as they were then called, Saadia, the Gaon of Sura (892–942). The latter translated the Bible into Arabic, wrote Arabic commentaries on Biblical books, and besides his activity in other directions, is noteworthy as a pioneer in what is called the Philosophy of Religion, but ought more properly to be termed apologetics. He wrote a book in Arabic on Judaism, 'Dogma and Philosophy.' From this time on, a decline in the spiritual life of the Babylonian Jews is noticeable. At the end of the 10th, and in the beginning of the 11th century, only the names of Sherira, and his son, Haii, are prominent as rabbinical authors. Both occupied the position of Gaon of Pumbeditha, in Babylonia. The former, especially, is noteworthy for his compilation of the history of rabbinical law, which was undertaken for apologetic purposes, in order to prove that the rabbinical law had come down in uninterrupted tradition from the days of Moses. With this decline in Babylonia, new centres of spiritual life appeared in other countries. In Morocco, Isaac Israeli (850–950) appears, whose medical treatises, written in Arabic, are considered important contributions to the medical literature of his day. He also wrote Biblical commentaries, and he was the first to present the idea that some of the passages of the Pentateuch were written after Moses' time. In the 10th century, we meet the first Jewish author known by name in Europe. He is Sabattai Donolo, who wrote on astronomy and on Cabala. Cabala, literally tradition, is the Jewish theosophy, which, while obscure in its origin, seems to go back to Neo-Platonic philosophy, and received its first systematic presentation in the Sefer Yezirah ('Book of Creation'), written most likely about 850. (See article THE CABALA in this section). Before Donolo, however, there were some Jewish authors in Italy, whom we do not know by name. One of them wrote the Josippon, a Hebrew abstract of the works of Josephus. Another wrote a homiletical compilation, called the Chapters of Rabbi Eliezer, and ascribed to Eliezer ben Hyrkanos, who flourished about 100 in Palestine, but really written by a Roman Jew, about 840.

The classic period of Jewish literature in mediæval times began in the 10th century in Spain. There, under the favorable condition produced by Arabic dominion, some Jews became powerful factors at the courts of the Caliphs, and, like their Arabic countrymen, employed their wealth and their influence for the patronage of literature. Such Maecenases were Hasdai ibn Shaprut (950), and Samuel Hanagid (1050). Under their influence, a systematic study of Hebrew grammar began. The names of the most important authors on this subject are Dunash ibn Labrat, Menahem ben Saruk (10th century); who were succeeded by Ibn Ganah and Judah Hajug. Ibn Ganah wrote the first Hebrew dictionary. With such attempts, naturally, exegesis went hand in hand, and penetration into the laws of the language developed a finer taste for Hebrew style, and a better conception of the art of poetry than that which the former Payetanim possessed. Of the numerous exegetes of this period, Abraham ibn Esra (1092–1167) deserves to be mentioned. He not only employed his knowledge of grammar and the principle that the Bible must be explained from the point of view of the context, but he also claimed that the rabbinical interpretation of scripture was not infallible, and, finally, he pointed out a number of passages in the Pentateuch which could not have been written by Moses. So he became the father of Biblical criticism. Of the Hebrew poets of this age, two deserve very prominent mention, Solomon ibn Gabirol (1022–70) and Judah Halevi (1080–1141). Both handled the Hebrew language not merely for the purposes of religious poetry, but for secular poetry, as well, and with a mastery which makes them classics, not merely of Jewish, but of the world's literature. Judah Halevi's 'Ode on Zion' has been translated into various modern languages. During this period, the Philosophy of Religion, if we may employ this traditional term, developed to its highest perfection. (See article JEWISH PHILOSOPHICAL WRITERS in this section). The first to write on this topic in Spain was Bahya ibn Pakuda (11th century), whose work, 'Duties of the Heart' emphasizes the necessity of an inner religion, as contrasted with the idea of strict ritual observance. A very popular work is the 'Kusari' of Judah Halevi. The most important development of this class of literature is the 'Guide for the Perplexed,' by Moses ben Maimon (1135–1204), written like the above-mentioned works in Arabic. Like them, it was translated into Hebrew, in the course of the 12th century. While this literary activity shows a somewhat secular tendency, also evident in works on astronomy, medicine, science, etc., talmudic studies were not neglected. Maimonides wrote a code of the Jewish law, including even the sacrificial cult, and the constitutional law for Israel's kingdom, dogma and ethics, under the title, 'Mishneh Torah.' He had been preceded by Isaac Alfasi (1013–1103), a native of Fez, who lived during the latter part of his life in Spain. Alfasi made an abstract of the Talmud, in order to facilitate legal decisions, and this work became a very popular code of Jewish law and was often commented upon.

Jewish literature developed in France, somewhat later than in Spain. There were chiefly two centres, one in the south, the Provence, and one in the east, the Champagne. The oldest

name of any prominence is that of Gershom, surnamed, "The Light of the Diaspora." He wrote talmudic commentaries, and a number of decisions and hymns. In the latter part of his life he moved to Mayence, where he established a new centre of Jewish spiritual activity. He died in 1028. To the school founded by him belongs the most popular of all mediæval authors, Solomon ben Isaac of Troyes, called "Rashi," abbreviated from the initials of his name, Rabbi Shelomoh Izhaki (1040–1105). He compiled the first complete commentary on the Babylonian Talmud, which from his time on was studied alongside of the text, and is printed with all talmudic editions. He further wrote commentaries on almost all books of the Bible, and his commentary on the Pentateuch, giving in simple, precise language the talmudic interpretations of the law and the best rabbinical homilies is the most popular work of mediæval Jewish literature, being used to-day in numerous schools and study circles. His disciples, among whom members of his own family, especially his two grandsons, Samuel and Jacob ben Meir, were most prominent, continued his work in commenting on the Talmud, and laid down their work in glosses, called Tosafot (additions). In Germany, where studies began with the 11th century, attention was almost exclusively given to the Talmud, besides which only religious poetry was cultivated, lacking, however, the true inspiration of the Spanish school.

With the death of Maimonides a marked decline occurred. With a few exceptions, exegesis degenerates into blind adherence to rabbinical authorities, philosophy becomes more and more fanciful homiletics, or gives way to theosophy, and poetry becomes punning on Biblical and talmudic phrases. Exceptions are found in the cases of Joseph Kimhi, and his two sons, Moses and David (1150–1230), and Moses ben Nahman (1200–70) whose commentary on the Pentateuch, though as a rule very sound, shows very often leanings toward fanciful mysticism. Notable, in this period, is the work of the family of Ibn Tibbon, four generations of which were engaged in the translation of Arabic works into Hebrew, and so, along with others, among whom may be mentioned Jacob Anatoli of the 13th century, helped to preserve the treasures of Greek literature, which they translated from Arabic into Latin. Among those who worked along the lines of Saadia for the harmonization of religion and science, mention must be made of Hasdai Crescas, author of 'The Light of the Lord,' Levi ben Gershom, author of 'The Wars of the Lord' (14th century), and, finally, Joseph Albo (1400–40), whose work 'Ikkarim' ('The Fundaments of Faith'), is altogether dependent on Maimonides. While this decline is noticeable in the best parts of Jewish literature, there is, on the other hand, a great activity in mystic literature. The most important work of this kind is the 'Zohar' ('Brightness'). It is a theosophical explanation of the Pentateuch, which gives itself as the work of Simeon ben Johai, a rabbi of the 2d century, but is now generally believed to have been written by a Spanish author, Moses de Leon, about 1280. The fabrications of works of this kind, attributed to the authorities of the Talmud, and even to patriarchs, became as frequent in these days as it had been in the first Christian century, when the book of Enoch, and the Sibylline oracles were composed. The German Jews of those days confined their activity exclusively to Talmudic literature, and even in this line were frequently devoting themselves to the minutest details of ritual practice. A very prominent author of this day, and the founder of an important school, was Meir of Rothenburg, who is otherwise well known in Jewish history as a martyr, who spent seven years in prison, because he refused to allow his congregation to pay the ransom, for the exaction of which King Rudolf had imprisoned him (1286). Exceptions are found in Italy, where most noteworthy are the poets, Kalonymos ben Kalonymos and Immanuel of Rome, the latter a friend and contemporary of Dante. Another exception are some polemical works against Christianity, among which mention may be made of the Nizahon, by Lipman of Muehlhausen (14th century).

III. From the Reformation to Moses Mendelssohn.— The expulsion of the Jews from Spain (1492) had an unfavorable influence on Jewish literature. The Jew, driven to the Orient and to Poland, and even expelled from all centres of culture in western Europe, became more and more spiritually isolated. On the other hand, however, rabbinical literature was more widely studied, owing to the assistance of the printing press. Talmudic studies flourished largely in the Orient and in Poland. The most important production of this time is the popular code of the law, the 'Schulhan Aruk,' by Joseph Caro (1488–1575), written in Safed, and edited with annotations by Moses Isserles (1520–72), of Cracow. Annotations to the code of the law formed the most popular literary occupation for the rabbis of the 17th and 18th centuries. While the belief in the rabbinical authority became more and more almost absolute, indications of a development in the opposite direction began to appear. Elijah Levita (1469–1549), a German who lived in Italy, and devoted his activity to grammar, made an important step in critical archæology by his discovery that the vowel points were not invented before the 7th century. He was followed by Azariah dei Rossi (1511–78), who, in his work 'Meor Enayim' proved that the authority of the Talmud could not be maintained in questions of history and astronomy. His work brought forth a number of apologies of rabbinical literature, notably, the 'Beer Hagolah,' of Loew ben Bezalel, rabbi of Prague (1530–1609). Similar apologies were prompted either by the attacks of Christianity, or by skepticism within the Jewish fold. To the former class belong the 'Consolations' of Samuel Usque (1553), and to the latter, the 'Nomologia' of Immanuel Aboab (1625). An indication of a sounder development of Jewish literature, although prompted by apologetic methods, were the chronicles, becoming more and more numerous from the beginning of the 16th century. The most prominent of these are 'The Sceptre of Judah,' by Solomon ibn Verga, 'The Chain of Tradition,' by Gedaliah ibn Yahia, and the 'Valley of Weeping,' by Joseph Hakohen, all of the 16th century. The influence of this development is offset by the growth of Cabalistic literature, which penetrates into every branch of religious practice, and degenerates into the compilation of sense-

less phrases. The comparatively soundest representative of this class is Isaiah Horwitz (1550–1630), whose book 'The Two Tablets of the Covenant,' intended to give a system of Cabala, became very popular. The type of utter degeneracy is represented by Hayim Vital, whose exposition of the doctrine of the transmigration of the soul, and of similar Cabalistic doctrines, is partly childish, and partly unintelligible. At the same time, however, Cabala was attacked severely by Leon Modena, of Venice (1571–1648), who also wrote a defense of rabbinical Judaism, against the attacks of freethinkers, of whom Uriel Acosta is the most prominent type. Apologetic works were further written by the Amsterdam rabbi, Menasseh ben Israel (1600–55), who is famous in history owing to his audience with Oliver Cromwell, which resulted in the readmission of the Jews to England, after nearly 400 years of exile. Still, the most untiring activity of the Jews was devoted to dialectical explanations of the Talmud, and to the exposition of the ritual law. A great exception is the case of Moses Hayim Luzzatto (1707–47) of Padua, whose allegorical dramas, written in Hebrew, and patterned after Italian masters, rank with the best Hebrew poetry of mediæval times. Another exceptional position may be claimed for Jacob Emden (1696–1776) who, while a strict believer in rabbinical authority, wrote a work, proving that the 'Zohar,' as we possess it, was the work of a Spanish Jew.

IV. From Moses Mendelssohn to the Present Day.— Religious toleration, partly the result of actual conditions as they developed after the Thirty Years' War, and partly the result of the philosophical teachings of Locke, and his disciples, the English Deists, and the French encyclopedists, influenced the condition of the Jews very favorably. Admitted to higher occupations, and to the universities, the number of those who devoted themselves to secular learning began to increase considerably in the 18th century. This movement to rescue the Jews from their mental isolation received its strongest impetus from Moses Mendelssohn (1729–86), whose translation of the Pentateuch into pure literary German changed the hitherto one-sided education of the Jewish youth. His example was followed by a number of his friends, who, like him, translated the Biblical books and the prayerbooks into pure literary German, and wrote Biblical commentaries, which, by their clear Hebrew, and by their embodiment of modern methods and ideas, broadened the intellectual horizon of the Jewish student. Together with this movement there was a revival of Hebrew poetry, notably due to Hartwig Wessely (1725–1805), which helped to develop a literary art, almost forgotten since the beginning of the 16th century. A prominent factor was *Hameassef* (1783–1810), a Hebrew periodical, edited by friends of Mendelssohn. Through the medium of these works, the Jews became acquainted with secular literature, and very soon a generation arose that received a secular education equal to that of their Christian neighbors, which could not but influence the development of Jewish literature. This branch, is inaptly called, "The Science of Judaism." It is a systematic presentation of Jewish literature and history. The founder was Leopold Zunz (1794–1886), whose 'Gottesdienstliche Vortraege' was the first, and is still unsurpassed in its scientific presentation of homiletical literature. Of his numerous other works, special mention must be made of his 'Synagogale Poesie,' another pioneer work, presenting a history of liturgical literature and especially of liturgical poetry. His work was taken up by some Polish scholars, who, possessing a vast acquaintance with Jewish literature, lacked systematic training, and living in a land where secular studies were considered heresy, had received the first ray of light from some men who had come, under Mendelssohn's influence, to Berlin. The leaders were Nahman Krochmal (1785–1840), and Solomon Loeb Rapoport (1790–1867). The latter presented for the first time biographies of mediæval Jewish authors in scientific form. The attack on this movement by fanatics prompted some fine satirical works in Hebrew, notably, 'The Revealer of Secrets,' by Joseph Perl (1773–1838), patterned after the 'Epistolæ obscurorum,' and a travesty on the Jewish mystics; also 'The Observer,' by Isaac Erter (1792–1851).

These two currents of literature, namely, the investigation of the history and literature of the Jews on the one hand, and the poetical representation of modern ideas in good Hebrew, on the other, characterize the literary activity of the Jews in the 19th century. The work of Zunz was continued by various authors, notably Zechariah Frankel (1801–75), who was head of the Breslau Seminary, and stimulated many authors into similar activity. Abraham Geiger (1808–74), the leader of the liberal movement in religious matters, has also contributed to the elucidation of Jewish history. An attempt to present history in a more popular form was first made by Isaac Marcus Jost (1793–1860). The most popular work of this kind was written by Heinrich Graetz (1817–91), whose work has gone through several editions, and been translated into various languages. More strictly scientific is the work of Moritz Steinschneider, born 1816. Of the numerous scholars who worked on individual topics of Jewish history and literature, mention may be made of Isaac H. Weiss (1815–1905), Meyer Kayserling (1829–1905), David Kaufmann (1852–99). Jewish poetry and fiction were chiefly cultivated in Russia, where, through the efforts of Isaac Baer Lewinsohn (1789–1860), modern ideas were cultivated. A marvelous art in the use of Biblical Hebrew for novels was exhibited by Abraham Mapu (1808–67), who first attempted to write novels from Biblical times, and later on used the Biblical language with unprecedented skill in writing a novel from the life of the Russian Jews of his day. Poetry, especially of the satirical sort, is best represented by Leon Gordon (1831–92), while in novels from contemporary Jewish life Perez Smolensky (1842–84) ranks foremost.

Some words must be said about the development of literature in Yiddish, which is a German, freely mixed with Hebrew, and in eastern Europe also with Slavic. Originally devoted merely to practical religious purposes, such as translation of prayerbooks for the edification and religious instruction of women, in the latter half of the 19th century it began to be used for higher literary purposes, in

poems, novels and dramas. As a poet, Simeon Frug may be considered as the foremost representative; among the novelists, S. J. Abramowitz, Solomon Rabbinowitz and J. S. Peretz, some of whose works may justly claim a place in the world's literature. Among the dramatists, Jacob Gordin is noteworthy for his bold treatment of sociological and economical questions, although the plots of his plays are mostly adaptations from the classics of other languages.

In this connection a new branch of literature has to be mentioned, which, akin to the idyl, is peculiarly Jewish. It is the so-called Ghetto novel, cultivated first in the German language by Aaron Bernstein (1812–84), in his two novels, 'Voegele der Magid,' and 'Mendi Gibbor,' presenting life in a provisional town of Eastern Germany in the period of transition from Ghetto to modern culture. Leopold Kompert (1822–86), wrote stories from Bohemian Ghettos which are masterpieces of their kind. Life in the overcrowded Ghetto districts of eastern Galicia, with its squalor and superstition on the one hand, and its ardent desire for knowledge and its beautiful family life on the other, were masterfully presented by Leopold von Sacher-Masoch (1835–95), and Karl Emil Franzos (1848–1904). Israel Zangwill, born 1864, presented the life of the Russian Jews in London. Sketches from Jewish life in Moravia were written by Martha Wolfenstein (1871–1906), in her 'Idyls of the Gass.'

A development of the 19th century is Jewish periodical literature, although its beginnings reach back to 1674, when a periodical in Judeo-Spanish was first published in Amsterdam. These periodicals are mostly weekly, when devoted to religious interests. The oldest of them is the *Allgemeine Zeitung des Judenthums*, now of Berlin, founded in 1837 at Leipzig. It was followed by the *Archives Israélites* of Paris, in 1840, the *Jewish Chronicle* of London, in 1841, the *American Israelite* of Cincinnati, in 1854 and the *Jewish Messenger* of New York in 1856. Such papers appear in at least 15 languages. Dailies in Hebrew and Yiddish are devoted to general news, but give particular attention to Jewish affairs. They appear in Warsaw, Wilna, Saint Petersburg and New York. The oldest is *Hazefirah*, founded in 1862 as a weekly, edited as a daily since 1886 and suspended by order of the government in 1905. Some monthlies and quarterlies are devoted to scientific and literary purposes; the most prominent are *Monatsschrift fuer Geschichte und Wissenschaft des Judenthums* (1851), *Revue des Etudes Juves* (1880), and the *Jewish Quarterly Review* (1880). To this class belong numerous yearbooks, published in various languages, and appearing more or less regularly.

In spite of these modern tendencies, which occupied the attention of Jewish authors during the 19th century, talmudic studies of the old type were not entirely neglected. They are, however, mostly confined to the east of Europe, and the Orient. The most prominent rabbinical author in the beginning of the 19th century was Moses Schreiber (Sofer), rabbi of Presburg (1762–1839). In the Orient, the most prolific authors of rabbinical works of the 19th century are Hayim David Hazan (1790–1876), rabbi of Jerusalem, Hayim Palagi, rabbi of Smyrna (1782–1868), and finally, Hayim Hezekiah Medini, of Hebron (1832–1904). Of the Jews of Europe, the most prominent rank amongst the talmudic authors in the latter part of the 19th century, was held by Isaac Elhanan Spektor (1810–96), rabbi of Kovno.

Bibliography.—Abraham's 'Short History of Jewish Literature' (London 1906); Darmesteter, Arsène, 'The Talmud' (Philadelphia 1897); Steinschneider, 'Juedische Literatur' (in Ersch und Gruber's 'Allgemeine Encyklopädie der Wissenschaften und Künste,' Section ii, Vol. 27, Leipzig 1850); Karpeles, 'Geschichte der jüdischen Literatur' (Berlin 1886); id., 'Jewish Literature and Other Essays' (Philadelphia 1895); Winter und Wünsche, 'Die Jüdische Literatur seit Abschluss des Kanons' (Berlin 1897); and 'The Jewish Encyclopædia' (12 vols., New York 1901–06).

GOTTHARD DEUTSCH,
Professor of History, Hebrew Union College, Cincinnati, Ohio.

5. JEWISH PHILOSOPHICAL WRITERS. The philosophic spirit in its proper sense appeared among the Jews at the time of their contact with Greek culture, which began with the conquest of the Semitic Orient by Alexander the Great. Its first definite traces are to be discerned in the skepticism which pervades Job and Ecclesiastes, books which in their present form belong, therefore, to a period subsequent to the last quarter of the 4th century B.C. In the former work, the skepticism is more or less veiled and proceeds no further than to express a doubt as to the wise workings of Providence. In the latter composition, the skeptical spirit is more pronounced and amounts to a practical denial of divine justice. Results of a more positive character, however, appear in the system of Philo Judæus (b. in Alexandria about 20 B.C.; d. after 40 A.D.). In his many works, of which the chief are in the form of commentaries to the Pentateuch, he strives to reconcile the traditional tenets of Judaism with the eclectic school of Greek philosophy. While recognizing the Old Testament as divine and authoritative, he makes full use of allegory, to adapt Jewish conceptions to current Greek wisdom. The cornerstone of his system is formed by his doctrine of the Logos or "Word" as the active agency associated with God in his creative powers. He identifies the Logos with the "divine wisdom," so strongly personified, notably in the book of Proverbs, as to become not merely an attribute, but an element of the divine. Philo is influenced throughout by Plato's doctrine of ideas, and while leaving little permanent impress on Jewish, he profoundly influenced Christian theology. The conception of the "Word" in the Gospel of John is the most striking trace of the Philonic doctrine, and so enthusiastic were the early Christians over Philo's teachings that some of them saw in him a Christian. Philo's philosophy plays also a prominent part in the writings of the Church Fathers, and it is chiefly due to them that his works were preserved.

Saadia.— One of the earliest and most distinguished Jewish philosophers dates from the 9th century when the intellectual centre was still in the East, although there were already indications of its transfer to northern Africa

and Spain. The rise of Islam, followed by conflicts among its adherents as to the interpretation of the Koran, had given a fresh stimulus to philosophic thought which had its influence likewise upon the Jews. The rise of the Karaite sect (see article THE KARAITES in this section) at the end of the 8th century is to be directly ascribed to this influence. For a time it seemed as though the disintegration of Rabbinical Judaism was at hand when the tide was stemmed by a profound thinker and prolific writer — Saadia ben Joseph, born in Dilaz in upper Egypt in 892 and who died at Sura 942. Equally versed in the Talmudic and Islamic theology, Saadia attempted to reconcile the teachings of Jewish orthodoxy with the current philosophy as developed chiefly by the Islamic rationalists known as the Motazilites (or Separatists). His main work, written in Arabic, 'Book of Faith and Doctrines,' was completed in 933 and may be said to mark the first systematic compend of Jewish philosophy. Differing from Philo in making Biblical doctrines his starting-point, his entire efforts were devoted to demonstrating that where the current philosophy or rationalism was in contradiction to the Old Testament, the philosophy must be wrong and the Old Testament right. The aim of the book is clearly set forth in the introduction as intended to put an end to the prevailing confusion, and to rescue those immersed in the sea of doubt and error. Recognizing as sources of knowledge the testimony of the senses, reason and logic, he declares that a fourth source — revelation, as comprised in the Old Testament, is superior to them all, because through revealed knowledge the means is found to control the correctness of the teachings deduced from the other sources. In his chief philosophic work Saadia includes discussions of the creation of the world, of the attributes of the Creator, the theory of revelation, the beliefs based upon divine justice, the doctrine of the soul, the resurrection of the dead and of the Messianic belief, concluding with a summary of ethical precepts.

Beginning in each main subdivision with the teachings of the law and the prophets on the subject, he contrasts these teachings with the speculations of the philosophers and shows wherein the errors of the latter consist. He betrays Aristotelian influences and at times, especially in his discussion of the problems of creation, follows very closely the model of the more rationalistic Islamic theologians. Accepting the philosophic doctrine of a *creatio ex nihilo*, he proves its correctness from the use of the word "bara" in Gen. i, 1, which he declares means creating something out of nothing. The doctrine of a creator as set forth through revelation in the Old Testament is confirmed by reason which declares that creation implies a creator. Passing on to the more precise determination of the attributes of the Creator, he polemicizes against the dualistic tenets of Zoroastrianism, and against the trinitarian doctrine of Christianity in his endeavor to justify the conception of God as a unit. The divine laws as laid down in the Pentateuch, supplemented by oral tradition, are, according to Saadia, given in order to enable men to attain to the highest degree of blessedness; and while recognizing in the divine laws given to Israel two classes, (a) those suggested by reason and (b) those due to revelation, he shows by examples how the latter may likewise be explained by pure reason. Perhaps the most original feature in Saadia's philosophy is the manner in which he endeavors to reconcile the doctrine of the freedom of the human will with the belief in the omniscience and omnipotence of God. He solves the problem by declaring that God could control the human will, but deliberately gave men freedom, so that he might bear the responsibility for his acts. Suffering and trials are sent by God to man in order to bring him by spiritual discipline nearer to perfection. He criticizes the various theories proposed by philosophers and others as to the nature of the soul and declares it to be a fine substance created by God, and placed in the human body during its stay on earth. After its life on earth another existence is in store for the soul, but only after the number of the souls to be created has reached an end, when all souls are again united to their bodies. In this combination of the doctrine of immortality with the resurrection of the body, Saadia betrays the influence of Islamic theologians who postulated this doctrine on the basis of the pictures of Paradise drawn in the Koran. Saadia's Messianic beliefs accord with those indicated in the Talmud, pointing to the appearance of the Messiah as a preliminary to the resurrection of the dead. In the world to come the good and pious will receive their recompense for their acts and sufferings in this world. The influence of Saadia on his age was profound. Through his philosophy in conjunction with his polemical writings against the Karaites, the new sect received a blow from which it never recovered. Jewish orthodoxy once more won the day, and it was not until the days of Maimonides that the soundness of Saadia's system was questioned.

Ibn Gabirol.— Passing by some minor writers like Bachya ben Joseph ibn Pakuda who flourished at Saragossa in the first half of the 11th century and who largely on the basis of Saadia's religious philosophy developed a system of Jewish ethics in a work known as 'The Guide to the Duties of the Heart' that represents a combination of Jewish doctrines with certain phases of Islamic mysticism, we reach in Solomon Ibn Gabirol (b. in Malaga about 1021; d. in Valencia about 1058) a thinker of the first magnitude, whose chief work written in Arabic is 'The Fountain of Life.' Though its aim is to reconcile the monotheistic doctrines of Judaism with the philosophy of Neo-Platonism which Gabirol espoused in opposition to the prevailing Aristotelianism, its basis is essentially philosophical rather than theological. Nor does the author lay any special stress upon his Jewish beliefs, as a consequence of which the influence that he exerted upon the scholasticism of mediæval Christianity was far greater than upon Jewish theology. The work consists of five treatises dealing respectively (1) with matter and form, (2) the substance underlying the corporeality of the world, (3) proofs of the existence of intermediaries between God and the physical world, (4) proofs that these intermediaries known as "simple" or "intelligible" substances are composed of matter and form, and (5) a treatise on universal matter and universal form. According to Gabirol's system,

everything that exists is embraced under these three categories: (1) God, which is the first substance, (2) the world, which is matter and form, and (3) will as intermediary between the two. Whether Gabirol connected with God divine attributes apart from an existence pure and simple is a question in regard to which opinions differ. The best authorities, however, incline to the view that Gabirol was an opponent of ascribing attributes to God as ingredient parts of his Being. Gabirol's chief model among the Greek Neo-Platonists is Plotinus, though he knew this author through secondary sources only. In an ethical treatise entitled 'The Improvement of the Moral Qualities,' composed in 1045, he is even bolder than in his philosophic work, inasmuch as he attempts to formulate principles of ethics without reference to religious belief or doctrines. A comparison between Philo and Gabirol naturally suggests itself. Both revert to Plato as the natural source of their inspiration Philo adapted Judaism to the Platonic doctrines whereas Gabirol a thousand years later revised Neo-Platonism and adapted Judaism, so far as it entered into his thoughts, to this system. Like Philo, Gabirol's influence was profound on Christian theology and under the Europeanized form of his name, Avicebron, his writings translated into Latin helped to mold the thought of such philosophers as Albertus Magnus, Thomas Aquinas, Duns Scotus and Giordano Bruno. Ibn Gabirol was also a poet of the first rank, whose liturgical compositions in Hebrew give evidence that his philosophy, though so apparently independent of Jewish doctrines, had not weaned him from Jewish orthodoxy. In this combination of poet and philosopher, he suggests comparison with Judah (or Jehudah) Halevi — the next important writer to engage our attention.

Judah Halevi was born in Toledo toward the end of the 11th century, dying some time after 1140 during a journey to the Orient. He is more famous for his exquisite Hebrew poems — both lyric and religious — than for his philosophy. The tone, form and imagination of the poet color his views of life far more so than in the case of Ibn Gabirol. Hence, in his philosophic treatise, written in Arabic, but generally known by the title of the Hebrew translation as 'The Book of Cuzari' — he takes his stand upon revealed religion, which to him is superior and more trustworthy than any human speculation. He does not even attempt, like Saadia, to reconcile religion with philosophy, but devotes himself mainly to showing the superiority of Judaism among the religions claiming to be revealed. The discussion of the tenets of Judaism and the proof for their truth is given in the form of a dialogue between a Jew and the pagan king of Chazars — hence its title — who after discussing religion with a philosopher, a Christian and a Mohammedan, turns to the Jew for a statement of his beliefs. Naturally Judah Halevi cannot escape dealing with the current philosophical doctrines, and while claiming to draw his views exclusively from the teachings of the Old Testament, introduces distinctively Aristotelian notions, as well as certain views held by Islamic theologians. God is for him the first cause who creates the world out of "nothing." He divides the attributes of God, without any distinction between essential and non-essential, into three classes — active, relative and negative. While not regarding God as a corporeal Being he is not prepared to reject all the anthropomorphisms in the Old Testament as purely symbolical. According to him, the immortality of the soul, the resurrection of the dead and the doctrine of rewards and punishment are all taught in the Old Testament and constitute essential features in Judaism. An entire division of the book is devoted to a refutation of the Karaites, an exposition of the basis and development of oral tradition as exemplified in the Talmud, while the fifth and last division is taken up with polemics against the current systems, including the Aristotelian cosmology and the Epicurean doctrine of Fatalism which was also accepted by the orthodox Islamic theologians. His attempt to reconcile the freedom of the human will with the omniscience of God follows largely on the lines laid down by Saadia.

Maimonides.— The greatest of all Jewish philosophers in whom their philosophical activity reached its zenith was Moses ben Maimon, generally known as Maimonides (b. in Cordova, 30 March 1135; d. at Cairo, 13 Dec. 1204). His two main works are (1) the codification of the talmudic regulations systematically arranged into 14 groups. This elaborate treatise, to which he gave the title 'Mishneh Torah' or 'The Second Law' and which was written in Hebrew, is a profound monument to the author's learning, ingenuity and skill. It marked an epoch not only in talmudic studies, but in the history of Judaism, and although intended to uphold and strengthen the authority of the Talmud, in reality led in the course of time to an anti-talmudic movement, which after many vicissitudes contributed to the decline of Rabbinical authority in Judaism and eventually to its overthrow in all of western Europe and in America. The orthodoxy displayed by Maimonides in his code is in striking contrast to the freedom and boldness of his philosophical and theological views in his great philosophical work, completed in 1187, written in Arabic and known as the 'Guide of the Perplexed.' Upon this work his claim to immortal fame rests. Its principal aim may be summed up as an attempt to bring about the reconciliation between the prevailing modification of the Aristotelian philosophy and Judaism. Maimonides purposed to do for Judaism what Alfarabi, Avicenna (or Ibn Sina) did for Islam — to adapt it to the teachings of Aristotle, as these teachings were understood and interpreted in his days. Starting from the thesis that there can be no contradiction between truths revealed by God and truths discerned by the human mind, which is a power derived from God, Maimonides explains the apparent conflict between science and religion as due to a misunderstanding of the anthropomorphisms in the Old Testament. Holding more strictly than any of his predecessors to the doctrine of the incorporeality of God, and going to the length of declaring every one who denied this dogma to be an idolater, he is obliged to fall back in accounting for anthropomorphic descriptions of God in the Bible on the old Philonic principle of the twofold meaning — an external or superficial one and an internal or allegorical one. By the same

method he disposes of the attempt to predicate positive attributes into five classes, (1) those that include all the essential properties of an object, (2) those that include only a part of the essential properties, (3) those indicating a quality, (4) those indicating the relation of one object to another, (5) those referring to the actions of an object. He rejects all but the last either because they rest upon the erroneous assumption that God can be defined or because they contradict the fundamental view of the absoluteness of God. Attributes referring to God's actions may be admitted because they do not assume the coexistence with him of anything else. Maimonides, accordingly, interprets the names given to God in the Old Testament as indicative of His activity. While accepting the principle of *creatio ex nihilo,* because it can be supported by better arguments than the doctrine of the eternity of matter, he admits that no positive proof can be given for the former and criticizes sharply the seven arguments in support of the doctrine given by the Islamic theologians. In a series of 26 propositions he establishes the doctrines of the existence, unity and incorporeality of God as the primal cause. He accepts the Aristotelian view of a number of heavenly spheres, each endowed with an intellect and possessing a soul, but instead of regarding these spheres and intelligences as coexisting with the primal cause, Maimonides maintains that they were created by the will of God. With the help of his allegorical method of interpreting Biblical passages, he proceeds to show that the account of creation in the book of Genesis is in accord with the views of Aristotle. He takes the first word of Genesis as the term for "Intelligences," which constitutes the first work of God, as proclaiming the *creatio ex nihilo.* Adam's sin and even the three sons of Adam are accorded a purely allegorical interpretation, so that in this way everything falls into line with the Aristotelian system. When he comes to prophecy, which in accord with the philosophers he regards as a natural quality that may be granted to any man whose physical, mental and moral qualities are in perfect condition, he extends the allegorical method to the interpretation of the prophetic visions, notably those of Ezekiel. Evil, according to Maimonides, has no positive existence, and consistently all such evils as are in the Old Testament ascribed to God as the direct cause are interpreted allegorically. His solution of the apparent contradiction between God's omniscience and the freedom of the human will possesses at least one original feature in the emphasis that he lays upon God's knowledge as essentially one of possibilities, and that the knowledge of the realization of one of several possibilities does not affect the nature of the "possible." This being admitted, man has a free choice among several possibilities. The last part of the 'Guide' is devoted to an exposition of Maimonides' system of ethics which is based upon the Pentateuchal laws. These laws bear either directly or indirectly upon morality as the means to attain the highest happiness which in the case of men as superior to the animal world and as the end and purpose of creation must consist in a moral and intellectual perfection. In accordance with this basic principle he proceeds to the interpretation of the Pentateuchal precepts and from them deduces precepts for the regulation of man's life. His philosophy though intended as a justification of Judaism was not so regarded by those whose philosophical interests were subsidiary to their religious zeal. There was much in the 'Guide' that appeared rationalistic to more simple-minded believers—more particularly his views of prophecy and miracles, both of which he accounted for as due to perfectly natural processes. His lack of positiveness with regard to the doctrine of the *creatio ex nihilo* also aroused offense, and it was not long before a controversy arose that grew in bitterness between the adherents and opponents of Maimonides in France and Spain, and which threatened at one time to create a break in Jewry. The influence of Maimonides' 'Guide' extended, however, far beyond the limits of Judaism. Through a Latin translation it made its way to Christian scholastics and it was instrumental, like Gabirol's 'Fountain,' in shaping the thoughts of men like Albertus Magnus, Duns Scotus and numerous others, while within the pale of Judaism its traces may be discerned in Spinoza's system and down to the 18th century in men like Moses Mendelssohn and Solomon Maimon.

Gersonides.— Half a century after Maimoindes we encounter in Levi ben Gerson, known as Gersonides (b. 1288; d. 1344), and in Latin as Leo Hebræus, a philosopher who struck out into new paths, diverging somewhat from those of Maimonides. He was remarkable for the wide scope of his attainments, embracing logic, metaphysics, mathematics and medicine. As a philosopher his fame rests upon his work 'The Wars of God,' which is devoted chiefly to a discussion of those questions which Maimonides left in a vague state or in which he opposed Aristotelian principles. Gersonides clings more closely to Aristotle than any other Jewish philosopher, and thus represents the climax of Aristotelian influence in Jewish theology. If Maimonides is dependent upon Ibn Sina's interpretation of Aristotle, Gersonides may be said to represent the adaptation of Ibn Roshd's (or Averroes') exposition of the Aristotelian system to Judaism and which involved a more radical departure from orthodoxy. In a conflict between reason and religion, he does not hesitate to give the preference to reason. He ranges himself on the side of the scholastic realists and follows the arguments of the latter in maintaining that the intellect inasmuch as it consists of conceived ideas having a real existence may survive after the body decays. In opposition to Maimonides, he claims that certain attributes, such as knowledge, can be predicated of God but that divine knowledge is not to be placed on a par with human knowledge in any such particular. Through the wide divergence between the two, he opens the way for the maintenance of the doctrine of the freedom of the human will in the face of God's omniscience. Perhaps the most original part of his philosophy is his view of creation, assuming as he does that from eternity there existed inert and undetermined matter, devoid of form, to which God at the proper time bestowed form, life and motion. He thus occupies a middle position between those who accepted the eternity of matter and those who admitted the *creatio ex nihilo.*

Crescas.— The revolt against Aristotelianism came in the following century, the chief representatives of the movement being Chasdai ben Abraham (or ben Jehuda) Crescas (1340–1410) and his pupil Joseph Albo (1380–1435). In his work, 'The Light of God,' Crescas boldly makes front against the subjection of Jewish theology to the tenets of the Aristotelians, whether of the Avicenna-Maimonides or of the Averroes-Gersonides type. He criticizes the 26 Aristotelian propositions adopted by Maimonides as the basis of his doctrine of the First Cause, and endeavors to show that through revelation alone can the belief in the unity of God be established. Against Maimonides he assumes that attributes can be assigned to God without involving oneself in contradictions. As the six fundamental doctrines of Judaism he sets up the omniscience, omnipotence and providence of God, prophecy, freedom of the will and recognition of a purpose in creation. As the purpose of God's creation of the world he assumes the happiness of man's soul, though admitting that this happiness is not fully realized until after death when the soul enters into higher realms of existence. The soul is independent of knowledge and man's highest perfection is reached not through knowledge but through love of God's law, and obedience to it.

Joseph Albo.— Crescas' pupil Joseph Albo develops the themes of his master still further. In his 'Principles' he plants himself even more securely on the basis of revelation, maintaining that the Mosaic law as the outcome of revelation establishes the claim of Judaism for all times as the only true religion. Instead of six, he sets up three principles as fundamental to this true religion, (1) the existence of God, (2) revelation and (3) rewards for the observance of God's laws and punishment for disobedience. Albo may be called the philosopher of Jewish orthodoxy par excellence, and the only feature of this orthodoxy that is perhaps not accentuated with its full force is the Messianic doctrine which is obscured by that of divine retribution. Such was the popularity of Albo's work that it eclipsed the glory of Maimonides. The philosophical movement among the Jews thus issues, as among the Mohammedans, in the triumph of orthodoxy. With the breaking of the bond between the prevailing Aristotelian systems and Judaism, a distinctive religious philosophy among the Jews, for the time being at least, comes to an end. Instead, we have, as the next step in the realm of speculation, the tendency toward mysticism, which became more marked as the ages passed on, until in the 16th century it successfully stifled all efforts at independent speculation. The dark period of persecution which the Jews encountered, leading in Spain to their expulsion at the end of the 15th century, and to their more or less complete isolation from the life around them by the establishment of ghettos, either voluntary or enforced, in Italy, France, Germany, Poland, Russia and even Holland, was also a factor in bringing the philosophical movement among them to a temporary close. Thus thrown upon their own resources, the study and interpretation of the Talmud, without reference to extraneous currents of thought, furnished by the side of absorption in cabalistic lore the outlet for intellectual energies. See article THE CABALA in this section.

Spinoza.— In a measure Baruch Spinoza (1632–77) is to be regarded as a representative of Jewish philosophy because of the influence exerted upon him in his youthful training by Maimonides, Gersonides and Crescas, but his thought turning into the new direction given to philosophical speculation by the movement that dates from Descartes he developed a system in which Judaism as a revealed religion had no part. The breaking away from scholasticism opened up new aspects, and Spinoza takes his place in the general history of philosophy rather than in the religious philosophy of Judaism, and this despite the fact that there are features in his system which can be directly traced to some of the Jewish philosophers of the Middle Ages. Thus it is generally agreed that Spinoza's attitude toward the problem of determinism was derived from Crescas, as likewise the emphasis he lays upon the love of God, rather than knowledge as the highest human quality. From Maimonides he appears to obtain the view that Time arose in Creation and not the reverse. His attitude toward the question of divine attributes also points to the influence of Jewish philosophers. His break, however, with the prevailing form of Judaism was so complete, as illustrated not merely by his excommunication but by his departure from the accepted doctrine of the Pentateuchal Laws as a special dispensation for the Jews derived directly from the divine source through Moses, as to place him outside of the rank of Jewish philosophers. His system, however, furnishes a link between Jewish theology and the currents of the later philosophical systems like those of Leibnitz and Wolff (built up largely under the influence of Spinoza, though with an endeavor to escape from his conclusions), so that when toward the end of the 18th century the Jews once more began to take their place within the world's activities, the influence of Spinoza on specifically Jewish thought also began to make itself felt. Moses Mendelssohn, the mediator between Judaism and the external world, though a follower of Wolff's system, yet derives some of his views from Spinoza, and Solomon Maimon, one of the ablest of the early exponents of the Kantian philosophy, passed through a period of domination of Spinozastic philosophy. Indeed from a certain point of view, Spinoza's pantheism may be regarded as the last word of Jewish religious philosophy, though it involves the discarding of the specific doctrine of the divine authority of the Old Testament. In a certain sense, Spinoza is the last Jewish philosopher. See SPINOZA.

The attitude of Mendelssohn and Maimon toward the systems prevailing in their days is typical of modern Judaism, the exponents of which are swayed, as are the exponents of Christianity, by the currents of thought arising on the basis of scientific investigations outside of the domain of religious belief — either accepting the modern attitude toward the problems of existence, or endeavoring to confront it. Whether conditions will ever arise that will again lead to a distinctively Jewish philosophy is more than doubtful. The present tendency throughout the more intelligent religious world to seek the essence of religion in the heart and soul of man and to lay the main emphasis of the religious life upon conduct rather than upon speculation is unfavorable to the creation

of such conditions, either in Judaism or in Christianity.

MORRIS JASTROW, JR.,
Professor of Semitic Languages, and Librarian, University of Pennsylvania.

6. THE JEW IN ART, SCIENCE AND LITERATURE. It is a task of much difficulty to describe the influence which the Jews in all ages have exercised on art, science and literature; for a period of more than 3,000 years will have to be considered, while the Jews have not only shared all the great developments of humanity's intellectual life, but have blended therewith the views which are at the basis of their own individuality. The culture of the Jews is bound up with that of antiquity, with Christianity's origin and development, all important movements of the Middle Ages, all grades of development and tendencies of the modern era. While it takes part in the intellectual life of the past and present, whose struggles and sorrows it shares, it becomes a complement of universal culture, but with an organism which aids in its turn the recognition of the universal.

Art.— It is conceivable how a people of such positive monotheistic belief should have only slightly cultivated art. Such cultivation belonged rather to a race which had received the surname of Japhet, or beauty, in the genealogical record of Noah, thus symbolizing its mission. It was, however, the mission of the Hebrews to know God and spread this knowledge throughout the world. The older Talmudists assigned to Hellas the cultivation of beauty, to Judæa that of religious truth. In fact certain lines of art were condemned by the Hebrews, because they led to idolatry, to imitating and deifying nature, which in the Jewish religion was secondary to God, as the world's creator. Poetry, however, chiefly the lyric, and music were zealously cultivated — in these fields they equalled the most important achievements of other races in antiquity or surpassed them in many respects. Unquestionably the Jew's capacity for music is an old inheritance of his race. Architecture, too, with its side-lines, was familiar to the Hebrews, judging from their temples, gardens, pleasure grounds. The plastic arts and painting were not cultivated from religious motives, not from any want of taste or capacity. The mimic art, for a similar reason, was adopted at a late period, but with great success. The dance had been early developed into an art, and with musical accompaniment. Upon the whole, however, the nurture and development of art was neither the task nor the strength of old Israel, which lacked all the conditions to its growth. The period of national prosperity under Solomon and his successors, the most favorable time for such artistic achievements, occurred at too early a stage in the intellectual development of the race, and when this gradually reached its maturity art found little sunshine.

In the Middle Ages.—A similar condition occurred in the Middle Ages, but to a greater degree. Persecution, leading to incessant wandering from city to city, and land to land, prevented any growth of art, even in countries where the Jews enjoyed comparative rest for some centuries. In Spain, of all lands, where they dwelt in free competition with the Arabs, shared joyously the pleasures of life, hardened themselves in knightly exercises, sang and danced, spoke the vernacular like a mother tongue, and participated in intellectual progress, the religious prohibition against idolatry was carried out by the rabbis to the extremest limit. Islam, with its fanatic hostility to plastic art, was a worthy model; not only the representations of the Deity, but that of living beings, man and animal, was not allowed. Yet we hear in Spain of a famous Jewish portrait painter, whose name is unknown; and in Titian's days, on the border lines of the 15th and 16th centuries, we learn of an Italian portrait painter and illustrator, Mose dal Castellazzo, who attained high fame in art-loving Venice and then elsewhere in Italy.

Art in the Synagogue — One form of art was cultivated by the Jews in the Middle Ages — the ecclesiastical. If the synagogue interior was usually free from any decoration, there were exceptions, when this was permitted, if rabbinical authorities assented. One of the most eminent sages in the 15th century allowed painting of forms of animals and plants in the synagogue on the ground that there was no likelihood of the Jew becoming an idolator. Hence we find in the synagogue windows

painted glass and on the walls birds and plants. In some MSS. of prayerbooks and ritual works the illustration is a real adornment—an art that attained great development in the later Middle Ages. The goldsmith's art and silver embroidery employed in the decoration of the scrolls of the law, the curtains, coverings, little bells, goblets, lamps and other objects used in the synagogue, reached high perfection in the ghetto.

In the Modern Era.—As the Jews, first in Germany, in the second half of the 18th century, again participated in the nation's intellectual activity, they devoted their attention to every branch of art. Hardly half a century after their emancipation, they number in Germany prominent painters who rank among the ablest in their profession, like Eduard Bendemann, one of the leaders in the older historical school; Philipp Veit, one of the most brilliant representatives of ecclesiastical art; Eduard Magnus, Julius Muhr, Moritz Oppenheim, whose 'Pictures from the Old Jewish Family Life' have acquired fame; Solomon Hart, the first Jewish Academician in England. In our day Jewish painters are prominent in every land. To mention the most eminent, let us recall the Hollander Josef Israels, the English Academician S. J. Solomon, the Austrian portrait painter Leopold Horowitz, the French historical painter Eugene Vichel, the genre artist Friedrich Friedländer, the Belgian painter Carl Jacoby, with names like Herman Junker, Max Kahn, Louis Neustätter, Felix Possart, Toby Rosenthal,—one of the few American genre painters with a reputation in Europe—the great Swedish painter Geskel Salomon, Nathaniel Sichel, Isidor Kaufmann, Philipp Aarons, Henry Baron, M. Verner, David Bles—the dozen of Dutch painters—Karl Heinrich Bloch, Felix Borchardt, Lajos Bruck, Friedrich Kraus, the Polish historical painter Alexander Lesser, the French idyl painter Emile Lévy, Leopold Pollack, Felix Heinrich and Karl Schlesinger, Gustav Wertheimer, Jules Worms, F. Hirszenberg, Philipp Làszlo, Samuel Hirschfelder, Herman Struck, Isaac Snowman, the American Henry Mosler, Geo. D. M. Peixotto, Ernest Peixotto, M. A. Woolf. In the modern movement, Max Liebermann, Lesser Ury and Louis Corinth are among the leaders. Strange to say, Russia has expelled the most painters. In copper and steel engraving, as in etching, the Jews furnish three of the first masters of this art—Friedrich Fränkel, Louis Jacoby and Henryk Redlich. In America Louis Loeb, Henry Wolf and Jacques Reich have acquired high rank. In sculpture one can mention as pre-eminent the Russian Marcus Antokolski, then the American M. J. Ezekiel and Ephraim Keyser, the French Antoni Adam Solomon, E. Soldi, Em. Hanneaux, L. Astruc; the Hungarian Max Klein, the Belgian Charles Samuel, the German Louis Sussman Hellborn, the Russian Leopold Bernstamm, Henrik Glycenstein, Charles Günzburg. In architecture may be mentioned, in Europe, Max Fleischer, Georg J. Hitzig, W. Stiassny, Richard Wolffenstein, Ludwig Levi, Frederick Marcks, Adolf Wolff, Siegmund Taussig; the American Dankmar Adler, Arnold W. Brunner, Henry Fernbach, Edgar M. Lazarus, S. B. Eisendrath. As medalists and engravers few names surpass in excellence A. Abrahamson, Salomon Bucher, Jacques Karl and Leopold Wiener.

Music.—Through all the stages of his history, music was always close to the Jew. In antiquity it accompanied the Temple service, in the Middle Ages it comforted the home and in the modern era it was to reach high development. The long list of composers, musical artists and directors is opened by the Englishman, John Barnett, and there follow Sir Julius Benedict, Meyerbeer, Felix Mendelssohn-Bartholdy, J. F. Halévy, George Bizet, Anton Rubenstein, Jacques Offenbach, Ignatz Brüll, Karl Goldmark, Frederic Cowen, Ferd. David, Friedrich Gernsheim, Ferd. Hiller, Eduard Lassen, Ignatz Moscheles, Moritz Moszkowski, Siegfried Ochs, Julius Schulhoff, Jules Cohen, Josef Dessauer, Baron A. Franchetti, Ferd. Gumbert, Adalbert von Goldschmidt, Leopold Auer, H. W. Ernst, J. Joachim, E. Reményi, H. Wieniawski, H. and A. Grünfeld, David Popper, H. Herz, M. Rosenthal, Karl Taussig, Karl Heymann, M. J. Gusikow, L. Damrosch, S. Sulzer, Herman Levi, Gustav Mahler, Julius Stern, L. Lewandowski, and the artistes Clotilde Kleeberg, Sophie Jaffe, Ilona Eibenschütz, Berthe Marx, Fannie Bloomfield-Zeisler, the American pianist.

The Stage.—In dramatic art the achievements of the Jew have been conspicuous. Among actors, singers, theatrical directors, managers, in every civilized land, there is a lengthy list of Jewish names. To mention the most prominent, as operatic and concert singers, there are Leopold Demuth, Georg Henschel, Paul Kalisch, Leopold Landau, Nikolaus Rothmühl, Julius Lieban, Heinrich Sontheim, John Braham, Jose Lederer, Pauline Lucca, the sisters Grisi, Lola Beeth, Juditha Pasta, Caroline Gompertz, Rosa Olitzka. Among famous actors and actresses are Rachel Felix and Sarah Bernhardt, Adolf von Sonnenthal, E. Worms, S. Berr, L. Barnay, Anton Ascher, Bogumil Dawison, Ludwig Dessoir, Siegwart Friedmann, Alfred Hertz, Maximilian Ludwig, Gustav Kadelburg, Ernest von Possart, Emrich Robert, Moritz Rott, Emil Thomas. In America, the names of Aaron J., Jonas B. and Moses J. Phillips, Mordecai Noah, Emanuel and S. B. H. Judah occur in the early history of the American stage as playwrights and actors, and in more recent days the Wallacks, Madeline Henriques, both of Jewish origin, David Warfield, H. Conried, Jacob Adler.

Science.—"Knowledge and understanding" were ever regarded in Israel as the highest palladium from the earliest ages of its national history to the present day. The priest was the community's teacher and physician as well. In later times, when the different sciences were separated from each other more and more, the rabbis of the Talmudic era not only recommended such avocations to the faithful, but zealously devoted themselves to such pursuits. Many Talmudic teachers were physicians, astronomers, mathematicians, jurists. In the Talmud principles of geometry are stated, which agree with the modern rules. Its computation of the calendar rested upon the finest astronomical observation. The number of bones in the human body is given exactly as in modern anatomy. In the Middle Ages the Encyclopedia of the Sciences included chiefly three disciplines—astronomy, which was connected with mathe-

matics and geometry, medicine and philosophy. In all these fields the Jews have accomplished much, in some degree they have been pioneers, particularly in Spain and North Africa, where they could develop unchecked. The foundation of mediæval mathematics — the 'Almagest,' of Ptolemy, and of mediæval botany — the 'Plant Lore' of Dioscorides, Jews brought to Europe. It was Abraham (b. Chija) who wrote the first textbook of geometry that Europe could boast of; it was a Jew who brought to Europe the Arabic-Indian numbers; a Jew whose observations on the inclination of the earth's axis cleared the way for the immortal astronomer who, as he arranged his system of the world, had to have translated into Latin the Arabic writings of that Jew, Jacob ibn Machir. A French Jew furnished an approximation for incommensurable numbers; a Spanish Jew was the first to apply decimal fractions in the extraction of the square root. As Jewish astronomers, among the Arabs, are mentioned Maschallah, Sahl el Taberi, Sind ben Ali, Ibn Simaweih, etc., through whom the Arabs already in the 8th century became acquainted with Indian medicine and astronomy, before the Greek sciences had been introduced. Natural philosophy and medicine, mathematics and astronomy, formed often the transition from the *halakha* to the *hagada,* and knowledge of these sciences could not therefore have been unknown to the teachers of the law.

Medicine.— Jews have performed the most important service in the department of medicine. Masergeweih (683) translated from the Syrian into Arabic the 'Pandects' of the Presbyter Aaron, a valuable medical work of antiquity. Nearly all the works of the Greeks and Arabs, the Syrians and Indians, the Nestorians and Christians, were brought to Europe by Jews and thus rescued from oblivion. These very writings were then, mostly by Jews, again translated into Arabic. More than 200 such translations have been restored by modern bibliography out of the dust of libraries. Their activity was precious for the history of the sciences in the Middle Ages. Entire families like the Tibbon and the Kalonymos occupied themselves in such work. It is stated that Jews were the first teachers of medicine at the first European high schools of Salerno and Montpelier. Whether this is a fact or not it is in every case proved, what the history of medicine illustrates, that the labors of the Jews in this field during the first half of the Middle Ages belong to the greatest achievements in that science, which without such activity could hardly be thought of as existing. In those days, too, Jews were body-physicians of popes and emperors, of sultans and notabilities in many countries.

Present Day Medical Scientists.— To-day this tendency has been naturally strengthened, with the result that in all lands Jews are among the most eminent physicians and medical investigators. We need mention only the names of Ludwig Traube, Herman Senator, August Hirsch, Jacob Henle, Eduard Henoch, Albert Neisser, Robert Remak, Julius Pagel, Karl Störk, Emil Zuckerhandl, Johann Schnitzler, Adolf Politzer, Paul Ehrlich, Julius Cohnheim, Wilhelm Ebstein, H. Zeissel, Jac. Fischel, August Wasserman, Ludwig Mauthner, Karl Weigert, Victor Birch-Hirschfeld, John Lebert, Heinrich Jacobson, Julius Wolf, Jacob Gottstein, in Germany; Germain Sée, Georges Hayman, Siegmund Rosenstein and Jacob Stokvis, in Holland; Sir Felix Semon, in London; G. Valentin and Moritz Schiff, in Switzerland; Gottlieb Cluge, in Belgium; Max Mandelstamm, Josef Bertenson, in Russia; Elias Cohen-Pasha, in Turkey. In the United States it would be no exaggeration to say that 50 names and more could be cited of Jewish physicians and medical experts who are leaders in their profession in every city and included in college faculties. It was Dr. Simon Flexner, who was chosen director of the Rockefeller Institute of Preventive Medicine. Of German physiologists we might mention among the authorities Julius Bernstein, Herman and Immanuel Munk, Nathan Zuntz, Isidor Rosenthal.

Natural Sciences.— In the natural sciences, Jews number distinguished names in the varied lines of research. The most famous botanists are Ferdinand Cohn, N. Pringsheim, Julius Sachs. Among the eminent chemists are Victor Meyer, whose discoveries were remarkable, Adolf Pinner, Rafael Meldola, Karl Liebermann, Oscar Liebreich, Georg Lunge, H. G. Magnus. As geologists, mineralogists and palæologists one may include Emil Cohen, Angelo Heilprin. In physics a name of international prominence is Heinrich Hertz, famous for his discoveries in electricity and magnetism, with F. J. Pisko, P. T. Ries, who was the first Jewish Academician in Germany, and Arthur Schuster in England. As zoologists, we can refer to Mendelssohn's contemporary, M. E. Bloch, to Emil Selenka, H. Gabriel, E. Ladenburg, G. Lehfeld, Leo Graetz.

Mathematics.— For centuries Jews have studied mathematics. Their sagacity, gift of combination, power of thought, have won signal success. The rabbis of the Talmud had mathematical ability. In the Middle Ages the science of mathematics was preparation for philosophy. In this field Jews were intermediaries and translators, as well as independent authors. They were employed in editing the Alfonsine Tables — the chief being Isaac Ibn Sid, with Judah b. Salomo Cohen and Samuel Levi. One of the leading mediæval Biblical commentators, Abraham Ibn Ezra, was regarded by the Catholic Middle Ages as patron of mathematics. In later centuries Jews displayed similar interest in that science, and to-day they number leaders in the line. For instance, we may mention Leopold Kronecker, Felix Klein, Immanuel Fuchs, S. Spitzer, W. Königsberger, Meyer Hirsch, Georg and Mortiz Cantor, Oscar Minkowski, J. Rosanes, G. Schönfliess, S. Weingarten, Ch. Slonimski, Herman Schapiro, Maurice Levi, J. J. Sylvester. In astronomy can be included Wilhelm Beer, Wilhelm Goldschmidt, Adolf Hirsch, Robert Rubenson, E. Schwarzschild, Prof. Harold Jacoby, of Columbia University.

Travel and Exploration.— To turn from traversing the skies with the telescope to traversing the earth in the interests of scientific research, we find a large number of Jewish travelers who have penetrated distant lands. From the legendary Eldad-ha-Dani of the 9th century, Benjamin of Tudela, and Petachia of Regensburg down to the men who shared the sea-journeys of the Portuguese, the Spaniards and the Italians, and accompanied Columbus

and Vasco de Gama, to our time, a lengthy list could be given. In recent times can be mentioned J. J. Benjamin, Jacob Saphir, J. Halevy, while among explorers are Emin Pasha, Emil Bessel, Oscar Neumann, Eduard Glaser, Herman Vambéry, Edouard Foá, Adolph Strauss, W. G. Palgrave (of Jewish descent), and in America Angelo Heilprin and Franz Boas, who is associated with Arctic research. In this connection may be recalled the labors of Jews in engineering, science and invention, etc., with Jos. Hirsch, Maurice Levy, J. Bachman for France, E. Herman and G. Schlesinger for Germany, Mendes Cohen, Emil Berliner, Elias E. Ries, Albert Edward Woolf, E. Zalinski for the United States. Here, too, may be included prominent names in numismatics, statistics and economics. In the latter branch Profs. E. R. A. Seligman and J. H. Hollander are authorities in the United States; A. Raffalovicz in Russia; L. Luzzatti, Leone Wollenberg in Italy; as statisticians, Maurice Block is pre-eminent in France, Josef Körösi in Hungary, while Leone Levi did useful work in England. Here belong the founders of modern Socialism — David Ricardo, Karl Marx, Ferdinand Lassalle, E. Bernstein, with J. Jastrow, Max Hirsch, Edgar Loening, E. Warschauer, Ludwig Hamburger. As numismatists we can refer to Julius Friedländer, Wilhelm Löwy, A. Merzbacher, Leopold Hamburger, M. A. Levy.

Law.— Biblical and Talmudic legislation shows clearly that the Jews from olden days showed special inclination toward law and its interpretation. Coworkers in the compilation of the Pandects, they furnish distinguished jurists, judges and lawyers. In France they can point to Adolphe Cremieux, August Bédarrides, A. Lyon-Caen; in England to Sir George Jessel, Sir George Lewis, J. Waley, Earl Reading; in Holland to the Assers, Goudsmit, Gódefroi; in Germany and Austro-Hungary, to Eduard Gans, Levin Goldschmidt, Paul Laband. Karl Grünhut, Herman Staub, Heinrich Harburger, Heinrich Wiener, H. Friedeberg, H. Makower, Eduard von Simson, Wolfgang Wessely, David Rubi, Ferd. Frensdorf, Julius Unger, Max Neuda, H. Dernburg, J. Glaser; in America they include a number of State and city judges.

Philosophy.— Recent writers call the Jews "the people of philosophy," and in fact to reflect on the highest questions of life has ever been their custom. Philosophy was regarded among them as one of the weightiest sciences — both during the Middle Ages and to-day. We have to thank the Jews for the diffusion in Europe of Neo-Platonism, for being intermediaries between the Arab and Christian philosophy, for the basis of Scholasticism, the popularizing of Greek philosophy in Europe, and the birth of a new conception of the universe. In the construction of this new-world philosophy, above all else in spreading the systems of Kant, Hegel and Schopenhauer, Jews have taken a conspicuous part. Among the Alexandrian philosophers Philo is pre-eminent, Solomon Ibn Gabirol opened a new path for Platonism, and was Scholasticism's pioneer, Moses Maimonides raised Aristotelianism to speculative heights. (See article JEWISH PHILOSOPHICAL WRITERS in this section). Baruch Spinoza was influenced by him and later investigators, who were more inclined to mysticism. Jews were associated with the achievements of the Renaissance and Humanism, because they were teachers of the leaders of those movements. It was Moses Mendelssohn who popularized philosophy. Markus Herz and Salomon Maimon, Lazarus Bendavid, were enthusiastic supporters of Kant, whose most important representative in the new philosophy is Prof. Hermann Cohen of Marburg. The founders of the school of folk-psychology, Moritz Lazarus and H. Steinthal, champion Herbart's philosophy. Hegel's best followers were Eduard Gans and Julius Braniss; Schopenhauer's most ardent disciples, Julius Frauenstädt, D. Asher, Moritz Venetianer. In addition belong to philosophy Ludwig Stein, H. Bergson, Adolph Lasson, S. L. Steinheim, Adolphe Franck, S. Alexander.

Philology.— In the line of language, too, the Jews have labored with zeal. They count among the foremost workers in philology, as well as in literary history and bibliography. A brief summary of names will be sufficient proof — such as G. Ascoli, Jules Oppert, Jacob Bernays, Theodor Gompertz, Michele Amari, Theodor Benfey, M. Breal, James and Arséne Darmesteter, Jos. and Hartwig Derenbourg, H. Weil, W. Freund, Julius Fürst, Lazarus Geiger, Theodor Goldstücker, Ignatz Goldziher, J. Halévy, Wilhelm Bacher, H. Hirschfeld, S. Landauer, Gustav Weill, A. Harkavy, Salomon Munk, Adolf Mussafia, Daniel Sanders, S. Benedetti, L. Kellner, I. Gollanz, and in the United States, Marcus Jastrow, Alexander Kohut, M. Bloomfield, and a number of younger scholars who have done much to arouse interest in Semitic studies at American universities.

History.— In the Middle Ages history was neglected — they had no time to write their history, for before their old sufferings were narrated, new trials were to be endured. A few chronicles alone survive, with some Memor. Books. From the historian Josephus, of the 1st century, to our time, Judaism has produced no eminent historian of the outside world. With so much more zeal have Jews in more recent years devoted themselves to this department, men like Philipp Jaffé, Martin Philippson, Max Büdinger, Harry Bresslau, Samuel Sugenheim, Alfred Stern, Adolf Beer, Ernst Bernheim, Jacob Caro, Heinrich Friedjung, Salomon and Theodor Reinach, Julius Schwarz, Cesare d'Ancona, Alfred Przibram, E. Szanto. Samuel Romanelli is the historian of Venice, and Robert Davidson of Florence. Charles Gross, of Harvard, is an authority on early English history, as is Felix Liebermann on English law. In the history of the Jews in its varied departments Jewish scholars have naturally displayed particular ability — one need only mention names like Graetz, Zunz, Jost, Steinschneider, Geiger, Kayserling, Güdemann, A. Berliner. In the closely-allied branch of archæology, Charles Waldstein is a pre-eminent name, with B. Berenson in art criticism.

Literature.— In its earliest historical period Israel gave to humanity its best achievement in literature—the Bible, which with prophets and psalmists, despite the latest discoveries and researches, remains without a peer in the entire stretch of the world's literature. Since the close of the Canon until to-day the Bible has furnished a wealth of inspiration to the

poets and writers of every race. The greatest poets in the world have been impelled by its words; it has exerted a distinct influence on the literary genius of every European literature, and how much plastic art is its debtor is far from being appreciated.

In the Early and Middle Ages.— The first translation of a book into another language was the Greek translation of the Bible — the Septuagint. This leads us to the participation of Jews in Greek literature. Of Philo, who has already been mentioned, it was said in Alexandria that he wrote as fine Greek as the divine Plato. Then lived, too, the first Jewish dramatist, Ezekiel; then a long line of philosophers, poets, historians, the author of the Sibylline books, and many other writers in Greek. In the Middle Ages the Jews familiarized themselves with Arabic literature, under whose influence the new Hebrew poetry in Spain developed. What Arab and Jew united in those centuries accomplished is not to be overlooked. They rescued the treasures of classical antiquity from oblivion and preserved them for posterity; they enriched the arts and sciences and truly promoted the intellectual growth of humanity. Jews appear, too, among the Arab poets, like Abraham Ibn Sahl, who is praised by them as one of the most graceful singers of love, Ibn el Mudawwer, Kasmune, etc. The Indian and Greek world of fable was communicated to Europe by Jews. During the entire Middle Ages, when the old literary treasures were practically lost, they preserved almost the only knowledge of those romances, stories and fables which were to enter modern literature by a roundabout way through Arabia and Spain from the world of the ancients and the pictured pomp of India. They took a prominent part in those stories from the Orient, which still serve as material for our narrative literature. Later, too, when the Mohammedans were driven from Spain, the Jews displayed a lively interest in the development of the Arabic literature and language. A Moorish Israelite, Ibn Alfange, wrote the first 'Chronicle of the Cid'; another the first Spanish romance; a third — the baptized Petrus Alphonsus — the first story in Oriental manner, 'Disciplina Clericalis'; a fourth was the first Castilian troubadour, Santob de Carrion; and a fifth, Rodrigo de Cota, is credited with the authorship of the first Spanish drama 'Celestina.' In the Spanish songbooks of the 15th century can be found many poems of baptized Jews. At the same era Jews were familiar with French literature. From the glosses of Rashi, the famous Biblical commentator, the old French language has been partly reconstructed; and Rashi's contemporaries, who through Nicolas of Lyra directly influenced Luther, already knew German and utilized that language. At the very period when the Jews in Germany were persecuted in the cruelest fashion, there lived a Jewish minnesinger, Süesskind von Trimberg; a Jew shared in the authorship of 'Percival.' Their epics and elaborations of romantic legends aid to-day in interpreting old German literature.

In Modern Times.— When through Lessing and Mendelssohn the Jews in literature, at least, were emancipated, they devoted themselves to authorship with special zeal. Jewesses, like, Henriette Herz, Rachel Varnhagen von Ense, Dorothea Veit, founded the Berlin Salon and gave distinct impetus to Romanticism. Moses Mendelssohn was not only a philosopher, but one of the first authors in the era of rationalism. Heine is unquestionably the greatest German lyric poet after Goethe, Ludwig Börne the first German critic after Lessing. Berthold Auerbach founded the school of village tales; Fanny Lewald that of the woman's social romance. Jews have taken marked interest in all later literary movements. One may mention in this field the German authors, Karl Beck, Michael Beer, Theodor Creizenach, L. A. Frankl, Leopold Kompert, Karl Emil Franzos, E. Kulke, Moritz Hartmann, L. Kalisch, S. Kapper, Hieronymus Lorm, S. H. Mosenthal, Max Ring, Ludwig Robert, J. Rodenberg, August Silberstein, M. G. Saphir, H. Stieglitz, Daniel Spitzer, J. V. Weilen, L. Wihl, O. L. B. Wolff, Wilhelm Wolfsohn; and of later writers Theodor Herzl, L. Hevesy, A. L'Arronge, F. Lubliner, Fritz Mauthner, Oscar Blumenthal, Max Bernstein, J. J. David, L. Fulda, Max Nordau, Georg Hirschfeld, Felix Holländer, L. Jacobowski, J. Löwenberg, A. Schnitzler, J. Wassermann, Ernst Rosmer, Henriette Ottenheimer, Lina Morgenstern, Betty Paoli, Jenny Hirsch. In the history of literature Ludwig Geiger, Richard M. Meyer, Gustav and Otto Hirschfeld, Otto Pniower, Max Hermann, Eduard Engel, Max von Waldberg, E. Wolff can be mentioned.

In France Jews contribute to all branches of poetry — in dramatic composition may be included Catulle Mendes, Abraham Dreyfus, Ernest Blum, Leon Halévy, A. d'Ennery, A. Valabrègue, and as lyric poet León Gozlan, Gustav Cahn, Eugène Manuel, Louis Ratisbonne. In England Sir Philip Magnus has written extensively on education, Joseph Jacobs is an authority on folklore, Sidney Lee is a leading Shakespeare scholar, Emanuel Deutsch was the first to tell the English world what the Talmud really was, B. L. Farjeon was a voluminous novelist, while I. Zangwill is prominent in various lines. In Italy one may point to Alessandro d'Ancona, David Levi, Tullo Masserani, Erminia Fuá; in Denmark to Henrik Hertz, M. Goldschmidt, Georg and Eduard Brandes, Silvia Benet; in Sweden to O. Levertin and Sophie Elkan; in Holland to Isaac d'Acosta of the past and H. Heijermans of the present; in Russia to S. Frug, S. Nadson, N. Minsky; in Rumania to Ronetti Roman, the greatest poet of our day, and to H. Tiktin, the greatest philologist; in Hungary to Ludwig Doczi, Josef Kiss, Adolph Agai, A. Nemény, all writers of distinction. In the United States Isaac Harby, Mordecai M. Noah are names of the past; with Emma Lazarus admittedly the leading poet and essayist, and among present-day story-writers I. K. Friedman, Ezra S. Brudno, Emma Wolf, Miriam Michaelson, Martha Wolfenstein, Mary Moss, Abraham Cahan, Montague Glass. Prof. L. Wiener has written on the history of Yiddish literature, Oscar S. Straus on 'The Origin of the Republican Form of Government,' and 'Roger Williams.' Professor Winkler has edited a number of German classics. In journalism Jews have undoubtedly attained prominence, as names like L. Sonnemann, Dernberg and Bernstein in Germany, Brody in Hungary, Lawson and Lucien Wolf in England, Pulitzer, Ochs, Rosewater, De Young in America, amply prove.

We have given merely a survey, necessarily

incomplete, of Jewish activity in art, science and literature, in all ages and among all nations. It has been shown, however, with sufficient clearness that they have always striven with ardent enthusiasm for ideal aims, and with marked energy, despite unfavorable conditions, have taken an active interest in all the developments of the world's intellectual life.

7. THE TALMUD, a code or digest of Jewish laws and opinions. The Talmud is in reality a combination of two entirely separate works — the Mishna being the text and the Gemara its commentary. The name signifies "study," and has come to be applied to the combined text and commentary, although it refers properly to the Gemara alone. There are two recensions of the Gemara, one called the Palestinian Talmud, originating in Palestine, the other Babylonian, in Babylon. They differ both in language and contents. There are only slight variations in their respective Mishnas.

The Mishna.— The word Mishna has been differently interpreted, according to its etymology, either as "second" or as "doctrine," oral teaching. It is a codification of the oral or unwritten law, based upon the written law of the Torah or Pentateuch, and was compiled during the era of the second Temple, and completed at the end of the second Christian century. As in course of time the oral law became unwieldy in bulk and hard to be remembered, owing to its lack of order and arrangement, Hillel, who presided over the Sanhedrin in Herod's days, made the first attempt to systematize the immense mass of material by arranging it in six divisions, which were accepted by later revisers. Rabbi Akiba, who participated in the Bar Cochba revolt, went a step further by employing a more correct method of division. His disciple, Rabbi Meir, continued the work of revision, or, rather, collation, of old-time usages and teachings. Toward the end of the 2d century, R. Judah, the Prince, called "Rabbi," a descendant of the wise Hillel, strove to complete the work of his predecessors, sifted anew the mass of traditional ordinances, and became, by his intellectual vigor and freedom. the real compiler of the Mishna. In his later years he subjected the work to further revision, although some additions after his death were made by others. Whether Rabbi wrote the Mishna or merely transmitted it orally to his disciples is not definitely known, and has long been a moot point among scholars, with the probability in favor of his having written the work.

Divisions of the Mishna.— The Mishna is divided into six chief sections, called Sedarim or Orders: (1) Zeraim, seeds or products of the field, containing the ritual laws respecting agriculture. (2) Moed, Festival, referring to laws of the Sabbath and festivals. (3) Nashim, Women, including rules about marriage and divorce. (4) Nezikin, Damages, a large section of the civil and criminal law. (5) Kodashim, Sacred Things, discussing the laws of sacrifice and the Temple service. (6) Teharoth, Purification, treating of regulations as to things clean and unclean. Each Order is divided into Masechtoth, or treatises, which are 63 in all in the Mishna. Each treatise is subdivided into chapters, or Perakim, and each chapter or perek into paragraphs, each of which is called Mishna or halakhah, law principle. The arrangement of the Orders is fixed, although the sequence of treatises, chapters and paragraphs is more open to question.

Contents of the Treatises of the Mishna. —The best way to describe the subject matter of the Mishna is to give a list of the various treatises and their contents. These are as follows, according to the six Orders: I (1) Berakhoth, benedictions, treating of liturgical rules. (2) Peah, corner, about the corners and gleanings of the field. (3) Demai, uncertain, about corn bought from those suspected of not having given tithes. (4) Khilayim, mixtures, about the prohibited mixtures in plants, animals and garments. (5) Shebiith, the Sabbatic year. (6) Terumoth, heave offerings for the priests. (7) Maaseroth, tithes to be given to the Levites. (8) Maaser Sheni, the second tithe, according to Deut. xiv, 22–26. (9) Challa, the dough, to be given to the priests, as ordered in Num. xv, 20–21. (10) Orla, treating of the fruits of the tree during its first four years, as commanded in Lev. xix, 23–25. (11) Biccurim, or first fruits. The contents of Order II: (1) Sabbath, giving an account of labors prohibited on that day. (2) Erubin, combinations, continuing the subject of the preceding treatise and referring to the Sabbath boundary. (3) Pesachim, relating to the laws of Passover and the paschal lamb. (4) Shekalim, the law of the half-shekel temple tax. (5) Yoma, of the day of Atonement. (6) Sukkah, of the laws concerning the Feast of Tabernacles. (7) Betsah, of the work permitted or prohibited on the festivals. (8) Rosh Hashonah, of the feast of the New Year. (9) Taanith, as to the public feasts. (10) Megilla, the scroll, about the reading of the book of Esther on the feast of Purim. (11) Moed Katan, minor feasts, referring to the intermediate days of the festivals of Passover and the Feast of Tabernacles. (12) Chagiga, feast offerings, referring to the private offerings on the three pilgrim festivals. Order III: (1) Jebamoth, sisters-in-law, about levirate marriage. (2) Khetuboth, marriage contracts, of dower and marriage settlements. (3) Nedarim, as to vows and their annulment. (4) Nazir, of the laws concerning Nazarite. (5) Sotah, about the woman sus-

pected of infidelity, according to Num. v, 12–31. (6) Gittin, the laws of divorce. (7) Kiddushin, of betrothals. Order IV: (1) Baba Kama, of damages and injuries. (2) Baba Metsia, of laws concerning found property, buying and selling, lending, hiring and renting. (3) Baba Bathra, of real estate, trade and hereditary succession. (4) Sanhedrin, of courts, their procedure, and capital punishment. (5) Maccoth, stripes, referring chiefly to false witness and its penalties. (6) Shebuoth, oaths, about the various kinds of oaths, private and public. (7) Eduyoth, testimonies, laws and decisions collected from the testimonies of famous teachers. (8) Abodah Sara, idolatry, of idols and their worshipers. (9) Aboth, a collection of ethical sentences from the fathers or Mishna teachers. (10) Horayoth, decisions, as to the effect of erroneous decision by a religious authority, according to Lev. iv, 5. Order V: (1) Sebachim, sacrifices, of animal sacrifices and the mode of offering. (2) Menachoth, meat-offerings, about meat and drink offerings. (3) Chullin, of the methods of slaughtering animals for food and of the dietary laws. (4) Bekhoroth, of the laws concerning the firstborn. (5) Arakhin, values, as to how things or persons dedicated by vow are legally appraised to be redeemed. (6) Temurah, exchange, of the laws about dedicated things which have been exchanged, according to Lev. xxvii, 10–27. (7) Kherithoth, excisions, of the sins subject to the penalty of excision and their expiation. (8) Meila, trespass, concerning the sins of profaning sacred things. (9) Tamid, the daily sacrifice, a description of the Temple service connected with the daily morning and evening sacrifice. (10) Middoth, measurements, giving chiefly the measurements and description of the Temple courts, gates and halls. (11) Kinnim, birds' nests, an account of the sacrifices which consist of fowls, the offering of the poor. Order VI: (1) Khelim, as to how domestic vessels become unclean ritually. (2) Ohaloth, tents, as to how tents and houses become ritually unclean. (3) Negaim, of laws as to leprosy of men, garments and houses. (4) Parah, the heifer, treats of the red heifer and its ashes as a purifying agent. (5) Teharoth, purification. (6) Mikvaoth, wells, how wells and reservoirs are fit to be used for ritual purification. The remaining six treatises concern various kinds of ritual uncleanness.

The Mishna Rabbis.— The men who are mentioned as authorities in the Mishna are among the most notable names in Jewish history for about five and a half centuries from the era of the scribes to the death of Rabbi (210). They include the scribes of Soferim, who succeeded Ezra, and continued for about two centuries, the teachers who headed the Sanhedrin in pairs from the Maccabean struggle until the period of Hillel and Shamai, and finally the disciples of the two latter and their successors. These were called Tanaim teachers, whose opinions extend over fully two centuries, and whose disputations reveal marked intellectual keenness. Another class of rabbis received the name of Amoraim, speakers or expounders, whose labors were carried on in the schools of Tiberias, Sepphoris and Cæsarea in Palestine, and in Nahardea, Sura and Pumbaditha in Babylonia. Their province was to explain the terse Mishna phrases, examine into their sources, reconcile apparent contradictions and apply the traditional principles to new cases. The Palestinian Amoraim were titled rabbis, the Babylonian rab or mar. They date from the death of Judah the Prince to the end of the 5th century, which marks the compilation of the Babylonian Talmud. They number several hundreds, while their predecessors, the Tanaim, amounted to about 120.

The Gemara.— The name Gemara, which means completion or doctrine, which has come to be used interchangeably with Talmud, is practically a commentary on the Mishna, although some of its elements may be older. It embraces the discussions and interpretations of the Amoraim, but contains in addition a vast bulk of matter often unconnected with the Mishna text and touching upon law, history, ethics and homiletics. The Palestinian Talmud, the work of the schools and schoolmen of Palestine, was more distinctly national, being composed on Jewish soil, and was completed about 370, although a later date is claimed by some. The Babylonian Talmud was finished about a century later. If rabbis like Jochanan, Rab and Samuel were pioneers in the work, others gave the finishing touches, men like Rabba (270–330), Abayi (280–338) and Rava (299–352), while Ashi (352–427) and Rabina (d. 499) are associated with its actual compilation. The Palestinian Gemara in its present form extends only over 39 out of the 63 treaties of the Mishna, thus indicating a probable loss of many treatises. The deficiency may partly be due to persecutions which abruptly closed the schools in Palestine, and partly to the fact that the Palestinian Gemara hardly received the favor and attention which commentators have given to the Babylonian. It is stated that Ashi devoted 30 years to the task of compilation and then revised the entire work. His Gemara covers only 37 of the treatises of the Mishna.

The Two Gemaras Compared.— The Gemaras differ in language, style and method. The Mishna is in new Hebrew, which was developed during the era of the second Temple. While the popular language was Aramaic, the ancient Hebrew was retained for the liturgy and legal forms. Contemporary languages had their influence on it, and the Aramaic, Greek and Latin were drawn upon and modified by the Hebrew idiom. In regard to the Palestinian Gemara, the language is the West Aramaic, which was current in Palestine in the age of the Amoraim. The language of the Babylonian is a blend of Hebrew, East Aramaic and Persian, with other dialects whose decipherment is often attended with much difficulty. Of the main elements of the Gemara, the halakhah or abstract law element, and the hagadah or legend, the former is more fully represented in the Palestinian, while the latter is more at home in the Babylonian edition. In size the Palestinian is about one-third of the Babylonian, and only in modern times has aroused the attention of Jewish scholars. The study of the Babylonian Talmud, however, flourished in North Africa and thence passed to Spain, France, Germany and Poland and was ever a subject of interest and devotion. It gave rise to a vast library of rabbinical literature. Not the least curious incident connected with the spread of this study is that the four messengers sent by the schools of Babylonia in their days of decline to collect funds from their

richer brethren in other lands were taken captive by the Spanish pirates and sold in different slave-markets. All were redeemed by their co-religionists and they became the heads of the community at Cairo, Kairwan in Africa, Cordova and possibly in Narbonne. Among names eminent in the diffusion of Talmudic learning from the East to the West after the era of Sherira Gaon, his son Hai Gaon and Samuel bar Hophni, were Gershom ben Judah of Metz, Isaac of Troyes, Jacob ben Yakar of Worms, Nathan ben Jechiel of Rome, Isaac ben Judah of Mayence and the famous Rashi, his sons-in-law and disciples. After the expulsion of the Jews from England (1290) and France (1306), Poland became a favored home for them and a seat of Talmudic learning whose glory has not yet been extinguished, although in other lands such lore is less cultivated. Of recent years, however, a fresh impulse has been given to Talmudic studies both in Europe and the United States.

The Talmud in History.— The history of the Talmud is essentially a history of the religious and intellectual development of the Jews, which has been elsewhere treated. A spiritual temple arose among the Israelites when the Temple at Jerusalem had been destroyed by the Romans. The Talmud's history, however, is an important theme, and a brief glance at the varying fortunes of this volume will show the continuous persecution which it has received, like the Jew himself. It was proscribed by state and church, mutilated by the official censor, condemned by councils, burned by popes and kings. Earlier centuries show a scattering fire of fulminations against it, from the era of Justinian, but the Middle Ages were persistent in such incidents of violence. In 1240 the Jews of France were compelled to surrender their copies of the Talmud and the work was put on trial, the result of which was that it was ordered to be burned. Twenty-four carloads of the Talmud and similar writings were seized by Saint Louis and publicly burned in Paris in June 1242. The anniversary was held as a fast and elegies were written on the event. Barcelona had a four days' trial of the Talmud on 20 July 1263. In 1264 Clement IX issued a bull of confiscation and subjected the Talmud to examination by the Franciscans and Dominicans, who expunged what they deemed abusive and blasphemous. Tortosa, Aragon, witnessed a public trial of the Talmud, which lasted from February 1413 until 12 Nov. 1414 and had 68 sessions. Pope Benedict XIII presided, condemned the work to the flames and prohibited its further study. His bull of 11 clauses issued 11 May 1415 never came into effect, for he was deposed by the Council of Constance. The hue and cry against the Talmud in the beginning of the 16th century was to have a marked influence on the Reformation and to pave the way for a Hebrew renaissance. On 19 Aug. 1509 the Emperor Maximilian gave Pfefferkorn full power over the Talmud and similar works; but when he demanded their surrender the Jews of Frankfort appealed to the archbishop of Mayence, who temporarily checked the Dominicans. Reuchlin, the head of the Humanists, was asked to describe the character of the Talmud and by him it was vindicated. Hutten and the author of 'Epistolæ Obscurorum Virorum,' lampooned Hoogstraten and the Dominicans. The Talmud gained new adherents, including Erasmus and Franz von Sickingen. The universities were appealed to for their opinion and the University of Paris condemned the Talmud. Finally the subject was brought before the Lateran Council and the Dominicans were compelled to pay the costs of their suit against Reuchlin, while Leo X permitted the Talmud to be printed by Daniel Bomberg at Venice. It was in the very year of the *editio princeps* of the Talmud (1520) that Luther at Wittenberg burnt the Pope's bull. On 12 Aug. 1553 Pope Julius III signed the decree laid before him by the Inquisition-General, condemning to confiscation and the flames throughout Italy all copies of the Talmud and Hebrew books. Paul IV continued hostile, but Pius IV modified somewhat the harsh laws of his immediate predecessors. His bull (24 March 1564), in accordance with the decision of the Council of Trent, allowed the Talmud to be printed provided its name were omitted and it had been submitted before publication to the censor. The mutilations of the Talmud in accordance with the whim of an ignorant censor were often very curious; that the word heathen can refer to a non-Christian and that the Rome of the early rabbis was not the Rome of the papacy did not dawn upon the intelligence of the learned inquisitors. A brighter day was now to follow, with the Hebrew renaissance. In Holland, England and Switzerland, Talmudic studies attracted a host of scholars, and the Buxtorfs, L'Empereur, Sheringam, Selden, Surenhuys, were among those who strove to popularize rabbinical lore and who were to be succeeded by a host of learned men down to our own day — translators and interpreters in varied fashion. It is true, the Talmud was now and then subjected to condemnation; as recently as 1757, a large number of copies were burned in Poland by fanatics. Germany, too, during the wave of anti-Semitism, revived old-time accusations. But the Talmud has survived the storm and Christian scholars like Franz Delitzsch, August Wünsche, H. L. Strack and W. H. Lowe have joined with a host of Jewish scholars in its vindication and interpretation. After all its vicissitudes, it seems to have found rest as a distinct addition to the world's culture. Pope Clement's proposal in 1307 to found Talmudical chairs at the universities has been adopted to some extent in Europe and America.

Talmud Manuscripts, Editions and Translations.— It is not to be expected that many manuscripts of the Talmud have been preserved after its experiences during the Middle Ages. The bonfire at Cremona in 1559, in which 12,000 volumes of the Talmud were burned, was only one of such incidents. The only known complete manuscript of the Babylonian Talmud, 1369, is in the Royal Library of Munich. Codices of single portions are preserved in the Vatican Library and in the libraries at Oxford, Paris, Leyden and other cities of Europe. Columbia University has secured from South Arabia a collection of manuscripts containing four treatises which date from 1548. The University Library of Cambridge, England, has a fragment of the Talmud Pesachim, from the 8th or 9th century, edited in 1879, with an autotype facsimile by W. H. Lowe. Manuscripts of the Mishna or portions of it are found in a few libraries

abroad. The only manuscript of the Palestinian Talmud of any importance is to be found in Leyden. As to printed editions of the Mishna, the first appeared (1492) in Naples and has since been followed by numerous others. In Venice (1520–23) appeared the first edition of the Babylonian Talmud by Daniel Bomberg in 12 folio volumes and it has been followed by many editions in Venice, Basel, Amsterdam, Berlin, Warsaw, Vienna, etc. Only four complete editions of the Palestinian have appeared, Bomberg's Venice edition of 1523–24 being the first. Several parts, however, have been issued with commentaries. The Mishna has been translated into Latin and German and partially into English. Translations of single treatises of the Babylonian Talmud have appeared in Latin, German, French and English. At present complete translations of the work are being attempted in Berlin and New York. Special monographs have appeared on the medicine of the Talmud, its mathematics, its botany, zoology, astronomy, civil and criminal law, its legends, its archæology, meteorology, coins and weights, chronology and calendar, its customs, ethics and psychology, its exegesis, geography and history, linguistics, education, its superstitions and philosophy, its poetry and proverbs—an extensive list that proves how comprehensive is the work and how many-sided the old-time sages who fought and wrought until the fabric was finished. Out of its mines the workmen are still bringing fresh gems to light and its deep lying strata furnish an inexhaustible field for research in almost every department of human knowledge.

The Talmud's Influence.— On the Jewish people the influence of the Talmud has been remarkable, not only by maintaining religious ideas among them, but by promoting their solidarity. Its development illustrates the buoyancy of Judaism and the ease with which at a time of national overthrow and dispersion a fundamental reform could be instituted. It was a darings design, when so much of the Mosaic law had lost its application, to infuse new life into the religious code and provide for continuous intellectual development. The soldiers who defended Jerusalem became scholars whose labors were to be more successful in the field of progress and thought. The Talmud, too, was a popular institution — it was no exclusive possession of the few. All could become sages if they had the brain and soul-power. In its disputations, a purer atmosphere was breathed that made the Dark Ages impossible — it was tonic and preservative as well. Hence Jews could be scientists, physicians, poets, philosophers in goodly number, because their intellects had been Talmud-fed and they had no craving for the riotousness and immorality that prevailed among their contemporaries. The rabbi, too, was no idle ecclesiastic, but a resolute worker, now a saddler, now a weaver, now a carpenter, now a dyer, for the study of the law was held to be most meritorious when combined with some manual employment. Hence the helpful and ennobling domestic life, in ages when family vices, not virtues, were exemplified alike in court, palace and hovel. On the other hand, it must frankly be stated, that the exclusive study of the Talmud was often narrowing and repressive, with an unhappy influence on Jewish growth. It produced in such instances an intellectual Ghetto, utterly foreign to the spirit of representative sages, dwarfing the Jewish soul and its ambitions. When scholars become scholiasts, and broad students fatuous schoolmen, like the mediæval champions who argued as to how many angels could stand on the point of a needle, mental decay is inevitable. Hence the study of the Talmud degenerated at times into useless dialectic, which met the severe rebuke of clear-thinking rabbis, but held sway over many minds and particularly in lands where the Jew knew no vernacular but a mongrel jargon of his own, and had no rights or privileges as a citizen, being merely a serf or underling, to be told to "move on!" with every fresh outbreak of the mob — a veritable Ahasuerus of the popular imagination, ever wandering. No wonder that under such conditions he found solace in his Talmud and built his mountains of syllogism on very unsubstantial basis. It was Moses Mendelssohn who broke away from the intellectual Ghetto of his coreligionists and paved the way for their emancipation from the exclusive Talmudic atmosphere. They were to be citizens of the world hereafter and civil and religious liberty became their possession. The Talmud was to be cherished, but not made an idol of, to be venerated, but not worshiped. It was a work to be studied, but not regarded as an infallible authority. It was to be analyzed, dissected, subjected to criticism as the work of men. Bible, Mishna, Gemara, with ritual codes and commentaries, were but steps in the progressive development of Judaism whose sages are restricted to no age and clime, but are continuous as God's revelation. One can thus understand how the Talmud supplies ammunition to all schools in modern Jewry, whether right, left or centre; progressive or conservative; advances of orthodoxy or reform.

Faults of the Talmud.— While claiming high rank for the Talmud among the works that have influenced millions of people, it is not necessary to glorify it out of all proportion and assert its absolute perfection. There are faults in this encyclopedia, which records the opinions of a thousand disputants of different climes, conditions and eras, their after-dinner talk, as it were, and their more serious utterances. These faults are given as four-fold by the Jewish historian Graetz (History, II, p. 633, Am. ed.). The Talmud contains much that is immaterial and frivolous, it reflects the superstitions and views of its Persian birthplace, with their magic, incantations, miraculous cures, demoniacal medicine and mystic dreams — all opposed to the spirit of Judaism. Then, too, it contains occasional instances of harsh judgments and decrees against other nations and religions; and, finally, it seems to favor an incorrect exposition of Scripture, accepting, as it does, often tasteless interpretations. What Graetz asserts is not to be denied; yet these defects are not organic. The Talmud is not one book but a collection of books; is not by one author, but by a thousand authors; is the work not of one age, but seven centuries. What wonder, then, that there are faults in such a composite creation, which Graetz compares to a literary Herculaneum and Pompeii, comprising the sublime and the common, the great and the small, the grave and the ridiculous, the altar and the ashes, things Jewish and heathenish side by side. The expressions of uncharitable-

ness, often nothing but the utterances of ill-humor and righteous indignation of some single teacher, preserved by over-faithful pupils, are more than counterbalanced by the breadth and humanity that often illuminate the Talmud; and by its recognition of genuine religion as something higher than race or creed. One must also consider that the rabbis never enjoyed security for any prolonged period. The Roman, the Greek, the Persian and the rest were ever «baiting» them, and persecutions were constant. If their utterances were human and expressed their agony and passion in times of bitter distress, the spirit of broad humanity was never wholly absent from their complaints. It was a sage of the Mishna who said: «A heathen who occupies himself with the law of God stands in the same rank as the high priest.»

Commentaries on the Talmud.—The first to write a commentary on the Mishna was Maimonides (12th century), originally in Arabic. Manuscripts of this work are in the Bodleian and have been translated into Hebrew by some scholars of the 13th century. R. Tanchum of Jerusalem followed Maimonides by writing a lexicon of the Mishna in Arabic. This has never been published, but manuscript copies exist in the Bodleian. A large number of commentaries have appeared upon the Mishna in whole or in part, usually clear and simple in aim, concise and exact in expression. As commentator on almost the whole of the Talmud, Rashi of Troyes (1040–1105) is most eminent, and his very clear and systematic exposition appears in every edition of the Babylonian Talmud. The supplements and additions to Rashi's commentary were written by his relatives and pupils. A collection of notes and discussions called Tosafoth, additions, appears in all Talmud editions, whose authors called «Tosafists,» lived in France and Germany during the 12th and 13th centuries. Three of the more important later commentators whose expositions are printed in many Talmud editions are Solomon Luria (16th century), Samuel Edels (d. 1631) and Meir Lublin (d. 1616).

Helps to Talmudic Study.— These consist of lexicons from the oldest, the Aruch of R. Nathan ben Jechiel of Rome, of the 11th century, recently revised and enlarged by Kohut as the 'Aruch Completum,' to Fischer's revised and enlarged edition of Buxtorf, Levy's 'Dictionary of the Talmuds and Midrashim' (in German) and Jastrow's 'Dictionary of the Talmud,' etc. (London and New York, 1886–1903), an admirable and scholarly work. Then must be mentioned grammars, like Luzzatto's and Levias', which aid in the study of the idiom of the Babylonian Talmud, chrestomathies for beginners and more elaborate introductory works and treatises from Samuel Hanagid's fragment (11th century) and Maimonides' introduction, translated into German by Pinner, to modern authors like Brüll, Frankel and pre-eminently J. H. Weiss. There are other works of reference, but the best help is the living teacher, who is obviously the most trustworthy pilot through the «sea of the Talmud.»

Bibliography.— Mielziner, 'Introduction to the Talmud'; Deutsch and Darmesteter, 'Essays' (Jewish Publication Society of America); Schechter, 'Studies in Judaism'; Ginzberg's 'Legends of the Jews'; Isaac's, 'Stories from the Rabbis'; Graetz, 'History, Vol. II'; De-Sola and Raphall's 'Eighteen Tractates from the Mishna.' An exhaustive bibliography in English, German and French is given in Mielziner's work. The various volumes of the 'Jewish Encyclopedia' furnish ample material.

ABRAM S. ISAACS,
Professor of Semitic Languages, New York University.

8. THE MASORAH. Masorah or **Massorah** is the name given to the body of critical notes on the external form of the Hebrew-Aramaic text of the Old Testament. The name is taken from Ezek. xx, 37, and means originally «fetter,» the fixation of the text having been correctly looked upon as a fetter on its exposition. In later times the word assumed the meaning of «tradition.» This body of notes represents the literary labors of a long line of scholars, very few of whom are known by name, who flourished during a period of about 17 centuries — from about 300 B.C. to the invention of printing. They were mostly copyists or professional scribes or teachers of the Bible and their notes were the outcome of a close application to their professional work.

Object and Method.— The chief object of the masoretic notes was to serve as a guide to the copyists and enable them to produce a faultless Bible-text. They were written on the margins of private Bible-codices or between the lines and collected in a body before or after such codices or finally compiled in special independent works. In Bible-scrolls designed for public use at the synagogue no notes were permitted in accordance with the injunction of Deut. iv, 2. The amount of masoretic notes differs greatly depending on the amount of space at the copyist's disposal; on the size of the script used, the price of the writing material and of the scribe's labor and on the fanciful shape he gave to his glosses, which were sometimes written so as to form ornamental decorations to the book.

The independent works are arranged topically in numbered groups or rubrics; the interlinear and marginal notes, however, follow the order of the text, forming a kind of running annotation. Presumably in the course of time a certain technique was worked out with regard to the distribution of masoretic material. Certain matter was designed preferably for the intercolumnal and outside perpendicular margins; other matter for the upper and lower margins, etc. The former is known as the Inner or Small Masorah, the latter as the Outer or Large Masorah; the glosses surrounding the initial word of a book, usually written on a separate line, are called the Initial Masorah. The term Large Masorah is also applied to the lexically arranged notes at the end of the printed Bible, usually called Masoretic Concordance or Final Masorah.

The Small Masorah consists of brief notes with reference to marginal readings, to statistics, showing how many times a particular form occurs in Scripture, to full and defective spelling and to abnormally written letters. The Large Masorah is more copious in its notes. The Final Masorah comprises all the longer rubrics for which space could not be found in the margin of the text.

The old Hebrew text was in all probability

written in continuous script, without any break, and some of its words were abbreviated. The masorites divided the text into words, books, sections, paragraphs, verses and clauses (probably in the chronological order here enumerated), the various divisions being indicated by spaces. They fixed the orthography, pronunciation and cantillation, and introduced the square characters or modern Hebrew script. To indicate various teachings, legal or popular, religious or mystical, they formed some letters in some words in an abnormal way; some are larger, other smaller than the rest, some have their strokes or bars curved, others have them drawn out in a scroll, still others have scroll-like and semi-circular attachments, or a broken stroke. Most of these graphic peculiarities are of a late date and their vogue was short-lived; the printed Masorah either ignored them or did not know them, and some of the terms referring to such peculiarities were already misunderstood by specialists in the 14th century. More of a purely caligraphical origin are the titles or apices on certain letters of alphabet.

There are four words having one of their letters suspended above the line. One of them, the *n* in the name of Manasse (Judges xviii, 30), is due to a correction of the original Moses, out of reverence for the latter. The origin of the other three (Ps. lxxx, 14; Job xxxviii, 13, 15) is doubtful. In the opinion of some they are mistakes for large letters; according to others they are later insertions of originally omitted weak consonants.

Nine passages in the Bible are preceded and followed by signs usually called "inverted Nuns," because they look like the letter N in the Hebrew alphabet. These signs are probably of text-critical importance. Their real significance is, however, unknown.

In 15 passages some words are stigmatized as a sign of deletion. At a later period a marginal reading takes the place of a stigma. The marginal readings are of a threefold character: (1) words to be read for those written in the text; (2) words to be read for those not written or omitted in the text; (3) words written, but not to be read. The origin of these variants is manifold. Some represent various readings in ancient manuscripts; others arose from the necessity of replacing erroneous expressions by correct ones, difficult, irregular, provincial and archaic, by simpler, current and appropriate; or cacophonous by euphonious expressions. Some of them may have been designed to call attention to some mystic meaning or homiletical lesson supposed to be embodied in the text. Finally, and this at a later date, they represent variant readings found in Talmudic literature.

In traditional literature the observation is found that in some passages the number of which varies in the different sources as 7, 11, 13, 15 or 18, the Bible contains expressions other than the context would lead one to expect. To the question why this is so, the earliest sources answer: "the Bible uses euphemism." The later sources, however, explain this by the assertion that the men of the Great Synagogue, i.e., the scholars of pre-Maccabean times, had made corrections in the text. Modern investigators are inclined to attribute these peculiarities to the authors or redactors of the Biblical books themselves, the latter shrinking from putting in writing a thought which some of the readers might expect them to express. The assertion about the corrections made by the scribes is probably due to the tradition which ascribes the redaction of several books of Scripture to the Great Synagogue.

Textual Correction.— There are, however, phenomena in the Biblical text which lead one to assume that at some time textual corrections had been made. These corrections may be classified under the following heads: (1) Removal of unseemly expressions used in reference to God; e.g., the substitution of the verb "to bless" for "to curse" in certain passages. (2) Safeguarding of the Tetragrammaton; e.g., the substitution of Elohim for Yhwh in certain passages. Under this head some have counted such phenomena as the variants of the divine names in proper names, e.g., Joahaz for Jehoahaz. (3) Removal of application of the names of false gods to Yhwh; e.g., the change of the name Ishbaal to Ishbosheth; or, according to another opinion, from Ishbosheth to Ishbaal. (4) Safeguarding the unity of divine worship at Jerusalum. Here belongs the change of the city of "Righteousness" (Isaiah xix, 18) to that of "Destruction."

A large portion of the Masorah is given to statistical data: how many letters, words, verses, sections and chapters there are in each book and in all of them together; which is the middle letter, word or verse in each book; how many words begin with a certain letter or combination of letters; how many times a particular form of word occurs in the Bible, etc. This feature probably has its origin in the early copyists counting the letters of the text to have a basis for calculating the charge to be made for their labor.

Beside the labors of fixing and guarding the purity of the text, the masorites put the world of scholars under the greatest obligation by inventing and introducing in the 6th century systems of vocalization and accentuation, embodying the pronunciation as handed down in the schools of their time, and their understanding of the textual connection. A great deal of our grammatical knowledge of the Hebrew language is based on their vocalization.

History and Development.— The history of the Masorah may be divided into three periods: (1) creative period, from its beginning to the introduction of vowel-signs; (2) reproductive period, from the introduction of vowel-signs to the printing of the Masorah in 1425; (3) critical period, from 1425 to the present day. The cultivation of masoretic studies both took its rise and had its culmination in Palestine. Still, it had already in the 2d Christian century its workers in Babylonia. In the course of time differences of spelling and pronunciation developed not only between the schools of Palestine and Babylonia, but in the various seats of learning in each country. In Babylonia the school of Sura differed from that of Nehardea; similar differences existed in the schools of Palestine, where the chief seat of learning in later times was Tiberias. These differences must have become accentuated with the introduction of graphic signs for pronunciation and cantillation; and every locality, following the tradition of its school, had a standard codex embodying its readings. The Biblical text accepted by us, its vocalization and accentuation, the Masorah in its contents and language, as well as the

regulations with reference to writing of Biblical books, all are of Palestinian origin. Fragments of text and Masorah originating in Babylonia have but recently been discovered.

In this period living tradition ceased, and the masorites in preparing their codices usually followed the one school or the other, examining, however, standard codices of other schools and noting their differences. In the first half of the 10th century Aaron ben Moses Ben-Asher of Tiberias and Ben-Naphtali, heads of two rival masoretical schools, each wrote a standard copy of the Bible, embodying the traditions of their respective schools. Both of them were descendants of distinguished families of masorites. Ben-Asher's codex became recognized as the standard text of the Bible. Notwithstanding this, for reasons unknown, neither the printed text, nor any manuscript which has come down to us, is based entirely on Ben-Asher; they are all eclectic. The two rival authorities, Ben-Asher and Ben-Naphtali, practically brought the Masorah to a close. Very few additions were made by the later masorites, styled in the 13th and 14th centuries *Nakdanim*, who revised the works of the copyists, added the vowels and accents, and frequently the Masorah. Considerable influence on the development and spread of Masoretic literature was exercised during the three first centuries of the second millennium by the Franco-German school of *Tosaphists*, or Talmudic annotators.

Jacob ben Hayyim ibn Adonijah, having collated a vast number of manuscripts, systematized his material and arranged the Masorah in the second Bomberg edition of the Bible (Venice 1424–25). Besides introducing the Masorah into the margin, he compiled at the close of his Bible a concordance of Masoretic glosses for which he could find no room in a marginal form, and added an elaborate introduction — the first treatise on the Masorah ever written. In spite of its numerous errors this excellent work has generally been acknowledged as the "textus receptus." Next to Ibn Adonijah the critical study has been most advanced by Elijah Levita, who published his famous 'Massoret ha-massoret' in 1538. The 'Tiberias' of the elder Buxterf (1620) made Levita's researches accessible to Christian students. Levita compiled likewise a vast masoretic concordance which still lies in the National Library of Paris unpublished. Other prominent workers in this field in the times of the Renaissance were Rabbi Meir ben Todros ha-Levi, Menahem di Lonzano, and Jedidiah Solomon of Norzi. In modern times, to mention only the most prominent names, were W. Heidenheim, S. Pinsker, S. Frensdorff, S. Baer and C. D. Ginsburg.

In imitation of the Masorah to the Hebrew text a similar work exists to the text of the Aramaic version, known as Targum Onkelos. Its date is probably about 900.

Bibliography.— On the name: Bacher, W., *Jewish Quarterly Review* (III, 785); Levias, C., in 'Hebrew Union College Annual' for 1904. On the Masora: Ibn Adonijah, 'Introduction' (ed. Ginsburg, London 1865); Levita, 'Massoret ha-massoret' (ed. Ginsburg, ib. 1867); Strack, H. Formerly Professor of Hebrew, Union College.

9. THE CABALA. Cabala designates the mystic lore of the Jews and the practices based thereon. The name is etymologically related to a Hebrew verb meaning to receive and which is technically used to denote the reception and transmission of divine revelation. Its application to theosophic speculation and theurgic art indicates the belief that the doctrines and practices comprising the Cabala were imparted through divine revelation, saints such as, among others, the Patriarchs being regarded as the chosen recipients of the divine unfolding.

The twofold character of the Cabala as speculative and experimental is expressed in the distinction of the one as Cabala Iynnit — reflective Cabala, and of the other as Cabala Maasit — active or theurgic Cabala. Historically considered, the Cabala antedates by many centuries the works devoted to the exposition of its theories and the inculcation of its practices. Indications are plentiful in both the Apocrypha and the Pseudo-epigrapha, notably in the Enoch books and the Testaments of various Biblical heroes, pointing to the acceptance and currency of Cabalistic concepts at the time these extra-canonical books were composed. Babylonian mythological elements, as well as Zoroastrian theological conceits, were among the extraneous influences that gave fertile impulse to cabalistic speculation. Greek philosophy, especially as developed in the Stoic and Neo-Platonic systems of Alexandria, must also be credited with having stimulated its development. Jewish, of the late pre-Christian, and Christian Gnosticism of the early Christian centuries, may be looked upon as its predecessor. The absolutely transcendental character of Jewish monotheism could not but lay near to reflective minds the fundamental problems, basic to all Jewish mysticism, how the sublime extra and supra-mundane Deity could be the Creator of the existing world and could be regarded as being in contact with it as its ruler and guide, and more especially how man could rise into communion with God. The Biblical account of the Creation known as the Ma'aseh Bereshit (literally the work of the beginning) and the description of the divine chariot in the first chapter of Ezekiel termed the Ma'aseh Merkabah (literally the work of the chariot) were held in early Talmudic records to hide esoteric knowledge within the reach of the chosen few who of mature age and proper degree of wisdom might venture to unravel their occult suggestions. The allegorical method of interpreting scriptural contexts, in vogue among the preachers of Haggadists of the synagogue, stood the elect searchers for the contents of divine revelation transmitted in these two chapters in good stead. By amplifying it, they arrived at the deeper meaning of Genesis i and Ezekiel i, designated by them as the "secrets" and the "hidden things" of the Torah or the Law. But care was had not to divulge publicly the truth thus found. It was zealously reserved exclusively for the "wise"

and "worthy." Concepts that recur as basic to later theosophic speculations are attributed to some of these Talmudic wise men; for instance, the view that fire, water and air existed before creation, these three producing light, darkness and wisdom respectively, the world being a combination of these six elements, or that creation in reality is a process of condensation, God contracting Himself or His garments of light to make room for the world resulting from this operation. The Pantheistic designation of the Godhead as the "Place" the Mākôm (Greek Topos) of the universe credited to some Talmudic doctors is another indication of the prevalence of mystic speculation in the Talmudic schools, as is also the personification of God's "Justice" and "Mercy," of frequent recurrence in Talmudical parlance. Another evidence to the same effect is the tendency characteristic of a number of Talmudical observations to represent God's activity by 10 hypostases of Sephirot, viz., wisdom, insight, cognition, power, strength, immutability, justice, righteousness, love and mercy. Sometimes, as in Philo, wisdom is named as the totality of these 10 potentialities. But most significant in this connection is the occurrence in Talmudic theology of Metatron, an angelic mediator between the transcendental Deity and Creation. He is the Demiurgos, the instrument through which the supra-mundane God acts. Again the soul is often described as pre-existent. The pious are credited with the power while living to ascend to God. During such ascension they learn the secrets of the Beyond. Furthermore the "mystery of sex" and of "marriage," which is one of the main preoccupations of the later (literary) Cabala, as well as the doctrine of emanation, is met with in the Pseudo-epigrapha as in Talmudic passages.

Cabalistic speculation and practice presented in the Talmudic documents in detached glosses proceeded to become more systematic in what is known as the Geonic period (from about 500–900 or 1000 A.D). Jewish mysticism developed a literature of its own which however has been preserved only in fragmentary form. From what is known of the contents of this literature, it is certain that theosophy and cosmogony were central in its speculative interests, while theurgic practice, the art of producing by mystic words and names certain effects, was another department of its preoccupation. In theosophy, the nature and personality of Metatron; the dimensions of God, or those of this mediator, presented the principal theme for discussion. The work entitled 'Shiur Kômāh,' the proportions of the (divine) stature, is devoted to the latter. Descriptions of the celestial halls or Hekalôt and of the visits and experiences of saints and ascetics that made the "ascension" furnish the matter of other treatises. To cosmogonic mysticism belong works treating of the "six days of Creation," the story of the conflict between God and Primal Water, or between the "Masculine" and "Feminine" Waters, descriptions of Paradise and the lower world. As for theurgic art, these fragmentary remnants of mystic literature present expositions of the power vested in such as know the names of angels, or of the prophylactic virtue of the knowledge and the use of mystic names.

The most important work by far is the famous Sephēr Yezirāh, the book of the Creation. Its date is in doubt. Certain it is that before the beginning of the second Christian millennium it had come to be regarded as one of the most important books calling for and receiving commentation at the hands of the most learned. According to this book the fundamentals of all being are Sephirôt or potentialities. These mediate between God and Creation. They comprehend first three emanations, one direct from God and the other mediate, viz.: (1) Spirit or air (Hebrew Ruach), from which came (2) water, which in turn was condensed into (3) fire. To these are added six dimensions, three to the right and three to the left. The 10th element is the Spirit of God. All 10 are eternal, the first three being, however, pre-existent. They are the substance of all that is, the form being supplied by the 22 letters of the Hebrew alphabet. Between substance and form is a contrast. Creation consists in resolving this contrast. God is the solvent. Through Him as the solvent, existence, i.e., combination of form and substance, takes on reality.

The Neo-Platonic and Pythagorean character of the books' theorizing is evident. To some sectaries the affirmations of the treatise seemed too strongly anthropomorphic. They therefore posited between God and universe a mediator, the "Prince of the World," to whom they imputed all acts of creation and to him they referred the corporeal descriptions of God found in the Bible.

Among the systems that to a certain degree were impregnated with Cabalistic Pantheism, and in turn exercised a determining influence on the further evolution of Jewish mysticism, that of Ibn 'Gabirol holds a prominent place, as his philosophy seemed to confirm the theory of God's immanence, underlying the central theory of the Cabala, that of successive emanation.

Subsequently the Cabala differentiated into that of the German Jews, and that of the Jews of Spain and Provence. Among these Eleazar of Worms and Abraham Abulafia deserve mention as exponents of the doctrine. They held that God was too exalted to be cognized by human intellect. But between the Unknowable God and man searching for God was God's Kābôd or Glory, created by God out of His own primal fire. This "Glory" has shape and dimension. It is seated on a Throne in the east but screened by a curtain open alone in the west. To this Kābôd the descriptive adjectives of the Bible refer. Four worlds are in existence: (1) That of this "glory"; (2) that of the angels; (3) that of the animal soul; (4) that of the intellectual soul. This German mysticism on its practical side was a reaction against the dominancy of Talmudic scholarship as the sole measure of piety. It substituted for study prayer, which it viewed as a mystic progress toward God. It reveled in states of ecstasy, as a protest against the barren rationalism and unstirred sobriety of the schools' dialects. Fasting, asceticism and meditation were resorted to to bring on the coveted ecstatic states, or recourse was had to the mystic names of angels and the deity.

The Cabala of the Provence traced its origin

to a revelation by the prophet Elijah to Jacob ha-Nazir, who in turn initiated Abraham, son of David of Posquières, whose son (Isaac the blind) again transmitted the doctrines to his followers. This invoking of the prophet Elijah shows that the mystics of Spain and the Provence regarded their doctrines as of divine authority. That it had come to them from afar — from Babylon by way of Greece and Greek philosophy — is now the theory of the competent scholars. The more important expositions are comprised in the following works: (1) 'Masseket Azilut' or treatise on emanation; (2) 'Bahir,' in which a new classification of the Sephirot is given and the doctrine of continuous emanation is advanced; (3) Azriel's book, written "to present Cabala to philosophers with a view of making it acceptable to them"; (4) a number of pseudo-epigraphic books of the second half of the 13th century, based on the foregoing; (5) the *one* publication commonly regarded as the Bible of the Cabala, the 'Zohar' (Splendor, based on Dan. xii, 3), written in the form of a commentary on the Pentateuch and introduced as R. Simon ben Yochai's production. Analysis demonstrates that the Zohar is "an aggregate of heterogeneous parts." The compilation probably is not older than the beginning of the 14th century. It received its present form largely at the hands of Moses de Leon. Later Cabalists, either exponents or opponents of the Zohar, were Joseph ben Abraham, Ibn Wakar, Moses Botarel, Isaac Arama, Isaac Abravanel, Abraham Saba, Isaac Luria, Moses Zacuto and others. The Cabala found readiest acceptance among the Jews in Turkey and in Poland. The pseudo-messianism of Shabbatai Zewi (1665) rested to a certain extent on Cabalistic expectations, asceticisms, keeping vigils at frequent intervals, performing baptismal ablutions, doing penance, having marked the practices of the adherents of the later Cabalistic teachers, who regarded these acts as preparatory to leading pure lives and expressive of love for man, virtues that were hoped to usher in the coming of the promised Redeemer.

The Cabala of the Jews was not without influence on the thoughts of Christian scholars, among them Raymon Lulli (1225–1315), Pico di Mirandola (1463–94), Reuchlin, Heinrich, Cornelius Agrippa (1487–1535), Zorzi (1460–1540) and others. It is not too much to say that Cabalistic speculation recurs in the theology of some of the noted precursors of the Reformation, and had a share in the development of the Evangelical Church's dogmatics.

In brief, the main contentions of the Cabala are these: (1) God is unknowable in His own essence. He is the En-sôf, limitless, infinite. He is the Hidden of All Hidden. He is the "negative" as far as He is cognizable by man. He is the first primal of all primals, the ulterior principle. Only as far as He has deigned to change His absoluteness into relativity, by permitting creation to take on existence, is He cognizable in measure as creation reveals Him. Between Him and creation, through irradiation or condensation of His primal light, He placed a mediator, Metatron, or the Prince of the World, or the Merkaba or Chariot; to this, sometimes denoted as the first Sephirāh, refer all anthropomorphisms of scriptural description of the Godhead. The Infinite has no attributes. But the Mediator has. He is the "Superior Man," the "Celestial Man," "Wisdom." This primal man or being is the creator and governor of the world. He is endowed with corporeality.

In God, will and thought and action are identical and synchronous — instantaneous. In Him transition from resolution to execution presupposes no change in essence. This divine will is the Rāzôn Kadmoñ, the uncreated eternal will. It is the first principle or sephirāh. God, however, concentrates himself. This "mystery of the divine concentration" (Sôd Zimzum) results in rendering visible that part of himself which is the world. This act is similar to making a rent in a vessel, through which the contents are exposed to view. Through God's self-concentration, however, room is made for the visible world. For it limited vacancy is produced in which the divine ray of light is implanted as the germ of progressive creation. The Infinite has thus himself willed His partial finiteness. The Cause of all Causes has produced the 10 Sephiroth. He is the Crown, the Light that is Infinite. In Him there is neither form nor substance. But He made a little vessel, the letter Yod. It is "wisdom"; then created He the sea, which is reason. This sea He divided into seven streams, for which He made seven vessels: (1) Greatness; (2) power; (3) beauty; (4) victory; (5) highness; (6) foundation; (7) Shekinah or government. Some of these Sephiroth are constructive, others — the first three — are elemental. Some mystics regard these 10 as identical — representing only various aspects of the Divine Infinite — but others hold them to be tools of the Creator, superior beings totally different from Him. In the Sephiroth two natures inhere: (1) That through which all change occurs, i.e., the "vessel"; (2) that which is unchangeable, i.e., the "Light" or the Power.

(2) Man. Man is the highest creature. His body is built according to the mysteries of wisdom. But he is more than body. He is threefold, soul,— animal soul (Nēphesh), moral soul (Ruach), intelligent soul (Neshāmāh). This third soul emanates from "Wisdom," the second from "Beauty," the third from "Dominion, or Kingdom." The soul is pre-existent. After dissolution of the temporary union of body and triune soul, the intelligent soul ascends to God, the moral soul enters Eden, the animal abides peacefully on earth. This is the destiny of the righteous. If stained by sin, the soul has to undergo punitory trials. Hence the Cabala accepts the doctrine of the transmigration of the soul. Only those souls that have fully developed their power may return to God or enter Eden; others will have to serve their period of probation, sometimes two souls being "inter-impregnated," merged into one, so as to help each other in the performance of the allotted task.

Man should love and fear God. Love is the secret of unity with God. In the degree man loves God he rises to higher intimacy with God. Life in the beyond is life which vouchsafes deeper contemplation of the divine reality. Evil is the contrary of the God-like, the "left side." Evil is finite. Evil man mistakes semblance for

substance. He separates himself from God. The Cabala to a certain extent teaches the sinlessness of original man whose fall brought sin and evil into creation.

Man, however, is not eternally lost. He may rise to the centre of divine light through penitence.

The Cabala has induced a more spiritual conception of religion and emphazised its ethical implications more strongly than legal ritualism could vitalize. On the other hand it encouraged the belief in magic, in demons and opened the door to many grotesque and even noxious superstitions. Its adepts came to put faith in signs and constellations, and otherwise naturalized in Judaism many conceits and customs of non-Jewish origin and significance.

Bibliography.— General readers may be referred to Franck, A., 'La Kabbale' (German translation by Jellinek); Ginsberg, 'The Kabbalah'; Flügel, 'Philosophic Qabbala and Vedanta'; Myer, Isaac, 'Qabbalah.' An exhaustive list of special works is given in 'Jewish Encyclopedia' (III, 479).

EMIL G. HIRSCH,
Professor of Rabbinical Literature and Philosophy, University of Chicago.

10. THE KARAITES. A Jewish sect which took its rise in southern Mesopotamia in the second half of the 8th century and which has persisted to the present day. Several causes have contributed to its origin and continuance, some purely personal, others depending upon a difference of view in regard to some of the essential features of Rabbinical Judaism.

Origin.— The development of what is known as Rabbinical Judaism, which commenced after the destruction of the second Hebrew commonwealth, has not been as one-sided as is popularly imagined. In addition to the written law, the basis of all religious and all civil development, an unwritten law had naturally grown up which by its interpretation of the written law fitted that law to the changing times and to different needs. In this manner a large mass of traditions interpreting and enlarging the law has come into being. This mass is known as the oral law, and it gradually acquired a sanction and a sanctity second only to that of the canon. This oral law was not necessarily rigid; for as long as the schools maintained their vigor a natural and healthy development took place. Custom, however, came to the aid of the oral law and in a natural process was itself then regarded as law. The development, however, was not homogeneous. There were at all times within the Jewish polity freer spirits who rebelled against the trammels which a fixed interpretation of the Biblical laws naturally induced. They imagined that by basing themselves wholly upon the word of Scripture they would free themselves, forgetting that they were running the risk of worshiping the letter instead of the spirit which manifested itself in the development of the oral law. From time to time sects arose, having as their principal object the negation of the official tradition. Of such a kind were the Samaritans, though their opposition to the Jews was more political than religious, and in a large measure the Sadducees. To such sects the Karaites belong; but they represent the only sect that has had a long and important existence and against which Rabbinical Judaism had continually to be on the alert.

Anan and the Early Karaites.— The sect was thus to a certain extent the outcome of the opposition to the official oral law. A personal element entered into this opposition. The founder of the sect was a certain Anan ben David, said by some to have been a descendant of Bostani, a celebrated head of the captivity. His followers and certain Mohammedan writers assert that he himself was an exilarch; this is undoubtedly a falsehood. His uncle, however, did occupy that position; and when he died in 760 Anan had a certain right to expect the appointment. A younger brother, Josiah by name, was preferred. Whatever may have been the reason for this preferment, Anan resented it and out of pique had himself proclaimed exilarch in 767. This appeared to the Abbasid Caliph al-Mansur as treason, seeing that the regular exilarch had been confirmed by himself. Anan was imprisoned, and only released by heavy bribes given to the officials. He then started out to build up a following of his own. His immediate followers, who must be clearly distinguished from later Karaites, were called Ananites. This was no difficult matter at that period and in those regions. The Mohammedan world itself was in a ferment, due largely to the pretensions raised by the various followers of Ali. Numerous Mohammedan sects raised their heads, and their example cannot have been lost upon the Jews living in their neighborhood. The influence of Mohammedan thought upon the Jews was great at all times; and it cannot be doubted that this influence was strongly exerted in the formation of Karaism. The central doctrine of Anan's philosophical or theological rebellion was his denial that the oral law was divine. According to him all portions of the Bible are of equal value. One must delve deep into it in order to take out its secret and its hidden meaning. No fixed rules are to govern this study; each individual must find out for himself what is the law. To a greater or less degree similar controversies were raging in the Mohammedan world. The Shiites in a measure denounced tradition (Sunnah) as much as Anan did; and even among the orthodox the question as to the right of individual speculation occasioned bitter controversies. The founder of one of the four chief Mohammedan legal systems, Abu Hanifah, was the one who upheld this doctrine of the right of individual speculation; and it cannot be merely a chance circumstance that he lived in the same place and at the same time as did Anan. In fact it is said that he was imprisoned together with Anan. Undoubtedly the two systems have their basal thought in common.

Spurred on by the example in the Mohammedan world, the Karaites held that they were not a new sect, that they represented true Judaism, and that it is necessary to return to the purity in belief and practice of Moses and the Prophets, just as Mohammed insisted that he simply reintroduced the old religion of Abraham. The Rabbinites he held were following the secession introduced by Jeroboam. The Sadducees had, it was further held, found out a part of the truth; but Anan was the first to reveal it in its entirety. The connection with

the Sadducees seems undoubted, in spite of the fact that the later Karaites rejected the connection, because the Sadducees did not believe in the resurrection. This is seen in their adoption of certain Biblical interpretations which are only to be found among the Sadducees or in the early *Halakah* which was superseded by that which became canonical, *e.g.*, the meaning of the expression "on the morrow after the Sabbath" (Lev. xxii, 11), as the time for commencing to wave a sheaf of the first fruits; the real meaning of the lex talionis (Deut. xix, 21) and the use of the flesh of an animal that was diseased before it was slaughtered. The older Halakah not only forbade one to kindle a light on the Sabbath day but even to allow it to burn — an interpretation followed by the Sadducees, the Samaritans and the Falashas. The early Karaites seem even to have had Sadduceean writings in their possession which are now lost, the authenticity of which not even their great opponent Saadia contested. Anan was an eclectic, and evidently tried to gather into his fold all manner of doctrine that was in any way opposed to the Rabbinical interpretation. Thus he introduced the prohibition of eating meat or drinking wine during the exile of the Jews from the Holy Land; a theory upheld by two minor sects, the followers of Abu Isa of Ispahan (685 to 705), and of Yugdan, a pupil of Abu Isa. But despite his opposition to the Rabbinites, Anan followed their teachings in many things. He himself was a good Talmudist and he took over nearly all the rules of Biblical interpretation upon which the Talmudists based their system. He was by nature something of an ascetic, and consequently was apt to follow in all cases the more stringent rather than the more lenient view in questions of practice. In fact, he may be said to have developed a tradition and a Talmud of his own. His immediate followers, who called themselves "Mourners for Zion," went to live in Jerusalem, where they gradually died out and were of very little influence upon the development even of their own sect.

Development.— In the 10th and 11th centuries Karaism took on quite a large following. It spread notably in Babylonia, Persia, Syria, Palestine and Egypt. It found a second home in Constantinople, and from here spread into Europe and certain parts of the Mediterranean littoral. We hear of Karaites in Salonica, and, what is of more importance, in Spain itself. One reason for this extension was undoubtedly the *point d'appui* that Karaism gave to all those who, for one reason or another, were dissatisfied with Rabbinism. A more important reason was the supineness of the Jewish authorities in Babylon who were the nominal or spiritual heads of all the Jewish communities, but who were fast losing the direction of their affairs and prominence in scholarship. In a most surprising manner these Babylonian authorities misjudged the possible effects of the new schism. Even though proselytes were made out of their own ranks, they must have persuaded themselves that the new movement could be killed by silence. The Gaon Natronai bar Hilai (ca. 857–867) is the first one to busy himself with the new doctrine. In Spain it was otherwise. A Castilian Jew, Oid al-Taras, in 1054, journed to Jerusalem, where he became a convert to the new school. He returned and commenced to spread Karaism among the Spanish Jews. There grew up communities in Carrion, Burgos, Toledo and Talavera, etc. The Rabbinites, however, were aroused, and even secured the aid of the secular arm. Both the religious and the civil power weighed heavily upon the Karaites. At the end of the 11th century, then again under Alfonso VIII (1126–56), and a third time under Alfonso IX (1158–1214), they suffered persecution and the schism was nipped in the bud.

But without making use of secular weapons, a young scholar in Fostat (Old Cairo), Egypt, set out in a scientific way to demolish the foundations upon which Karaism was built up. Had it not been for Saadia ben Joseph (892–942), the heresy might have made great inroads into the Jewish body politic. Not only as a young man in Egypt, but later as Gaon at Sura, he devoted some of his best energies to refuting the works of Anan and to writing anti-Karaitic tracts. The refutation may be said to have been complete; for he set at rest any fear that the heresy might become dangerous to the real unity of Judaism.

The polemics of Saadia naturally called forth replies on the part of the Karaites and produced the flower of Karaite literature. Karaite scholars were forced to defend their theological position, their peculiar interpretation of the Bible, and their knowledge of the Hebrew language. The chief Karaite writers of this period were the polemicist and Bible commentator, Solomon ben Jeruham (940); David ben Abraham al Fazi (950), the author of a Hebrew dictionary; Jacob al-Kirkisani (938), author of a commentary on the Pentateuch; David ben Boaz (ca. 910), author of a commentary on the Pentateuch and a work on the principles of religion; Japhet ben Ali (ca. 1000), their most prolific commentator, and Sahl ben Masliah (ca. 980), the author of a work on the Biblical laws.

Further History.— In the next period Constantinople becomes the centre. Its most important Karaite scholar was undoubtedly Judah Hadassi (1149), the author of the 'Eshkol ha-Kofer,' an encyclopedic work in rhymed prose, giving a whole system of Karaite theology and treating of the most varied subjects. After him lived Aaron ben Joseph, the elder (1300), a native of the Crimea, who is known not only as a distinguished Bible commentator, but as the compiler of the prayerbook still used by the Karaites, and to which he contributed some notable poems of his own. Aaron ben Elijah, the younger (1300–69), wrote the most philosophic treatise (Gan Eden) of any Karaite, as well as a commentary on the Pentateuch which is still very much in honor among his fellow-believers. He had studied thoroughly the writings of Maimonides, and he did his best to raise up Karaism out of the morass into which it had fallen through the heavy onslaughts of Saadia. To these must be added Elijah ben Moses Bashyazi, the systematizer of Karaite canon law (1420–90), his brother-in-law, Caleb Afendopulo (end of the 15th century), liturgical poet and writer of homiletic and theological works, and Moses ben Elijah Bashyazi (1544–72), a writer on theology. At the present day there are from 50 to 60 families in

Constantinople concentrated in the district Hasskeui. Upon several occasions the Karaites procured Firmans from the Porte recognizing themselves as a religious body apart from the other Jews and with their own chief rabbi. In 1900 these Firmans were confirmed by an Irade.

The Karaites had come into Egypt not long after the foundation of their sect. That they had made considerable progress there is seen from the fact that Saadia commenced his polemical writings in Fostat before 928, and that he had a number of direct opponents in the city. It was here, too, that lived the only important poet produced by the Karaites — Moses Dar'i who wrote in the style of the Judæo-Arabian poets of Spain. In Cairo, the Karaites, as elsewhere, kept themselves apart from the rest of the Jews. They had their own organization, at the head of which was a Nagid, who, however, was under the general jurisdiction of the Rabbinite Nagid. They had their own synagogues, first in Fostat and then in Cairo itself. They acquired a considerable amount of wealth there, being largely engaged in the goldsmith trade, while a number occupied positions of eminence chiefly as physicians. In the year 1313, when Abraham Maimonides was chief of the Egyptian Jews, a number of Karaites were converted to Rabbinism. At the present day about 400 families live in Cairo mostly in a separate street back of the old Jewish quarter.

In Russia.— Under the Tartar rulers of southern Russia Karaite Jews had emigrated during the 12th century into the Crimea and into Lithuania. From here they even penetrated into Galicia, and a Karaite community exists to-day there in the city of Halitsch. A portion of the city of Troki was given over to them; and here Isaac ben Abraham Troki composed, in 1593, his polemic, Hizzuk Emunah, directed against the Christian interpretation of Old Testament Messianic passages. It was especially in the Crimea that they flourished and evidenced some attempt at a revival of their literature; Simhah Isaac Lutski (1750) wrote a bibliography of Karaite writers, while Isaac ben Solomon, at the beginning of the 19th century, composed a work upon the doctrines of his sect. Their chief settlements here were in Chufut-Kale, Goslov (Eupatoria), Kaffa (Theodosia), Yenikele and Sulchat. In contradistinction to the other Jews in the Russian Empire they have always been treated well by the government. In 1796 Catherine II relieved them of one-half of the poll tax, and from 1827 to 1874 they were entirely freed from service in the army. As late as 1905 the Karaites in Moscow were permitted to keep their synagogue open, a privilege not granted to other Jews. In the Russian Empire there were in 1914 43 Karaite communities, all under the leadership of an energetic Haham Pampuloff. They are, however, yearly decreasing in number; as they have until recently refused to intermarry with other Jews. The attempt was recently made to have the government grant complete civil rights to all Rabbinite Jews who married Karaite girls upon condition that they formally renounce the Talmud. It was in the Crimea also that a Karaite archæologist, Abraham Firkovich, made his celebrated collection of Karaite antiquities and manuscripts, after having traveled over a great portion of the Hither East for that especial purpose. Unfortunately, despite the excellency of this collection which is now deposited in the Imperial Library at Saint Petersburg, he forged the dates on gravestones and upon manuscripts in order to prove the great antiquity of Karaite settlements in the Crimea and the disassociation of the ancestors of the present Karaites from the events that preceded the death of Jesus. At times, the Karaites in Russia have not scrupled at aiding the Russian government against the other Jews of the empire. Before the war of 1914 there were about 10,000 Karaites in Russia, about 2,000 in Cairo, 20 or 25 in Jerusalem, and another thousand scattered in various places.

Dogmas and Customs.— The religious dogmas of later Karaism have been formulated by Judah Hadassi as follows: 1. *Creatio ex nihilo;* 2. The existence of a Creator; 3. God is an absolute unity and incorporeal; 4. Moses and the other prophets were sent by God; 5. God has given to us the Torah, which is true and complete in every respect and not wanting the addition of the oral law; 6. The Torah must be studied by every Jew in the original language; 7. The Holy Temple was a place erected by God for his manifestation; 8. Resurrection of the dead; 9. Reward and punishment after death; 10. The coming of the Messiah, the Son of David. In other observances the Karaites differ in several particulars from the Rabbinites. Their synagogues are more thoroughly Oriental and have the appearance of Mohammedan mosques. Their prayers are largely made up of selections from the Bible, and of hymns composed by Aaron ben Elijah. Before entering the synagogue they remove their shoes. They do not wear phylacteries nor celebrate the festival of Hanukkah. They observe the Sabbath rest with great strictness; though in some places fire and light are now permitted on that day. Pentecost is celebrated on the day after the Sabbath; and the 10th of Ab is observed as the anniversary of the destruction of the Temple. The prohibitive degrees of marriage have been greatly extended.

It should also be said that during its early development Karaism reacted favorably upon Jewish learning in the East. The Rabbinite Jews were forced to meet their opponents upon their own ground. Karaite exegesis led the Rabbinite Jews to a deeper study of the Bible and of the Hebrew language. The philosophic presentment of their theology necessitated an equally philosophic presentment on the part of the Rabbinites, and the rivalry they engendered was useful in turning the other Jews to a closer and more scientific examination of their own position.

ites in Chufut-Kaleh, consult 'Globus' (Vol. LXXXIV, p. 7 et seq.); on the Karaites of Cairo, R. Gottheil in 'The Jewish Comment' (Baltimore 1905). A bibliography of Karaite books is given by E. N. Adler in *Jewish Quarterly Review*, XII, p. 674), and G. Margoliouth has published 'Ibn al-Hiti's Chronicle of Karaite Doctors' (ib., Vol. IX, p. 429).

RICHARD GOTTHEIL,
Professor of Semitic Languages, Columbia University.

11. ANTI-SEMITISM. A term which has received a special signification of its own as the situation of the Jews in Germany, France, Russia and elsewhere, in recent decades, has become more or less acute, means opposition to the Jews and their religion for various reasons. Such enmity, springing from many causes, has been a persistent factor in history from the era of the Pharaohs. Its manifestations assume different forms according to local or national conditions — from the crassest prejudice due to ignorance to more intense odium due to envy and often arousing long-continued persecutions or popular outbreaks. While it is unjust to call every criticism of the Jews and Judaism anti-Semitic — radical and religious peculiarities afford a fair field for the critic or investigator, who is not always to be termed an enemy because he discerns flaws or weaknesses — Anti-Semitism is wholly unfriendly, usually unjust, exaggerates minor defects into fundamental vices, employs faulty generalizations, and is careless how it arouses to strife and bloodshed, so keen and ruthless is pursuit of its quarry. History and literature abound in antipathies to nation and sect, from which, in Europe, Roman Catholic and Protestant, Methodist and Quaker alike have suffered, and which have crystallized themselves in words like barbarian and heathen, mummery and jesuitical. Anti-Semitism, however, in its intense and most characteristic form, is more than an antipathy — it is a relentless hunt to the death, which denying social and political equality to the Jew would brand him as outcast and alien, strip Judaism of every distinguishing excellence, revive for the Jew an exclusive Ghetto or banish him from civilized climes. And this is done in the name of society, religion and the state. What strength there must be in Judaism to awaken such antagonism! And how superficial the culture that countenances such enmity!

Origin and History. — The word Anti-Semitism owes its origin and present meaning to the ethnical differentiation of the Jews as Semites from the Aryan or Indo-European. Ethnology is made to prove that the racial traits of the Jews as Semites render them inferior and that they are legitimate objects of aversion. The theory as well as the present unfriendly signification of the term are of recent date, appearing in Germany about 1880, when the movement against the Jew and Judaism began to gain headway and spread elsewhere, as the era of persecution assumed a deadly phase in Russia. Decades earlier the word Semitism had been employed in a purely academic sense by philologists, but soon the theory of Semitic inferiority was to be asserted first by Lassen (1800–76), who ascribed to the Semite rather unflattering traits, such as intellectual sharpness, exclusiveness and selfishness in marked contrast to "the harmony of psychical forces which distinguishes the Aryan." It was reserved for Ernest Renan (1823–92) to emphasize still more strongly Semitic inferiority: he went so far as to assert that "science and philosophy were foreign" to the Semites. But if this opinion was not sufficient, he added in his 'Studies of Religious History' various other generalizations — a line in which he was quite proficient — to the effect that the Semites did not comprehend civilization in the modern sense; they were intolerant as the logical result of being monotheists, bequeathing their bigotry to the Aryans, who were naturally broader, while the Jews can attribute the hatred which has been extended to them for so many centuries to their glowing anticipation of future triumph. There can be little doubt that Renan's views had marked influence upon the growth of a hostile anti-Semitic spirit, although he urged his readers to be careful in their interpretation of his opinions. He stated expressly that Jews to-day were not Semites, but moderns, and he denied in his 'Judaism as Race and Religion' that there was such a thing as a Jewish race. The extensive literature of anti-Semitism shows throughout Renan's unconscious coloring. It was but a short path from him to von Hellwald, who called the Jew a "cancer," to Goldwin Smith, who termed him a "parasite," and to Stewart Chamberlain. During the progress of the European War of 1914–18 some anti-Semitic feeling arose in England, chiefly in connection with army enlistments.

In Ancient Authors. — The curious persistence of anti-Semitism in modern cultured writers and the faulty generalizations which they do not hesitate to proclaim as scientific truth thus finds its parallel in many famous authors of antiquity. Thus Manetho, high priest of the temple at Heliopolis and court historian under the early Ptolemies, considered the Jews descendants of the Hyksos usurpers and attributed their expulsion from Egypt to sacrilege and irreligion, stigmatizing them at the same time as afflicted with leprosy — and the story was repeated by Chaeremon and Lysimachus, to reappear in Schiller's 'Mission of Moses.' Diodorus Siculus asserts that the prevalence of a plague in Egypt led to the banishment of foreigners, most of whom entered "the country now called Judea"; at the same time he vindicates the character of Moses and the traditional religion. Apollonius Molo, a Greek rhetorician who lived at Rome in Cicero's time, pronounces Moses "a conjuror and deceiver"; and his disciple, Cicero, went further in his utterances to show his contempt. There are several passages in his 'Pro Flacco' which display his animus against a people whose wealth and influence were beginning to be feared. "Their barbarous superstitions must be fought," he exclaims; they are a nation addicted to "suspicion and slander"; they "display contempt for the Roman power." Tacitus, the model for historians, repeats the fables of Manetho as to the origin of the Jews and adds that their laws are "hostile to men and calculated to inspire the Jew with hatred and opposition to the rest of mankind" — "the first instruction they receive is to despise the gods, to forswear their country, to

forget father, mother, and children.» Horace and Martial could jest at the Jew and his ceremonies, like a modern comic journalist, while Juvenal exercised his wit more than once in the same direction, and Seneca, with all of his philosophic insight, deplores that «this abominable nation» has spread its customs everywhere and «the conquered have given their laws to the conqueror.» Under such teachings from moralists and orators, what wonder that the spirit of persecution was roused in Rome, Antioch, Lybia and the Greek cities, with its accompanying bloodshed. In this era Christian and Jew were brethren in suffering and despised alike for harboring a «detestable superstition»; and many of the accusations which in after centuries the Church hurled against the Jew were now forged against the Christian.

Apion and His Accusations.—It was Apion, an Egyptian teacher of rhetoric at Rome in the reign of Tiberius, who was probably the most violent anti-Semitic in his field of his or any day; for his statements as preserved by Josephus in the historian's treatise 'Against Apion,' are modern in their variety and bitterness, while they are as baseless, as Josephus succinctly shows. Among his many charges, Apion claimed that the Jews derived the name Sabbath from the circumstance that they were obliged to rest after journeying for six days because they were afflicted with a painful disease which the Egyptians called Sabbatosis. He asserts that they put up a head of an ass in the Holy of Holies, that they caught a Greek annually and fattened him for sacrifice. He accuses them of having produced «no wonderful men, not any inventors of arts or any eminent for wisdom.» He states that «they swear by God to bear no good will to any foreigner, especially to Egyptians, while they have no just laws of their own and do not worship God as they ought.» One of the replies made by Josephus can be given here. If the Jews, said the historian, had set up the head of an ass, it would not have been more contemptible than some of the animals, such as the goat, which the Egyptians deify. But the statement, he continued, is an untruth, which Apion would not have told had he not the heart of an ass or the impudence of a dog.

In the Dispersion.— The spirit of antagonism to the Jew which was displayed after the final destruction of Jerusalem and the gradual dispersion of the Jews, east and west, can hardly be called anti-Semitism, for it was really anti-Judaism and directed against the Jew and his religion. It was practically a religious, not a social or political crusade, in direct contrast to the modern movement which ostensibly claims to be without any religious motive and to work purely for the welfare of society and the state. Under the Romans there was often some approach to a legal residence, but the attitude of the Church toward Jews and heretics was decisive. While here and there a kindly voice was heard and occasionally priest and prince championed them, the ages until the French Revolution were periods of enforced seclusion and repressive legislation. With the iron power of religion and the state checking them at every step, the Jews became a special class, awakening to new life and vigor for a few centuries under the Moslem, but liable at any moment to be at the mercy of the mob in Mohammedan Spain or Christian Europe. Being thus the weaker class both in numbers and prestige, upon whom insult could be heaped with impunity, the morale of the Jews was not to be improved by the policy which herded them in the Ghetto and restricted them from ordinary avocations. Most of the faults which their enemies discerned in them were acquired, not hereditary. The famous dramatist who to suit the London temper of his day consciously transposed the characters in the original story at the basis of 'The Merchant of Venice' and branded the Jew as a Shylock for all time, illustrates the attitude of those centuries. Springing from these conditions came the conception of a Jew as a kind of Barabbas, in Marlowe's play, who poisons wells, murders children, commits all kinds of wickedness in his hatred of the Christian. In the heated atmosphere of the Dark and Middle Ages no accusation was too vile to fasten on the Jew. Hence their responsibility for the «Black Death,» a plague which ravaged Europe between 1348 and 1351. A myth arose, especially in Germany, that the disease sprang from the wells which the Jews had poisoned. Alleged confessions were sent from town to town and the maddened populace wreaked vengeance, forgetting that the Jews were suffering as much as their neighbors from the pestilence. In nearly every town in Germany, exclusive of Austria, about 350 in all, the Jewish communities were attacked, only three large Jewish centres by the end of the 15th century being left in that land. A further source of odium was the Jewish usurer. Owing to the canon law forbidding loans on money, the money trade of western Europe fell into the hands of the Jews in the early Middle Ages, who charged high interest, first because there was little if any competition, and secondly because of the insecure tenure of their property — emperors, prelates and powerful individuals could not be depended upon long to remain under a burden of debt to heretics. However, Christian evasions of the canon law became frequent and Jews were soon despoiled of their capital; and as reputable trades, professions and agriculture were denied them, they were forced into humbler occupations, but the taint of the money-lender has clung to them even in later days when money-lending has become the vital international pursuit. Undoubtedly it was imprudent for them to lend on interest, but they had no other resource and one can understand the sense of power it gave to a despoiled race, for which they had to pay dearly in exactions and expulsions from land to land until England was closed to them for centuries.

The Blood Accusation.—Among the many popular accusations which have been fostered upon the Jew, none is more revolting than the charge of using Christian blood for ritual purposes, notably in connection with the Passover. The origin of such a myth is still unknown, but the frequency of its occurrence the past seven centuries is not to be denied. When a decade ago Christian missionaries in China can be accused by the populace of slaying Chinese children for Church purposes, one may faintly understand how such accusations originate in ignorance and fanaticism in any age or clime. But the slander seems doubly incredible when

one realizes that there is no Jewish ritual which prescribes the use of human blood. It is needless in this connection to trace the history of the blood-accusation which appears first to have been alleged against the Jews in 1144, in the case of Saint William of Norwich, although the first literary mention dates from the middle of the 13th century, in a work of Thomas Cantimpré. The Norwich case was thus developed. A convert — and it must be confessed that converts were not averse to making mischief — said that the Jews annually sacrified a Christian child at Passover, and when the boy was missing, the Jews were accused. It seems, however, that during an attack of catalepsy he had been buried alive by his relatives. No Jew was tried or punished in Norwich, but the rumor led to charges against the Jews in other English towns. A list of similar incidents from the 13th to the 16th centuries could be given. Chaucer has mentioned the story of Little Hugh of Lincoln — a lad of eight years, whose sudden disappearance was laid at the door of the Jews with tragic consequences. Most remarkable, however, is the survival of such a myth in the 19th century, cases having occurred in 1882 (Hungary), 1891 (Corfu and Prussia), 1899–1900 (Bohemia and Prussia), and of course without a shadow of proof as to the alleged crime. It is of interest to note that in recent years August Rohling of Prague, who was most conspicuous in his efforts to prove the truth of the blood-accusation, was completely refuted by a Christian theologian of distinction — Professor Strack in his scholarly book 'Das Blut.' Christian divines have protested against the charge, which has received the condemnation of many popes and the sanction of none. Yet, such is the persistence of the anti-Semitic spirit, the accusation may reappear at any time in eastern Europe. As late as the summer of 1916 the blood-accusation was seriously discussed in northern Ireland. Its latest appearance in Russia was the Beilis case near Kieff in 1914.

Recent Movements.— In long-continued attempts to prevent the complete emancipation of the Jews in Germany about the middle of the 19th century there was ample opportunity for anti-Semitism to show its hand. Prominent leaders in politics, literature and the Church alike advocated the denial to the Jews of civil and political rights so long as they remained Jews. The ideals of the French Revolution had been forgotten. When the unwholesome era of reaction had passed and liberalism became the nation's rallying cry, the Clerical party scenting danger to absolutism began anew a crusade against the Jews as the cause of every evil, the prominence of Jewish members of the Reichstag, like Ludwig Bamberger and Edward Lasker, arousing fresh hatred. Hence arose anti-Semitism both in Germany and Austria as a distinct political program. In 1878 a Christian Socialist party, under Court Chaplain Adolf Stoecker, was formed, whose avowed purpose was anti-Jewish. "The Jews are our misfortune," said Prof. Heinrich von Treitschke (1834–96) in 1880 and for two decades the anti-Jewish agitation continued, it being made an issue in all elections and scattered riots took place, while books and pamphlets antagonistic to the Jews were published in the chief cities. It was even proposed to exclude Jews from public office, but that attempt was not successful. Bismarck acted as a check while in office and his influence led to Stoecker's retirement as court chaplain, while powerless or unwilling to prevent the growth of anti-Semitism. Renewed agitation appeared when Bismarck ceased to hold office (20 March 1890), and Ahlwardt began his attacks on the Löwe firm with their "Judenflinten" which were to be furnished the German army to ensure its defeat by the French; but his animosity was without ultimate effect, and he passed into obscurity like so many of his class, Henrici, Förster, Stoecker and the rest. In 1891 the "Verein zur Abwehr des Antisemitismus," a society to combat the attacks of the anti-Semites, was formed by prominent German authors and scientists, showing the growing sympathy of the better classes, and little by little the agitation appears to have lost much of its virus, with the disappearance, often through imprisonment for various crimes, of notorious leaders. In Austria George von Schönerer was the first to begin a distinct anti-Semitic movement (1882), whose adherents were elected in steadily greater numbers to the Reichsrath and the provincial Diets. To Luegar, mayor of Vienna, the party is indebted for its turbulent character, although of late years its excesses have been less marked. In France, Edouard Drumont's book, 'La France Juive' (1886) was the beginning of an open anti-Semitic campaign which grew into the Dreyfus affair nine years later, as books and pamphlets were published, and Drumont's paper 'La Libre Parole' became widely read. The story of Captain Dreyfus shows to what length the anti-Semites will go; if Clericalism inspired their efforts the present dissolution of religious orders in France tells its own moral. In Russia anti-Semitism has produced since 1881 a succession of disorders in many cities which culminated in the excesses of Kisheneff and elsewhere (1903) that have aroused the world to indignation. It remains to be seen if mediæval restrictions against the Jews will be abolished. In Rumania, despite the provision of the Berlin Congress (1878) guaranteeing civil and religious liberty to all citizens, the Jews continued to receive harsh treatment; became victims of popular outbreaks; were restricted in trade and profession and debarred from public schools. As the natural result of such treatment recent decades have witnessed an increasing emigration from Russia and Rumania to all portions of the globe, the great majority settling in the United States.

Future of Anti-Semitism.— In the diffusion of education and the gradual recognition of the truth that nations and creeds are partners in the great work of human betterment, one may expect a general disappearance of antipathies and animosities as the borderland of the religions is broadening and the era of co-operation and confederation is less distant than at any epoch in the world's history. This reconciliation is not to be hurried — one must be satisfied to think that the agreements among people and creeds are more numerous than the diversities which drive them apart. And the Jew will do his share to promote good will among men, as his race and religion are universalized and memories of persecution and prejudice no longer promote disharmony or

exclusiveness. There will be no Jewish problem when civil and religious liberty is everywhere acknowledged and class privileges have ceased to exist in the growing consciousness of human brotherhood.

Bibliography.— In the extensive literature on the subject the best general works are Le Roy Beaulieu, 'Israel chez les Nations' (English translation by Mrs. Hellman); B. Lazare, 'Contre l'Antisemitisme' (English translation, New York 1903); Joseph Jacobs, 'The Jewish Question' (London 1885). On the blood-accusation, besides Strack's work, consult Chwolson, 'Blutanklage' (Frankfort 1901); Franz Delitzsch, 'Schuchmatt, den Blutlügnern, Rohling and Justus' (Erlangen 1883); M. Joel, 'Die Angriffe des Heidenthums an Juden und Christen in den Ersten Jahrhunderten Römischen Cæsaren' (Breslau 1879). A useful little work is John Gill, 'Notices of the Jews and Their Country by the classic writers of antiquity' (2d ed., London 1872).

ABRAM S. ISAACS,
Professor of Semitic Languages, New York University.

12. ZIONISM. Past and Present.— The first Basel Congress (1897) declared that the movement it organized "aims at establishing for the Jewish people a *publicly* and *legally assured* home in Palestine"; but modern Zionism is too complex to be defined by any formula. It is a broad stream wherein flow, but partially commingled, many currents. The first in point of time is the expectation founded on Biblical prophecy and its traditional interpretation, that God's purpose concerning His people can only be fulfilled by regathering the dispersed of Judah and Israel in the land of their fathers; and that this will be brought about through a divinely-commissioned prince of the House of David — hence an "anointed one" (Messiah). This hope is expressed in many prayers of the established synagogue liturgy and even in the individual or collective "grace after meat." In those countries and times, however, wherein Jews have enjoyed a practical civic equality with their neighbors, the Messianic expectation has been for many centuries and with the vast majority rather an article of faith and a pious hope of the indefinite future, than a matter of immediate concern. Everywhere, Jews have exhibited the most ardent attachment to the land of their birth or adoption and have rendered it faithful and patriotic service. In Germany the 19th century witnessed a conference of rabbis (Frankfort 1845) who faithfully represented a large body of "Reform Jews" resolving to expunge from the prayer-book "the petitions for a return to the land of our forefathers and the restoration of the Jewish State"; while in the United States this example was not only followed by two rabbinical conferences (Philadelphia 1869, Pittsburgh 1885), but bettered by the declarations of preachers and orators that "America was [their] Palestine and Washington [their] Jerusalem." In those countries wherein the Jews have been continuously oppressed, as Russia, Rumania, Galicia, Morocco, the "dream" of re-establishment in the Holy Land as a priestly nation, under the direct protection of Providence, has naturally been more prolonged and more intense; and a strong intelligent minority — not all of whom may be characterized as "enthusiasts" — has nurtured the same hope, even in free countries. The belief that restoration was to be signalized, as of old, by some unmistakable sign of miraculous intervention, necessarily tended to discourage human initiative. Hence the many attempts, fantastic, tragic or simply premature, of pretended Messiahs (e.g., Serene, 729; David Alroy, 1160; Sabbathai Zebi, 1648); of Jewish statesmen in the service of European states (e.g., Joseph Nasi, Duke of Naxos, Venice, 1550, Constantinople, 1565); or of benevolent Jews of local prominence (e.g., Mordecai M. Noah of New York, c. 1820) to establish self-governing Jewish communities in Palestine or elsewhere proved abortive or disastrous. A less ambitious and more frankly philanthropic movement has, however, in recent times, met with a somewhat greater measure of success. In 1870 Charles Netter, acting for the "Alliance Israélite Universelle," established a farm-school near Jaffe, on land presented by the Sultan (Mikveh Israel) and in 1878 under the influence of Laurence Oliphant, active work in planting Jewish agricultural colonies in Palestine began. Baron Edmond de Rothschild now became interested and gave wise and practical aid. In 1882, and subsequently, many settlements arose. This was brought about largely through agitation in Germany and, especially, in Russia, by means of various societies which finally took the name of Chovevei Zion ("Lovers of Zion"). Stimulated by the Rumanian and Russian persecutions of 1880 and 1881, the movement continued to spread in these and other countries, including England, France and the United States; and in 1884 a conference was held in which more than 50 societies were represented. This phase of Zionism reached its height in 1890. In 1892–94, perhaps because the immigrants were so largely of Russian nativity as to raise the question of a possible complication with a persistent enemy, the Sultan's government restricted the entry of foreign Jews into Palestine, and the colonization movement received a temporary check, only recently removed. Meanwhile two other currents, always more or less active, began to flow strongly; one of them, turbulently. The latter third of the 19th century was marked in Europe by the recrudescence of separatist and nationalist sentiment. The French Revolution had made "universal brotherhood" a watchword, and this influence persisted until after the failure of the revolutions of 1848 in Germany. The Franco-Prussian War (1870) and the Russo-Turkish War (1878) marked the returning intensification of racial and national hatreds. To this a false philology and a falser anthropology brought its pseudo-scientific jargon of "Aryan," "Semite" and "Hamite." Out of the whirlpool that arose issued the two streams that have most influenced modern Zionism — renascent Jewish Nationalism — a *Volk Geist* no longer religious in motive, and anti-Semitism. George Eliot in 'Daniel Deronda' (1876) described the first; the resurrection of obsolete oppressive laws and government-incited massacres in Russia (1880 to 1906) typify the last. (See article ANTI-SEMITISM in this section). In Germany, France and Austria Jews were not killed or subjected to legal disabilities, but they were harassed and restricted in social and pro-

fessional life until finally the high-water mark of this form of persecution was reached in the "Dreyfus Affair" in France (1894–1906).

The Herzl Movement.— It may have been his observation and experience while sojourning in Paris in 1895 as correspondent of the *Neue Freie Presse* of Vienna, that led Dr. Theodor Herzl (b. 1860; d. 1904), an Austrian playwright and feuilletonist not before identified with Jewish life or affairs, to write his 'Judenstaat'; an attempt to prove that the "Jewish question" can only be solved by the establishment of a Jewish state. At first intended only for private circulation, this pamphlet was later published broadcast (1896) in German, English, French, Hebrew and Yiddish. Assuming that anti-Semitism is uneradicable; that whatever may be true as to individual Jews here and there, the Jews as a whole are not welcomed into the social life around them; and that true assimilation is possible only by means of intermarriage — which means disappearance — Herzl proposes an organized effort to obtain a territory wherein Jews may build up a state of their own. The underlying motive being political and economic, not religious, one part of the globe will serve as well as another, and he at first suggested that Argentina might be available. Later, he was brought to realize the sentimental importance of the Holy Land, and now for the first time his proposition becomes in truth Zionistic. In some of its details it was, indeed, anticipated by Benedetto Mussolino (1870), an Italian Christian, who had vainly journeyed to London in the attempt to interest Lord Palmerston and Lord Rothschild in his project. In both plans Turkish suzerainty was to be acknowledged and the holy places of other faiths made extra-territorial. For the accomplishment of its object the 'Judenstaat' suggests first, a "Society of Jews" to do the preliminary scientific and political work (since measurably realized in the Zionist organization, especially its "Palestine Committee"); then a chartered "Jewish Company," similar to the British East India or South African Company, with a capital of £50,000,000 and with headquarters in London (partially realized in the "Jewish Colonial Trust"). In July 1896, Herzl was induced to present his plan in person before representative London Jews. It was received with polite coldness or active hostility — in striking contrast to the enthusiasm evoked from an assemblage of poor Jews in the east end of that city. The difference was typical and prophetic. Indifference or opposition was manifested by the vast majority of prosperous Jews, not only in England but also in western and central Europe, and virulently in America.

Spread of the Movement.— The 'Judenstaat' nevertheless exerted an influence in the crystallization of opinion and action among Jews imbued with or susceptible to the nationalist sentiment. More important was the change gradually wrought in the attitude of Herzl himself, who, forced far beyond his primary intention of literary propaganda into the active rôle of leader and organizer of a reawakened people, and brought into contact, as not before, with religious Jews of both orthodox and reform wings, began better to understand both his people and their destiny. His new thought sprang into extemporaneous and epigrammatic utterance when he declared at Basel that "the return to Judaism must precede the return to Zion." For by this time much support had come from among the "Chovevei Zion" and kindred societies, and an alternative territory to Palestine could not be considered. The Jewish bankers and rich Jews in general continued to be either indifferent or antagonistic to Zionism. Certain orthodox rabbis opposed it as an endeavor to anticipate Providence; reform rabbis denounced it as an attempt to reverse history. Many sincere thinkers, regarding Anti-Semitism as a temporary aberration, regretted the movement as an apparent abandonment of the position won by Jews in countries where their only distinction from fellow-citizens is in creed, not in nationality — a position to be stoutly contended for wherever it has not yet been attained.

Herzl was not, however, altogether without the help of Jews of learning and distinction, and among those who early declared in his favor were representatives of the strictest orthodoxy, of the most extreme radicalism, and of the supremest indifferentism to all religion. Sympathy also came from the Gentile world from men eminent in art, literature, statesmanship and Christian theology. A call was issued for an international convention at Munich, but so great was the opposition of the most influential rabbis and laymen among the Jews of Germany that Basel in Switzerland was chosen instead, and there, on July 29, 30 and 31, 1897, the first Zionist Congress assembled. It was composed of 204 members, most of whom came as private individuals, though a number represented various organizations, especially the "Chovevei Zion" societies, which later became virtually merged into the Zionist body here constituted. This Congress issued the document known as the 'Basel Program,' defining the Zionist aim in the words cited at the head of this article and proposing the following means for its attainment: (1) The promotion of the settlement of Jewish agriculturists, artisans and tradesmen in Palestine; (2) the federation of all Jews into local or general groups according to the laws of the various countries; (3) the strengthening of the Jewish feeling and consciousness; (4) preparatory steps for the attainment of those government grants which are necessary to the achievement of the Zionist purpose. The scheme of representative organization was formulated, an executive body (Actions Comité) constituted and steps taken toward the establishment of a "Jewish national fund" and the formation of a banking corporation which should be custodian of the national fund and perform the functions which the 'Judenstaat' had suggested for the "Jewish Company." "The National fund," now very considerable, is derived from the sale of stamps placed upon all official Zionist communications, and upon other correspondence by ardent Zionists; from free-will offerings, and from payments made to inscribe persons and societies in the "Golden Book." It is to be used exclusively for the purchase of land in Palestine, and although originally intended not to be touched until it had reached $1,000,000 has recently been drawn upon for such purposes. The Zionist bank, officially known as the Jewish Colonial Trust, Limited, of London, was chartered under the laws of Great Britain,

"to promote, develop, work, and carry on colonization schemes in the East, by preference in Palestine and Syria, or in any other part of the world." Its authorized capital stock is £2,000,000 in £1 shares, of which somewhat less than £325,000 has been paid in, chiefly by the joint efforts of the very poor and upon an instalment plan. Control is lodged in 100 "founders' shares," which must be held by members of the "council of administration," who must in turn be chosen from the "Grosses Actions Comité" (Greater Executive Committee) of the Zionist organization. In 1902 a subsidiary corporation, "The Anglo-Palestine Company" was formed and a branch opened in Jaffe. Quite recently branches have been opened in Jerusalem and in Beirut. Through the Colonial Trust the Zionist organization hopes to obtain concessions of territory, and to promote therein agriculture, industry and commerce. Meanwhile it is the custodian and administrator of the Jewish National Fund and devotes its capital to the encouragement and development of private enterprise on the part of the settlers in Palestine. In 1906 its statutes were so altered as to restrict its operations to Palestine and adjacent regions.

Work of the Congresses.—The second and third congresses were held at Basel in 1898 and 1899 respectively. Organization had now so far progressed that only delegates were permitted to vote. A proposition to acquire Cyprus was rejected. With a view of making propaganda the fourth congress (1900) was held in London; the fifth returned to Basel and decided that subsequent assemblages should be biennial. Herzl necessarily became president of all congresses held during his lifetime and chairman of the smaller executive committee which had its seat in Vienna. He practically gave up his life to the work, except in so far as his refusal of salary made it necessary to continue his literary labors for a livelihood. He had interviews with ministers and crowned heads, including the Sultan and Kaiser Wilhelm II, from both of whom he received sympathetic expressions, but he was never able to report more than "progress" to the congress. Negotiations with representatives of the Egyptian and English governments for a concession of land at Al'Arish in the Sinaitic Peninsula (1898) failed because of the necessity for irrigation, as diversion of any part of the Nile water could not be permitted. Herzl continued, however, to keep in touch with the British government and at the Sixth Zionist Congress held in Basel, 23 to 28 Aug. 1903, was enabled to make public the willingness of Lord Lansdowne "to entertain favorably proposals" from the Jewish Colonial Trust, Limited, "for the establishment of a Jewish colony or settlement" in British East Africa; with the "appointment of a Jewish official as the chief of the local administration, . . . and permission to the colony to have a free hand in municipal legislation . . . such local autonomy being conditioned upon the right of His [Britannic] Majesty's government to exercise general control." The proposition to send a commission to examine the country offered and to report to a subsequent special session of the congress was bitterly opposed by the Russian delegates, who on its adoption withdrew, and only Herzl's personal pleading and the agreement that no funds of the Zionist organization should be expended by the Commission of Inquiry prevailed upon them to return to subsequent sittings. Much delay was experienced in forming and dispatching the Commission; opposition becoming meanwhile more and more pronounced in Russia, spreading to Germany, England and America. Simultaneously with the sixth Basel Congress, the first Jewish Congress had met in Palestine in the colony Zikron Jacob, under the presidency of M. Ussischkin of Ekaterinoslav, apparently never proceeding further. Ussischkin, however, organized an aggressive movement within the Zionist organization to discredit and defeat the East African project. Others proceeded with greater considerateness but no less determination. A conference of Russian members of the "Greater Actions Comité," held at Kharkof in October 1903, demanded the abandonment of all schemes of "Territorialism"; by which term the movement for Jewish state-building outside of Palestine now became known. Meanwhile the East African Commission had reported to the Actions Comité 16 May 1904. The report was not unanimous, but two of the three members agreed that the territory offered by the British government (the "Ghas Ngishu Plateau") was insufficient for a large number of Jewish settlers, and was fitted for grazing rather than agriculture. At the sixth congress, Herzl had exhibited signs of physical weakness. The worry consequent upon the dissensions that followed this congress completed what nine years of overwork and anxiety had begun, and on 3 July 1904 he died after a few days of acute illness. The seventh congress (Basel 1905), attended by more than 600 delegates, was controlled by the followers of Ussischkin. It voted overwhelmingly to "reject either as an end or as a means colonizing activity outside Palestine and adjacent lands," and that "the Zionist organization shall not engage itself further with the proposal of the British government." As a result, the Territorialist delegates, under the leadership of Israel Zangwill (q.v.), met upon the adjournment of the congress and organized the "Jewish Territorial Organization" (Ito), which has since perfected an international organization, aiming to obtain wherever feasible, "a publicly, legally assured place of settlement upon an autonomous basis" for those Jews who are persecuted in the countries wherein they now live. Within recent years, it has practically ceased activity.

Many anti-Zionists and non-Zionists have joined the Ito, and many who remain Zionists, particularly in America, have united likewise with the new organization. It has recently appointed a "Geographical Commission" embracing such men as Lord Rothschild and Hon. Oscar S. Straus.

Present Status.—The number of Zionist societies throughout the world runs well into the thousands. They are composed of members subscribing to the Basel program and paying "one shekel" (25 cents) yearly into the general fund, with such local dues as may be exacted. For every 200 shekel-payers one delegate may be sent to the congress. The societies in various countries are aggregated more or less completely into federations. The president of the Jewish Colonial Trust and the head of the executive committee has been a

citizen of Cologne, to which city the headquarters has been transferred. Here also is now published *Die Welt*, the Zionist organ founded by Herzl, and here will meet the "yearly conferences" of the Larger Executive Committee, which will probably take the place of frequent congresses. One of the most promising features in recent reorganization is the "Palestine Committee," headed by Prof. Otto Warburg of Berlin, which systematically studies industrial and other conditions in Palestine. There are many parties in present-day Zionism — some being religious, others non-religious or even irreligious, and having various economic aims, such as the "Po'ale Zion," a frankly proletarian or even socialistic organization. The "Ziyone Zionists," probably representing the old "Chovevei Zion," demand immediate work in Palestine. The "Political Zionists," headed by Nordau and Wolffsohn and embracing Herzl's closet adherents, insist on diplomatic action, while the "Practical Political Zionists," regarding autonomy as of less importance than legal authorization, favor systematic colonization in Palestine and neighboring lands under the best attainable assurances. "Moral Zionism" pleads for a national spiritual, rather than a political, centre in Palestine. Doubtless in time the fusion of these varied elements will lead to useful results. Meanwhile the Jewish population of Palestine is increasing with rapidly developing activities, agricultural, industrial, commercial, educational; while Zionism has brought closer together the Jews of different lands; stimulated anew the study of Hebrew literature and Jewish history and led to a re-examination and increasingly better understanding of the fundamentals, ethnic, religious and economic, of Judaism. A profound impetus was given to Zionism in the latter part of 1917 by Hon. A. J. Balfour's statement that "His Majesty's government favor the establishment in Palestine of a national home land for the Jewish people, and will use their best endeavors to facilitate the achievement of this object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine or the rights and political status enjoyed by Jews in any other country." A preliminary fund of a million dollars — a hundred million to be raised later—was at once begun by Jews in America for the rehabilitation of Palestine.

13. THE SPIRIT OF RABBINIC LEGISLATION. In Deut. iv, 2, Israel was told: "Ye shall not add aught to the word that I command you, nor shall ye diminish aught therefrom." In the course of time, however, many new laws unavoidably crept in, along with new outward conditions, habits of life, tastes and beliefs; aside from relapses towards the old Babylonian statutes, forming a kind of common law for all Semitic Asia.

The Law-making Power.— For lack of an elective body wielding undisputed authority, with the early disuse of the sovereign assemblies of all Israel known from the book of Judges, the law-making power rested only with the learned men, who were wont to interpret and apply the existing laws, that is, with the judges. These sat not only in civil and criminal cases but also passed on all questions of morals, ritual, and doctrine, for state and church were one. After the death of Herod, it seems, any man learned in the law began to be called "rabbi," or "my master"; but the rabbi's office and spirit fell to Ezra and his companions. The leading scribes from their time down to Simeon the Just were comprised under the vague name of the "Great Synagogue." Of their names and activity hardly anything is known with certainty; but there were ascribed to them these maxims (Mishnah Aboth, i, 1): "Be slow in judgment, raise up many disciples; make a fence around the law." The last maxim led to many additions to the divine commands; for the rabbis narrowly construed the verse forbidding additions or diminutions thus: whenever the law names so and so many things to be used for one purpose; for instance, four paragraphs in the phylactery (Ex. xiii, 9, 16; Deut. vi, 8; xiii, 18), you must not use one more nor one less than this number. The grouping of the three maxims shows that the same men were judges, religious teachers and law-makers.

Making of New Laws.— New laws were worked out mainly by a bold interpretation of the Torah (Pentateuch), which when accepted by the people became part of the traditions or of the oral law. This was carried down the ages by word of mouth from teacher to pupil or in the remembrance of judicial decisions until toward the beginning of the 3d century it was written down in the Mishnah, the commentaries on Exodus and Leviticus and in the Aramaic version (Targum) of Onkelos. The Mishnah in turn became the text of the later discussions of the Talmud (see article THE TALMUD in this section), and this whole mass of religious and juridical lore proved the starting point for the rabbis of later ages. Many of the new rules were avowed innovations, bearing the name of "Gezeroth" and of "Taqqanoth" (prohibitions and institutions).

Scope and Method.— The drift of rabbinical legislation ran always along four lines: the desire to set up a "fence" or outworks around the law; to render it more humane, fitted for a higher culture; to create a more rational and spiritual worship of God than that

of the sacrificial altar; in times much later than the Talmud to adapt the Jews to the demands of their non-Jewish neighbors. It is to be understood, however, that the Talmud itself lays the groundwork for such concessions. The "fence" was sometimes thrown around a moral prohibition, such as that against receiving usury from fellow-Israelites; but it was mainly directed to ritual observances, such as Sabbath rest and abstention from forbidden foods. The rabbis frankly declared that certain acts, if done on the Sabbath, constitute "work" in the scriptural meaning, while other acts, although not capitally sinful as work, should be avoided, as they would lead to sinful work. Thus to bake or cook any food on the Sabbath is a scriptural sin; to eat anything on the Sabbath cooked or baked by a Jew, or even by a non-Jew at a Jew's request, is forbidden by the scribes. Again, the law forbids the eating of blood, but adds, "Thou shalt pour it on the earth like water"; which indicates that only blood which can be poured out, not blood which can be drawn from the flesh by artificial means, is scripturally forbidden. Yet the rabbis prescribed a course of salting and watering the flesh of mammals and fowl, although these had been bled to death in the act of slaughtering. They feared that the taste of the inhering blood once acquired might tempt the people to eat also the flowing blood. In like manner, the prohibition of leavened food on the Passover was surrounded by many minute rules which were avowedly not demanded by the true meaning of the text: for example, that against the use of "Median strong drink," that is a fermented infusion of barley. On the strength of the command (Num. xxxi, 23) for cleansing the captured utensils of the Midianites the use of dishes which have been employed for forbidden food, unless they have first been appropriately cleansed, is prohibited. Earthenware thus defiled cannot be cleansed, but must not be used at all. Thus the dietary laws of the Jews address themselves as much to the kitchen utensils as to the stomach. The thrice written words: "Thou shall not seethe the kid in his mother's milk" were construed "thou shalt not cook, eat or use flesh in milk." While admitting that fowl's flesh is not within this wider scope of the prohibition, as its mother gives no milk, the rabbis nevertheless told the faithful that the flesh of fowl must also be kept out of touch with milk or cheese. The task to keep flesh and milk and the dishes for each apart is quite an obsession to observant Jewish housewives. The desire to bring humanity into the law and the ministrations of justice was shown by construing "eye for eye, tooth for tooth," etc., into a rule under which the assailant must pay in money both for the loss of earning capacity and for the pain inflicted; while damages for the affront were deduced from Deut. xxv, 12, which hard-sounding verse was held to signify this and nothing more. The Mishnah may have been right in its construction of "eye for eye," but to change the amputation of a woman's hand into a rule that awards a solace in cash for the disgrace of a whipping is judicial legislation of the boldest type; but it was evidently borne out by ancient custom running back to the code of King Hammurabi. In the cause of mercy the rabbis taught that a man condemned to stoning should be thrown headforemost on a large stone; one condemned to be burned should have hot lead poured into his throat at the moment of being strangled. The penalty of death or of 40 stripes (at least for ritual offenses) was to be adjudged only when the culprit had been previously warned of the sinfulness of his act; and criminal proceedings were beset with such technicalities as to render conviction almost impossible. The position of women, both as wives and daughters, was much more favorable, the power of the husband and father much more restricted, than if the text of the Pentateuch alone had been regarded. Thus at the age of 12 years and a half a girl was termed "mature" and thenceforward freed from the father's control. The law for maintaining and endowing orphan daughters put them in a majority of cases in a more favorable position than the sons and heirs.

Spiritual Growth.— The returned Babylonian exiles naturally craved a more spiritual mode of worship than that of bloody sacrifices. In the land of their captivity they had worshiped God without an altar. King Josiah's reform restricting all offerings to one chosen place had taken root. The farmers of Judea could bring or even see a sacrifice but rarely; they could fulfil Hosea's prediction: "We shall make good the bullocks with our lips." Still there was the temple with its altars of incense and sacrifice; there was the caste of the "Cohanim" claiming descent from Aaron, alone qualified to minister and partly supported by a tribute paid in kind ("Terumah"), which might be eaten only in "levitical cleanness" by them and their households. Then Ezra, although of the priestly caste, and his associates and successors of the Great Synagogue, began building up the liturgy which in its outlines is used still by the Jews of our day. Its main elements are: the reading of the Shema ("Hear O Israel"), which is Deut. iv, 4–9, xi, 13–21, and the last five verses of Num. xv; the former two passages inculcating belief in God's unity and in national. reward and punishment, demand "thou shalt speak of them when thou liest down and when thou risest"; the latter to commemorate briefly the liberation from Egypt. When "thou liest down and risest" was interpreted to mean at even and morning tide, thus enabling many to join in worship. Among the benedictions drawn up to precede these readings one was written to combat three forms of false belief. It blesses the Lord "who formeth light and createth darkness," in protest against Persian dualism; it asserts that He renews on each day the work of creation, in opposition to a godless philosophy; it names Him as the maker of sun, moon and stars to rebuke those who worshiped the luminaries as gods. The other chief element is the prayer proper, modified for Sabbath, festivals, new moons and fasts, spoken in standing posture twice daily, morning and afternoon; a third recital in the night service was made obligatory only by the efforts of the patriarch Gamaliel about 100 A.D. A grace after meals was elaborated, based on the command in Deut. ix, 1: "thou shalt bless the Lord thy God for the goodly land, etc."; and other home devotions for hallowing Sabbaths and festivals at the evening meal, to denote the return of work time, special services for Passover night, and for many other do-

mestic occasions, were prepared. To the duty of reciting the liturgy was added that of hearing at stated times — Sabbaths, festivals, Mondays and Thursdays — the written Law read in public. Nehemiah's wooden turret (viii) is the pattern for the platform from which the scroll of the law is read to-day, as Ezra read it to men, women and children assembled around him. Later on lessons from the prophets were added; in the days of Jesus it had become customary to preach on a text from this lesson. Thus while sacrifices went on in the temple, the synagogue (q.v.) was ready in and outside of the holy land whenever the Israelites met, to satisfy their needs with common exercises — confession, praise, prayer, the study of God's law, comfort from the prophets, monition to faith and good works. When the temple fell, the synagogue had almost supplanted it by greater usefulness. The Pharisees, or «Haberim,» companions as they called themselves, had already taught the people that learning in the written law and in the traditions was weightier than priestly descent; as the Mishnah blunty puts it: an adulterine bastard, if a disciple of the sages, is of more importance than an unlearned high priest. The rabbis of the Mishnah and Talmud and all their successors in the rabbinical office have been either Pharisees or the spiritual descendants of the Pharisaic party, which represented the main current of Jewish thought.

Influenced by Conditions.— The rules comprised under the name of the «ban of Rabbenu Gershom» (Rabbi Gershom ben Judah, b. at Metz, 960; d. at Mayence, 1040), form the best illustration of a principle proclaimed by the rabbis and accepted by the Jewish people as a concession to the nations among whom they dwell. The date and place of the synod which issued this «ban» is rather uncertain; the latest researches fix it at about the year 1000 and at Mayence. It was pronounced against Jews living in Christian countries, and accepted by those alone, who should be married to more than one wife at a time, or who should divorce a wife (except for notorious adultery) without her consent, or who should put obstacles in the way of one apostatizing under fear of death when he tried to return to the fold. But this decree of comparatively late date is only the outcome of the principle declared by Samuel at Nehardea (about 235 A.D.): «The statute of the kingdom is law»; that is, when the law of a country does not demand from the Jew anything contrary to the law of God, he should obey the law of the country in which he lives.

14. A CENTURY OF EMANCIPATION. Up to the close of the 18th century the Jews had no political or civil rights anywhere. The only serious attempt at remedying this state of affairs before that time was made in England in 1753, when Parliament passed the Jews' Emancipation Bill, but so great was the outcry raised throughout the country that it was immediately repealed. In Germany a kindlier spirit had arisen in the latter half of the 18th century, the era of enlightenment, notably through the influence of Moses Mendelssohn (q.v.). Lessing's friendship had resulted in 'Nathan the Wise,' and another friend of the «Jewish Socrates,» Christian Wilhelm von Dohm, made the first extended plea for the political emancipation of the Jews in his work 'On the Civil Improvement of the Jews' (1781). In 1782 the Emperor Joseph of Austria issued the famous Toleration Edict; its object was not the political but rather the educational emancipation of the Jews; schools were established in which other branches than the Hebrew, the only subject of instruction then offered to Jewish children, were taught. After Mendelssohn's death the French orator and statesman Mirabeau (q.v.) published a book entitled 'Moses Mendelssohn and Political Reform' (London 1787), in which he urged the cause of the Jews.

France.— The country in which these seeds first bore fruit was France. A year before the French Revolution the Royal Society of Sciences and Arts of Metz offered a prize for the best essay on the subject «What are the best means to make the Jews happier and more useful in France?» Nine were offered in competition for the prize which was awarded jointly to three contestants, one of whom was the Abbé Gregoire, to whose efforts as a member of the National Assembly the passing of the bill on 27 Sept. 1791, granting full rights of citizenship to the Jews of France, was largely due. Some time earlier (23 Jan. 1790) the assembly had voted rights of citizenship to the so-called Portuguese Jews. The status of the Jews also engaged the attention of Napoleon I. In 1807 he convened in Paris an assembly of Jewish notables from the various sections of France and Italy, known as the French Sanhedrin, to which he propounded a number of questions, the sixth of which was «Do the Jews who are natives of France, and are treated as French citizens by the law, look upon France as their fatherland? Do they consider themselves in duty bound to defend it? Are they obliged to obey the laws and satisfy all the demands of the civil code?» These questions were answered with a decided affirmative; the emperor was assured that the Jews looked upon other Frenchman as their brethren and upon France as their native country. The final step which placed the Jews for once and all on terms of absolute equality with all citizens of other faiths was taken on 13 Nov. 1830, when the Minister of Education offered a bill providing for the payment of the salaries of the rabbis from the public treasury as was the case with Catholic priests and the Protestant clergy. This became a law 8 Feb. 1831. The last vestige of mediæval discrimination against the Jews disappeared when the Supreme Court abolished the oath «More Judaico» in 1846.

Holland.— In the national convention of the Batavian Republic a bill was passed on 2 Sept. 1796, which declared that «No Jew shall be excluded from rights or advantages which are associated with citizenship in the Batavian Republic and which he may desire to enjoy.» Since then the Jews of Holland have had all political rights; how absolutely their equal

standing with other citizens is assured appears from the adoption of a resolution by the legislature in 1845 giving the widows of rabbis the same pensions as the widows of the Protestant clergy.

Germany.—In none of the many German states was political emancipation definitely granted to the Jews before 1848. True, the Prussian edict of 11 March 1812, issued by Frederick William III at the instance of his liberal-minded Prime Minister, Hardenberg, did declare the Jews to be natives and granted them citizenship on the condition of their taking family names and using the German or any other living language in place of the German-Jewish jargon. They were given permission to settle anywhere and to acquire real estate; all special Jew taxes were abolished; in return they had to assume all the obligations of citizenship, notably the payment of taxes and military service. After the Congress of Vienna and the fall of Napoleon a spirit of reaction set in and this edict remained practically a dead letter. Not till 1848 was definite political emancipation granted the Jews of Prussia. Paragraph 4 of the law of 5 Dec. 1848 declared that "All Prussians are equal before the law. Class privileges are not recognized. Public offices are open to all who are capable of filling them," and paragraph 11 stated that "The enjoyment of political rights is independent of religious confession and of membership in any religious association." In that same year the delegates from the various German states in Parliament assembled at Frankfort-on-the-Main formulated a statement of the fundamental rights of the German people. Paragraph 13 was to the effect that "The enjoyment of civil and political rights is to be neither conditioned nor limited by religious belief; neither are political duties to be interfered with by it." The chief champion of the cause of Jewish emancipation in Germany was Gabriel Riesser (1806–63). Notably during the fourth and fifth decades of the 19th century when this question was prominently before the legislatures of the various German states was he active. In each one of these states the Jewish question had a varied course, but in time one after the other removed the civil disabilities of the Jews, Hanover and Nassau in 1848, Wurttemburg in 1861, Baden in 1862, Saxony in 1868, and Bavaria last of all in 1869.

England.—In England the final struggle for Jewish emancipation began in 1830 and continued till into the 20th century, when in 1903 the religious test at London University was abolished with the appointment of a Jew (Israel Gollancz) to a professorship. In 1829 the bill removing the civil disabilities of the Catholics had passed the Houses of Parliament. The following year Robert Grant introduced a bill in the House of Commons granting the same boon to the Jews; this bill was passed in the Lower House in 1833 but was defeated in the House of Lords; the same fate met the bill in 1834; in fact the bill was passed 10 times in the House of Commons and rejected as often in the Upper House before a Jew was finally permitted to take his seat in the House of Commons in 1858. In 1835 a bill was passed called the Sheriffs' Declaration Bill permitting Jews to hold the office of sheriff. In 1836 David Salomons was elected sheriff in London. In 1845 a bill became law whereby Jews were permitted to hold municipal offices. The Religious Opinions' Relief Bill passed in 1846 removed some minor disabilities from Jews and dissenters from the Established Church. The situation became particularly acute when Lionel de Rothschild was elected to Parliament in 1847 for the city of London. A bill was introduced in December of that year to permit him to take his seat. It took the course of its predecessors of like nature, passing the Commons, and being thrown out by the Lords. The year 1850 witnessed a similar experience. David Salomons who was elected a member for Greenwich in 1851 took the bull by the horns when he persisted in holding his seat although ordered to withdraw by the speaker; he aggravated the offense when he voted "no" on a motion for adjournment made after his refusal to withdraw. The Prime Minister now ordered that he leave the chamber. Salomons addressed the House and although the members sympathized with him they sustained the Prime Minister. The case was carried to the courts; the decision was against Salomons on the ground that he had no right to vote before taking the oath prescribed for members of Parliament. He was compelled to pay a fine of £500 for each time he had voted. Three times more, in 1853, 1856 and 1857, the Commons passed the bill, but the Lords persisted in rejecting it; finally in 1858 a bill passed both houses which declared the House of Commons competent on occasion to modify the form of oath by special resolution. Lionel de Rothschild by such special resolution of the House was now permitted to take his seat, omitting from the oath the words "on the true faith of a Christian." In 1860 this concession was made a standing rule and in 1866 the Parliamentary Oaths' Act was passed which omitted the objectionable words altogether and thus removed the discrimination which marked off the Jewish members. The University Test Act was abolished in 1870; in 1885 the first Jew (Baron Nathaniel de Rothschild) became a member of the House of Lords, and in 1890 all religious tests for all offices excepting the kingship itself were removed and all offices were thrown open to all subjects of the realm without distinction of creed.

Austria.—The Toleration Edict of Joseph II was of no significance as far as the political emancipation of the Jews of that realm was concerned. There was no definite step toward removing civil or political disabilities until the year 1846 when the oath "More Judaico" was abolished; on 25 April 1848 the new Constitution granting free exercise of religion and civil rights irrespective of religious creed was promulgated; five Jewish deputies were elected to the first Parliament which convened after the new Constitution went into force. On 28 October of that same year the special Jewish taxes were abolished. As in a number of German states a period of reaction set in in Austria after the revolutionary fire of 1848 had spent itself, and the Jews suffered from this reactionary spirit; the rights granted them were revoked; when the concordat was signed in 1855 whereby the reins of government fell altogether into the hands of the Clerical party, the anti-Jewish spirit was accentuated and some mediæval decrees touching the status of the Jews passed at

this time. The reactionary regime was in power till July 1859 when the peace of Villafranca was signed. Soon thereafter, in February 1860, some new legislation in reference to the Jews was framed of a more liberal spirit. On 21 Dec. 1867 the new Constitution was issued, which established the political equality of all citizens of the empire regardless of religious faith.

Hungary.— In the other portion of the dual kingdom political emancipation was greatly agitated in the fifth decade of the 19th century. As early however as 1790 the Jews of that land had laid before Leopold II a petition requesting equality with other citizens; the following year the Diet passed legislation «De Judaeis» affording the Jews protection. At the same time a promise was made that a commission would be appointed to look into the situation and to report measures for the betterment of their condition. A half century passed before any real relief was afforded. The Diet of 1840 passed a law which allowed all Jews of good repute whether native or naturalized to reside anywhere except in mining towns; this law also permitted them to study for the professions and engage in manufacture; however, their right to own real estate was restricted to the cities. In 1846 the toleration tax was abolished. Nowhere did the Jews take so prominent a part in the revolutionary struggle of 1848 as in Hungary. This was appreciated by the party of freedom and in the national assembly of the Hungarian Republic held at Szegedin in 1849 a bill was introduced and passed on 28 July granting the Jews all rights of citizenship. This republic was of very short duration. The Jews enjoyed their newly won rights just two weeks. The overthrow of the Hungarian Republic was followed by the most stringent restrictive measures and the Jews were made to suffer severely for their sympathy with and participation in the revolutionary struggle; a very heavy tax was imposed and every right that had been granted was revoked. The question of Jewish emancipation was not agitated again till 1861 but no remedial legislation was passed till 1867. In December of that year both houses of the Hungarian Parliament passed a bill granting political emancipation. Full emancipation was secured when on 11 May 1896 the Upper House after two previous rejections concurred in the bill passed by the Lower House two years earlier recognizing the Jewish religion as one of the legally acknowledged faiths of the country.

Denmark.— When the deliberative assemblies were established in the various provinces of Denmark by the laws of 28 May 1831 and 15 May 1834, the Jews were granted the right to vote but they were not permitted to stand for election to Parliament; the Constitution adopted 5 June 1849 granted them full political rights and removed all restrictions.

Belgium.— The Jews were emancipated politically in 1815.

Italy.— When Italy passed into the dominion of Napoleon I the Jews of that country secured the advantages of the liberal French legislation. With the fall of Napoleon and the reinstatement of Pius VII, the Jews were deprived of the liberties they enjoyed under French rule and the old mediæval legislation was re-enforced. This continued till 1848, the revolutionary year, when as everywhere else a brighter day dawned for the Jews of Italy; however, in the reaction which followed they were again forced into mediæval conditions. This continued till 1859 when with the achievement of Italian unity the Jews received full political rights; in Rome alone were those withheld but there, too, they were granted upon the downfall of the papacy as a temporal power (September 1870).

United States.— The first amendment to the Constitution announces unequivocally the separation of church and state; all men are equal before the law whatever their religious creed; however a number of the 13 original States which adopted State constitutions before the Constitution of the United States was framed demanded religious tests of a character to exclude all but believing Christians from holding office. The constitution of Delaware of 1776 had such a test which was abolished in the amended constitution of 1792. The constitution of Massachusetts which had a similar provision was not amended till 1822. According to a constitutional provision of New Jersey only Protestants could hold office; not till 1844 was this article amended; the article of the constitution of Pennsylvania which posted a belief in the Old and New Testaments as prerequisite for office-holders was amended in 1790 to the effect that belief in God and the future state should be the condition; Vermont repealed the religious test of the constitution of 1777 in 1793; Rhode Island, Connecticut, Virginia and Georgia required no religious tests in their original constitutions. In Maryland a long struggle was necessary before the provision of the constitution of 1778 requiring belief in the Christian religion as a condition for office-holders was abolished. The Jew bill introduced in the legislature in 1818, whose object was to remove the civil disability of the Jewish citizens of the State, was not passed till 1826. The new constitution adopted in 1851 still contained the original clause accompanied, however, by a special provision for the Jews; the constitution of 1867 definitely removed all religious tests excepting the belief in the existence of God. The constitution of North Carolina of 1776 made a belief in the Protestant religion a condition for holding any office of trust or profit; in 1835 the words «Christian religion» were substituted for «Protestant religion»; this emancipated Catholics, but not Jews; not till 1868 was this remedied, when only such were declared as being disqualified for office who «shall deny the existence of Almighty God.»

Rumania.— In 1878 the representatives of the powers of Europe assembled at the Congress of Berlin made the political and civil emancipation of the Jews one of the conditions of the independence of Rumania. These rights have not been granted, and alone among European powers Rumania refuses to grant her Jewish citizens the rights of men. There have been reports now and then, however, since the Russian Revolution that Rumania will emancipate the Jews within her borders.

Russia.—Long after emancipation had come to the Jews of western Europe, repressive laws of the most extreme character continued in

force against them in the land which contained over half the Jews in the world. Protests by leading statesmen and citizens of all faiths in the free lands of Europe and America were of no avail. The United States had gone so far as to refuse to renew its commercial treaty with Russia because American Jews were not permitted to enter Russia though holding the American passport. Then burst upon a startled world the Russian revolution. March 15, 1917, became one of the epochal days in the world's history. The oppressed classes in Russia were freed. Among them the Jews. On 5 April the provisional government abolished all limitations on rights of Russian citizens and friendly aliens based on race and religion. On 20 April all words offensive to Judaism were stricken out of the official oath taken by Jews. Joy reigned in the Russian Jewries, in truth among Jews and all lovers of freedom throughout the world. The Jews in the two chief cities of Russia decided to commemorate the emancipation of Russian Jewry in striking ways, the Jewish community in Petrograd by establishing a Temple of Equality in connection with an international institute for the study of national problems, and the Jewish community of Moscow by establishing a special fund. To become really effective as the law of the land the decrees issued by the various cabinets that have been in power since the revolution must be ratified by the Constituent Assembly. The Constituent Assembly whose duly elected delegates met on 18 Jan. 1918 and organized by electing a presiding officer unwelcome to the Bolsheviki and extreme social radicals is being blocked from further assembling by these extremists. No one can tell what the future may bring forth. But for the present Russian Jewry is free!

DAVID PHILIPSON,
Professor of Homiletics, Hebrew Union College, Cincinnati, Ohio.

15. THE SYNAGOGUE. The origin and development of the synagogue, the story of its simple beginnings from the Babylonian captivity to its appearance in Palestine, to spread from land to land with the dispersion of the Jewish people; the gradual rise of synagogue prayers and customs, which form so vital a factor in the survival of Judaism;— these are subjects which are full of interest, and not from the standpoint of archæology alone. For the synagogue is a living organism — it means more than edifice or meeting-place for prayer. It spans the entire history of Israel and is coextensive with the Jewish consciousness from the earliest dawn of an organized worship and discipline, rite and doctrine, law and custom. The synagogue is thus school, assembly, home, law-court, as well as house of prayer; and sometimes in an era of persecution it was a fortress also, wherein the Jew resisted the enemy and perished amid the flames of the sanctuary. The history of the synagogue is, then, primarily the history of the Jewish people and their religion, although in the present sketch the subject will be limited to the story of the synagogue in its current meaning.

Origin.— It was when the Jews went to Babylon under Nebuchadnezzar in the 6th century before the common era that the desire for public worship and instruction gave rise to the synagogue, contradistinguished from the Temple with its forms and sacrifices. Tradition traces a synagogue to King Jehoiachin of Judah, who, borne captive to Babylonia with his people, founded such a place of assembly at Shafjatib, in the district of Nehardea. Whether the legend be historical or not, synagogues must have spread in the land of the captivity and been transplanted to Palentine on the return under Ezra. For the post-exilic Psalm lxxiv, 4–8 complains of the destruction of places of worship and Ezra (in Neh. viii) is represented as summoning the people to prayer and instruction, he himself reading the law as he and the heads of the community stand upon a wooden platform in the centre of the worshippers. To this rude beginning can be traced the modern synagogue.

Name.— Synagogue is but one of many appellations, and is merely the Greek translation of the Hebrew "Beth ha Keneseth" ("the house of meeting"). It is not found in the Old Testament, but is common in the New, and applied to all places of worship outside of the Temple which were so numerous throughout Palestine and the Eastern world. In the Apocrypha references are made to a "Proseuche" ("house of prayer") and the word is found in Josephus and Philo and in Juvenal, too, in an often cited passage, usually, however, with a more restricted meaning than synagogue. It is of interest to learn from the Talmudic tradition (Pesachim 88 a) that Abraham called his place of prayer a "mount," Isaac a "field," and Jacob a "house." The first Temple was called "Beth El," "house of God" (1 Kings vii, 12). In later Biblical books the term "Moëd," "place of assembly," is used (Lam. i, 4; Ps. lxxiv, 4, 8).

Growth.— The spread of the synagogue was rapid with the diffusion of the Jewish in the immediate centuries before and after the fall of Judæa. There are distinct references in the Talmud to the fact that in Jerusalem were 480 synagogues, so large was the host of foreign Jews who visited the Temple and necessitated the creation of many places of prayer. There were synagogues of the Alexandrians, Libertines, Cyrenians, Elymæans and Asiatics. In the reign of Augustus Cæsar, Rome had many synagogues, which attracted Roman visitors, leading to the conversion of men and women of eminence, and arousing respect for Jewish Sabbaths and festivals. A few centuries later when the Christians of Rome burned down a synagogue, and the usurper Maximus commanded the Roman Senate to rebuild it at the expense of the state, he was called a Jew by

Ambrosius of Milan. In Egypt, with nearly a million of Jews, according to Philo, the famous synagogue at Alexandria was one of the wonders of its century. In the New Testament many are the allusions to the synagogues of Damascus, Antioch, Athens, Corinth and elsewhere outside of Palestine and to Nazareth and Capernaum within its limits. To the Jewish colonies which went from Rome to the south of France and to Spain is due the synagogue's appearance in Europe. To the east and the west and the isles of the sea, the synagogue spread, and the spirit of persecution which aimed at its destruction only served to maintain and develop its strength. By the running stream or sea shore, so as to admit of ablutions, in those early days the house of prayer was erected, and if in the crowded city no private roof was to exceed it in height. And often beyond the beaten track of travel, in the wilderness and deserted village, the little Jewish synagogue would be built, to become a refuge for the persecuted in after centuries. Several of the oldest existing synagogues in Europe, so runs the tradition, date back to such an origin. Often, too, the synagogue was erected close to the tombs of famous rabbis — a custom common in early times among Christian and Mohammedan. Visiting Europe and the East toward the end of the 12th century, Rabbi Petachia tells in his 'Travels' (Benisch's ed., London 1856) of seeing at Nisibis two synagogues built by Ezra the Scribe, at Bagdad three besides that which tradition refers to Daniel. In Babylon he found 30, all the worshipers being bare-footed. At Tiberias he visited the synagogue ascribed to Joshua, at Damascus the one supposed to be erected by Elieser ben Asariah, who lived about the 1st Christian century. In Alexandria, Egypt, is the Elijah synagogue, so-called because legend claims that the prophet for some time dwelt on the spot, and into its neighboring small houses sick Jews and Mohammedans are taken, in the hope that Elijah will perform miracles in their behalf. Making every allowance for pious credulity, a reasonable antiquity for such synagogues must be admitted. The Karaite synagogue in Jerusalem dates from the 9th century. The synagogue on Rabbi Simon ben Jochai's grave near Safet and Rabbi Meir's synagogue in Tiberias are of venerable age.

Famous Synagogues.—The roll begins with the Basilica of Alexandria, destroyed when the Jewish community was swept away in a whirlwind of persecution (about 116 of the common era). He who never beheld it, to paraphrase the description in the Talmud (Sukkah, 10 b), never saw the majesty of Israel. It rose like a basilica, colonnade within colonnade, filled at times with a throng of people twice as great as went out of Egypt with Moses. There, too, were golden chairs inlaid with precious stones corresponding in number with the 70 elders of the Sanhedrim, each of which seats cost 25,000,000 golden denarii. In the centre on an elevation of wood stood the choir-leader. Each guild had its own place, so that a stranger might recognize his trade and join his coworkers. So large was the edifice that the responses of the congregation were directed by a flag signal. Spain had numerous synagogues of importance. When Cordova fell in 1148 its magnificent synagogues were destroyed. In Toledo at its height of prosperity, there were many splendid synagogues, two of princely magnificence, which still exist after varied transformations. The Samuel Abulafia synagogue (1357), El Transito, later transformed into a church, was built partly in the Gothic, partly in the Moorish style. It consisted of several naves separated from each other by columns and arches; the upper part of the walls was decorated with delicately cut arabesques, within which, in white characters on green ground, can still be read the 80th Psalm in Hebrew. On the north and south sides are inscriptions in bas-relief, reciting the merits of the founder and of Don Pedro of Castile. Once the treasurer and adviser of Don Pedro, Abulafia died under the torture, three years after his synagogue was completed (1360), happily unconscious that the edifice about a century and a half later, with the expulsion of the Jews from Spain, was to be converted into a church, to remain to our time an ornament to the old Castilian city. Such changes were common in the Middle Ages. The first synagogue in the north of Europe was built in 1598 by the Portuguese Jews of Amsterdam — a historic community with its memories of Spinoza. When the Portuguese synagogue was originally erected in London in 1702, the Quaker architect who would receive no compensation except the actual cost (£2,750) of the building, incorporated in the roof a beam from a royal ship presented by Queen Anne. Prague can point to a synagogue, around which fanciful legends cluster, which in parts dates back to the 12th century, and Worms, as fruitful in legend, can show a portion of its old synagogue which was not later than the year 1100. Stately was the Venice synagogue, built in the 16th century, with a splendor of ornamentation that attests its wealth and taste.

Under the Ban.— If books have their fates, synagogues would also seem to have had their destinies, which were not always of the happiest kind. Their forcible conversion into churches was often a sign of the times. As early as the 5th century Theodosius II prohibited the Jews from building new synagogues. A century later Justinian I renewed that decree with increased severity. When the Jews of Genoa asked permission of Theodoric to put their synagogue into better repair he granted it grudgingly, but later showed his liberality in condemning the Roman commune to make compensation for the synagogue which a mob in that city had burned. Pope Gregory I razed to the ground a synagogue in Sicily. Calipb Omar I was as intolerant, including the church in his orders. Omar II (717–20) wrote to his governors: "Do not pull down a church or a synagogue, but do not allow new ones to be built within your provinces." At the Council of Oxford (1222) Stephen Langton forbade the Jews of England to build synagogues. Alfonso X of Castile (1252–84) may have called the reader of prayers in a Toledo synagogue, Don Zag, an eminent astronomer, "his sage," but his code of laws contains a prohibition against building new synagogues. Pope Eugenius IV, in a letter to the bishops of Leon and Castile (1442), also decreed that Jews should build no more synagogues. As late as 1612 in Hamburg Jews were not allowed to have synagogues, but such restrictions did not last long. They were permitted in a few years to meet for religious

worship on their threat that otherwise they would leave Hamburg in a body, with their capital and business connections. On the other hand, instances are not rare of kindlier consideration. Chrysostom may have fulminated against the synagogues of Antioch and called them infamous theatres and dens of robbers, but Theodosius the Great (379–95) ordered the bishop of Callinius in northern Mesopotamia, who had caused a synagogue to be burned down, to have it rebuilt at his own expense. The Byzantine emperor, Arcadius (395–408), protected the synagogues when they were attacked by the clergy in Illyria. Cyril of Alexandria, whose zeal led to Hypatia's death, aroused the mob to destroy his synagogue; but Theodosius II compelled the clergy and mob of Antioch to restore the synagogues to their owners. In 1419 Pope Martin V issued a bull, in whose preamble it was expressly stated that Jews should not be molested in their synagogues and "their laws, rights, and customs be not assailed"—and he was not the only Pope who protested against bigotry. In the days of Innocent III a complaint was made at Sens that the synagogue was higher than the church, which offended the sensibilities of the churchmen. In the 14th century in Rome, church and synagogue were built in close proximity, without arousing the ire of the populace. Five centuries later in many cities in the United States, churches are invited to occupy synagogues at times of emergency, and Jewish and Christian ministers, with their congregations, join in service on national holy days.

Synagogue Architecture.— There is no distinct Jewish architecture — the synagogue's form has varied with its environment and the architect's artistic genius. Jewish law, it is true, concerns itself with the height and the position of the edifice — it must be higher than private dwellings and must face the east; otherwise there is no restriction. Hence there can be synagogues octagonal and quadrilateral although the cruciform arrangement would be hardly admissible. The readiness with which prevailing styles were adopted is proved by the remains of synagogues in Palestine, which Kitchener in the 'Quarterly Statement' for July 1877 of the Palestine Exploration Fund reduces to 14, of which 11 are known and 3 doubtful. He finds that these ruins show similarity in plan and detail of ornamentation, with the same class of moldings, and pointing to same date of erection. He concludes that the Roman emperors Antonius Pius and Alexander Severus, who were great builders and restorers of temples in Syria, inspired and aided the erection of these synagogues, which were built by Roman labor. "The dressing, size and nature of the masonry is certainly Roman." Kitchener gives as their date 150–300 of the common era. The Worms synagogue is Romanesque, the Old New synagogue at Prague, Gothic. The Santa Maria la Blanca in Toledo, formerly a synagogue, but changed into a church in 1405, is built after most approved Moorish-Spanish design. The plan is that of a basilica, the ground floor tiled, being an oblong square about 90 by 65 feet, divided into five naves or aisles, divided by four rows of octagon pillars, nine in each row. Horseshoe arches of peculiar Moorish pattern rise from these columns. Over the arches, whose spandrils are carved into elegant rose patterns, is placed a second arcade ornamented with pure Byzantine work, appearing like stonelace. A third series of stalactite archlets rests upon double pillarets, crowned by an elaborate frieze reaching to the roof, which though of wood has the durability of rock, and black with age, still shows traces of gold ornamentation. In 1550 this building was used as a Magdalen asylum, and at the French invasion in 1792 was appropriated for military barracks. In Trani, Sicily, is a Gothic Catholic church, which was originally a synagogue — in the early centuries the Jews of Sicily were numerous and prominent. In Poland and parts of Russia are wooden synagogues, whose flat roofs show indubitable signs that they could harbor cannon, when the Jews were forced to defend themselves. The variety of synagogue architecture illustrated in the splendid new places of worship that now adorn the chief cities of Europe — such as Strassburg, Berlin, Paris, Vienna, Florence, Turin, Munich, Warsaw, Cologne, Budapest, etc., — shows that the synagogue to-day is as adaptive as of old and runs the gamut of every style from the Classic to the Renaissance. This freedom and eclecticism are seen at their best in the United States, where within the past few decades in particular a large number of magnificent new synagogues have been erected — the reform congregation calling them preferably "temples." The oldest American synagogue is at Newport, R I. (1762), in the Colonial style of the period, built of brick, with a carved stone cornice and porch. With the increase in population and wealth, the synagogues have rapidly improved in size and beauty. The styles have been largely Moorish, as in Temple Emanu-El, New York, but the Byzantine, Romanesque, Renaissance and Classic, with their various blendings, are also represented. The first regular synagogue in New York was erected in Mill street in 1729, a simple structure which was later taken down and more pretentiously rebuilt.

The Inner Synagogue.—The interior architecture of the synagogue has been to a certain degree retained from the earliest times. The centre of the main floor is occupied by an elevated platform, on which stands the desk, from which the lessons from the Pentateuch and the Prophets, and in some communities the regular prayers, are read. This platform is usually called *Almemor*, from the Arabic *al-minbar*, "the chair," or by its Talmudic name *Bema*, the Greek Βῆμα, a speaker's platform. It recalls Ezra's wooden pulpit, from which he addressed the people (Neh. vii, 4). Directly facing the entrance from the vestibule which is usually at its western end is the Ark, termed *Teba* or "box" in Talmudic phrase, but *Aron* in later Hebrew, a closet or niche in the wall, in which the scrolls of the Law or Pentateuch are kept, and before which a curtain is suspended. A perpetual light is hanging in front of the Ark, symbolic of immortality. In the new American synagogues reading desk and pulpit are combined before the Ark. The olden tabernacle is thus powerfully suggested by the inner arrangement of the average modern synagogue with the curtain screening the Ark, like the curtain which concealed the Holy of Holies. The main floor is reserved for men and boys, the gallery, or in smaller buildings, a side room is set aside for the women. The separation of

the sexes, however, has rapidly disappeared in American synagogues of the progressive school; and family pews have been introduced, while the men no longer pray with covered heads in Oriental fashion. The interior equipment of the synagogue is capable of splendid decoration. The Ark is often elaborately ornamented, and while plastic art has received little if any encouragement, carved wood or rich marbles are often employed and Mexican onyx, gold and mosaics used with fine effect. The Italian synagogues are remarkable for their costly embroidered curtains and scroll coverings. Usually the walls are plain, but at times are elaborately decorated, according to the resources of the congregation, the windows being either severely simple or of richly stained glass. The tendency to-day among some of the wealthiest temples is to abandon almost wholly the traditional features of the synagogue in the effort to secure the acoustics, comfort and ventilation of a perfect lecture-hall or auditorium, whatever becomes of the "devotional ensemble," in which respect some churches are equally at fault.

Synagogue Administration.— The highest functionary is the rabbi, which signifies "my teacher"; originally in days of national autonomy a judge and adviser in civil and criminal matters and religious questions, to-day his function in the United States and in centres of Western civilization, as distinguished from the Orient and Eastern lands in general, is chiefly to preach. In countries where Jewish ecclesiastical law is scrupulously followed and the traditions strictly observed, he decides on religious and theological matters. The reader in the synagogue is called *hazan*, "overseer," from which comes the Christian *episkopos*, an official whose duty it was to ensure the correct reading of the service. He is termed also *cantor* and possesses high musical abilities. The *shammash* is sexton or general servant of the congregation. The business head is called *parnas*, "provider," or merely president in new-fashioned synagogues, who with the vice-president, and a number of trustees, manage the temporal interests. A useful functionary existed after the Babylonian Captivity, when the Hebrew was disappearing as the language of the people, called a *methurgeman* ("dragoman") or "interpreter," who used to translate into the vernacular the lessons from the Hebrew Pentateuch. The primitive synagogue had other officials, whose duties are now relegated elsewhere. A helpful service was rendered by the 10 *Batlanim*, or "men of leisure," whose presence was necessary as a legal quorum for worship. These were either people of independent means or stipendiaries of the congregation. This quorum of 10 was called *Minyan*. To become a member of the synagogue, no formal subscription to a creed is exacted; the mere fact of being an Israelite is sufficient. Each synagogue is autonomous, although of recent decades unions of congregations, under various names, have been established in England, Germany and the United States. Their functions, however, are largely educational, and they do not interfere with the independence of any constituent member. The synagogue is supported by seat or pew assessments and by voluntary offerings. There are never collections except for charitable or patriotic causes. Paid officials are elected by the trustees or members, for short or long terms, but sometimes for life.

Ritual and Customs.— To describe briefly the liturgy of the modern synagogue it is an evolution from the ritual of the primitive place of meeting, with its suggestions of the Temple service. It consists of portions from the Pentateuch and the Psalms, with certain selections, called "Amida," or "Shemone Esre," "the 18 benedictions," and additional passages of ancient origin. With the centuries and enforced emigration from land to land, the simple elements in the liturgy were developed and amplified, additions were constantly made by poetasters and local rabbis, until with the sermon the length of the service was unduly protracted and its solemnity disturbed. Hence of late decades condensation and elimination have taken place, while music and the mixed choir have been introduced in more progressive synagogues of Europe and the United States. In these, too, the Hebrew has been curtailed and many portions of the service read in the vernacular, particularly the lessons from the Pentateuch and Prophets, and the prayer for the government, whether it be kingdom, empire or republic. There is a deep vein of solemnity in the old-time liturgy, although its *leit-motif* is more national than individual. The atmosphere, however, is far from narrow and God is usually described not as God of the Jew alone, but of "all flesh," "all nations," of humanity. At the same time the lesson is enforced that men are brethren and religion is a daily exercise and not a weekly parade. As the liturgy was composed at times when the spirit of persecution was most rampant, its breadth and beauty are all the more notable. It must not be imagined, however, that the synagogue was like a monastery, and its spirit ascetic and unduly rigid. It was the centre of communal activity, the meeting-place for all interested in benevolence, education and social welfare. Here came the bridegroom, the Sabbath after his marriage. Here was brought the babe on its first outing. Here worshiped the young mother, when she recovered from illness. Here publicly prayed the orphan and the mourner when their dear ones were taken from them. Here, too, the sinner did penance — was not Uriel Acosta flogged in the Amsterdam synagogue in 1633, although in "a retired corner?" There are records extant of public announcements on Saturdays in the synagogues of the results of law suits and of properties in the market. Lost articles were openly cried, and a proclamation of stolen goods was instituted. The moral law, both as regards commercial honesty and domestic virtues, was publicly enforced. "Be one of the first in synagogue," reads a quotation from a 14th century Jew in the *Jewish Quarterly Review*, III, p. 463, "Do not speak during prayers, but repeat the responses and after the service do acts of kindness. . . . Wash me clean, comb my hair as in my lifetime, in order that I may go clean to my eternal resting-place, just as I used to go every Sabbath evening to the Synagogue." The sermon lost its hold during the Middle Ages. The rabbi was more of a teacher than preacher, but Jewish pulpit eloquence revived with the century of emancipation and to-day the rabbi of the best type wields influence as preacher. The

olden synagogue was the first "institutional church" and it maintains its essential character.

Professor Semitic Languages, New York University.

16. REFORM JUDAISM. Reform Judaism in America finds its roots in the beginning of the reform movement that took place in Germany in the first quarter of the 19th century. The cause of the religious advance of the Jew in Europe was the breaking up of the Ghetto in the latter half of the 18th century. As long as the Jew was excluded from the world, its culture and its opportunities, he found his greatest comfort in his Hebrew studies and in his religion. The latter developed only along its own narrow lines and was protected from every admixture of foreign elements. The Jew, as it were, built a "fence around the law." When the bars of the Ghetto fell and the Jew was initiated into a new world of thought, language, literature and activity, he found the old religion incongruous with modern life and the rabbinical law too rigid for the new conditions. Reconciliation between the two was difficult. A bitter struggle ensued between the old religion and the new life. A compromise was the only solution. Judaism was equal to the demand. Heartburnings, personalities, domestic schism, often followed in the wake of innovations. The wheels of progress, however, could not be stayed.

Moses Mendelssohn translated parts of the Bible into German and thus opened up a new field of study for the Jew. This was followed by a translation of the prayerbook into German by David Friedlander. The Talmudic regulations were either openly violated or interpreted in a liberal spirit. Religious schools for instructing the younger generation in the principles and practices of Judaism as well as in the literature and history of Israel were instituted and conducted according to modern pedagogical methods. Religious services in many synagogues were modified, rituals were shortened, objectionable features were omitted, and prayers, sermons and hymns in the vernacular were introduced. Israel Jacobson was the first who successfully established reformed religious schools and services in Germany and later built a Reform temple at Seesen, which was consecrated 17 July 1810. This Reform movement soon spread to Berlin and Hamburg and before long it reached America and found expression here in 1824 in the city of Charleston in the organization of the "Reform Society" of Israelites, which instituted divine services that consisted of a short ritual with sermons, etc., in English and the abolition of offerings during the divine service. A great ecclesiastical battle resulted and many questions of Reform were delayed for several years. An organ was purchased and the system of family pews adopted in spite of much opposition. It may here be mentioned to the everlasting credit of Reform Judaism, that it instituted family pews and gave to woman the right to worship in the same pew with her husband and sons. The practice of the orthodox wing, which still prevails in many congregations, of isolating women in a screened gallery, is both improper and without warrant in this age of enlightenment. Reform differs further from Orthodoxy in the interpretations put upon the Scriptures and the Talmud and the authority with which they are severally credited. Orthodoxy gives to both Scripture and Talmud a binding authority over Jews without regard to circumstances of time and place. Reform seeks to set up a higher standard of authority than merely the literal texts and to find a way of reconciling ancient laws and traditions, if possible, with modern requirements. The usual custom of Reformers is to be reasonable and to discriminate between the essentials and the non-essentials of Judaism. Reform Judaism has discarded belief in bodily resurrection, in the coming of a personal Messiah, in the national restoration of Palestine and the reinstitution of the ancient temple with its Levitical cults. Reform Judaism is also manifested in a refusal to abide by the rigorous enforcement of the Mosaic and Rabbinical dietary laws and in certain changes in the ritual and religious observances. The Reform instituted at Charleston soon spread to the North where in the city of New York the Temple Emanu-El was organized in 1845 under the leadership of Rev. Dr. Leo Merzbacher who formed his own ritual for the congregation. Temple Emanu-El has led the van of the Reform Jewish congregations of America for over half a century and has given much impetus to the progress of Israel. Under Dr, Samuel Adler and Dr. Gustav Gottheil this congregation made vast strides and is now the largest and wealthiest Jewish congregation of the world. Its place of worship is situated at the corner of Fifth avenue and 43d street, and its present rabbis are the Rev. Drs. Joseph Silverman and Hyman G. Enelow. Har Sinai congregation was soon organized in Baltimore under the banner of Reform and adopted the prayerbook of the Hamburg Temple. Some of its noted rabbis were Dr. David Einhorn, Dr. Samuel Sale, Dr. D. Philipson and Dr. F. Shanfarber. The present incumbent is Rabbi Charles Rubenstein. A stronger note than all these, however, was sounded in the early days of reform at Albany where Rev. Dr. I. M. Wise officiated from 1846 to 1854. He had come from Germany, impregnated with the new spirit of progress, and at once carried his cherished ideals into practice in this country. He fought some of the early battles of Reform in America which went far beyond the expectations or desires of the Reformers of Europe. He contended for choir and organ and for a prayerbook in the vernacular and his *Minhag America* (the American ritual) was acceptable to most American Reform congregations for almost 50 years. It later became the basis of the Union Prayerbook now generally in use. Wise was not alone in his strenuous battles for progress. Leo Merzbacher, Max Libienthal, Samuel Adler, David Einhorn and Samuel

Hirsch ably entered the lists and contributed valuable aid to the new movement. These men were later reinforced by such valiant Reform leaders as B. Felsenthal, J. K. Gutheim and Gustav Gottheil. Rev. Dr. Isaac M. Wise, rightly called the father of American Reform Judaism, gave to this movement a greater impetus than it had ever received, when in 1873 he organized the Union of American Hebrew Congregations and under its auspices, in 1875, the Hebrew Union College, a theological seminary for the training of American rabbis. A great drawback to the progress of the reform element was the lack of leaders and rabbis with modern scholastic education who could enter into the spirit of American conditions and the needs of Israel in this country. In the last 35 years over 200 graduates of this college have found pulpits in reform congregations where, with their modern culture and the ability to appeal to the younger generation, they have had eminent success, and have given Reform (or Progressive Judaism, as it is sometimes called) a firm foothold on American soil. The Union of American Hebrew Congregations is now actively engaged in providing circuit preachers for small congregations and in organizing congregations and religious schools in communities where none exist. Another source of active strength to Reform Judaism has been the Central Conference of American Rabbis, which the late Rev. Dr. I. M. Wise called into existence in Detroit in July 1889. This had been preceded by several Reform Rabbinical Conferences which from time to time discussed burning ecclesiastical and ritual questions. The most noted of the conferences was the Pittsburgh Conference held in November 1885, at which the following platform of Reform Judaism was adopted and which in the main has been approved by nearly all Reform rabbis and teachers and been generally accepted by the laity:

Act 1.— Judaism conveys the highest conception of God and of his relation to Man. God is the Creator and Ruler of the world, Father and Educator of the human race.

Act 2.— The Holy Scriptures are the record of Divine Revelation and of the consecration of the Jewish people as the missionaries of the one God. In composition and literary arrangement the Scriptures are only the work of men with the unavoidable limitations of their age.

Act 3.— The results of natural science are the best helps to the understanding of the working of Divine Love in the world, the Bible serving as guides to illustrate the working of Divine Power within us.

Act 4.— The Mosaic laws are intended for the training of the Jews of Palestine in their former surroundings; only the moral laws are divine; all social, political and priestly statutes, inconsistent with our modern habits and views, are to be rejected.

Act 5.— The Mosaic-Rabbinical laws on diet, purity and dress fail to imbue modern Jews with the spirit of priestly holiness; their observance to-day would obstruct rather than enhance moral and spiritual elevation.

Act 6.— Israel's Messianic hope relates to the establishment of the authority of peace, truth, justice and love among men. No return to Palestine is expected, nor the reinstitution there of a Jewish state, nor of a worship conducted by descendants of Aaron.

Act 7.— Judaism is an ever-growing, progressive and rational religion of modern civilization and asserts the necessity of preserving identity with the great past of the Jewish nation.

Act 8.— Judaism hails the efforts made by various religious denominations toward removing the barriers separating sect from sect.

Act 9.— It is the duty of Jews to spread the knowledge of their religious truths and mission amongst Jews and non-Jews.

Act 10.— The present agitated state of Judaism is a period of transition from a blind belief in authority and exclusion to a rational and humanitarian conception of religion; the masses, therefore, should be enlightened as to the history and mission of the Jewish people and their social and spiritual condition elevated through press, pulpit and school.

The Central Conference of American Rabbis has, under the régime of its founder and first president, Dr. I. M. Wise (1889–98), and its second president, Dr. Joseph Silverman (1899–1903), formulated many decisions which have been put into practice by the people at large, the most important of which are the abrogation of circumcision for adult proselytes, permission to the rabbis to officiate at cremations, the interdiction of rabbis from officiating at intermarriages (between Jews and non-Jews), etc. The most important work of the conference has been the publication of the Union Prayer Book and Union Hymnal, both of which have become very popular and have been the means of bringing unity into the religious services of more than 200 Reform congregations and abolishing the many different rituals which had been a source of confusion in modern Judaism. Of late years some Reform congregations have been holding Sunday services in addition to the regular Sabbath services and many people have had grave fears lest this movement might lead to the substitution of Sunday for the Jewish Sabbath. The Central Conference of American Rabbis at its convention at Detroit July 1903 allayed those fears by adopting a resolution to the effect that this Conference favors adherence to the historical Sabbath as the fundamental institution of Judaism, and that Sunday services, whenever held, must only be regarded as supplementary to the regular Sabbath services. The future of Reform Judaism in this country is pregnant with great possibilities. It is to be shaped, in the main, by the Union of American Hebrew Congregations, the Central Conference of American Rabbis and the Hebrew Union College (Cincinnati, Ohio) presided over by Dr. K. Kohler, the successor of Dr. I. M. Wise, and by the graduates of this college of whom the older and more prominent are H. Berkowitz, Jos. Krauskopf, Louis Grossman, R. Grossman, M. Heller, David Philipson, Jos. Stolz, Jos. Silverman, Wm. Rosenau. Among other leading Reform rabbis of America may be counted E. G. Hirsch, K. Kohler, S. Sale, Leon Harrison, I. S. Moses, Abram Simon, S. Schulman, M. H. Harris, S. S. Wise and R. Grossman. It is hoped that the Jewish Theological Seminary of America (New York), will also add power and influence to progressive Judaism in

America, notwithstanding its present conservative tendency. The main problem for the reformers of the future will be how to promote assimilation with modern conditions without sacrificing the integrity of Judaism.

JOSEPH SILVERMAN,
Rabbi, Temple Emanu-El, New York City.

17. EDUCATION AND THE JEWS. The rise of education among the Jews during the period before the Babylonian exile is, like all the beginnings of national and intellectual life in antiquity, enveloped in obscurity. But enough can be learned from many casual allusions in Biblical literature to prove that even during that early era education had attained a high standard, and had become a solid foundation upon which generations could continue to build. So much is certain, that education began at a very tender age, from the moment when the intelligence of the child first awakened. Then the impressions had to begin to produce what was regarded the end and aim of all education, namely, to make a perfect man.

Among the Jews the virtuous man was one who realized his likeness to God in whose image he was created. This ideal was taught by the Hebrew prophets, and formed the basis of their education, which religion commanded should be given to all alike. Every duty to the individual and the community was a religious duty; therefore there was a perfect union of religion and life, and education had as its end systematically to form and elevate humanity. Of the highest truth and duties it was commanded "Thou shalt teach them unto thy children, and shalt talk of them when thou sittest in thy house, and when thou walkest by the way, and when thou liest down, and when thou risest up." (Deut. vi, 7). "This instruction educated the whole people to the consciousness, that conduct is the largest concern of life, so that righteousness became Irael's ideal." (Matthew Arnold).

The survival of the Jews after the twice repeated destruction of their national life, their salvation from disappearance under 18 centuries of systematic persecution and their constant high standard of intellectual and moral attainments is due to the high value they placed upon education and the manner in which it has been adapted by them to every age and time, so that no progress, caused by the advance of science, found opposition among them for any length of time. Therefore a modern educator has said truly, "If ever a people had demonstrated the value of education, it is the Jews."

In Biblical Times.— During the earliest period the instruction was domestic — the home was the only school, the parents were the only teachers. (Deut. iv, 9; vi, 7; xi, 19). Ceremonies were introduced in the house for the purpose of impressing upon the plastic minds of the children the glorious achievements of the fathers and government of the world by God. (Ex. xiii, 8). Abraham's merit was found in the assurance that he would give his children such training. (Gen. xviii, 19). There are many evidences that the arts of reading and writing became more and more widely diffused. The well-educated child is the joy of his parents. (Prov. x, 1; xvii, 25). But religion and virtue remained the foundation of all education. "The fear of the Lord is the beginning of wisdom." (Prov. i, 7). The main object of the Sabbath assemblages was instruction; everyone was made thoroughly acquainted with the national literature. (Deut. xxxi, 12–13). So the Jews were trained to become "the people of the book."

In the Rabbinical Era.— During the period of the second temple systematic instruction and schooling were introduced. First the high school (Beth ha-Midrash) in connection with every synagogue (first mentioned Eccles. li, 23). The New Testament refers to these schools many times. Luke v, 17 speaks of teachers from every town in Galilee and Judea which proves how numerous they were. It seemed indeed so unthinkable that such schools had not existed from primæval times, that the later Haggadah anticipates the Beth ha-Midrash for the time of Moses, Joshua and Samuel, that it reported Solomon built schoolhouses and Hezekiah supported them. Primary education was made compulsory by Simon ben Shetah about 75 B.C., and the High Priest Joshua ben Gamla, 63–65 A.D., enacted that teachers be appointed in every province and town for children from the ages of six to seven years up. It was then that the elementary school (Beth ha-Sefer) was established, and together with the high school connected with every synagogue. (Talm. Babl. Ber. 17, a, Ta'anit 23, b, Kidd. 30, a, Yalkut Is. 257). At the time of Josephus the duty of universal education for every child was regarded as so important that he says (Ap. I, 12) "Moses commanded us to instruct the children in the elements of knowledge, reading, writing and the deeds of the forefathers." He could state with pride (Ap. II, 25) "Amongst us every child must learn to read." In addition to reading, writing and the history of the past it was the duty of every father to have his son taught the art of swimming and to give him manual training by letting him learn a trade.

In the midst of the convulsions caused by the destruction of Jerusalem and the Temple R. Jochanan ben Sakkai obtained from Vespasian the permission to establish an academy at Jamnia which at once became the centre of Jewish learning, the mother of the succeeding high schools where the discussions were held whose records are preserved in the Talmud, (see TALMUD) which is filled with evidences of wise pedagogic insight in the arrangement of schools and courses of studies and anticipates many of the new movements in education which mark the present time. Especially is the high importance of the teacher and the respect due to him expressed in the most emphatic manner. "A President of the Academy," relates the Talmud, "sent some scholars to ex-

amine the schools and establish them where none existed. They came to a city and demanded to see the keepers of the city. The magistrates and police officials were introduced to them. 'These are not the city's keepers!' said the wise men, 'Who then are?' asked the citizens. 'The city's keepers are the teachers of the children,' was the reply." "A city without elementary schools deserves to be destroyed," is another saying. Nothing was permitted to interfere with the school lessons, not even the rebuilding of the Temple. Rabbi Jehudah said "The world is saved only by the breath of the school children." The subjects of instruction were in the first place the religious literature, the Bible and the Talmud. But the studies were so arranged that by the nature of the talmudic discussions they embraced all known sciences: natural history, anatomy, medicine, geometry, astronomy and foreign languages.

In Later Times.— The succeeding ages were dominated by the wise rules laid down in the Talmud referring to discipline, qualifications of the teachers, the respect due to the teachers, rules about limiting the size of the classes taught by one teacher and the attention paid to the individuality of the pupils. The great regard paid to the school by the Jews in the Middle Ages, when among Christians education was limited to the small number of the favored classes, is apparent from a detailed scheme preserved from the 12th century for the course of instruction followed in the schools. The order of studies is carefully elaborated from the elementary schools for all children through the secondary schools up to the academies. In the 13th century the "seven sciences" comprised the prescribed curriculum among the Jews as it did among the Christians. Especially in Italy systematic education received great care and encouragement at that time, and the same is true of Spain and Provence. Great rabbis stimulated interest in science outside of religious lore; Hebrew books of ethics of the period contain side by side with the moral teachings of the rabbis maxims from Aristotle, Porphyry, Theophrastus and others. The Jewish educational curriculum in Italy included the whole field of knowledge, theology, poetry, philosophy and natural science long before the Renaissance.

In Spain the ordinary course of Jewish study was Bible, Hebrew poetry, Talmud, the relation of philosophy and revelation, the logic of Aristotle, the elements of Euclid, arithmetic, the mathematical works of Nicomachus, Theodosius, Menelaus, Archimedes and others, optics, music, mechanics, medicine, natural science and metaphysics. So it happened that during the darkest mediæval times Jews were conspicuous as scholars, philosophers and physicians; to them, in fact, is owing the scientific elaboration and advancement of medicine; they took the most active part in the progress of astronomy, founded the famous schools of Montpelier and Salerno and contributed essentially to the flourishing condition of Padua. Without Jewish inventions neither Columbus nor Vasco de Gama could have made their daring sea voyages. Moritz Steinschneider in his great work 'The Hebrew translations of the middle ages, and the Jews as interpreters' has shown the inestimable services rendered by them in being the mediators of Greek and Mohammedan civilization for the nations of the Occident. All of this high education and respect for scholarship was based upon the broad foundation of the elementary school which existed in every and even the smallest Jewish congregation.

Child Training.— Although little attention was paid to the education of the girls, nevertheless many of them became distinguished by scholarship, and all were imbued with the highest appreciation of learning. The mothers took their little sons to school and both the mother and father participated in the important function of introducing the boy to school for the first time. This was made a solemn religious ceremony, so arranged as to leave an indelible impression upon the tender mind of the child. The initiation took place in the synagogue on the Feast of Pentecost, the traditional anniversary of the revelation on Mount Sinai. Early in the morning the boy was dressed in new clothes and three cakes of fine flour and honey were baked for him by a young maiden. Three eggs were boiled and apples and other fruit were gathered in profusion. Then the child was taken in the arms of the rabbi or another learned friend first to the school and then to the synagogue or vice-versa. The child was placed on the reading dais before the scroll, from which the Ten Commandments were read as the lesson of the day. In the school he then received the first lesson in reading Hebrew. On a slate were traced in honey some of the letters of the alphabet, or simple texts, such as "Moses commanded us a law, an inheritance for the congregation of Jacob" (Deut. xxxiii, 4); the first verse of Leviticus and "Let instruction be my vocation." The child was then handed over to the arms of his mother who had stood by during this delightful scene. (Abraham's 'Jewish Life in the Middle Ages,' p. 348, from Machzor Vitry, p. 628).

Rabbis as Educators.— The influence of Jewish education became very conspicuous when at the time of the Renaissance the revival of learning took place. Then the Jews were the only ones through whom the Hebrew Bible could be rediscovered for the Christian world. As once Origen and Jerome, so now the religious Reformers learned to read and interpret the Hebrew Scriptures from the Jews, and Luther in his commentaries is altogether dependent on Nicholas de Lyra, who in his turn had appropriated the commentary of Rashi (Rabbi Solomon ben Isaac of Troyes 1040–1105), which was familiar to every Jewish child. So the Italian Jews especially became the teachers of nearly all Hebraists among the Humanists. Wherever the Jews found a refuge during the persecutions in Germany, and when expelled from England and France, Spain, Portugal and Sicily, they carried their educational ideals with them and it was their first concern to establish elementary schools and schools for higher education. Especially praised by contemporaries on account of its excellent systematic arrangement was the school at Amsterdam, where Spinoza received his primary education.

In Modern Times.— Less systematic were the educational establishments in Germany and Austria in consequence of the centuries of oppression to which the Jews were subjected and

their total deprivation of all civil rights in those countries. But even there they did the best possible under their arduous condition, and at no time were men distinguished by scholarship lacking among them. The system was finally improved in Germany by the influence of Moses Mendelssohn and his followers, and in Austria through the initiative of Hartwig Wessely who stirred up the Jews to improve their schools in accordance with the suggestions of the Emperor Joseph II. So at the end of the 18th and the beginning of the 19th centuries a number of Jewish schools were founded on the old Jewish principles combined with the most modern pedagogic developments. The Jewish Free School was founded in Berlin in 1778, the Wilhelm School of Breslau in 1791, the Franz School of Dessau in 1799, the Jacobson School at Seesen in the Harz in 1801, the Philanthropin at Frankfort-on-the-Main in 1804, the Samson School at Wolfenbüttel in 1807. At the latter school Leopold Zunz received his education and imbibed that love of learning which made him the founder of the scientific treatment of Jewish religion, literature and history. These schools were so excellent that most of them were patronized by Christians also. They set an example for schools with similar ambitions in every Jewish congregation in western Europe. Immediately the necessity was felt for competent teachers at such schools and for rabbis systematically trained and endowed with general education. The first teachers' seminary was founded at Cassel in 1809. Others followed in rapid succession. For the education of rabbis many institutions sprang up which have won deserved distinction in France, Germany, Italy, Austria, England and America.

The New Education.— Guided by the conviction that education would be the best means of improving the wretched condition of the Jews in Rumania and Turkey, the Alliance Israélite Univerélle (see article ALLIANCE ISRAÉLITE UNIVERELLE) has opened in those countries many schools for the teaching of elementary branches, languages and manual training, their high standard being so well recognized that in Turkey they are largely patronized by Mohammedans and Christians also. Trade schools and schools for technical training have been founded by Jews. Those established in America for the benefit of Jewish immigrants and their children, in New York city the Educational Alliance by the Baron Hirsch Fund and in Chicago the Jewish Manual Training School deserve special mention on account of the magnificent work they are doing.

MAX LANDSBERG,
Rabbi, Temple Berith Kodesh, Rochester, N. Y.

18. COMMERCE AND THE JEWS. Commerce or the exchange of goods is and has at all times been one of the prime motors of civilization. In antiquity the Phœnicians were the great trading nation, and together with the various products they carried from one land to another they spread the elements of culture into remote parts of the earth. Thus they furnished the Greeks with the very elements out of which their industry, art and literature afterward developed until they themselves became heirs to the Phœnician trade. Less known and recognized is the fact that during the early Middle Ages the Jews, owing to their dispersion over the globe and their connection with one another, were the merchant people par excellence, filling the position of the Canaanite of old as intermediaries of the world's trade.

Early Traders.— On the soil of Palestine the Hebrews were gradually transformed from a people of shepherds into farmers. Trading was greatly discouraged by legislation which prohibited loaning money on interest and the merchant's honesty was distrusted alike by prophet and by sage (Hosea xii, 7; Ecclesiasticus xxvi, 29–xxvii, 2; Kiddushin iv, 14). The great caravan routes from Arabia and Egypt to Tyre and Damascus did not touch the highlands of Judæa and Samaria; it was the Canaanite or Phœnician who «walked around» from town to town and from house to house with his merchandise (Isaiah xxiii, 8; Hosea xii, 8; Ezek. xvii, 4; Zech. xiv, 21; Prov. xxxi, 24). Once or twice the attempt was made to join the Phœnicians in maritime expeditions but without success (I Kings x, 15–22; xxii, 48). In the Babylonian exile the Jew imbibed an unquenchable love for the wide world; his eyes were opened to the facilities of commerce as he watched the markets of Babylonia and of Tyre (Ezek. xxvii; Genesis x; Tobit i, 13). Travel on land or on sea for the pursuit of commerce became a matter of frequent occurrence also among Palestinian Jews under the Persian dominion (Prov. vii, 19–20; Ps. cvii, 23; Tobit i, 13, 21; iii, 7; Jonah i, 3), although the markets of Jerusalem were chiefly occupied by Phœnician traders at the time of Ezra (Nehem. iii, 31; xiii, 16). Josephus also writes rather in a spirit of contempt for trade: «We neither inhabit a maritime country nor do we delight in commercial occupation, but take pains in cultivating the fertile land we inhabit.» (Contra Apionem i, 12).

Hellenic Jews.— It was chiefly since the time of Alexander the Great and under the Ptolemies and Seleucides that the Jews settled in large numbers in the great centres of commerce all along the Mediterranean and engaged in mercantile pursuits acquiring wealth and influence to such a degree as to rouse the jealousy of their Greek competitors. This was especially the case in Alexandria where they inhabited a large portion of land along the sea and became owners of ships and great merchant princes controlling the navigation of the Nile. (Philo In Flaccum 8; III Maca. iii, 10; Josephus Contra Apionem ii, 5; Comp. Frankel Monatschrift, 1874, p. 147, and Theodore Reincharl, «Judæi» in 'Dictionnaire des Antiquités Gothques et Romaines'). There was scarcely a commercial town throughout the whole Roman Empire from Asia Minor to Spain in which they had not a colony of their own, enjoying the protection of the Roman rulers because of their success (Josephus, Ant. xiv, 7, 2–3; Jewish War ii, 16, 4). They were Jews in race and faith, but Hellenes in culture; commerce broad-

ened their views and rendered them cosmopolitan. Jewish merchants carried Jewish ideas wherever they went; they paved the way for a world-conquering faith. They ploughed the soil for Saint Paul and Christianity to reap the great harvest.

Judæa also came under the influence of the commercial spirit of the Hellenic Jew. The large list of goods mentioned in the Mishnah gives evidence of the extensive international trade carried on by the Jews which flooded the mother-country with merchandise imported from all parts of the globe and which enriched the Jewish vocabulary with a great variety of Greek terms (Herzfeld, 'Handelsgeschichte der Juden des Alterthums,' 1879; Schuerer, 'Gesch. d. juedischen Volkes' II², 50–63). The ships sculptured upon the Maccabean mausoleum point to the possession of a mercantile fleet by the Jews stationed at Joppa, the port at which Simon the Maccabean prince endeavored to develop the foreign trade (I Macc. xiii, 29; xiv, 5), whereas King Herod desired to make Cæsarea a more convenient harbor (Josephus, Ant. xv, 9, 6). As a typical man of wealth of this time a high priest by the name of Eleazar ben Harsom is mentioned in the Talmud who is said to have inherited from his father a thousand towns on land and a thousand ships on sea (Yoma 35ᵇ). But the best proof of the gradual transformation of the Jews from an agricultural to a commercial people at the time of Herod is given by the fact that Hillel, the great master of the rabbinical schools, felt induced to institute a legal mode of procedure in regard to loans of money which virtually did away with the Mosaic prohibition (Gittin v, 5). It shows that investment of capital in commercial speculation had become a necessity with the people.

The Jews in the Dispersion.— The fall of Judæa in the year 70 and the final defeat at the Bar Kokba War in 135 changed the destiny of the Jews altogether, and they bent their efforts to a far larger extent than before upon mercantile pursuits. Scattered over the wide globe, they were enabled through extensive travel and good connections to establish flourishing trade everywhere. Especially in Babylonia under the dominion of the Parthians they amassed great fortunes by commerce, enjoying the favor of wise rulers. (Consult Herzfeld 1, c. 118–119; 336). Along the Phœnician sea-coast they became heirs to the Phœnician trade and industry to such an extent that far into the Middle Ages they are found to be the chief manfacturers of Tyrian glass and of purple, as shown by Benjamin of Tudela's Travels. Ere Christianity spread its arms westward, they marched as peddlers under the shadow of the Roman eagle up the Ebro as far as Toledo and Saragossa, up the Rhine as far as Cologne and along the Danube as far as the Black Sea, carrying on an importing trade in spices and perfumes, in pearls and jewels and in costly clothes of the East. Particularly was the silk-trade greatly developed, if not altogether monopolized by them, and this accounts for ancient Jewish settlements in China, the home of silk and for the protection accorded to Jewish silk manufacturers by rulers of Sicily, France and Spain. (Consult Heyd, 'Gesch. des Levanthandels,' i, 6–9, 12; 24; 26; Mommsen, 'Roemische Gesch.,' v, 465–470; Herzfeld, 119; 308; Graetz, 'Gesch. d. Juden,' v³, 55, 228, 329 and elsewhere). The same seems to have been the case with the trade in spices (Heyd, l. c. 12, 141; Depping, 'Die Juden in Mittelalter,' p. 132; Bedarride, 'Les Juifs de France,' 46; 454). It is significant that the Jews were assessed to pay their taxes in the shape of pepper (Depping, l. c. 132). The existence of black Jews in Malabar indicates the establishment of Jewish colonies in India for commercial purposes. Throughout the early Christian centuries Jews are mentioned as importing silk, spices and embroidered goods from the East to the markets of Spain and France. The flourishing period of Jewish trade came when the victorious flag of Mohammed united the East and the West into one great empire offering new incentives to industry and commerce. Jews were employed by the Moslem rulers as commissaries of the army and as financiers. Jewish merchants, partly on their own ships, made regular trips from far off China, India and Egypt to Marseilles and Narbonne, bringing the produce of the East to the Western depots of commerce. They carried the fur and amber of Russia, brought to the Crimea or to Bohemia the shawls and embroideries of Constantinople, the spices of India and drugs of Arabia to the markets of Narbonne, Lyons, Cologne and Mayence (Bedarride, l. c. 57 and elsewhere). Descriptions of the mercantile routes taken by such Jewish traders have been preserved by Arabic geographers, showing the important position taken by them as international mediators between the Orient and the Occident. Jews were indeed in those centuries the merchants (mercatores or negotiatores) par excellence. This accounts for the fact that Jews were selected as ambassadors by German emperors like Charlemagne and Otto I and made secretaries of finance and prime ministers by the Moslem rulers. Conversant with the languages of many countries, they had the opportunity of controlling the market and accumulating great wealth as no other class of people (Sombart, W., 'The Jews and Modern Capitalism,' London 1913; and collation of Jewish reviews in Am. Econ. Report for 1913; Heyd, l. c. 138–142; 87; 194; 258; Jacob, 'Handelsartikel der Araber,' 1891, p. 9; Stobbe, 'Die Juden in Deutschland,' 6–7; 103; 199–200; 231; Kremer, 'Die Kulturgeschichte des Orients,' I, 188; II, 176; Lee's 'Spanish Inquisition'; Kohler, K., 'Die Weltgeschichtliche Bedeutung des jüdische Handels,' in 'Jahrbuch für jüdische Geschichte und Literatur, 1909, pp. 90–107).

As Addison says in the *Spectator*, they were so disseminated through all the trading parts of the world that they became the instrument through which the most distant nations conversed with one another and by which mankind were knit together in a general correspondence.

The trade in slaves was almost exclusively in their hands a long time. (Consult Heyd and Stobbe l. c.). Some they brought from Gaul, but to a larger extent they bought slaves from the Slavonic rulers (Benjamin of Tudela, p. 111ᵇ; and Graetz, Gesch. V, 303). With the Chazar kings in the Crimea they also stood in close relationship, as is proved by the fact that the latter embraced the faith of the Jews

(Graetz, l. c. 176 et seq.; Beer, 'Gesch. des Welthandels,' 198, 229–230). The entire trade with the products of the Baltic provinces seems to have been in their hands since the time of the Roman Empire (Schuerer, l. c., III, 18). Besides woolen and silken goods, spices, tapestry, embroideries and furs, we find jewelry, gold and precious stones also monopolized by them. Nor was the commercial activity of the Jews merely confined to the exchange of goods. They reared those centres of commerce in western Europe which were afterward occupied by the rich burghers or merchant guilds who drove them out of their possessions in order to rid themselves of their competitors or masters in the art of trading. The beginnings of the history of cities such as Narbonne and Lyons, Cologne and Mayence, Nuremberg, Regensburg, Ulm and Augsburg, London and York and dozens, if not hundreds of others, coincide as a rule with Jewish settlements in these places, one far-sighted Jew being the pioneer of commerce whose success attracted other Jewish traders, to render the market there a centre of commerce, until, finally, the growing wealth of the Jews rouses the jealousy of the Christian people and becomes the cause of their oppression and expulsion. As Sombart (*supra*), Kieselbach, 'Der Gang des Welthandels,' and Roscher, 'Die Juden im Mittelalter,' in his 'Ansichten der Volkswirthschaft,' II, have shown, the Jews opened new sources of wealth everywhere by creating the means and methods of communication for the trade, for which neither the peasant or farmer nor the nobleman had the capability or the understanding. Only wise rulers, realizing the benefits conferred by the Jewish traders upon the country, encouraged these by special privileges to settle therein and develop its resources. This was done by Charlemagne and his successors in France and in Germany, by Alfred the Great and William the Conqueror and Cromwell in England, by King Roger of Sicily, Kasimir the Great in Poland and Sultan Bajazid in Turkey. Everywhere the commercial genius of the Jewish people developed the prosperity of the cities. (Consult also Lecky, 'History of the Rise of the Spirit of Rationalism in Europe,' II, 272–273). "They were the teachers and tutors of the commercial activity of Europe," says Roscher, l. c., and no sooner did the cities feel that they could do without them than they dispossessed them of all they had acquired, though half of the houses of Paris, London or Nuremberg had been theirs, and either killed or expelled them. But even when driven by a bloodthirsty mob or by hostile guilds and by state legislation out of his original domain, the world-commerce, the Jew carried his small stock of merchandise into the villages to bring, as Kieselbach says, the elements of culture also into parts more remote from civilization, or he took up the despised work of the money lender, finally to rise to the influential position of banker and prince of finance. The whole system of modern exchange of money is, if not his invention, certainly to a large extent his work. To his financiering skill and international trade the banks of Amsterdam, Hamburg and finally of England owe their existence and their success.

Results of Their Activity.— What Jewish commerce achieved in all these lands became manifest in France after their expulsion in 1306, and in England after their expulsion in 1290, and still more so in Spain after 1492. Jewish fugitives of Spain carried the trade into Turkey and Holland and into Italian cities like Leghorn and Ancona, just as Poland's commercial industry was entirely due to fugitive Jews of Germany. (Consult Sombart, *supra;* Graetz, 'Gesch. d. Juden' index, and 'Jewish Encyclopedia,' s. v.). So did the New World profit by the persecutions of the Jew in the Old. Jewish Marranos built up the trade in tobacco, coffee and sugar in South America, and with the help of the Jews of Amsterdam for some time brought the world's commerce into the hands of Holland until Cromwell succeeded in opening England for the Jews and thus paved the way for the British trade with the West Indies. (Consult Beer, 'Gesch. d. Welthandels,' II, 211, 366; Kohler, Max, 'Jewish Activity in American Colonial Commerce,' in 'Publications of the American Jewish Historical Society,' X, 47–63). The trade between America, Europe and the Levant was almost entirely in the hands of Spanish Jews or Marranos; families like the Gradis, Caceres, Mendez, Lopez and Henriques had their branches and their ships in almost every part of the world. (Consult Wolf, Lucien, 'Menasseh ben Israel'; Gruenwald, 'Portugiesengraeber auf deutscher Erde'). Jews were instrumental in starting the East India Companies (Picciotto, 'Sketches of Anglo-Jewish History,' 134). They were largely pioneers of commerce in North America. Jewish merchants (Marranos) enabled Columbus and other navigators to discover the new hemisphere and provided the new lands with grain, horses and other needs (Kayserling, 'Christopher Columbus' and the article THE JEW IN AMERICA in this section). They possessed large tobacco, sugar and coffee plantations in Cuba, Brazil, Surinam, Curaçoa, and kept up commercial connections through navigation, partly by means of their own ships, with North America, Amsterdam, Leghorn in Italy, and the Far East (Gruenwald, l. c.) and were extensively engaged in the West Indian trade, in trade with the American Indians and in developing the country west of the Ohio.

When with the era of the Reformation the systematic oppression of the Jews somewhat relaxed and they were again allowed to pursue more honorable and profitable occupations, we find them for a century or two, up to the time of the better regulated traffic by steam railroads, the chief visitors of the annual or semi-annual fairs held at Leipzig, Frankfort on the Oder, Prague, Wilna, Novgorod and other great market places, whither they bring their clothes, silk and velvet, fur, leather and other goods, for sale. On these occasions Jewish merchants from the remote parts of the continent met, exchanging the products of the various lands and providing their specific districts with goods for home consumption. In some provinces of Europe, Jews became the principal dealers in cattle and the chief attendants of the cattle markets; elsewhere, as in Russia, they deal chiefly in grain and lumber.

The new modes of industry finally transformed the former peddlers in old clothes and the like into manufacturers of woolen, silk and leather goods. The first silk and velvet factories in Prussia and the woolen factories in

Austria were introduced there by Jews. Henceforth Jews monopolize this trade again in a large part of the world. Compare for the whole also the article "Commerce" in the 'Jewish Encyclopedia,' and article "Juifs" in 'La Grande Encyclopaedie'.

Owing to his constant expulsion from the land inhabited and cultivated by him, whether in Palestine or in Babylonia, in Africa or in southern Europe, the commercial instinct was developed in the Jew, thus making him excel his competitors. As a skilful and far-sighted merchant he not only acquired the wealth and power needed to maintain himself amidst the perils surrounding him wherever he was treated and regarded as an alien, but he proved the most valuable promoter of civilization in the lands in which he lived, the foremost liberalizing element in the shaping and broadening of human culture.

KAUFMANN KOHLER,
President of Hebrew Union College, Cincinnati, Ohio.

19. FOOD AND HEALTH LAWS.

Food Laws.— The food laws of the Jewish people form a very complex system, with numerous and diversified enactments. These refer to the determination of the species of animals, birds, fish and insects that may be eaten; the method of slaughter; the inspection of the animal for disease and lesion; the prohibition of the blood, fat and certain parts of the animal; the treatment of meat prior to cooking; the prohibition of certain food mixtures; certain vegetable food laws, such as the prohibition of leaven during Passover, first fruit crops — Orlah, and the new corn — Hadash; and various anti-heathen food laws, affecting the use of wine, etc. It is certainly very suggestive of the importance of food legislation that the first direct command of God to Adam should be a food law (Gen. ii, 17), and that the punishment for its trangression should be the advent of death. The exposition of the dietary laws has given rise to a vast literature to which every century and almost every school of thought has made its contribution, but the general result is chaos. This is due mainly to three causes: (1) The essentially monistic nature of the Jewish thought has been quite overlooked. Conceptions that appear almost antithetic for the modern mind were apprehended as an undifferentiated whole by the ancient Hebrew. His language had no word that would be equivalent to "nature"; the physical and the psychical, the legal and the ethical, the spiritual and the vital, were all unified manifestations of the Theocratic Will. So that when the Bible declares with all emphasis that the end of the law is "life"—"that ye shall live by them"—"your life and the prolongation of your days," it is just as uncritical to exclude physical life from this end as it would be to exclude from it the life of the spirit and the life everlasting. (2) The second cause of the overwhelming confusion prevalent in this literature is the unscientific exaltation of every observed effect of the laws into a motive for their promulgation and observance . (3) The avowedly different character of many of these laws in origin and purpose has been largely disregarded. The exposition of the dietary system would have been much simplified and innumerable controversies avoided if it had been clearly understood that the statement of effects does not involve their predication as motives; that motives apparently diverse could yet remain unified and undifferentiated for the Jewish mind, and that there is no one explanation that will cover all the laws:

1. *Clean and Unclean Species.*—Among the quadrupeds only the ruminants that are provided with fully cloven hoofs are declared to be fit for food; and of these only the kine, sheep and goats are fit for sacrifice (Lev. xi, Deut. xiv). The rabbis refer to another distinguishing mark possessed by all clean animals, namely, the absence of incisors from the upper jaw (Talmud Bab., Hullin 59A). Among the fish, only those that have fins and scales are clean; thus all the siluridæ, eels and shell-fish are prohibited. As all that have scales have also fins, the presence of scales is the decisive mark (Talmud Bab., Niddah 51A). No marks are given in the Bible to determine the clean fowl, but a long list is recorded of species that are unclean. These are birds of prey, scavenger birds and marsh fowl. The bat is also included in the list. All the species not named are declared fit for food. The rabbis have formulated certain marks distinguishing the clean fowl — but finally only those birds that are traditionally known to be clean are permitted to be used for food (Talmud Bab., Hullin 63B). All insects are declared unclean, with exception of four species of locusts. All creeping things are unclean (Shulhan Aruch, Yore Deäh §§ 79–85).

The earliest explanation of this distinction between clean and unclean is afforded in the allegorical interpretations of the Apocrypha (IV Maccab. 5, Letter of Aristeas, etc.), the works of Philo and the Fathers of the Church (Augustine, Irenæus, Cyril, Tertullian, Novatian "On the Jewish Meats"). The unclean animals are all regarded as typifying vices,— the hare libidinousness, the swine impurity, the fox craft, etc. The cloven hoof, the first sign of purity, typifies the distinction between good and evil; the chewing of the cud symbolizes the constant repetition of the law. This method of interpretation, while certainly leading to curious results, has some justification in the Bible presentation of the Serpent as the agent of temptation (Gen. iii, 1) and also in the figures employed by Ezekiel (chap. xxiii, 20). Another explanation bases itself upon the natural and instinctive antipathy and loathing that destructive and death-dealing animals arouse. It is only natural that beasts of prey, serpentine and snake-like fish, slimy crustaceans, birds of prey, marsh fowl and scavenger birds, insects feeding on corruption and ordure, should be held unclean and polluting by a people striving to keep itself pure and holy (Lev. xi, 43). The consequences of this striving after holiness affect the whole of Jewish thought and life, and are of primal importance for the comprehension of the dietary system (Schechter, *Jewish Quart. Rev.* Vol. X, Art. "Holiness"). That death-dealing creatures were regarded as abhorrent and imperfect is proved definitely by the prophecy of Isaiah, who sees as one of the conditions of the Messianic period "that the wolf shall dwell with the lamb — and the lion shall eat straw like the ox — they shall not hurt or destroy in all my holy mountains," etc.

(Is. xi, 6–9, lxv, 25). There must further be noted the special shrinking evidenced in many ways from the hybrid and border species as departures from the true order of nature, which was that "all creatures should be after their kind" (Gen. i, 11, 21, 24). This would specially apply to the bat, the hybridous ostrich of the desert and the "winged quadrupedal creeping things" (Lev. xi, 23); the grass-eating locust would alone be excepted of all the insect tribe.

Others have seen in the distinction made between the clean and the unclean the means to separate Israel from the rest of the surrounding nations. "It was necessary for Israel to sever all intercourse with the desert tribes and in order to accomplish this the camel, for instance, was declared unclean. It was even more necessary to separate Israel from the corrupt and degenerate Canaanites, and so the swine was pronounced impure." (Ewald). The argument is entirely without warrant, as the kine, sheep and goats were all eaten by the neighboring nations, and yet are regarded as clean for Israel.

Many have striven to connect the food laws of Israel with those of Manu. It is true that the food laws of Manu, with regard to the clean and unclean, have a great many elements in common with the Jewish Code, but the differences are too great to permit of any direct connection. Both give expression to the natural repugnance for certain classes of animals, but the details do not agree. In Manu's laws the hare, rhinoceros, porcupine, hedgehog, are all permitted, but they are unclean in the Jewish Code. The prohibitions relating to the birds, too, are not the same. Manu prohibits birds dwelling in cities and those that strike with the beak. There are also differences with regard to the fish. Manu prohibits all but a few species, and declares the crocodile, turtle and tortoise clean, but these are unclean in the Jewish Code. The Jewish law stands even further removed from the Zend-Avesta, as it knows nothing of the dualism of the latter (Gen. i, 31; Is. xlv, 7; Ps. cxlviii, 10). The most recent interpretation is the one advanced by W. Robertson Smith and accepted by Stade and Cheyne. He regards the prohibitions as identical with the taboo that Totemism places upon the use for food of the sacred ancestral animals. But it is the essence of Totemism that while sacred animals are not to be eaten generally, they are to be eaten eucharistically, as a religious rite and further, these animals being regarded as ancestral, their names are reproduced in the names of tribes and individuals. With regard to the first point, there is absolutely no proof that the unclean creatures were ever eaten eucharistically in Israel. The two verses usually cited (Is. lxv, 4 and lxvi, 17), which condemn the consumption of swine are altogether too doubtful in meaning and too decidedly the subject of dispute (Duhm, Marti) to be in any way important. Still less fortunate is the attempt to prove the existence of Totemism from the occurrence of such names as Achbor and Chesir; for there is a larger number of clean animals whose names occur as names of individuals—Zimri (?) Hagab, Eglah, Epher, Rachel, Jonah, etc. (Jacobs, 'Stud. in Bib. Arch.'). If any further proof were needed that the bestowal of names has no connection with Totemism and is the result of accident or the suggestion of environment, it would be afforded by the large number of plants, excluded from consideration of clean and unclean, that furnish the names of individuals. Thus Susanna (Lily), Hadassah (Myrtle), Tamar (Palm), Carmi (Vineyard), Elah (Terebinth), Elon (Oak), Keziah (Cassia), Zetham (Olive). Totemism, moreover, would utterly fail to account for the extensiveness of the list of the unclean, and for the evident principles of selection guiding the compilation of the list. But the presence of Totemism altogether, characteristic as it is of the lowest stages of savage life, would be a startling anachronism in the highly complex and ethical civilization of the Hebrews (Nöldeke, 'Zeitsch. d. Deutsch. Morg. Gesell.,' 1886). The consideration of the dietary laws as hygienic enactments will come under the section in this article *Health Laws*.

Blood.— The prohibition of blood is avowedly different from the prohibition of the unclean creatures. Blood was too precious to be used by man. It was identified with the vital sentient principle. It was therefore to be consecrated to God. It is declared to be the medium of atonement representing the very life of the animal sacrificed (Lev. xvii, 11). The injunction concerning the blood is coeval with the very permission to use flesh as food (Gen. ix, 4). It is enunciated as a duty for all humanity, and the stranger was bound to respect the prohibition equally with the Israelite.

In the case of non-sacrificial animals or birds, the blood had to be poured on the ground and covered with earth (Lev. xvii, 10–15). The prohibition only applied to blood of mammals and birds, not to the blood of fish or locusts. It referred only to the free blood in the blood-vessels, and not to that absorbed in the tissues. The blood prohibition was one of the chief factors for the law of Shehitah or ritual slaughter. So great is the abhorrence of the Jews toward blood that bread is rendered unfit for use if in the process of eating it become tinged by a speck of blood from the teeth (T. B. Kethuboth 60A). The monstrous absurdity of the "Blood Accusation" has been adequately treated by Strack ('Das Blut in Glauben,' etc., Munich 1900) and Chwolson ('Blutanklage,' 1901). Early Christianity accepted the blood prohibition (Tertullian, Apolog.), and it remained in force for various Christian sects till comparatively recent times (Grotius on Acts xv, 20). For Moslems, the prohibition is still in force (Koran, Sura II, V, VI). For the hygienic consideration of the blood prohibition, see under section *Health Laws* in this article.

Fat.— The fat, like the blood, was reserved for the altar. Its prohibition was therefore limited to the fat of sacrificial animals — kine, sheep and goats — and did not refer to that of other clean animals or birds. It was further limited to the fat similar in character to the intestinal fat, lying in layers separate from the flesh, and did not refer to that which was grown with the flesh (Lev. iii, 16, 17; Shul. Aruch, Yore Deäh § 64). The traditions of Karaitic Jews differ from those of Rabbinical Jews with regard to the extent of the fat prohibition (Adereth Eliahu, Chap. 19). The curious suggestion of Michaelis that the prohibition was due to the desire to further the

oil culture of the country has no foundation. For hygienic aspect, see section *Health Laws.*

"Sinew which Shrank."— "Therefore shall the children of Israel not eat of the sinew which shrank which is upon the hollow of the thigh" (Gen. xxxii, 32; cf. Septuagint). The prohibitioin of the nervus ischiadicus (?) commemorates the great triumph of Jacob, when, through his victory over the Angel of the night, he received the name Israel, and despite his own injury compelled his conquered opponent to bless him. It is the special moment of great achievement to Jacob (Hosea xii, 4, 5) and of supreme destiny to his children (Gen. xxxv, 10, 11). Owing to the disputed nature and locality of the prohibited sinew, the prohibition has been extended to both the nervi ischiadici, the adjacent veins, tubular sinews and fatty fibres. The removal of all these, however, demands a special knowledge and expertness infrequent in many Jewish communities; so that the sirloin, etc., is not generally available for food except in the Orient and eastern Europe (Shul. Aruch, Yore Deäh § 65).

Slaughtering.—All animals that die otherwise than by Shehitah, ritual slaughter, are termed Nebhelah (that which dieth by itself), and all that are torn by beasts or are afflicted by any fatal disease or lesion are called Trefah (the Torn). In both cases their use for food is prohibited. The ritual slaughter, Shehitah, is one of the most important functions in the Jewish ceremonial and is always in the hands of trained experts (Deut. xii, 21). The knife used is specially sharpened and repeatedly tested by experts to ensure a perfectly sharp and smooth edge. Its blade, being usually 14 inches in length and two inches in width, is specially adapted for rapid manipulation. It must then be drawn with a steady stroke across the throat, severing the trachæa and esophagus and dividing the pneumogastric nerve controlling cardiac action, and the carotid artery and jugular vein. Reserving hygienic considerations for "Health Laws," the following effects of the process must be noted. They formulate the result of a vast number of experiments comparing all the known methods of slaughtering animals, conducted by Dr. Dembo in Saint Petersburg under the auspices of a scientific commission: (1) Comparative Painlessness of Death.—(a) The severing of the great blood-vessels, producing instantaneous anæmia of the brain, results in absolute unconsciousness — the gray matter of the brain ceasing its function at once and complete loss of consciousness following in three to five seconds. (b) The cut is exceedingly rapid, seldom consuming more than one second in time, as the knife is sharpened and smoothed with extraordinary precaution; consequently the pain of death is minimized. (2) Economical Considerations.—(a) Through the much earlier appearance of rigor mortis, the meat is sooner available for food. (b) Through the much later appearance of decomposition, the meat remains longer available even in summer (Shul. Aruch, Yore Deäh §§ 1–27).

Inspection.— While the proper performance of Shehitah excludes the animal from the category of Nebhelah, it must be further examined to ascertain beyond all question that it is not Trefah (suffering from any mortal disease or lesion). This examination, Bedikah, is purely hygienic and is treated under section *Health Laws.* But just as the Shehitah (ritual slaughter), with all its far-reaching ethical, economical and hygienic consequences, originated in all probability with the necessities of the altar service — to pour out the blood for sacrifice — so the Bedikah (examination for disease) with all that it involves had its prototype in the temple service in the priestly examination of the sacrifice for disqualifying blemishes (Lev. xxii, 20–25; Malachi 1, 8).

Extraction of Blood-Vessels, etc.— The prohibition of the blood, the fat and the nervi ischiadichi necessitates the careful extraction (nikkur) of certain blood-vessels, membranes, fat layers and tissues, sinews and fat-fibres from various parts of the body (Shul. Aruch, Yore Deäh § 65.) English-speaking Jews call this process of extraction "porging," a word derived from the Judæo-German "porschen." The process is very elaborate ('Jewish Encyclopedia,' article "Porging") in the case of animals. It is, however, very simple in the case of fowl, where the prohibition neither of fat nor of the nervi ischiadichi obtains.

Salting, etc.— There still remains one further process Melihah (salting), before the meat is fit for food, and that is the soaking and salting thereof to remove the surface blood. Salt also came on the altar with sacrifices (Lev. ii, 13; Ezek. xliii, 24). The hygienic importance of Melihah is referred to under section *Health Laws.*

Products of the Prohibited.— Not only are the unclean and the diseased animals prohibited but all their products. Thus the milk and cheese of both unclean and diseased (Trefah) animals are prohibited. Milk and cheese should not therefore be purchased in the general market without superintendence. Human milk is prohibited for the adult and even for the child who has once been properly weaned. So the eggs of unclean birds and all eggs on whose yolk a drop of blood is found are prohibited. In like manner the roe of an unclean fish cannot be eaten. Honey, however, is permitted, as it is not regarded as a product of the bee, but simply as the nectar gathered by the insect (Shul. Aruch, Yore Deäh § 81). In the case of any mixture of the forbidden and the permitted,— if the taste of the forbidden object be discernible, then all is forbidden. So cheese which has been curdled with a prohibited rennet is entirely prohibited, and some superintendence ought to be exercised over the manufacture of cheese.

Meat and Milk.— The threefold repetition of the command "Thou shalt not seethe the young in its mother's milk" (Deut. xiv, 21) is traditionally interpreted as referring to the threefold prohibition of cooking meat and milk together, of eating this mixture or of deriving any benefit from it. The interpretations of the command have been many and varied, but two predominate, and have certain justification. Philo construes it as an ethical law similar to (Deut. xxii, 6, and Lev. xxii, 28), denouncing cruelty to animals and intended for the moral discipline of the people. The milk that was set apart by nature for the nourishment of the young should not be used as the medium in which the young is seethed. Maimonides explains the prohibition as directed against an old heathen custom or magical rite of propitiat-

ing the nature gods by sprinkling the fields with this meat and milk broth. This explanation of the prohibition has also been advanced by Spencer and Cudworth and has received some support from modern authorities. Meat and milk are never partaken of together at the same meal, sufficient interval being allowed, if the meat has been eaten first, for it to be digested before partaking of milk. The prohibition refers with equal force to any preparations in which meat or milk enters (Shul. Aruch, Yore Deäh §§ 87-97).

Vegetable Dietary Laws.— Not all the food laws concern themselves with meat. There is the injunction concerning Orlah which forbids the use for food of the fruit of a tree in the first three years of its growth (Lev. xix, 23–25). The yield of the fourth year, or its money equivalent, was brought to Jerusalem and used for special rejoicing and feasting. The prohibition of the fruit crop of the first three years continues binding to the present day. Another law of somewhat similar character is that of Hadash which prohibits the eating of the new corn until the time of the offering of the Omer (Lev. xxiii, 9–14). The sowing of mixed seeds in a vineyard is prohibited (Deut. xxii, 9). Should, however, the prohibition be transgressed, then the produce cannot be used for food. But the most important vegetable dietary laws are those of Hametz and Matzah commemorating the Exodus from Egypt. During the eight days of the Passover festival no leaven (Hametz) can be eaten and none may be permitted to remain in the house (Ex. xiii, 7). There is furthermore the positive law that unleavened bread (Matzah) shall be eaten.

Heathen Food Laws.— Another group of dietary laws are either prohibitive of the objects of idolatrous worship or of intercourse between Jews and idol-worshipers. The most important of these refer to the use of wine. Wine that has been consecrated to an idol is absolutely prohibited. But even the ordinary wine of the heathen is prohibited, partly because of the suspicion that he may have consecrated it to his idol but also to create a social barrier that would make the possibility of intermarriage more remote (Ab. Zarah 36B). Furthermore wine that has been touched by an idolator, though belonging to a Jew, will be under suspicion of having been idolatrously consecrated and its use prohibited. The general stringency of the regulations is, however, influenced by the specific conditions of social environment.

Health Laws.— There has been considerable dispute as to the existence of a class of professional medical men distinct from the priestly class in Biblical times. The occurrence of the expression "thy healer" (Ex. xv, 26) has been advanced as an argument for the affirmative, but the whole verse may be interpreted as referring to a union of the sacerdotal and the medical offices. Certainly the context in Ex. xxi, 18–20 seems to imply that the doctor was paid; and there is mentioned in Isaiah the Hobhesh or woundbinder. Asa, king of Judah, is reproached for having sought help from the physicians and not from God. The Prophets were frequently appealed to for aid in sickness and one interesting cure is recorded as having been made by Isaiah. King Hezekiah had fallen sick of a disease which Lauder Brunton identifies with the inflammation of the tonsils. The prophet cures him with a plaster of figs,— a remedy not unknown to modern treatment. Later, we find physicians highly honored (Ecclesiasticus xxxviii, 1–8), and numerous evidences of considerable skill on their part. A long array of famous physicians is recorded in the Talmud and many difficult operations are credited to them (Kotelmann, Virchow's 'Archiv.,' Vol. 84). A prolonged controversy has raged round the interpretation of a passage in the Talmud (T. B. Niddah 40A) which according to one reading refers to the successful performance of "Cæsarian Section," Hysterotomy, mother and child both being saved. Of special importance is the physiology and pathology of the Talmud tractate Hullin. Certainly the health laws of the Bible give eloquent testimony to the advanced condition of social hygiene. Certain biotic advantages have been claimed for the Jew. Greater longevity, greater fecundity, greater exemption from tuberculosis and syphilis, special capacity for acclimatization, are among these. But the advantages do not appear to be racial and seem to be entirely dependent upon the degree of the observance of the special laws, and to be forfeited with the non-observance of these (Adler, Nossig).

Work and Rest.— The first health laws are given in the Decalogue with the institution of the six days of labor and the seventh day of rest. The hygiene of labor is clearly recognized in Jewish law. Even the scholar is enjoined to acquire a handicraft (Pirke Aboth ii, 2). The necessity of physical training is insisted upon with emphasis, and it is accounted a paramount duty for the father to teach his child a craft and to train him to swim. Even the women of the wealthiest class are enjoined to work because of the destructive effect of idleness upon moral strength and mental sanity (T. B. Kethuboth 59B; cf. Proverbs xxxi), but over pressure has been guarded against by the complementary regulation of a full day of periodical rest. Since the nature of the toxins produced by fatigue and the extremely gradual rate of their elimination from the system have been more clearly recognized the Sabbath rest has become a scientifically demonstrable hygienic necessity, which no shortening of the day's labor can possibly supply.

Food.— Nearly all the food laws have their hygienic aspect. The prohibition of the carnivoræ with their exclusively nitrogenous diet; of the swine with its tendency to trichinic infection, and the readiness of its meat, as most freely productive of gelatine, to provide a favorable nidus for morbific bacilli (Dr. E. Ballard), has been welcomed as a health law of importance. Dr. Borell of Göppingen (Virchow's 'Archiv.' 65) describes the presence of worms similar to trichina in the blood of the raven, and Virchow adds, that this is a variety of Filaria similar to the Filaria sanguinis hominis which is known to be the cause of chyluria and chylous hematuria and supposed to be the cause of Elephantiasis. Similar discoveries have been made by Herbst in the blood of the crow, the daw, the hawk and the jay. The rejection of eels, muræna, oysters, mussels and crabs from the list of foods has been regarded as hygienic since these feed largely on

sewage, and have been the causes of numerous epidemics, especially of typhoidal character. The ordinary mussel, mythis edulis, has had its poison examined and analyzed by several specialists (Virchow's 'Archiv.,' Vols. 103, 104, 110, 115). The preference for the scaled fish of the sun-bathed, purer and more highly oxygenated surface waters has also its hygienic aspect. Recent investigation as to the propagation of disease through insects and animals,— malaria and yellow fever by the mosquito, typhoid by the fly, pneumonia by mice, hydatid cysts by the dog, etc., seems to afford continually growing evidence to the hygienic value of the food-laws and of the elaborate regulations concerning the defilement of person, clothes, foodstuffs and utensils by contact with the various species (Lev. xi, 32 et seq.).

The rejection of blood has also its hygienic effect. It is in the blood that toxins produced by disease germs and occasionally the germs themselves circulate, and this makes it a vehicle for communication of disease; and further by its own rapid decomposition, it becomes also an original source of disease. The intestinal fat has also been considered by many hygienically objectionable, as harboring parasites in the lymphatic ganglia (Ebstein). In the method of slaughter (Shehitah) a valuable group of health laws is encountered. (1) The two main characteristics of the Shehitah are the quick bleeding and the accompanying epileptoidal convulsions. These produce, after certain chemical reactions, the acid phosphate of potash, KH_2PO_4, which is antiputrefactive. It hinders the development of micro-organisms, delays the formation of the products of decomposition of ptomaines and toxins, and imparts an additional savor to the meat. (2) Through the epileptoidal convulsions the blood left in the meat is less alkaline and therefore less favorable to the development of bacteria (Dembo). The Bedikah (Examination) is avowedly a pure health law. Its function is to determine whether or not the animal was suffering from any fatal disease or lesion, as this would make it Trefah, "Torn," and unfit for food. For this purpose the chief organs have to be examined, especially the lungs. It must be clearly determined whether or not there are any adhesions either of one lobe of the lungs to the other, or the whole or part of the lungs to the diaphragm or chest wall. The lungs are tested for perforations by inflation during immersion in water. The surface of the lungs is examined for tubercules of any kind (Dr. Behrend in *Nineteenth Century*, 1889). Inspection of other organs occurs only when symptoms are observed indicating the presence — or when there is general prevalence — of some affection. Nor are the lungs of a fowl examined unless there is special ground for suspicion. Koch (Inter. Med. Cong. 1890) has, however, shown that tuberculosis of fowl is a species distinct from human or bovine tuberculosis and is innocuous to man.

Melihah, or "salting the meat" prior to use, has for its purpose the removal of the stagnant, impure, diseased, germ-laden, surface blood. When the conditions, under which meat has often to be kept before use, be remembered, the health value of the Melihah law will be clearly apparent (Hyamson, *Jewish Quarterly Review*, Vol. IX). The avoidance of the mixed meat and milk diet has also been hygienically commended. It is claimed that the simultaneous ingestion of soluble and fibrinous albumen is not well borne by the gastric apparatus (Aronstam). Of importance are the special laws aiming at the purity of water and milk. In countries where poisonous reptiles abound, water and milk must not be left uncovered. Articles of food should not be kept in any unclean place, as under the bed, nor be served from any impure vessel. Timely and simple diet is recommended. There are 83 diseases that are prevented by an early breakfast of bread and salt and a pitcher of water. For health reasons, it was enjoined that meat and fish should not be eaten simultaneously.

Body.— In its insistence on the purity of the body Jewish law presents a unique phenomenon. As Leroy Beaulieu declares, "for 25 centuries the Jew has striven to be clean, and alone has observed the laws of moral and physical purity." Yet here as elsewhere there should be no confusion between effects and motives. Though the motives were to a considerable degree avowedly hygienic, yet predominantly they were religious. Ablutions were demanded from the Jew, for prayer could not be pronounced amid physical uncleanliness; his body had to be scrupulously clean for the Phylacteries could not otherwise be worn. At the very moment of rising, ablution of the hands and face was enjoined — without this he could not offer his morning prayer (Psalm xxvi, 6). Before and after every meal the hands had to be washed and a special benediction for the injunction of cleanliness pronounced. After every unclean bodily function, after touching any unclean object, after visiting a cemetery, ablutions had to be performed. Although water is truly precious in the East, yet there never was stint of it for the purposes of cleanliness. Rabbi Akiba in prison preferred to leave his thirst unassuaged, and used his dole of water for ablutions. It was prohibited to live in a town that had not a bath, and the use of water was regarded as the infallible panacea. "Better a little cold water in the morning and a warm hand and foot bath in the evening than all the salves in the world" (Shab. 109A): "Man endangers the eye, nose, mouth and ear if he touch them with unwashed hands." The value of the warm baths of Emmaus near Tiberias, of Gadara in Peræa and Callirrhoe near the Dead Sea, was thoroughly appreciated. Nor were æsthetic considerations overlooked in the case of the body. Physical beauty was highly valued (T. B. Berachoth 20A). The long list of blemishes and disfigurements, over 150 in number, that were disqualifying for the priesthood points to the existence of a high standard for physical conformation (Sifra, Emor III).

Clothes.— The view entertained as to the cleanliness of clothes is tersely stated in the apothegm, "the sage upon whose garments a grease spot is found is worthy of death." The uncleanliness of his garment was an insult to the holy law whose dignity it was his duty to protect. Whenever the man has been in contact with any impurity, whether it be one of the leproidal diseases or the impurity of the corpse, or any sexual impurity, it is not only his body, but also his clothes that have to be

washed. It is perhaps unduly imaginative to see in the law which prohibits the wool being mixed with flax in the manufacture of garments, an anticipation of Jaeger (M. N. Adler). But Ebstein insists nevertheless that such a garment would be hygienically harmful as the wool would tend to warm and the cotton or flax to cool the body and there would be unequal protection for the body surface (Deut. xxii, 11). There is a reference in Leviticus to a peculiar species of reddish or greenish discolorations occurring in garments and destroying the material. It is termed leproid and may be some form of fungoid growth. Where garments are worn for long periods such growths may occur. Directions are given for inspection and seclusion, lustration or destruction (Lev. xiii, 47).

Sanitary Arrangements.— The Bible already makes provision for the protection of the camp from the usual plagues of typhoid, diarrhœa and dysentery attendant on camp life. The consignment of all putrid matter to the earth — in a place without the camp — ensured disinfection and the protection of the water and the air (Deut. xxiii, 9–14). These admirable hygienic provisions are the direct consequences of the Holiness motive with its psychophysical implications: "that thy camp shall be holy." In the subsequent city life similar precautions were taken. It was prohibited to rear poultry or keep wild animals or permit dung-heaps to gather in Jerusalem (T. B. Baba Kama, 82B). No tannery could be erected within 50 cubits of the city limits, and then only to the east of the city so that the prevalent west wind would carry away the effluvia. Kimhi maintains in his comment to Psalm xxvii, that a fire burned continually without the city for the destruction of all cadavers and offal and refuse. Many scholars, though not all, accept this statement. Certain writers have referred to the extremely valuable sanitary results of the minutely scrupulous removal of all leaven from the homes before the advent of Passover (M. N. Adler). As this involves the thorough overhauling of the whole house from garret to cellar, the purification and cleansing of all utensils and kitchen accessories, and the destruction of the accumulation of scraps, etc.— the hygienic effects, however undesigned, must be acknowledged (Ex. xii, 19; Deut. xvi, 4).

Temperance.— Both in food and drink temperance was enjoined. Gluttony and drunkenness is the special crime of the rebellious son whose punishment is death. Wine was so important an article of food, that special influence was necessary to prevent its abuse. The stories of Noah and Lot conveyed their own moral. The priests were held unfit for office if they indulged in strong drink. The order of the Nazarites, and the clan of the Rechabites, upheld an ideal of abstinence. But yet the value of wine as a medicine was recognized (Prov. xxxi, 6). Nor was the ascetic attitude entirely approved of. The Nazarite brought his sacrifice when the term of his vow was over for having denied himself that which God permitted. "In the future world, man will have to account for every enjoyment that was offered to him and he has unnecessarily refused" (Jerus. Tal. Kid. IV). Yet there is no limit to the denunciation of drunkenness throughout the Bible.

Dwelling.— The Bible records the special protection to be afforded to the flat roofs of the houses. They were to be surrounded by a battlement so there should be no blood upon them (Deut. xxii, 8). The height of the battlement is fixed at a minimum of 3.06 feet. It must be strongly built and able to stand any ordinary strain. There are further injunctions prohibiting the presence of any open well or pit, or the presence of unsafe ladders about the house. There is a remarkable series of hygienic laws referring to a diseased condition of the house (Lev. xiv). The reference is probably to houses attacked by dry rot — merulius lacrymans, a fungoid growth inimical to the health of the inhabitants. There are clearly formulated in the regulations — (1) duty of declaration; (2) duty of examination and diagnosis; (3) complete removal of the affected parts without the camp; (4) scraping of the interior of the house and removal of the dust and débris without the camp to the unclean place; (5) on return of the affection, the house is to be completely destroyed; (6) all the persons who have been in the house, eaten or slept therein, must be purified through the washing of clothes and person (Baginsky).

Disease.— Proceeding upon the principle that the whole law was given for life and not for death (Lev. xviii, 5, T. B. Ab. Zarah 27B), the interest of the patient is declared superior to any of the ordinary religious obligations;— even the sanctity of the Sabbath and the Day of Atonement giving way to the necessities of medical treatment. The duty of visiting the sick is a part of the great *Imitatio Dei* (T. B. Sota 14A) and the neglect of this duty is declared by Rabbi Akiba to be a criminal indifference to human life (T. B. Nedarim 39B). But the visiting must be helpful in act and reverent in spirit since the Divine Shechinah stands ever watching at the head of the bed of suffering. This visiting should, however, be entirely omitted if the nature of the disease or the attendant circumstances make it a source of embarrassment to the patient. In certain cases of disease or contact with disease measures for purification and disinfection have been enacted. Wherever there has been contact with the dead, or pseudo-leprous symptoms of disease, or sexual secretions and discharges — an elaborate process of washing and bathing for person and garments prevails.

Burial.— Interment must take place as speedily as possible (Deut. xxi, 22). It is the last and most unselfish act of kindness one can perform to one's fellow. God himself showed the example by burying Moses. All can claim interment, even the criminal executed on the gallows (Deut. xxi, 23). Cemeteries were extramural and were prohibited within a circuit of 60 cubits from the city limits. The dead were placed in caves and vaults and were visited by their relatives for three days after, to avoid all possibility of their being buried alive. After some time the remains were then interred in the grave proper. The rapid decomposition of the body to its constituent elements is regarded as desirable. While cremation is opposed to Jewish practice (Gen. iii, 10; Eccles. xii, 7), yet quicklime is frequently placed in the grave in some countries. The prevalent custom among observant Jews in

eastern Europe and the Orient is to have the coffin of the simplest construction,— a few boards nailed together,— with the bottom perforated,— so as to interpose no obstacle to rapid decomposition. The selection of the soil for cemetery purposes is of hygienic value,— as the ground must not be in contact with any water sources, and thus the danger of contamination of the water supply is minimized. An interesting account is given in the Bible of the composition of the "Water of Lustration" used for all who had been in contact with the dead. Undoubtedly the ingredients possess high disinfecting qualities. Into its composition entered cedar wood (coniferæ), rich in phenol and cresol and cedrene camphor; hyssop with its camphoraceous oil of penetrating aroma and other oils, rich in oxygen; the cremated carcase of the heifer, rich in potash and soda (Num. xix).

Sexual Relations.— There is a vast legislation controlling all the circumstances of sexual relation. The penalty of death is imposed for all acts of sodomy or unnatural intercourse, for connection within specially prohibited degrees and for adultery with a married woman (Lev. xx, 10–16). Excision is the penalty imposed for all other illicit connections. Prostitution is absolutely prohibited (Deut. xxiii, 18) and chastity is demanded from both sexes. Two of the commandments of the Decalogue are devoted to the maintenance of the purity of married life (Ex. xx, 14, 17), and the elaborate table of prohibited degrees protects it hygienically (Lev. xviii, 7–18). Thus the marriage institution is enabled to perform its proper function, the fulfilment of the law: "Be ye fruitful and multiply" (Gen. i, 28). Anticonceptional acts invited the Divine doom (Gen. xxxviii, 9), and the duty of begetting children is declared the supreme privilege and blessing (Psalm cxxvii, 3–5; Psalm cxxviii, 3–4). In opposition to the powerful current of opinion, favoring childlessness, that found support among Epicureans and Stoics in the interests of greater independence and possibilities of self-indulgence or self-development, and in Essenaic and Christian monachism in the interests of chastity and personal holiness, the rabbis compare a man voluntarily childless to a "shedder of blood" and "an opponent of God" and adjudge him unworthy of life (T. B. Yebamoth, 63B et seq.). Yet marriage is acknowledged to be also an end in itself (Gen. ii, 18), and an eloquent panegyric is pronounced over it. "He who is without wife, dwells without joy; without blessing; without good; without religion; without citadel; without peace. The wife is to be loved as one's self; to be honored more than one's self" (T. B. Yeb., 62B). The age recommended for marrying is about 18 years for the male and extreme disparity of age is discountenanced. The influence of modesty in love is declared of paramount importance for the character of the children (T. B. Niddah, 71A), and temperance is absolutely enforced by the rigid prohibition of sexual relations for a certain period succeeding the menses and parturition (Lev. xii, 2–5; xx, 18). Behrend maintains that the enforced temperance ensures procreation at a specially favorable period. The fecundation that occurs after the lapse of seven days following the cessation of the menses is much less likely to result in abortions. Circumcision was regarded by Philo and Maimonides as assisting in the promotion of temperance by weakening the erotic element (cf. Bereshith Rabbah, § 80) while increasing functional power. Motherhood was honored even in animals (Lev. xxii, 28; Deut. xxii, 6). The time preceding and following parturition is the occasion for the exercise of extreme care both dietetically and mentally (Jud. xiii, 7; T. B. Yoma, 8; T. B. Kethuboth, 60B). The nourishment of the child is the duty of the mother (1 Sam. i, 23), the mother's milk being regarded as the best food. With regard to sexual impurities the laws are very minute and detailed and refer to the impurity through coition, the menses, parturition, secretions and discharges of various kinds. Segregation, bathing and washing of the clothes, etc., are the means by which purity is restored. The laws in Leviticus (chaps. xii–xv) are elaborated in the Shulhan Aruch, Yore Deäh, §§ 183–200. The fullest protection is given to woman and the utmost hygienic precautions are taken (Baginsky).

Leproid Impurity.— Much controversy prevails concerning the leproid affections referred to in Leviticus (chap. xiii et seq.). One group of interpreters identify the disease here referred to with true leprosy, *Lepra Arabum* or *Elephantiasis Græcorum* (Häser, Michaelis, Neumann, Fox). A second group regard the Zaraath of Leviticus as a generic term covering a large variety of skin diseases ranging from true leprosy to the comparatively mild psoriasis (*Lepra Græcorum*), scabies, eczema and possibly syphilitic affections. (Aug. Hirsch, Liveing, Munro). Others again find no connection at all with true leprosy (Hebra, Münch, Hillary, Finály, S. R. Hirsch). Thus Münch maintains that the *Lepra Arabum* was quite unknown to the early Hebrews. Finály gives a peculiar and unwarranted connotation to the diseased "skin of the flesh" (Lev. xiii, 2) and would confine the whole legislation to syphilitic affections. Hirsch, Hoffmann and other theologians regard the disease as a purely symbolical affection, similar possibly to the "mark of Cain" (Gen. iv, 15).

The following are the main negative considerations that influence those that deny all reference to true leprosy: (1) The absence of the characteristic symptoms of *Lepra Arabum;* anæsthesia, muscular atrophy and loss of extremities, etc. (Cf. Sforno on Lev. xiii, 2). (2) The extreme brevity of the interval of seven days, between the different inspections that determine the presence or absence of a serious affection, points away from leprosy which is characteristically slow in development. (3) The excessively mild enforcement of the regulations in the later development of the law makes the identification of Zaraath with true leprosy highly improbable (T. B. Moëd Katan, 7B). (4) The Biblical Zaraath seems to be regarded as an hereditary and contagious disease. Many authorities, however, consider true leprosy to be neither contagious nor hereditary. (5) Certain anomalies in the regulations suggest a symbolic disease or infliction of stigmata expressive of Divine displeasure rather than a true disease (T. B. Arachin, 16A; cf. Ex. iv, 6; Num. xii, 10). Thus when the white leprous

efflorescence covers the whole body the affection is pronounced clean and neither isolation nor further inspection follows. Yet this complete efflorescence is apparently a characteristic of the incurable Egyptian leprosy. (Deut. xviii, 35).

None of these considerations is, however, conclusive, and most probably Zaraath in the Bible is a generic term including many diverse skin diseases and among them true leprosy. The characteristics of the advanced stages of *Lepra Arabum* do not seem to have been unknown (Num. xii, 10, 12; Deut. xxviii, 27, 35), and the reference to Egyptian leprosy seems to point to true leprosy, which was known in Egypt (Ebers). In Leviticus, however, the earliest symptoms alone are given to determine the presence of the disease. The laxity in the enforcement of the rules in later times may be explained by the gradual decrease of true leprosy among the Jews, and the consequent limitation of Zaraath legislation to the minor skin affections. The terrible diseases that decimated the army of Pompey were largely leproid in character (Pliny), and the immunity of the Jews to all these is affirmed by Tacitus. Similar testimony to the freedom of the Jews from leprosy is afforded by Plutarch (Sympos.) and Aelian ('De Natura animal'), who assert the consumption of swine to be the cause of leprosy and skin disease (cf. T. B. Kiddushin, 49B). The apparent anomalies are removed if Zaraath be regarded as a term covering many widely different skin affections. Modern science has discovered the special leprosy fungus, *Bacillus Lepræ*, and has, on the whole, vindicated the Bible view of leprosy as contagious. Its hereditary character has been less clearly determined, but it is also less clearly implied in the Bible. The main points of hygienic interest are those referred to in the affected house,— the insistence upon declaration of disease, diagnosis, isolation, lustration, etc.

Late Professor of Homiletics, Jewish Theological Seminary of America.

20. JEWISH CHARITIES. On 26 April 1655, the board of directors of the Dutch West India Company wrote to Governor Stuyvesant as follows: "After many consultations, we have decided and resolved upon a certain petition made by said Portuguese Jews, that they shall have permission to sell and to trade in New Netherland and to live and remain there, provided the poor among them shall not become a burden to the company or to the community, but be supported by their own nation."

The records of the department of charities of the city of New York show that on 6 July 1916, in a Jewish population approximating 1,250,000 in Greater New York, in the almshouse on Blackwell's Island there were 72 pauper Jews, of whom the majority were blind, idiotic or possessed of some peculiar defect which prevented admission to existing Jewish charitable institutions. These figures indicate how thoroughly the Jews of New York have assumed the responsibility imposed upon them over 250 years ago. The same is true of Jews throughout the United States. In our modern day, under more favorable conditions and auspices, the Jew has, to some extent, become non-sectarian in his philanthropies. Hospitals, as a rule, supported and endowed by Jews, throw open their doors to sufferers irrespective of creed, color or nationality. Other instances could be cited of charities, not medical, organized along similar lines. The Jewish free employment bureaus of New York make no distinction with its applicants. The Educational Alliance and other Jewish social centres in the same city offer their clubs and classes to the Jew and Gentile alike. Jewish agencies, giving material relief, or to use a better term, those which care for the needy in their own homes, in the main confine their work to beneficiaries of their own faith, without, however, making any rigid distinction. On the other hand, the trend of Jewish charity has been in the direction of caring for the Jewish poor, solely through Jewish agencies, and without the intervention or co-operation of other sectarian or non-sectarian societies or institutions.

The problem of the Jewish charitable societies of the United States to-day is the problem of the care of the immigrant. As such, it passes beyond merely local lines. In some of its manifestations it is national in character and in a few it has an international significance. The fact that the large bulk of the needy Jews in the United States reside in New York is accidental, and concerns the Jews of Denver and San Francisco equally with those of the Eastern seaboard cities. Insofar the problem is a national one. Moreover, to deal intelligently with the question requires a knowledge of the immigrant's antecedents, the impelling motive which brought him to the United States and an acquaintance with his previous environment. And here the international phase of the question comes in. Roughly speaking, it may be said that there are no American-born Jewish poor. Of the 9,274 families who applied for assistance to the United Hebrew Charities of New York during the year ending 30 Sept. 1915, 2 per cent were born in the United States. And of these the majority of heads of families were of the first generation. Jewish dependents who have an ancestry in the United States of more than two generations are practically unknown. It must not be concluded, however, that Jewish immigrants become dependent on their arrival. In 1915 only 13.59 per cent of applicants at the United Hebrew Charities of

New York were in this country less than five years.

In the year 1881 began that great wave of emigration from eastern Europe, the end of which is not yet. Driven by a relentless persecution, which endangered not only their homes but frequently their lives, thousands of Jews were compelled to flee from their homes to seek new residence on these shores. The Russo-Jewish committee which originally undertook the work of caring for these immigrants turned it over very shortly to the Hebrew Emigrant Aid Society, which came into existence in December 1881. In one year this society spent $250,000, $50,000 less than had been spent by the United Hebrew Charities of New York in the seven years of its existence. In the first and only annual report of the Emigrant Aid Society its president outlined as tersely as possible the efforts that had been made to provide homes and occupations for the thousands of fleeing exiles who reached these shores during the momentous summer of 1882. In the month of July the committee spent for board and lodging alone over $11,700.

With the gradual falling off in immigration, the Emigrant Aid Society went out of existence, and the care of the needy immigrant who remained in New York and who became impoverished after residence reverted to the United Hebrew Charities. In 1885 immigration again began to grow heavier and continued to grow in such numbers that in the following five years over 120,000 immigrants arrived at Castle Garden. In 1890 the immigration reached the figures of 32,321, the largest number ever recorded up to that time. With all that had been done, the real work of the charities was but to begin. In 1891 the religious persecution of the Russian Jews reached a climax. In the year ending 30 September, 62,574 immigrants arrived at New York, of whom nearly 40,000 arrived between June and September. The entire charitable effort of the New York Jewish community was for the time directed out of the ordinary channels and applied to this monumental question of caring for the arriving Russian Jews. The Baron de Hirsch Fund, instead of utilizing its income for its educational work, appropriated over $67,000 to the United Hebrew Charities to assist in the work of the Immigration Bureau. Over $175,000 was spent by the United Hebrew Charities during this year. In September of 1891, it became apparent that there would be no cessation to the immigration, and that much larger funds would be necessary to give anything like adequate assistance to the unfortunates who were arriving at the rate of 2,000 per week. The enthusiasm which was aroused at a banquet tendered to the late Jesse Seligman brought into existence the "Russian Transportation Fund," which added over $90,000 to the revenues of the United Hebrew Charities and which was given by the citizens of New York, irrespective of creed. Later in the year, a standing committee of the society, known as "The Central Russian Refugees Committee" was organized and was made up of representatives of the Baron de Hirsch Fund, the Russian Transportation Fund, the United Hebrew Charities and the American Committee for Ameliorating the Condition of the Russian Exiles. The last committee was organized to secure the co-operation of relief societies in other cities, in order that the various European societies who were assisting the persecuted Russians to emigrate should thoroughly understand the attitude of the New York organization. The year, October 1891 to September 1892, will ever be a memorable one in the history of the Russian emigration and of Jewish philanthropy; 52,134 immigrants arrived at the Barge office in that time. The treasurer of the United Hebrew Charities paid out the enormous sum of $321,311.05, of which $145,200 was spent by the Russian Refugees Committee between February and September.

Since the year 1881, 1,981,563 Jewish immigrants have arrived at the port of New York alone. Of these, the bulk comprise refugees from Russian and Rumanian persecution, Austrians and Galicians. They came from countries in which many of them lived under conditions of appalling poverty. The records of the Immigration Bureau show that from the standpoint of material wealth, these immigrants are below the average of immigrants from other European countries. Due to their previous condition, a goodly percentage is illiterate. On the other hand, the number of skilled artisans and craftsmen is so large as to be distinctly noticeable. In 1909, the work at Ellis Island was turned over to a newly-created society known as the Hebrew Sheltering and Immigrant Aid Society.

Many years ago it was realized that the increasing settlement of this population in the city must be discouraged as far as possible and two organizations, generously endowed with funds, the Jewish Agricultural and Industrial Aid Society, established in 1900, and the Industrial Removal Office, established in the same year, began a concerted movement to distribute as many of these immigrants as possible over the less thickly populated sections of the country. The former encourages their settlement on farms; the latter in the smaller industrial centres of the country. These attempts have met with great success, 85,000 Jewish souls having been satisfactorily removed to the interior and placed in positions where they have been self-supporting. But these numbers form only a small part of the influx of Jewish immigrants during this period.

In 1907, Mr. Jacob H. Schiff organized a movement which he alone has supported in this country, to divert Jewish immigrants from the Atlantic seaports to the Far West, through the port of Galveston, Tex., and through this movement has accomplished substantial results, about 9,000 immigrants being distributed in this way to the sparsely settled sections of the country. While it has not stemmed the tide to any considerable degree, it has established, in those which it has settled, centres of attraction for thousands of others who would otherwise have come to the Atlantic seaports. This movement was abandoned just before the European War broke out in 1914.

The experience of these organizations have long pointed the way for governmental action. Several years ago, a division was created in the Immigration Bureau of the Federal government, known as the Division of Information, whose purpose it has been to encourage the distribution of immigrants throughout the country so as to relieve congestion in the large seaports.

As stated before dependency among Jews in this city is largely the result of immigration. By that it was not meant that the newly-arrived required assistance, but that those in need of aid belonged nearly entirely to the class who were handicapped in their struggle for existence because they were strangers in a strange land. But as the years pass, these people depend more and more upon themselves and resort to community aid only in exceptional cases.

In spite of the large increase of population, there has been a constantly diminishing number of applications for relief at the United Hebrew Charities of New York and its co-operating societies. Many of the immigrants who came here 10 and 20 years ago are now very comfortably situated, notwithstanding, if an investigation were made of their history, many of them would be found recorded on the books of the United Hebrew Charities. Even with the great mass of Jews who settled here during the past generation and who are still in the wage earning classes, very few find it necessary to apply for relief when in temporary distress. During the great cloakmakers' strike in 1910 and the shirtwaist makers' strike shortly after, involving approximatelv 100,000 workers, practically none of these persons found it necessary to ask aid of the charities, in spite of the fact that they were out of employment for four months. The panic of November 1907 threw hundreds of thousands of persons out of employment; nevertheless, a negligible number of persons applied for assistance and these did not come to the doors of the charities until June of the following year. The masses of the Jewish wage earners in this city have established, and effectually organized for themselves, their own mutual benefit societies to which they resort during emergencies of illness, accident, death and unemployment. There is hardly a Jewish workingman or storekeeper of the immigrant class who does not belong to a mutual benefit society. These people have demonstrated in a marvelous fashion that social insurance is better than charity.

Though the mutual benefit societies have been the most important factor in the reduction of community dependency, there have been minor factors that must not be ignored. The Industrial Removal office and the Jewish Agricultural and Industrial Aid Society, above referred to, have contributed their share to this happy situation. The Hebrew Free Loan Association is another organization peculiarly Jewish, which is, to some degree, responsible. This organization was established about 20 years ago and since that time has loaned sums ranging from $5 to $200 in 240,000 cases without investigation and without security, also without interest, but simply upon the guarantee of two responsible persons that the sums loaned would be returned. Only five-eighths of 1 per cent of the $7,000,000 thus loaned has not been repaid.

In spite of the growing independence of the great masses of the Jewish people in this city, the United Hebrew Charities finds it necessary to continue its activities and because the families who do require aid are, for a large part, in the position where continuous assistance and treatment must be afforded, increased funds are necessary both for relief and for administration. In 1903, the society disbursed about $200,000, aiding during that year 7,900 families. In 1913, the society expended about $300,000, aiding 3,996 families. But this was not the only cause for this increase in disbursements. Two other causes have operated, — first, the cost of the necessities of life has substantially increased, and secondly, higher standards of relief have been adopted by the organization.

The United Hebrew Charities limits its activities to what was the city of New York before the consolidation of the boroughs, that is, to Manhattan and the Bronx. It was established 45 years ago, as an off-shoot of the Hebrew Benevolent and Orphan Asylum Society, and was composed of the following organizations: Hebrew Benevolent and Orphan Asylum Society, The Hebrew Benevolent Fuel Association, the Hebrew Relief Society of Congregation Shearith Israel, Ladies Benevolent Society, Congregation Gates of Prayer and the Hebrew Ladies Benevolent Society of Yorkville.

The general character of its relief work does not differ materially from that of the other large relief organizations, except in this respect, that for many years the United Hebrew Charities has maintained a large list of pensioners, so-called, that is, of the families who after a careful investigation are found to be in a position where regular and continuous relief is necessary. These families are visited from time to time, irregularly, to determine whether their conditions have changed, requiring a readjustment of the treatment, or at such times as the families themselves seek advice or additional aid.

As to the causes of distress among Jewish families, these do not differ except in one respect from the causes that operate among non-Jewish families. It can safely be said that much of the dependency prevailing here is due to circumstances over which they have little control. Sickness among Jewish cases is responsible for 45 per cent of the applications; half of this is due to tuberculosis; 60 per cent is due to widowhood. Among the other 25 per cent, employment plays its part, old age, physical and mental handicaps play their part, as well as family desertions. These causes cannot be presented with scientific accuracy. An analysis of the causes of distress are highly intricate and complex, as Dr. Devine points out in his book 'Causes of Misery.' What part heredity plays in bringing these victims to the doors of the charities is difficult to determine, but unquestionably it plays its important rôle, for if every Jewish widow, tuberculosis patient and chronic invalid were to apply to the organization for assistance, the numbers now coming would be multiplied several times. There is one cause which is absent among Jewish families,— the drink evil is practically unknown among Jews.

The United Hebrew Charities has consistently pursued the policy of attacking the causes of distress so far as it has been able. In most instances, the removal of the causes could not be brought about by the organization itself, because they are governed by conditions beyond its control. There is one cause, however, which it has been able to attack in a substantial degree, and that is, family desertion. The impression may have been created because of its extraordinary activity in this direction, that this evil prevails to a larger extent among Jews

than among other families, but this is not so. The records of other organizations show that desertion is as large a contributing factor in dependency among other people. As a result of the work done by that organization, the National Conference of Jewish Charities established the National Desertion Bureau in 1910 to act as a clearing-house for desertion cases for all Jewish charities throughout the country. Up to the present time about 10,000 such cases have been taken up and in about 75 per cent the deserter has been located. In nearly all the instances they were reconciled with their families or an arrangement was made under which they resumed the support of the family, even though separated from them, and in a few cases where the deserter refused to resume his moral and legal obligations, the laws on the subject were invoked. The reports of that bureau are among the most interesting human documents ever published.

The cornerstone of Jewish charity is aid to "self-help." Maimonides, the great Jewish law codifier, enumerated eight different kinds of charity in the order of their merit. The first was aiding the poor to help themselves. This principle has always been the primary object of so-called "case work," with all of these organizations. Similar methods to accomplish these results are followed with variations by all the large relief organizations. In the case of the Jewish charities, the instruments employed are in some respects similar and in others different. About $15,000 of its funds are yearly applied in the form of loans without security to enable persons to become self-supporting in small businesses. These means come largely from what is termed "The Self-Support and Self-Help Fund." A few years ago the organization established a workroom for women on a modern business plan, where neckties and shirts, boys' wash suits are manufactured with electric power machines. To this workroom have been sent many women whose absence from the home caused no neglect to their children, nor worked unusual hardship to the women themselves.

It is only rarely that the able-bodied men apply to the organization. It is, therefore, not necessary under normal conditions to aid such people in securing work. There are always, however, a considerable number of handicapped persons applying to us who are able to engage in some vocation, but who because of their misfortune find it difficult to obtain employment. For these there is conducted an employment bureau. Much difficulty is experienced in securing work for such people. All of the Jewish Employment agencies were coordinated into a Placement Clearing House whose office was in the Hebrew Charities Building. Because the Federal government has established employment bureaus the work of these agencies is being rapidly turned over to the government bureaus.

In recent years, the spread of tuberculosis among Jews has merited the earnest attention of the society, and among its other activities the United Hebrew Charities has been a pioneer in developing a systematic plan for caring for such tuberculous applicants in their own homes, for whom no provision could be made in existing sanatoria. The campaign thus begun has been not only a charitable but a social one. Not only have these unfortunates been given food, nourishment and medical care to aid them toward recovery, but in addition thereto, instruction has been given them in the rudiments of sanitation and in the prevention of infection. It is significant that the work of the United Hebrew Charities in this field has been followed to some extent by the Committee on Tuberculosis of the Charity Organization Society.

In 1910, realizing the inadequate sanatorium treatment and also the limitations under which the United Hebrew Charities labored in dealing with tuberculous families, it entered into an arrangement with the Free Synagogue to join in an experiment with a view to determining what results could be accomplished with such families in their own homes, if adequate funds were afforded for their maintenance and for effective medical supervision and nursing. The results of that experiment were so encouraging that in 1913 the co-operation of the Montefiore Home was enlisted in an enlarged experiment along the same lines, and this committee, known as the Jewish Committee on Tuberculosis, is now doing this intensive and rehabilitative work with the family of every Jewish patient admitted to local sanatoria and is spending $60,000 annually to carry on this work. A very interesting activity carried on by this committee is a model garment factory employing upward of 150 former sufferers from tuberculosis, all of them receiving union wages. Practically none of these persons have suffered relapses.

The name "United Hebrew Charities" as applied to the New York organization is somewhat of a misnomer, since it does not include all the Jewish charitable agencies in the city of New York. It would be more proper to speak of it as the consolidation of all the purely relief societies which existed in New York prior to 1874. Aside from these, there are to-day hospitals, orphanages, technical schools for boys and girls, trade schools, day nurseries and kindergartens, guilds for crippled children burial societies, loan societies, societies for maternity relief and a goodly number of smaller organizations which have been founded by the immigrants of the last 20 years. Among the most important large organizations and institutions in New York may be mentioned: The Mount Sinai Hospital, Lebanon Hospital, Beth Israel Hospital, Montefiore Home, Hebrew Orphan Asylum, Hebrew Sheltering Guardian Society, Home for Hebrew Infants and Hebrew Free Loan Association. It is estimated that there are over 300 Jewish organizations and societies in the city of New York to-day, whose activities to a greater or lesser degree are directed along philanthropic lines. Practically all of the larger organizations, such as the hospitals, etc., work in co-operation with the United Hebrew Charities. In some of the other cities in the United States, where the question of the care of the poor is not so complex as in New York, closer co-operation has gone by leaps and bounds. In cities like Philadelphia, Cincinnati, Cleveland, Chicago and others, the individual societies have formed federations of charities, the purpose of the federation being to express the philanthropic impulse of the community in terms of greatest economy, the smallest amount of friction and the highest

possible efficiency. In Philadelphia the federation is the common treasury. It acts as the common collection agency of all moneys and distributes them pro rata among the various societies and institutions, whose autonomy is not impaired by this method. In other cities, this plan with some slight variations is in force. In New York after sporadic attempts a federation for the support of philanthropic societies was established in 1917 numbering 91 constituent societies.

In addition to these local federations, the various societies throughout the United States have joined together to form a national body known as the National Conference of Jewish Charities. At present it comprises the charitable organizations of 85 cities. Annual conferences are held. The published reports of these meetings indicate conclusively the wisdom and the necessity of founding such a national organization. The rules governing the transportation of dependents which have been in force in the National Conference of Jewish Charities since its inception were adopted, with alterations and additions, at a meeting of the National Conference of Charities and Corrections at the meeting held in Atlanta in May 1903. The official organ of the National Conference of Jewish Charities is a monthly publication, *Jewish Charities*.

Some idea of the extent to which the Jewish charities have been developed in the United States may be gathered from the following: In practically every city and town there are benevolent societies which look after the interests of the poor in their midst. Jewish orphan asylums are established in the cities of Atlanta, Baltimore, Boston, Brooklyn, Chicago, Cincinnati, Cleveland, Newark, New Orleans, New York, Philadelphia, Pittsburgh, Rochester and San Francisco and Erie, Pa. In New York there are three institutions and in Philadelphia there are two. New York has a dozen Jewish hospitals and such cities as Philadelphia, Baltimore, Chicago, Cincinnati, Denver, New Orleans and San Francisco, and even smaller cities, each have one or more. Homes for aged and infirm are found in most of the large cities. Similarly, educational movements along philanthropic lines are developing throughout the country. These include organizations such as the Hebrew Educational Society of Brooklyn, The Hebrew Education Society of Philadelphia, The Jewish Training School and Hebrew Institute of Chicago, the Hebrew Free and Industrial School of Saint Louis, the Hebrew Industrial School of Boston, the Clara de Hirsch Home for Working Girls, the Hebrew Technical School for Girls, the Hebrew Technical Institute and the Baron de Hirsch Trade School, the last four being situated in New York. The Maxwell Street Settlement of Chicago and the Neighborhood House in Saint Paul are under Jewish auspices. Most of the large cities have Jewish settlements. In New York the Educational Alliance, the largest institution of its kind in the United States, has within the past few years developed a settlement with resident workers. Along educational lines, the Jewish Chautauqua Society, a national organization, has conducted a summer school in philanthropy in connection with its summer assembly held in Atlantic City, N. J. At these sessions, important communal problems of interest to Jewish workers in philanthropy have been considered.

Other national organizations of importance are the Jewish Agriculturists' Aid Society, the Baron de Hirsch Fund and the Jewish Agricultural and Industrial Aid Society. The first named, with headquarters in Chicago, is engaged in placing farmers throughout the Northwest, particularly in Dakota. The work of this society, while not on an extended scale, has nevertheless given results and has demonstrated the fact that it is possible to take residents of congested centres, remove them to country districts and make farmers of them. The Baron de Hirsch Fund was established under a foundation of the late Baron de Hirsch, the deed of trust being incorporated in March 1890. Its activities at present are directed to the conduct of the Baron de Hirsch Trade School in New York city and the Agricultural Colony at Woodbine, N. J., where the Fund has an Agricultural and Industrial School. The Fund likewise gives moneys to co-operating societies in various cities for the purpose of granting tools and teaching trades to recently arrived immigrants. The Jewish Agricultural and Industrial Aid Society is an offshoot of the Baron de Hirsch Fund, receiving money from the latter society and from the Jewish Colonization Association, which was created under a de Hirsch endowment. Its purpose is to find agricultural and industrial positions for Jewish immigrants. Under the care of this organization are the various colonies in South Jersey, aside from Woodbine, and the organization has made farm loans to farmers in various parts of the United States, particularly in Connecticut.

The number of philanthropic organizations has grown so large and their problems so complex that the National Conference of Jewish Charities has established a field bureau to study them and give advice to local committees. In New York a Bureau of Philanthropic Research has been created, under the auspices of the Council of Jewish Communal Institutions, to study local philanthropic needs and resources. These bureaus together with the Bureau of Statistics of the Jewish Committee have recently been amalgamated with headquarters in New York.

MORRIS D. WALDMAN,
Executive Director, United Hebrew Charities, New York City.

21. JEWS IN AMERICA. Although the Jewish population of America has been greatly increased by immigration only since 1881, Jews have been closely identified with American history for centuries.

Before taking up the history of the Jews in America, some statistics concerning the American-Jewish population at various periods will be in order, as tending to throw light on more isolated historical incidents relating, for the most part, to the experience of a small fraction only.

Statistics.— The latest and most authoritative statistics as to the present Jewish population of the United States are furnished by the 'American Jewish Year Book' (1918), wherein it is computed that the total number of Jews in this country is 3,300,000, of whom about 1,500,000 reside in New York city; in Chi-

cago, 225,000; Philadelphia, 200,000; Cleveland, 100,000; Boston, 77,500; Saint Louis, 60,000; Baltimore, 60,000; Pittsburgh, 60,000; Newark, 55,000; Detroit, 50,000, and San Francisco 25,000; all the other States and Territories, including Hawaii, Porto Rico and the Philippine Islands, and also the District of Columbia, likewise contain some Jewish residents. In making up this total, account is taken of the fact that about 2,001,000 Jewish immigrants arrived in the United States from 1881 to 1 July 1915. New York city, which contains the largest Jewish community that has ever existed within the confines of a single municipality, has over 1,200 congregations, and 180 religious schools with 41,403 pupils, exclusive of about 14,000 who attend private schools. It has over 100 recreational and cultural agencies, more than 1,000 mutual aid societies, 965 lodges, 193 economic agencies and 164 philanthropic and correctional agencies. Dr. Oppenheim gives a list of nine cities, exclusive of New York city, containing an aggregate of over 9,200,000 inhabitants, of which 900,000 are Jews. New York city is not percentage-wise the most Jewish city. Chelsea, Mass., has a general population of 46,000 and contains 13,000 Jews, or a Jewish population of 28 per cent. Rosenhayn, N. J., has a general population of 600, and contains 300 Jews, or a Jewish population of 50 per cent, while Carmel, N. J., has a general population of 750 and contains 450 Jews or a Jewish population of 60 per cent. Woodbine, N. J., is practically entirely Jewish in population. The same authority computes the Jewish population of America, exclusive of the United States, as follows: Canada, 75,681; British West Indies, approximately, 1,000; Argentina, 55,000; Brazil, 3,000; Cuba, 4,000; Mexico, 8,900; Curaçao, 670; Surinam (Dutch Guiana), 933, and Venezuela, 411. These figures are mere estimates, than which nothing more accurate is at present obtainable; but they are no doubt approximately correct, being based upon partial actual counts; the United States census of 1910 returns of persons giving Hebrew and Yiddish as their mother tongue; the government immigration records, analyses of death rates and reports of competent judges in the various localities, and having also been revised from time to time in the light of criticism and new data.

The first systematic attempt to secure statistics of the Jewish population in the United States culminated in the publication of a report by the Union of American Hebrew Congregations in 1880, giving estimates for each State and city in the Union, and aggregating 230,257 persons. In connection with the national census of 1890 statistical information was gathered regarding Jewish congregations in the United States, and the total number of Jewish communicants was estimated at 130,496, belonging to 533 church organizations. Of these, 316 organizations, having 122 church edifices, valued at $2,802,050, and 51,597 communicants, are to be credited to Orthodox Judaism, while Reform Judaism counted 217 organizations, having 179 church edifices, valued at $6,952,225, and 72,899 communicants. A very large majority of the Jewish immigrants arriving in the United States since 1890 belong to the orthodox wing, and even the figures of 1890 undoubtedly disregard numerous small, often unorganized, orthodox congregations, from whom it was relatively more difficult to secure reports. In 1818 the Jewish population of the United States was estimated at 3,000 only; in 1848, at 50,000. In South America there were several thousand Jews prior to 1650, the greater part of whom were in Brazil, as noted below; but hostile laws and the persecutions of the Inquisition, while driving some to the West Indies, and even as far north as New Netherlands, caused several thousands Jewish settlers in Spanish and Portuguese territories to totally give up their Jewish identity.

It might be said that there were successive tides of Jewish emigration to America from European countries, fairly well separated from each other in point of time. During the first 250 years after the discovery of America the settlers were mainly Jewish immigrants of Spanish-Portuguese stock, with a sprinkling of German, French, English and Polish Jews. German Jewish emigration becomes considerable only about the time of the American Revolution (though evidence is accumulating that it took upon itself larger dimensions and at an earlier period than is commonly believed); it was stimulated by the reactionary measures following the Napoleonic wars and the Revolution of 1848, and began to include emigrants from the Austro-Hungarian Empire, and later on an increasing number of Poles. The Russian-Jewish exodus, which began about 1881, was by far the heaviest of these various currents of emigration, and was itself succeeded or rather joined by a Rumanian-Jewish wave about 1900.

Jews in the Spanish and Portuguese Colonies.— Before the discovery Jews were actively identified with the fate of America, as may be said without reference to the curious and once widely accepted theory that the American Indians are descendants of the lost Ten Tribes. Emilio Castelar, the late Spanish statesman and historian, referring to the coincidence that the Jews were expelled from Spain in the year that Columbus started on his first voyage of discovery — a circumstance noted by Columbus himself in his journal, and repeatedly thereafter commented upon by Jewish historians — makes this observation:

> It chanced that one of the last vessels transporting into exile the Jews expelled from Spain by the religious intolerance of which the recently created and odious Tribunal of the Faith was the embodiment, passed by the little fleet bound in search of another world, whose creation should be newborn, a haven be afforded to the quickening principle of human liberty, and a temple reared to the God of enfranchised and redeemed consciences.

But Jewish aid to Columbus was not limited to Jews accompanying him on his first voyage (including Luis de Torres, a new convert to Christianity, who went as interpreter because of his knowledge of Arabic, and settled before 1500 in America), nor to the circumstance that Columbus carried with him, as aids on his voyage, a sea-quadrant called "Jacob's Staff," invented by a Spanish Jew, and astronomical tables and charts invented by another Jew. The more significant and important fact is that Jewish financiers at the Spanish court were his leading patrons, and advanced the money for his voyage, as evidenced by original account-books still found in the Spanish archives; so

that it was a mere recognition of this circumstance that induced him to address the first two letters (now justly famous, and the earliest copies of printed editions of which command thousands of dollars from book-fanciers) narrating his discovery to those two secret Jewish friends, Luis de Santangel, chancellor of Aragon, and Gabriel Sanchez, royal treasurer. In the light of such facts the late Herbert B. Adams wrote that "not jewels, but Jews, were the real financial basis of the first expedition of Columbus." The revenues needed to fit out the second expedition were secured from the proceeds of the property of which the expelled Spanish Jews were despoiled by the Inquisition at the time of their expulsion from Spain.

In spite of prohibitions upon Jewish settlement in Spanish and Portuguese America, many Jews rapidly emigrated to the New World from among those exiled from Spain and Portugal; occasionally, in spite of the inconsistency involved, in view of those prohibitions, Jews and Jewesses were forcibly transported to America by the state through the agency of the Inquisition. By 1548 Jews are referred to not merely as having settled in Brazil, but as introducing sugar-culture there, which they transplanted from Madeira. The smoking of tobacco had been introduced to Europeans even before 1500 by Luis de Torres, a companion of Columbus. Occasionally, enormous sums of money had to be raised and given to the Crown in order to effect suspension or revocations of prohibitions upon Jewish settlement in the Spanish and Portuguese colonies. But the Inquisitioin and its terrors were introduced even into the New World; hence Jews found it advisable to try to conceal their faith under the cloak of Christianity; and it is principally in the records of the Inquisition that we find proofs of the Jewish practices of many of these settlers — called Marranos or secret Jews — whose trials commonly resulted in imprisonment, frequently in death at the stake, and were at all events followed by confiscation of their property.

In Brazil, Jewish settlers actively aided the Dutch in effecting their conquest of that country, about 1620, after which the Jews *en masse* threw off their Christian disguise and publicly professed their own religion. The Dutch West India Company (q.v.), which obtained the proprietorship of Brazil, had many influential Jewish stockholders, and under their auspices large numbers of Jews from Portugal, Holland and Germany emigrated. Jewish residents are referred to about 1640 as owning the principal sugar-plantations of Brazil, and as heavily interested in the diamond industry then developing there; and there is also evidence that a Jewish literature sprang up in Brazil at this time. Some idea of their numbers may be gathered from the fact that at the time of the surrender of Recife (Pernambuco) to the Portuguese, after its recapture from the Dutch, soon after the middle of the 17th century, that city alone contained about 5,000 Jews, even after many had departed from the city. In smaller numbers they were also established in other cities of Brazil, in Mexico, Peru, the West Indies and at other points. The Dutch capitulation of Brazil in 1654 led to their flight in large numbers from that country, their migrations leading them northward, particularly to the West Indies, and one party of refugees even becoming the nucleus of a Jewish settlement at New Amsterdam (New York city) in 1654. Many, however, remained in the South American colonies, and their Jewish identity was gradually lost under the hostile influences at work. The settlements under Dutch auspices at Surinam, Cayenne and Curaçao are reserving of particular attention.

Of the professing Jewish inhabitants now to be found in these districts, enumerated in the statistics just considered, very few are descendants of the original Spanish settlers, the great bulk of them being comparatively recent arrivals from Germany, Russia and Rumania. Through the munificence of Baron de Hirsch (q.v.) millions of dollars were employed about 1891 in the purchase of land and equipment for the use of agricultural colonies of Russian Jews established under his auspices in Argentina, where several thousand Jews settled, though they have met with only moderate success.

West Indies.— Reference has already been made to early settlements of Jews in Cuba and other West Indian islands. Their settlement in Jamaica was particularly important on account of their numbers and the once great commercial importance of the island. For the latter reason their residence in the Barbados, at Saint Eustatius, Martinique and in the Danish West Indian colonies also led to important consequences. Reference will be made hereafter to this circumstance. Except in Cuba, the decline of the above-named places commercially has caused a decided diminution in the number of their Jewish inhabitants, and to-day the chief interest in the settlements is historical.

Early Settlements in the United States before the Revolution.— There are indications of some isolated and casual arrivals of individual Jews within the present limits of the United States prior to the arrival of the party from Brazil in colonial New York during the Dutch régime, in 1654; these were in Maryland, Virginia, New England and New York. These instances (other than those in the Dutch colony) are purely casual, however, and unimportant, because Jews were not allowed at this time to live as avowed Jews in any of the principal countries that then had colonies in America except Holland. Prohibitions against their settlement were in force (though occasionally ignored) in Spain, Portugal, England, and to some extent in France. Holland alone at this time welcomed the Jewish refugee, to her great commercial advantage; and this "common harbor of all opinions and of all heresies" was, logically enough, destined to establish a precedent for granting religious liberty also in the New World. It is true that in New Netherlands Gov. Peter Stuyvesant (q.v.) was decidedly hostile to the Jewish arrivals, as were also some of the early Dutch ecclesiastical authorities; but thanks to the leveling and humanizing influence of commerce, and to Jewish holdings of stock in the Dutch West India Company, the directors of that company, 26 April 1655, instructed their governor that the "Jews shall have permission to sail to and trade in New Netherlands, and to live and remain there, provided the poor among

them shall not become a burden to the company, or to the community, but be supported by their own nation"; and Stuyvesant was strongly reproved soon after for seeking to thwart these clearly expressed wishes of the company. This grant was commemorated in 1905 by a wide-scaled celebration throughout the country of the "250th Anniversary of the Settlement of the Jews in the United States." The emancipation of Jews was, however, only gradual; certain restrictions were continued through the whole colonial period, though they decreased from time to time, and in importance. Public worship, as distinguished from private religious services, was forbidden them till near the close of the 17th century, as was also selling at retail, and certain political rights of citizenship were also denied; but these restrictions in the course of time were largely removed in practice, so that the adoption of the first constitution of the State of New York, in the Revolutionary period, which established absolute religious liberty, conferred in effect few, if any, privileges on the Jewish residents of that State which they had not already virtually enjoyed. In the interior the number of Jewish residents had grown somewhat by emigration from Germany, Hungary, Poland and also from England, which, under Cromwell, readmitted the Jews soon after the time of their settlement in New Netherlands; but the increase in numbers through immigration was not great till after 1800, for there were few Jews in England, and still fewer who desired to emigrate from there, while emigration to New York and New England prior to the above date from any of the other designated countries was very small.

To Newport, R. I., Jews emigrated very soon after they first settled in New Amsterdam, and Roger Williams (q.v.) in terms included them in his program for establishing a colony where religious liberty would be accorded to all sects and creeds. In the course of time they erected a synagogue here also, as well as in New York, and established a community which contributed most materially to the commercial prosperity of Newport, which city far outrivaled New York for some decades before the Revolution, and until, during that struggle, its shipping interests received a blow from which they never wholly recovered. Here, also, there were some retrogressions during the colonial period from Roger Williams' enlightened declaration of principles; but on the whole, Jews were most prosperous residents of Newport during the latter portion of the colonial period. Even though the colony never was numerous, it embraced such merchant princes as Aaron Lopez and Jacob Rodrigues Rivera, and its fortunes were commemorated, after all the old-time residents had departed, in Longfellow's famous lines on 'The Jewish Cemetery at Newport.' Already in the colonial period Jewish settlers occasionally found their way into Connecticut, also to Boston, and even, it would seem, to Maine, but they were very few in number, and the present Jewish residents of New England date almost entirely from the period of German settlement after 1848, followed by a much more considerable Polish and Russian-Jewish settlement toward the end of the 19th century. About 1820 Maj. Mordecai M. Noah, at one time United States consul to Tunis, developed a fantastic plan for founding a Jewish state for the oppressed Jews of other lands under his own "judgeship," near Niagara Falls, at a place he named "Ararat, City of Refuge," and attempted to tax all the Jews throughout the world for this purpose, but the scheme merely aroused amused attention. Other less ambitious early colonization schemes also were formed.

Pennsylvania, under William Penn's generous plan for founding a home for victims of persecution, attracted Jewish settlers, and in the early decades of the 18th century a little stream of immigration began which brought a number of German, English and Polish Jewish settlers to Philadelphia, whose numbers were increased, after the capture of New York by the British in 1776, by the arrival of Portuguese Jews from that city. The Jewish settlement in Lancaster, Pa., was made shortly before the American Revolution; and there was a small Jewish immigration into Maryland and Virginia, with communities in Schaefersville, Easton, Baltimore and Richmond. Before the close of the Revolution a Portuguese synagogue had been erected in Philadelphia; soon a German Jewish congregation was established there; and about the same period one was erected in Richmond, Va. The laws of Maryland prohibited Jewish settlement, and as early as 1658, Dr. Jacob Lumbrozo, "the Jew physician," figured there as defendant in a blasphemy trial, which nearly cost him his life. Baltimore is of particular interest because it was the only city in the United States in which systematic and long-continued efforts were necessary, subsequent to the Revolution, in order to secure full civil and political rights for Jews as such; they acquired them finally in 1826. Georgia attracted Jews almost immediately after the founding of the colony, parties of both German and Portuguese Jewish settlers having arrived at Savannah in 1733. Some of these were indigent Jews who were assisted to emigrate by coreligionists in England. Off-shoots from this colony migrated to South Carolina before the first half of the 18th century and a congregation was formed in Charleston in 1750. By the time of the Revolution, and for some decades thereafter, Charleston contained one of the most important and prosperous Jewish communities in the United States. In both of these colonies Jews seem to have figured as holders of responsible civil office before the close of the Revolutionary War.

The various places which contained Jewish communities prior to the Revolution have now been enumerated; the total Jewish population embraced in them and in other and more isolated settlements was, as seen, somewhat less than 3,000 in the year 1800.

Interior Settlements.— Space does not permit consideration of the various Jewish settlements and their date of establishment outside of the limits of the 13 colonies. The great majority of Jewish residents of the United States still reside along the eastern coast-line. In time, the westward movement carried Jewish settlers along with it, some into interior cities in the original 13 States, others farther west. In fact during the second half of the 18th century, the Gratz, Franks, Simon and Henry families, in conjunction with George Croghan and

others, did much to open up the territory west of the Mississippi. By 1800 there were several Jewish residents at Pittsburgh. Judah Touro (q.v.), the well-known Jewish philanthropist, went to New Orleans about 1801, and Jews were destined, during the latter half of the 19th century, to achieve considerable political distinction there, though probably there were some Jewish settlers in the Louisiana Territory nearly a century earlier, who were persecuted by reason of the prohibitions in the French "Code Noir" upon Jewish settlement. The first indisputable Jewish resident of Kentucky seems to have settled there about 1808. Ohio appears to have received its first Jewish residents about 1817–19 and after 1830 a considerable tide of German-Jewish immigration flowed toward Cincinnati. In Illinois, which has to-day a considerable number of Jewish inhabitants especially in and about Chicago, the first Jewish settler probably arrived about 1841; and after a couple of years, numbers of German Jews began to come. A little later this same tide reached Detroit, Mich. Texas, while still belonging to Mexico, had quite a contingent of Jewish settlers, who began to arrive about 1821. California attracted a considerable number of Jews at the time of the gold discovery in 1849, and in 1850 they had two congregations in San Francisco. It will be observed that the great majority of Jews in the United States are to be found in the large cities, due largely to prohibition abroad in Russia and Rumania on their owning land and living outside of specified urban sections, which habits the immigrants carry with them to this country.

The reactionary movement that followed the Napoleonic wars in Germany, early in the 19th century, and particularly the barbarous Jewish marriage laws of some of the German states (which, among numerous disabilities from which Jews suffered, were possibly the most objectionable, as they forbade more than a certain number of Jewish couples to live in any district), greatly stimulated German Jewish emigration to the United States from about 1815. After the revolutions of 1848 the political and economic unrest in Germany and throughout Europe caused a particularly valuable and intelligent class of Jewish immigrants to come to this country, including, in addition to Germans, also Hungarians, Poles and Bohemians; while after 1881 the Russian-Jewish exodus assumed large dimensions, and the Rumanian-Jewish emigration began to be heavy about 1900. The volume of these tides can be gauged by comparing the estimates of Jewish population at various periods, already quoted, with these various dates. The forced emigration of recent years from Russia and Rumania has naturally had the effect of bringing to these shores persons less adequately equipped, and who had known fewer opportunities for development and self-improvement than the earlier immigrants, generally speaking, had enjoyed, but their Americanization and progress here have been phenomenal.

The Jews in American Commerce, Industries and the Professions.— Reference has already been made to early Jewish activities in the field of commerce, exhibited in Brazil and the West Indies particularly. It is most important here to note the consequences which followed the dispersion of the Jews throughout so many different lands and districts, resulting in their opening of international and intercolonial trade relations with each other long before those having no such ties of relationship or confidence, and no such common language or commercial abilities, were ready for any such mutual intercourse. The result was that in early colonial days Jews were pioneers and prime promotors of intercolonial and foreign commerce in America, which became not merely profitable, but actually indispensable, for the maintenance of the colonies. The most distant points thus became interlinked by means of their Jewish residents. Every industry and branch of trade engaged their attention. Among persons who were particularly prominent in these fields, besides Lopez, Rivera and Touro, already referred to, were Lewis Gomez and his sons, who were exporters of wheat on a very large scale in colonial New York, early in the 18th century; Hayman Levy, the fur dealer of New York, who had close relations with the Indians and was at one time the employer of the first John Jacob Astor; David Gradis of Bordeaux, who is described as having "controlled the trade of France with the West Indies," in the 18th century, the Gratzes, etc. Aaron Lopez of Newport had a fleet of over 30 vessels shortly before the Revolution, engaged in trade between Newport, the West Indies and Africa. Newport Jews also created the spermaceti industry. Jews were among the founders of the New York Chamber of Commerce and one figures on its seal as a member of the committee receiving its charter from the colonial governor. They were also among the founders of the New York Stock Exchange and ever since that time have been growing in importance in America as bankers, brokers, financiers and railroad magnates. They have been particularly influential in certain lines of trade, including the cotton, tobacco, sugar, coffee, jewelry, leather, hides, meat-packing and clothing industries and department-store activities.

The Jews of America have produced distinguished inventors, lawyers, physicians, rabbis, journalists, scientists, artists, dramatists and professors, filling chairs at all the leading universities, far in excess of the proportional number of their race in the population of the country. On the other hand, the large immigration of unskilled laborers into the United States has led to the employment of thousands of Jews here in every industrial pursuit, frequently at the start under unfavorable conditions.

Jews in the Army, Navy and Public Service Generally.— Prior to the American Revolution there were Jews serving in the militia and in the colonial wars. During the Revolutionary War, their numbers on the army rolls far exceeded their ratio to the total population and a number achieved distinction above the ranks. The New York Jewish congregation concluded, by a decisive majority vote, to disband, rather than to sacrifice patriotism on the altar of religion and many of its members fled to Philadelphia, just prior to the British occupancy of New York. In the South a corps of volunteer infantry, known as Captain Lushington's company, composed principally of Jews, was organized in Charleston in 1779, and fought in the patriot ranks. A number of Jews had figured as signers to the Non-Importation

Agreement of 1765. Among those on the Revolutionary rolls who achieved military distinction are Col. Solomon Bush; Col. David S. Franks, aide-de-camp to General Arnold before the latter's treason, and who was the bearer of the signed definitive treaty of peace, sent abroad by Congress for delivery there; Isaac Franks, who became colonel of Pennsylvania's volunteers soon after the Revolution, after having served long during the war in the ranks; Capt. Jacob de la Motta; Major Nones; Lieutenant Seixas; and Deputy Commissary-General of Issues Sheftall, of Georgia. During our War of 1812 and the Mexican War many Jews served in the ranks and occasionally as holders of important military positions; while during the Civil War the number of Jewish soldiers in the field far exceeded their ratio to the whole population of the country, and they held military positions from brigadier-general down. Hon. Simon Wolf, in his work, 'The American Jew as Patriot, Soldier and Citizen,' has, by means of enormous labor and investigation, collected available names and records of Jewish soldiers in the Federal army and navy, in which he reports that during the Civil War no fewer than 7,884 Jews served, and even these numbers are necessarily incomplete. As the Jews were Union men in the North, so those living in the South generally espoused the cause of the Confederacy and Mr. Wolf's figures include less than 2,000 Confederate Jewish soldiers. The number included by him as serving in the Union and Confederate navies is relatively smaller. A similar list of Jews who served during the Spanish-American War has been compiled ('American Jewish Year Book' 1900–01, pp. 527–622), and includes thousands of names, again exceeding the relative ratio based on that of the total number of persons serving to the total population; and President Roosevelt, years later, felt called upon to compliment them publicly upon their bravery, as indicated by instances of Jews who served under him and were commended for gallantry. Neither have Jews failed to enlist in our navy, for since the latter was instituted, a number of Jews have notably risen from the files to naval distinction, as witness the careers of Captain Etting, Maj. David M. Cohen of the United States Marine Corps, Capt. Levi M. Harby, Capt. Jonas P. Levy and "Commodore" Uriah P. Levy, who at the time of his death in 1862 was the ranking officer in the United States navy, Rear-Admiral Marix and Captain Zalinski. Nor have Jews failed to render the government signal services in private life. Haym Salomon, the associate of Robert Morris and Madison, was broker to the Office of Finance, and it was through his hands that the loans from France and Holland to the infant republic passed; he made heavy advances to the government, which at the time of his death was indebted to him in hundreds of thousands of dollars, which have never been repaid, in spite of repeated Congressional reports in favor of the claim. During the Revolutionary period, there were still others who aided the government's hazardous financial fortunes. Among the most distinguished Jewish patriots of the Revolution stands Francis Salvador, who was a member of the South Carolina Provincial Congress and of the General Assembly of that State. On the other hand there were, naturally enough, also a few Tories among the Jews, chief among whom were David Franks of Philadelphia, who had been British commissary-general, during the French and Indian War, together with his father, Jacob Franks. David Franks' daughter, Rebecca Franks, was one of the leading belles and wits of Philadelphia and New York during the Revolution. A number of Jews have served in Congress, both in the Senate and the House of Representatives, the most prominent among them having been Judah P. Benjamin (q.v.), who resigned his seat in the Senate to become Attorney-General, Secretary of War and then Secretary of State of the Confederate States and subsequently became leader of the English bar. Several Jews have been United States ministers to foreign countries and consuls-general, one of the former, Oscar S. Straus, now being a member of the Permanent Court of Arbitration at The Hague, and having been Secretary of Commerce and Labor under President Roosevelt. Many have been judges in different States, and several have been attorneys-general of their States, and Louis D. Brandeis was appointed by President Wilson as justice of the United States Supreme Court. Several have held the office of governor in American States, and a number have been mayors of leading cities, while many others have held local and State offices. Among those who rendered our government most valuable services in trying financial times are J. & W. Seligman & Co. Several Jews, particularly Moritz Pinner, David Einhorn and M. Heilprin, were active workers for individual liberty in the anti-slavery movement.

Charities and Other Institutions.— The Jewish charities of the United States are unequaled in magnitude and efficiency, compared with the total Jewish population. Naturally enough, the enormous exodus of well-nigh indigent Jews to these shores has greatly increased the burden falling on their more fortunate coreligionists. The amounts disbursed by the organized Jewish charities in New York city alone exceeds $3,000,000 per annum and are of the most varied character. The pure milk depots opened by Nathan Straus, at a heavy cost, in New York — an example which has been followed in other cities — is one of the most effective forms of charitable endeavor and has saved thousands of infant lives. Various Jews of the United States have contributed hundreds of thousands of dollars at a time in individual instances to charitable purposes, best known among whom is Mr. Jacob H. Schiff, of New York, who is credited with observance of the old Jewish practice of giving a tithe of his income to charity. About $5,000,000 were raised by the Jews of the United States for the relief of their coreligionists in the war zone in 1914–18, besides large contributions to non-Jewish war relief funds. The arbitration movement for settling controversies between capital and labor, known as the Civic Federation, has enlisted several Jews in its directorate. The Jewish charities of the United States are being systematized and organized more and more from year to year; aid is being afforded by the annual national conferences of Jewish charities and the Industrial Removal Office has opened offices throughout the United States to

aid indigent immigrants after arrival, to seek locations for them in the interior of the country and thus relieve the congestion of the large Eastern cities. Special efforts have also been made to promote agricultural pursuits among the Jews of the United States, and to encourage industrial activities among them. Of course all the local New York charities deal particularly with recent arrivals, but the Baron de Hirsch Fund, the Hebrew Sheltering and Immigrant Aid Society, the Council of Jewish Women, the Clara de Hirsch Home, the Hannah Lavenburgh Home and the Educational Alliance especially address their efforts toward them. In 1911 the United States abrogated her treaty with Russia, because Russia declined to treat American citizens of the Jewish faith, holding our passports, on a parity with citizens of other faiths, and refused to permit them to enter Russia under the treaty concessions. In Secretary Hay's Rumanian note of 1902 and on other occasions, the United States sought to secure full rights for persecuted Jews abroad. See article JEWISH CHARITIES in this section.

A number of very large mutual benefit and mutual development societies, taking the form of fraternities and Jewish lodges, exist within the United States and do much good, chief among them being the Independent Order B'nai B'rith, Independent Order Brith Abraham, the Independent Order Free Sons of Israel, the Arbeiter Ring and the Independent Order Sons of Benjamin. The recently organized Zionist movement has appealed greatly to many thousands of Jews in America, particularly to the more orthodox and they have organized numerous societies to aid in establishing a Jewish state, in Palestine or elsewhere, for the benefit of the persecuted Jews of eastern Europe. Several Jewish theological seminaries are maintained in the United States, one in Cincinnati, by the reform wing, called the Hebrew Union College, sustained by the Union of American Hebrew Congregations, which was founded by Isaac M. Wise, and of which Dr. K. Kohler is president, and an orthodox seminary in New York called the Jewish Theological Seminary, of which the late Dr. Solomon Schechter was president. Besides the Union of American Hebrew Congregations, there exists an "American Jewish Committee," with branches in the various States, in which the orthodox Jews are more fully represented; for a number of years Judge Mayer Sulzberger of Philadelphia was president and he was succeeded by Louis Marshall of New York city. A Rabbinical Conference called together by Dr. K. Kohler in conjunction with Dr. I. M. Wise and Dr. S. Hirsch at Pittsburgh in 1885, adopted a Declaration of Principles for the Reform wing in American Judaism. A "Jewish Publication Society" was founded in 1888 and has issued many Jewish works, and the 'Jewish Encyclopedia' in 12 volumes was issued in America, with a new Jewish Bible translation as a close second, the most important Jewish work published in modern times. Numerous Jewish newspapers are issued, including a number of dailies in Yiddish.

MAX J. KOHLER,
Formerly Corresponding Secretary, American Jewish Historical Society.

22. PRESENT STATUS OF THE JEWS THROUGHOUT THE WORLD. With the voluntary and enforced emigration which marks the Jew in every age, and to which the past century was as little an exception as the present bids likely to prove, it is difficult to regard the status of the Jews as fixed for any length of time. The population is as shifting as conditions. Within the past three and a half decades there has been a Jewish migration of fully 2,500,000 from eastern Europe to western lands, and across the sea to North and South America, Australia and South Africa. Even if the new environment be permanent adaptation takes time, and one must be prepared for inequalities in many ways. Yet it is possible to give an accurate and fairly comprehensive sketch of the present-day status of the Jews in every land.

Australia.— In the gradual settlement Jewish merchants and men of affairs took a prominent part, and as a result they have entered largely into colonial life, and form an important factor in its prosperity. Their population is about 20,000, with the greater number in New South Wales (7,000), Victoria (6,000), New Zealand (3,000), with communities in South and West Australia, Queensland and Tasmania. The discovery of gold in 1892 drew emigrants to West Australia, and a flourishing Jewish congregation exists in Perth, although it is liable to decline, if the mines cease to attract, as happened in Coolgardie, where the synagogue built in 1896 was sold for a Masonic

hall, owing to lessening numbers. Throughout Australia, in most of the capitals and many of the smaller towns, Jews have been mayors; the agent-generalship of New South Wales has been held by Sir Saul Samuel and Sir Julian Salomons. Many have sat in the various Parliaments, and some have been colonial ministers; for example, V. L. Solomon (1899), Premier of South Australia, and Sir John Vogel, long Premier of New Zealand. In Adelaide J. Lazar, J. M. Solomon and Lewis Cohen (1883–84) have been mayors; M. Lazarus has been president of its Chamber of Manufactures. In Melbourne Edward Cohen was three times mayor, E. L. Zox being his successor in Parliament. I. A. Isaacs was attorney-general (1894–99), his brother J. I. was a member of Parliament (1894), other members being N. Steinfeld of Ballarat, Joseph Steinberg of Bendigo, F. J. Levien of Geelong, Theo. and B. J. Fink and D. B. Lazarus. In Sydney the name of J. G. Raphael is preserved in several of its streets; he with Charles Collins, L. W. Levy and J. J. Cohen occupied official positions; George J. Cohen, Richard Gotthelf and other Jews were presidents of the Chamber of Commerce; H. E. Cohen was one of the judges of the Supreme Court. In 1905 J. J. Cohen, Daniel Levi and A. E. Collins were members of the legislative assembly. It must be added that intermarriages have been very frequent in Australia, particularly in Sydney. Exceedingly handsome synagogues are in Sydney and Melbourne, and smaller ones elsewhere. The better class of Jews are well represented in professional and mercantile life. In 1912 Arthur M. Myers was called to the New Zealand cabinet, and Hyman Herman appointed government director of Geological Survey of Victoria. In 1913 John Monash of Victoria made brigadier-general; 1916, major-general in the European War.

Africa.— It is not easy to give exact statistics as to the Jews in Africa, but to follow the figures given by Isador Loeb, about 25 years ago their numbers were then 468,000 — the population of the different localities being Abyssinia, 200,000 (a palpable exaggeration); Algeria and Sahara, 43,500; Cape Colony, 1,500 (since then increased probably to 50,000); Egypt, 8,000; Morocco, 100,000; Tripoli, 60,000, and Tunis, 55,000. In Abyssinia exists a colony of Jews called Falashas, "emigrants," who have other appellations in different parts of the country. Their origin is obscure, but they preserve Jewish customs. Agriculture is their chief occupation. They are ignorant of Hebrew, but preserve the Mosaic religion based upon the Ethiopic version of the Pentateuch. They are found in various districts of Abyssinia and have had an eventful history. In Algeria, the condition of the Jews was greatly improved by the French conquest, and their religious status is on a par with the Jews of France. The consistory of Algiers has five congregations and 14 outlying communities; Constantine's includes 21 communities and Oran 38. In 1891 Leroy-Beaulieu gave a total Jewish population of 47,564. Practically due to M. Drumont and the French Clericals anti-Semitism raged in Algiers for some years, but has grown less violent. Of the Jews of Algiers a recent census showed a large proportion followed handicrafts. It has 19 synagogues, 13 being private. In South Africa the Jewish population may be stated to have reached nearly 50,000, including the Transvaal, 25,000; Cape Colony, 22,000; Natal, 2,000. Cape Town has four synagogues, and they are scattered in every district, the large influx of Russians being noticeable. Kimberley's synagogue has a memorial tablet to Jewish officers and soldiers who fell in the Anglo-Boer War. Natal has two synagogues. Jonas Bergthal (1820–1901) was a member of the assembly, while in the 90's A. Fass and M. G. Levy held official positions; in the Orange Free State Isaac Baumann was twice mayor of Bloemfontein; M. Leviseur and W. Ehrich have had civic honors. In the Transvaal the Jews enjoy a large share of prosperity, and among the men of prominence can be mentioned Samuel Marks, the Barnatos, Neumann, Albu, Eckstein, Alfred Beit. In the Boer War about 2,800 Jews fought on the British side and many were in the Boer ranks. Jewish services are held in Rhodesia, where communities are growing — Buluwayo has a synagogue, as well as in Bechuanaland and in Portuguese territory in Lourenço Marques. There are numerous Zionist societies, and the religious training of the young is steadily improving.

In Egypt, according to the census of 1907, the Jewish population numbers 38,635, of whom half are natives, half strangers. The condition of the Jews has been greatly improved of late decades owing to the work of the Alliance Israélite Universelle (q.v.), which established many schools. Cairo has 10 synagogues in all, with 10,000 Jewish inhabitants. Morocco had in the 80's of the last century about 40,000 Jews, although widely varying estimates are given. They are of two classes: the descendants of the early settlers, who are found mostly in the Atlas and hilly section; and of those who sought shelter in Morocco from Spain and Portugal. The former, speaking the Berber, are antagonistic to modern ideas; the latter form a progressive settlement, many speaking Spanish. In the ports they are fair linguists, are active in business, particularly in Mogador; and are employed by the foreign consulates. With the exception of a few under foreign protection all suffer from Moorish injustice, and are confined in the Mellah, or Ghetto, of each town. Such treatment has not been without its effect in making a spiritless people, who live in poverty, largely due to early child-marriages, while superstitions abound. The Jews of Tripoli number about 20,000 and share the superstitions of their environment. They have 18 synagogues, small and large, and are engaged in commerce and trade. Nearly 5,000 live in neighboring towns. Tunis, a dependency of France since 1881, grants equal privileges to Mohammedans and Jews — the latter number about 50,000 in the whole district — 30,000 of whom are in the city of Tunis. They are divided into two classes: the Tunsi, descendants of the first settlers; the Grana, descendants of the exiles from Spain and Portugal, and of Jews of Leghorn (Gorneyim). There are 27 synagogues, and while a few of the people are financiers and professional men, the great majority are petty traders. The other 12 towns in the regency contain about 12,000 Jews. Dur-

ing the European War (1914–18) a Zion mule transport corps was formed at Alexandria composed entirely of Palestinian refugees.

Asia.—The Jewish population approximately is thus divided: Asiatic Turkey, 200,000; Asiatic Russia, 115,000; British possessions, 20,000; Persia, China, etc., 30,000; total, about 365,000. They vary in their political status according to the political complexion of the countries which hold sway — Turkey, Russia or Great Britain. Their status has gradually improved — Turkey since 1876 has instituted a close approach to civil and religious freedom, and has frequently made Jews public officials. In Yemen, Kurdistan and Persia their condition continues less favorable. In Asia Minor, half of whose Jewish population reside in the vilayet of Smyrna, they are active petty traders and handicraftsmen; schools, including an agricultural one, and workshops, are making the outlook bright for the future. In Asiatic Russia, the Caucasus, some of the Jews (who numbered about 78,000 in 1918) have become Mohammedans and Christians, and present strange types to the ethnologist. The Mountain and Georgian Jews present widely different traits. A curious sect are the Sabbatarians, who use Russian, not Hebrew, in their prayers, but conform to many Jewish customs. Siberia had 58,730 Jews, according to census of 1918. They have had to endure many exactions and their position is very anomalous; yet they are welcomed because of their energetic business methods. In Bokkara are about 5,000 Jews who wear a special badge and dwell in an enforced Ghetto. The cotton trade is largely in the hands of the Jews. In the British possessions Aden has 2,500 Jews, who have almost monopolized the trade in ostrich feathers. At least 25,000 reside in British India, the greatest number in Bombay, where the Sassoons have done so much to educate and uplift the poor. In this city, too, can be found the Beni-Israel, a sect of black Jews, of whom about 5,000 live in Bombay and 2,000 elsewhere in the Bombay Presidency and about 2,500 in Calcutta. They speak the Mahrati and were originally oil men or oil pressers, as their native name implies. Many are educated men and have entered the professions. They have several synagogues, some very handsome. In Calcutta the Jews number many prominent men in trade. Although the vernacular of the rich Jews is Arabic, their habits and dress are European. Afghanistan has fully 40,000 Jews in the chief cities. They pay a war-tax, which exempts them from military service. They live in special quarters in the larger towns. Persia treats its Jews with continued exactions that have broken the spirit of the people, who engage perforce in the lowliest avocations. Teheran has 5,500; Ispahan, where their condition is a little better, about 3,700. China has flourishing communities of foreign Jews at Shanghai and Hongkong, who deal largely in opium and cotton. A native body of Jews reduced to 100 in number by the census of 1900 exists in Kai-Fung-Foo, in the province of Honan. Since 1870 their synagogue has been in ruins, and poverty has compelled them to sell their possessions, sacred and otherwise. Their origin is obscure. They are probably from Persia and have interesting traditions. In 1916 Palestine had probably 75,000 Jews, of whom 15,000 are in rural settlements, with Jerusalem, Hebron, Safed and Tiberias favored places of residence. The agricultural colonies show fair progress. Five hundred thousand boxes of oranges came from Jewish plantations at latest estimate. The wine trade is flourishing. The general credit and the schools, due much to the Hirsch organization, are similar helpful agencies. There are in efficient working order reforestration colonies, an industrial colony of Yemenites, an agricultural experiment station and a system of plant exchanges between Palestine and America. Despite an occasional locust plague and the disadvantageous results of the European War, the status of the Jews in Palestine is hopeful. The successive appointments of Messrs. Morganthau and Elkus as ambassadors to Turkey have been a distinct benefit. Recent developments are discussed under PALESTINE AND ZIONISM.

Europe.— In Austria, with the dawn of freedom in 1860, followed by the constitution of 1867, the status of the Jews began to improve, several were returned to Parliament and Baron Anselm de Rothschild was made a peer; in 1903 there were three Jewish members of the House of Lords, the brothers Gomperz and Baron von Oppenheimer, while many are university professors in various lines, with a full quota of journalists, musicians, dramatists, scientists, scholars. Vienna in 1900 had 146,926 Jews, with a large proportion of conversions to Christianity, 559 in 1900 and 617 in 1904, due doubtless to anti-Semitism in the capital. They form one community, whose receipts in 1903 reached 2,243,449 kronen, expenses 2,147,506, and which is particularly rich in educational and charitable institutions. Belgium has about 14,000, with larger communities at Brussels and Antwerp. In the latter city they number about 9,000. One of their principal industries is diamond cutting, which occupies about 750. Brussels has an important Jewish community, with many charitable societies and representatives in the arts and learned professions. Bohemia imposed some mediæval exactions as late as 1849, and even in later years there have been occasional Czech outbreaks, but the general prosperity has been uninterrupted. Prague has the largest Jewish community (20,000), while in about 150 of the smaller towns are included 50,000. In Bosnia 4,000 out of the 7,500 Jews reside in Sarajevo, where many are lawyers, physicians and public officials. Bulgaria has 30,000, divided into 35 communities, the largest being Sofia, Rustchuk and Philippolis. Since the Alliance Israélite has opened its trade schools, trading has been supplemented by handicrafts. The general prosperity has been somewhat affected by popular hostility (see JUDAISM — ANTI-SEMITISM) which promotes emigration to Turkey in Asia. Owing to their bravery in saving Sofia from destruction by the Turks in 1877, Prince Alexander decreed in 1879 that the fire brigade should be enrolled exclusively from Jewish citizens, with a place of honor at all processions. Denmark has 3,600 Jews, Copenhagen having the largest community (500), and include varieties of occupation from trade to agriculture; in the latter calling are landed proprietors and peasants. There are many intermarriages with the non-Jewish population. It is only since 1849 that complete civil and religious liberty was proclaimed.

France, with its 150,000 Jews, of whom about 100,000 live in Paris, offers an example of practical assimilation, for despite the existence of a certain social prejudice, many of them occupy prominent positions in every walk of life, in literature, art, science, law, the army, and in no other country do they include such an array of names known beyond their own country. The patriotism and generosity of the wealthier representatives have done much to strengthen the Jewish status, which has gained morally by the Separation Law. While the Jews of France are conservative, a reform movement has just begun in Paris, whose supporters are sanguine of success. Paris has an extended number of Jewishs institutions, religious, benevolent and educational, with five large synagogues and many smaller ones. In 1912 M. G. Lippman was elected president of the French Academy, Ferdinand David Minister of Commerce and M. G. L. Klotz reappointed Minister of Finance.

Great Britain.— The 175,000 Jews in London, forming the bulk of their number in the British Isles (estimated at 275,000), have attained the fullest civil and religious liberty, and their favorable condition has resulted in a fair, if not remarkable, display of talent in art, science, literature, the law and political life, while they have done more than their share in colonial expansion. They have held the office of mayor in a number of cities, including London, have entered Parliament where they belong to different parties, such is their individuality. Their influence is such that again and again have imposing meetings been held by prominent Christian divines and leaders throughout England to protest against the spirit of persecution in Rumania, Russia and elsewhere. Within the past year or two the question of immigration has aroused much debate and ill-feeling, a new Alien bill was passed, whose real purpose was to check Jewish arrivals from Russia, not from any anti-Semitism, but a desire to prevent further overcrowding in the east end of London. During the war in South Africa fully 1,000 Jewish soldiers participated. At present S. Alexander is professor of mental philosophy and E. Schuster of physics in the Victoria University, Sir Philip Magnus is one of the chief authorities in technical education, Israel Abrahams is reader in rabbinics at Cambridge University, where lately C. Waldstein was Slade professor of fine arts. Solomon Hart, S. J. Solomon and Simeon Solomon are prominent names in art, while S. L. Lee, I. Gollancz, Claude Montefiore, Israel Zangwill are known in literature. The Jews of England have secured their present status largely because of the vigor with which they fought for their rights, and won public opinion in their favor, while their splendid record in philanthrophy with names like the Rothschilds, the Goldsmiths, the Mocattas, the Montefiores, has done much to add to their fame. In commerce and finance they number a large number of important firms in London, Manchester and Liverpool. The condition of the Russian element in the chief cities is more or less a problem, whose solution requires patience and forbearance. The younger element soon becomes English, but the older transplants to English soil the Ghetto atmosphere — a phenomenon which is seen all over the world. In 1902, according to official data, the sum of £111,639 was spent by London Jewish charities. Of the Russian and Polish Jews in London in 1901, amounting to 28,574 males, 24,863 females, it was found that 24,164 males and 5,358 females earn their own living in a great variety of trades. The Jewish population of Ireland in 1901 was given as 3,771, the bulk residing at Dublin, 2,200; Belfast, 450; Cork, 400. Russian immigration is adding steadily to their numbers. Sir Otto Jaffe was lord mayor of Belfast (1899–1900), high sheriff a year later, and is now justice of the peace for that city, and counsel for Germany. Lewis Harris and his son, A. W., were aldermen of Dublin; Trinity College, Dublin, has graduated many Jewish students. Scotland has almost its entire body of Jews in Glasgow and Edinburgh, about 9,000 in all; there are congregations in Dundee, Aberdeen and Greenock. Recent immigration has built up the Scotch communities. Glasgow has 7,000 Jews, with three congregations, with several benevolent and educational societies. Two of their representatives are justices of the peace. Herbert Samuel was appointed Postmaster-General of Great Britain, and Edwin Samuel Montagu member of the cabinet, in 1915; Sir Rufus Isaacs, Lord Chief Justice in 1913, made Lord Reading more recently.

In Germany's various sections before the war of 1914, the Jewish status was distinctly favorable, after centuries of conflict which has not wholly died away. Baden includes 27,000 Jews in 15 rabbinical districts, who enjoy equal rights with the other inhabitants. Bavaria numbers 55,000, with a long list of names who are adding to its strength in trade and industry and scholarship. Some are members of the Bavarian Diet, others are prominent in law and the learned professions. Fuerth has a number of Jewish industrialists in mirrors, bronzes, toys and hardware, leaders in their line. In Nuremberg, Fuerth and Bamberg they control the hop business; the cattle trade is entirely in the hands of the country Jews. In the duchy of Brunswick about 2,200 reside. In Elsass-Lothringen, despite the emigration of many Jews after the annexation, about 37,000 reside in the province, chiefly in Strassburg, Mühlhausen and Colmar; they are largely manufacturers and merchants. Hesse-Cassel has 18,500; Hesse-Darmstadt in its three districts about 26,000, with numerous educational and charitable institutions, and with every calling open to them. Prussia in 1900 had a Jewish population of 392,332. Of its chief cities, Berlin has 19 synagogues and numerous educational and benevolent institutions, with a brilliant coterie of prominent names in all the arts and professions, trades and industries, many being authorities in their callings, and prolific contributors to art, science and literature. There are fully 110,000 Jews. Breslau has about 25,000 and here, too, in the various professions, particularly medicine and the natural sciences, they number very eminent names. They are in every trade and manufacture, and hold many chairs in the university. Hamburg has about 20,000. Within recent years it has had some prominent representatives in different fields — with many institutions, such as schools, hospitals and syna-

gogues. Hanover has a prosperous community of about 5,000, who number leaders in commerce and trade. Saxony, where the Jews were late in securing complete freedom, had in 1904, 12,196, 7,000 being in Leipzig and 3,059 in Dresden; in both cities they are identified with the chief industries. In 1900 the Jews of Wurtemberg numbered 11,916. The criminal status of the whole population in that year was 0.089 per cent; of the Jews, 0.083. Many charitable institutions abound, and there are handsome synagogues in the chief cities. In Stuttgart in 1903 there were 3,015 Jews, who include manufacturers, lawyers and merchants of note, while they are members of the city Superior Court and of the faculty of its polytechnic and its conservatory of music. In 1912 Dr. Harburger of Munich University was made president of Senate of Supreme Court, Max Liebermann Senator of the Academy, Judge Wolfsthal of Ratisbon, Attorney-General. Greece has 10,000, with about 4,000 in Janina and Prevesa in Epirus, including Corfu, 4,000; Larissa, 2,750; Athens, 400. In Athens the majority are of Levantine-Spanish descent, and are peddlers or artisans. In Corfu they are exporters and manufacturers. There are no restrictions on their progress in Greece under the present government. Although it was not until 16 May 1896 when Hungary declared Judaism a "legally recognized religion," the Jews have long attained prominence in varied lines of political, industrial, scientific and artistic development, and contributed a long list of notable names. They have founded important institutions for religion, charity and education, their new synagogues are among the handsomest in the Old World, and in their chief communities, Budapest (166,198), Szegedin (5,863), Temesvar (5,916), Presburg (7,110), they are prominent in every calling. In 1913 Budapest had a Jewish burgomaster. In 1912 the government created two chairs for the Talmud at the Budapest University.

In Norway, where Jews have been allowed to live since 1851, their present number is hardly a thousand, who are engaged exclusively in industrial pursuits and are on the whole prosperous. The majority reside in Christiania, with the rest in Trondhjem and Bergen. Rumania's treatment of the Jews, marked by constant exactions and neglect of the provisions of the Treaty of Berlin (1878), has not only reduced the Jewish population to less than 225,000, but made their condition pitiable in the extreme. Mediæval conditions have led to wholesale emigration — at least 80,000 having left between 1898 and 1905, chiefly to the United States; and unless exactions cease their numbers are likely still further to decrease. Much poverty exists among the Jews, although there is a small wealthy class. From recent data as to the Jews of Russia, it appears (1897) that they number 5,189,401 or 4.13 per cent, a figure which has been reduced by steady emigration from cities large and small to all parts of the world. In the Pale of Settlement reside 93.93 per cent of the Jewish population, or 11.46 of the total population. They are massed together most densely in northwest Russia and Poland, where they form 14 per cent of the entire population, figures which throw light on recent outbreaks. A number of agricultural colonies, 301 in number, including 10,721 families, with 68,959 population, who occupy 100,107 deciatines of land, exist in a number of governments, but these are necessarily limited. In 1898 the number of artisans in the Pale and Poland reached 500,986, or 13.2 per cent of the total Jewish population. Technical training having been only recently introduced, old-time methods of learning prevail, save in some of the larger cities. Owing to keen competition the income of the Jewish artisans is insufficient to support their families, and extreme poverty with its attendant unsanitary surroundings prevail. In addition, in the Pale and Poland are 105,000 Jewish day laborers, about 2 per cent of the entire Jewish population. Without the Pale, in the interior of Russia (1893) were 1,948 Jewish workshops compared to 24,020 belonging to non-Jews, being most numerous as tailors and metal-workers. Some idea of the great poverty in the Pale may be gathered from the number of loan associations, of homes of shelter for the transient poor, 226 in all, and similar institutions, of medical committees and hospitals, and of other charities for their benefit. From 1899–1918 the Jewish emigration to the United States, chiefly Russian, reached 1,548,594, due to political as well as economic conditions. It is not necessary to dwell upon existing legislation regarding the Pale, and until an enlightened government holds sway no permanent change for the better is possible. Despite unfavorable circumstances, the scholarly abilities of large numbers of the Russian Jews are evidenced by the Hebrew Renaissance among them, and the enthusiasm with which liberal studies are followed by thousands of young men and women. In literature, journalism, archæology, medical and natural science, jurisprudence, art, they show much activity. Old-time rabbinical education holds its own among the great majority of the people, while early marriages powerfully promote poverty. In 1899 the percentage of Jewish students to total number in the Russian universities was 10.9. According to the census of 1913, the Jews of all Russia number 6,946,090 souls, or 4.2 per cent of the entire population, and fully one-half of all the Jews in the world. Yet they constitute 15.6 per cent of the residents in urban centres. A striking illustration of Jewish concentration in towns is furnished by Berditscheff, where they number 41,617, or 78 per cent of the total population, or by Warsaw, with 219,128, or 34.3 per cent. The birth rate of 1877 was 35.43 per 1,000, being less than other sections, except Protestants, 34.73. The rate of illegitimacy in European Russia was small — 5.4 per 1,000 births; among the Catholics 36. In 1897 the Jewish death rate was 17.82 per 1,000 as against 34.28 for orthodox Christians, and 22.76 for Roman Catholics. The predominant language among the Jews is Yiddish, 96.90 per cent of the entire population using that medium. For insanity the Jewish figure (9.84 per 1,000) is greater than that of the Poles and Russians (8.51 and 9.54), but much less than the Letts (13.75), and the Germans (15.04). The May laws of 1881, which restricted the free movement of the Jews outside the Pale of Settlement (Russian Poland and 15 Russian provinces), set the stream of emigration into permanent motion toward all

parts of the world. In one year alone (1904–05), in consequence of the Russo-Japanese War and internal disorders, 92,388 Jews left the country. It is estimated that in the past 20 years 1,123,000 have emigrated from Russia — more than one-fifth of the whole of Russian Jewry. (Consult Dr. Arthur Ruppin's work issued by the German Bureau for Jewish Statistics. Berlin: Jüdischer Verlag 1906). In regard to age distribution the Jews have a higher percentage of persons under 10 years of age, owing to lower infant mortality, but in consequence of this excess of children 100 Jews have dependent on them for support two more than the orthodox Christians, three more than Catholics and Mohammedans, and six more than Lutherans. In Finland a movement took place in 1906 to give the Jews equality with the rest of the population. Bill granting full rights became a law 15 Feb. 1918. They are found at Helsingfors and a few other places, and suffer from many political restrictions. Serbia, since 1889, has abolished all anti-Jewish laws, but the Jews take little part in public affairs until their equality is more generally recognized by the people. They number about 7,500, chiefly in Belgrade (4,500), including a few lawyers, physicians and engineers, with some state officials. Spain, whose early settlement by the Jews is attested by a tombstone unearthed in Adra, with a Latin inscription, which dates back to the 3d century, has within recent decades opened her territory to the Jews, very few of whom have settled on its historic soil. In 1858, under General Prim, the edict of expulsion was repealed, and in later years Senor Lapuya headed a movement to invite Russian emigrants to Spain, but without more than a limited response, although in time the settlers may be larger in number. Madrid has about 25 families, who hold holiday services — they came from Tunis, Mogador, Lisbon, Alexandria, etc. In Toledo, where but a few reside, the government ordered the restoration of El Transito (see SYNAGOGUE), formerly a Jewish place of worship, but which had been converted into a church. Seville had (1905) 200 Jewish families, the majority poor, being emigrants from Tangier and elsewhere in Africa. In this connection the Jews of Portugal may be mentioned. In 1903 they numbered 500 persons, the majority being merchants and shipowners. According to the constitution of 1826 they are not allowed to hold service save in places not bearing the signs of a public house of worship. Lisbon has 400 Jews, mostly natives of Gibraltar, Morocco or the Azores. A number are prominent in science, letters and the arts. There is one communal synagogue (1902), situated in an enclosure, and without any outward sign. The cemetery dates back to 1801. Switzerland, where civil and religious liberty exists apart from a statute (1903) declaring illegal slaughtering of animals according to the Jewish ritual law, has fully 20,000 Jews, with congregations in the larger towns, Zürich being the most important, with 5,500 Jewish population, as international in character as the city itself. In the Cantoral Council are two Jewish representatives and at the university polytechnic and gymnasiums are several Jewish professors and privat-docents. The Jews are mostly merchants, excluding the Polish and Russian immigrants who begin as peddlers but soon enter other callings. The canton of Bern has about 2,500, with many Jews as university professors. Basel has about 340 families.

Sweden grants full civil and religious freedom to the Jews, barring a few privileges which neither they nor any other non-Lutherans can obtain. There are synagogues in all of the larger cities, with a total Jewish population of fully 5,000. Turkey in Europe and Asia had (1914) 260,000, of whom the largest number are in Constantinople, Adrianople, Salonica. The condition of the young people has improved owing to the spreading of schools, technical, agricultural and religious, by the Alliance Israélite, with 6,651 children in European and 6,299 in Asiatic Turkey. The Jews speak usually a mixture of Spanish and Hebrew, often a Judæo-German dialect, and rarely Turkish, although they are making strong effort to speak the latter more generally. They enjoy the same privileges as all "rayahs," non-Moslem subjects. According to the constitution of 1876 the equality of all Ottomans is proclaimed before the law and in the short-lived National Assembly of the following year several Jews were among the members. The Jewish administration, before the European War, ratified by the sultan in 1865, consisted of three councils, a national assembly of 80, a temporal council of 7 lay members and a spiritual council of 9 rabbis. Of the various Turkish communities, Salonica is the largest and most picturesque. While the majority are poor and engaged in all kinds of handicrafts and petty trade, the city has, with the professions represented, 37 synagogues, with numerous charitable institutions. Constantinople contains among other callings, some wealthy wholesale merchants and bankers. The only glass works in Turkey is carried on by a Jewish manufacturer. The schools of the Alliance Israélite teach many handicrafts, but their graduates become largely accountants in financial institutions. The civil list in the Ministry of Public Instruction and the consular offices includes a number of Jews, 20 of whom are physicians and druggists. The Jews of Russia, Poland, Galicia and Rumania suffered severely in the European War, both in numbers and otherwise.

North America.— With increasing Russian emigration within recent years, Canada's Jewish population must reach at least 75,000, with 25,000 in Montreal, 5,000 in Manitoba, 8,000 in Toronto and 10,000 in Quebec. There are several agricultural colonies in the Northwest, due to the gifts of Baron de Hirsch (1892), in a section called Assiniboia at three settlements. Jews have sat in the Canadian Parliament, Mr. Nathan of British Columbia being the first to attain the honor. In 1845 there was only one synagogue in all Canada; now they exist in Toronto, Victoria, B. C., Hamilton, Winnipeg (2), Halifax, Saint John, N. B., Ottawa, London, Quebec. It is of interest to note that Christian sympathizers in Montreal, headed by the Anglican bishop, contributed to the fund in aid of the Russian refugees. In their occupations the Jews are indistinguishable from other citizens.. United States — The history and development of the American Jews have already been described (see JEWS IN AMERICA); it only remains to gather a few

additional facts and note further tendencies. In the effort to promote education, uplift the destitute, and Americanize the incoming masses of emigrants, the lines of demarcation between reform and orthodoxy seem to be becoming fainter, and a spirit of conservatism, free from fanaticism of either extreme, appears to be growing. Greater interest is being shown in agricultural and technical education, which will help in turning thousands to the soil, but divert thousands of the young to the arts and handicrafts. More energy, too, is being displayed in distributing emigrants from the congested centres of New York and elsewhere, although with increasing immigration the results are comparatively slight. Recent arrivals are of a better class on the whole, and include many who have ample resources. In the larger cities, however, the general character of the Jews is being unconsciously changed, owing to the gradual elimination of the distinctively American, English or Portuguese type, and the appearance in every line of the Russian, who competes keenly with the less numerous German. But this is only a reflex of American phenomena in general, as the emigrant outnumbers the native, or appears to do so by reason of his aggressiveness in securing a foothold. The skilled Jewish laborers in New York city number (1915) 350,000; the great majority belong to the United Hebrew Trades; two-thirds are Russian, being found as well in the silk mills of New Jersey, the machine shops of Connecticut and jewelry factories of Rhode Island. In 1903 in the New York State prisons out of 9,820 prisoners 257 were Jews; in the city prisons (1904) out of 3,251, 479 were Jews; in the Blackwell's Island workhouse for year 1904 were 1,036 Jews out of 19,520 prisoners. More than 80 per cent of the students in the City College are Russo-Jewish emigrants or the children of Russian Jews. The chief lines of commerce in which the Jews in New York are thus given, in the order of importance: Clothing manufacturers, jewelry, jobbers, wholesale butchers, liquor dealers, leaf tobacco jobbers, cigar manufacturers, cloak manufacturers, chamois importers, leather and hides, manufacturers of overshirts, watch importers, artificial flowers and feathers, furs, undergarments, lace and embroidery, white shirts, hats and caps. Immigration since 1904 has largely increased these figures. In 1911 Jews occupied 2,984 farms with 30,000 persons engaged in agriculture, and two large schools, at Woodbine, N. J., and at Doylestown, Pa. The land value of these farms according to data of 1912 reached $22,194,335, and equipment value of $4,166,329. In 1905 the real property of synagogues and Jewish charitable institutions in New York city, exempted from taxation, was valued at $13,558,100. With the gradual settlement of the Far West they are found among the pioneers in Alaska and the far Western plains. The Jewish population in the United States in 1918 was 3,390,572.

South and Central America.— While Jews are to be found in all the more prosperous cities of the South American continent, their numbers are very small, except in Argentina, where agricultural colonies exist, swelling the Jewish population to 110,000. Brazil has 4,000, and there are about 8,000 scattered in the other states. A few are found in Panama, with an old cemetery; there is a small community in the City of Mexico. The Dutch colonies have supplied most of the 300 Jews in Dutch Guiana and Venezuela. Jews of German descent are the leading jewelers at Lima and Santiago. The only synagogues (2) are in Buenos Aires; in Argentina many of the Russian colonists have found their way to the chief cities. The imperial purchase of land for colonization by Baron de Hirsch included over 17,000,000 acres. Their present condition is fairly reassuring, but they require continual support and they cannot be regarded as entirely successful. Moiseville, the oldest of the colonies, in the Santa Fé province, is the next prosperous, with 1,200 settlers, and a good outlook for the future. Mauricio, in the province of Buenos Aires, is less favorably situated and has 1,100 colonists. Clara, in Entre Rios province, is the largest, with 5,000 souls, who dwell in 19 villages. The future success of these colonies will depend on the independent character of the colonists. The equipment is thorough and has cost millions. In Santiago, Chile, there are many Jewish merchants of prominence but no organized congregation.

West Indies.— Jewish activity in these islands was early displayed and is still continued, although fluctuating from time to time, and declining sadly in some places. At Saint Thomas, once the seat of an important Jewish community, hardly 50 survive. Jamaica shows a similar decline, with its diminished commercial importance. Its former historic settlements at Spanish Town, which had two congregations 60 years ago, Montego Bay, Falmouth and Lacovia have passed away. Kingston has one fair-sized congregation since the merger of the two existing in 1900. The Jews hold positions of prominence in various lines but lose many of their best material through emigration to England or the United States. The hurricane of 1831 brought about a decline in the prosperous Barados community whose numbers have dwindled to hardly 20. Curaçoa has an influential body numbering about 1,100 in two congregations, including lawyers, physicians, druggists, merchants, members of the executive and colonial councils, judges, bank presidents and officers in the militia. The Jews of Surinam number 1,500 and occupy a prominent position, being large property-owners.

Bibliography.— For the present status of the Jews, see Jewish Year-Books, issued annually in London and Philadelphia, as well as annual reports of Union of American Hebrew Congregations, Deutsche Gemeindebund, Alliance Israélite, Anglo-Jewish Association, American Jewish Historical Society and similar societies. E. Adler's 'Jews in Many Lands' (Philadelphia 1905) throws light on the condition of the Jews in the East and in scattered communities.

ABRAM S. ISAACS,

Professor of Semitic Languages, New York University.

23. ALLIANCE ISRAÉLITE UNIVERSELLE. An organization with headquarters at Paris, France, having for its purpose the protection, improvement and education of the Jewish people. Its activities have been directed, in the main, toward safeguard-

ing and educating Jews in eastern Europe, Asia Minor and North Africa. During the first half of the last century several attacks made on the Jews by fanatical mobs, owing chiefly to false charges of ritual murder, evoked fervent appeals for organization, to which apparently little heed was at first paid. Public sentiment began to crystallize after the Damascus blood accusation in 1840. A temporary cessation of difficulties produced indifference to the needs of organization when, on 23 June 1858, the world was startled by the announcement of the details of the Mortara case. Edgar Mortara, aged six, a son of Jewish parents, was forcibly abducted from his parents' home in Bologna by papal soldiers on the grounds that four years earlier, during a supposed spell of sickness, a servant, Anna Morisi, had secretly baptized the child.

Origin of the Alliance.— Public sentiment now became inflamed. The need of some central organization to watch over Jewish interests was keenly felt and the «Alliance Israélite Universelle,» founded in 1860, was the result. Six Parisian Jews, at that time but little known, but whose names have since become almost household words in Jewry, were chiefly instrumental in founding the society. They were Aristide Astruc, later chief rabbi of Belgium; Isidor Cahen, editor of the 'Archives Israélites'; Jules Carvallo, civil engineer; Narcisse Leven, lawyer; Prof. Eugene Manuel; Charles Netter, merchant.

Objects.—The object of the Society is: «To defend the honor of the Jewish name whenever it is attacked; to encourage, by all the means at our disposal, manual labor and the pursuit of useful trades and professions; to combat, whenever necessary, the ignorance and vice resulting from oppression; to contend, by the power of persuasion and moral influence, for the emancipation of our brethren who still suffer under the oppressive burden of exceptional legislation; to advance and promote the complete enfranchisement of our brethren by intellectual and moral regeneration.» Article I of the Society's Statutes states its object: «(1) To toil everywhere for the emancipation and moral progress of the Jewish people; (2) To extend effective help to those who suffer persecution because they are Jews; (3) To encourage all publications calculated to promote these ends.»

Management.— The Alliance is managed by a central committee of 62 persons, 23 of whom reside in France and 39 in other countries. Its headquarters are located at 35 Rue de Trévise, Paris. The central committee is elected for nine years, one-third of the members retiring at the end of three years, being, however, eligible for re-election.

Methods.— The modus operandi of the Alliance is solely along lines of moral force. The results achieved have, therefore, been slow of growth. They are, however, permanent in character and are beginning to bear fruit in the most unmistakable manner. The work has naturally divided itself into three branches, (1) political; (2) educational; (3) literary. Political activity has not been resorted to with a view of intermeddling in the affairs of the powers, but of appealing to political leaders to secure justice. The necessity for such work arises from the fact that the Jews are followers of a religion which has no government to support it.

Political Activities.— While the undertakings of the Alliance in this direction have not been uniformly successful, they have served to stir the world's sluggish moral sense and in many important respects to improve the political status of the Jews. Switzerland and Sweden first yielded to the appeals of the Alliance and after these initial successes, Russia and the Balkan provinces were the European countries in which the strongest efforts were made, because in these lands the Jews suffered most from all kinds of disabilities. At the time when this society was formed the lot of the Jews in the Balkan provinces was most unfortunate. At its instance remedial legislation was promised and when Adolphe Crémieux went to Bucharest in 1866 and pleaded with the Rumanian authorities, it was believed that Jewish emancipation had been effected. But conditions went from bad to worse, until in 1878 the Berlin Treaty in Article 44 (inserted in the main through the influence of the Alliance), demanded recognition of the political rights of Jews in the Balkan provinces. Serbia and Bulgaria have been faithful to the terms of the treaty, but to this day Rumania considers the Jews as aliens, although the government in 1917 promised reforms. Rumania remains the scene of great activity on the part of the Alliance, large subventions being annually granted for charitable and educational purposes. In spite of persistent representations to the Russian government little success has been achieved in Russia. The political status of the Jews is that of aliens. Social, economic, civil and religious disabilities of every character menace the progress of about 6,000,000 Jewish souls. During the famine of 1869, when Poland and the west-Russian provinces suffered, the Alliance came to the rescue of the unfortunate, provided funds for the purchase of food, helped many to emigrate to Occidental lands, took charge of several hundred orphans and founded trade-schools for Russo-Jewish children in western Europe. When the persecutions of 1881–83 were inaugurated, when the «May Laws» were put into operation and the Pale was again made the compulsory residence of millions of unhappy Jews, the Alliance again became an angel of mercy for them. Kishineff, Odessa, Kieff are names which recall the barbaric massacres of many helpless Jews, and during 1905 the Alliance became the agent of the world's beneficence, distributing over 3,000,000 francs among the sufferers. The soldiers wounded during the Russo-Japanese War, widows and orphans deprived of their natural protectors during the massacres, 8,000 workmen rendered penniless through riots and mob violence, emigrants who sought opportunity and liberty in foreign lands, have all been efficiently assisted by the ministrations of this «universal» agent. With the expulsion of the Tsar in 1917, a happier outlook was predicted for justice for the Jews of Russia. In Mohammedan countries Jewish disabilities are of a different character. Here the people suffer from poverty and lack of education, rather than from political inequality. Still, large sums of money have been spent by the Alliance in Morocco, Tunis, Egypt, Persia and Turkey to protect the Jews from the violence

of the mobs incidental to the misrule prevailing in most of these countries. Its representations have been strengthened by the intervention and support of the British and French, and, in recent years, of the American, consuls, with gratifying results. In 1914 Spain gave grants to schools in Tetuan, Larache and Alcazar in return for making Spanish the language of instruction.

Educational Work.— The most hopeful work conducted is the educational activities designed for intellectual and moral improvement. The bulk of the world's Jewish population in 1860 resided in unprogressive countries and the intellectual status of the majority was necessarily low. In 1862 a school was founded in Tetuan (Morocco), in 1864 another was opened in Tangiers and in 1865 a third was started in Bagdad. In 1880 there were 34 schools; in 1890, 54; in 1899, 94—58 of which were for boys and 36 for girls, having an attendance of 24,000 pupils. To-day the Alliance conducts 132 schools, with an enrolment of more than 40,000 pupils, in Bulgaria, Turkey in Europe, Turkey in Asia, Egypt, Tripoli, Tunis, Algeria, Morocco and Persia. Schools are free to the poorest children who also receive, free of charge, and at the expense of the Alliance, a mid-day meal each day and one or two suits of clothes each year. Whenever possible the scholar must pay a fee, which in the case of the most prosperous is as high as 20 francs a month. The schools are open to children of all denominations, and non-Jews as well as Jews are found among the pupils and instructors. In some localities night-schools for adults are now being conducted. A Rabbinical seminary was founded in Constantinople in 1897. In order to provide instructors for the 132 schools conducted by the Alliance, a normal school was founded in Paris in 1867. As far as possible the teachers are selected from the communities in which they are to teach in later years, and are sent to Paris for tuition. The "Ecole Normale Israélite" has a magnificent building in the French capital in which hundreds of male and female students have received an education to fit them for their profession. Theory and practice go hand in hand under the system of the Alliance. Elementary school education is supplemented by manual and agricultural training. On 5 April 1870 the Mikveh Israel (Hope of Israel) Agricultural School was founded in Jaffa, upon a grant of land of about 600 acres sympathetically granted to the Alliance by an imperial firman of the Turkish government. Fortunately for the undertaking M. Charles Netter was ready to devote his energies to the development of the school, whose existence was due to his suggestion and whose success has been greatly due to his initiative and capable administration. M. Netter died in 1882. The Jaffa Agricultural School has over 220 pupils. Graduates of this school have become the instructors of the colonists who have settled on the Baron Edmond de Rothschild colonies in Palestine and in the de Hirsch colonies in Argentina. Another agricultural school was founded in 1895, in Djedei, a few miles from Tunis. A tract of land of about 3,000 acres was purchased, suitable buildings erected and in a few years there was an enrolment of over 210 pupils. The Alliance also provides means of earning a livelihood through training given in the trade-schools. In 35 different centres of the Near East "apprentice-schools" are conducted in which children are taught remunerative trades. The trade-school in Jerusalem, founded in 1882, has been particularly successful.

Further Activities.— Another branch of educational work undertaken is directed toward the formation of public opinion concerning the Jews. It has spread abroad a knowledge of Jews and Judaism by means of help given to Jewish scholars by subventions granted to assist them while writing and publishing their works. It is said that no important work referring to Jews and Judaism has appeared during the past 35 years without some assistance being granted by this Society. The Alliance library consists of nearly 25,000 volumes.

Bibliography.— The 'Bulletins,' annual, semi-annual and monthly, published usually in French and occasionally in English, German, Dutch, Italian, Judæo-German and Hebrew; 'Publication of the 25th Anniversary of the Foundation of the Alliance Israélite Universelle,' issued in 1885, and published in French, English, German and Judæo-Spanish; 'Publication,' issued in 1896, containing a review of work done from 1860–96; French pamphlet by M. Nissim Behar, American Agent of the Alliance.

J. LEONARD LEVY, D.D.,
Late Rabbi Cong. Rodeph Shalom, Pittsburgh, Pa.

JEW'S HARP, a small musical instrument held between the lips, the sound coming from the vibrations of a tongue of metal, bent at a right angle, which is set in motion by being twitched with the fore-finger. The sound is increased in intensity by the breath, and altered in pitch by the shape of the cavity of the mouth, which acts as a reflector. The name some derive from *jeu,* play, from the fact of its being a toy; but more probably it is a derisive allusion to the harp of David.

JEW'S MALLOW, a pot-herb. See COR-CHORUS.

JEWSBURY, Geraldine Endsor, English novelist: b. Measham, Derbyshire, 1812; d. London, 23 Sept. 1880. She was brought up under the care of her brilliant elder sister, Maria Jane Jewsbury (q.v.), and is chiefly remembered for her friendship with Thomas Carlyle and his wife, although her writings were popular in her lifetime. She possessed a wide circle of friends, among them W. E. Forster, Huxley and Froude. She met the Carlyles in 1841 and the friendship then formed lasted through Mrs. Carlyle's and Miss Jewsbury's lifetimes. Her account of Mrs. Carlyle's early life is printed in Carlyle's 'Reminiscences.' She wrote for Charles Dicken's *Household Words* at his solicitation, and also contributed to the *Athenæum* and to the *Westminster Review.* Author of the novels 'Zoe' (1845); 'The Half Sisters' (1848); 'Marian Withers' (1851); 'Constance Herbert' (1855); 'The Sorrows of Gentility' (1856); 'Right or Wrong' (1859).

JEWSBURY, Maria Jane (MRS. WILLIAM K. FLETCHER), English author, sister of the preceding: b. Measham, Derbyshire, 25 Oct. 1800; d. Poonah, India, 4 Oct. 1833. She lost her mother at the age of 18 and thereupon as-

sumed the care of her younger sister and three brothers. Her first published verse appeared when she was about 18 and she later adopted literature as a profession. She held the admiring friendship of Wordsworth, Miss Landon and other notables and her work was well-received. She married a missionary in 1832 and died of cholera 14 months later. Author of 'Phantasmagoria, or Sketches of Life and Character' (2 vols., 1824); 'Letters to the Young' (1828); 'Lays of Leisure Hours' (1829); 'The Three Histories: The History of an Enthusiast,— the History of a Nonchalant, the History of a Realist' (1830; 3d ed., 1838).

JEX-BLAKE, Sophia, English physician: b. Sussex, January 1840; d. Sussex, 7 Jan. 1912. She was the daughter of a physician, studied medicine in Boston, Mass., 1866–68, and returning to England matriculated at the University of Edinburgh. Here her action in attempting to enter the medical profession aroused the greatest hostility; she was mobbed and eventually excluded from the classes; legal proceedings taken on her behalf proved unsuccessful on appeal; and she subsequently graduated at the University of Berne. She was a pioneer in the higher education of women, and it was her sacrifices that opened the way for women students in medicine in British universities. She founded the London School of Medicine for Women in 1874, the Edinburgh School of Medicine for Women in 1886; and practised in Edinburgh from 1878–99.

JEZEBEL, the Phœnician wife of Ahab, king of Israel. She was the evil genius of her husband, favored the idolatrous worship of Baal in Palestine, and persecuted the prophets of Jehovah. Her name left a dark stain upon the annals of Israel and survived to the later dispensation where it occurs in the Book of Revelation (Rev. xi, 20) as a symbol of feminine depravity and impiety. She outlived Ahab by 14 years (2 Kings ix, 30–37), and was finally murdered by Jehu, when he captured the throne of the northern kingdom (about 843 B.C.). Consult Schmidt, N., 'The Sins of Jezebel' (in *Journal of Biblical Literature,* Boston 1915).

JHELAM, jē'lam, or **JHELUM** (ancient HYDASPES), a river which has its rise in Kashmir. An octagonal tank has been built in a garden at Vernag, and into this reservoir flow springs from the Western Himalayas, which form the head waters of the Jhelam. The river flows northwest to the Wulur Lake, about 10 miles from Srinagar; then southwest and northwest, forming a curve from Wulur Lake through Barambula Pass to Mazufurubad, where it turns south, and flows along the boundary between Punjab and Kashmir, a distance of about 100 miles. Leaving the boundary line at Jhelam it flows southwest into the Chenab River. Its whole course is about 500 miles, nearly all of which is navigable. The first part of its course is through remarkable mountain scenery and the last through a rich agricultural region. It is the thoroughfare for a number of large cities and small towns. This is the river upon the banks of which Alexander the Great built a war fleet in 326 B.C. and fought a battle with Porus.

JICARILLA, a tribe of North American Indians of Athapascan stock, originally occupying portions of Arizona and New Mexico but now settled on a reservation near Tierra Amarilla in northern New Mexico. The tribe at one time comprised two bands, the Llanero and the Ollero, ranging on different banks of the Rio Grande. The name «Jicarilla» is supposed to be of Spanish origin, from «jicara,» a basket tray, the tribe being famed for its skill in basket weaving. At one time they were the terror of their district, but they now live quietly although they remain uncivilized. Their language is similar to that of the Apaches and they are believed to be an offshoot of that tribe although they maintained their independent existence. The tribe is steadily decreasing, now numbering less than 700.

JIG, in music, a light, quick tune or air to be found in the sonatas of Corelli, Handel and other composers till toward the middle of the 18th century. The Irish jig, played to a dance also called a jig, is a lively tune of two or three sections written in 6-8 time. The jig is popular among many nations, is distinguished by various titles and has a certain amount of difference in the steps according to the habits and customs of the people by whom it is adopted. With some it is a sober, steady country dance; with others it is a wild, savage exercise, without point of meaning. With some it is made a means of displaying the agility of the lower limbs of a combined company of dancers; with others it is a terpsichorean drama for two performers, in which all the emotions excited by love are represented by gestures and cries.

In mechanics, a device for holding a casting, stamped work, etc., in position for machining, drilling, etc.

In ore-concentration, a box in which sized ore may be shaken.

JIGGER, the corrupt current form of «chigoe,» the South American name of a small arachnid, or red bug (*Sarcopsylla penetrans*), which abounds in tropical America, and is troublesome by working its way under the skin, especially of the feet, where, unless speedily removed, it produces eggs and forms a bad sore.

JIHAD, jī-hād', **JEHAD,** or **TIHAD** (Arab. «zeal, endeavor»), the term applied to the religious war, as undertaken by Mohammedans against those who did not believe in the mission of the Prophet, for the purpose of promoting the spread of Islam. The Jihad was a religious duty, imposed upon the faithful both by the Koran and the concurrence of sacred tradition. Its purpose was ostensibly the Mohammedanization of the unbelieving, and it was carried on in a systematic manner. The disposition of the peoples conquered in the Jihad was prescribed by law. Captives and others who fell into the hands of the Mohammedan hosts had the choice of three things given them. Either they were to deny their own faith and accept that of Islam, or to consent to pay a toll tax to their conquerors. If they refused both of these alternatives they were put to death by the sword. Consult Baillie, 'Of Jihad in Mohammedan Law' (1871); Hughes, T. P., 'Dictionary of Islam' (1886).

JIMÉNEZ DE RADA, Rodrigo, Spanish archbishop and historian: b. probably Puente la Reina, Navarra, about 1170; d. 1247. He studied at Paris, entered the Franciscan Order and became archbishop of Toledo in 1208 or

1210. He was a dominant figure of his time, a learned writer, statesman, warrior and counsellor of kings. He was engaged at the battle of Las Navas de Tolosa, and commenced the building of the cathedral at Toledo, and founded the first general schools there. His work as a historian was of great importance and influence. Author of 'Historia Gothica,' better known as 'Chronica Rerum Gestarum in Hispania,' which he translated into Castilian, 'Historia de los Godos' (1241).

JIMMU TENNO ("SON OF HEAVEN"), originally **KAMU-YAMATO-IWARE-BIKO**, first ruler of Japan and legendary founder of the reigning line of mikados. He was supposed to be the great-grandson of the grandson of the sun-goddess Amaterasu and the first human ruler of Japan. The name "Jimmu Tenno" is supposed to have been given him 14 centuries after his death. While Japanese annalists place his reign as beginning at 660 B.C., there is small ground for crediting Japanese chronology before the 5th century, as the 'Records of Ancient Matters' are without dates. However, 660 B.C. is generally accepted as the beginning of Jimmu Tenno's rule, in which year he was supposed to have been crowned. He died at his palace of Kashiwa-bara in 585 B.C., his age being reckoned 127 by the 'Chronicles of Japan' and 137 by the 'Records of Ancient Matters.' The theory generally accepted concerning the origin of Jimmu is that if he actually existed he was the leader of an invading band of Mongolians from the Korean peninsula. The Japanese calendar dates from the supposed beginning of Jimmu's reign, and his day is set as 11 February.

JIMSON-WEED. See DATURA.

JINGAL, jĭn'gâl, a large heavy musket used in eastern Asia, especially by the Chinese. It is fired on a rest, or swivel, from a wall, or the bulwark of a boat or ship.

JINGO, a word first used as a political term in the Russo-Turkish War of 1877–78, and was applied to a class of British politicians who continually urged on Disraeli, then the Prime Minister, the necessity of taking sides with the Turks. The word was adopted from "McDermott's War Song" — that is, the song sung in music halls by McDermott and very popular at the time. The chorus ran thus:

We don't want to fight, but, by Jingo! if we do,
We've got the ships, we've got the men, we've got the money, too.

"Jingo" is used to denote any person in favor of aggressive military policy.

JINGO-KOGO, legendary empress of Japan, wife of Chuai Tenno, 14th Mikado (191–200 A.D.). Upon the death of her husband she assumed control of the government, reigning until 270. Chuai Tenno died while on an expedition to suppress an insurrection in Kiushiu, and his wife, concealing his death, left the campaign in the hands of a general while she proceeded with a great force to conquer Korea. After her victorious return, her son, Ojen Tenno, 15th Mikado, was born and Jingo Kogo continued to reign as regent. The son was afterward canonized as Hachiman, god of war. While there is little doubt that the invasion and conquest of Korea are largely mythical there are references in Chinese history, usually more accurate, which indicate the existence of this empress at the period credited by Japanese historians. There is further reference to her in the annals of Japan, when her step-brothers vainly endeavored to prevent her return to Yamato and to bar her son's succession. She is still worshiped in Japan.

JINN, DJINN, or **GENII,** a class of spirits in Arabian folklore and mythology. They are lower than the angels and are made of fire, but are capable of appearing in both human and animal form; and if good are beautiful, while if bad they are hideous. They are supposed to exercise supernatural influence, which may be either goor or bad. While supernatural they are supposed to live, propagate their kind and die as humans do, except that the duration of their lives is greater. Their home is the mountain Kaf and their rulers are kings named Suleyman, or Solomon, one of whom is supposed with their aid to have built the Pyramids. In current translations of the 'Arabian Nights' they are called "genii"; but this, while generally passed, is not to be taken to mean that they are identical with the genii of Roman mythology.

JINRIKISHA, jĭn-rĭk'ē-sha, man-power-carriage, a light vehicle balanced on two wheels, with projecting shafts and cross bar, within which a man steps and pulls. The jin-riki-sha was given a name by the Japanese, with one of those many hundreds of modern word-coinages with Chinese characters, created since contact with foreigners, and which the Chinese themselves have accepted. The common native term in use is kuruma (wheel). Foreigners usually clip one word of the combination, making it "rick-shaw," while the Japanese usually say jin-riki — both vulgarisms. This vehicle, which has gone round the world and is in especial use where labor is cheap, was invented in 1871, at Yokohama, by the Rev. Jonathan Goble, who died in May 1898. He was an American Baptist missionary and formerly a marine in the United States navy, under Commodore Perry. With meagre salary and having a sick wife, and desiring to give her gentle outdoor exercise, he showed to a Japanese carpenter a picture of a baby carriage in *Godey's Lady's Book,* and suggested the plan and form. The Jin-riki-sha quickly displaced the kago and palanquin, and is now in turn being displaced in Japan by the electric trolley car. Whereas in 1908 there were 165,995 jin-riki-sha in use in Japan, the number in 1916–17 was but 112,687, while stage coaches and private horse carriages (ba-sha), automobiles, tram and steam cars (joku-sha), had multiplied in an extraordinary ratio.

JIRÁSEK, Alois, Bohemian novelist and dramatist: b. Hronov, 25 Aug. 1851. He was appointed instructor in a gymnasium at Prague in 1888, and has devoted himself to the portrayal of Bohemian history through medium of historical fiction and drama. Author of the novels 'Nevolince'; 'Mezi proudy' (a triology in the times of Huss); 'Maryla' and 'V cizích službach' (in the period following Huss), etc. The drama 'Vojnarka' (1911) is one of several with a historical foundation. His works were presented in a collected edition (Prague 1899).

JIU JITSU (written also ju-jutsu and jiu-jitsu), the Japanese method of personal attack and self-defense, literally meaning the art of

making one's opponent use his strength to his own disadvantage. There are many methods, but only one is recognized as official, that devised by Prof. Jiguro Kano, principal of the High Normal School of Tokio, and is taught to every officer and enlisted man of the Japanese army, navy and police departments. Included in the 160 feats of the Kano system are the "serious tricks," by which death may be caused at the will of the adept, and the process of Kuatsu or revivi cation, by which the apparently lifeless victim is restored to the full use of his functional powers. Jiu jitsu is not a system of muscle building by physical training, but rather a means of offsetting the effectiveness of powerful muscles, by performing the most skilful yet simple manœuvres. The United States government has recognized its importance as science by having it taught at West Point and Annapolis as a special training. It is a scientific application of the knowledge of the weaker spots in the human anatomy to offense and defense. Such spots as the "funny bone" are utilized to down an adversary; fingers are bent backward; an opponent's onward rush is utilized to trip him; he is encouraged to uncover an armpit; he is pressed in the gland below and back of the ear; in short every trick that would be accounted "foul" in wrestling and boxing is the height of excellence in jiu jitsu. The study and practice of this art has been recommended to slight men and to women as a protection in case of assault. In professional jiu jitsu bouts the contestants avoid being injured by rapping the floor with hand or foot, and thus acknowledging defeat when an adversary has one in a position where he could inflict serious hurt. Consult Skinner, 'Jiu Jitsu' (New York 1904).

JIVARO, JIBAROS, GIVAROS, or XIVAROS, South American Indian race living in Ecuador and northern Peru about the tributaries of the upper Amazon. They are divided into numerous small tribes with individual names, are wholly savage and their language has never been classified. They live chiefly by hunting and warfare, their weapons being lances and bow guns with poisoned arrows. They are head hunters, drying and preserving their enemies' heads and also those of their own chiefs. Spanish settlements were made in their territory in the 16th century and missionaries established themselves there, but all were driven out by an uprising against them in 1599. They live in wooden houses, constructed with considerable skill, raise corn, beans and bananas, and possess the art of weaving.

JOAB, jō'ăb, the son of King David's sister Zeruiah, and commander-in-chief of David's army. He is first mentioned as the leader of David's men in an expedition against Abner. When Joab treacherously murdered Abner in revenge for the death of Asahel, David dared not punish the deed, and thus showed the ascendency which Joab had acquired over him. After David had been established king in Jerusalem, Joab conducted all his wars with uniform success. He remained faithful to him during the rebellion of Absalom. When he had slain that ungrateful son, David made a weak attempt to supersede him in favor of Amasa, the general of Absalom. Joab slew Amasa and resumed his post, a proceeding in which the king tacitly acquiesced. He further supported David by assisting in the murder of Uriah the Hittite. Toward the close of David's reign he joined in the rebellion of Adonijah, for which Solomon, by the advice of David, put him to death (1 Kings ii, 28–34).

JOACHIM, yō'ä-hĭm, **Joseph,** Hungarian violinist: b. Kittsee, near Presburg, 28 June 1831; d. Berlin, 15 Aug. 1907. He was of Jewish parentage and studied under Szervaczinsky at Budapest, with Böhm at Vienna and Hauptmann at the Vienna Conservatory, and after appearances in concert continued his studies at Leipzig. He played in England in 1844. In 1849 he became concert-meister of the Weimar grand-ducal orchestra, of which Liszt was then conductor, in 1854–66 was solo-violinist and conductor of concerts to the king of Hanover, and in 1868 became director of the Hochschule für ausübende Tonkunst at Berlin. He became known, both as an interpreter of the best music and as an executant, as the greatest violinist of his time, and particularly as a quartette player gained an almost classic reputation. His compositions include the 'Hungarian Concerto' in D-minor for violin and orchestra, his most important works; ballads, trios, overtures, marches and works for violin and pianoforte. He played also in the famous quartette which included De Ahna, second violin; Hausmann, 'cello, and Wirth, viola. Consult Moser, A., 'Joseph Joachim' (Berlin 1904); and Bickley, Nora, 'Letters from and to Joseph Joachim' (London 1914).

JOACHIM, jō'ą-kĭm, **Saint, Order of,** an order of knighthood founded 20 June 1755, under the title "Order of Jonathan for the purpose of defending the honor of Divine Providence." It consisted of 14 dukes, princes, counts and nobles, and its grand master was Prince Franz Christian of Saxe-Coburg. Its object was by the establishment of commanderies to stir up the rich to philanthropic work among the lower classes. This order was still in existence in 1820, but it has since then been dissolved.

JOACHIM DE FLORIS, Italian mystic theologian: b. Celico, near Cosenza, Calabria, about 1145; d. Monte Nero, 20 March 1202. Of noble birth he was brought up at the court of Duke Roger of Apulia and in his youth visited the holy places of the East. Soon after his return he resolved to alter his manner of life and entered the Cistercian order at Casamari. In 1177 we find mention of him as abbot of the monastery of Corazzo. He visited Pope Lucius III at Veroli in 1183, and Urban III at Verona two years later. He soon became dissatisfied with the lax discipline of the monastery and retired to the solitudes of Pietralata, where with some followers he founded the abbey of San Giovanni in Fiore, on Monte Nero. He was befriended by the Pope and emperor and branch houses were established. He is best known however as the author of prophetic and polemical works, although in the 13th and succeeding centuries many such works were put out under his name. Only those enumerated in his will can be deemed absolutely authentic. These are 'Concordia Novi ac Veteris Testamenti' (first printed at Venice 1519); 'Expositio Apocalypsis' (Venice 1527); 'Psalter-

ium decem Chordarum' (Venice 1527) and various "libelli" against the adversaries of the Christian name and faith. He divides the history of mankind into three periods, which in the 'Expositio' he calls the Age of Law, or of the Father, the Age of the Gospel, or of the Son, and the Age of the Spirit, which will witness the consummation of all things. His ideas soon spread in Italy and France, and many interpolations were made in his works. Some of the opinions attributed to him were condemned at the Lateran Council of 1215. In 1255 others similarly attributed to him were censured by Pope Alexander IV, but the orthodoxy of Joachim was affirmed. Consult 'Acta Sanctorum' (Antwerp 1643–86); Roussetat, Xavier, 'Etude d'histoire religeuse aux 12e et 13e siècles, Joachim de Flores, Jean de Parma et la doctrine de l'évangile éternel' (2d ed., Paris 1867); Fournier, P. E. L., 'Etudes sur Joachim de Flore' (ib. 1909).

JOACHIMITES, a Christian sect having its origin in the teaching of Joachim, abbot of Floris in Calabria (1145–1202). He was a visionary reformer. He fiercely attacked the corruptions of the Church. His hope and teaching was that there was to come an "Age of the Spirit" in which the Holy Spirit was to have its sway over the secular, beginning with 1260. Some of his teaching was Montanistic. In turn his doctrines were influential with the Franciscans who accepted the idea of the Age of the Spirit; and the Reformers who saw the vision of a better church and therefore of a better world. Joachim and his followers based their vision on a genuine religious experience.

JOACHIMSTHAL, Austria, city in Bohemia, 12 miles north of Karlsbad, at the foot of the Keilberg and at an elevation of 2,365 feet. It is a mining and manufacturing town and originally was celebrated for its silver mines. The silver pieces known as "Joachimsthaler," and later shortened to "thaler," were first coined here in 1518 or 1519. The silver mines are no longer important, but there are other mines of bismuth, nickel and zinc blend. Manufactures include gloves, dyes, tobacco, paper, lace and dolls. Pop. commune 7,550.

JOAN, Pope, mythical female Pope, supposed to have occupied the papal chair in the guise of a man as Pope John VIII, 855–58. As there was no interregnum between Pope Leo IV, 847–55 and Pope Benedict III, 855–58, the story is undoubtedly pure fable; and moreover no mention is made of the supposed popess until the middle of the 13th century, contemporary history being entirely silent on the matter. The legend runs that Joan was of English descent but born at Ingelheim or Mainz, and that she loved a Benedictine monk with whom she fled to Athens disguised as a man. She attained great learning and after the death of her lover went to Rome, still in male attire, rose to be cardinal and finally was elected Pope. She died in childbirth during a papal procession, one legend having it that in a vision she was given choice between temporal disgrace and eternal punishment. The story was widely current from the 13th to the 17th centuries and was first definitely refuted by a French Calvinist, David Blondel, in 'Eclaircissement de la question si une femme a été assise au siège papal de Rome' (1647) and in 'De Joanna Papissa' (1657). These volumes were ably supplemented by Johann Dollinger, 'Papstfabeln des Mittelalters' (1863; Eng. trans., 1872).

JOAN (jo-ăn or jōn) **OF ARC** (JEANNE D'ARC), the Maid of Orleans, heroine of France: b. Domrémy, Basse Lorraine, now department of the Vosges, 6 Jan. 1412; d. Rouen, 30 May 1431. While she was still a girl she began to be deeply affected by the woes of her country, much of which was conquered by the English and their Burgundian allies, leaving only a small portion to the French king, Charles VII. From about 13 she declared she heard heavenly voices, which at last became very definite in their commands to go to the aid of Charles and liberate France. At first she was regarded as insane, but eventually she found her way to the king and his councillors, and having persuaded them of her sincerity, received permission to hasten with Dunois to the deliverance of Orleans. In a male dress, fully armed, she bore the sword and the sacred banner, as the signal of victory, at the head of the army. The first enterprise was successful. With 10,000 men she marched from Blois, and on 29 April 1429 reached Orleans with supplies. By bold sallies, to which she animated the besieged, the English were forced from their intrenchments, and Suffolk abandoned the siege (8 May 1429). Other successes followed; Charles entered Rheims in triumph; and at the anointing and coronation of the king, 17 July, Joan stood at his side. She then asked to be allowed to return home, but at the urgent request of King Charles, remained with the army. She was later less successful and failed to capture Paris. On 24 May 1430 she entered Compiègne, then besieged by the Burgundians, and on the same day, in a sally from the town, was taken prisoner. Subsequently she was delivered to the English, who, with the University of Paris and the bishop of Beauvais, demanded her execution as a sorceress. She was taken to Rouen, and after a long mock-trial, accompanied with many shameful circumstances, condemned to death. On submitting to the Church, however, and declaring her revelations to be the work of Satan, her punishment was commuted to perpetual imprisonment. But pretexts were soon found to treat her as a relapsed criminal, and as such she was burned at Rouen, and her ashes were thrown into the Seine. She died with undaunted fortitude. Her recantation is now doubted by some historians. Voltaire, in a notorious burlesque, 'La Pucelle,' Southey, Schiller and others have made her the subject of their verse. Schiller's drama, 'Die Jungfrau von Orleans,' still remains the worthiest monument of her fame. A revision of the trial was later had at the instance of her family, and she was declared innocent (1456). From 1875 the question of her canonization was discussed at Rome, in 1902 she was pronounced "venerable" and she was beatified by Pius X, 11 April 1909.

JOAN OF ARC, Personal Recollections of, a historical novel by "Mark Twain" (S. L. Clemens), published in 1896. It professes to be a translation by Jean François Alden from the ancient French of the original unpublished MS. in the national archives of France, written by the Sieur Louis de Conte, her page and secretary. The historical facts are closely followed.

JOANNESIA, a genus of plants of the family *Euphorbiaceæ*. *J. princeps,* the single species, is an inhabitant of Brazil. The wood is spongy and light, the flower yellow and large, and the fruit a gray nut which encloses two kernels in a double rind. The fruit is strongly purgative and is used by Brazilians as a remedy in cases of indigestion, jaundice and other diseases. Oil is pressed from these kernels, with which the natives anoint their limbs. It is said to be a good drying oil and excellent for painting. The rinds of the fruits, thrown into ponds, destroy the fish.

JOASH (or **JEHOASH,** as it is sometimes written), king of Judah, was the great grandson of Ahab and grandson of the wicked Athaliah who sought to put him out of the way. He was also a direct descendant of David. He was hidden away in a lumber-room of the palace by an aunt. When he was seven years old he was placed on the throne by the priestly party under the leadership of Jehoiada. On the whole his reign was a good one. He repaired the Temple and had the people taught from the rediscovered roll of the law. The blot on his reign was the murder of Zechariah, son of his benefactor, Jehoida. Hazuel, the Syrian, invaded his kingdom but was bought off with immense bribes, including the Temple treasures. He was the victim of a painful malady and because of his loathsome condition was finally assassinated by his own servants.

JOB, a legendary character of Hebrew literature whose history is poetically treated in the book of Job. He is said to have been a sheik of the patriarchal age who lived near the Arabian desert on the eastern boundary of Palestine. After repeated disaster and ruin, suddenly stripped of his possession, bereaved of his children, himself smitten with leprosy, and his wife advising him "to curse God and die," he gives way to despair, his friends even giving him but critical, philosophical advice. Finally, however, by force of character he rises superior to circumstances, and regains health, wealth and honor. The traditions handed down, according to early custom, in oral form, were committed to MS. about the 5th century B.C. While they have their origin in historical tradition, the events describing the life of Job are not regarded as literal history. Some authorities contend that the book is purely a literary invention, a rabbi as early as the Talmud 'Baba Bathra' (xv, 1), writing "Job was not, and was not created, but is an allegory." See JOB, BOOK OF.

JOB, Book of. The supreme masterpiece of ancient Hebrew literature, is one of the small group of world poems that live as universal expressions of the human spirit. The book takes its name from its hero, who is pictured as an ancient sheik living to the eastward of Palestine, on the borders of the Arabian Desert. Already in the time of Ezekiel (Ezek. xiv, 14, 20), the name was famous as that of a righteous man. It was perhaps two and a half centuries later than Ezekiel's reference that the unnamed author of the book made the ancient, traditional figure the hero of his great poem. The exact date of the author and his work is undetermined, but the relation of the poem to the general development of Jewish literature places it most naturally in the last century of Persian rule or even shortly after Alexander's conquest.

In orderly structure, Job resembles Greek and other Western literary works much more closely than do most examples of ancient Semitic literature. The poem is framed by a prologue and epilogue in prose. These, presumably, give the substance of the ancient traditional story as it had come to the author. It may be that their present artistic form is due to his genius, but the explanation of Job's sufferings given in the prologue is so foreign to the body of the poem, and the restoration of double the material blessings, in the epilogue, is so far below and so inconsistent with the thought of the poem that it seems as though the tradition was already too firmly established for the author greatly to modify its substance. The prose sections, when taken together, give a dramatic account of a series of misfortunes that fell on Job in order to prove to the Satan, "the Adversary," that disinterested righteousness does exist in man. Having endured the test with complete devotion to God, Job was rewarded with material prosperity twice as great as he had before. The prologue closes with the visit of Job's three friends who come to comfort him, but sit by him in silence for seven days. The great poem, inserted between the two parts of the prose narrative, itself falls into three main divisions: (1) the discourses of Job and his three friends (chaps. iii–xxxi), (2) the speeches of Elihu (chaps. xxxii–xxxvii), (3) the words of Jehovah and Job (chaps. xxxviii–xlii, 6). The Elihu section is best regarded as a later addition, made by some one who felt that the author had failed to present the orthodox point of view maintained by the friends with enough strength. The original poem would then be made up of the two great divisions — the debate between Job and his friends and the interposition of Jehovah when the friends have been silenced. The poem is much more impressive in this briefer form. The first section is subdivided into Job's curse and three cycles of debate. In each cycle the friends speak in turn, followed in every case by Job, except that in the third cycle the third friend, Zophar, does not appear. Some of the words ascribed to Job in this section probably belonged originally to Zophar (xxvii, 7-11, 13-23) so that the three cycles were complete. The notable poem on the unsearchableness of wis-

dom, near the close of the third cycle (chap. xxviii), belongs to no one of the speakers in the original debate and was probably introduced by some later hand.

In sharpest contrast to the prologue, the poem begins with Job vehemently cursing the day of his birth and longing for death. The friends are greatly shocked at Job's words. Eliphaz urges that confession of sin would be appropriate; Job is no doubt a great sinner for trouble does not come without a cause. He exhorts the sufferer to seek unto God, who will greatly bless if Job accepts correction and does not despise the chastening of the Almighty. Job admits that his words have been rash under his great calamity and again longs for death. He adds pertinently that when one is ready to faint and is forsaking the fear of the Almighty, kindness should be shown him from a friend; but his friends have proved as deceitful as the mountain torrents of Palestine which vanish under the summer's heat. He describes the horror of the disease with which he has been smitten, which gives him no respite day or night and then turns to bitter words toward the watcher of men who has set him up as a mark. Bildad now speaks, and more bluntly than Eliphaz had done, even suggesting that Job's children may have met their sudden, tragic death because of their sin. At the close, he too holds out hope; but Job now sees his hopeless case with his friends. If it is true, as they believe, that God gives prosperity to the righteous and sends suffering to the wicked, then he is proven guilty, yet his conscience acquits him. His own suffering has opened his eyes to the fact that the time-honored dogma of material rewards and punishments is not true to the facts; rather wickedness prospers and it must be God who is responsible. If it be not He, who then is it? Returning at length to his longing for final release, he pleads with God for a little mercy before he goes to the land of the shadow of death. Zophar, untouched by the pathos of Job's plea, charges that God is exacting less than Job's iniquity deserves. In this first cycle of the discussion, the point of view of the friends becomes clear. They have inherited the noble faith bequeathed by the prophets and are earnest defenders of God's justice and mercy. The prophetic doctrine that sin brings suffering to the sinner may be supported with much evidence. Job has had a personal experience, however, which has made clear to him the fact that material benefits are not always apportioned on the basis of merit. In closing this cycle of the debate, Job sarcastically scorns the friends' traditional wisdom with which he is as familiar as they. They draw their wisdom from the ancients; he tells them that wisdom is with God and power too; but Divine justice he cannot find in human affairs. From man he turns to God, longing to speak directly with Him; he will take his life in his hand and appear before the Almighty. Then the strength of the sick man fails. God's hand is upon him so that he cannot argue his case. He prays that he may be hidden in the grave till the wrath is past and then may have a hearing. Thus Job is brought to the question: If a man die, shall he live again? If Job could believe in a life after death, he could wait, but he sees only oblivion and sinks back in despair.

Already before this first cycle ends, the interest of the sympathetic reader has insensibly passed from the argument of the debate to the unfolding of Job's inner life. In the following cycles the accusations of the friends become more direct, but they are able to add little that is new in support of their contention that all suffering is sent for sin. In the second cycle it becomes clear that all Job really asks of his friends is sympathy while he pursues his lonely quest through the darkness. It is God, not the friends, with whom he is really concerned. Once and again he rises to the momentary faith that his case is clear in heaven and that he will ultimately see God and find vindication. Under all his doubts there is the conviction that God must be just as well as powerful. Job's real quest is for a satisfying view of God which the current theology could not afford him. The friends who represent this theology are silenced but not convinced. The debate closes with a long discourse of Job in which he tells how in his former honored condition he had been accustomed to give sympathy to the wretched and defends himself against the charges of sin. Then he realizes that his defense is hopeless; God does not hear and he is speaking in ignorance of the charge against him.

Omitting the Elihu speeches as an intrusion on the original complete poem, Job's wish is suddenly granted. Jehovah speaks out of the whirlwind, telling of his wisdom and power in the creation and control of the mighty forces of nature. In this section many feel that an interpolator had added the semi-mythical behemoth and leviathan (xl, 15 — xli, 34). Without these the section contains the wonders of both the inanimate and animal worlds. In the speeches of the Almighty no really new thought is added to the faith that the Hebrew prophets had attained before the book of Job was written; but a splendid, dramatic presentation of the Divine wisdom and power seen in nature humbles Job; he feels that he had heard of God by the hearing of the ear but that he now sees Him. In this vision he rests humbled and content, not even thinking of arguing his case as he had hoped to do.

Like every great work of literature, the book of Job is a transcript from life as it is. It reveals the negative power and the limitations of the critical intellect, the positive power and outreach of vision and faith. The classification of the poem has been the subject of much debate. That it is dramatic is obvious; it may even be presented with some effective power upon the modern stage; yet the theory that the poem is a genuine drama, designed for action, is now generally abandoned. It is recognized, indeed, that the ancient Semites did not develop any true drama, so far as our knowledge of their life and literature extends. The work has in recent years been styled an epic, "the epic of the inner life," telling the story of the perilous quest and brave deeds of a typical Jewish hero whose exploits were in the sphere of the spirit. In external form it resembles epic rather less than drama, yet the recognition of the fact that the search for God is the essence of the poem is vital to its right understanding. Exact classification of ancient Semitic writings under our categories of Indo-European literature is not possible. The divisions of epic and dramatic poetry were made

for the description of Greek not Hebrew poetry. That has its own forms, usually less rigid than those of Western writings. As yet they have defied thoroughly satisfactory definition. Although Job is a supreme world poem revealing "the essentials of life in its greatness," true alike to the 4th century B.C. and the 20th century A.D., in external form it is Semitic poetry, not Occidental. This statement is just as true of its general structure as it is of its genuinely Hebrew rhythm and metre.

HENRY THATCHER FOWLER,
Professor of Biblical Literature and History, Brown University.

JOBERT DE LAMBALLE, zhō'bār dĕ läṅ'bal', **Antoine Joseph,** French surgeon: b. Matignon, 17 Dec. 1799; d. Passy, 25 April 1867. In 1825 he was made assistant in anatomy for the faculty of Paris, then doctor of medicine and supplementary professor at the École de Médecine, next surgeon for the central bureau of hospitals. In 1830 he became surgeon at the Saint Louis Hospital, and in his later years he worked in the Hotel Dieu Hospital, and was made professor of the external clinic of the Paris faculty. In 1854 he was appointed surgeon to the emperor and was made member of the Academy of Sciences in 1856. He did valuable service in uterine diseases and invented *cystoplastie* by use of healthy tissue in the cure of vesico-vaginal fistula. His best-known works are 'Traité des plaies d'armes à feu' (Paris 1833); 'Recherches sur les appareils électriques des poissons' (ib. 1858); 'Etudes sur le système nerveux' (ib. 1838); 'Traité de chirurgie plastique' (ib. 1849); 'De la Réunion en chirurgie' (1864).

JOB'S TEAR, a stout grass (*Coix lachryma-jobi*), allied to maize, and sometimes six or eight feet in height. It is a native of tropical Asia and Africa, is naturalized in Spain and in other countries, and is sometimes grown in hothouses. The hard, round, shining seed-capsules, from whose fanciful resemblance to tears the plant derives its name, are used in making rosaries and ornamental articles, as medicine by the Chinese, and as a staple food among some of the hill-tribes of northern India. See also GRASSES IN THE UNITED STATES.

JOBSON, Frederick James, English Wesleyan clergyman: b. Northwich, Cheshire, 6 July 1812; d. London, 4 Jan. 1881. After serving as apprentice to a Norwich architect he entered (1834) the Wesleyan ministry preaching at Patrington, Yorkshire (1834), and Manchester (1835–37), when he became assistant at City Road Chapel, London. He was a delegate (1856) of the British conference to the Methodist Episcopal Conference held at Indianapolis, Ind., and to the Sydney, Australia (1860), conference. He advanced the publishing business of his denomination as book steward (1864–79) and superintended the issue of the *Methodist Magazine* for 12 years. At the Wesleyan Methodist Conference (1869) he was elected president. His best-known works are 'Chapel and School Architecture' (London 1850); 'America and American Methodism' (1857); 'Australia; with Notes by the way on Egypt, Ceylon, Bombay and the Holy Land' (1862); 'Perfect Love for Christian Believers' (1864); 'Serious Truths for Consideration' (1864). In B. Gregory's 'Life of F. J. Jobson' (London 1884) are a number of his sermons.

JOCELYN, Nathaniel, American portrait painter: b. New Haven, Conn., 31 Jan. 1796; d. there, 13 Jan. 1881. At 18 he was apprenticed to an engraver, but after three years his early love for painting asserted itself and he established himself as a portrait painter at New Haven in 1820. He was for some time resident in Savannah, where he painted many portraits, but returned to his native town where his work was very popular and where from 1825 to 1835 he painted the portraits of many notables, not a few of which are preserved in Alumni Hall at Yale. His fame extended beyond the limits of his State and he exhibited at the Academy of Design on several occasions. At the age of 80 he painted 'Ocean Breezes,' a successful work of fancy, and his only one. His portraits have been greatly prized by critics. Jocelyn was a staunch anti-slavery man, and his home in New Haven was long one of the stations on the underground railroad. He was for many years the senior partner of a bank-note engraving company in New York which subsequently became the American Bank Note Company, resigning from the latter in 1867.

JODHPUR, India, capital city of the Rajput state Marwar or Jodhpur, in lat. 26° 17′ N. and long. 73° 4′ E. It was built by Rao Jodha 1459 A.D., and is located on the Luni, constructed like an amphitheatre and surrounded by a strong wall. On a high rock is the fort which contains the palace of the maharajah. The sacred suburb Mahamandil lies somewhat apart and is also fortified and is ruled over by the high priest of the empire. To the north are the magnificent ruins of the forsaken (1459) capital Mandor. This city is the seat of government and the buildings are of good architecture and substantial construction as the neighborhood has a large stone supply. Here are located a high school, college, two hospitals, etc. It is an important commercial centre and has a wheat market and electric-lighting plant. Among its manufactures are beans, ivory, lacquer wares, vegetable dyes, etc. Pop. 59,262.

JODHPUR, or **MARWAR,** India, tributary state of the British East Indian province Rajputana. It is bordered on the east by the Aravalli Mountains whose watershed feeds the

river Luni which flows through the entire state, ending in the Great Rann. To the west it is bordered by the Indian Desert. The climate runs to great extremes, frost often appearing in the winter season. There are several salt lakes from which salt is extracted in commercial quantities. In the irrigated sections are grown wheat and cotton. The best camels of India are raised here besides fine cattle, horses and sheep. Its exports also include wool, iron and zinc. Sugar, rice and cotton goods are the chief imports. The railway from Sindh to Agra bisects the state from west to east. Its maharajah has great governing power and receives a big income from taxation and sustains a considerable army. Pop. 2,057,553.

JOE PYE WEED. See EUPATORIUM.

JOEL, one of the minor Hebrew prophets who lived in the 5th century B.C., a predecessor by a few years of Amos and Hosea, whose writings are very similar in character. Outside of his writings, nothing is known of the author. His style is that of a clear, calm, logical mind free from the doubts and struggles that distract the minds of other Hebrew poets and prophets. Without the strain and abruptness that characterize the writings of Hosea and Jeremiah, his language is smooth and flowing, the imagery is gorgeous in its profusion, and metaphor and hyperbole have to be interpreted to discern fact amid the maze of imagination and fancy. See JOEL, BOOK OF.

JOEL, Book of. The book consists of two parts, which differ materially from each other in thought. Chapters i and ii, 1–27, except for possible later additions, were written in the midst of a plague of locusts and drought, regarded as a punishment upon Israel; while chapter ii, 28–32 and chapter iii (chapters iii and iv in the Hebrew), make no mention of these circumstances but are dealing with the coming day of Yahweh, the final judgment on the nations. Until recently the whole book, or the most of it, has been regarded as the work of a single author; but now some maintain that the second part, or the most of it, is not by the author of the first part. This is on grounds of thought and style, neither reason, however, giving a sufficient warrant for this conclusion. The probable view is that the most of the book was by a single author, the two portions, however, being written at different times. There are a few later additions. These in the first portion are i, 15; ii, 1b, 2, 10–11, 20. All these were designed to connect the first part with the thought of the second, in each case they are inappropriate in the context and interrupt the thought. In the second part iii, 4–8 interrupts the connection, and is to be regarded as a later addition.

Concerning the prophet, nothing is known outside of the book. His name means: "Yahweh is God." In earlier times the date was often thought to be pre-exilic. It is now generally recognized, however, that it is post-exilic. This is evident from iii, 2, from which it appears that the people are scattered among the nations. There is no mention of a king, which points to the same period. The emphasis on the importance of the Temple services also strongly suggests the post-exilic period. Chapter ii, 32 is a direct allusion to Obadiah xvii, which was written after the exile. The allusions to foreign nations make no mention of Assyria or Babylonia, one of which is mentioned in every pre-exilic prophet except Amos, and doubtless alluded to there. Further, there is no mention of the northern kingdom, Israel, which excludes the pre-exilic period except the last part. The Temple is standing, as appears from frequent references, such as i, 13, hence it is after 516 B.C. Probably ii, 9 indicates that the wall of Jerusalem has been built, thus indicating the time after Nehemiah. The date about 400 B.C. seems, therefore, most probable.

The thought of the book is in accord with the general teaching of the prophets, although it makes no material advance upon the messages given earlier. The author prizes more highly than most of the prophets the external worship, yet this is regarded as an expression of the realities of the inner life, ii, 13. He connects sin and punishment, repentance and national prosperity. He looks forward to the coming day of Yahweh, a general judgment upon the nations for their sins. In this time the true Israel, the faithful who call upon Yahweh, will be delivered, ii, 32, iii, 16; and will receive abundant blessing, iii, 18–21. The conception of God emphasizes his power and his justice.

Bibliography.— Bewer, J. A., 'Joel' ('International Critical Commentary,' New York 1911); Driver, S. R., 'Joel and Amos' ('Cambridge Bible,' Cambridge 1897); Smith, G. A., 'The Book of the Twelve Prophets' ('Expositor's Bible,' Vol. II, New York 1898).

GEORGE RICKER BERRY,
Professor of Old Testament Interpretation and Semitic Languages, Colgate University.

JOFFRE, zhō'fr', **Joseph Jacques Césaire,** marshal of France: b. Rivesaltes, Pyrénées, 4 Jan. 1852. He was educated at the College of Perpignan and in 1868 was enrolled at the École Polytechnique as a student of military engineering. He joined the French army as second lieutenant during the Franco-Prussian War of 1870–71, and was in command of a battery during the siege of Paris. He returned to the Polytechnique after the war, was made a lieutenant in 1872, helped in the defense of Pontarlier in 1874 and became captain in 1876. He served in Tongking under Courbet in 1883–84, and under Dodds in Dahomey 10 years later. He took part in the occupation of Timbuctoo in 1894 and in the Madagascar campaign of 1897; was appointed on his return professor at the Higher War School and in 1901 was made brigadier-general of a division. He organized the defenses of Formosa and in 1911 while in command of the Second Army corps at Amiens was made commander of all the French forces. The Three Years' Service Law for the French army is largely due to his efforts. He is a distinguished mathematician. At the outbreak of the war in Europe in 1914 he was chief of the general staff. He was placed in supreme command of all forces, both British and French, on the western front. History will in all probability laud him as the hero of the Marne. With Von Kluck battering his way to Paris, Joffre doggedly refused to give battle, announcing that at his own time and on his own ground, and not before, would he make his stand. But when, finally, he issued his memorable orders on the eve of Lafayette's birthday, in that gloomy September of 1914, "Troops unable to advance should die where they stand rather

than give ground to the enemy,» not a soldier wavered. The German was thrown back on the Somme front, Paris was saved and Joffre ascended to the council of France's heroes. Joffre yielded the command of the forces in the field to General Nivelle in 1917, and became adviser of the general staff at the war office. In April 1917 he was made a member of the French High Commission to confer with the government of the United States on the conduct of the war. Everywhere in America he was hailed as «the savior of France.» He was made a marshal of France in 1915 and holds the grand cross of the Legion of Honor. He is greatly esteemed by the soldiers of his command for his many little deeds of kindness along the battle line and men in high places respect him because, shortly after he assumed supreme command, he cashiered several generals for inefficiency, without regard to friendship or political influence. He has published 'My March to Timbuctoo.'

JOGUES, zhōg, **Isaac,** French missionary among the North American Indians: b. Orleans, 10 Jan. 1607; d. Ossernenon, near the present Auriesville, Montgomery County, N. Y., 18 Oct. 1646. He became a Jesuit at Rouen in 1624, and, after some years passed in study and teaching, was ordained in 1636. At his own request he was immediately sent to the Huron mission in Canada. In 1639 he undertook a mission to the Tobacco Nation, in 1641 preached to the Algonquins at Sault Sainte Marie, not long after went to Three Rivers for supplies for the Huron Mission, and upon his return was captured by the Mohawks and severely tortured. He remained among the Indians as a slave, until the summer of 1643, when he made his escape to the Dutch settlement of Rensselaerswyck (Albany), and was conveyed thence to New Amsterdam. He finally reached France, where he was treated with great consideration, and invited to court. Returning to Canada, he traveled to the Mohawk country in May 1646, in the capacity of an ambassador to conclude a treaty between that people and the French. Ascending the Sorel, he passed through Lake Champlain and Lake George, which he named Lac Saint Sacrement. Having ratified the peace he returned to Quebec, and after a few days' rest set out for the Mohawks again, this time as the founder of the Mission of the Martyrs. He was soon tortured as a sorcerer, and finally killed. Consult Martin, trans. by Shea, 'Father Isaac Jogues' (1896); Parkman, 'The Jesuits in North America' (1898). See JESUITS.

JOHANNES SECUNDUS, Latin poet: b. The Hague, 14 Nov. 1511; d. Doornyk, 24 Sept. 1536. His actual family name was Jan Nicolai Everaerts. He studied law at Bourges, then turned to art, traveling through Italy and Spain and becoming secretary of Cardinal Tavera, archbishop of Toledo. He became devoted to poetry and his work shows tenderness, and refined selection expressed in the classic language. Best known is his 'Basia' (Utrecht 1539). A complete collection of his poetic works is found in 'Opera poetica' edited by his brothers (Paris 1541; Leyden 1821).

JOHANNESBURG, yō-hăn'nĕs-boorg or jō-hăn'nĕs-bĕrg, South Africa, the most populous city and the commercial metropolis of South Africa, situated 5,735 feet above the sea, about 30 miles southwest of Pretoria, in the Transvaal, with which and with Delagoa Bay 364 miles, Durban 483 miles, East London 659 miles, Port Elizabeth 715 miles and Cape Town 957 miles, it is in railway communication. It is the recognized business centre of the rich gold fields of the Witwatersrand. In 1886 it was represented by a few shanties, but the discovery of gold and the development of gold mining has made it within a comparatively few years the most important city in South Africa. Municipal government was conferred upon the city by the Transvaal authorities in 1896, when the population within a three-mile radius was 102,078, of whom 50,907 were whites, 67 per cent of these being of British origin, while the Boer citizens numbered 6,205. The great Uitlander agitation, which culminated in the Transvaal War (1899–1902), centred in Johannesburg, which was occupied by Lord Roberts in 1900. Since the close of the war, important public improvements have been carried through. These include many miles of well-paved streets, an elaborate electric car system, new waterworks and a sanitation system. Mementoes of the former Boer rule are an imposing but dismantled fortress which dominates the town, and the monument near Krugersdorp which commemorates the declaration of Boer independence in 1880. The town is lighted by electricity.

The international peace exhibition of South Africa, held at Johannesburg in 1904–05, when the inhabitants numbered 158,580, fully rehabilitated commercial interests, and it was then predicted that within six years Johannesburg would have a population of 200,000. It has bettered that number. Pop. 237,104, of which 119,953 are Europeans, and 117,151 natives.

JOHANNINE EPISTLES. See JOHN, EPISTLES OF.

JOHN, the name of 23 Popes, as follows:

JOHN I, Saint: b. Tuscany; d. 526. He succeeded Hormisdas in 523, and was a friend of Boethius, who dedicated to him several of his works. Theodoric sent him to Constantinople to induce the Emperor Justin to adopt milder measures toward the Arians. Though received with uncommon pomp, his mission was fruitless, and on his return Theodoric threw him and his companions into prison, where he died. He is commemorated by the Roman Catholic Church 27 May.

JOHN II (MERCURIUS): d. Rome, 27 May 535. He was a Roman and was surnamed Mercurius by reason of his eloquence. He became Pope in 532. His letters are published in Migne, 'Patrologia Latina' (Vol. LXVI).

JOHN III: d. Rome, 12 July 572. He was a Roman and became Pope in July 560. During his time the Lombards frequently ravaged Italy.

JOHN IV: b. Salona in Dalmatia; d. Rome, 11 Oct. 642. He was elevated to the papal chair in December 640 and was noted for zeal and orthodoxy. He formally condemned the Monothelitic statement of faith which Sergius had drawn up at the desire of the Emperor Heraclius.

JOHN V: b. Antioch, Syria; d. Rome, 2 Aug. 686. He was the earliest of several pontiffs of Oriental origin and had been sent to

GENERAL JOSEPH JACQUES CÉSAIRE JOFFRE

Maréchal de France

Commander-in-Chief of the French armies (1915-17)

the Sixth General Council by Pope Agatho as legate. He became Pope 24 July 685.

JOHN VI: he was a Greek by birth; d. Rome, 9 Jan. 705. He became Pope in 701, and when appealed to with reference to the long dispute between Saint Wilfred of York and the archiepiscopal see of Canterbury, decided in favor of the latter.

JOHN VII, a Greek: d. Rome, 17 Oct. 707. He became Pope 1 March 705.

JOHN VIII, a Roman: d. Rome, 15 Dec. 882. He became Pope in 872. The Saracens during his pontificate pushed their ravages to the gates of Rome and he was compelled in 877 to pay them tribute. He crowned three emperors, Charles the Bald, 875; Louis the Stammerer, 878; and Charles the Fat, 881. He attempted, but unsuccessfully, to unite the Greek and Latin churches.

JOHN IX: b. Tibur; d. May 900. He belonged to the Benedictine order and became Pope, as the choice of the Frankish party, in June 898.

JOHN X: b. Romagna; d. July 929. He was a man of great ability and of virtuous character notwithstanding the aspersions Liutprand casts upon him. He was archbishop of Ravenna in 905 and became Pope in 914. He placed himself at the head of an army and drove the Saracens from Italy, but his determination to rule independently of any faction aroused the anger of his opponents and he was imprisoned, and at length murdered, by Theodora's daughter, Marozia, whose ambitions he had thwarted.

JOHN XI: b. 906; d. 936. He was the son of Marozia (q.v.) and Guy, Duke of Spoleto. He was elected Pope while under age in 931, and governed through the influence of his mother. His brother Alberic II revolted and imprisoned the Pope and his mother in the castle of San Angelo, where John died.

JOHN XII (Octavian): d. Rome, 14 May 964. He was the son of Alberic and grandson of Marozia. He became Pope in 956, after the death of Agapetus II, though only 18, and was the first Pope who changed his name on accession to the papal dignity. He applied to the Emperor Otho I for assistance against Berengarius II, crowned the emperor 962, and swore allegiance to him, but soon after revolted against Otho, who caused him to be deposed by a council, in 963, and Leo VIII to be elected. On Otho's departure for Germany, John returned and excommunicated his rival.

JOHN XIII, a Roman: d. Rome, 6 Sept. 972. He was bishop of Narni, was made Pope in 965 by the influence of the Emperor Otho I and was expelled by the Roman nobles. Otho II restored him to Rome and was crowned by him. The Poles and Hungarians were converted during his pontificate.

JOHN XIV (Peter): b. Pavia; d. Rome, 20 Aug. 984. He was bishop of Pavia and had been chancellor to Otho II who made him Pope in November 983, in place of the anti-pope Boniface VII. The latter had seized the papacy after the death of Otho I. Boniface now returned from Constantinople and imprisoned John in the castle of San Angelo, where he died soon after.

JOHN XV: d. Rome, April 996. He was the choice of Crescentius and his party, under whose influence he remained throughout his reign (985–996).

JOHN XVI (Philagathus), a Greek of Calabria: d. probably April 1013. He became Pope in 997. A native of Rossano, Calabria, he became a monk and from Otto II received the abbey of Nonantola. In 988 he was promoted to the see of Piacenza. Crescentius placed him on the papal throne in 997 which he occupied about a year before he was thrown into prison by Otto III, and subsequently removed to a monastery. His nose and ears were cut off and his eyes gouged out.

JOHN XVII (Sicco): b. Ripa Jani; d. Rome, 6 Nov. 1003. An anti-pope intruded during the pontificate of Gregory V. He reigned only a few months, from 13 June 1003 to 6 November.

JOHN XVIII (Phasianus). He became Pope on Christmas Day 1003, and in May 1009 resigned his office and entered a monastery. His pontificate was marked by strict attention to ecclesiastical administration.

JOHN XIX, a Roman: d. January 1033. He succeeded his brother, Benedict VIII. He was disposed to concede the title Ecumenical to the patriarch of Constantinople, but this met with so much opposition from the Latin Church that he was obliged to withdraw the concession. He crowned the Emperor Conrad II in the presence of Rudolph of Burgundy and King Canute of Denmark and England.

JOHN XX, frequently called **JOHN XXI** (Pedro): b. Lisbon, Portugal; d. Viterbo, Italy, 20 May 1277. He became in 1273 cardinal-bishop of Frascati and Pope in September 1276. He was learned in philosophy and medicine and wrote several treatises still of interest as showing the status of mediæval medicine.

JOHN XXI. See John XX.

JOHN XXII (Jacques D'Euse): b. Cahors, about 1244; d. Avignon, 4 Dec. 1334. He was archbishop of Avignon, cardinal-bishop of Porto (1312) and was elected Pope at Lyons 1316, two years after the death of Clement V. He resided at Avignon, but had many adherents in Italy. He is important in German history on account of the active part he took in the disputes of the Emperors Louis of Bavaria and Frederick of Austria. Louis intruded the anti-pope Nicholas V and declared John XXII deposed. Several theological controversies filled his pontificate with ecclesiastical strife, the most notable being the question of absolute evangelical poverty raised by the Franciscans and that of hominalism led by William Occam (q.v.). He published in 1317 the 'Constitutions of Clement V,' a manual of canon law, since known by the title 'Clementines' (q.v.). He was also the author of the decretals called 'Extravagantes.'

JOHN XXIII (Baldassare Cossa): b. Naples; d. Florence, 22 Dec. 1419. He was elected Pope in 1410, by the Council of Pisa, after the death of Alexander V, on condition that, if Gregory XII and Benedict XIII would resign, he would also retire to end the schism. He summoned the Council of Constance, demanded by the Emperor Sigismund, in 1415, where he confirmed his resignation 2 March; but 20 March he fled secretly from Constance to Schaffhausen and revoked his resignation. He was cited before the council, but not ap-

pearing, he was suspended and finally deposed. He was imprisoned four years. Pope Martin V subsequently pardoned him and made him cardinal-bishop of Tuscoli and dean of the college of cardinals.

JOHN, king of England: b. Oxford, 24 Dec. 1166; d. Newark, Nottinghamshire, 19 Oct. 1216. He was the youngest son of Henry II, by Eleanor of Guienne. Being left without any particular provision he received the name of *Sans Terre* or Lackland; but his brother, Richard I, on his accession conferred large possessions on him. He obtained the crown on the death of Richard in 1199, although the French provinces of Anjou, Touraine and Maine declared for his nephew, Arthur of Brittany, who was lineally the rightful heir, then with the king of France. A war ensued, in which John recovered the revolted provinces and received homage from Arthur. In 1201 disturbances again broke out in France, and Arthur, who had joined the malcontents, was captured and confined in the castle of Rouen and never heard of more. John was universally suspected of his nephew's death, and in the war which followed he lost Normandy, Anjou, Maine and Touraine. In 1205 his quarrel with the Pope began regarding the election to the see of Canterbury, to which the Pope had nominated Stephen Langton. The result was that Innocent III laid the whole kingdom under an interdict, and 1211 issued a bull deposing John. Thereupon John made abject submission to the Pope, even agreeing to hold his kingdom as a vassal of the Pope (1213). His arbitrary proceedings led to a rising of his nobles, and he was compelled to sign the Magna Charta or Great Charter 15 June 1215. But he did not mean to keep the agreement, and obtaining a bull from the Pope annulling the charter, raised an army of mercenaries and commenced war. The barons, in despair, offered the crown of England to the Dauphin Louis, who accordingly landed at Sandwich 30 May 1216, and was received as lawful sovereign. The issue was still doubtful when John died. Consult Stubbs, W., 'Lectures on Early English History' (Vol. I, London 1906); Norgate, K., 'England under the Angevin Kings' (1887), and 'John Lackland' (1902).

JOHN II, king of France, surnamed the «Good»: b. about 1319; d. London, 8 April 1364. He was the son of Philip VI of Valois and was a monarch distinguished alike for his incapacity and his misfortunes. In 1356 he was defeated and taken prisoner by the Black Prince at the battle of Poitiers, and detained at Bordeaux and at London till released at a heavy expense to his country by the Peace of Brétigny in 1360. On learning that his son, the Duke of Anjou, who had been left as a hostage in England, had effected his escape, he returned to London, where he died.

JOHN III (Sobieski), king of Poland: b. Olesko, Galicia, 2 June 1624; d. 17 June 1696. After receiving his education at home he traveled in France, England, Italy and Germany with his brother, returning in 1648 on his father's death. John Casimir appointed him standard-bearer to the Crown, and he distinguished himself in the war against the Russians and Swedes, which terminated with the Peace of Oliva in 1660. In 1669 Michael Koribut was chosen king on the resignation of John Casimir against a party who preferred Sobieski. On the death of Michael he was chosen king, 21 May 1674. A new war with the Turks was concluded after varying success by a peace, 27 Oct. 1676. The anarchy in which Poland was constantly kept by the turbulence of its aristocracy was aggravated during the reign of Sobieski by the intrigues of his wife, and his own talent for administration was not equal to his capacity as a general. Besides internal troubles, European politics at this time occupied the attention of Sobieski, whose alliance was solicited both by Lous XIV and the emperor. He at length concluded (31 March 1683) an alliance with the latter against the Turks, who had allied themselves with the malcontents in Hungary and threatened a most formidable invasion of the empire. Uniting with the Austrian forces 9 September, at the head of a combined force of 83,000 men, he inflicted a decisive defeat on the Turks and compelled them to raise the siege of Vienna, 12 Sept. 1683. He terminated the campaign with the capture of Gran (27 October), which had been in the possession of the Turks for nearly a century and a half. In 1686 he overran Moldavia and Wallachia, but failed to make a permanent conquest. Consult Tatham, 'John Sobieski' (Oxford 1881); Dupont, 'Mémoires pour servir à l'histoire de Sobieski' (Warsaw 1885); and Rieder, 'Johann III, König von Polen' (Vienna 1883).

JOHN, Claude Hermann Walter, English clergyman, educator and assyriologist: b. Banwell, Somersetshire, 4 Feb. 1857. He was educated at Queen's College, Cambridge University. He was second master of Horton College, Tasmania, 1880–84; Paston Grammar School 1885–87; tutor at Saint Peter's College, Peterborough, 1887–92. After his ordination in 1887, he was curate of several parishes, and until 1901 assistant chaplain of his alma mater and rector of Saint Butolph's, Cambridge, 1892–1909. He was Edwardes Fellow of Queen's College, 1903–09; lecturer on assyriology in the same institution, 1895–1909; also at King's College, London, 1904–10. Since 1909 he has been master of Saint Catharine's College, Cambridge. He has contributed largely to scientific journals and dictionaries dealing with subjects in assyriology and biblical archæology. His works include 'The Oldest Code of Laws in the World, the Code of Hammurabi' (1903); 'Babylonian and Assyrian Laws, Contracts and Letters' (1904); 'Ur-Engur — a Bronze of the Fourth Millenium' (1908); 'Ancient Assyria' (1912); 'Ancient Babylonia' (1913); 'Relations between the Laws of the Babylonians and the Laws of the Hebrew Peoples,' (The Schweich Lectures for 1912–14). He also delivered the Bohlen lectures on «The Religious Significance of Semitic Proper Names.» He edited 'The Old Testament in the Light of the Ancient East' by Alfred Jeremias (2 vols., 1911).

JOHN, yōn, **Eugenie** («E. Marlitt»), German novelist: b. Arnstadt, Thuringia, Germany, 5 Dec. 1825; d. there, 22 June 1887. She was the daughter of a portrait painter, and after pursuing the study of music at Vienna, lived at court for some years. She then returned to her native town and took up novel writing, using the pseudonym of «E. Marlitt.» Her works, which are very numerous, have

been translated into English by Mrs. A. L. Wistar, and have been very popular in this country. Among them are 'Gold Elsie' (1868); 'Old Mamselle's Secret' (1868); 'Countess Gisela' (1870); 'Princess of the Moor' (1872); 'The Second Wife'; 'In the Counsellor's House.'

JOHN, Griffith, Welsh Congregational missionary: b. Swansea, 14 Dec. 1831; d. 1912. He studied at Brecon College (1850–54), then at the Missionary College, Bedford, England. He was assigned to China (1855) by the London Missionary Society, residing, till 1861, at or near Shanghai, moving then to Hankow and becoming the first Protestant missionary in central China. He made numerous trips through the contiguous country, establishing a number of churches and mission stations. With the exception of two furloughs to Great Britain (1870–73 and 1881–82), visiting the United States during the latter, he continued his services in China till 1906, when his declining health forced his resigning from missionary work.

JOHN, Sir William Goscombe, Welsh sculptor: b. Cardiff, 1860. He studied at the City of London School of Art, Kensington and the Royal Academy Schools, taking the Royal Academy gold medal and traveling studentship (1889), when he went to Paris to study (1890–91), taking the gold medal at the Paris Salon (1901). A few of his principal works are statues of King Edward VII, at Cape Town; Prince Christian Victor, at Windsor; 7th Duke of Devonshire, at Eastbourne; the historian W. E. H. Lecky, at Trinity College, Dublin; equestrian statue of the Earl of Minto, at Calcutta. Among his best-known memorials are the Marquis of Salisbury, at Westminster Abbey and in Hatfield Church; Bishop Lewis and Dean Vaughan, in Llandaff Cathedral; Sir Arthur Sullivan, in Saint Paul's Cathedral; that dedicated to the Coldstream Guards and War Correspondents, in Saint Paul's Cathedral. His works in a lighter vein contain 'A Boy at Play,' in Tate Gallery; 'The Elf,' in Cardiff Art Gallery; 'Morpheus' and 'Saint John the Baptist,' in Liverpool Art Gallery. He was created a knight in 1911 and is a corresponding member of the Institute of France, and Royal Academician since 1909.

JOHN, Epistles of. Three short epistles in the New Testament traditionally assigned to the Apostle John. The first and longest contains no definite indication as to its author or destination. It lacks the usual epistolary introduction and closing salutation. Nevertheless, it is a genuine letter and from one author, on his own sole responsibility, in spite of the occasional use of the first person plural (e.g., in chap. i). Though the author speaks with authority on matters of the Christian faith, it is the authority of fatherly affection, rather than of official position, that is felt and asserted. The inference is that the author was an old man writing to a church or group of churches whose members looked to him for spiritual guidance and regarded him with deep affection. The general purpose of the letter was to urge and lead those addressed to a fuller realization of their fellowship with God through His Son Jesus Christ, the Word of Life. He argues and pleads for the sinless life (confession of sin, trust in the Divine grace, positive "walking in the light"), with special emphasis on love as absolutely essential. This can be realized only through a full acceptance of the great redemptive work of God in Christ and therefore a full confession of Jesus Christ, son of God, "come in the flesh" is indispensable. The letter aims at counterventing certain docetic and antinomian tendencies that were threatening to subvert the faith of those addressed. Linguistically and doctrinally 1 John has so much in common with the Fourth Gospel that the prevailing opinion is that it was from the same hand and for the same circle of readers. Evidence of its use from Polycarp (c. 110 A.D.) down is abundant and trustworthy.

The second and third epistles are very short letters and belong together. 2 John, addressed to a church (called "lady," Greek *κυρία*), is a message of affectionate admonition, warning against erroneous teachers ("anti-Christs"). 3 John, to Gaius, a member of the church addressed in 2 John, is of a more private and confidential character. Gaius is commended for his hospitality to itinerant missionaries. Diotrephes was probably the leading member of the church addressed in 2 John. The author, in both letters, calls himself "the elder," but does not give his name. Stylistically and doctrinally the relation of 2 and 3 John to 1 John is close, and identity of authorship is the most probable view. For literature see article on JOHN, GOSPEL OF.

EDWARD E. NOURSE.

JOHN, Gospel of. The fourth Gospel in the usual order of the New Testament writings. According to tradition, this gospel was written by the beloved disciple, John, in his old age, at Ephesus in Asia, near the end of the 1st century (90–100 A.D.). On this view, the gospel embodies the personal testimony of one of Jesus' most intimate disciples, and consequently is the most reliable and valuable of all the gospels.

To-day this traditional view is strenuously disputed. While the great spiritual value of the book is conceded, its apostolic authorship and independent or primary authority for the events of Jesus' ministry or for His teaching are denied. It is assigned to an unknown, though highly gifted, author, a Christian of Asia, who wrote in the early years of the 2d century, and was familiar with the earlier Christian literature (e.g., Paul's letters, and the Synoptics), but who felt that a new formulation of Christian truth was called for in view of the various doctrinal complications that threatened to undermine the faith of the Church. He therefore composed this "spiritual" gospel, in reality a profound doctrinal treatise rather than a gospel. The following discussion will attempt to set forth, as fully as space permits, the character of this gospel and the problem it presents for solution.

I. Contents.— Formally, at least, the plan of the gospel is simple. The purpose of the writer is plainly stated in xx, 30–31, and the book was planned to accomplish a result, namely, a *faith* in Jesus that issues in *life*. The writer sought to show why and how it is that belief in Jesus gives life, and unbelief results in death. The contents unfold simply and

naturally according to this ruling motive, as can be seen from the following brief outline:

Introductory section (the Prologue). The fact and significance of the incarnation of the Word (i, 1–18).

I. *The Beginnings of Faith. How Jesus won the first believers* (i, 19–iv, 54).
   1. The witness of John and the first followers from John's disciples (i, 19–51).
   2. The first "sign" at Cana (ii, 1–12).
   3. Manifestation of His authority at Jerusalem and Judea, resulting in (imperfect) faith on the part of many. The case of Nicodemus and additional testimony of John (ii, 13–iii, 36).
   4. The faith of the woman of Samaria and of the Samaritans (iv, 1–42).
   5. Return to Galilee. The second "sign" and its resultant faith (iv, 43–54).

II. *The Manifestations of Unbelief, culminating in the decision of the Jewish authorities to put Jesus to death* (v–xii).
   1. Jesus in Jerusalem cures a cripple on the Sabbath, and arouses the hostility of the Jews (v).
   2. In Galilee, at a Passover season, 5,000 fed. The day following the Jews refuse to believe Jesus' claim to be the Bread of Life. Many desert Him, but the Twelve remain faithful (vi).
   3. Again in Jerusalem, at Feast of Tabernacles, Jesus' claims rejected in extended debate by the Jews who are severely condemned for their unbelief (vii, 1–x, 21).
   4. In Jerusalem, at a Feast of Dedication, another instance of unbelief and hostility (x, 22–42).
   5. The Raising of Lazarus. In itself this was full proof of Jesus as "the resurrection and the life," but its effect on the Jews was to decide them to put Jesus to death (xi, 1–57).
   6. The final public presentation of Himself at the last Passover season. Incidents of belief and welcome. The author's reflections on the great act of unbelief, the rejection of Jesus by the Jews (xii, 1–50).

III. *Jesus' more complete and confidential revelation of Himself to His own* (xiii–xvii).
   1. The footwashing at the Supper and teaching based upon it (xiii, 1–20).
   2. Disclosure of the impending betrayal and of his separation from them (xiii, 21–38).
   3. Fuller teaching concerning His departure and concerning Himself and the Paraclete (xiv–xvi).
   4. The great intercessory prayer (xvii).

IV. *The Culmination of Unbelief, The Arrest, Trial, Condemnation, Crucifixion, Death and Burial of Jesus* (xviii–xix).

V. *The Victory — the raised and living Lord. Various appearances of the risen Jesus confirming the faith of the Disciples* (xx, 1–29).

Conclusion (xx, 30–31).

Appendix — The reinstatement of Peter and Jesus' saying concerning the beloved disciple (xxi).

The author states (xx, 30–31) that out of the many "signs" which Jesus did he had selected certain as calculated to produce faith. It is noteworthy that there are just seven such signs ((1) ii, 1–12; (2) iv, 43–54; (3) v, 1–10; (4) vi, 1–10; (5) vi, 16–21; (6) ix, 1–12; (7) xi, 1–44). That the author intended this number to be noticed and a *symbolic significance* to be attached to it is nowhere stated. If such a symbolic principle is assumed as intentional the book at once becomes full of subtle allusions, each alleged concrete fact being intended to suggest or teach some profound spiritual truth. On this principle the entire outline of the gospel can be converted into a theological program, the key to which is furnished by the prologue. This principle is accepted by many critics and dominates most of the modern critical interpretations of the gospel.

II. Relation to the Synoptics.— The contrast between the Fourth Gospel and the Synoptics is striking. There is a marked difference not only in respect to the general plan, but as to the details of Jesus' ministry, the style of His discourses and the content of His teaching.

Instead of an account of Jesus' birth and childhood, as in Matthew and Luke, we find the profound statement of the incarnation of the Word as the introductory section. In the Synoptics we have a narrative of the work of John the Baptist, his popular preaching, his prediction of the coming One, his baptism of Jesus. In our gospel John's *testimony* is the all important thing, testimony given to the official representatives of the Jews or to his followers. There is no account of John's ministry as such. Our gospel omits all reference to Jesus' temptation, but devotes considerable space to the way Jesus gained His first disciples and to a ministry in Jerusalem and Judea about which the Synoptics say nothing. The great popular ministry in Galilee to which the Synoptic account is chiefly devoted is all but omitted in our gospel. It is there as an indistinct background, while in bold relief we have the two visits to Jerusalem (ch. v and vii, 2–x, 21) of which the Synoptic account says nothing. Only in the case of the feeding of the 5,000 do the two accounts meet on common ground and here the differences are as prominent as the resemblances. While the Fourth Gospel, like the Synoptics, thinks of a ministry in Perea (cf. x, 40) and also, like them, follows this with an account of the events of Passion Week and of the resurrection appearances, it relates an almost entirely different set of incidents, and in the few identical cases the account itself is characteristically different.

The Synoptic account reflects the *popular* tradition, of a broad and general character, of Jesus' ministry. Our gospel covers only a few selected incidents and deals with these in a very intensive and personal way. The incidents are largely of a more private nature. Note, for example, chs. xiii–xvii, devoted entirely to one evening's intimate fellowship of Jesus with His disciples.

It would seem that the author of our gospel used the Synoptic outline, assuming it to be

well known, as a working basis, and tried to adjust his own very different account to this in such a way as to cause the reader, already familiar with the Synoptic account, no serious disturbance of mind. That he succeeded admirably everyone must admit. On points of chronology he was particular. The indeterminate length of the ministry in the Synoptic account is corrected by noting the feasts — especially three Passovers — which show that the ministry covered more than two years. The cleansing of the Temple is placed at the beginning instead of the end of the ministry. The opening of the ministry in Galilee did not follow *immediately* upon the recognition of Jesus by John (cf. i, 35ff., and iii, 24, with Mark i, 13, 14). The last supper was on *the night before* the Passover and Jesus was crucified on the feast-day itself, not a day later, as in the Synoptics.

As to the *style* of Jesus' discourse there is a very remarkable difference between our gospel and the Synoptics. The parables are absent, although Jesus speaks in figures. In the Synoptics Jesus usually talks in a popular, simple, straightforward way and the common people hear Him gladly or with interest. In our gospel Jesus' speech is allusive, obscure, figurative, perpetually provoking question as to His meaning, even when speaking most confidentially to His disciples. The subjects of His discourse are not the same. In the Synoptics Jesus talks only rarely about Himself, mainly about conduct, morality, religion in the broad sense and the life it calls for. In our gospel His subject is mainly Himself: His significance, His relation to the Father, belief in Him, etc. In the Synoptics, His audience is usually the masses — the common people to whom He ministered as a physician to the sick with His "good news" of the Kingdom. In our gospel His audience is usually either some isolated individual, or the (hostile) "Jews," or His disciples.

Finally, our gospel differs from the Synoptics in that it is very definitely a *theological* writing, which cannot be said of the other gospels. The gospel opens with a section that is doctrinal in the fullest sense, a section which no one but a profound theologian could have composed. And throughout the work, in apparently simple language, doctrines of highest importance are set forth. Nothing like this is found in the Synoptics.

The facts mentioned thus far are patent to all. No theory of the gospel's origin can be accepted that fails to give a reasonable explanation of them.

III. Internal Evidence as to Authorship. — Turning now to the question of authorship, we shall consider first the *internal* evidence. That is, what evidence, explicit or unintentional, does the book furnish as to its author, or the time and place of its composition.

Explicit statements are few and not definite. Such are i, 14f, "*we* beheld his glory," "of his fulness have *we* all received," and xix, 35, "He that hath seen (the blood and water) hath borne witness." To whom do "we" and "he" refer? Is there here a claim or assertion by the author that he was a personal disciple of Jesus? Such seems to be the view of xxi, 24, but this is in the appendix, the authorship and date of which is a problem by itself. We also find hints concerning a disciple, indefinitely indicated as present (i. 35–42), at other times designated as the disciple "whom Jesus loved" (xiii, 23; xix, 26; xx, 2), or simply as "the other disciple" (xviii, 15; xx, 4, 8). So far as our limited knowledge of the Apostolic Age permits a judgment, these allusions can refer to but one individual, the Apostle John, one of the three "pillars" (Gal. ii, 9) and one of the three disciples closest to Jesus (Mark ix, 2ff. and ||s; xiv, 32ff. and ||s). In the passages cited it is not expressly claimed that the unnamed disciple was the author of the gospel or the main source of its contents, but xix, 35, taken in connection with verses 25 and 26, implies this, and such is the view of ch. xxi (cf. v. 24).

It is entirely in harmony with such a claim that our gospel assumes an intimate acquaintance with the minute details of Jesus' ministry, —the very hour when events took place, how He sat "thus" on the well-curb, details of topography, etc.,— and with the Judaism of the time when Jesus lived. It will probably be conceded by every impartial critic that no serious error has been proved against the gospel. The alleged anachronism in the name "sea of Tiberias" collapses in view of Josephus' similar, although not exactly identical, expression in his history of the Jewish War (iii, 3, 5; iv, 8, 2) written between 75 and 79 A.D. The alleged scientific objection to the "blood and water" (xix, 34) is shown to be baseless by Sir A. R. Simpson, M.D., in 'The Expositor,' 1911, Vol. II, pp. 300 ff. Many apparent improbabilities, indeed, suggest themselves, but these are not proofs that the work does not rest upon the testimony of an apostle or eyewitness.

Such, in general, seems to be the claim or assumption of the book itself, and it has been commonly received for centuries as guaranteeing apostolic authorship. But the book also gives other evidence regarding itself on which the chief stress is laid to-day by many critics and which, it is claimed, makes it impossible to hold to apostolic authorship, and necessitates a date not earlier than the first decade of the 2d century. Very briefly stated this evidence consists in the distinctly *theological* character of the Fourth Gospel and especially in the mature and developed type of its theological conceptions. The use made explicitly in the prologue of the Logos-idea and implicitly (it is claimed) throughout the book, which ever has in mind the Logos-Christ; the central significance assigned to the person of Christ, the (Logos) Son, the revealer of the Father and imparter of eternal life to those who come to know Him; the highly spiritualized eschatology in contrast to the realistic type of the Synoptics; and in general the indications that the author was familiar with and had assimilated the main Pauline doctrines, but had sought to modify or complete them in certain important respects,— such facts, it is claimed, point decisively to some one of the post-apostolic generation as the author. It is also claimed, and not without reason, that the author had in mind certain Docetic and Gnostic errors which he attempted to refute, errors that were particularly prevalent and dangerous in the first decades of the 2d century. Admitting the correctness of these observations, the problem is, do they *decisively prove* that the gospel could not have been written by the Apostle John?

Arguments drawn from the *structure* of the book are of uncertain value. In both style and structure the gospel is unique and amenable to no rule. Certain sections, as chs. v and vi and chs. xv and xvi, appear to have been shifted from their original positions, but minute study reveals so many instances of abrupt transitions, of broken or interrupted narrative or discourse, and of unexplained situations that the simple hypothesis of misplaced sheets (of the original MS.) will not suffice. It is a case either of extensive editing by a later hand of a document originally shorter and more orderly than our present gospel, or of a work unique in character and quite careless of ordinary rules of composition. If it is a case of editing, the task of ascertaining the scope and order of the original (apostolic?) material is a hopeless one.

One must admit, therefore, that the internal evidence, drawn from the book itself, is not clear, either as to its date or author. It seems to claim an eyewitness of Jesus' ministry, even a "beloved disciple," as its author. On the other hand, the quality of its theology and the stage of theological development and the character of the theological controversies presupposed in the book seem to indicate a date when authorship by an apostle becomes very questionable. Its other internal characteristics are not decisive.

IV. The External Evidence.—The testimony of early Christian writers after about 160 A.D. is practically unanimous as to the early date and Johannine authorship of the gospel. Even the sole known exception, the small and obscure group in Asia Minor, later called the Alogi, with possibly the Roman presbyter Gaius, did not dispute the early date, though they asserted that the gnostic Cerinthus was its author. Such writers as Theophilus of Antioch, Irenæus of Lyons, Clement of Alexandria and Tertullian of Carthage assumed that the Johannine authorship was indisputable. They knew of no other tradition. But as our inquiry is pushed back toward the beginning of the 2d century traces of the use or knowledge of the gospel become increasingly uncertain. It must be remembered, however, that the same thing is measurably true of each one of the Synoptics, especially Mark, the oldest gospel of all. Justin Martyr (140–50 A.D.) almost certainly used our gospel as the work of the Apostle John. Ignatius of Antioch (110–17 A.D.) was acquainted with its type of thought and may have read it. Both Papias (c. 140 A.D.) and Polycarp (110–17 A.D.) made use of 1 John, which speaks for rather than against their knowledge of the gospel, but this is all that can be said with confidence. The evidence that Basilides, the Egyptian Gnostic (c. 130), used our gospel is strong, though not free from uncertainty. That I Clement, written in the West, at Rome, about 96 A.D. contains no allusion to this gospel is not surprising. In case the gospel was written in Asia between 90 and 100 A.D. a reasonable time must be allowed for it to have become generally circulated and known as familiarly as the older gospels were. When this is taken into consideration the evidence for the gospel compares very favorably with that in favor of Mark, for example.

The reliability of the tradition that the Apostle John lived "to the times of Trajan" (98–117), as it is expressed by Irenæus, and that the later part of his life was spent in Asia (Ephesus) has been emphatically disputed by many critics, especially since DeBoor proved from newly-discovered evidence that Papias probably said something about John being put to death by the Jews. But the exact wording of Papias' statement has not been recovered, nor the context to which it belonged. Until we have more than only a few fragments of Papias' work in our hands, we shall not be able to base any conclusions on what he may have said or meant. Irenæus' testimony as to how he himself, in his youth, heard Polycarp of Asia speak of his intercourse with the Apostle John is positive and cannot easily be brushed aside. Then there is the obscure figure of an "Elder" named John, spoken of by Papias, who may have become confused, even as early as c. 140–50 A.D., with the Apostle John.

V. Conclusions.—The decision of the critical question is, it is evident, beset by great difficulties. The external evidence, while on the whole favorable to Johannine authorship, is not strong enough to be considered decisive. The internal evidence is conflicting. It is both for and against the traditional view. Each of the opposing views can be supported with forcible arguments, and a decision will probably be found to rest mainly on one's personal equation.

No one knows (historically) when the Apostle John died, nor where or how he spent his last years. No one knows what were his mental and spiritual gifts. No one can say that he could or could not have written such a book as the Fourth Gospel. But these things are practically certain: the Fourth Gospel must have been composed *after* the Synoptic tradition was generally accepted. It was composed by one who was richly endowed with spiritual insight, who had a profound Christian experience, and who had thought deeply on some of the greatest problems of theology and was able to discuss or state them in marvelously simple and concise language. Can any one say positively that an aged apostle could not have planned deliberately a "spiritual" gospel in which the words and deeds of Jesus were to be treated symbolically rather than literally?

However the problem of authorship may eventually be solved, the fact remains that in the Fourth Gospel the Christian Church possesses a treasure of priceless worth. To the spiritually minded of all the Christian centuries this gospel has ministered more effectively, probably, than any other New Testament Book. It has spoken untold comfort to the troubled and sorrowing. A mystic influence emanates from it and under its spell God and eternal life become realities of experience. Whoever wrote it had sounded the depths of the revelation of Christ. Through its influence the early Church was enabled to clarify and unify its faith, and realize the full significance of the gospel in an age when subtle speculations threatened to strangle its life and confuse its mind.

Bibliography.—The literature on the Fourth Gospel (including usually a consideration of the Epistle of John) is extraordinarily extensive and cannot be listed here. The most serviceable recent list will be found in Moffat's 'Introduction to the Literature of the New Testament' (New York 1915). Of special importance are the following: Zahn, 'Introduction to the New Testament' (Vol. III, Edinburgh

1909); Feine, Paul, 'Theologie des neuen Testaments' (2 Aufl. Leipzig 1910, pp. 514–631); 'Encyclopædia Biblica' (Vol. II, New York 1901, articles "Gospels" and "John, Apostle"); Bacon, B. W., 'The Fourth Gospel in Literature and Debate' (New York 1910); Stanton, V. H., 'The Gospels as Historical Documents' (Part I, Cambridge 1903); Sanday, W., 'The Criticism of the Fourth Gospel' (New York 1905); Drummond, J., 'The Character and Authorship of the Fourth Gospel' (London 1903); Scott, E. F., 'The Fourth Gospel' (Edinburgh 1906); 'Cambridge Biblical Essays' (New York 1909, pp. 251–329); Findlay, G. G., 'Fellowship in the Life Eternal' (on 1 John, London 1909); Latimer, Jackson, 'The Problem of the Fourth Gospel' (Cambridge 1914).

EDWARD E. NOURSE,
Professor of Biblical Theology, Hartford Theological Seminary.

JOHN, Order of Saint, a military religious order of mediæval origin. The Knights Hospitallers of Saint John, subsequently known as Knights of Rhodes, and lastly as Knights of Malta, were once a great power in Christian Europe. The origin of the order is unknown, but most probably it was early in its history that a rich merchant of Amalfi built not far from the Holy Sepulchre at Jerusalem a certain church known as Santa Maria della Latina, with a monastery for monks, under the rule of Saint Benedict, and a hospital for pilgrims. The first patron of the order seems to have been Saint John the Compassionate, patriarch of Alexandria in the 7th century. Afterward Saint John the Baptist was chosen patron, and the Benedictine brethren assumed the title of Johannites, or Brothers Hospitallers of Saint John. Pope Paschalis II in 1113 gave them the privilege of electing their own rector. Later, in addition to the vow of poverty, chastity and obedience they were pledged to make war upon the infidels, and assumed a black cloak with a white cross on the left side. The members were divided into three classes, knights of noble birth, the fighting class, priests bound to the service of the Church, and brethren of service who took care of the sick and acted as guides to the pilgrims. In 1291 the order was driven from Palestine by the conquests of the Saracens, and after holding Cyprus for a time they occupied Rhodes in 1309, from which they were ultimately driven by Sultan Soliman II in 1522. After that the knights retired to Candia and other places, but finally to Malta, which Charles V granted them in 1530. Here they continued to be a bulwark of western Europe against the Turkish navies till modern times. The chief of this order, which had great possessions in almost every part of Europe, was called "Grandmaster of the Holy Hospital of Saint John of Jerusalem, and Guardian of the Army of Jesus Christ." He lived at Valetta, in the island of Malta.

The military duty of the knights consisted in taking the field at least three times against the Turks or the pirates of Barbary. In war they wore a red jacket or tabard, charged with a white cross. In 1798 Malta was unexpectedly attacked and taken by Bonaparte, and about the same time the extensive properties belonging to the order in various countries were confiscated. This may be considered the end of the order as a vital institution, although shortly after the capture of Malta, Paul I, who had been chosen grand master, took the order under his protection, and it still exists nominally at least. After the death of Paul the nomination of the head of the order was vested in the Pope.

JOHN, Saint. See SAINT JOHN.

JOHN OF AUSTRIA, commonly called **DON JOHN OF AUSTRIA,** Spanish general: b. Ratisbon, Bavaria, 24 Feb. 1547; d. near Namur, Belgium, 1 Oct. 1578. He was an illegitimate son of the Emperor Charles V by Barbara Blomberg. In 1550 he was sent to Spain where he was brought up under the care of Don Luis de Quijada at Villagarcia near Valladolid. The will of Charles V recognized him as his son and recommended him to Philip II, who created him a prince of the house of Austria. In 1568 he was placed in command of a squadron which fought the Barbary pirates, and in 1569 undertook the suppression of the Morisco rebellion in Andalusia, in which he was most successful. In 1570 he conducted a campaign against the Moors of Granada with great vigor and relentlessness, and in the following year commanded the allied fleet which won the great naval battle of Lepanto over the Turks (7 Oct. 1571). In 1576 he was appointed governor of the Netherlands, and had won with the Prince of Parma the victory of Gemblours (1578) over William the Silent, when he died suddenly, not without suspicion of having been poisoned by his jealous half-brother, Philip II, but for this belief there is no evidence. Consult Motley, 'The United Netherlands' (New York 1900); Stirling-Maxwell, 'Don John of Austria' (1883).

JOHN THE BAPTIST, the "forerunner" of Jesus the Christ. He was the son of Zacharias, a Jewish priest, whose wife, Elizabeth, was also of a priestly family. The dates neither of his birth nor of his entrance on his public work can be fixed with unmistakable certainty. For his birth, dates varying from 8 to 4 B.C. have been proposed, and the beginning of his ministry must have been about 26 to 28 A.D. According to Luke he was born when his parents were extremely old, and the evangelist adds a story of great beauty about the vision of Zacharias while engaged in his priestly duties in the Temple, and the visit to Elizabeth of her relative Mary, the Virgin Mother of Jesus. Of the life of John before he steps out into public activities we know little. The home of his parents was in one of the hill towns of Judea, but there is no good ground for naming any particular city, as has sometimes been done. From his birth he had been dedicated as a "Nazarite," that is, he was under obligation to allow his hair and beard to grow untrimmed, to refrain from all use of wine and other intoxicants, and especially to avoid every contact with a dead body. He seems while still young to have decided not to take the honored office of priest which would have been his by hereditary right and to have withdrawn to the desolate and lonely desert of Judea, which the presumably early death of his parents would leave him quite free to do. There he lived with the utmost simplicity, dressed in a robe of coarse camel's hair cloth

and eating the locusts and wild honey which abounded in that wild region to the west of the Dead Sea. The notion that he was associated with the Essenes, ascetics dwelling in communities in the desert, though earlier held by some, has nothing in its favor and has now scarcely any advocates.

It is not surprising that when John suddenly began to preach he aroused wide and deep interest amounting to general enthusiasm at first throughout Judea, and then elsewhere as he extended his ministry along the whole Jordan Valley. The very figure of the gaunt and meanly clad desert dweller must have been striking; his vehement warnings against sin and demands for thoroughgoing repentance were most impressive, and these were re-enforced by the assertion that the prophecies of the King and divine kingdom to come which had so long sustained the faith and rekindled the hopes of Israel were now near to fulfilment. Never had the summons to repentance been so vehement, and never had it been re-enforced with such a motive, "The expected King will speedily set up his promised kingdom of righteousness: repent, therefore, that by righteousness the nation may become fit to receive its King." Throngs of all classes of society flocked to listen to hear the trumpet message of the desert evangelist, and multitudes were plunged in baptism beneath the waters of the Jordan in token of their obedience to his message, pledging themselves as penitents to the service of the "One who was to Come."

But the most significant point in the ministry of John was reached when Jesus came from Nazareth and in spite of protestations insisted on baptism at his hands. The details of the event are not fully recorded. The later statement of the Baptist that he had not known Jesus before his baptism may mean only that before that he had no grounds for definitely recognizing him as the Messiah whose coming he was foretelling, or it may mean that in spite of their possibly remote cousinship John and Jesus had had no previous personal acquaintance at all. The hesitation of John to baptize Jesus may have rested on earlier knowledge of his character, but it may also have developed at the first interview. It is frequently assumed that the heavenly sight and sound which we are told accompanied the baptism were shared by the crowds who are supposed to have been present, but this is nowhere asserted, nor indeed is it necessarily implied that any others than John and Jesus were present at the time. The Synoptic Gospels deal chiefly with the work of John up to the baptism of Jesus, while the Fourth Gospel gives his testimony to Jesus afterward, and so there is no such inconsistency between the reports as is sometimes said to exist. According to the Fourth Gospel, which purports to be by the Apostle John, possibly a relative of the Baptist and at any rate one of his followers, the impression made by the baptismal scene was such that he was convinced that the Messiah had now come, and while he did not modify his preaching, leaving it to Jesus to reveal himself in his own way, he privately pointed him out as "The Lamb of God who should bear away the sin of the world," and some of his disciples consequently at once transferred their allegiance to Jesus.

That after this clear recognition John sent some of his disciples to seek from Jesus an explicit assertion of his Messiahship has sometimes been explained as due to a desire to obtain confirmation of the faith of these disciples, but the answer of Jesus makes it probable that it was due to some lack, at the time at least, of positive conviction in John's own mind, perhaps because the method of Jesus in presenting himself to the nation was not what John had expected, an uncertainty very probably intensified by the depression which his imprisonment may be presumed to have caused or intensified. But in the discourse which followed Jesus took occasion to eulogize John as greater than any of the prophets, as the greatest man who had ever lived.

After his recognition of Jesus as the One for whom he was preparing the way, John continued his work for a time, perhaps for some months, presumably with the feeling that the people still needed in mind and life the work which he had been doing. But his fidelity to his mission as a preacher of repentance and right living soon cost him his liberty and in the end his life. Herod Antipas, the ruler under Rome of Galilee and Perea, had taken to himself the wife of his brother Philip. This doubly adulterous connection John denounced openly and apparently to Herod's own face, having perhaps been summoned by him to preach at court. This aroused such a fury of hate, especially in Herodias, the woman in the case, that John was imprisoned in the fortress of Machærus near the Dead Sea, in the ruins of which marks of fetters may still be traced on the walls of the dungeons. Finally after perhaps months of hesitation on the part of Herod, by the shameful artifice of allowing her daughter Salome actually to appear as a dancing girl before Herod and his guests at a feast, he was induced to swear that he would give the girl whatever she asked, and when she demanded in fulfilment of this rash promise "The head of John the Baptist on a platter at once," he was beheaded in the prison and the head was carried to Herodias, who is said to have wreaked her fury on the inanimate object of her hate. There seem to have been for years groups of men who were known as disciples of John the Baptist, but with this tragedy his great influence ended, for though, as Jesus called him, he was "a light that burned and shone," yet as he himself said in his forecast of his relation to Jesus, "He must increase, but I must decrease."

DAVID F. ESTES,
Professor of New Testament Interpretation, Colgate University.

JOHN BROWN'S BODY, a famous marching song of the Civil War, the origin of which has for years been in dispute. It has been generally credited to C. S. Hall of Charlestown, Mass. (1861). The words were applied

to an old tune common in England in the 18th century.

"JOHN BULL," a popular nickname or sobriquet applied to England or to its citizens. In 1712 Dr. John Arbuthnot (q.v.) wrote a political allegory entitled the 'History of John Bull.' It was designed to ridicule the Duke of Marlborough and to render the Continental War then raging unpopular. Aside from its immediate object, it is one of the best humorous compositions in the English language. Each of the European nations had a designation in the work; the French were "Lewis Baboon," the Dutch, "Nicholas Frog," etc. The sturdy English yeomen and the English public in general were amused with the apt cognomen in spite of the satire intended, and it was adopted by the people with such hearty good will that it has been popular ever since in all parts of England.

JOHN THE CONSTANT, Elector of Saxony: b. 30 June 1468; d. Schweidnitz, 16 Aug. 1532. He was fourth son of Elector Ernst and lived during youth at the court of his great-uncle, Emperor Frederick III. He took part in the campaigns of 1494 and 1499 and succeeded his brother, Frederick the Wise (1525), as Elector, declaring himself emphatically in favor of the Reformation. In 1526 he joined the Torgau Union hindering the agitations of the followers of the old faith and placing his coreligionists in the position to form a unanimous party at the Diet of Speyer. Using the power given him over Church matters he instituted (1527-29) visitations throughout his domain of the Evangelical State Church of Saxony. In 1530, at the Diet of Augsburg, he opposed the emperor fearlessly on the question of the confession. In 1531 he united the Protestants in their defense with the Schmalkaldic League.

JOHN CRERAR LIBRARY, The, a free public library, established in Chicago, Ill., in 1894, in accordance with the provisions of the will of the late John Crerar. Mr. Crerar, a prominent merchant of the city, had no near relatives and left $600,000 in personal bequests, nearly $1,000,000 to many of the charities of the city and the remainder of his estate, then valued at not quite $2,500,000, to the library. In 1917 the library had a total income of $235,000, of which $33,000 were spent for the increase of the library, $42,000 for rent, $83,000 for maintenance and $41,000 set aside for a building fund. Land has been purchased at the northwest corner of North Michigan avenue and Randolph street, opposite the Chicago Public Library, and plans have been prepared for an 11-story building of Romanesque style. A portion of the site will be occupied as temporary quarters until circumstances permit building. By agreement with the other public libraries of the city, the library limits its scope to the sciences and useful arts. The field is defined and the development attained is indicated by the following statement of the departments established and the number of bound volumes in each on 1 June 1918: Social sciences, 103,035; physical sciences, 30,345; natural sciences, 37,079; medical sciences, 71,869; applied sciences, 77,795; general works, 53,233. Such a library of course attracts special classes of readers: of these, physicians are the most numerous, engineers second, chemists third and teachers fourth. The library is especially strong in sets of periodicals and society transactions and also contains special collections on aviation, cremation, eye and ear and medical history.

JOHN OF DAMASCUS, Saint; also known as JOHN DAMASCENE and JOHN CHRYSORRHOAS ("gold-streaming" — eloquent), the last of the Greek fathers: b. Damascus toward the end of the 7th century; d. about 753. The son of a Syrian Christian bearing the Arabic name of Mansur, who held a government office in Damascus under the Saracen Caliph Abdul Malek, John received an excellent education in theology and philosophy from an Italian monk named Cosmas, a prisoner of war in Saracen hands. All that is known of the life of John is derived from a scanty biography written in the 10th century by the patriarch John IV of Jerusalem, who culled his material from an earlier Arabic biography. The "life" is embroidered with some fabulous details, including the famous legend of his right hand being cut off by order of the Greek emperor, and afterward miraculously restored. About 730 A.D. John sold his property, gave the proceeds to the poor and buried himself in the monastery of Mar Saba (Saint Sabas), between Jerusalem and the Dead Sea. His greatest theological work is the 'Fountain of Knowledge,' a systematical theology founded on Aristotelian metaphysics and the writings of Leontius of Byzantium. For a short time he officiated as priest in the church at Jerusalem, but returned to the monastery to devote himself to writing. His zeal for image-worship brought him into conflict with the iconoclasts, against whom he indited three essays or diatribes, between 726 and 736. These excited much discussion and criticism. Included in his works is an essay in defense of image-worship, addressed "to all Christians and to the Emperor Constantine Caballinos and to all Heretics," which is not regarded as genuine. He died in the monastery and was buried there; the body is said to have been removed to Constantinople in the 14th century. The most authoritative theologian of the Eastern Church, he is honored as a saint in both the Greek and Latin churches. The biography referred to above was published in Rome 1553, and an edition of his works — in Greek and Latin — by Father Lequin, appeared in Paris in 1712 and was reprinted in Verona in 1748.

JOHN DOE, a fictitious name given to unknown plaintiffs or defendants in law. In former times the name was applied to the fictitious lessee of the plaintiff in the mixed action of ejectment, that of the fictitious defendant being "Richard Roe."

But if the lessor made out his title in a satisfactory manner, then judgment and a writ of possession were awarded to John Doe, the nominal plaintiff, who by this trial had proved the right of John Rogers, his supposed lessor.— Blackstone.

JOHN DORY. See DORY.

JOHN THE FEARLESS, or **SANS PEUR,** DUKE OF BURGUNDY: b. 1371; d. 10 Sept. 1419. He was son of Philippe the Bold and joined King Sigismond of Hungary with the French army for the crusade against the Turks. He was taken prisoner (1396) at the battle of Nikopolis and was released on pay-

ment of a ransom of 200,000 ducats. He became Duke of Burgundy (1404) on his father's death. He was adverse to the extravagant Duke of Orleans, and, greatly provoked by the latter, brought about his assassination (1407), thereby rising to leadership in the state and to the rearing of the Dauphin. This gave rise to civil strife on the part of the Orleans adherents, and the lawless actions of the pro-Burgundian Paris mob — the *Cabochiens* — led (1413) to John's downfall. Henry V of England (1415) becoming his ally, he captured the capital (1418) with severe reprisals. Called by the Dauphin Charles for an interview he was murdered (1419) on the bridge crossing the Yonne near Monterean.

JOHN OF GAUNT, gänt or gânt, DUKE OF LANCASTER, English soldier: b. Ghent, Flanders (whence his name), 1340; d. London, 3 Feb. 1399. He was the fourth son of Edward III and his queen, Philippa of Hainaut. He was created Duke of Lancaster in 1362; served in the French wars, and became governor of Guienne. He assumed in right of his wife the title of king of Castile, invaded that kingdom to assert his claims, but relinquished them in favor of Prince Henry of Castile, his son-in-law. He was a supporter of the reformer John Wiclif, and a patron of the poet Chaucer. Shakespeare introduced him as a prominent figure in the play of 'Richard II.' His eldest son, Bolingbroke, became king of England as Henry IV. Consult Longman, 'Life and Times of Edward III' (1869); Trevelyan, G. M., 'England in the Age of Wycliffe' (2d ed., 1899).

JOHN GILPIN, or in full "The Diverting History of John Gilpin showing how he went farther than he intended and came safe home again," is a famous humorous ballad by William Cowper, written about October 1782 and printed anonymously the next month in the *Public Advertiser*. The runaway adventure it describes is said to have happened to a certain John Beyer, linen draper, and the name John Gilpin is thought to have been taken from a tombstone in Saint Margaret's, Westminster. It is more certain that the story was told Cowper by his friend, Lady Austen, in order that she might relieve him in one of his periods of gloom. He is said to have been so amused that he could not sleep until he had got out of bed and written down some of the stanzas as they had come to him. Then he polished and added, sending portions across the street for the approval of a jocular barber friend. When published, the poem made its way fairly well, but it broke away like Gilpin's horse and got its great start toward its unbounded popularity through the recitations of it given in 1785 by the actor Henderson. The same year it was included in the same volume with 'The Task,' and doubtless helped to make that a success. It has never since declined in popularity, and one fails to see how it ever can, so long as people display a propensity to laugh at the not clearly dangerous misadventures of others, and so long as a free natural style and a genuine fund of humor varying from arch to almost rollicking are as rare as they seem to be among literary gifts.

WILLIAM P. TRENT.

JOHN HALIFAX, GENTLEMAN, a novel by Dinah Maria Muloch Craik, in which the hero, John Halifax, one of "nature's noblemen," beginning life as a poor boy, works his way up to prosperity and happiness, by means of his high principles, undaunted courage and nobility of character. The heroine is Ursula March; and the simple domestic story includes few minor characters. The interest lies in the development of character: and the author's assertion is that true nobility is of the soul and does not inhere in wealth, in learning or in position; and that integrity and loftiness of purpose form the character of a true gentleman.

JOHN INGLESANT, by J. Henry Shorthouse, a well-known novel first published in 1881 belongs to the type of fiction represented by Kingsley's 'Hypatia' and Pater's 'Marius the Epicurean.' The author called it a "philosophical romance," designing it to be a means of presenting philosophy under the guise of fiction. The method is generally that of Reade's 'The Cloister and the Hearth,' by which is unrolled a panorama of the life of a period in various lands. 'John Inglesant' is, however, concerned far less with a brilliant picture of personalities and customs in many countries than with expositions of dominant religious and political ideas. The hero from whom the book takes its name is the descendant of a family established and enriched during the religious transformations of Henry VIII, but his own time is that of the Commonwealth. Educated under the influence of a Jesuit with a view to future services to the Roman Church, he becomes an important member of King Charles's *entourage* and as such not only sheds his blood in the Royalist cause but meets representatives of nearly all the English factions and sects. As a confidential emissary of the king, he barely escapes suffering his master's fate. On his release from two years' imprisonment he goes to France, where he mingles with the Royalist refugees and becomes acquainted with important types of French religious thought. An important mission leads him to Italy, where he remains for several years, influenced by and influencing, as well as merely observing, the intricate play of religious politics and faiths, of character and custom, until his final return to England. Throughout the chief end of the novel is to represent a cross-section in several countries of a dominant interest and to expand various views, to such a degree, indeed, that the personal characters are very much obscured and the people become rather types and mouthpieces than individuals.

WILLIAM T. BREWSTER.

JOHN OF LEYDEN, lī'dĕn. See ANABAPTISTS.

JOHN OF NEPOMUK, or **POMUK,** patron saint of Bohemia: b. Nepomuk, about 1330; d. 20 March 1393. He is considered as the protector of those falsely accused and of those in danger of drowning. He is said to have been made master of arts at Prague after being consecrated to the priesthood. There is very much difference between the accounts that have come down to us concerning the life of this saint and but little reliable historical facts. There are even claimed to be two personalities embodied in the legendary incidents at hand.

He was preacher in the Teynkirche at Prague, soon thereafter elevated to canon of Saint Veit's, then provost of All Saints'. Later he was appointed almoner of King Wenceslas IV and father confessor of Queen Johanna. For refusing to divulge the queen's confessions in spite of the king's threats and after all tortures had failed to extract the secrets of the confessional, he was, on the eve of Ascension Day 1383, thrown into the river Moldau. History also tells of a John of Nepomuk drowned by Wenceslas from which the legend borrows some features. One fact is assured, that he was killed 20 March 1393 for differences of opinion in Church politics. The fact that Benedict XIII, in 1729, canonized a man whose existence is not provable gave Schmude, in his 'Geschichte des Lebens und der öffentlichen Verehrung des ersten Märtyrers des Beichtsiegels' (Innsbruck 1883), the idea that there were two Nepomuks. Abel attempts to make this saintly episode an allegory of the heretical Hus. The legend has given rise to the symbolic emblem of a padlock on the lips of a figure being used as representative of this saint in art. Consult Frind, 'Der geschichtliche Johannes von Nepomuk' (2d ed., Prague 1871), and 'Der heilige Johann von Nepomuk' (ib. 1879); Reimann, in Sybel's *Historische Zeitschrift* (Vol. XXVII).

JOHN NEPOMUK SALVATOR, Archduke of Austria and Prince of Tuscany: b. Florence, 25 Nov. 1852; d. —— 1891. He was the youngest son of Archduke Leopold II of Tuscany, became colonel (1876) with command of a regiment at Komorn, then (1878) commander of an infantry brigade at Vienna; then mayor-general, commanding a brigade in the army of occupation at Bosnia. In 1879 he was commander of a division, and was transferred to Lenz (1883–87), commanding the 3d division, as a disciplinary measure for publishing his 'Drill oder Erziehung' (Vienna 1883) criticizing the leaders of the army. He was suddenly deprived of his command in consequence of his arbitrary claim to the Bulgarian throne. In 1889 he resigned every dignity and rank and took the name of Johann Orth, from the title of his castle near Gmunden. He then went abroad and, having passed his examinations as ship's captain, he purchased, equipped and manned a merchantman, the *Margerita,* and sailed from Hamburg for South America. It is generally conceded that he suffered shipwreck on the coast of South America and lost his life, not a soul, however, surviving to corroborate the fact. Legendary stories of his living with his brother Archduke Ludwig Salvator of Tuscany at Majorca and other fabrications have been denied by those best able to know. He also wrote 'Betrachtungen über die Organisations der österreichischen artillerie' (Vienna 1875); 'Geschichte des kaiserlich-königlichen Linien-Infanterieregiments Erzherzog Wilhelm Nr. 12' (ib. 1877–80, 2 vols.). He wrote the text for the ballet 'Die assassinen,' and wrote adversely of spiritualism in 'Einblicke in den Spiritismus' (Linz 1885, 5th ed.). Consult Heinrich, 'Erzherzog Johann, mit Beiträgen zur Geschichte der Begründung der Zweiten Dynastie Bulgariens' (Vienna 1901).

JOHN O'GROAT'S HOUSE. In the reign of James IV of Scotland, about 1489, John of Groat, or Groot, from Holland, settled on some land on Duncan's Bay Head, the most northerly point in Great Britain and was followed by a number of brothers. This would appear to be historic fact as descendants of the Groats still live in these parts. The mythical part of the story has two versions. One of these states that there were seven brothers who came from Holland to join John and consequent disputes arose as to family precedence, which induced John to build a house of octagon shape having one room, eight windows and eight doors, and containing an octagonal table. This permitted each branch of the family to enter by its own particular door and sit at its own particular part of the table, and left no room for dispute as to precedence of entry or place at table. The other version declares the disputants were eight sons of John O'Groat and they caused him to invent this form of structure to dispel the trouble. The foundation stones and lines on a green hummock are all that remains of the building; a hotel, erected nearby, with an octagonal tower commemorates the name since 1876. Burns mentions "frae Maidenkirk to Johnny Groat's." The phrase "from John O'Groat's to Land's End" is a term long in use expressive of the entire length, 994 miles, of Great Britain which is included in these two geographical extreme locations at the most northerly and the most southerly points.

JOHN THE PARRICIDE, known also as **JOHN OF SWABIA:** b. 1290; d. about 1313. He was son of Duke Rudolph II of Swabia, brother of the German Emperor Albert I and was reared in the Bohemian court. He demanded, when he became of age, a share in the Hapsburg domain, and, upon refusal by his uncle, he took a vow, spurred on by the archbishop of Mainz, against the king's life. While Albert was crossing the Reuss (1 May 1308) near Rheinfelden he, together with three knights, forced his way on to the vessel and, separating the king from his retinue killed him on the opposite bank of the river. He and his companions were outlawed and pursued vigorously till he took refuge in a monastery, becoming a monk. His end is unknown, but there is a story that he died, in monk's garb, repentant (1313) at the feet of Emperor Heinrich VII at Pisa. Schiller makes use of this character in 'Wilhelm Tell.' Consult Mücke, 'Albrecht von Hapsburg' (Gôtha 1866).

JOHN PAW, a large and beautiful grouper (*Epinephelus Drummond-Hayi*), which is dark umber brown densely covered with small white pearly spots. It inhabits the Gulf of Mexico and is valued as a good fish in Florida. It is also known in the Bermudas, where it is called "speckled hind."

JOHN OF SALISBURY, English historian and prelate: b. Salisbury, about 1120; d. 25 Oct., probably 1180. He is mentioned in documents often as Johannes Saresberiensis. He studied at Paris and Chartres under Abélard and Gilbert and accompanied (1148) Pope Eugenius III to Italy, returning to England (1153 or 1154) to enter the service of the archbishop of Canterbury. After the fall of Archbishop Thomas à Becket, he fled with Henry II to France, returning (1170) with Becket and, after the latter's assassination,

wrote his biography. He was appointed (1174) thesaurus of the capital at Exeter and (1176) bishop of Chatres. He was a lovable, cultured prelate, learned and broad of view, a philosopher, theologian, jurist and historian, honored by his contemporaries. His 'Metalogicus,' that sharply censures formal scholasticism, and his 'Polycraticus,' a clerico-political philosophy, show the classic culture of his mind. His letters are a valuable source for contemporaneous history. His works have been edited by Giles (Oxford 1847–48; 5 vols.). Consult Schaarschmidt, 'Johannes Sarseberiensis' (Leipzig 1862); Denimuia, 'Jean de Salisbury' (Paris 1873).

JOHN B. STETSON UNIVERSITY, a coeducational school founded in 1884 at De Land, Fla., under the auspices of the Baptist denomination. The institution was first called De Land University, but in honor of John Batterson Stetson (q.v.), who has given large gifts to the institution, nearly all of the buildings and the campus, the name has been changed. The departments are a preparatory, schools of music, law, art and technology, a normal and practice school for teachers, a business college and a college of liberal arts. The courses lead to the degrees of bachelor of arts, laws and philosophy, and to degrees of bachelor of civil, electrical and mechanical engineering. The school in 1898 made arrangements with the University of Chicago, whereby the graduates of the college of liberal arts, who have a high standing in their studies, may receive corresponding degrees from the Chicago institution. In 1917 the number of students in attendance was 487, the number of professors and instructors 40. The endowment fund amounted to about $1,000,000 and the income to $40,000. The library contains over 24,000 volumes. The campus of 35 acres and the well-equipped modern buildings are valued at $300,000.

JOHN STRANGE WINTER. See STANNARD, HENRIETTA.

JOHN WOOLMAN'S JOURNAL. Charles Lamb's advice, «Get the writings of John Woolman by heart,» is well known, and other sensitive and idealistic critics, English and American, have been equally enthusiastic over Woolman's chief work, his *Journal;* but among practical Americans of to-day it is to be feared that the book is oftener praised than read. It was begun when Woolman was 35 years old, and was continued until his death, in 1772, at the age of 52. Though it is called a journal, it goes back to recount the events of his whole life, particularly his spiritual experiences. It is notable that among the few American classics that have come down from the 18th century are the autobiographies of two men who represent opposed tendencies in American thought — Franklin and Woolman. In contrast with Franklin's extreme practicality stands Woolman's disregard of wordly things, and his readiness to sacrifice property, convenience, and bodily comfort for the sake of principle, and even for reasons of conscience so slight as to seem almost whims. Thus, on his trip to Europe he endured all the hardships of the steerage for the reason, as he says, "that on the outside of that part of the ship where the cabin was I observed sundry sorts of carved work and imagery; that in the cabin I observed some superfluity of workmanship of several sorts," and he felt a scruple against paying a passage rate that was greater because of these worldly adornments. Woolman was, however, no ordinary crank or eccentric reformer. The genuineness and sweetness of his character impel us to respect him when he goes to the greatest extremes in matters of conscience. He did not, like Franklin, pay deliberate attention to the mastery of style, but his singularly pure and limpid prose seems a natural expression of the man himself.

WILLIAM B. CAIRNS

JOHNNY CRAPAUD, kra'po' (toad), a popular nickname of the French nation, in a collective sense.

JOHNNY REB, a nickname given to the Confederates by the Federals during the Civil War, when they were usually termed «rebels» in the Northern States.

JOHNNY VERDE, or JUAN VERDE, a fish belonging to the genus *Paralabrax,* confined to the coasts of tropical America. The species *Paralabrax nebulifer,* known locally as the johnny verde, frequents our Pacific coast from Monterey to Lower California, where it is an important food fish. It is usually found in shallow water, grows to 18 inches length, is of a greenish color with mottlings irregularly pale and dark. The spotted *cabrilla, Paralabrax maculatofasciatus,* of this genus is found from San Pedro, Cal., to Mazatlan.

JOHN'S, Eve of Saint, the survival of a popular celebration of remote antiquity, held on 23 June, which in Christian times because the vigil or eve of the feast of the nativity of Saint John Baptist, 24 June (Midsummer Day). On the eve of the feast it was the custom in former times to kindle fires called Saint John's fires. This was indeed a continuance of those Teutonic and Scandinavian pagan festivals, which at the winter solstice were observed with Yule-fires, and at the summer solstice with similar beacon-fires, originally intended to communicate through the country the changes in the seasons announced by the priesthood, so as to direct the activities of agriculture and navigation. The burning of the Yule log at Christmas is a survival of these observances.

JOHNS HOPKINS UNIVERSITY, a university at Baltimore, Md., founded by Johns Hopkins, who was born in Maryland and amassed a fortune in Baltimore. He died in 1873 and bequeathed $3,500,000 to found a university. Opened in 1876, it is now one of the foremost universities in the United States. In 1902 a large tract of land in the suburbs of the city, comprising 176 acres (56 of which have been deeded to the city for a public park), was presented by several friends as a future site for the university. This noteworthy gift was followed within a few months by a generous contribution from alumni and citizens of Baltimore of $1,000,000 toward the permanent endowment of the institution. In the summer of 1916 the equipment of the university, in all departments but medicine and chemistry, was removed to the new site. A commanding structure named Gilman Hall (in honor of the first president of the university) houses the library and provides

seminary and classrooms for the non-laboratory subjects, besides offices of administration. It also takes care temporarily of the departments of zoology and botany. A separate building close by is equipped for plant physiology and botanical research work. There are two fine buildings for engineering, and the departments of physics, geology and undergraduate chemistry find temporary homes therein. The department of engineering was organized in 1912, funds for buildings and equipment having been appropriated by the State legislature. A most important part of the university is the medical school — begun in 1893 — occupying several buildings in the immediate vicinity of the Johns Hopkins Hospital. The most recent addition to the medical work is the school of hygiene and public health established by the Rockefeller Foundation, to be opened in 1917. Connected with the university is the Johns Hopkins Press, from which issue the *American Journal of Mathematics; The American Journal of Philology; Memoirs from the Biological Laboratory; Studies in Historical and Political Science; Beiträge zur Assyriologie; Modern Language Notes; Hesperia; Johns Hopkins University Circular; Terrestrial Magnetism and Atmospheric Electricity*, etc. The degrees of bachelor of arts, bachelor of science, bachelor of science in engineering, master of arts, master in engineering, doctor of philosophy and doctor of medicine are conferred. The university reported at the close of 1916 — professors, instructors and lecturers, 274; students, 1,668; number of graduates, 3,300; volumes in the library, 197,000; productive funds, $6,000,000; grounds and buildings valued at $3,360,000; value of books and apparatus, $633,000; income, $565,000. The university offers a large number of fellowships and scholarships for the encouragement of promising or needy students. Five endowed scholarships, three endowed fellowships, 10 university fellowship and 55 free tuition scholarships are open to college graduates. For undergraduates in arts and sciences there are 43 free tuition scholarships; for engineering students 129; for medical students seven. The university receives as students the following classes: College graduates, men or women, who may proceed to the higher degrees, or may work for longer or shorter periods in the various seminaries or laboratories without reference to a degree; undergraduate students looking forward to the degree of bachelor of arts, or of bachelor of science in engineering; candidates for the degree of doctor of medicine, for whom a four-year course is provided, and who may be either men or women; doctors of medicine desiring to pursue certain special courses; students who have not taken a degree, and are not looking forward to a degree, but who desire to avail themselves for a brief period of the opportunities here offered. College courses for teachers and others, at convenient hours in the afternoon and evening and on Saturday morning, have been provided for several years. In the autumn of 1916 the university inauguarated evening courses in business economics and in engineering subjects. Summer courses have been conducted since 1911. Work in these three groups may be credited toward the degree of bachelor of science. It is difficult to overestimate the influence of the Johns Hopkins University upon higher education in this country. There is scarcely an American college faculty that has not been enriched by the presence of one or more of its graduates, bringing with them at least something of the spirit of the institution, and its respect for exact scholarship and regard for scientific truth.

JOHNSON, Alba Boardman, American manufacturer: b. Pittsburgh, Pa., 8 Feb. 1858. He was graduated at Central High School, Philadelphia, in 1876. In 1877 he entered as junior clerk at the Baldwin Locomotive Works, then owned by Burnham, Parry, Williams and Company, in 1878–79 he was with the Edge Moor Iron Works of Wilmington, Del., and returned to the Baldwin Locomotive Works in the latter year. He was admitted to partnership in 1896 and in 1909 was made vice-president and treasurer and in 1911 president of the Baldwin works. He is a director of the Federal Reserve Bank, of the Standard Steel Works, of the New York Life Insurance Company and many other corporations. He is president of the American Manufacturer's Export Association and a member of the American Master Mechanics' Association.

JOHNSON, Alvin Saunders, American economist: b. near Homer, Neb., 18 Dec. 1874. He studied at the University of Nebraska, took the degree Ph.D. (1902) at Columbia, and was appointed (1901) reader in economics at Bryn Mawr College. He became instructor and adjunct-professor of economics (1902–06) at Columbia, professor of economics, University of Nebraska (1906–08) and at the University of Texas (1908). He was acting associate professor at University of Chicago (1909) and associate professor (1910–11), professor of economics at Leland Stanford, Jr. University (1911–12), Cornell University (1912–16), then professor of political science, Stanford University (1916–18). From 1902–04 he was editor of economics for New International Encyclopedia, and editor of political science for the American edition 'Nelson's Encyclopedia.' He wrote 'Rent in Modern Economic Theory' (1903); 'Introduction to Economics' (1909); 'The Professor and the Petticoat' (1914).

JOHNSON, Andrew, 17th President of the United States: b. Raleigh, N. C., 29 Dec. 1808; d. Carter's Station, Tenn., 31 July 1875. Johnson's father died when the boy was 5 years old, and at 10 he was apprenticed to a tailor in his native town. While at work, Johnson gained the first rudiments of an education from a gentlemen who often visited the tailor's shop and read aloud to the journeymen and the apprentices from a volume of speeches of eminent British orators. Johnson became interested and received the book as a gift from the owner and learned to read and spell at the same time. In 1824, having completed his apprenticeship, he left Raleigh and went to Laurens Court House. In 1826 he returned to Raleigh, but in September of the same year he left with his mother, whom he always showed the greatest solicitude and respect, for Greenville, Tenn. The following year he married. Encouraged and aided by his wife he learned to write and figure. Becoming interested in the problems of his fellow-workers he was elected alderman (1828), to which office he was twice re-elected. In 1830 he was elected mayor, and held the posi-

tion for three terms. He was also chosen by the County Court as trustee of Rhea Academy, which he held until he entered the State legislature. In 1839 he took an active part in the adoption of a new State constitution which greatly enlarged the freedom of the masses and guaranteed freedom of speech and of the press. The next year he was elected to the State legislature from the counties of Washington and Green where he was especially pronounced in his opposition to the wild schemes of internal improvements then in vogue. Defeated in 1837 for re-election, he was returned in 1839 when the State realized the justice of his position in view of the crisis of 1837. Johnson canvassed eastern Tennessee for the Democratic candidate in 1840, and served as presidential elector-at-large. In the following year he entered the State senate, signalizing his advent by the introduction of a judicious measure for internal improvements. In 1843 he was nominated from the first district for Congress, and in December took his seat in the national House of Representatives, which he continued to hold for 10 years. While in the lower house he supported a bill for refunding the fine imposed on General Jackson, the annexation of Texas, the war measures of Polk's administration, and a homestead measure, and opposed all schemes of internal improvement when local in scope and the tariff of 1842. On 2 Aug. 1848, he made a speech setting forth his ideas with regard to the President's veto power. "A veto as exercised by the executive," he declared, "is conservative and enables the people through their tribunician officer, the President, to arrest or suspend for the time being unconstitutional, hasty and improvident legislation until the people, the sovereigns in this country, have time and opportunity to consider its propriety." This utterance was made the theme of an interesting article in the *Democratic Review* in its January issue. Returning to his own State he was chosen for governor in 1853. His inaugural excited much criticism for its ultra radical statements. Two years later he was elected to the United States Senate. As senator he gained special distinction in advocating a homestead measure, only to see his efforts thwarted by President Buchanan.

By this time the slavery problem was the real issue of the nation. Johnson, a Southern Democrat, himself the owner of slaves "acquired by the toil of his hands," mildly upheld slavery, but he did not believe in compromises nor in agitating the slavery controversy, deeming all such discussions as futile. For this reason he disbelieved in the right of petition but supported the Compromise of 1850 because he thought each resolution embodied his views. Nevertheless he did not sanction the Southern attitude of threatening the national government. In the National Democratic Convention at Charleston in 1860, Johnson was a candidate, but in the election he supported the Breckenridge ticket. When he saw the determination of the South to secede, he alone of the Southern members refused "to go with his State" when it withdrew. In 1861 he returned to Tennessee and often at the risk of his life worked in behalf of the Union. In 1862 he became military governor of that part of Tennessee under the control of the Northern forces and began organizing a Union government. Two years later Johnson was placed on the ticket with Lincoln in order to secure the votes of the border States and the Democrats.

At the sudden death of Lincoln, Johnson undertook the difficult problem of reconstruction left unfinished by his predecessor. Perhaps no man in the Union was so unfitted for this task as the President. Egotistical, tactless, self-confident, fond of making extravagant speeches, radical by nature, and uneducated, Johnson was incapable of grasping the subject. Where Lincoln by his skill could have molded opinion to his view, Johnson aroused a storm of opposition. Yet, to the radical Republicans, Johnson's succession to the mild Lincoln was received with acclaim, for the new incumbent had always displayed himself as a vigorous prosecutor of the recalcitrant Southerners. But no sooner was Johnson in office than he began to change, probably due to Seward's influence and the added responsibility of his new office. In so doing, Johnson soon found himself in opposition to the legislative branch of the government.

Two possible agencies were available to handle the new situation. One, the executive branch, working on the theory that the President as commander-in-chief of the army had the power to establish military rule and withdraw it; the other, the legislative body, on the assumption that restoration was a part of the lawmaking function. Lincoln, in dealing with the parts of Tennessee, Arkansas and Louisiana recovered from the Confederacy, had undertaken the task of reconstruction by issuing his Amnesty Proclamation (8 Dec. 1863), in which he had declared that when a number of citizens of the State equal to one-tenth of the vote of that particular State in 1860 had taken the prescribed presidential oath, they might establish a civil government; but the President had definitely stated that the admission of their senators and representatives to Congress would rest entirely with the legislative branch. Congress showed its opposition to this scheme by hastily passing the Wade-Davis Bill (2 July 1864). Lincoln "pocket vetoed" the bill, but the significance of the struggle demonstrated the determination of Congress to exert its full prerogatives.

Notwithstanding this warning from Congress, Johnson embarked on the same policy at his succession, and on 29 May 1865 issued a similar Amnesty Proclamation, excluding, however, more classes than Lincoln had done. Immediately the work of creating provisional government in the seceded States began, and by October six Southern States had carried out Johnson's ideas by denying the right of secession and abolishing slavery. Three circumstances, however, contributed to destroy the efficacy of his plan; (1) the South adopted harsh "black codes" which, by prescribing severe restrictions covering apprenticeship, vagrancy and employment of the freedmen, led the North to suspect the new establishments of good faith; (2) the selection of old secession leaders as new representatives, Georgia even going so far as to choose Stephens, the ex-Vice-President of the Confederacy, as one of her United States senators; (3) the determination of the radicals in Congress to exclude the Southern leaders and

ANDREW JOHNSON

Seventeenth President of the United States

give the negro political rights, thereby assuring the supremacy of the Republican party. Accordingly, a bitter contest began between the President and Congress, led by Stevens and Sumner, over the question of reconstruction. On 4 Dec. 1865 Stevens introduced a resolution creating a Reconstruction Committee composed of nine representatives and six senators. This started the conflict. Johnson replied by vetoing (19 Feb. 1866) the Freedmen's Bureau Bill intended to aid the negro; and, three days later, he delivered a public address to a serenading party in which he charged Stevens, Sumner and Wendell Phillips with trying to destroy the principles of the government. From this time on the breach was irremediable and Congress passed over the President's veto the Civil Rights Bill, a new Freedmen's Bureau Bill, and submitted the 14th Amendment to the States. Both parties appealed to the people in the fall election for vindication, and, owing to Johnson's lack of tact and decorum in his "swinging round the circle campaign," and an unfortunate riot in New Orleans with its accompanying evil effects on the North of the Southern good intentions, the radicals carried the election. Therefore in 1867 Congress set forth the Congressional plan of reconstruction which meant the disfranchisement of the ex-Confederates and the enfranchisement of the negroes. Johnson, to his credit, carried out faithfully these laws, but the final test came with the removal of Stanton as Secretary of War in violation of the Tenure of Office Act, 2 March 1867. This act forbade the President dismissing any officer without the consent of the Senate. Counseled by his Attorney-General that the act was unconstitutional, Johnson dismissed Stanton, now in open accord with the radicals and for whose protection the law had been enacted. In dismissing Stanton, Johnson broke with Grant over a question of veracity, and thereby gave Congress its opportunity. In February 1868 the House of Representatives voted to impeach him. The main charges brought against the President were (1) his dismissal of Stanton; (2) his declarations that certain laws were unconstitutional; (3) his speeches in the campaign of 1866; (4) his opposition to Congressional reconstruction. The trial was poorly conducted; the evidence showed much animus; and the fear that Wade, president of the Senate, would succeed, combined with the happy appointment of General Schofield as Secretary of War, turned the tide in favor of the President. Thus on the final vote he was acquitted (35–19), the requisite two-thirds for conviction not having been obtained. In 1868 Johnson was a candidate in the Democratic National Convention but failed to secure the nomination. He returned to Greenville, and after several unsuccessful attempts was elected senator in 1875. His triumph was short, for he died in July.

E., 'The Struggle between President Johnson and Congress over Reconstruction' (New York 1896); Seward, F. W., 'Andrew Johnson' (Philadelphia 1890); Dunning, W. A., 'Essays on the Civil War and Reconstruction' (New York 1898); id., 'More Light on Andrew Johnson' (in *American Historical Review*, April 1906); Foster, L., 'Life and Speeches of Andrew Johnson' (New York 1866).

R. C. McGrane,
Assistant Professor of History, University of Cincinnati.

JOHNSON, Bradley Tyler, American lawyer: b. Frederick, Md., 29 Sept. 1829; d. 5 Oct. 1903. He was graduated from Princeton in 1849, studied law at Harvard in 1850–51, entered practice at Frederick in 1851, became in that year State's attorney for Frederick County, was a delegate to the National Democratic Convention at Charleston and Baltimore in 1860, withdrew from the convention and supported the Breckenridge and Lane ticket. At his own expense he organized a company for the Confederate service, in which he rose to be brigadier-general of cavalry (1864). Subsequent to the war he practised law at Richmond in 1865–79, at Baltimore in 1879–90; and was a member of the State senate of Virginia in 1875–90. His works include 'Reports of Chase's Decisions' (1875); 'Memoir of J. E. Johnston' (1891); a 'Life of General Washington'; 'Maryland in Confederate Military History' (Atlanta 1899).

JOHNSON, Burges, American publisher and journalist: b. Rutland, Vt., 9 Nov. 1877. He was graduated at Amherst (1899) and became reporter on the New York *Commercial Advertiser* and the *Evening Post*. He was literary adviser for G. P. Putnam's Sons (1900–02) and on the literary staff of Harper & Brothers (1903–06), assistant editor on *Everybody's Magazine* (1906–07), editor of *Outing* (1907–08), becoming president of the Thompson, Brown Co., publishers (1908–13). He was appointed manager of the educational department of E. P. Dutton & Co. (1913) and assistant professor of English at Vassar College (1915). He has written 'Rhymes of Little Boys' (1905); 'Pleasant Tragedies of Childhood' (1905); 'Beastly Rhymes' (1906); 'Rhymes of Home' (1909); 'Yearbook of Humor' (1910); 'Bashful Ballads' (1911); 'Rhymes of Little Folk' (1915).

JOHNSON, Cave, American politician: b. Robertson County, Tenn., 11 Jan. 1793; d. Clarksville, Tenn., 23 Nov. 1866. Admitted to the bar, he practised at Clarksville, in 1820 became a judge of the State Circuit Court, and was a Democratic representative in Congress in 1829–37 and again in 1839–45. In 1845 he was appointed Postmaster-General, from which post he retired at the close of Polk's administration (1849). He was president of the Tennessee State Bank in 1850–59, and was elected to the State senate as a Unionist in 1863, although unable to serve because of ill-health. He was against secession and used every endeavor to keep Tennessee in the Union. He consistently supported Andrew Johnson and his policy of conciliation.

JOHNSON, Charles Fletcher, American legislator: b. Winslow, Me., 14 Feb. 1859. He was graduated at Bowdoin College (1879), receiving LL.D. diploma (1911). He was appointed principal of the high school at Machias, Me. (1881–86), admitted to the bar (1886) and practising first at Waterville, where he was elected mayor. In 1892 and 1894 he was the Democratic candidate for governor of

Maine, and was a member of the House of Representatives in 1905 and 1907. He was United States senator from Maine from 1911–17, and circuit judge, first circuit, from 1917.

JOHNSON, Clifton, American author and illustrator: b. Hadley, Mass., 25 Jan. 1865. He obtained a secondary education, worked on a farm, was clerk in a bookshop and school teacher, studied in the New York art schools, published in 1892 'The New England Country,' an illustrated study of farm folk, and later was much abroad obtaining notes and pictures for works on foreign life. More recently he has visited every nook and corner of the United States in gathering material for an 'American Highways and Byways' series in seven volumes. He has edited a considerable number of books for school use and illustrated a long list of others by famous authors. Among the volumes of which he is author and illustrator are 'The Country School' (1893); 'The Farmer's Boy' (1894); 'What They Say in New England' (1896); 'Among English Hedgerows' (1899); 'Along French Byways' (1900); 'The Isle of the Shamrock' (1901); 'The Land of Heather' (1903); 'Old Time Schools' (1904); 'The Picturesque Hudson' (1909); 'The Picturesque Saint Lawrence' (1910); 'American Highways and Byways' (dealing with the South, the Mississippi Valley, California, the Rocky Mountains, the Great Lakes, from the Saint Lawrence to Virginia, and New England, the first volume published in 1904, the last in 1915); and 'Battleground Adventures in the Civil War' (1915).

JOHNSON, Duncan Starr, American botanist: b. Cromwell, Conn., 21 July 1867. He took the degree B.S. (1892) at Wesleyan University and Ph.D. at Johns Hopkins (1897), then studied at Munich (1901). He was appointed assistant in botany (1898), becoming associate (1899) and associate professor (1901), to become professor in 1906 and director of the botanical garden from 1913. From 1896–1900 he had charge of botany work and of cryptogamic botany from 1902–11 at Cold Spring Harbor, L. I. He worked on botanical exploration and investigation (1903, 1906 and 1910) at Jamaica, West Indies, and was special investigator at Carnegie Institution, Washington (1912 and 1915). He has written 'The Relation of Plants to Tide Levels' (1915) in collaboration with H. H. York, and has been a regular contributor to the botanical journals.

JOHNSON, Eastman, American painter: b. Lowell, Me., 29 July 1824; d. New York city, 5 April 1906. He began his art studies at the Royal Academy, Düsseldorf (1849–51), and developed a distinct talent for genre. He afterward traveled in France, Italy and Holland, and spent four years at The Hague. Among his pictures painted in Europe are the 'Savoyard' and the 'Card Players,' in which he showed the influence of the Dutch school. He returned to the United States in 1856 and devoted himself for some years to the study of rustic and negro life and he painted some of the most popular pictures ever produced by a native painter; many of them have been engraved and chromolithographed. The best known are 'Old Kentucky Home'; 'Husking Bee'; and the 'Boyhood of Abraham Lincoln.' He also produced excellent likenesses of Grover Cleveland, Benjamin Harrison, John D. Rockefeller, William H. Vanderbilt, Cornelius Vanderbilt, Mrs. August Belmont and Mrs. Alexander Hamilton.

JOHNSON, Edward, American colonial historian: b. Herne Hill, Kent, England, about 1599; d. Woburn, Mass., 23 April 1672. He emigrated to America probably with Governor Winthrop in 1630. In 1632 he was engaged in trade at Merrimack, and was on the committee appointed to superintend the foundation of a new town and church at the place now called Woburn. In 1643 he was elected by the town of Woburn a member of the legislature of Massachusetts, in which he continued to sit till 1671, with the exception of 1648. In 1655 he was chosen speaker of the house. He was recorder of Woburn from the time of its incorporation till his death. In 1665 he was one of the members deputed to hold conference with the commissioners sent from England by Charles II. He wrote a 'History of New England from the English Planting in 1628 till 1652, or Wonder-Working Providence of Zion's Saviour' (1654). It was reprinted in 'Massachusetts Historical Collection' (2d series, Vols. I–V, VII–VIII). There is also a facsimile edition with an introduction by W. F. Poole.

JOHNSON, Edward, American soldier: b. Chesterfield County, Va., 16 April 1816; d. Richmond, Va., 22 Feb. 1873. After being graduated from the United States Military Academy in 1838 he fought in the Florida wars, for his services in which he was brevetted captain, and subsequently in the Mexican War, being brevetted major for his conduct at Chapultepec. He received his captain's commission in 1851, but in 1861 resigned to enter the army of the Confederate States as colonel of the 12th Georgia Volunteers. He was promoted brigadier-general in 1862 and major-general in 1863. At Gettysburg he commanded a division. He was captured with his entire force at Spottsylvania (12 May 1864) and retaken in the following December. Subsequent to the war he was a farmer in Chesterfield County, Va.

JOHNSON, Emily Pauline, Canadian poetess: b. Chiefwood, Ontario, 1862; d. Vancouver, 7 March 1913; the daughter of George Johnson, head chief of the Mohawk Indians, and of his English wife. Her poems on Indian subjects are full of dramatic force and intensity. Her works are 'The White Wampum' (1894); 'Canadian Born' (1903); and 'Flint and Feathers' (1912).

JOHNSON, Emory Richard, American economist: b. Waupun, Wis., 22 March 1864. He studied at University of Wisconsin (1888) and University of Pennsylvania (1893), taking the degree of Sc.D. (1913). He was instructor of economics at Haverford College (1893–96), professor of transportation and commerce at University of Pennsylvania (1896). He served as expert on transportation (1899) on the United States Industrial Commission, and was a member on valuation of railway property for the United States Census Bureau (1904–05), and as expert on traffic on the National Waterways Commission (1909). In 1911 he furnished a report on Panama Canal traffic, etc., for President Taft, and arbitrated the dispute (1907) between the Southern Pacific Company and the Order of Railroad Telegraphers. He is an ex-director of the Bureau of Municipal Research, Philadelphia, and director of the Philadelphia

Maritime Exchange. He has written 'Inland Waterways; their Relation to Transportation' (1893); 'American Railway Transportation' (1903); 'Elements of Transportation' (1906); 'Railroad Traffic and Rates' (1911); 'Panama Canal Traffic and Tolls' (1912); 'Measurement of Vessels for the Panama Canal' (1913); 'The Panama Canal and Commerce' (1916); 'Principles of Railroad Transportation' (1916), and many papers on the economics of railroads, etc. He was editor of the *Annals* of the American Academy of Political and Social Science from 1901–14.

JOHNSON, Franklin, American Baptist clergyman and educator: b. Frankfort, Ohio, 2 Nov. 1836; d. 7 Oct. 1916. He was graduated from Colgate Seminary in 1861; was ordained a Baptist minister in 1862, and was pastor at Bay City, Mich., 1861–63; Lambertville, N. J., 1864–66; Passaic, N. J., 1866–72; Newark, N. J., 1872–74; and Cambridge, Mass., 1874–88. He studied at German universities and traveled Europe, Egypt and Palestine in 1868–69. He was made D.D. by the University of Jena, Germany, in 1869, and LL.D. by the University of Ottawa, Kan., 1898. After his pastorate in Cambridge he traveled in Greece and spent the winter of 1888–89 in Athens. He was president of Ottawa University 1890–92. The remainder of his public life has been in connection with the University of Chicago, where he was assistant professor of church history and homiletics 1892–94; associate professor 1894–95; professor 1895–1908; and professor emeritus since 1908. Thus his public life has been divided into two almost equal parts, the first in the pastorate and the second in university administration and teaching. While laboring as pastor at Cambridge he was also editor of *The Watchman* 1876–77. The following are his principal published writings: 'The Gospel according to Matthew,' with notes (1873); 'Moses and Israel' (1874); 'Heroes and Judges from the Lawgiver to the King' (1875); 'True Womanhood; Hints on the Formation of Womanly Character' (1884); and 'Romance in Song,' a translation of Heine's 'Lyrical Interlude' (1884); 'The New Psychic Studies in their Relation to Christian Thought' (1886); 'The Quotations of the New Testament from the Old considered in the Light of General Literature' (1896); 'The Home Missionaries,' a poem (1899); 'Have we the Likeness of Christ?' (1902); 'The Christian's Relation to Evolution' (1904). In addition he made contributions to reviews and to encyclopedias, and published translations of Latin and Anabaptist hymns in the current periodicals. He journeyed around the world in 1913–14, making studies of Christian missions and the conditions of Asiatic populations.

JOHNSON, Gisle Christian, Norwegian Lutheran theologian: b. Fredrikshald, 10 Sept. 1822; d. Christiania, 17 July 1894. He was educated at the Christianssand Cathedral School and University of Christiania, gaining a scholarship which assisted him to study at Berlin, Leipzig, Erlangen, Heidelberg, Tübingen and Paris. He was appointed (1847) lecturer of theology at Christiania University and became professor in 1860. His lecture subjects were systematic theology, history of doctrine, the New Testament canon, but after 1877, church history. He was of the strict orthodox old Lutheran faith. He wrote 'Nogle Ord om Barnedaaben' when the pietist Lammers (1857) left the Established Church to found a "free apostolic and Christian congregation." With Caspari, he edited *Tidskrift for den evangelisk lutherske Kirke i Norge,* and founded (1863) the *Luthersk Kirketidende,* editing it till 1875. His 'Grundrids af den systematiske Theologie' appeared 1878–79, but his 'Forelæsninger over den christelike Ethik' and also his 'Forelæsninger over Dogmehistorien' were not published till after his death, in 1896.

JOHNSON, Helen Kendrick, American author: b. Hamilton, N. Y., 4 Jan. 1844. She was the daughter of A. C. Kendrick (q.v.) and was married to Rossiter Johnson (q.v.) in 1869. Beside editing several compilations of verse she has published 'The Roddy Books,' popular juvenile tales (1874–76); 'Our Familiar Songs' (1881); 'Raleigh Westgate' (1889); 'Woman and the Republic' (1897). She has been an active member of the Association Opposed to the Extension of Suffrage to Women and has written much on the question of woman suffrage. She founded the Meridian Club in 1886, and the Guidon Club in 1907.

JOHNSON, Herman Merrill, American educator: b. Butternuts, N. Y., 15 Nov. 1815; d. Carlisle, Pa., 5 April 1868. He was graduated (1839) at Wesleyan University, Connecticut, and appointed professor of ancient languages at Saint Charles College, Missouri. He accepted a similar position (1842) at Augusta College, Kentucky, which he left (1844) when called to the chair of ancient languages and literature at Ohio Wesleyan University. In 1850 he became professor of philosophy and English literature at Dickinson College and was called to the chair of moral science in 1860, accepting in the same year the presidency, which he held till his death. Ohio Wesleyan University conferred on him (1852) the degree of D.D. He edited 'Orientalia Antiquaria Herodoti,' published an edition of the 'Clio' of Herodotus (1850) and was a regular contributor to the *Methodist Quarterly Review* and the religious periodicals.

JOHNSON, Herrick, American clergyman and educator: b. Caughnewaga, N. Y., 22 Sept. 1832; d. 20 Nov. 1913. He was graduated (1857) at Hamilton College and (1860) Auburn Theological Seminary, and became associate pastor (1860–62) at the First Presbyterian Church, Troy, N. Y., then pastor (1862–67) at the Third Presbyterian Church, Pittsburgh, Pa. He was pastor (1868–73) of the First Presbyterian Church, Philadelphia, and was then made professor of homiletics and pastoral theology at Auburn Theological Seminary (1874–80), becoming next pastor at the Fourth Presbyterian Church, Chicago, until 1883. From 1880–1906 he was teaching at McCormick Theological Seminary, Chicago. He was president of the Presbyterian Board of Ministerial Education (1869–73) and of the Presbyterian Board of Aid (1883–1903), moderator of the Springfield, Ill., General Assembly (1882), etc. He wrote 'Christianity's Challenge' (Chicago 1880); 'Plain Talks about the Theatre' (1882); 'Revivals, their Place and Power' (1883); 'Presbyterian Bulwarks' (New York 1887); 'Pres-

byterian Book of Forms' (Philadelphia 1889); 'Ideal Ministry' (1908).

JOHNSON, Herschel Vespasian, American jurist and politician: b. Burke County, Ga., 8 Sept. 1812; d. Jefferson County, Ga., 16 Aug. 1880. He was graduated from the University of Georgia in 1834, studied law, practised there, from 1844 at Milledgeville, and in 1848 was appointed to the Senate of the United States to fill the seat of W. T. Colquitt, resigned. A strong advocate of Clay's compromise scheme, he identified himself with the Southern Unionists. In 1849–53 he was a judge of the Georgia Superior Court, in 1853–57 governor of the State. He was nominated by the Northern Democracy in 1860 as Vice-President on the presidential ticket with Douglas. Though opposed to secession, he followed his State, and in 1862 was elected to the Confederate Congress. Elected United States senator in 1866, he was refused his seat because of war disabilities. He was a judge of the Georgia Superior Court from 1873 until his death.

JOHNSON, Hiram Warren, American lawyer and senator: b. Sacramento, Cal., 2 Sept. 1866. He was educated at the University of California and was called to the California bar (1888), practising at Sacramento, but moving (1902) to San Francisco. He made his reputation as one of the prosecuting attorneys in the boodling cases (1906–07) which involved the leading officials of the city and the utility corporations. When Francis J. Heney was shot in the court room during his prosecution of Abe Ruef for bribery, he took his place and convicted Ruef (1908). He was elected governor of California (1911–15) and re-elected for the term 1915–19, but resigned 1917. He was a founder of the Progressive party (1912) and nominee for Vice-President on the Progressive ticket and was elected United States senator from California, for the term 1917–23. During his administration as governor he continued his attacks on the Southern Pacific Railroad with the expressed determination that that corporation should loosen its political hold on the State, and he rid the government of numerous inefficient office holders. He advocated initiative and referendum as an amendment to the constitution of his State to aid in putting political grafters out of office. The Webb Bill, forbidding the ownership of land by Asiatic aliens, was signed by him (1913) and brought on a heated and prolonged controversy between Washington and the Japanese government.

JOHNSON, Sir John, American colonial soldier: b. near Johnstown, N. Y., 5 Nov. 1742; d. Montreal, 4 Jan. 1830. He was the son of Sir William Johnson (q.v.), was knighted in 1765 and succeeded to his father's estates and baronetcy in the Mohawk Valley in 1774. When the Revolution came on he escaped to Canada in 1776 with 700 loyalists. He organized the corps known as the Queen's Own American Regiment, of which he was commissioned colonel. In July 1777, he took part in the siege of Fort Stanwix (q.v.). He defeated General Herkimer in the latter's brilliant attempt to cause the besiegers to abandon their operations; but was himself subsequently defeated. During the next two years he continued active in northern and central New York, and the Indian massacres of Cherry Valley and Wyoming formed some of the most painful incidents of the war. He was, however, crushingly defeated at Newton (now Elmira) 29 Aug. 1779, and retired to Montreal. His influence over the Indians had always been remarkable and the British government appointed him superintendent-general of Indian affairs in British North America, besides making him extensive land grants, to replace the Mohawk family estates which had been confiscated. Consult Stone, 'Life of Brant' (Albany 1865).

JOHNSON, John Albert, American public official: b. Saint Peter, Minn., 1861; d. Rochester, Minn., 21 Sept. 1909. When Johnson was only 13 years old, his father died in the county poorhouse of alcoholic dementia, and he was forced to leave school in order to support his mother. He was employed by various mercantile establishments and for a time was connected with a railroad construction gang. During all of this time, however, he continued to educate himself by private study. His success in this respect was demonstrated in 1886 when he was made editor of the Saint Peter *Herald*. He was active in bringing about civic improvements, providing free public lectures and establishing playgrounds. His attractive personality and geniality made him extremely popular. In 1894 he entered politics as Democratic candidate for the State senate; though then unsuccessful, in 1898 he was elected and served in three successive legislatures. He became known for his independence of party partisanship when he opposed Governor Lind on the question of withdrawing Minnesota troops from the Philippines. Johnson was a bold advocate of tariff reform and economy in the administration of the government. In 1904 he was nominated and elected governor. The campaign was extremely bitter, and personalities entered largely into the speeches. The public issue concerned the merging of the Great Northern and Northern Pacific railroads, but Johnson was taunted with reference to his family. His popularity with the Scandinavian element, his public record and the assaults on his family turned public sentiment in his favor, and he was elected by a plurality of 6,000 at a time when Roosevelt carried the State for the Republican national ticket by 146,000. As governor, he achieved immense success, and through his influence legislation was enacted providing for employers' liability, the abolition of railroad passes, schools for delinquent girls, and a reformation of the civil service; he was also instrumental in effecting local and national reforms in insurance laws. He was re-elected governor in 1906 by a plurality of 76,000, and again in 1908 by 20,000, although Taft carried the State for the Republican national ticket by 85,000 votes. In the presidential campaign of 1908 Johnson was frequently mentioned for the Democratic nomination, and he received 46 votes in the Denver Convention. His prestige and success as governor were not diminished by the quiet, though determined, method employed by him in dealing with the miners' strike of 1908. He had long suffered from appendicitis, and in 1909 an operation was performed, but failed to save his life.

JOHNSON, John Butler, American civil engineer and educator: b. Marlboro, Ohio, 11 June 1850; d. Madison, Wis., 1902. He graduated as a civil engineer (1878) at the University of Michigan and was appointed assistant engineer in the United States Lake and Mississippi River surveys. In 1883 he accepted the chair of civil engineering at Washington University, Saint Louis, Mo., in which vocation he became noted among educators. He was chosen dean of the College of Mechanics and Engineering (1898), at the University of Wisconsin, where he taught till his death. He wrote 'Theory and Practice of Surveying' (8th ed., 1904); 'Materials of Construction' (1st ed., 1897); 'Engineering Contracts and Specifications' (3d ed., 1904). In 1884 he directed the *Index to Current Literature* in the *Journal of the Association of Engineering Societies,* and (1891) the United States Agricultural Department placed him in charge of the extensive tests of American timbers.

JOHNSON, Joseph French, American economist: b. Hardwick, Mass., 24 Aug. 1853. He was graduated (1878) at Harvard, studied political economy and history for one year in Germany and became member of the staff of the Springfield *Republican,* then financial editor of the Chicago *Tribune.* He founded the Spokane, Wash., *Tribune* (1890), selling out in 1893 to become professor at Wharton School of Commerce, University of Pennsylvania (1893–1901). From 1899–1903 he was lecturer on finance at Columbia University and, from 1901, professor of political economy. From 1903 he was dean of the School of Commerce, Accounts and Finance at New York University. Hobart College, Geneva, N. Y., conferred LL.D. degree (1915). He was a member of the commission on New Sources of Revenue for New York city (1912) and of the commission to revise the banking laws of New York State (1913). He wrote 'Money and Currency' (1905); 'Syllabus of Money and Banking' (1899); 'Report on the Canadian Banking System for the National Monetary Commission' (1910), besides numerous contributions to the technical periodicals on financial and economic problems.

JOHNSON, Manuel John, English astronomer: b. Macao, China, 23 May 1805; d. 28 Feb. 1859. He was educated at Addiscombe College, England, entered the artillery (1821) at Saint Helena, becoming aide-de-camp to General Walker, who aided him in founding an observatory on the island. By 1833 he had secured materials for 'A catalogue of 606 principal Fixed Stars in the Southern Hemisphere' which was printed by his patrons, the East India Company (1835), who had furnished his astronomical equipment. For this important catalogue he was awarded the Royal Astronomical Society's Gold Medal. He was appointed (1839) to take charge of the Radcliffe observatory when he worked indefatigably on the redetermination of Groombridge's circumpolar stars, his investigations appearing in 18 volumes of the *Radcliffe Observations.* With the aid of Sir Robert Peel an improved outfit of instruments was furnished (1843) including a Simms transit circle and a heliometer (1849) by Repsold of Hamburg with a seven and one-half object glass, the largest then existing. With this new equipment he observed (1850) 26 important double stars and (1852–53) measured the chief stars of the Pleiades and the annual parallaxes of 61 Cygni, continuing the work on Castor, Arcturius and Lyræ (1854–55). He was elected Fellow of the Royal Society (1856), and president of the Royal Astronomical Society (1857–58). His catalogue of 6,317 circumpolar stars was in the printer's hands when he died and was published in 1860. A prize for an essay on an astronomical or meteorological subject is offered at Oxford every four years, since 1862, instituted in his memory. Consult Foster's 'Alumni Osconiensis,' *Monthly Notices Royal Astronomical Society* (Vols. XIX and XX).

JOHNSON, Owen, American author: b. New York, 27 Aug. 1878. He is a son of Robert Underwood Johnson and was graduated at Yale in 1901. His story of school life 'The Varmint' (1910), with its boyish high spirits, cleverness and wholesomeness, is perhaps his best work. 'Stover at Yale' (1911), a college story, frank in its criticisms of certain phases of life at Yale, aroused a storm of controversy. He has also written 'Arrows of the Almighty' (1901); 'In the Name of Liberty' (1905); 'Max Fargus' (1906); 'The Eternal Boy' (1909); 'The Humming Bird' (1910); 'Tennessee Shad' (1911); 'The Sixty-first Second' (1912); 'The Salamander' (1914), later dramatized; 'Murder in Any Degree' (1914); 'Making Money' (1914); 'The Woman Gives' (1915). He also wrote the plays 'The Comet' (1908); 'Comedy for Wives' (1912), and an adaptation from the French, 'The Return from Jerusalem' (1912); 'Virtuous Wives' (1918).

JOHNSON, Reverdy, American jurist: b. Annapolis, Md., 21 May 1796; d. there, 10 Feb. 1876. He was educated at Saint John's College in that city, and at 17 began to study law. In 1815 he was admitted to the bar, in 1817 removed to Baltimore and subsequently devoted his time mainly to the arguing of cases before the United States Supreme Court. He reported seven volumes of the decisions of the Maryland Court of Appeals, known as 'Harris' and Johnson's Reports,' (1820). In 1821 he was elected a State senator, and at the expiration of his term in 1825 was re-elected for a second term. In 1845 he was chosen a United States senator, resigning in 1849 on being appointed Attorney-General of the United States. On the succession of Mr. Fillmore, after the death of President Taylor, he resigned that office, and resumed in Baltimore the practice of the law. In 1861 he was a member of the peace commission, was United States senator 1863–68, and succeeding Charles Francis Adams as Minister to England in 1868 negotiated the treaty for the adjustment of the *Alabama* claims, afterward rejected by the Senate. He was recalled in 1869. He prepared an argument in defense of Mrs. Surratt, accused of complicity in the assassination of Lincoln, but it was refused a hearing by the military court.

JOHNSON, Richard Mentor, American statesman and soldier: b. Floyd's Station, near Louisville, Ky., 17 Oct. 1780; d. Frankfort, Ky., 19 Nov. 1850. He was educated at Transylvania University, and subsequently studied law and practised with success. He commenced his public career as a member of the Kentucky

legislature, to which he was elected at 23, and in 1807 was returned to Congress, and remained a member of the House until 1819. He was a firm supporter of the administration of Madison, and upon the commencement of the War of 1812 raised a body of Kentucky mounted riflemen, whom he commanded, on the Canadian frontier. The decisive charge of his mounted volunteers mainly contributed to the brilliant victory gained over the British and Indians at the battle of the Thames, 5 Oct. 1813, and it was by his hand that the Indian leader Tecumseh is commonly supposed to have fallen. In 1819 he was elected to fill a vacancy in the United States Senate, of which he continued a member until 1829, when he was again returned to the House of Representatives. He remained a member until his election by the senate in March, 1837, as Vice-President of the United States. He discharged the duties of presiding officer of the Senate for four years, and in the Presidential election of 1840 was an unsuccessful candidate of the Democratic party for Vice-President. He thenceforth lived chiefly in retirement. He was, however, serving a term in the State legislature at the time of his death. In Congress his chief efforts were against the discontinuance of the Sunday mails, and in behalf of soldiers of the Revolution or of the War of 1812, who applied for pensions. He was the author of the law abolishing imprisonment for debt in Kentucky.

JOHNSON, Richard W., American military officer: b. near Smithland, Ky., 7 Feb. 1827; d. Saint Paul, Minn., 21 April 1897. He was graduated at West Point in 1849, was employed chiefly on frontier service until 1861, when he became colonel of the 3d Kentucky Cavalry, 11 October was appointed brigadier-general of volunteers, and later commanded a division at Murfreesboro, and with his division fought under Thomas at Chickamauga (19–21 Sept. 1863). He commanded the 12th division of the Army of the Cumberland in the invasion of Georgia and a division of cavalry at Nashville, was brevetted brigadier-general, United States army, for his services (13 March 1865), and, having been mustered out of the volunteer service, became provost-marshal of the military division of the Tennessee. In 1867 he resigned from the service with rank of major-general, changed by act of Congress (1875), to brigadier. Among his writings were 'Life of Gen. G. H. Thomas' (1881), and 'A Soldier's Reminiscences' (1886).

JOHNSON, Robert Underwood, American editor and author: b. Washington, D. C., 12 Jan. 1853. He was educated at Earlham College, Indiana, and joined the staff of the *Century Magazine* in 1873, he was associate editor from 1881 to 1909, and in the latter year, on the death of Richard Watson Gilder, succeeded to the editorial chair, which he occupied until May 1913. He early became noted for his services in behalf of international copyright, as secretary of the American Copyright League doing much to secure the passage of the law of 1891, for which he was decorated by the French and Italian governments. With Clarence Clough Buel he had charge of editing the 'Century War Series,' afterward published as 'Battles and Leaders of the Civil War' (1887–88). He induced General Grant to write his 'Memoirs,' and, with John Muir, set on foot the movement resulting in the creation of the Yosemite National Park. He was the originator of the Memorial to Keats and Shelley in Rome, and has been active in many national movements, notably the forest conservation movement. He became permanent secretary of the American Academy of Arts and Letters. His writings include 'The Winter Hour and Other Poems' (1891), and 'Songs of Liberty and Other Poems' (1897); 'Poems' (1902); 'Poems,' enlarged (1908); 'Saint Gaudens: An Ode' (1910; 4th ed., 1913); 'Italian Rhapsody and other Poems of Italy' (1917).

JOHNSON, Rossiter, American author and editor: b. Rochester, N. Y., 27 Jan. 1840. He was graduated at the University of Rochester in 1863 and was associate editor of the Rochester *Democrat* 1864–68. From 1869 to 1872 he edited the Concord (N. H.) *Statesman;* and in 1873–77 was associated with George Ripley and Charles A. Dana in editing the American Cyclopædia, while in 1879–80 he aided Sydney Howard Gay in his 'History of the United States.' In 1883–1902 he was editor of the *Annual Cyclopædia,* and since 1900 has been editor of the 'Universal Cyclopædia.' He edited the series of 'Little Classics' (18 vols., 1874–80); 'Liber Scriptorum' (1893), and was editor-in-chief of the 'World's Great Books' (50 vols., 1898–1901); 'Great Events by Famous Historians' (20 vols., 1904), and of 'The Authors' Digest' (1909). In 1906, in collaboration with Dora Knowlton Ranous, he edited 'The Literature of Italy' (16 vols., 1906). His original works include 'Phaeton Rogers,' a novel of boy life (1881); 'A History of the French War ending in the Conquest of Canada' (1882); 'History of the War of 1812' (1882); 'Idler and Poet,' verse (1883); 'History of the War of Secession' (1888); 'The End of a Rainbow,' a story (1892); 'The Hero of Manila' (1899); 'Short History of the War with Spain' (1899); 'Morning Lights and Evening Shadows,' poems (1902); 'The Alphabet of Rhetoric' (1903); 'The Clash of Nations' (1914); 'Captain John Smith' (1915), and 'Episodes of the Civil War' (1916); 'Biography of Helen Kendricks Johnson' (1917).

JOHNSON, Samuel, American college president, first president of King's College (now Columbia University): b. Guilford, Conn., 14 Oct. 1696; d. Stratford, Conn., 6 June 1772. He was graduated at Yale College in 1714, and two years later appointed tutor there. In 1718 he resigned to receive ordination as a Congregational minister, and settled at West Haven. He relinquished his charge in 1722 and soon after sailed for England, where he received Episcopal ordination in 1723. Shortly after he returned to America, bearing a commission as missionary of the Society for the Propagation of the Gospel in Foreign Parts, and settled in Stratford, Conn., as rector of an Episcopal church there. In 1743 he received the degree of D.D. from the University of Oxford. In 1746 he published 'A System of Morality,' and in 1752 a compend of logic and metaphysics, and another of ethics; the two latter were printed in Philadelphia by Franklin as textbooks for the University of Pennsylvania. In 1755 he was offered the presidency of that university, but de-

clined it. In 1753 he was invited to accept the presidency of the newly founded King's College in New York, in all the plans for which he had been consulted. He did so, but in 1763 resigned and returned to Stratford, where he resumed his parochial duties, revised his previous works and published an 'English and a Hebrew Grammar' (1767). Johnson carried on long controversies upholding apostolic succession and divine sovereignty. Consult Beardsley, 'Life of Samuel Johnson, D.D.' (New York 1876), and Chandler, 'Life of Samuel Johnson' (London 1824).

JOHNSON, Samuel, English man of letters: b. Lichfield, 18 Sept. (N. S.) 1709; d. London, 13 Dec. 1784. He was the son of Michael Johnson, a learned bookseller, and his wife, Sarah Ford. The father was a Jacobitical, High Church Tory, somewhat given to melancholy, and not methodical in habits. The son took after him in these particulars. Of the mother little is known. They had another son, Nathaniel, born in 1712, who died at 25. The elder Johnson was a man of some local importance, church warden, sheriff and bailiff, but before his death in 1731 his business had declined until he was nearly bankrupt.

Samuel is said to have been a very precocious child, but his mental forwardness could not compensate for his bodily defects. His face was deeply marked by scrofula and one eye was permanently injured, Queen Anne's touch profiting him nothing, but leaving in his loyal memory a vague picture of a "lady in diamonds and a long black hood." He was first taught by a dame, later at the Lichfield school. Being lazy and lumbering he early exerted his powers of command upon his fellows by making three of his mates carry him to school. In 1726, he was sent to school at Stourbridge for a year. Then he remained for two years at home, where he did little except to read widely among his father's books. His talents impressed a neighboring gentleman, who offered to send him to Oxford. Johnson entered Pembroke College as a commoner 31 Oct. 1728, remained in continuous residence a little over a year, and returned for brief periods, until the autumn of 1731. He was wretchedly poor during his college residence, and he left without a degree because of his father's business troubles. The stories of his haranguing students in a tattered gown and flinging away in a passion a pair of shoes left at his door are well known. His unusual learning seems to have impressed the college authorities from the beginning, and his Latin translation of Pope's 'Messiah,' printed in 1731 in a "miscellany," pleased that famous poet. But Johnson was too indolent and hypochrondriacal to profit greatly from the college routine, and the cutting short of his academic career is thus not specially to be regreted.

After his father's death he found himself obliged to earn his living by teaching school and acting as chaplain to a baronet, who did not treat him kindly. He soon gave up the place and removed to Birmingham, where he lived with an old schoolmate named Hector and became a bookseller's hack. The only fairly important work of these years was his translation, through the French, of the Portuguese Lobo's 'Voyage to Abyssinia,' which appeared in 1735. Johnson is said to have walked to Oxford to get a copy of the French version, which has never yet found its way back to the shelves of the Pembroke College library.

In 1735 he made a marriage which has afforded posterity a great deal of amusement. Among his acquaintances in Birmingham was a mercer named Henry Porter, who died in 1734, leaving a widow and three children. In a little less than a year Johnson married the widow, who was about 20 years his senior. Johnson declared that it was a love match on both sides, and his own constancy to her throughout her life and his devotion to her memory prove that for himself at least he did not exaggerate. Despite his uncouth appearance, his eccentricities, his visionary and morbid qualities which made some people think him insane, the widow is said to have recognized that he was at bottom one of the most sensible of men. According to Garrick he showed no sense of the beautiful in choosing a fat, painted and affected old woman. She showed no prudence in placing her small fortune under the control of a poor young man with apparently slim prospects. Yet as Johnson was nearsighted and could see but little of what shocked others in his wife — if indeed the report of Garrick was not purposely exaggerated — and as he undoubtedly made her a good husband, there seems to be little reason to waste sympathy on either party to the match.

After his marriage Johnson set up a boarding school near Lichfield. His peculiarities naturally prevented him from succeeding. He may have had only three pupils; but one of these, David Garrick, combines with the master himself to make the short-lived school a very famous one. Early in 1737 the two set out together to seek their fortunes in London, Mrs. Johnson being left in Lichfield. They had little money, and Johnson's chief baggage seems to have consisted of part of his tragedy 'Irene' and a few letters of introduction.

The literary adventurer spent his first months in London seeking employment from the booksellers. He lived prudently and seems to have been aided by Henry Hervey, a son of the Earl of Bristol. In the summer he returned to Lichfield and finished 'Irene'; in the autumn he removed permanently to London with his wife.

Macaulay in an excellent paragraph of his admirable essay on Johnson describes the desperate state of authors at the time. In 1736 the day of the patron was drawing to a close, but, although Pope had succeeded in making the public his patron, it was too early for other men to hope to rival him. Writers who under Queen Anne might have received money and political positions were now rather happy when they were sure of their meals. Booksellers kept them under by "sweat-shop" methods. Johnson took his place in the toiling ranks, but, because of his pride, suffered more than most of his brother hacks. His never polished manners deteriorated in cellar restaurants; he became a sloven in his dress and, as all the world knows, he never got over his acquired aversion to clean linen. Much of the brutality of manners for which he was afterward reproached is accounted for by the rough treatment to which he was subjected at this period of his career.

The details which Boswell was able to gather with regard to the early life of his hero are not very ample. After 'Irene' was refused by a

manager, Johnson secured employment with Cave in 1738, revising for *The Gentleman's Magazine* the parliamentary debates, which could be published only as if they had occurred in the senate of Liliput. From July 1741 to March 1744 he wrote the debates, making use of notes taken by others. They were often regarded as genuine, few readers knowing that the writer, to use his own words, had taken care that the Whig dogs should not have the best of it.

Meanwhile in 1738 Johnson had published through Dodsley his first important piece of work, the satire entitled 'London,' in which he imitated Juvenal's third satire as Boileau and Oldham had done before him. Being a strong, manly spirit and having his own sufferings and indignities to spur him on, he produced a poem which seemed so good to his contemporaries that the first edition was exhausted in a week. Pope inquired who the author was and endeavored to have him elected to the mastership of a school. The project failed and Johnson remained in London gathering the knowledge of writers and life that stood him in such good stead in his later criticism.

This knowledge was first displayed on a considerable scale in his life of Richard Savage (q.v.), which appeared in February 1744 Johnson, who had been much thrown with Savage, took that curious personage far too seriously; but his small biography is not only valuable as an excellent description of the literary Bohemianism of the day, but is important as one of the first books of its kind to abandon a stiff and formal or a stately tone, and to present a life simply and vividly. When we praise Boswell as a biographer, we ought not to forget that his great subject gave him instructions which the Scotchman bettered.

Little is heard of Johnson for the next two or three years, but his fame must have grown, for in 1747 he was employed by a sort of booksellers' syndicate to prepare an English dictionary, this project superseding that of an edition of Shakespeare, which he contemplated in 1745. The dictionary was to be in two folio volumes for which he was to receive £1,575. The entire cost of preparing copy fell on him, however, hence the bargain was not a profitable one to the needy scholar except in so far as it enhanced his reputation. He issued a plan of his work dedicated to Lord Chesterfield; did a large amount of reading to secure quotations; employed six amanuenses to copy such citations as he had marked; supplied etymologies and definitions; and finally on 15 April 1755 stood forth to the world as "the great lexicographer." All things considered, it was a monument of scholarship despite its compiler's ignorance of the history of the language. Of its definitions, excellent as a rule, the humorous ones, such as that oats is a grain used for horses in England but for people in Scotland, are mainly remembered; but it should not be forgotten that Johnson not only far surpassed his predecessors, but also laid the foundations on which subsequent lexicographers have reared more imposing structures. The dictionary is also remembered as the occasion of Johnson's writing one of the most famous of all letters — that to Lord Chesterfield, who had neglected him for years but on the eve of the publication of the great work wrote flattering notices of it in the hope that it might be dedicated to him. Johnson's letter of 7 Feb. 1755 is remarkable not merely for the dignity with which he refused to be encumbered with help after he had safely reached the shore unassisted, but also for the touching pathos with which he referred to his disillusionment and his loneliness. His "Tetty," for whose sake he had labored so heroically, was not by his side to share his rewards. She had died in March 1752.

The completion of the "Dictionary" in eight years would have been sufficient work and glory for a more than ordinary man of letters; but between 1747 and 1755 Johnson added greatly to his reputation in other ways. In January 1749 the second of his celebrated satires appeared, 'The Vanity of Human Wishes,' based upon the tenth satire of Juvenal. It is better than the 'London,' indeed it is one of the best sententious pieces of moralizing in verse to be found in English literature. It brought Johnson only 15 guineas. He received nearly £300 in benefits and copyright for his tragedy 'Irene,' which Garrick produced in February 1749. Even Garrick's acting and Johnson's appearance in a box clad in a gold-laced hat and a gold-laced scarlet waistcoat could not save so undramatic a performance. It ran nine nights; the person who has read it nine times has probably never existed.

More important than his reappearance as a poet was his assumption of the rôle of periodical essayist. His famous semi-weekly imitation of *The Spectator*, entitled *The Rambler*, which ran from 20 March 1750 to 14 March 1752, was not specially successful as a journal, but when the numbers were gathered into volumes, which Johnson most carefully revised, the work became very popular. That it was the equal of *The Spectator*, as the novelist Richardson, who wrote the only really popular number, and other contemporaries declared, nobody now believes. That it should have held its own against so formidable a rival, when so many other attempts had failed, is a clear proof that it had genuine merits. It certainly established Johnson's fame as a moralist, and, if we omit the papers in which he clumsily attempted to be entertaining as well as some of his specifically critical essays, we can still find in its pages more sound thought and feeling with regard to human life in its lights and shadows than can be discovered in the pages of most of the essayists we actually read. Johnson's contemporaries were also greatly impressed by his elaborate, balanced, Latinistic prose style. The effects of this both upon the prose of his period and upon his own reputation were injurious. Even to this day most people think of Dr. Johnson — he was not yet M.A., that degree coming to him from Oxford, partly in reward for *The Rambler*, in time to be printed on the title page of the Dictionary — as a pompous affected writer who never used a short English word, if he could find a long Latin one to put in its place. *The Rambler* and other works produced when he was about 40 give a basis of truth to this opinion; but we should remember that as he grew older and after he had had much practice as a racy talker, his style became simpler and stronger.

The last number of *The Rambler* was written when Mrs. Johnson was dying. He mourned her loss sincerely through 32 years of widower-

hood. He did not see her painted cheeks or hear her affected giggles; he saw only an ideal being whose death left him desolate. No one can read the numerous references to her in his 'Prayers and Meditations' (1785) without feeling a profound respect for the blinded man.

During the years between 1752 and 1759, that is between *The Rambler* and 'Rasselas,' Johnson not only published the Dictionary, wrote essays for his friend Dr. Hawkesworth's 'The Adventurer' (1753–54), and edited and contributed to the *Literary Magazine, or Universal Review* (1756–58), but also issued proposals for the edition of Shakespeare he had long contemplated (1756), and began a new series of essays, *The Idler*. He lazily put off the Shakespeare until a taunt by the satirist, Charles Churchill, in 'The Ghost,' to the effect that he was cheating the subscribers who had paid in their money forced him to go to work on the promised edition, which finally appeared in 1765. Naturally, it was not a monument of scholarship, but it contained some sound criticism, and its preface has long been regarded as one of the most sensible introductions to the reading of Shakespeare that we possess. *The Idler* ran in weekly numbers from 15 April 1758 to 5 April 1760 on Saturdays in Newberry's 'Universal Chronicle.' It was collected in two volumes in 1761 and in part deserved its title, for it was distinctly less ponderous than *The Rambler*.

It is at this period that the Johnson who has impressed the world's imagination as a man begins clearly to emerge. He was still the old impecunious Johnson, for the year after the Dictionary appeared he was twice arrested for debt. But he was slowly improving his finances, and he was gathering around him friends who were better than riches. He had long delighted in tavern clubs where he met queer characters, such as the forger, Psalmanazer (q.v.). In 1749 he organized a club of his own at the King's Head, which included Bathurst, Hawkesworth, and his future biographer, Sir John Hawkins. Then he formed friendships — destined to become more famous because they figured so frequently in Boswell — with the accomplished Grecian Bennet Langton, with the gay, fashionable Topham Beauclerk, with Sir Joshua Reynolds and Dr. Burney, and, a trifle later, with Goldsmith and Burke. An humbler circle of friends is still more picturesque — to wit, the unfortunates he received into his gloomy house after his wife died — blind Miss Anna Williams, good talker but peevish, Robert Levett, the self-educated physician of the poor, to whose memory Johnson consecrated one of the most pathetic of English elegies — and later, Mrs. Desmonlins and Miss Carmichael. These dependents, as was natural, quarreled among themselves and harassed their benefactor. Another inmate of his house, of whom we frequently hear, was his black servant, Francis Barber.

In January 1759 Johnson's old mother died at Lichfield. The story that he wrote 'Rasselas, Prince of Abyssinia,' in a week, to pay her funeral expenses is, as is usual, not altogether accurate. It seems to have been begun before her death, mainly in order to defray the cost of a visit to her. When published, it became the most popular of his writings, and it still has readers and ranks as a classic, although a ponderous one. It has little narrative interest, lacks the atmosphere of the East, presents us with personages rather than with persons, and makes them talk in an impossibly magniloquent style; yet, when all deductions are made, it remains not only a strong attack upon the fashionable shallow optimism of the day which Johnson detested, but also one of the most manly utterances on the evils of life and the courage needed to combat them that has ever been heard from an English moralist. In literary ability Johnson was inferior to Voltaire, whose witty 'Candide,' by a curious coincidence, attacked the optimists almost contemporaneously with 'Rasselas'; but in moral force the advantage was entirely on Johnson's side.

Three years after 'Rasselas' began its long life in numerous editions and translations, Johnson's own life was almost entirely changed. In July 1762, despite his famous uncomplimentary definition of "pension," he accepted one of £300 per annum. He was independent enough to be able to afford being slightly inconsistent, and he did not promise to support the Tory government in return for its favors. Pensioned or unpensioned he would have taken his reactionary position on American affairs, whether or not he would have written his unfortunate 'Taxation no Tyranny' (1775), just as naturally as he took part in exposing the Cock Lane Ghost (1762).

His pension gave Johnson full opportunity to indulge his constitutional sluggishness. He could afford to write only now and then, to lie in bed till the afternoon, to spend the evening at a tavern laying down the law to his hearers. Thanks partly to his genius for conversation and friendship, partly to his rooted dislike of solitude, he grew to be more and more of a club-man, as the word was then understood, and it was in this capacity rather than as a productive man of letters that he became the literary dictator of his time. As Macaulay remarks, between 1765 and 1775 Johnson published only what it would scarcely have taken him a week to write if he had been working at his old rate of speed. Instead of writing he talked, and when he came forward again as an author, the vigorous English of his conversation got the better of the stately Latin of his pen. About the beginning of 1764 he became the chief figure of the famous club which for nearly 20 years held weekly or fortnightly meetings at the Turk's Head, Soho. Besides Johnson, its chief members were Reynolds, Burke, Goldsmith, Gibbon, Garrick, Sir William Jones, and, last but not least, James Boswell, whom Johnson caused to be elected early in 1773. Langton, Beauclerc, Bishop Percy, Fox, and others nearly or quite as distinguished, were also members. It is perhaps not so surprising that these men admitted Boswell at Johnson's solicitation as that Johnson should have tolerated the bibulous, gossiping little man, who hailed from a part of Great Britain for which the sturdy English moralist had always professed a great dislike. The matter can no more be settled by explanation than Johnson's infatuation with Mrs. Porter. Boswell, with all his faults, must have been amusing, and his devotion to his master doubtless touched that essentially kind though rough personage. At any rate, posterity, which owes so much to Boswell, has no occasion to criticize harshly either of the apparently ill-

assorted friends. It is better to remember that, although several other members of the club wrote books that have stood the wear and tear of time more successfully than most of Johnson's writings have done — Burke, Goldsmith and Gibbon, for example, and Boswell himself — the fact that Johnson dominated such men speaks volumes for his essential greatness as a man. Mere dictatorial rudeness and other qualities natural to an *Ursa Major*, as the poet Gray used to denominate him, are not sufficient to explain the phenomenon.

Boswell is not the only person who lives in literature because he was once associated with Johnson. Henry Thrale, the brewer, and his bright, gay wife are mainly remembered, because after 1764 Johnson passed much of his time at the brewery in Southwark and at their villa at Streatham, leaving his new house in Fleet street to be occupied in the main by the queer recipients of his bounty already mentioned. He now became somewhat more polished in his manners and enjoyed the society of such interesting women as Fanny Burney (Mme. D'Arblay, q.v.), Hannah More (q.v.), Mrs. Montagu and Mrs. Carter. The literary lion in such company presents a picture very different from that of the adventurer wandering the streets with Savage. Boswell gives so many interesting pictures of the later Johnson that it is difficult to select the most striking. The interview with George III was a great event in the life of so loyal a subject. It took place in February 1767. His softening down in the presence of that amusing radical, John Wilkes, showed him in a still happier light. His excursions, whether with Boswell or the Thrales, to the Hebrides (1773), to Wales (1774) and to France (1775) — to say nothing of visits to his old friends at Oxford and elsewhere, had their share with time in mellowing his character and widening his outlook upon men and institutions. 'A Journey to the Western Isles,' the account he gave of his visit to Scotland with Boswell, upon which the latter wrote a more sprightly book, would have given far more offense to the Scotch if it had been written two decades earlier. It was published in 1775, the year Oxford, following Dublin by 10 years, made him a doctor, and is a dignified and worthy book; but it is probably chiefly remembered because in it Johnson severely handled James Macpherson of Ossian fame, a fact which led to Macpherson's challenging him, and to Johnson's purchasing a stout stick, which he did not have occasion to use on his challenger.

Two years later — Easter Eve 1777 — a committee representing many of the best London booksellers called upon Johnson to ask him to furnish introductions to a proposed series of the works of the English poets since the Restoration. The project pleased him, he named a compensation far too low (200 guineas, subsequently increased by £200 by the booksellers), shook off his lethargy and by 1781 had finished the most famous of his books, the 'Lives of the English Poets,' which appeared (collected) in 10 small volumes (1779, 1781). This latest work was, in literary merit, by far his best. He was in sympathy with most of the poets he had to treat, he had amassed through reading and gossip much information about them, he had mellowed with age, the common sense and sound morality, which are the best features of his criticism, had full chance to display themselves, and his style was no longer ponderous and unidiomatic. The life of Milton was marred by prejudice, religious and political, as well as by lack of appreciation of such a poem as 'Lycidas,' the life of Gray was unsympathetic and inadequate; but the chief lives, such as those of Cowley, Addison, Dryden, Swift, Pope and Savage, left little to be desired, and many of the minor sketches were intelligent, to the point, and, not infrequently, humorous in a somewhat grim fashion. In short, the book well deserves the place it has secured as an 18th century classic.

After its publication Johnson aged rapidly, and what with the loss of friends (like Thrale in 1781, and Levett in 1782), and with his dread of death and his increasing infirmities of gout and asthma, the last three years of his life were very painful. A break with Mrs. Thrale in consequence of her attachment to the Italian Piozzi, whom she married in 1784, led to his going back to his house in Fleet street, to recriminations and bad temper trying both to him and to her, and finally to his last letter to her, which is pathetic in the extreme. In the summer of 1783 he had a paralytic stroke; recovering, he tried, more or less in vain, to forget his miseries in his clubs, old and new. He visited Oxford with Boswell; plans were formed to get him to Italy, but failed; and in November 1784 he entered upon his last illness. Physicians and friends served him with the utmost kindness, his fears of death subsided, and after bravely undergoing operations and giving many proofs of his unfeigned piety, he died peacefully on 13 Dec. 1784. Seven days later he was buried in Westminster Abbey.

Johnson's massive figure and disfigured face, his swaying backward and forward, his muttering prayers to himself, his touching all the posts he passed, his bad manners at table, his 25 and less cups of tea, his slovenliness, his near-sightedness — all his moral and physical peculiarities are known wherever Boswell is read. We do not so frequently recall his generosity in making advances after a quarrel, his love of children, his chivalry toward women, his loyalty to his friends, his charity to the poor, his hatred of tyranny in every form. We remember his prejudices and superstitions without recalling the fact that he inherited them in large measure. By insisting upon his eccentricities we tend to overlook his splendid triumph over bodily infirmities and social drawbacks that would have quelled a less resolute spirit. Johnson at bottom was of heroic mold — courageous, tender, large-minded, sound-hearted. His peculiarities make him picturesque; study of his character and his career reveals him to have been truly great as a man. As a man of letters he is also great, through his influence upon the literature of his period, through his services to lexicography, through the solid intelligence and morality of his essays and 'Rasselas,' through the sanity of his best criticism, and through the vitality of his biographical sketches. But as a writer of books that are judged solely on their intrinsic merits of style and substance Johnson can scarcely be termed great. His complete works have been but rarely reprinted in the past 80 years and are little read. As an essayist and letter-writer, and poet, he is not in the highest class; 'Rasselas' is found to

be heavy reading by most people; the 'Lives of the Poets' are perused in their entirety by but few. Boswell does much more to preserve Johnson's fame than the great Doctor's own writings; but the value of these is easily underestimated, and Boswell's biography would not have been such a great book if Johnson had not been such a great man. See LIVES OF THE POETS; RAMBLER, THE; RASSELAS; VANITY OF HUMAN WISHES.

Bibliography.— Good editions of Boswell's 'Life of Samuel Johnson' are by G. Birkbeck Hill (6 vols., Oxford 1887) and by Roger Ingpen (2 vols., New York 1909). Other editions of importance are those by Malone (6th edition of the work, 1811), Croker (11th edition, 1831; revised, 1835), Percy Fitzgerald (1874), Rev. Alexander Napier (1884). Other sources of information are the biography by Sir John Hawkins (1787), Arthur Murphy's 'Essay on the Life and Genius, etc.' (1792), Mrs. Piozzi's 'Anecdotes' (1786), and her 'Autobiography' (1861), the Diary of Mme. D'Arblay (1841, now edited anew by Austin Dobson), and, in general, books dealing with the chief men of the time, Goldsmith, Reynolds, Burke, etc. Consult also the short lives by Leslie Stephen ('English Men of Letters,' London 1879), and Col. F. Grant ('Great Writers,' ib. 1887); Dennis, J., 'Dr. Johnson' (New York 1905); Raleigh, W. A., 'Samuel Johnson' (Oxford 1907); id., 'Six Essays on Johnson' (ib. 1910); Shorter, C. K., 'Immortal Memories' (New York 1907); Piozzi, H. L. T., 'Dr. Johnson's Mrs. Thrale' (ib. 1910); Broadley, A. M., 'Dr. Johnson and Mrs. Thrale' (ib. 1910); Burney, F., 'Dr. Johnson and Fanny Burney' (ib. 1911); Bailey, J. C., 'Dr. Johnson and His Circle' (ib. 1913). The chief critical essays are by M. Arnold, Birrell, Carlyle, Macaulay and Leslie Stephen. Consult also Birkbeck Hill's 'Dr. Johnson and His Friends' (1878), and 'Johnsonian Miscellanies' (1897), and Whitwell Elwin's 'Some Eighteenth Century Men of Letters' (1902). Johnson's works were edited by Hawkins in 1787 in 11 volumes (to which two volumes edited by Stockdale were added later). Several editions by Arthur Murphy followed (1792, 1796, etc.), then two by Chalmers (1810, 1816), and finally in 1825 came the best, the Oxford edition in 11 volumes, edited by F. P. Walesby and containing the Parliamentary Debates. Johnson's 'Letters,' save those included in Boswell's, were edited by Birkbeck Hill in 1892 (2 vols). Reprints of separate works have been very numerous, of late chiefly for school use. The best editions of 'Rasselas' are those by Birkbeck Hill (1887), and O. F. Emerson (1895). The 'Lives of the Poets' were edited by Peter Cuningham in 1854, by Mrs. Napier in 1890 and by Arthur Waugh in 1896; but these have been superseded by the monumental edition of Birkbeck Hill (3 vols., 1905). Matthew Arnold edited six of the lives in 1878.

WILLIAM P. TRENT,
Professor of English Literature, Columbia University.

JOHNSON, Samuel, American preacher and author: b. Salem, Mass., 10 Oct. 1822; d. North Andover, 19 Feb. 1882. He was graduated from Harvard in 1842, and from the Harvard Divinity School in 1846. He joined no religious denomination, and save for one year with a Unitarian church in Dorchester was not settled as a minister until 1853, when he established in Lynn, Mass., an independent society, with which he remained till 1870, then withdrew to complete studies of many years, the results of which appeared later in his publications. With Samuel Longfellow (q.v.) he compiled a 'Book of Hymns' (1846) and 'Hymns of the Spirit' (1864). Some of his own inspiring hymns in these books are now found in the collections of various denominations. His critical study 'The Worship of Jesus' (1868), written in accordance with his views of universal religion, is described by O. B. Frothingham as "perhaps the most penetrating and uplifting essay on that subject in any language." He printed notable essays on religion, reform, etc., in *The Radical* and other periodicals. His great work 'Oriental Religions,' including 'India' (1872), 'China' (1877) and 'Persia' (1885)— the last containing an introduction and a critical estimate of Johnson by O. B. Frothingham — represents what Johnson himself calls his "purely humanistic point of view." His philosophy was highly transcendental; but being versed in many languages, he was acquainted with all schools, and with the results of history, literature, science and criticism in every department. 'Oriental Religions,' in the task of writing which scholars have compared his competence, patience and thoroughness with the same qualities in Darwin, has taken its place among the most learned and liberal contributions to the study of comparative religion and civilization. Prof. E. J. Eitel, the German Orientalist, wrote of "Johnson's pre-eminent merits as the historian of universal religion," and F. Max Müller paid him tribute as the finder of "a religion behind all religions." His 'Theodore Parker' (1890) is a profoundly spiritual interpretation of that preacher and reformer, whose work on the intellectual side was surpassed by Johnson's, while on the moral side, as in the anti-slavery conflict, they stood as equal comrades. A little volume of Johnson's hymns, with other poems, was published in 1899. Consult Longfellow, 'Lectures, Essays and Sermons by Samuel Johnson, with a Memoir' (Boston 1883). This volume contains some of Johnson's best papers, including brilliant lectures on 'Switzerland' and 'Florence,' the outgrowth of searching observations in Europe, 'Equal Opportunity for Woman,' 'Labor Parties and Labor Reform,' and an illuminative essay on 'Transcendentalism.'

JOHNSON, Samuel William, American chemist: b. Kingsboro, N. Y., 3 July 1830; d. 1909. He studied at Yale Scientific School and the universities of Leipzig and Munich. In 1856 he became professor of analytical chemistry in the Sheffield Scientific School of Yale, taught agricultural chemistry there 1857–75, and from 1875 to 1896 was professor of theoretical and agricultural chemistry, becoming in 1896 professor emeritus. He was director of the Connecticut Agricultural Experiment Station from 1877 to 1899. In 1858 he was made chemist to the State Agricultural Society, in which capacity he issued an important series of papers on commercial fertilizers and allied subjects. He was elected to the National Academy of Sciences, and in 1878 was president of the American Chemical Society. He published

'Essays on Peat Muck and Commercial Manures' (1859); 'How Crops Feed' (1870); 'Peat and Its Uses' (1866); 'How Crops Grow' (1868), and edited Fresenius' 'Quantitative Chemical Analysis' (1864, 1875, 1883).

JOHNSON, Thomas, American statesmen: b. Saint Leonard's, Md., 1732; d. 1819. He studied law at Annapolis, was elected to the first Continental Congress (1774), was again sent to Congress in 1776, moved the appointment of Washington as commander-in-chief, and in the same year became brigadier-general of Maryland militia, going to Washington's relief in the winter of that year. In 1777 he was chosen governor of Maryland, remaining in office until the close of 1779, and rendering important services to the Continental Congress and its forces. In 1780 he entered the provincial congress and the house of delegates, in 1781–87 was in the Continental Congress, where he supported the Constitution and was a member of the Maryland Convention which ratified that instrument in 1789. In 1791 became an associate justice of the United States Supreme Court, and later declined the office of chief justice. He was a member of the commission which laid out the city of Washington.

JOHNSON, Thomas Cary, American theologian: b. Fishbok Hill, Va., 9 July 1859. He was graduated at Hampden-Sidney College (1882) and took diplomas in Latin, Greek and mathematics (1883–84) at the University of Virginia, then graduating in theology (1887) at Union Theological Seminary, Virginia. He was appointed professor of Old and New Testament exegesis at Austin (Tex.) Theological School (1889–90), and was ordained to the ministry in 1890, becoming pastor-elect of the Third Church, Louisville, Ky. (1890–01). He was made a member of the faculty of Union Theological Seminary, Richmond, Va., filling chairs of English Bible and pastoral theology (1891–92), ecclesiastical history and polity (1892–13), systematic theology since 1913. He wrote 'History of the Southern Presbyterian Church' (1894); 'John Calvin and the Genevan Reformation' (1900); 'Life and Letters of Robert Lewis Dabney' (1893); 'Life and Letters of Benjamin Morgan Palmer' (1906); 'Virginia Presbyterianism and Religious Liberty' (1907); Introduction to Christian Missions' (1909); 'Baptism in the Apostolic Age' (1912).

JOHNSON, Thomas Loftin, American capitalist and municipal reformer: b. Georgetown, Ky., 18 July 1854; d. Cleveland, Ohio, 10 April 1911. He was clerk in a street railway office (1869–75), and invented several street railway devices, included the Johnson rail and a fare box; became owner of a street railway in Indianapolis and later acquired large interests in Cleveland, Detroit and Brooklyn; he was also interested in iron manufacture in Cleveland. He disposed of his railway properties and became prominent in politics as a member of the Democratic party, and known as an advocate of the single tax and public ownership of public utilities. His plans for municipal ownership attracted nation-wide attention. Though opposed to the free coinage of silver, he supported Bryan in 1896 and 1900, and the State convention which he controlled unanimously endorsed the Kansas City platform. He was a member of Congress, 1891–95. In 1901 he was elected mayor of Cleveland, and was re-elected 1903, 1905 and 1907. He transformed the city government by introducing several radical reforms. He was an advocate of three-cent street railway fares. In 1903 he was the Democratic candidate for governor of Ohio, but was defeated. He quitted public life in 1910. Consult his autobiography, 'My Story,' edited by E. J. Hauser (New York 1911).

JOHNSON, Virginia Wales, American novelist: b. Brooklyn, N. Y., 28 Dec. 1849. Since 1875 she has lived in Florence, Italy. Her publications, mainly for young folk, include 'Kettle Club Series' (1870); 'Travels of an American Owl' (1870); 'Joseph the Jew' (1873); 'A Sack of Gold' (1874); 'The Catskill Fairies' (1875); 'The Calderwood Secret' (1875); 'A Foreign Marriage' (1880); 'The Neptune Vase,' her finest work (1881); 'The [illegible] of Tipton' (1885); 'Tulip's Place' Fainalls (1886); 'Miss Nancy's Pilgrimage' (1887); 'The House of the Musician' (1887); 'The World's Shrine' (1902); 'A Lift on the Road' (1913); and other fictions and several descriptive works, such as 'Genoa, the Superb'; 'The Lily of the Arno'; 'Lake Como'; 'Many Years of a Florence Balcony' (1911).

JOHNSON, Sir William, British superintendent-general of Indian affairs in North America: b. Smithtown, County Meath, Ireland, 1715; d. near Johnstown, N. Y., 11 July 1774. His uncle, Sir Peter Warren, offered his nephew the management of his entire property in New York, if the latter would undertake its improvement and settlement. Johnson accepted the offer and in 1738 established himself upon a tract of land on the south side of the Mohawk, about 25 miles from Schenectady, which Sir Peter had called Warrensburgh. In addition to the settling and improving of the country, he embarked in trade with the Indians, whom he always treated with perfect honesty and justice. He became a master of their language, speaking many of their dialects as perfectly as they did themselves and was thoroughly acquainted with their beliefs and customs. He was adopted by the Mohawks as one of their own tribe, chosen a sachem and named Warraghejaghe, or Warraghiaghy, "he who has charge of affairs." In 1744 he was appointed colonel of the Six Nations, in 1746 commissioner of New York for Indian affairs. In 1750 he became a member of the provincial council. In 1754 he attended as one of the delegates from New York the congress of Albany and also the great council held with the Indians on that occasion, at which they strongly urged his reappointment as their superintendent. At the council of Alexandria, 14 April 1755, he was sent for by Braddock and commissioned by him "sole superintendent of the affairs of the Six United Nations, their allies and dependents." He was also, pursuant to the determination of that council, created a major-general and commander-in-chief of the provincial forces destined for the expedition against Crown Point. At the head of these forces, in September 1755, he defeated Baron Dieskau at Lake George. This victory saved the colony from the French and Johnson received the thanks of Parliament for his vic-

tory, was voted £5,000 and on 27 Nov. 1755, created a baronet of Great Britain. On his arrival at Lac Saint Sacrament a few days before this battle, he gave to it the name of Lake George, "not only in honor of his majesty, but to assert his undoubted dominion here." In March 1756 he received from George II a commission as "colonel, agent, and sole superintendent of the affairs of the Six Nations, and other northern Indians." He held this office for the rest of his life. In 1758 was present with Abercrombie at Ticonderoga. General Prideaux led the expedition against Fort Niagara in 1759. Johnson was second in command and upon the death of Prideaux, before that fort, succeeded to the command in chief. With upward of 1,000 Indian allies he continued the siege with great vigor and cut to pieces the French army. He led the same Indian allies the following year in the Canadian expedition of Amherst and was present at the capitulation of Montreal and the surrender of Canada to the British arms in 1760. The war was now at an end and the king granted to Sir William for his services a tract of about 100,000 acres of land, north of the Mohawk. In 1764, the country being at peace and the Indians perfectly contented, Sir William erected Johnson Hall, a large wooden edifice still standing. The village of Johnstown, with stores, an inn, a courthouse and an Episcopal church was soon laid out. In 1772 it became the shire town of Tryon County. Johnson lived in the style of an old English baron of former days and exercised a liberal hospitality. In 1768 he concluded the Treaty of Fort Stanwix. He wrote 'The Language, Customs and Manners of the Six Nations,' published in Proceedings of the Philosophical Society of Philadelphia (1772) and his letters have great historical value. Consult 'Calendar of the Sir William Johnson Manuscripts,' compiled by Day (Albany 1909); Buell, 'Sir William Johnson' (New York 1903); Griffis, 'Sir William Johnson and the Six Nations' (ib. 1891); Stone, 'Life of Sir William Johnson' (2 vols., Albany 1865).

JOHNSON, William, American jurist: b. Charleston, S. C., 27 Dec. 1771; d. Brooklyn, N. Y., 11 Aug. 1834. He was graduated (1790) at Princeton, then entered the law office of the celebrated Charles Cotesworth Pinckney and was admitted (1793) to the bar. He represented Charleston at the State legislature till 1798, when he was appointed judge of the Court of Common Pleas. In 1804 Thomas Jefferson appointed him associate justice of the United States Supreme Court. He was an adherent to the Jefferson political principles but was firm in all matters respecting his reading of the law. This brought him into collision with the President in the celebrated "Embargo" act, which he declared illegal and he belonged to the minority in the matter of the South Carolina nullification proceedings. He found opposition to him so strong that he had to leave the State for a time, going (1832) to western Pennsylvania, then to Brooklyn, N. Y., where he died. He wrote 'The Life and Correspondence of Major-General Nathaniel Greene' (1822), and in 1826 he published a eulogy on Adams and Jefferson.

JOHNSON, William Samuel, American jurist: b. Stratford, Conn., 7 Oct. 1727; d. there, 14 Nov. 1819. He was the son of the Rev. Samuel Johnson (q.v.), first president of King's College (Columbia University), New York. He was graduated from Yale in 1744, was admitted to the bar, practised in the New York and Connecticut courts, in 1761 and 1765 represented Stratford in the Connecticut general assembly, or lower house, and in the latter year was a Connecticut delegate to the Stamp-act congress at New York. In 1766 he became a member of the governor's council or upper house of the Connecticut legislature, in 1766–71 was in England as special agent for the colony in defense of its title to land obtained from the Mohegan Indians, in 1771 re-entered the council, and for a time in 1772 was a judge of the Superior Court of the colony. After Lexington, he was a member of a committee sent to General Gage on the unsuccessful mission of inquiring into possible means of peace. Opposed to the Revolution, he remained in private life during its progress, but in 1784–87 was a member of the Continental Congress, in 1787–89 sat in the Connecticut assembly, in 1787–1800 was president of Columbia College, and from 1789 to 1791, when he resigned, was the first United States senator from Connecticut. He resigned the college presidency in 1800 because of failing health and retired to Stratford. Oxford conferred on him the degree of D.C.L. in 1766. He made the acquaintance of Dr. Samuel Johnson during his stay in London, and later corresponded with him. His letters to the governors of Connecticut during his residence in Great Britain have been published in the 'Collections' of the Massachusetts Historical Society, 5th series, Vol. IX (Boston 1885). Consult Beardsley, 'Life of William Samuel Johnson' (Boston 1876).

JOHNSON, William Woolsey, American mathematician: b. Owego, N. Y., 23 June 1841. He was graduated (1862) at Yale University, receiving (1868) the degree A.M., and served on the staff of the United States Nautical Almanac Office (1862–64), at Cambridge, Mass. He was appointed assistant professor of mathematics at the United States Naval Academy, Newport, R. I., and at Annapolis (1864–70), and professor of mathematics at Kenyon College, Ohio (1870–72), and Saint John's College, Maryland (1872–81), returning to the United States Naval Academy in 1881. He was made also professor of mathematics in the navy from 1913. He has written 'An Elementary Treatise on the Integral Calculus' (1881); 'Curve Tracing in Cartesian Co-ordinates' (1884); 'The Theory of Errors and Method of Least Squares' (1890); 'Treatise on Differential Equations' (1889); 'Theoretical Mechanics' (1901); 'Treatise on Differential Calculus' (1904); 'Differential Equations' (1906); monographs on mathematics; 'Treatise on Integral Calculus' (1907); 'An Elementary Treatise on the Differential Calculus' (1908).

JOHNSON, Boswell's Life of. Boswell's 'Life of Johnson' is one of the world's greatest biographies. Apart from its intrinsic literary worth, it is of historical importance in that it marks a culminating point in the general development of biography. From the time of Plutarch, and before, writers had been striving to set forth and follow proper methods of life writing. Boswell summed up and exemplified all the precepts of past method and gave to the

world a model of biography. It is not going too far to say that, since the publication of the 'Life of Johnson' in May 1791, all worth while biographies have followed, as far as possible, the general method employed by Boswell; that they have been, in short, mere variants of the 'Johnson.' It may be seen, therefore, that Boswell's work was both a culmination and an innovation.

In addition to its importance as a landmark in the general history of biography, the 'Life of Johnson' is one of the few classic English lives. Many critics of high rank pronounce it the greatest in the language. Although it is undoubtedly true that the 'Life' has exerted a greater influence upon the course of English biography than has any other single work, it may yet be questioned whether, from every point of view, it may be classed as the greatest of such works in the language. There is no doubt that it is one of the four or five greatest; that only such works as Lockhart's 'Life of Scott,' Trevelyan's 'Life of Macaulay,' Froude's 'Life of Carlyle' and Allen's 'Life of Phillips Brooks' may be put in the same class with it.

The biography is affected by certain limitations under which Boswell worked. In the first place, he did not meet Johnson until 16 May 1763, when the sage was nearly 54 years old. In consequence, about one-fifth of the 'Life' is concerned with the 54 years; the remainder with the 21 years during which Boswell knew Johnson. It was not the struggling and obscure, but the retired and famous Johnson that Boswell knew and recorded. Croker calculated that Boswell met Johnson on 276 days, including the period of the tour to the Hebrides — a time sufficiently brief, indeed, to enable one to write one of the most intimate biographies in existence. Furthermore, Boswell was a man of strong prejudices; he disliked to have Johnson show attention to others and could scarcely brook being outshone in any company. It is to his prejudices that we must lay the account for his attitude in the 'Life' toward such people as Sir John Hawkins, Mrs. Piozzi and Oliver Goldsmith.

The greatness of Boswell's work is the joint result of the subject, the biographer and the plan. Johnson was, perhaps, England's greatest literary dictator and possessed an individuality more interesting than anything he ever wrote. In the sum of his qualities and characteristics, he was a type of the English race. Boswell had the qualities requisite to a faithful delineation of such a subject. He combined strict regard for truth with intense devotion to his task, unsparing zeal in the face of stern rebuffs, willing sacrifice of his own dignity — whenever such seemed necessary, and a dramatic instinct keener almost than that possessed by any other biographer. The plan followed in the 'Life' is autobiographical: as far as he was able, Boswell allowed Johnson to reveal himself by means of conversation, letters and extracts from other written and printed documents. In addition, he included letters written to Johnson and the opinions of Johnson's contemporaries, with the result, to adapt the words of Carlyle, that he showed "what and how produced was Johnson's effect on society; what and how produced was the effect of society on him." Boswell never made the mistake of lapsing into sheer adulation: "I profess," he plainly asserted, "to write, not his panegyric, which must be all praise, but his life; which, great and good as he was, must not be supposed to be entirely perfect." Boswell says that he followed the plan adopted by the Rev. William Mason in the 'Life of Thomas Gray.' One has but to read Mason's dull and colorless work to appreciate the triumph of Boswell's genius; to learn, in fact, of how little comparative importance is mere plan apart from actual genius for writing biography. It is true that Boswell employed no methods that had not been used by biographers as far back as Plutarch; indeed, he refers to Plutarch as "the prince of ancient biographers," and any reader can determine for himself how much Boswell took to heart Plutarch's statement that it is not "always in the most distinguished achievements that men's virtues or vices may be best discerned; but very often an action of small note, a short saying, or a jest, shall distinguish a person's real character more than the greatest sieges or the most important battles." In the matter of recording conversation, and of representing events dramatically, Boswell has had no superior among biographers. The 'Life' portrays Johnson from many angles and vindicates the proud assertion made by Boswell in a letter to William Temple: "I am absolutely certain that my mode of biography, which gives not only a *history* of Johnson's *visible* progress through the world, and of his publications, but a view of his mind in his letters and conversations, is the most perfect that can be conceived, and will be more of a Life than any work that has yet appeared."

"What we want in a biography," wrote William Ewart Gladstone in his *Quarterly Review* article on Trevelyan's 'Life of Macaulay,' "and what, despite the etymology of the title, we very seldom find, is *life*. To fulfil its idea, it must have in it the essential quality of movement. . . . Neither love . . . nor forgetfulness of self will make a thoroughly good biography, without this subtle gift of imparting life. By this it was that Boswell established himself as the prince of all biographers." Gladstone has but voiced the general sentiment of a century and a quarter. What the biographer saw and heard and knew he recorded faithfully; Johnson lives and moves and speaks in our presence. Boswell was wise enough, however, to do more than merely record facts; he interpreted, and his artistic interpretation of Johnson, while ever subject to the censure of being only "an aspect of the truth seen from one particular point of view," has survived the double test of time and criticism, and has earned the palm which is awarded only to true artistry. One sure evidence of Boswell's skill in gradation and in creating the illusion that one has always known Johnson is the fact that few readers ever notice that almost the whole of the book deals with the last 21 years of the subject's life. Limitations the work may have; supplemented as it may be, however, by readings from Mrs. Piozzi's 'Anecdotes of Dr. Johnson,' Fanny Burney's 'Diary,' the 'Life' by Sir John Hawkins, or from any other of the numerous lives, sketches and critical articles that have accumulated during more than a century. Boswell's Johnson is the Johnson that

the world knows, the only Johnson that the world is likely to know intimately as long as the English language endures and men maintain an interest in the vigorous personalities of English literature. Those who would actually know Johnson and obtain "a view of literature and literary men in Great Britain for near half a century during which he flourished," must go directly to Boswell's great work. For it, there can be no substitute. For a discussion of the place of Boswell's work in the development of biography consult Dunn's 'English Biography' (ch. 5).

WALDO H. DUNN.

JOHNSON CITY, Tenn., city in Washington County, on the Southern and other railroads, 106 miles north of Knoxville. Its elevated location and picturesque mountain scenery make it a favorite summer resort for Southern people. Here are located the mountain branch of the National Soldiers' Home and the East Tennessee State Normal School. The manufacturing interests include iron furnaces, rolling-mills, machine shops, tanneries and brickmaking plants, cigar, box, table and furniture factories, a tannery and several woodworking establishments. The city was settled in 1870 and is governed under a charter of 1897, by a mayor and council elected biennially. The city owns the waterworks. Pop. 10,143.

JOHNSON GRASS. See GRASSES IN THE UNITED STATES.

JOHNSON'S ISLAND, Ohio, an island located at the mouth of Sandusky Bay, overlooking Lake Erie, about a mile long and a mile and a half wide. The island was used during the Civil War as a prison for captured Confederates. It was an ideal spot for a prison post. No prisoner was ever known to escape from it. The grounds were enclosed within a fence 12 feet high, with a platform top, upon which sentinels paced to and fro, day and night. To the north Lake Erie stretches away for 50 miles; on the east, separated by three miles of water, lies Sandusky, while west and south of the island are broad stretches of Sandusky Bay. The island was used almost exclusively as a prison for officers, the total number confined there from first to last aggregating over 15,000. The first prisoners were taken there in April 1862 and in September 1865 the last of them were sent to Fort Lafayette and Johnson's Island was abandoned as a prison post. The men confined on Johnson's Island represented the flower of the chivalry of the South. They were largely professional men and planters, among them being many who were prominent in science, literature and art.

JOHNSTON, Albert Sidney, American general: b. Mason County, Ky., 3 Feb. 1803; d. Shiloh, Miss., 6 April 1862. General Johnston had but a brief career in the Confederate army and the first part of that career was one of great disaster and consequently of severe criticism; but he fell "on the field of glory" at Shiloh, and not a few endorse the opinion of President Davis that he was the greatest general whom the war produced. Descended from a long line of illustrious ancestors, he obtained his literary education at Transylvania University and was graduated at West Point 30 June 1826, being number eight in a brilliant class of which Jefferson Davis was a member. He was brevetted second lieutenant in the 2d Infantry, transferred to the 6th Infantry in 1827, was regimental adjutant from 1828 to 1832, aide to General Atkinson a year, and acting assistant adjutant-general to Illinois volunteers during the Black Hawk War — in all of which positions he showed the qualities of an accomplished soldier. He resigned his commission in the United States army 31 May 1834, having determined to settle in Texas and cast in his fortunes with the "Lone Star" Republic.

The battle of San Jacinto was fought 21 April 1836, and soon after Johnston arrived in Texas and enlisted as a private soldier in the Texan army. His merit soon brought him promotion and he was made adjutant-general of the Army of Texas and not long after brigadier-general and chief commander of the army in the place of Gen. Felix Houston. As a result of jealousy growing out of this promotion there was an unfortunate duel between Houston and Johnston, in which the latter was wounded. He continued in command of the Texan army until 1838, when he was made Secretary of War of the Republic of Texas. In 1839 he led an expedition against the hostile Cherokee Indians and in a battle on the Neches defeated and routed them with great slaughter. He used all of his abilities and wide influence in bringing about the annexation of Texas to the United States, and promptly enlisted when the Mexican War broke out, being colonel of a regiment of Texas volunteers. He was distinguished in various battles, especially at Monterey, where he had three horses shot from under him and was highly complimented by General Butler, on whose staff he was serving.

On 31 Oct. 1849 he was appointed by President Taylor paymaster in the United States army, with the rank of major and when the 2d Cavalry regiment was formed he was appointed, 3 March 1855, its colonel on the recommendation of his old classmate and lifelong friend, Jefferson Davis, who was at that time the able and efficient Secretary of War. In 1857 he was put in command of an expedition to Utah to force the Mormons to submit to the laws of the United States government and overcame great difficulties and showed such ability and tact in the delicate mission that he was made brevet brigadier-general. When the war between the States broke out General Johnston was in command of the department of the Pacific, but he very promptly resigned his commission and with a small party made his way across the plains, passing through New Orleans and reached Richmond on 2 September, where he had a cordial reception and was made a full general and assigned to the command of the department of Kentucky, whither he went at once, beginning the able and efficient discharge of his duties there.

It could not be published at the time that he had a force barely 20,000 to defend that long line against overwhelming numbers of the enemy, and he was severely criticised in the newspapers for not being more aggressive and when Forts Henry and Donelson fell and he was compelled to fall back and abandon to the enemy so large a section of Confederate territory that abuse and severest criticism were heaped upon him, he was denounced as incom-

petent and his removal from command was demanded. President Davis calmly said: «If Albert Sidney Johnston is not a general, then I have none to put in his place.» He wrote his old friend a noble letter, and Johnston replied in the same spirit, concluding with this sentiment: «The test of merit in my profession, with the people, is success. *It is a hard rule, but I think it right.* If I join this corps to the forces of General Beauregard (I confess a hazardous experiment), then those who are now exclaiming against me will be without an argument.» He alluded to his plan of uniting with Beauregard to strike Grant before Buell and Mitchel could join him, and in pursuance of which plan he marched from Corinth, Miss., on 3 April, intending to attack Grant at Pittsburgh Landing, or Shiloh Church, 20 miles off on 4 April. There was delay on the part of some of the troops so that the attack could not be made until the morning of the 6th, but with his 40,000 men Johnston attacked Grant's 50,000 with such impetuosity, skill and dash that the Federals were driven back at every point, were huddled together at Pittsburgh Landing and there seemed to be lacking at 2.30 P.M. only one more vigorous advance to annihilate Grant's army. But just at this moment the great commander who had just remarked to one of his staff: «The victory is ours. We shall soon water our horses in the Tennessee River,» was struck by a minie ball in his leg, and bled to death in 15 minutes. In the confusion which followed, the advance was not made. Beauregard (who had been ill in his ambulance all day and did not appreciate the real situation) ordered the Confederate lines to fall back. Buell and Mitchel came up that night with 55,000 fresh troops, and thus the fruits of Johnston's great victory were lost and the next day the Confederates were compelled to fall back to Corinth.

No nobler eulogy could be pronounced on Albert Sidney Johnston than that of President Davis in a special message to the Confederate Congress, in which he said: «Without doing injustice to the living, it may safely be said that our loss is irreparable. Among the shining hosts of the great and good who now cluster around the banner of our country, there exists no purer spirit, no more heroic soul than that of the illustrious man whose death I join you in lamenting. In his death he has illustrated the character for which, through life, he was conspicuous — that of singleness of purpose and devotion to duty with his whole energies. Bent on obtaining the victory which he deemed essential to his country's cause, he rode on to the accomplishment of his object, forgetful of self, while his very life blood was fast ebbing away. His last breath cheered his comrades on to victory. The last sound he heard was their shout of victory. His last thought was his country, and long and deeply did his country mourn its loss.»

It is scarcely extravagant to say that had Albert Sidney Johnston lived the victory at Shiloh would have been complete, the whole character of the campaign in the West would have been changed, and with Lee in Virginia and Johnston in the West, the result of the war might have been different. The monument to Albert Sidney Johnston in New Orleans is one of the most beautiful in the country; he is buried in Austin, the capital of his adopted State. Consult the biography by his son, W. P. Johnston, 'Life of Albert Sidney Johnston' (New York 1878).

J. WM. JONES,
Author and Lecturer.

JOHNSTON, Alexander, American historian: b. Brooklyn, L. I., 29 April 1849; d. Princeton, N. J., 21 July 1889. He was graduated from Rutgers College, New Jersey, in 1870, studied law and was admitted to the bar in 1876. He did not practise, however, and was professor of jurisprudence and political economy at Princeton University from 1883 till his death. He was the author of 'History of American Politics' (1879); 'Connecticut: a Study of a Commonwealth-Democracy' (1887); 'History of the United States for Schools' (1886); and 'The United States: its History and Constitution,' reprinted from the 'Encyclopædia Britannica' (1887).

JOHNSTON, Alexander Keith, Scottish cartographer: b. Kirkhill, Edinburgh, Scotland, 28 Dec. 1804; d. 10 July 1871. His first important work, the 'National Atlas,' was published in 1843. At the suggestion of Humboldt, he visited Germany and gathered material for his 'Physical Atlas of Natural Phenomena' (1848–56), and his 'Royal Atlas of Geography' (1861) was one of the most beautiful and minutely accurate atlases ever published up to that time. His son of the same name (b. 1844; d. 28 June 1879) continued his father's enterprises; and died whilst leading an important exploring expedition to the head of Lake Nyassa.

JOHNSTON, Annie Fellows, American author: b. Evansville, Ind., 1863; sister of Albion Fellows Bacon (q.v.). She is one of two noted sisters, daughters of Rev. Albion Fellows. She was educated at the State University of Iowa and early went into literature and became known as a writer of stories for young people. Her husband, W. L. Johnston, dying in 1892, she was thrown upon the resources of her pen, and thereafter she produced in rapid succession juvenile stories that became very popular and are still extensively read. Among these stories are 'Big Brother' (1893); 'The Little Colonel' (1895), which later, on account of its popularity, gave its name to a long series; 'A Boy of Galilee' (1895); 'In League with Israel' (1896); 'Ole Mammy's Torment' (1897); 'Songs Ysame' (with her sister Albion Fellows Bacon, 1897); 'The Gate of the Giant Scissors' (1898); 'Two Little Knights of Kentucky' (1899); 'The Little Colonel's House Party' (1900); 'The Little Colonel's Holidays' (1901); 'The Little Colonel's Hero' (1902); 'Cicely' (1902); 'Asa Holmes' (1902); 'Islands of Providence' (1903); 'Little Colonel at Boarding School' (1903); 'Little Colonel in Arizona' (1904); 'The Quilt that Jack Built' (1904); 'Little Colonel's Christmas Vacation' (1905); 'In the Desert of Waiting'; 'Three Weavers'; 'Mildred's Inheritance'; 'Maid of Honor'; 'The Little Colonel's Knight Comes Riding' (1907); 'Mary Ware' (1908); 'Legend of the Bleeding Heart' (1908); 'Keeping Tryst'; 'Rescue of the Princess Winsome'; 'The Jester's Sword' (1909); 'Good Times Book' (1910); 'Mary Ware in Texas' (1910); 'Travelers Five' (1911); 'Promised Land'

(1912); 'Miss Santa Claus of the Pullman' (1913); 'Georgina of the Rainbows' (1916).

JOHNSTON, Charles Haven Ladd, American author: b. Washington, 17 July 1877. Educated at Harvard. Teacher of English at Harvard University 1901–02; instructor in English and lecturer on military history at the Massachusetts Institute of Technology (1904–05). Since then he has given most of his attention to literature. Among his published works are 'Little Pilgrimages among the Women Who Have Written Famous Books' (1901); 'Famous Cavalry Leaders' (1908); 'Famous Indian Chiefs' (1909); 'Famous Scouts' (1910); 'Famous Privateersmen' (1911); 'Famous Frontiersmen' (1913); 'Our Little Viking Cousin' (1916).

JOHNSTON, Christopher, American Assyriologist: b. Baltimore, 2 Dec. 1856; d. 1914. He studied (1872–79) at the University of Virginia, receiving the M.A. diploma, then at University of Maryland, where (1880) he received M.D. diploma. In 1888 he became special student of Assyriology at Johns Hopkins, becoming Fellow in Semitics (1889–91) and Ph.D. (1894). From 1880–88 he practised medicine, devoting much study to ancient and modern languages. He was (1891–94) instructor at Johns Hopkins, then (1894–99), associate in Semitics and associate professor Oriental history and archæology from 1899–1908. He wrote 'Epistolary Literature of the Assyrians and Babylonians' (1896), and edited 'Ancient Empires of the East' (1906).

JOHNSTON, Frank, American lawyer: b. Raymond, Miss., 31 Dec. 1843. He was educated at Mississippi College, and at the Western Military Institute of Nashville, Tenn. He fought with the Confederate army in the Civil War and was wounded at the battle of Big Black. Since 1866 he has been a practising lawyer and in 1879 became a member of the Catholic church. From 1893 to 1895 he was attorney-general of Mississippi and since 1912 has been first assistant attorney-general. He was a delegate from his State to the Democratic National Conventions of 1872 and 1876. In 1875 he brought about a conference which settled the Reconstruction difficulties in Mississippi. In 1889 he successfully advocated a State constitutional convention to consider the question of suffrage. Thereafter his most conspicuous public services were in connection with the abolishment of the convict-leasing system, in both State and counties. He was special judge of the Mississippi Supreme Court in many important cases. He is a member of the Mississippi Historical Society, in the publication of which he collaborated. He contributed to 'The Catholic Encyclopedia.'

JOHNSTON, Gabriel, American colonial governor of North Carolina: b. Scotland, 1699; d. 1752. Very little is known of his personal history. He was educated at the University of Saint Andrew's, with a view to the medical profession, which he seems not to have practised. He was for a while professor of Oriental languages at Saint Andrew's, and then removed to London, where he was engaged with Pulteney and Bolingbroke in writing for the *Craftsman*. By the influence of the Earl of Wilmington he was appointed governor of North Carolina, and took the oath of office at Brunswick, 2 Nov. 1734. He was the ablest and most successful of all the colonial governors, holding the reins of power up to the time of his death. Consult Ashe, 'History of North Carolina' (Vol. I, Chap. 19, Greensboro, N. C., 1908).

JOHNSTON, George Ben, American surgeon: b. Tazewell, Va., 25 July 1853; d. 20 Dec. 1916. He studied at the University of Virginia (1870–75) and took his degree (M.D.) at University Medical College, New York University (1876). He became professor of surgery at the Medical College of Virginia, surgeon at the Memorial Hospital, Richmond, at Johnston-Willis Sanatorium, and at Abingdon, Va., hospital. He acted as president of the American Surgical Association (1904–05) and of the Medical Society of Virginia (1897), also of the Southern Surgical and Gynecological Association (1887) and is an ex-president of Richmond Academy of Medicine and Surgery, etc. He was a frequent contributor to the surgical journals.

JOHNSTON, Sir Harry Hamilton, English traveler: b. London, 12 June 1858. He was educated at King's College, London, and the Royal Academy of Arts, traveled in North Africa, 1879–80, and Portuguese West Africa, and the Kongo region, 1882–83. He commanded a scientific expedition to Mount Kilimanjaro in 1884 and has held various consular posts in Africa. He has published 'Essays on the Tunisian Question' (1880–81); 'The River Kongo' (1884); 'Kilimanjaro' (1885); 'History of a Slave' (1889); 'Life of Livingstone' (1891); 'British Central Africa' (1897); 'History of the Colonization of Africa by Alien Races' (1899); 'The Uganda Protectorate' (1902); 'The Nile Quest' (1903); 'Liberia' (1906); 'The British Empire in Africa' (1910); 'Views and Reviews' (1912); 'Common Sense in Foreign Policy' (1913), etc.

JOHNSTON, Henry Phelps, American historical writer: b. 1842. He was graduated at Yale in 1862. He is professor of history in the College of the City of New York. He is a member New York and Connecticut Historic societies, American Antiquarian Society and New York Sons of the Revolution. He has published 'The Battle of Harlem Heights'; 'Observations on Judge Jones'; 'Loyalist History of the Revolution'; 'The Yorktown Campaign'; 'Biography of Nathan Hale' (2 editions); 'Campaign around New York and Brooklyn, 1776'; 'Storming of Stony Point, 1779'; 'Record of Connecticut Soldiers in the Revolution'; 'Correspondence and Public Papers of John Jay' (4 vols.); 'Yale in the Revolution,' etc.

JOHNSTON, James Steptoe, American Episcopal bishop: b. Church Hill, Miss., 9 June 1843. He was educated at the University of Virginia, served as 2d lieutenant in the Confederate cavalry during the Civil War, subsequently studied law and was admitted to the bar. After being admitted to the bar he took orders in the Episcopal Church in 1869 and after holding rectorships at Port Gibson, Miss., six years; Mount Sterling, Ky., four years; and Mobile, Ala., eight years became bishop of western Texas in January 1888. In May 1913 he retired from active service and turned over the administration of the diocese to his coadjutor, and is now

serving a small church and two missions in the mountains of West Texas.

JOHNSTON, John Humphreys, American artist: b. New York, 2 Nov. 1857. He studied art in New York as a pupil of La Farge, and in Paris under Lefebre and Doucet. He was awarded (1896) the Temple gold medal by the Pennsylvania Academy of Fine Arts and a silver medal at the Paris Exposition (1900) as well as the silver medal at Buffalo Exposition (1901); gold medal at Munich (1902); and silver medal at Saint Louis Exposition (1904). His works are to be found in the galleries of the Musée de Luxembourg, Paris, the Wilstach Trust Collection, Philadelphia, Carnegie Institute, Pittsburgh, etc. He is a Chevalier Legion d'Honneur (1901) and resides at Venice.

JOHNSTON, Joseph Eggleston, American soldier: b. Cherry Grove, Va., 3 Feb. 1807; d. Washington, D. C., 21 March 1891. He was graduated at West Point in 1829; and served with distinction in the Black Hawk and Seminole wars. In the Mexican War he distinguished himself also and was brevetted major and colonel United States army for bravery at Cerro Gordo. He was promoted quartermaster-general of the army with the rank of brigadier-general in June 1860, but resigned his commission when Virginia seceded. He was then made major-general of Virginia volunteers and later full general in the Confederate service, taking an active part in the first battle of Bull Run, 21 July 1861, where he personally led a charge with the colors of the 4th Alabama regiment in his hands. At the battle of Fair Oaks, 31 May 1862, Johnston was severely wounded and was disabled for service for several months. In November he again reported for duty and was assigned to the Military Department of Tennessee. In the operations of Grant before Vicksburg he did everything possible to prevent the shutting up of General Pemberton in Vicksburg, telegrahing him 2 May: "If Grant crosses, unite all your troops to beat him. Success will give back what was abandoned to win it." Although similar orders were repeatedly sent to Pemberton, they were disregarded; Pemberton allowed himself to be shut up in Vicksburg and the siege and surrender on 4 July followed. In December of the same year he took command of Bragg's army at Dalton, Ga., and by the spring of 1864 brought it to a state of efficiency which it had not previously had, though it contained only 45,000 men against Sherman's 98,797. The campaign from Dalton to Atlanta, a distance of 100 miles, was a series of severe engagements without a general battle, Johnston's friends claiming "the retreat had been the masterpiece of Johnston's life and one of the most skilful and successful that had ever been executed." On 17 July 1864 Johnston was superseded in this command by General Hood. In the early part of 1865 he was several times defeated by Sherman, to whom he surrendered at Durham Station, N. C., on 26 April, the terms of capitulation resembling those granted to Lee at Appomattox. After the war Johnston engaged in business, and was member of Congress 1876–78. He was a pallbearer at the funerals of Grant and Sherman. He was United States Commissioner of Railways 1885–89 and the author of 'A Narrative of Military Operations During the Late War' (1874). Consult **Hughes,** 'General Johnston' (New York 1893).

JOHNSTON, Mary, American novelist: b. Buchanan, Botetourt County, Va., 21 Nov. 1870. In 1898 she became suddenly famous through her 'Prisoners of Hope: a Tale of Colonial Virginia,' and her next book, 'To Have and to Hold' (1900), was even more popular. She has since published 'Audrey' (1902); 'Sir Mortimer' (1904); 'The Goddess of Reason' (1907); 'Louis Rand' (1908); 'The Long Roll' (1911); 'Cease Firing' (1912); 'Hagar' (1913); 'The Witch' (1914); 'The Fortunes of Garin' (1915); 'Foes' (1918). 'Audrey' and 'Sir Mortimer' were dramatized.

JOHNSTON, Richard Malcolm, American author: b. Powelton, Ga., 8 March 1822; d., Baltimore, Md., 23 Sept. 1898. He was graduated at Mercer University in 1841; was admitted to the bar in 1843; and began practice in Sparta, Ga., the same year. He was professor of literature in the University of Georgia in 1857–61 and served as colonel in the Confederate service during the Civil War. At its close he established a boys' boarding school at Sparta, which he removed in 1867 to Baltimore and of which he was the head for many years. His publications include 'Historical Sketch of English Literature'; 'Life of Alexander H. Stephens' (1883); 'Dukesborough Tales' (1883); 'Old Mark Langston'; 'Ogeechee Cross Firings' (1889); 'Mr. Absalom Billingslea and Other Georgia Folk' (1887); 'Studies Literary and Social' (1891–92); 'The Primes and Their Neighbors'; 'Mr. Billy Downs and His Likes.' The usual theme of his longer as well as his shorter fictions is the life of the middle class Georgian in the ante-bellum period.

JOHNSTON, Robert Matteson, American historian: b. Paris, France, 11 April 1867. He studied in France, England and Germany, graduating (M.A.) at Cambridge University (1889) and becoming barrister-at-law of the Inner Temple, London. He was lecturer on history at Harvard and Mount Holyoke colleges (1904) and professor of history at Harvard since 1908 and professor of history at Bryn Mawr College (1907–08). He wrote 'The Roman Theocracy and the Republic, 1846–49' (1901); 'Napoleon; a short biography' (1904); 'The Napoleonic Empire in Southern Italy and the Rise of the Secret Societies' (1904); 'Memoirs of Malakoff' (1907); 'American Soldiers' (1907); 'French Revolution' (1909); 'The Corsican' (1910); 'The Holy Christian Church' (1912); 'Mémoire de Marie Caroline, reine de Naples' (1912); 'Bull Run' (1913); 'Arms and the Race' (1915). He is editor of *The Military Historian and Economist.*

JOHNSTON, Samuel, American lawyer and statesman, nephew of Gabriel Johnston (q.v.): b. Dundee, Scotland, 15 Dec. 1733; d. near Edenton, N. C., 18 Aug. 1816. His father, John, came to North Carolina in 1736, became surveyor-general and acquired large landed estates. The son chose the profession of the law, and was clerk of the Superior Court in Chowan County for five years from 1767, and served there also as naval officer under the Crown. Elected to the assembly in 1769 from the first he espoused the popular side, and in

1773 the assembly placed him on its standing committee of inquiry and correspondence, the organ by which it sought to co-operate with the other provinces. This was the first decisive step toward revolution taken by the legislature of North Carolina. He was an active member of the first two provincial congresses in this province. The 3d and 4th met at his summons, and he presided over the deliberations of both. In the 3d, August 1775, the political organization of the province was decided on and the supreme executive authority was entrusted to a provincial council, of which he was made the chairman, and so virtually the governor of the province. In September 1775 he was chosen treasurer for the northern district of North Carolina. In 1781–82 he was a member of the Continental Congress. In 1787 he was elected governor of the State, and in 1788 presided over the convention which rejected the Federal Constitution, which, however, he supported with all his influence. He was United States senator 1789–93 and judge of the Superior Court 1800–03.

JOHNSTON, William Dawson, American librarian: b. Essex Center, Vt., 11 June 1871. He was graduated (1893) at Brown University, studied (1893–94) at the University of Chicago and took the degree A.M. at Harvard (1897–98). He was instructor of history (1894–97) at the University of Michigan and (1899–1900) at Brown University. He was assistant (1900–07) at the Library of Congress, lecturer on bibliography (1905–07) at Simmons College. He served as librarian (1907–09) at the Bureau of Education, Washington, at Columbia University (1909–14), Saint Paul Public Library, since 1914. He has written 'History of the Library of Congress' (1904), and 'Special Collections in Libraries in the United States' (1912), besides contributing numerous articles to the library journals.

JOHNSTON, William Preston, American educator: b. Louisville, Ky., 5 Jan. 1831; d. Lexington, Va., 16 July 1899. He was a son of A. S. Johnston (q.v.) and was graduated at Yale in 1852 and from the Louisville Law School in 1853. He served as colonel and aide-de-camp to Jefferson Davis in the Confederate army during the Civil War, and soon after its close became professor of history and literature at the Washington and Lee University, remaining there till 1877. In 1880 he became president of the Louisiana State University, and after its union with Tulane University, New Orleans, in 1884, was president of that institution till his death. His publications include 'Life of General Albert Sidney Johnston' (1877); 'The Johnstons of Salisbury' and 'The Prototype of Hamlet' (1890).

JOHNSTONE, Scotland, police burgh and manufacturing town in Renfrewshire, on the Black Cart, three and one-half miles west by south of Paisley and 11 miles west of Glasgow by the Glasgow and Southern Railway. This busy little city's chief industries are flax-spinning, thread manufacturing, paper-making, brass and iron founding. It has coal mines and works in the vicinity. Elderslie, said to be the birthplace of Sir William Wallace, is but one mile to the east. Pop. 12,000.

JOHNSTOWN, N. Y., city and county-seat of Fulton County, on Cayadutta Creek, and on the Fonda, J. & G. Railroad, 44 miles northwest of Albany. In 1771, a few years after its settlement, it was named after its founder, Sir William Johnson, whose mansion, built here 10 years earlier, still stands almost as it was left by him. In 1808 Johnstown was incorporated as a village, and in 1895 it received a city charter. The courthouse and jail, built by Sir William Johnson in 1772, occupy with Johnson Hall an interesting place in local history. The city has a public library building which was the gift of Andrew Carnegie. The industries of Johnstown include a variety of important manufactures, chief among which are those of gloves and mittens, knit goods of different kinds, leather, gelatin, lumber, grist-mill and machine-shop products, etc. The city has an active Chamber of Commerce. The municipal government is well supported by public spirit, and the city's affairs are efficiently managed. The people elect the water board and the school board, and the waterworks are owned and operated by the city. Pop. 10,875.

JOHNSTOWN, Pa., city, Cambria County, on the Conemaugh River and on the Baltimore and Ohio and the Pennsylvania railroads, about 80 miles east of Pittsburgh. The Little Conemaugh River and Stony Creek unite at Johnstown and form the Conemaugh River. The area of the city is about five square miles, and the valley in which it is located ranges from 1,148 feet to 1,600 feet above sea-level. Johnstown was settled in 1794, was incorporated as a borough in 1831 and as a city in 1889. Its situation, in a coal and iron ore region, combined with its great water power, has made it an important manufacturing centre. Fire-clay and limestone are also found in the vicinity. Some of its industrial establishments are the Cambria Steel Company works, where about 16,000 men are employed, the Lorain Steel Company, iron and steel works, iron-plate mills, street-car rail factory, silk mill, planing-mills, cement works, furniture factories, potteries, breweries, brick-yards, machine-shops, foundries, furnaces, wire works, leather and woolen goods. Some of the noted public buildings are the Cambria Free Library, a new $250,000 Y. M. C. A., the Conemaugh Valley Memorial Hospital, 67 churches, the city hall and the high school. The number and arrangement of the parks add to the beauty of the place.

In Grand View Cemetery are the graves of 777 unidentified dead who perished in the "Johnstown Flood." This disastrous flood occurred on 31 May 1889, and was the result of the destruction of a dam across South Fork, a small branch of the Conemaugh River. Heavy rains had fallen and the mountain streams of the vicinity had become roaring torrents. The dam kept back the waters of Conemaugh Lake, about two and one-half miles long, one and one-half miles wide and averaging over 50 feet in depth; in some places the water of the lake was 100 feet in depth. The direct distance from the city was about 12 miles, but along the river the distance was five or six miles longer. In a very short time after the dam had burst the valley was flooded and Johnstown and several small villages were under water. The loss of lives was 2,205 and the loss of property was estimated to be about $10,000,000. Aid for the sufferers came from all parts of the country

and the city was soon rebuilt and its industries re-established. Pop. 66,579.

JOIGNEAUX, zhwā-nyō, **Pierre,** French agronomist and journalist: b. Ruffey-lés-Beaune, 23 Dec. 1815; d. Bois-Colombes, 25 Jan. 1892. He was educated at École Centrale, Paris, but soon went into militant politics and was sentenced (1838) to four year's imprisonment for participation in the secretly published *L'Homme Libre* paper. In 1848 he was elected by his department member of the Constituent Assembly, then to the Legislative Assembly. He issued the *Feuille du Village* (1849–51), an organ of republican propaganda, which had great success. He was expelled in consequence of the *coup d'état,* returning to France in 1859 by favor of the general amnesty, and devoted his time to the subject of agriculture. He failed of election for Côte-d'Or and La Sarthe (1869), but was sent (1871) to the National Assembly for Côte-d'Or, which constituency he served till the elections of 1889 when he refused the candidacy. Shortly afterward, at a by-election, he was made senator. During these sessions he sat on the benches of the Extreme Left and occupied himself chiefly on agricultural matters. He wrote numerous books and pamphlets to popularize the knowledge of agriculture. Among his works are 'Dictionnaire d'agriculture pratique' (Paris 1855), in collaboration with Dr. Moreau; 'Le Livre de la Ferme' (ib. 1861–64), with several assistants. Just previous to his death he published 'Souvenirs historiques' (ib. 1891). The Versailles School of Agriculture had a bust made in his memory.

JOINERY, the industry and art of joining wood, stone or metal work by sawing, planing, cross-cutting, etc., connecting by means of glue, framing, nails, cement or bolts, and fitting the construction for the internal and external furnishings of buildings, ships and for various articles of furniture, etc. In woodwork, grooving, tonguing, mitering, mortising, molding and beading, wedge-cutting, boring, etc., are performed by means of a power-tool with different attachments called the joiner; the joiner's gauge is a scribing tool used to make a mark on a board parallel to its edge, while the facing and matching of boards is accomplished by means of a long bench plane called the joiner's plane. In carpentry and joinery, in architectural stone and structural steel work, the mold or the place where one piece of timber, stone or steel is connected with another is called the joint. See BUILDING; CABINETMAKING; CARPENTRY; BRIDGE CONSTRUCTION; STEEL CONSTRUCTION.

JOINT, in anatomy, an articulation or connection between bones. Many of the immovable joints are so close in their union that the two bones practically become one, as in the dovetailed sutures of the skull. In the make-up of a movable joint there are the two bones, and covering the surface of each a layer of tissue of rubbery consistency called cartilage; binding the bones together are firm inelastic bands of tissue called ligaments. Over the surface of the cartilage and the inner surfaces of the ligaments there is a thin, smooth layer of tissue, the synovial membrane, which is kept constantly moist with an oily fluid to prevent friction. Joints are classified according to the variety of motions they allow: the freest is the ball-and-socket joint, as seen in the hip and shoulder.

Diseases of Joints.— Joint-diseases are distinguished by names that indicate the principal structure involved and the causes of disease. Where the cause is a specific disorder, as tuberculosis, rheumatism, syphilis or gonorrhœa, the name of that particular malady is given to the inflammation. The only structure of a joint that is apt to be involved alone is the synovial membrane, and inflammation of this structure is called synovitis. Inflammation of all the joint-structures is called arthritis, and where the bone is the primary seat of the trouble, or is principally involved, the name osteo-arthritis is used.

Synovitis.— This condition results from injuries (sprains, bruises and wounds), from overuse, acting as an injury, and from poisons circulating in the blood. The joint is painful, moves with greater pain and may be red outside. Blood-serum is poured out and the synovial sac is distended. (This condition constitutes "water on the knee"). The general symptoms and severity depend on the cause of the trouble. Absolute rest of the joint and pressure by a snug bandage hasten recovery. When such injuries are repeated, or when the inflammation is slight but persistent, painting with iodine tincture may be of value. When the condition of inflammation reaches the suppurative stage all the structures of the joint are involved and the condition is considered under the term "arthritis."

Arthritis (non-specific).— This is due to the extension of disease of contiguous bone, or it may result from wounds or in the course of various diseases. The joint becomes swollen, red, very painful and the general symptoms are severe. When the poison is sufficiently virulent, suppurative arthritis results and the pus collects in the synovial sac. (See INFLAMMATION). In this condition the joint becomes "boggy," and the poisoning of the entire system is so severe as to warrant the most radical measures for relief. Opening the joint and allowing the escape of the pus, with thorough cleansing, may be sufficient, or the limb may have to be sacrificed. See ARTHRITIS; ARTHRITIS DEFORMANS; GOUT; RHEUMATISM; SYPHILIS.

Knock-knee.— This is a deformity of the legs, consisting in the angular projection of the knee inward, and is sometimes called in-knee. It arises in children learning to walk who are affected with rickets (q.v.). The deformity is due to the faulty growth of the bones which enter into the joint. In early life, correction of it may be secured by splints and braces; but when the bones become less pliable, the femur, the tibia, or both, may have to be severed by chiseling and the bones held in the normal line by plaster casts until union has taken place.

Charcot's Disease.— The peculiar form of arthritis thus named occurs in the course of locomotor ataxia, the knee-joint usually being the one affected. The joint swells painlessly, the structures are worn away and the function of the joint is lost.

Sprains.— These are wrenches resulting in more or less stretching or laceration of ligaments, hemorrhage in and around the joint and sometimes the displacement of tendons. The part usually swells at once and movement causes severe pain. This injury may closely re-

semble a joint-fracture. Absolute rest of the joint must be insisted upon, as synovitis may follow. Alternating hot and cold applications, if started early, lessen the damage. The joint should then be snugly bandaged and kept so until swelling and tenderness disappear.

Wounds of Joints.— Injuries of this nature may cause damage directly to the structures or by infecting the joint and producing arthritis. Penetration into the synovial sac is indicated by an escape of the viscid fluid.

Floating Cartilages.— These are rarely seen except in the knee-joint, where they are ordinarily due to a small portion of cartilage being bitten off between the bones; this piece then floats around in the synovial sac and causes trouble when the bones lock together on it. When this occurs, the patient falls to the ground because of the severe pain. The synovial membrane is injured and is apt to be mildly inflamed. These bodies may sometimes be felt through the skin and can be held, by holding the joint in the same position, until an opening is made; but ordinarily when the attacks become so frequent as to be unbearable the joint has to be opened and searched.

JOINT-SNAKE. See GLASS-SNAKE.

JOINT STOCK BANKS. See BANKS AND BANKING — WORLD'S SYSTEMS.

JOINT STOCK COMPANY, or ASSOCIATION. The usual definition in law of this term is that a joint stock company is an association of individuals for the purposes of profit, possessing a common capital, being divided into shares, of which each member possesses one or more, and which are transferable by the owner. It is distinguished from ordinary partnerships in that the death or withdrawal of an ordinary partner brings a dissolution of the firm, whereas in the case of joint stock companies death or withdrawal of interest does not involve dissolution. The members of a joint stock company, contrary legislation absent, are liable for all debts of the association the same as partnership members, and a similarity exists respecting other essential features. The joint stock company is distinguished from a corporation inasmuch as in the latter case its shareholders are liable for the debts of the company only to the extent of the share of the capital stock actually contributed by them, whereas members of a joint stock company are liable to contribute to the debts of the company. With these exceptions both forms of association are similar. Statutory enactments in England and the United States have been passed regulating their government. In England the Companies Act of 1862 provides "any seven or more persons associated for any lawful purpose may, by subscribing their names to a memorandum of association, and otherwise complying with the requisitions of the act in respect to registration, form an incorporated company, with or without limited liability." In cases where the intention of the company is that its members shall be subject only to limited liability the word "Limited" has to be stated in the company's title. Joint stock companies have been formed in large numbers under this law and have become one of the most important forms of commercial exploitation in England. In the United States statutes have been passed regulating the organization, government and management of joint stock companies, fixing the minimum number of members, authorizing the companies to sue or be sued in their own name, providing for the methods of management and establishing the extent of the liability of the members. The usual requirements mentioned in these statutes are that they record articles of association together with names of the members, amount of capital, name of company and character and location of the business. In general it may be asserted that at least one meeting of the members each year is provided by law or the articles of the association, timely notice being given the members as to time and place of said annual meeting. At this annual meeting the stockholders elect their officers by vote. A statute securing to minority stockholders in corporations the power of electing a representative in the board of directors does not apply to joint stock associations unless so incorporated in its articles. Contracts with joint stock associations can be made only with the officers or managers as stated in the associations' articles or as contained in the statute. As a joint stock company has the character and power, substantially, of a corporation, it may be served with process in a foreign jurisdiction. All the members, statutory regulation being absent, are parties to an action either by or against a joint stock association. While suit against members or officers individually is not valid, statutes generally provide that suits may be instituted in the name of a designated officer, as the president or treasurer of the company. But if judgment is properly rendered against a president as such, it does not bind his individual property. Dissolution is usually by consent of the members mutually, but the consent must be unanimous if the association is formed for a special period. Joint stock companies have not gained such popularity here as in England, the laws of corporations being less drastic in the United States than in England. Consult Birdseye, 'New York Statutes,' article "Joint Stock Associations" (New York 1901); Hurrell and Hyde, 'Law of Joint Stock Companies' (London 1898); Lindley, 'The Law of Companies' (ib. 1889); Scott, 'The Constitution and Finance of English, Scottish and Irish Joint Stock Companies to 1720, Vols. I–III' (Cambridge 1910–12); Lomnitz, H., 'Die Systematische Beurbeiting der Veröffentlichungen von aktiengesellschaften' (Leipzig 1908). See CORPORATIONS, HISTORY; CORPORATIONS, LEGAL.

JOINT TENANTS, persons who hold or own lands jointly, by title created expressly by one and the same deed or will. It has been uniformly held by the courts that a unity of possession derived by several and distinct conveyances does not constitute a joint tenancy, but rather a tenancy in common. Joint tenants must have the same interest, derived from the same conveyance, commencing at one and the same time, and held by a united possession. The duration of the estates must be alike in both, and also the interest. Should one hold under the conveyance for a term of years, and the other for life, the possession even for a term of years would not be a joint tenancy. The estate must vest in each tenant at the same time. In the case of a will which gives one an

interest to commence at a day named and another an interest to commence a year later, no joint tenancy is created thereby. Should one receive an interest absolute and another an interest for life, the relation of joint tenants would not be created. The doctrine of survivorship is the distinguishing incident of title by joint tenancy. In the event of the death of one of the joint tenants, the survivor is entitled to the whole property, and the full title immediately vests in him. This is not an incident of tenancy in common. Many of the States of the Union have abolished title by survivorship in joint tenancy by constitutional provisions or by express statute enactments. In other States acts have been passed abrogating the distinction between joint tenants and tenants in common; and inheritance by survivorship not being an incident of tenancy in common, such acts are construed by the courts as abolishing such inheritance. Such acts do not apply to existing joint tenancies, but only to such as may be created after the enactment. Consult Kent, J., 'Commentary on American Law' (14th ed., 4 vols., Boston 1896); Blackstone, W., 'Commentaries' (4th ed., 2 vols., Chicago 1899).

JOINT-WORM. See CHALCIS; WHEAT INSECT-PESTS.

JOINTS, breaks or fractures in the rocks of the earth's crust, dividing them into larger or smaller blocks. They differ from faults (q.v.) only in that the latter have undergone relative slipping of one wall past the other. Joints may be produced either by tension or compression. Columnar jointing (q.v.) in basalts is a good illustration of the former. The latter usually occurs in regions of folding. Joints when very small and closely spaced produce fracture cleavage (q.v.) in rocks. When a large number of joints are parallel they form a joint system. In sedimentary rocks two prominent systems often occur nearly at right angles to each other causing the rock to break in nearly rectangular blocks. When joints become filled with mineral matter they form veins (q.v.). Jointing aids in ground water circulation, particularly in non-porous rocks like granite. It is also an aid in quarrying, unless the joints are too closely spaced, in which case they destroy the value of the rock.

JOINTURE, join'tūr, a settlement of lands and tenements made to a woman in consideration of marriage, as a substitute for dower. Originally it was a joint estate limited to both husband and wife as a joint tenancy and subjected to survivorship. The wife takes nothing under the settlement until after the death of the husband, unless special provisions are incorporated, which in reality modifies the effect of a regular jointure. In some settlements, denominated jointures, provisions are inserted to the effect that they are not to exclude enjoyment of dower; but such provisions are an innovation upon the established province of jointures. A good jointure must provide that it shall take effect, in possession and profit, immediately after the death of the husband; that it shall be for the life of the wife herself, and cannot be left in trust for her use and benefit. It should be provided that it is in settlement of all dower interest, in order to maintain its distinctive features of jointure. The settlement must be executed before marriage, as marriage constitutes the entire consideration for the jointure. Such an instrument properly executed before marriage is binding on the wife and a complete bar to dower in any dowable lands owned or conveyed by the husband during the marital relations. Without the intervention and assistance of legislative action, no other form of agreement is effectual to bar dower. It sometimes happens that the wife is deprived of her jointure by lawful acts to which she is not a party, as by the lands being taken for public purposes, or in some other manner equally legitimate. In such a case the settlement does not bar her claim against the husband's estate to the extent to which she is deprived of her jointure.

JOINVILLE, zhwăñ'vĕl', **François Ferdinand Philippe Louis Marie d'Orléans,** PRINCE DE, third son of Louis Philippe: b. Neuilly, 14 Aug. 1818; d. Paris, 16 June 1900. He entered the naval school at Brest and was made lieutenant in 1836. He distinguished himself (1838) outside Vera Cruz when the war was declared against Mexico. In 1843 he married Princess Francesca of Braganza, sister of Don Pedro II, and he was created vice-admiral in 1845, sitting meanwhile in the Chamber of Peers. The Revolution of 1848 forced his exile to England, leaving, in 1861, for the United States accompanied by his son, the Duc de Penthièvre, and his nephews, the Comte de Paris and the Duc de Chartres. They entered the service under General McClellan. In 1870 he was again in France and, as Colonel Lotherod, was actively present in the 15th Corps before Orléans. He was arrested under instructions of Gambetta and interned five days at the prefecture of Mans and then returned to exile in England. At the 1871 elections he was chosen as representative of both La Manche and Haute-Marne and took the latter seat in the assembly. He retired from politics, but (1886) had to return to exile when the law again banished the royal families. Returning to France in 1895 he died there. He wrote numerous articles on history and the navy which appeared in the *Revue de Deux Mondes* signed as manager or director of that publication; they have since been published in collective form under the title 'Essais sur la marine française: L'escadre de la Méditerranée' (Paris 1853), and 'Études sur la marine et récits de guerre.' His 'La guerre d'Amérique, compagne du Potomac' had its second edition in 1872. In 1894 he published some of his interesting memories of the year 1848 in 'Vieux souvenirs, 1818–1848.'

JOINVILLE, zhwăn-vĕl, **Jean,** SIRE DE, French historian: b. Champagne, 1224; d. 24 Dec. 1317. He early entered the service of Thibaut, king of Navarre, and in 1248 raised a troop of 9 knights and 700 armed soldiers, and accompanied Louis IX in his first crusade to the Holy Land. He rose high in favor with Louis, shared his captivity, returned with him to France in 1254 and spent much of his time at court. In 1283 he became governor of Champagne during the minority of Jeanne de Navarre. In 1315 he volunteered to accompany Louis X in his expedition against Flanders. His 'Histoire de Saint Louis,' is one of the most valuable specimens of early French prose. It consists of an elaboration of scattered notes

taken during his military expeditions, combined with hearsay and tradition. It gives a lavish account of King Louis, relating his heroic deeds and his many meritorious qualities. His papers of chancellery are annotated with various remarks of historical interest. The 'Histoire' has survived in three manuscripts, first edited in 1546. The best edition with a translation into later French is by N. de Wailly in 'Société de l'histoire de France' (4 vols., 1874). In addition to this work, Joinville is also credited with a 'Credo' first reproduced in facsimile in 'Mélanges de la Société des bibliophiles français' (1837). His chancellery reports are edited in 'Bibliothéque de l'École des Chartes' (1867).

JOKAI, yō'kā-ĭ, **Maurus,** Hungarian novelist: b. Komorn, 19 Feb. 1825; d. Budapest, 5 May 1904. In 1846 he received his advocate's diploma, but never practised, and from a very early age devoted himself to literary work. In 1842 he produced a drama, 'The Jew Boy,' in 1846 his first novel, 'Work-days,' was published, and in 1847 he issued a collection of stories entitled 'Flowers of the Desert.' He served the cause of Hungarian independence in the revolutionary movement of 1848, and after its failure was a political suspect and that during the period of his greatest literary productivity. His 'Revolution and Battle Pictures' appeared in 1849, and after that he devoted himself with extraordinary energy to journalistic and literary work, producing in all more than 300 volumes. He was a member of the Hungarian Parliament and the recognized leader of the Liberal opposition after the restoration of the constitution, and in 1897 was appointed a life member of the House of Magnates. He was a successful newspaper editor continuously from 1858 till his death, his last paper being the *Nemzet* (Nation). He is best known by his numerous romances and novels. Among the latter are 'Transylvania's Golden Age' (1851); 'The Man with Two Horns' (1852); 'The Turks in Hungary' (1852); 'A Hungarian Nabob' (1854); 'Kárpáthy Zoltan' (1855); 'Political Fashions' (1861); 'The New Landlord' (1862); 'The New Landlord' (1865); 'The Romance of the Next Century' (1874); 'Our Days' (1881); 'The Man of Gold or A Modern Midas' (1886); 'There is no Devil' (1891); 'Dr. Dumany's Wife' (Eng. trans. 1891); 'In Love With the Czarina' (Eng. trans. 1894); 'The Nameless Castle' (Eng. trans. 1891); 'The Green Book' (Eng. trans. 1897); 'The Lion of Janina' (Eng. trans. 1897); 'The Poor Plutocrats' (Eng. trans. 1899); 'Debts of Honor' (Eng. trans. 1900); 'The Baron's Son' (Eng. trans. 1900); 'The Day of Wrath' (Eng. trans. 1900). His best plays are 'King Kolomon' (1855); 'Manlius Sinister' (1856); 'Georg Dózsa' (1858); 'The Martyrs of Szigetvár' (1859), and 'Milton' (1878). His 'Political Poems' appeared in 1880. Consult Nevai, 'M. Jokai' (1894), and Temperley, 'Maurus Jokai and the Historical Novel,' in the 'Contemporary Review,' July 1904. See MAN OF GOLD, A.

JOKJAKARTA, or **DJOCJAKARTA,** Java, Dutch resident town, on the island near the south coast. It is connected by railway with the harbor of Tlelatjap and with Batavia, Surakarta and Samarang. It is the residence of a native prince as well as of the Dutch resident and is quite powerfully garrisoned. There are great temple ruins in the vicinity. Pop. about 80,000.

JOLIET, Charles, French journalist: b. Saint Hippolyte-sur-le-Doubs, Doubs, 1832; d. 1910. He received his education at the College of Chartres and the Versailles Lyceum. He secured a place in the civil service in 1854, meanwhile writing occasionally for the newspapers. He published 'L'Esprit de Diderot' in 1859. After 1864 he devoted himself exclusively to journalistic and literary pursuits. His 'Le roman de deux jeunes mariés' (1866) and 'Mademoiselle Chérubin' (1870) were very successful and he became well known during the Franco-Prussian War of 1870, through his narration of incidents connected with the campaign. Other works are 'Les romans patriotiques' (1871); 'Le train des maris' (1872); 'Trois uhlans' (1872); 'La foire aux chagrins' (1873); 'Carmagnol' (1876); 'La vipère' (1880); 'Le crime du pont de Chatou' (1882); 'Le médecin des dames' (1885); Violette' (1890); 'Nouveaux jeux d'esprit' (1892).

JOLIET, Louis, American explorer: b. Quebec, 21 Sept. 1645; d. Canada, May 1700. He was educated at the Jesuit College of Quebec, and subsequently engaged in the fur trade on the western frontier, thereby becoming familiar with the missionaries and tribes. He was selected by the governor Frontenac to ascertain the direction and mouth of the Mississippi, a few of whose affluents had already been visited by missionaries and traders. Starting with his companion, the illustrious Father Marquette (q.v.), and five other Frenchman, from Green Bay in June 1673, he ascended the Fox River, and descended the Wisconsin to its confluence with the Mississippi, down which they sailed as far as the country of the Chickasaws, below the entrance of the Arkansas. Having ascertained with tolerable accuracy the general course of the stream, they returned to Green Bay, by the way of Illinois River, Chicago and Lake Michigan, whence Joliet started alone for Quebec. The whole route traveled by them is estimated at 2,500 miles. He lost his journal and other papers in the rapids above Montreal, but wrote out from recollection a few pages of manuscript, which agree with the narrative of Marquette. In the same manner he prepared a map of the region explored. The French government inadequately rewarded him for his services with the Island of Anticosti at the mouth of the Saint Lawrence, where he built a house and fort for his family, intending to embark in trade. He appears, however, to have been subsequently employed in the West. In 1691 his island was captured by a British fleet and his property destroyed. In 1697 the seignory of Joliet, Canada, was assigned to him. Joliet, the capital of Will County, Ill, is named after him. Consult Parkman, 'La Salle or the Discovery of the Great West' (1869); Winsor, 'Narrative and Critical History of America' (1884-87); Gagnon, 'Louis Jolliet' (Quebec 1902).

JOLIET, Ill., city, county-seat of Will County, on the DesPlaines River, and Lakes to Gulf Deep Waterway; also, on the Chicago, Rock Island and Pacific, the Michigan Central,

the Atchison, Topeka and Santa Fe, the Elgin, Joliet and Eastern, the Lake Shore and Elgin and the Chicago and Alton railroads, 40 miles southwest of Chicago. The first permanent settlement was made in 1831 and the city was chartered in 1859. The place was named in honor of Louis Joliet, a French navigator and one of the party who with Marquette visited this place in 1673. The city is situated in a rich agricultural region, and large limestone quarries are in the vicinity. Its chief manufacturing establishments are the American Steel and Wire and the Illinois Steel Company Mills, Coal Products Company, chemicals, matches, art calendars, cartons, oil and gasoline tractors, automobiles and auto accessories, machine shops, agricultural implement works, foundry and furnace products and breweries. Some of the public institutions are the State penitentiary, Silver Cross and Saint Joseph's hospitals, Saint Francis Academy and a public library which contains 45,000 volumes. The Illinois Steel Company Athenæum, a clubhouse for workingmen, is a fine institution. There is a fine Country Club and a flourishing Association of Commerce. The city has commission form of government and owns and operates the waterworks. The Chicago Sanitary District Power Plant supplies Chicago with light and power. The power plant of the Public Service Company of Northern Illinois is located here. Pop. city and township, 60,000.

JOLIETTE, or **INDUSTRY VILLAGE,** Canada, town and county-seat of Joliette County, Quebec, on the L'Assomption River, on the Canadian Pacific and Canadian Northern railways, 36 miles northeast of Montreal. It is an important market town, has fine water power and has a good trade in lumber and farm products. It has large foundries, saw, paper and grist mills, and manufactories of woolen goods, biscuit, agricultural implements, carriages and tobacco and cigars. Limestone for building is quarried in the vicinity. The municipality controls the waterworks and electric light. Pop. 6,346.

JOLIN, Johan Kristofer, Swedish dramatist: b. Stockholm, 1818; d. 1884. He was engaged as actor at the Stockholm Theatre in 1845–68 and for part of that time also served as reader and director of the dramatic school. He wrote a number of clever, witty plays, and some novels and sketches. His plays, are 'Mäster Smith' (1847); 'Barnhusbarnen' (1849); 'Mjölnarfröken' (1865); 'En man af verld och en man af värde' (1846); 'Min hustru vill ha roligt' (1868) and 'Smålands-Petter' (1883). Jolin's complete works have been issued (15 vols., 1872–88).

JOLINE, Adrian Hoffman, American lawyer: b. Ossining, N. Y., 30 June 1850; d. 15 Oct. 1912. In 1870 he was graduated at Princeton University and in 1872 was graduated in law at Columbia University and was admitted to the bar in the same year. At the time of his death he was senior member of the firm of Joline, Larkin and Rathbone. He acquired vast transportation interests; was president of the Missouri, Kansas and Texas Railroad and also the Texas company of the same name from 1906 to 1909; was director of the Albany and Susquehanna Railroad Company, the American and Foreign Insurance Company, the National Surety Company, the United Traction and Electric Company and the Chatham and Phœnix National Bank. After 1907 he acted as receiver of the Metropolitan Street Railway Company of New York. Mr. Joline was an expert on railroad legislation and corporation law in general. In 1912 he received a letter from Gov. Woodrow Wilson of New Jersey in which the latter expressed a desire for the elimination of Mr. W. J. Bryan from the political arena. The publication of the letter just previous to the presidential campaign caused a great stir among leaders of the Democratic party and for a time a rupture seemed imminent. Mr. Joline was a great booklover and collector of rare works. He wrote 'Meditations of an Autograph Collector' (1902); 'Diversions of a Book Lover' (1903); 'At the Library Table' (1910); 'Edgehill Essays' (1911); 'Rambles in Autograph Land' (1913).

JOLLY, Julius, German philologist: b. Heidelberg, 1849. He was educated at the universities of Munich, Berlin and Leipzig. In 1872 he was appointed docent and in 1877 professor of Sanskrit and comparative philology at the University of Würzburg. In 1882–83 he traveled in India. Professor Jolly is a recognized authority on Hindu jurisprudence. His works include 'Ein Kapital vergleichender Syntax' (1872); 'Geschichte des Infinitivs im Indogermanischen' (1873); 'Naradiya Dharmasastra' (1876); 'The Institutes of Vishnu' (1880); 'Tagore Law Lectures' (1885); 'A History of the Hindu Law of Partition, Inheritance and Adoption' (1885); 'Manutikasangraha' (1885–90); 'Institutes of Naradasmriti' (1885–86); 'Manava Dharmasastra' (1887); 'Minor Law Books' (1889); 'Recht und Sitte' (1896) and 'Indische Medezin' (1901) in 'Grundriss der Indoarischen Philologie.' He also wrote a life of Georg Bühler (1899).

JOLLY BALANCE, a spring balance devised by Prof. Philipp von Jolly, of the University of Munich, for determining the specific gravities of small objects. In its usual form it consists essentially of a long spiral spring of fine wire, to the lower end of which two pans are attached, one above the other. The lower pan is kept immersed in water, while the upper one remains in the air. The object whose specific gravity is to be determined is placed in the upper pan first, and the extension of the spring due to the weight of the object in the air is noted. The specimen is then transferred to the lower pan (where it will be under water), and the extension of the spring under these new conditions is also noted. The specific gravity of the specimen is then obtained by dividing the extension of the spring when the object is in the air by the difference between the two extensions as observed for air and water, respectively. The extension of the spring is observed by means of a graduated scale engraved upon a mirror that is placed back of the spring, and parallel to it. In taking a reading, the eye is brought into such a position that the image of the pupil is seen in the mirror directly behind the image of the pointer at the lower end of the spring. In this way errors of parallax are avoided in the readings. The Jolly balance is chiefly used for the rapid determination of the specific gravities of minerals and

similar objects, where great precision is not essential.

JOLLY BEGGARS, The. 'The Jolly Beggars' is one of many instances of Burns' range of gifts and interests. He had always had a taste, he says in a letter, for the company of blackguards, though he had no ambition to become one. The poem is called a cantata; and is, indeed, an opera of beggary, with the scene laid in Poosie Nansie's hedge alehouse; and the characters, all noisy vagrants from roaming the world, rising one after another, with short introductions of them in recitativo, to sing of their braveries and loves, lusts, debaucheries, of the highways, the hedges, of old days and soldier boys and youth. The whole piece is done in the manner of Jan Steen and Ostade among the painters; and in literature of the folk ballads, of Swift, Rabelais, Fielding, Shakespeare's Falstaff.

The frequent tendencies in the last four decades, especially on the Continent, to something of the broad realism of earlier periods, help clear the way for 'The Jolly Beggars' of the apologetic types of criticism from which it has often suffered, and make possible a more honest and direct approach. The chief excellence of the work lies in its power of minstrelsy, which here takes the direction of coarse, carousing, bludgeoning humor, genuine balladry of the highway people: one of the best pieces in English of gênre, kept perfectly to one key.

'The Jolly Beggars' was written in 1785, after a visit to an alehouse where a party of vagrants were carousing; but out of consideration for his public's sense of propriety, Burns excluded it from his published work. So that the poem was first printed, though only in part, in 1799, from a manuscript given to friends. In 1801 another manuscript was added to the first, making the poem complete as it now stands.

STARK YOUNG.

JOLY, Henri, on'rē zhō'lē', French philosopher: b. Auxerre, 1839. He was educated at the Ecole Normale Supérieure; became a teacher at Douai, where he remained until 1871, removing that year in a similar capacity to Dijon and being made dean in 1878. He was assistant at the Sorbonne in 1881–83 and spent one year at the Collège de France in 1886–87. He was elected to the Academy of Moral and Political Sciences in 1903. He published 'Elements de morale' (1880); 'Psychologie comparée: L'homme et l'animal' (1877; 5th ed., 1911); 'Psychologie des grands hommes' (1883; 3d ed., 1912); 'Le crime' (1888); 'La France criminelle' (1889); 'Cours de philosophie' (9th ed., 1891); 'Socialisme chrétien' (1892); 'A travers l'Europe' (1898); 'Malebranche' (1901); 'Sainte Theresa' (1901; Eng. trans., 1906); 'De la corruption de nos institutions' (1903); 'Le Belgique criminelle' (1907); 'La Hollande sociale' (1908); 'La Suisse politique et sociale' (1909); 'Problèms de science-criminelle' (1910); 'L'Italie contemporaine' (1911); 'L'Enfant' (1912); 'Histoire de la civilization' (1913).

JOLY, jō'lē, John, Irish physicist: b. Hollywood, King's County, Ireland, 1857. He received his education at Trinity College, Dublin; served there as demonstrator in civil engineering in 1882–91; and demonstrator in experimental physics in 1893. Since 1897 he has been professor of geology and mineralogy in the University of Dublin. He is scientific adviser to Dr. Steevens' Hospital, Dublin, and in 1911 was awarded the Boyle medal of the Royal Dublin Society. In 1918 Dr. Joly visited the United States as a member of the university commission to secure a closer rapprochement between the institutions of higher education in England and the United States. He has published 'Radioactivity and Geology' (1909); 'The Birth-time of the World, etc.' (1915); 'Synchronous Signalling in Navigation,' and contributions to the Royal Society, the *Philosophical Magazine*, etc.

JOLY DE LOTBINIÉRE, zhō'lē' dĕ lō'bē'nyār', **Sir Henri Gustave,** Canadian statesman: b. France, 5 Dec. 1829; d. Quebec, 15 Nov. 1908. He was educated in Paris, called to the bar of Lower Canada in 1855 and was first returned to the legislature in 1861. After Confederation he led the opposition in the Quebec legislature for some years, and was provincial premier 1878–79). He was controller and later Minister of Inland Revenue in the Dominion Cabinet, 1896–1900; and was lieutenant-governor of British Columbia, 1900–06.

JOMARD, zhō'mār, **Edme François,** French Egyptologist: b. Versailles, 1777; d. 1862. He was educated at the Ecole Polytechnique; went to Egypt with the French army in 1798 as member of the scientific commission. He became secretary of the latter in 1802. He edited 'La description de l'Egypte,' to which he made several contributions. He was one of the founders of the Geographical Society of Paris in 1821 and seven years later was made curator-director of the Royal Library. Acting on Jomard's advice, Mehemet Ali sent several Egyptian youths to be educated under him in France, and in this way was started the Institut des Egyptiens. Jomard received the title of Bey from the Khedive. He published 'Voyage à l'Oasis de Syouah' (1823) and 'Remarques sur les rapports de l'Ethiopie et l'Egypte' (1822).

JOMINI, zhō'mē'nē', **Antoine Henri,** BARON, general in the French and afterward in the Russian service, and writer on military tactics: b. Payerne, Vaud, Switzerland, 6 March 1779; d. Passy, 24 March 1869. He began his military career in a Swiss regiment in the French service, and chiefly through the friendship of Ney was raised to high military rank by Napoleon. In 1804 he began the publication of 'Traité des grandes operations militaires.' He distinguished himself in active service during the retreat from Russia, but offended at his treatment from Napoleon, really Berthier, the latter's chief of staff, he passed over to the allies after the armistice of Plaeswitz, and entered the service of Russia, in which he became lieutenant-general and aide-de-camp to the emperor. He declined to take part in the invasion of France in 1814. In 1828 he was active in the military operations at Varna; and in 1856 returned to Paris. Besides the work already mentioned, his 'Histoire critique et militaire des campagnes de la Révolution' (5 vols., Paris 1806); 'Vie politique et militaire de Napoleon' (4 vols., Paris 1827); 'Tableau analytique des principales combinaisons de la guerre' (1830);

'Précis de l'art de la guerre' (1836) are still of interest and value. Consult Lecomte, 'Le général Jomini' (3d ed., Lausanne 1888).

JOMMELLI, yō-mĕl'lē, **Nicolò,** Italian composer, b. Naples, 11 Sept. 1714; d. 28 Aug. 1774. He studied music with Muzillo, Prota, Mancini and Leonardo Leo; first composed cantatas, then applied himself to dramatic music, produced his first opera, 'Errore amoroso,' at Naples, in 1737, and his first serious opera, Odoardo,' in 1738, and the fame achieved by these works led to his being invited to Rome in 1740. There, under the patronage of Cardinal York, he composed two new operas, and in 1741 went to Bologna and composed 'Ezio' and studied with Padre Martini. He then made a tour of the chief cities of Italy; produced 'Didone' in Rome, 'Merope' for the theatre and a 'Laudate' for the church of San Marco, Venice, and 'Eumene' in Naples. He spent two years in Vienna giving instruction in music to the empress; and in 1748 was recalled to Rome, where he composed 'Artaserse' and the oratorio 'La Passione' and was appointed chapel-master of Saint Peter's Church. He resigned this office in 1754 and was chapel-master and court-composer at Stuttgart till 1772, when he returned to Naples. His last, and believed by many his greatest, work, the 'Miserere,' was composed after he had been paralyzed. His works comprise 40 operas, 5 cantatas, 4 oratorios and 34 church compositions. Consult Albert, H., 'Niccolo Jommelli als Opernkomponist' (Halle 1908).

JONAH, a Hebrew prophet: b. Gath-hepher, Zebulon, c. 781 to 741 B.C. The son of Amittai, he lived in the early years of the reign of Jeroboam II, king of Israel, who acceded to the throne in 781 B.C. He foretold the victories of Jeroboam over the Syrians, as related in 2 Kings xiv, 25. The book of Jonah, written some three centuries later, describing his mission to Nineveh to warn the inhabitants of the destruction of their city within 40 days tells all that is known of his subsequent life. See JONAH, BOOK OF.

JONAH, Book of. The book of Jonah is written concerning a prophet, Jonah, the son of Amittai, doubtless to be identified with the prophet of that name whose prediction in the time of Jeroboam II is recorded in 2 Kings xiv, 25. The book was written much later than the lifetime of the prophet, however. The language of the book is particularly decisive, for Armaisms and other late words afford clear evidence that it was written after the exile. The thought of the book makes it probable that it was intended as a protest against the narrowness of postexilic Judaism, which was most conspicuous after the time of Ezra and Nehemiah. It is probable, therefore, that the book is not earlier than 400 B.C., and may be somewhat later than that. The phrase "the king of Nineveh," iii, 6, is in accord with this dating, since it is one which would not have been used until some time after the end of the kingdom of Assyria, in 606. Concerning the personality of the author, or authors, nothing is known outside of the book itself.

The nature of the book is much disputed. It has in the past often been considered to be historical, but various features of the book are against that, of which the swallowing of Jonah by the fish and his later deliverance unhurt, and the repentance of the whole city of Nineveh at the call of an unknown foreign prophet are but more conspicuous features among many improbabilities. It is a book of wonders, not of history. Some have given it an allegorical interpretation, Jonah representing the nation Israel and Babylon being the fish which swallowed the nation during the exile. But the details of the treatment do not yield themselves readily to an allegorical interpretation. It is to be regarded as a story designed to teach a lesson, a romance. The story as such is doubtless the creation of the author. It may be based upon some current story or stories. Similar stories of the swallowing of a man by a monster and later deliverance are common among many ancient peoples. The somewhat similar story of Perseus and Andromeda is located at Joppa, the port from which Jonah embarked.

There has been some question whether the book is all by one author. With the exception of a few words here and there, however, there seems no reason for question except in reference to the psalm in ii, 2–9. That is undoubtedly not by the author of the remainder of the book. First of all, it is inappropriate at this point, Jonah can hardly have been thought to utter this while within the whale, and in its nature it is a thanksgiving for deliverance and not a prayer for such deliverance. It would be more appropriate if put after verse 10. But even then it would be in some measure inappropriate. The psalm presupposes no such experience as Jonah's but only drowning. The drowning, in accordance with the usage of the psalms of the Old Testament, is more probably figurative, as a description of extreme trials, than literal. The psalm was doubtless composed independently and probably in use in some collection of psalms, it being similar to those in the Book of Psalms. Nothing definitely indicates whether the psalm was added by the author or by a later reader or editor. In any case it is more probable that it was originally designed to be after verse 10, but was accidentally transposed. If added later, it was probably written on the margin, so that its transposition would be easy. The psalm consists largely of reminiscences of other psalms, and hence is probably postexilic.

In literary form the book excels; as a romance it is very artistically worked out.

There are two principal thoughts in the book. The first concerns the nature of the prophet's work, particularly in prediction. The purpose of the prophet is a practical one, to affect the lives of the hearers; not to present a program of the future, but so to present that future as to influence the lives of those addressed. This influence may so change their lives that the prediction of punishment will not be fulfilled. The prediction is conditional, as had been stated by earlier prophets. The other thought, and the principal one, concerns the character of God and his plans for men. The thought of God is not limited to the nation Israel, but is concerned with mankind generally. Even the great oppressor of Israel, Assyria, is the object of God's loving care; the people of that nation may find mercy from God if they repent. It is God's world-wide plans of mercy for men that are here presented, quite in the spirit of Deutero-

Isaiah. It is one of the most exalted messages in the Old Testament.

Bibliography.— Bewer, J. A., 'Jonah' ('International Critical Commentary,' (New York 1912); Kennedy, J., 'On the Book of Jonah' (London 1895); Perowne, T. T., 'Books of Obadiah and Jonah' ('Cambridge Bible,' Cambridge 1879); Smith, G. A., 'The Book of the Twelve Prophets' ('Expositor's Bible,' Vol. II, New York 1898).

GEORGE RICKER BERRY,
Professor of Old Testament Interpretation and Semitic Languages, Colgate University.

JONAH CRAB, a crab of southern New England (*Cancer borealis*) related to the common edible species, but more robust and with a thicker, harder shell. It lives at low tide on exposed rocky shores and is sometimes found buried at 10 fathoms.

JONAS, HŌ-nās, **Alberto,** Spanish pianist: b. Madrid, 1868. His musical studies were prosecuted at the Madrid Conservatory and at the Brussels Conservatory in 1886-90. He also studied under Rubinstein at Saint Petersburg and made a successful début at Berlin in 1891. He held the chair of music at the University of Michigan from 1894 to 1905; removed to Berlin in 1906, but he returned to New York in 1914 where he teaches music.

JONAS, yō'näs, **Justus** (originally JOBST KOCH), German religious reformer: b. Nordhausen, Saxony, 5 June 1493; d. Eisfeldt, 9 Oct. 1555. He accompanied Luther to the Diet at Worms, assisted him in translating the Old Testament, took part in the Marburg Conference, as well as in drawing up the so-called articles of Torgau and was present at the Diet of Augsburg. He did good service to the cause of the Reformation, not only by his preaching, but by his vigorous translations into German of the Latin works of Luther and Melanchthon. Consult Lindsay, 'History of the Reformation in Germany' (New York 1906).

JONATHAN, son of Saul, king of Israel. He carried on the war against the Philistines for some time with victorious success, but in the battle of Gilboa (1033 B.C.) was slain. His friendship for David is one of the most beautiful incidents in Old Testament history, and the elegy or dirge composed by David on his death —'The Song of the Bow'— is in the highest strain of Hebrew poetry. Consult Schmidt, 'Messages of the Poets' (New York 1911).

JONATHAN BEN NUZZIEL, ŭz-zĭ-ĕl, a Hebrew scholar, who flourished about 30 B.C. He was one of the first 30 disciples of Hillel, all of whom were credited with great learning and ability. He translated some of the Hebrew prophetical writings into the Aramaic language and wrote expositions of Haggai, Zechariah and Malachi. Tradition has also credited him with 'The Paraphrase on the Pentateuch,' 'The Paraphrase on the Prophets' and 'The Paraphrase on the Five Migilloth.' Later Jewish writers ascribed them to the joint work of several persons.

JONES, Alfred, American engraver: b. Liverpool, England, 1819; d. New York, 28 April 1900. He came to the United States when young and received first prize at the National Academy of Design in New York, in 1839, for a drawing that he had made from Thorwaldsen's 'Mercury.' He first came into public notice by his engravings of 'The Proposal,' by Asher B. Durand, and 'The Farmer's Nooning,' after William S. Mount, and his work was in request for illustrated publications. He went to Europe in 1846 and after studying in life-schools there, was elected a member of the National Academy, New York, in 1851. He is regarded as one of the best engravers of his period in America. For many years he was connected with the American Banknote Company of New York, as an engraver. Among his steel plates are 'The Image Breaker,' after Leutze; portraits of Adoniram Judson by Chester Harding and William Cullen Bryant; 'The Capture of Major André,' after Durand; 'Sparking,' by Edmonds; 'The New Scholar'; 'Mexican News'; 'Life's Happy Hour' after Lillie M. Spencer; 'Poor Relations,' after J. H. Beard; 'Patrick Henry Delivering his Celebrated Speech.' Jones was run over by a cab in New York city and died of his injuries.

JONES, Amanda Theodosia, American poet: b. East Bloomfield, Ontario County, N. Y., 19 Oct. 1835; d. Brooklyn, N. Y., 1 March 1914. She was a contributor to many periodicals and was literary editor of the *Western Rural* in 1869-70. She invented and patented several vacuum preserving processes for canning without cooking and the desiccation of fruits, etc., also a series of valves applicable to oil, air, vacuum, steam, gas, etc. Some of her war songs were very popular. She published 'Ulah and Other Poems' (1860); 'Atlantis and Other Poems' (1866); 'A Prairie Idyl, and Other Poems' (1882); 'Rubaiyat of Solomon and Other Poems' (1905); 'Collected Poems' (1906); 'A Psychic Autobiography' (1910).

JONES, Anson, last president of the Republic of Texas; b. Great Barrington, Mass., 20 Jan. 1798; d. Houston, Tex., 7 Jan. 1858. He commenced the study of medicine in Litchfield, Conn., in 1817, and in 1820 was licensed to practise. He established himself in 1833 in Brazoria, Tex., and upon the outbreak of the troubles between Texas and Mexico, became one of the earliest advocates of the severance of the two countries. In the succeeding war of independence he served as a private soldier and as surgeon in the Texan army. In 1837-38 he was a representative in the Texan Congress from Brazoria County; in 1838 was sent as Minister to Washington, where he endeavored, though unsuccessfully, to secure the annexation of Texas to the United States, and on his return to Texas took his seat in Congress as senator from Brazoria and in 1841 was appointed by President Houston his Secretary of State, which office he filled three years. In September 1844 he was elected President of Texas for three years from the ensuing December and held that office until the annexation of Texas to the United States. He succeeded in maintaining a footing of equality in negotiations with England, France and the United States; and by the intervention of the two former powers the government of Mexico was induced to acknowledge the independence of Texas. His journal and autobiography appeared in book form in 1858. Jones County and Anson, its county-seat, were named after him.

JONES, Arthur Edward, Canadian clergyman, educator and author: b. Brockville, On-

tario, 17 Nov. 1838. He was educated at Saint Mary's College, Montreal, and Jesuit scholasticates at Amiens and Vals, France, Boston, Fordham and Woodstock, United States. In 1857 he entered the Jesuit order; taught Latin at Saint Mary's College, Montreal, in 1861–62 and subsequently was professor of *belles-lettres,* rhetoric and geometry at Saint John's College, Fordham, N. Y. He was ordained to the priesthood in 1873; was professor of *belles-lettres* at Saint Francis Xavier College, New York, in 1874–75 and in the following year gave missions in New Brunswick. From 1876 to 1881 he taught English literature and geometry at Saint Mary's, Montreal, and from 1882 to 1900 he was assistant priest at the church of the Gesù, Montreal, at the same time serving as archivist of Saint Mary's College. He identified the scene of the martyrdom of Pères, Brébeuf and Lallemant and other Huron villages famous in early Canadian annals. He collaborated with R. G. Thwaite in the latter's 'Jesuit Relations and Allied Documents.' At the Saint Louis Exposition of 1904 his historical and archæological exhibit won the grand prize and he himself was awarded a medal for his work as archivist. He invented a practical fire-escape for institutions and a perpetual calendar of movable feasts. In 1906, at Quebec, he lectured on Huron topography before the International Congress of Americanists. Dr. Jones was architect of several colleges of his order. He is a member of the Ontario Historical Society and other learned societies of Canada and the United States. He is the author of 'Biens des Jésuite en Canada' (1888); 'Sketch of Louis André, S.J.' (1889); 'Answer to a Communication in the Montreal *Star* and the *Gazette* and the Toronto *Mail* campaign against the Jesuit Estates Bill' (1889); 'A Jesuit Father on the Act' (1889); 'Site of the Mascoutin Village' (1907); 'Hendaké Ehen or Old Huronia' (1909–11). He discovered and edited, with biographical notes, Laure's 'Relation of the Saguenay Mission' (1893) and is a contributor to the *Recherches Historiques,* 'The Catholic Encyclopedia,' etc.

JONES, Charles Colcock, Jr., American author: b. Savannah, Ga., 28 Oct. 1831; d. 19 July 1893. He was graduated at Princeton (1852), at Harvard Law School (1855) and was admitted to the bar in 1856. He served as colonel of artillery in the Confederate army during the war for the Union and on the return of peace removed to New York, where he practised law. In 1877 he returned to Georgia and devoted his time to the study of the history and archæology of that State. He wrote 'Historical Sketch of the Chatham Artillery during the Confederate Struggle for Independence' (1867); 'Reminiscences of the Last Days of Gen. Harry Lee' (1870); 'Antiquities of the Southern Indians' (1873); 'Life of Commodore Josiah Tatnall' (1878); 'Negro Myths from the Georgia Coast, Told in the Vernacular' (1888); 'The History of Georgia' (2 vols., 1883); 'English Colonization of Georgia' (1887).

JONES, Edward (Bardy Brenin), Welsh bard and writer on music: b. Llanderfel, Merionethshire, 1752; d. London, 1824. His whole life almost was spent in studying the harp and in promoting Welsh minstrelsy. He went to London in 1775 and a few years later was made official bard to the Prince of Wales. He published 'Musical and Poetic Relics of the Welsh Bards' (1784; 1794); 'The Bardic Museum of Primitive British Literature' (1802); 'Lyric Airs, Consisting of Specimens of Melodies of Greek, Albanian, Wallachian, Turkish, Persian, Chinese and Moorish Melodies' (1804); 'Cheshire Melodies' (1803); 'The Musical Bouquet' (1799); 'The Musical Miscellany'; 'Terpsichore's Banquet'; 'The Minstrel's Serenade'; 'Maltese Melodies'; 'The Musical Portfolio'; 'Musical Remains of Handel, Bach, Abel, etc.'; 'Collection of Melodies for Beginners on the Harp.'

JONES, E(mily) E(lizabeth) Constance, English educator: b. about 1857. She received her university education at Girton College, Cambridge, taking first in the moral science tripos in 1880. She was examiner in logic in the Cambridge Higher Local in 1902–04; also resident lecturer on moral sciences at Girton from 1884 to 1903 and mistress of Girton College from 1903 to 1916. She is external member of the board of philosophic studies of the University of London, governor of the University College of Wales, and member of the council of the Cambridge Training College for Women. With Miss E. Hamilton she translated Lotze's 'Mikrokosmus,' and is the author of 'Elements of Logic as a Science of Propositions'; 'General Logic'; 'Primer of Logic' (2d ed., 1918); 'Primer of Ethics'; 'A New Law of Thought and its Logical Bearings' (1911); 'Girton College' (1913); 'Three Great Questions' (1915) and of various articles and reviews. She was entrusted with carrying through the press the 6th and 7th editions of the late Professor Sidgwick's 'Methods of Ethics' (1901) and with editing his 'Lectures on the Ethics of Green, Spencer, and Martineau' (1902).

JONES, Francis Coates, American painter: b. Baltimore, Md., 25 July 1857. He studied at the École des Beaux-Arts under Yvon, Lehmann, Boulanger and Lefebvre. Since 1882 he has maintained a studio in New York; his specialty is figure painting. He was awarded medals at the Buffalo and Saint Louis expositions and in 1894 was elected to the National Academy. He is a member of the National Institute of Arts and Letters and director of the American Federation of Arts. His paintings include 'A Perplexing Move' (1909); 'Cup of Tea' (1910); 'Nymphs Bathing' (1911); 'The Letter' (1911); 'The Sisters' (1912); 'A Wooded Hillside' (1912); 'The Trout Pool' (1913).

JONES, Frederick Scheetz, American educator: b. Palmyra, Mo., 7 April 1862. In 1884 he was graduated at Yale University and studied subsequently at the University of Berlin and the Zürich Polytechnic. From 1889 to 1909 he was professor of physics; from 1902 to 1909 dean of the College of Engineering of the University of Minnesota and since 1909 dean of Yale College.

JONES, George Heber, American missionary: b. Mohawk, N. Y., 14 Aug. 1867. He was educated in the public schools of Utica. In 1887 he was appointed missionary to Korea by the Methodist Episcopal Church; in educational

work at Seoul from 1888 to 1891; principal Pai Chai English School at Seoul in 1892–93; presiding elder at Chemulpo 1893–1903; superintendent of the Korean Mission of the Methodist Episcopal Church in 1897–99. From 1903 to 1907 he was in the United States, serving as a secretary to the board of missions and as lecturer. He returned to Korea in 1907; was president of the Korean Biblical Institute and the Union Theological School from 1907 to 1911. In 1915–18 he was special lecturer on missions at the Boston University School of Theology. Since 1913 he has been editorial secretary to the board of foreign missions of the Methodist Episcopal Church. He published 'Korea: Country and People' (1907); 'English-Korean Dictionary of Scientific and Technical Terms' (1910).

JONES, Harry Clary, American chemist: b. New London, Md., 11 Nov. 1865; d. 19 March 1916. In 1889 he was graduated at Johns Hopkins University, and studied subsequently at Leipzig, Amsterdam and Stockholm. After his return to the United States he became instructor in physics at Johns Hopkins, associate professor in 1900 and professor in 1904. He edited the *Zeitschrift für physikalische Chemie* and *Journal de Chimie physique.* In 1913 he was awarded the Langstreth medal of the Franklin Institute. He published 'Freezing Point, Boiling Point, and Conductivity Methods' (1897); 'Theory of Electrolytic Dissociation' (1900); 'Elements of Physical Chemistry' (1902; Russian 1911; Italian 1912); 'Elements of Inorganic Chemistry' (1903); 'Electrical Nature of Matter and Radioactivity' (1906); 'Hydrates in Aqueous Solutions' (1907); 'The Absorption Spectra of Solutions' (1909); 'Introduction to Physical Chemistry' (1910); 'Electrical Conductivity of Salts and Organic Acids' (1912); 'New Era in Chemistry' (1913) and many papers in professional journals.

JONES, Sir Henry, Welsh educator: b. Llangernyw, North Wales, 1852. In 1879 he was graduated at the University of Glasgow. He was professor of philosophy and political economy at the University College of North Wales and subsequently professor of logic and metaphysics at Saint Andrew's. Since 1894 he has been professor of moral philosophy at the University of Glasgow. In 1912 he was knighted. His publications include 'Browning as a Religious and Philosophical Teacher' (1891; 6th ed., 1912); 'The Philosophy of Lotze' (1895); 'Idealism as a Practical Creed' (1909); 'The Working Faith of the Social Reformer' (1910); 'Social Powers' (1913).

JONES, Henry Arthur, English dramatist: b. Grandborough, Buckinghamshire, 28 Sept. 1851. After a secondary education, he took up writing as a means of livelihood, and in 1879 appe[illegible]ywright with 'A Clerical Error,' per[illegible] Wilson Barrett at the Court T[illegible]llowed this by a series of com-ed[illegible]n life, clever in dialogue and stag[illegible]n have been very popular, particularly [illegible]nglish audiences. They include 'Silver [illegible] (1882); 'Saints and Sinners' (1884); [illegible]dleman' (1889); 'Judah' (1890); 'The D[illegible]ng Girl' (1891); 'The Tempter' (1893); 'The Masqueraders' (1894); 'Michael and His Lost Angel' (1896); 'The Rogue's Comedy' (1896); 'The Liars' (1897); 'The Manœuvres of Jane' (1898); 'Carnac Sahib' (1899); 'Mrs. Dane's Defence' (1900); 'The Princess's Nose' (1902); 'Joseph Entangled' (1904); 'The Hypocrites' (1906); 'The Evangelist' (1907); 'Dolly Reforming Herself' (1908); 'Mary Goes First' (1913); 'The Lie' (1914). He is also author of a number of essays and lectures. He visited the United States in 1914. See Michael and His Lost Angel.

JONES, H(ugh) Bolton, American painter: b. Baltimore, Md., 20 Oct. 1848. He studied art in Baltimore and in France; made a specialty of landscapes. In 1889 he was awarded a third class medal at the Paris Exposition and a medal at the Columbian Exposition, Chicago, in 1893. He received a bronze medal at the Paris Exposition of 1900 and a gold medal at the Saint Louis Exposition of 1904. In 1883 he was elected to the National Academy. In the Metropolitan Museum, New York, are his 'Autumn' and 'Spring.' He is a member of the National Institute of Arts and Letters.

JONES, Inigo, English architect: b. London, 15 July 1573; d. there, 21 July 1652. He was the son of a clothworker and began life as a carpenter, but showing a taste for painting, William, Earl of Pembroke, supplied him with the means of visiting Italy for the purpose of studying landscape painting. At Venice the works of Palladio inspired him with a taste for architecture. He was appointed first architect to Christian IV, king of Denmark, but in 1605 he returned to his native country. After being employed for a time as a scenic and stage artist, he was appointed in 1610 surveyor of the works to Henry, Prince of Wales. After the death of the prince he again visited Italy, and extended his knowledge and improved his taste from the examination of the models of ancient and modern art. The banqueting house at Whitehall is a monument of his skill and science. At Winchester Cathedral he erected a screen in the style of classic antiquity. Like Wren he seems not to have duly appreciated the Pointed style of building. He built the front of Wilton House, in Wiltshire, for Philip, Earl of Pembroke, and was much employed by the court and by many of the nobility and gentry. He also designed the scenery and decorations for masques — a species of dramatic entertainment fashionable in the early part of the 17th century. In these pieces the dialogues and songs were composed by Ben Johnson, who quarreled with Jones and abused him in epigrams and satires. Being a Roman Catholic and a partisan of royalty, he suffered in the Civil War, and in 1646 was forced to pay a heavy fine as a malignant or cavalier. As an author he is known by a work on Stonehenge, composed by command of King James I, in which he undertook to prove that Stonehenge was erected by the Romans, and was a hypæthral temple dedicated to the god Cœlus. He was the reviver of classical architecture in England, but he blended Gothic elements with the Italian style. Among his works besides those mentioned are the Greenwich Hospital, the old London Exchange and the portico of Saint Paul's Church and Earl Pembroke's house. Consult the 'Life' by Cunningham (1898); Loftie, 'Inigo Jones and Wren'

(1893), and the papers by Blomfield in the *Portfolio* for 1889.

JONES, Jacob, American naval officer: b. near Smyrna, Del., March 1768; d. Philadelphia, 3 Aug. 1850. He entered the United States navy in 1799 as a midshipman, and while serving in the war with Tripoli was captured in 1803 and held a prisoner for 18 months. In 1812 he became commander of the *Wasp* and with her captured the English brig *Frolic,* 18 Oct. 1812, but on the following day encountered the English war vessel *Poictiers,* 74 guns, by which both the *Wasp* and its prize were taken. He was released on parole at Bermuda and for his victory over the *Frolic* was voted a gold medal by Congress and $25,000 was granted to him and his crew in payment of the personal loss they had sustained. He subsequently commanded squadrons in the Mediterranean and the Pacific.

JONES, James Kimbrough, American politician: b. Love, Marshall County, Miss., 29 Sept. 1839; d. 1 June 1908. His parents were residents of Tennessee, but in 1848 removed to a plantation in Dallas County, Ark. James served in the Confederate army during the Civil War, and then engaged in planting till 1873, when he began to practise law in Dalton County, Ark. He was a member of the State senate in 1873–77 and its president in the last-named year. In 1881–85 he was a member of Congress, having been elected as a Democrat, and in the latter year was elected to the United State Senate. He was re-elected in 1890 and 1897, and was chairman of the Democratic National Committee, conducting the Presidential campaigns of 1896 and 1900. Jones was an ardent tariff reformer. He retired from politics in 1903 and entered on the practice of law in Washington.

JONES, Jenkin Lloyd, American Unitarian clergyman: b. Llandyssil, Cardiganshire, Wales, 14 Nov. 1843. He came to America with his parents while an infant, served in a Wisconsin regiment during the Civil War, and was graduated from the Meadville (Pa.) Theological Seminary in 1870. He was instrumental in organizing the Congress of Religion. *Unity,* the organ of the congress, was edited by him after 1879. In 1909 he was given the degree of LL.D. by the University of Wisconsin. He was pastor of All Souls Unitarian Church, Janesville, Wis., 1874–83; was secretary of the Western Unitarian Conference for nine years, and since 1883 has been pastor of All Souls Church, Chicago (independent), and since 1905 head resident of the Abraham Lincoln Centre. He has been, since its inception, identified with the Peace movement, and is noted as a lecturer throughout the United States. Among his published works are 'The Faith that Makes Faithful,' with W. C. Gannett (1886); 'Practical Piety' (1890); 'Bits of Wayside Gospel' (1899); 'Love and Loyalty' (1907); 'On the Firing Line in the Battle for Sobriety' (1910), etc.

JONES, John, American surgeon: b. Jamaica, L. I., 1729; d. 1791. He studied medicine in Europe, and, returning to America, practised in New York, becoming professor of surgery in King's College, and, with Dr. Bard, founding the New York Hospital in 1771. After the occupation of New York by the English forces in 1777 he removed to Philadelphia, there being one of the physicians of the Pennsylvania Hospital, and in 1787 vice-president of the College of Physicians. He was the friend and physician of both Washington and Franklin, attending the latter in his last illness. He published 'Plain Remarks upon Wounds and Fractures' (1775).

JONES, John Paul, the first of the great American sea fighters, and not the least splendid in the long line, was born John Paul — the name Jones being a subsequent assumption — on 6 July 1747 on the estate of Arbigland, in the parish of Kirkbean, in the county of Kircudbright, Scotland; d. Paris, 18 July 1792. His family was obscure, his circumstances narrow, his advantages meagre, his opportunities limited. At the age of 12 he became a sailor. Genius rose superior to adverse circumstances, however, and before he died he was one of the most accomplished officers who ever served the United States. The greatest men of America and France took pleasure in his society and were proud of his friendship.

He progressed rapidly in his chosen career. At 19 he was chief mate of a slaver, a legitimate occupation in his day, but one that filled him with disgust. At 21 he was captain of a trader. In 1773 he came to America, forsook the sea and settled in Virginia on his brother's plantation, the latter having died childless in that year. It was at this time that he assumed the name Jones, by which he is so well known.

He was still poor and obscure when on 7 Dec. 1775 he was appointed a lieutenant in the new Continental navy, and was ordered to the *Alfred,* a small converted merchantman, Commodore Hopkins' flagship, on which, in the latter part of December, he had the honor of hoisting with his own hands the first naval flag of an American squadron. This was the famous yellow silk banner with a rattlesnake, and perhaps a pine tree, emblazoned upon it, with the significant legend, «Don't tread on me!» See FLAG OF THE UNITED STATES.

Hopkins made an abortive expedition to New Providence, in which Jones had but one opportunity to distinguish himself. At the peril of his commission, when the regular pilots refused to do so, he volunteered to take the *Alfred* through a difficult and dangerous channel. Needless to say, he succeeded — he always succeeded!

His first independent command was the little brig-ship *Providence,* of 70 men and 12 4-pound guns. In the fall of 1775 he made a notable cruise in this vessel; he skirmished with, and escaped from, by seamanship and [illegible], two heavy frigates, the *Solebay* and t[illegible]*ford;* in four months he captured 16 [illegible]8 of which were sent in as prizes, 5[illegible] returned to certain poor fisherme[illegible] stroyed property aggregating $[illegible]

Later, in command of the [illegible] short crew of 150 when he sh[illegible] 300, he made another brilliant c[illegible] he burned several British transp[illegible] one storeship laden to the gunwale[illegible] less munitions of war and supplie[illegible]t out three of the coal fleet from under th[illegible] guns of the *Flora* frigate, and had another smart brush with the *Milford.*

He was commissioned captain in the navy on 10 Oct. 1776, and on 14 June 1777, in the same resolution that established the form of the American flag, he was ordered to the *Ranger*, a small ship-rigged corvette of 300 tons and 18 6-pounders. On her, at Portsmouth, N. H., on 4 July, he hoisted the first Stars and Stripes that ever flew from the peak of an American man-of-war. Sailing for European waters, he carried to France the official dispatches announcing Burgoyne's surrender, which brought about the Franco-American alliance.

In Quiberon Bay, late on the evening of 14 Feb. 1778, in the *Ranger*, he received the first formal recognition ever given by a foreign fleet to the United States in a salute to the American flag. As it was after sunset when the salutes were exchanged, in order that there should be no mistake about it, the next morning, 15 February, Jones transferred his flag to the *Independence*, a small privateer, and deliberately sailed through La Motte Piquet's fleet of battleships, saluting and receiving salutes again.

In April 1778, still on the *Ranger*, he left Brest on a cruise in British waters, which took him around Ireland. During this cruise he made daring but abortive attempts to burn the shipping at Whitehaven, and to capture the Earl of Selkirk at Saint Mary's Isle. On the evening of 24 April, off Carrickfergus, he fought the British sloop-of-war *Drake*, of equal force and larger crew, to a standstill in an hour and five minutes. When the *Drake* struck her flag, her rigging, sails and spars were cut to pieces. She had 42 killed and wounded — more than one-fifth of her crew — and was completely helpless. The *Ranger* lost 2 killed and 6 wounded.

In 1779 Jones hoisted his flag on the *Duc de Duras*, a condemned East Indiaman, which would have been broken up had he not turned her into a makeshift frigate by mounting 40 guns in her batteries — 14 12-pounders, 20 nines and 6 eighteens. This, in honor of Franklin, he renamed the *Bon Homme Richard*. Accompanied by the fine little American-built frigate *Alliance*, 32, commanded by Pierre Landais, an incompetent and unbalanced French naval officer in the American service, the French corvette *Pallas*, 30, Captain de Cottineau, with the brig *Vengeance*, 12, and the cutter *Cerf*, 16, Jones cruised around England and Scotland, taking many valuable prizes and striking terror all along the shore, in spite of constant mutiny and insubordination among the ships, officers and men of his heterogeneous squadron.

On the evening of 23 September, off Flamborough Head, he fell in with the valuable Baltic convoy. He was accompanied at the time only by the *Alliance* and the *Pallas*. The Baltic convoy was protected by the *Serapis* and the *Scarborough*. The *Serapis* was a brand-new double-banked frigate of 800 tons, carrying 20 18-pounders, 20 nines and 10 sixes. Inasmuch as the 18-pounders on the *Richard* burst and were abandoned after the first fire, the *Serapis* could and did discharge nearly twice as many pounds' weight of broadsides as the *Richard* — say, 300 pounds to 175. The *Pallas* grappled with the *Scarborough* — a more equal match — and Jones attacked the *Serapis*, which was not unwilling — quite the contrary — for the fight.

The battle was one of the most memorable and desperate ever fought upon the ocean. The *Richard* was riddled like a sieve. Her rotten sides were literally blown out to starboard and port by the heavy batteries of the *Serapis*. Jones had several hundred English prisoners on board. The master-at-arms released them, but with great readiness and presence of mind Jones, who was brilliantly supported by Richard Dale, his first lieutenant, sent them to the pumps while he continued to fight the English frigate, his own ship kept afloat by their efforts.

Captain Pearson of the *Serapis* was a brave man, but no match for the indomitable personality of the American commander. After several hours of such fighting as had scarcely been seen before on the narrow seas, he struck his flag. The *Alliance*, commanded by a jealous and incapable Frenchman, had contributed nothing to Jones' success. Indeed, she had twice deliberately poured her broadsides into the *Richard* in spite of frequent warning. The American vessel was so wrecked alow and aloft that she sank alongside, and Jones had to transfer the survivors of his crew to the English frigate. The aggregate of the two crews was nearly 700, of which about 350 were killed or wounded. The *Scarborough* was captured by the *Pallas* after a smart action.

Jones took his prizes into the Texel, when, after showing himself as vigorous and able in statecraft in maintaining American honor in diplomatic intrigues as he was at sea in battle, he was forced to turn over the *Serapis* and *Scarborough* to France.

The poverty of America did not permit Jones to get to sea in adequate ships thereafter, although he subsequently commanded successively the *Alliance* and the *Ariel*, a small sloop-of-war, in which he caused the British letter-of-marque *Triumph* to strike her flag after a brief action, from which she escaped by a clever ruse, he performed no other conspicuous service.

After the Revolution he took service under Catherine of Russia, carefully reserving his American citizenship. In her service, in June and July 1788, he fought four brilliant actions in the Black Sea, in which he had to contend with the usual discouragement of indifferent personnel and wretched material, and in which he displayed all his old-time qualities, winning his usual successes, too.

Worn out in unrequited service, disgusted with Russian court intrigues of which he was the victim, resentful of the infamous Potemkin's brutal attempts at coercion, he asked leave of absence from Catherine's service and went to Paris, where in the companionship of his friends and in the society of the beautiful Aimée de Telison, the one woman he loved, he lived two years, and died of dropsy on 18 July 1792, at the age of 45.

Besides the memory of his battles, Paul Jones left a collection of immortal sayings, which are the heritage of the American navy and the admiration of brave men the world over.

"I do not wish to have command of any ship that does not sail fast, for I intend to go in harm's way!"

"I have ever looked out for the honor of the American flag."

"I can never renounce the glorious title of a citizen of the United States."

Last, but not least, the curt phrase which comes ringing through the centuries like a trumpet call to battle; the words with which he replied to the demand of the astonished Pearson, who saw the enemy's ship beaten to a pulp, and wondered why he did not yield:

"I have not yet begun to fight!"

Never in his long career did Jones have a decent ship or a respectable crew. His materials were always of the very poorest. His officers, with the exception of Richard Dale, were but little to boast of. What he accomplished he accomplished by the exercise of his own indomitable will, his serene courage, his matchless skill as a sailor and his devotion to the cause he had espoused. After his death, among his papers, the following little memorandum of his services, written in his own hand, was found:

In 1775, J. Paul Jones armed and embarked in the first American ship of war. In the Revolution he had 23 battles and solemn rencontres by sea; made 7 descents in Britain and her colonies; took of her navy two ships of equal, and two of superior force, many store-ships, and others; constrained her to fortify her ports; suffer the Irish volunteers; desist from her cruel burnings in America, and exchange, as prisoners of war, the American citizens taken on the ocean, and cast into prisons of England, as "traitors, pirates, and felons!"

Paul Jones was accused of being a pirate. The charge was a long time dying, but it is to-day generally withdrawn. His status was clear and unequivocal. He was a regularly commissioned officer in the navy.

In person Jones was a small, slender, well-made man, about five feet seven inches high. His complexion was dark, his features were regular and his eyes black and brilliant. He had acquired a charming manner, especially with women, and not a little education and polish in his varied career. He wrote and spoke fluently, and, like Nelson, sometimes amused himself by making indifferent verse. His chief fault was his vanity. In morals he was rather above the custom of the time and the society in which he mingled. He had one child by Aimée de Telison, which died in infancy.

As a strategist, tactician and fighter he stands high among naval captains. Louis XVI conferred on him the Order of Military Merit and presented him with a magnificent sword; the Empress Catherine appointed him a rear-admiral and created him a knight of Sainte Anne and Congress formally thanked him and awarded him a gold medal for his services. He was accorded the honor of a public funeral by the French Assembly, and was buried in a Protestant cemetery at the corner of the Rue de la Grange aux Belles and the Rue des Ecluses Saint Martin, in Paris. In the spring of 1905, through the efforts of Gen. Horace Porter, American Ambassador to France, his remains were discovered and identified and brought to America in the armored cruiser *Brooklyn*, flagship of Rear-Adm. Charles D. Sigsbee's accompanying squadron. They are interred at the United States Naval Academy at Annapolis, Md., awaiting the completion of a suitable resting place for them.

There is one mystery connected with Jones' life which has never been cleared up. No one knows why John Paul assumed the name Jones. There have been two attempts at explanation: one that he took it in testamentary succession to his brother, William Paul, who had taken the name Jones to inherit property from one William Jones, a Virginia planter. This is now disproved, and the prevailing theory is that the name was assumed by John Paul out of respect and affection for the Jones family of North Carolina, from whom he had received much kindness.

CYRUS TOWNSEND BRADY.

JONES, John Percival, American politician: b. Herefordshire, England, 1830; d. 1912. His parents brought him to the United States in 1831 and settled in northern Ohio. He was educated in the schools of Cleveland and in the early days of California gold-mining he journeyed across the Rockies to that State, where he acquired several mining interests and was successful as an operator. He was for a time sheriff of Tuolumne County and in 1863–67 was a member of the State senate. In the latter year he removed to Nevada, where he became a proprietor of the Crown Point silver mine, through which he realized a fortune. He became powerful in State politics through his influence with the miners. He was elected to the United States Senate from Nevada in 1873, was re-elected as a Republican in 1879, 1885 and 1891 and as a "Silverite" in 1897. He was an influential member of the Senate committees on Post Roads and on Mines and Mining, in which field his experience was invaluable. After 1875 he stood forth as a champion of bimetallism and supported W. J. Bryan in 1896. He returned to the Republican fold in 1900, but still held to his free-silver coinage doctrine and retired in 1903.

JONES, John William, American clergyman and author: b. Louisa, Va., 25 Sept. 1836; d. Columbus, Ga., 17 March 1909. He was graduated from the University of Virginia in 1859 and from the Southern Baptist Theological Seminary, and during the war served as private and then chaplain in the Confederate army. He was paster of a Baptist church in Lexington, Va., 1865–71, and chaplain of Washington College during Lee's presidency, and since the last-named date was successively agent of various Southern institutions, chaplain of the University of Virginia and pastor of several churches. Besides editing 14 volumes of 'Southern Historical Papers' he published [illegible]nal Reminiscences, Anecdotes and Le[illegible] E. Lee' (1874); 'Christ in the Camp, or Religion in Lee's Army'; 'Memorial Volume of Jefferson Davis'; 'History of the United States,' etc.

JONES, Leonard Augustus, American jurist: b. Templeton, Mass., 13 Jan. 1832; d.

1909. He was graduated from Harvard in 1855 and from Harvard Law School in 1858. He was admitted to the Suffolk bar in 1858 and practised until 1874 when he became associate editor (1874–1904) and later editor (1904–07) of the *American Law Review.* Among his many legal works are 'Law of Mortgages and Real Property' (6th ed., 1904); 'Law of Mortgages of Personal Property' (5th ed., 1908); 'Law of Easements' (1898); 'Index to Legal Periodical Literature' (2 vols., 1889); 'Legal Forms' (6th ed., rev., 1909); 'Real Property' (2 vols., 1896); 'Collateral Securities and Pledges' (3d ed., 1912); 'Corporate Bonds and Mortgages' (3d ed., 1907); 'Landlord and Tenant' (1906). He was appointed judge of the Court of Land Registrations in 1898.

JONES, Lewis Ralph, American botanist: b. Brandon, Wis., 5 Dec. 1864. In 1883–86 he studied at Ripon College; in 1889 at the University of Michigan. From 1889 to 1910 he was professor of botany at the University of Vermont and botanist of the Vermont Experiment Station. Since 1 Feb. 1910 he has been professor of plant pathology at the University of Wisconsin. He carried out investigations in the laboratory of the Bureau of Plant Industry, Washington, in 1904, and is a collaborator of the Department of Agriculture. He is a member of many botanical societies and is the author of botanical reports, bulletins, etc., in scientific magazines. He is editor of the *American Journal of Botany* and of the bacteriological terms of Webster's 'New International Dictionary.'

JONES, Sir **Lyman Melvin,** Canadian capitalist: b. York County, Ontario, 21 Sept. 1843; d. 15 April 1917. As a youth he entered the employment of A. Harris, Son & Co., agricultural implement makers, Brantford; on the formation of the Massey-Harris Company, Toronto, in 1891, became manager of the consolidated companies; and in 1902 president and general manager. He took a considerable interest in public affairs, and while resident in Winnipeg was mayor of the city (1887–88) and treasurer in the Greenway provincial government 1888–89. He was a Liberal in politics and was called to the senate in 1901, but opposed his party during the reciprocity issue in 1911, and in that year he was knighted.

JONES, Owen, English architect: b. London, 15 Feb. 1809; d. there, 19 April 1874. In 1834 he traveled in Spain and studied the art monuments of Granada, after which he visited Egypt. On returning to England he published his great work on the Alhambra. In 1851 he undertook the decoration of the Crystal Palace at the first Universal Exhibition. He also furnished the various courts of different architecture, notably the «Alhambra Court.» His researches and publications had a wonderful influence on the decorative art of England, especially his 'Grammar of Ornament,' in which he illustrated the decorative devices of all nations. He published 'Plans, Elevations, Sections and Details of the Alhambra' (1845).

JONES, Peter, American Indian missionary: b. 1 Jan. 1802; d. 29 June 1856. His Indian name was Kahkewaquonaby; his father was a white man of Welsh descent named Augustus Jones, who maintained the closest friendship with Brant during the latter's life. Peter's mother was Tuhbenahneeguay, daughter of a chief of the Missisauga on Credit River at the extreme western end of Lake Ontario. Peter remained with his tribe, following their customs and accompanying them on their excursions, until his 16th year, when his father, who was then a government surveyor, had him baptized by an English Episcopal minister. Having professed religion at a camp-meeting held near Ancaster, Ontario, and taken an active part in the religious exercises of the Wesleyan Methodist Church, Peter was sent on a missionary tour, in 1827, to Lake Simcoe and other points in western Ontario, although not yet ordained. He had by this time entered on his literary work, as in this year was published a hymnbook translated by him into Chippewa. He was constituted a Wesleyan Methodist minister at the Toronto Conference of 1833. The remainder of his life was devoted chiefly to missionary work among the Missisauga and Chippewa, and to some extent among the Iroquois. His position as a Christian pastor and ruling chief of his tribe gave him great influence, not only among his own people, but among all the Chippewa tribes. He visited England and New York and made repeated journeys in behalf of his people. It was largely through his efforts that the titles of the Credit Indians to their lands were perfected. A monument was erected to his memory, in 1887, at Brantford. In addition to the above-mentioned volume of hymns, Jones was author of 'An Ojibway Spelling Book' (1828); translation of part of the New Testament (1829); 'The First Book of Moses' (1835). He also wrote 'Life and Journals of Kah-ke-wa-quo-na-by (Rev. Peter Jones)' (1860); and 'History of the Ojibway Indians' (1861). Consult Pilling, 'Bibliography Algonq. Lang. Bull. B.A.E.' (1891).

JONES, Samuel Porter, commonly known as Sam Jones, American Methodist revival preacher: b. Chambers County, Ala., 16 Oct. 1847; d. 15 Oct. 1906. He was admitted to the Georgia bar in 1869 and practised successfully for a time. His drinking habits put an end to his career as a lawyer. Becoming converted in 1872 he was admitted to the ministry of the Methodist Church South, and afterward devoted himself to evangelistic work, his marked eccentricities of speech and manner probably contributing somewhat to his popularity. His works include 'Famous Stories of Sam P. Jones' (1908); 'Popular Lectures of Sam P. Jones' (1909); 'Sam Jones's Revival Sermons' (1912); 'Lightning Flashes and Thunderbolts' (1912).

JONES, Thomas, American lawyer: b. Fort Neck, Long Island, 30 April 1731; d. Hoddesdon, England, 25 July 1792. In 1750 he was graduated at Yale and in 1755 was licensed to practise law. In 1757 he was appointed clerk of Queens County (N. Y.) courts and for many years was attorney for the governors of King's College (now Columbia University). In 1769 he became recorder of New York city, retaining that office until 1773, when he was made judge of the Supreme Court in place of his father, serving until the close of the Revolutionary War, and held the last court under the Crown at White Plains in April 1776. On 27 June 1776 he was arrested at the instance of the New York Provincial Congress for refusing to

obey the summons of the committee to show why he «should be considered a friend of the American cause.» He was paroled but was re-arrested on 11 August, was detained a prisoner in Connecticut until December when he was paroled a second time. He was carried off a second time to Connecticut in 1779 and in April 1780 was exchanged for Gen. Gold S. Silliman. He went to England in 1781. The negotiations for peace in 1782 prevented his return, as he was included in the New York act of attainder, by which his life was *ipso facto* forfeited and his estate confiscated. Jones was the author of 'History of New York during the Revolutionary War' (latest ed., 1879).

JONES, Thomas ap Catesby, American naval officer: b. Virginia, 1787; d. 1858. Having entered the navy in 1805, he was employed in suppressing piracy, smuggling and the slave trade in the Gulf, saw service in the latter part of the War of 1812 when with a squadron of five gunboats he tried to bar the passage across Lake Borgne to Vice-Admiral Cochrane and his fleet. He inflicted great losses on the English, was himself seriously wounded before his vessels were captured. In 1826 he was sent to the Hawaiian Islands to settle the difficulties arising through the efforts of a local party to make the islands a British dependency. Jones secured the payment of debts claimed by American citizens and presided over a meeting of the factions and denied publicly the assertion of the British consul that the islands were a British dependency. While in command of the Pacific squadron in 1842 he heard that war had been declared between Mexico and the United States, and fearing from the actions of the British man-of-war *Dublin* that that government intended the annexation of California, he landed at Monterey and took possession in the name of the United States. Because of this imprudence he was removed temporarily from his command.

JONES, Walter, American physiological chemist: b. Baltimore, Md., 28 April 1865. He was graduated at Johns Hopkins in 1888. In 1891–92 he was professor of chemistry at Wittenberg College, Springfield, Ohio; in 1892–95 professor of analytical chemistry at Purdue University; in 1895–98 assistant in physiological chemistry at Johns Hopkins; associate professor there in 1898–1908 and professor since 1908. During the past 25 years he has given special attention to original investigations in the field of physiological chemistry, the results of which have been published through contributions to American, German and English technical journals. He has published 'Nucleic Acids' (1914).

JONES, Wesley Livsey, American legislator: b. near Bethany, Ill., 9 Oct. 1863. In 1886 he was graduated at the Southern Illinois College. In the same year he was admitted to the bar. He moved to the Territory of Washington just before its admission to Statehood, in 1889, and located at North Yakima, where he lived until 1917, when he removed to Seattle. From 1899 to 1909 he was member of Congress-at-large from Washington. In 1909 he was elected United States senator and was re-elected six years later.

JONES, Sir William, English lawyer and Oriental scholar: b. London, 28 Sept. 1746; d. Calcutta, 27 April 1794. He was educated at Harrow and Oxford and early acquired a reputation as a linguist, Hebrew, Persian, Arabic, and even Chinese, besides German, Italian, French, Spanish and Portuguese being among his acquisitions. In 1770 his translation (in French) of the life of Nadir Shah from the Persian appeared; in 1771 his grammar of the Persian language; in 1774 his 'Poeseos Asiaticæ Commentariorum Libri Sex,' and in 1783 his translation of the seven Arabic poems known as the 'Moallákat.' He had been called to the bar in 1774 and in 1783 was nominated judge in the Supreme Court of Judicature, Bengal, and knighted. Here he did much for the furtherance of Oriental studies, being one of the first Europeans to study Sanskrit, founding the Royal Asiatic Society, in 1784 translating the Sakuntala, the Ordinances of Manu, besides tales, poems, extracts from the Vedas, etc. He also undertook a digest of the Hindu and Mohammedan laws, which he did not, however, live to complete.

JONES, William, American anthropologist: b. Indian Territory, 1871; d. 1909. One of his great grandfathers was Wa-shi-ho-wa, a Fox chief. Jones was brought up by his grandmother on the Fox and Sauk Reservation. He was educated at Hampton Institute, Phillips Andover Academy and Harvard University, being graduated at the last-named institution in 1900. From Columbia he obtained the degree of Ph.D. He was employed by the American Museum of Natural History, New York, to collect ethnological specimens of the Sauk, Fox and Ojibwa tribes. He was a noted Indian linguist. He lost his life in the Philippines in an attack by the natives. He published 'The Algonkin Manitou'; 'Kickapoo Texts'; 'Fox Texts'; 'Some Principles of Algonquian Word-Formation' (1904); 'Mortuary Observances and the Adoption Rites of the Algonquin Foxes of Iowa.'

JONESBORO, jŏnz'bŭr-ō, Ark., city, county-seat of Craighead County, on the Saint Louis and San Francisco, the Saint Louis Southwestern and the Jonesboro, Lake City and Eastern railroads, about 120 miles northeast of Little Rock. It was first settled in 1870, although some settlements had been made earlier on farms in the vicinity. It was incorporated in 1882. It is situated in an agricultural and lumbering region and the railroad facilities make it the trade centre for quite an extent of country. The chief manufactures are flour, lumber, cotton oil, machines, staves and headings, boxes and wagons. In addition to the manufactures there is considerable trade in grain, live-stock and some dairy products. The government is vested in a mayor and council, elected every two years. The city owns the water, lighting and sewerage systems. Pop. 7,123.

JONESBORO, Ga., city, county-seat of Clayton County, on the Central of Georgia Railroad, about 16 miles south of Atlanta. It is situated in a fertile agricultural region, but its nearness to Atlanta and lack of water power are hindrances to manufacturing. Its chief trade is in fertilizers, cotton and farm products. At this point, August 1864, was fought a hotly-contested battle with General Howard of Sherman's army, in command of the Federal

troops, and General Hardee of Hood's army, in command of the Confederates. Pop. 970. See JONESBORO, BATTLE OF.

JONESBORO, Battle of and Fall of Atlanta. After the battle of Ezra Church (q.v.), 28 July 1864, General Sherman, unable fully to invest Atlanta, drew the Fourteenth corps and Schofield's Army of the Ohio from the left and extended his lines on the right nearly to East Point, about six miles below Atlanta, the junction of the two railroads leading from the south, upon which the city and Hood's army depended for supplies. Hood made a corresponding movement to cover the roads, meeting Sherman's advance with strong, well-entrenched lines, and, 6 August, severely handling two of Schofield's brigades that had crossed Utoy Creek, killing and wounding over 300 men and taking two colors. To compel Sherman to relinquish his movement and raise the siege of Atlanta, Hood, 10 August, sent Wheeler with about 5,000 cavalry to operate upon his line of communication with Nashville. Wheeler moved promptly, struck and destroyed the railroad near Marietta, Calhoun, Adairsville and Dalton, captured over 1,000 head of beef-cattle and other supplies, and, after demonstrating on Dalton and Resaca, was driven into East Tennessee. Sherman had issued an order, 16 August, for a general movement on the 18th upon the West Point and Macon railroads, for the purpose of forcing Hood from Atlanta, but hearing of Wheeler's raid, he suspended the order and directed General Kilpatrick, with 5,000 cavalry, to move on the night of the 18th against the West Point and Macon roads and destroy them completely. Kilpatrick started from near Sandtown, crossed the West Point road at Fairburn and struck the Macon road a short distance north of Jonesboro, some 26 miles from Atlanta, where he encountered Ross' brigade of cavalry, which was driven through Jonesboro. But little of the railroad had been destroyed when Jackson's brigade of cavalry and an infantry brigade, coming up from the south, compelled Kilpatrick to retreat. Making a circuit, he again struck the railroad at Lovejoy's, about six miles south of Jonesboro, and encountered a Confederate force, through which he cut his way and reached Decatur, near Atlanta, on the 22d. As Sherman was satisfied that Kilpatrick had not greatly damaged the railroad, he renewed his order for the movement of the whole army. On the night of the 25th the siege of Atlanta was raised. The sick and wounded, spare artillery and surplus transportation were sent back to the Chattahoochee bridge; Stanley's Fourth corps drew out from the left and moved to the right, closing up with the Fourteenth near Utoy, and the Twentieth corps fell back to an entrenched position covering the Chattahoochee bridge and the hospitals. On the night of the 26th the Army of the Tennessee (General Howard) drew out, rapidly made a wide circuit and came up on the right of the Army of the Cumberland, under General Thomas, along Utoy Creek, facing south. The Army of the Ohio remained in position, now on the extreme left. On the 28th, making a general left wheel, pivoting on Schofield's army, both Thomas and Howard reached the West Point road extending from East Point to Red Oak and Fairburn, Schofield closing in upon the left of Thomas, but a short distance from the Confederate works covering the junction of the road at East Point. The next day was devoted to the railroad, of which nearly 13 miles was destroyed, and on the 30th the entire army moved eastward for the Macon Railroad. Schofield, on the left, approached it near Rough and Ready, and presented a bold front toward East Point; Thomas, in the centre, reached Couch's, on the Fayetteville and Decatur road, with but little opposition; and Howard, on the right, driving before him the enemy's cavalry, saved the bridge over Flint River after a sharp engagement; then, crossing part of his command, halted at night within half a mile of Jonesboro. On the morning of the 31st Howard, finding himself in the presence of a large force, disposed the Army of the Tennessee for battle and entrenched, Logan's Fifteenth corps on the left, Ransom's Sixteenth corps on the right and Blair's Seventeenth corps in rear of Logan's left. When Sherman began his movement on the night of the 25th S. D. Lee's corps of Hood's army covered the railroad from near Atlanta to a place nearly a mile south of East Point. Hardee's corps was on Lee's left, while Hood held Atlanta with Stewart's corps and the Georgia militia. Hood had been deceived; he knew of Sherman's earlier movement, but misinterpreted it as preliminary to a retreat across the Chattahoochee; but when undeceived on the 30th, he ordered Hardee with his own corps and Lee's to move rapidly to Jonesboro and crush Howard on the morning of the 31st. Hardee, who was near Rough and Ready, four miles below East Point, began moving about 4 P.M., followed later by Lee; and at noon of the 31st both were in Howard's front. At 3 P.M. Hardee attacked with Lee's corps and part of his own, under Cleburne, with the expectation of driving Howard into the river, and for two hours the fighting was severe, but Hardee was repulsed. Lee, who, on the Confederate side, bore the brunt of the fight, says: "The attack was a feeble one and a failure, with a loss to my corps of about 1,300 men killed and wounded." Hardee's entire loss was about 1,700. The Union loss was 179 killed and wounded, almost entirely of Logan's corps.

When Sherman heard the noise of this battle he was with Thomas, who, with Schofield, had reached and was destroying the road from Rough and Ready southward. Thomas and Schofield were marched to the assistance of Howard, and Kilpatrick was sent down the western bank of the Flint to strike the road south of Jonesboro. Davis' Fourteenth corps joined Howard's left at noon of 1 September, relieving Blair, who was disposed to support Kilpatrick. Lee's corps had gone, but Hardee's was still in position and entrenched, covering Jonesboro on the north. At 4 P.M. Davis charged Hardee's works and, after a hard fight, carried parts of them, capturing General Govan and the greater part of his brigade and two batteries of four guns each. Stanley and Schofield reached the field too late to take part in the engagement. During the night Hardee retreated to Lovejoy's Station, and next morning Sherman started in pursuit. The Union loss 1 September was 223 killed, 946 wounded and 105 missing. The Confederate loss is not fully known; of the three divisions engaged Cleburne's sustained a loss of 55 killed, 197 wounded and 659 missing.

There is no return of losses in the other two divisions.

The result of the battle of Jonesboro was the fall of Atlanta. Six hours before Hood heard of the result of Hardee's attack 31 August, he sent an order to Lee to return in the direction of Atlanta, to make a movement on Sherman's flank or to cover the evacuation of the city. Lee received the order at midnight, and was halted next morning about six miles from Atlanta. Meanwhile Hood had heard of the result of Hardee's attack; its "failure necessitated the evacuation of Atlanta." Lee was ordered to join Hardee, which he did on the 2d, and at 5 P.M. of the 1st Hood marched out of the city with Stewart's corps on the McDonough road; the Georgia militia was sent to Covington, and at night the rear-guard blew up some abandoned ammunition trains. Slocum's Twentieth corps entered the city on the morning of the 2d. Sherman received the news on the 4th, and, turning his back on the Confederates at Lovejoy's, marched his army to East Point and Atlanta.

The campaign for Atlanta, which began 6 May 1864, was marked by brilliant flanking movements on both sides, by almost uninterrupted skirmishing, growing at times to the dimensions of a battle, and by many heavy engagements, most of them of a desperate character. The Union losses in the entire campaign were 4,423 killed, 22,822 wounded and 4,442 missing, a grand aggregate of 31,687. The Confederate losses were 3,044 killed and 18,952 wounded. Add to this the number of prisoners captured, 12,938, makes a grand aggregate of 34,979. Consult 'Official Records' (Vol. XXXVIII); Cox, J. D., 'Atlanta' (New York 1882); Van Horne, J. B., 'History of the Army of the Cumberland' (Vol. II, Cincinnati 1875); id., 'Life of Gen. George H. Thomas' (New York 1882); Bowman, S. M., 'Sherman and His Campaigns' (Cincinnati 1865); Sherman, W. T., 'Personal Memoirs' (New York 1875); Century Company, 'Battles and Leaders of the Civil War' (New York 1887–88).

JONESVILLE, jönz'vĭl, Va., the scene of a Civil War action. On 1 Jan. 1864 Major Beeres, who had been operating with a battalion of the 16th Illinois Cavalry and a battery, near Cumberland Gap, attacked and drove a small Confederate cavalry force from Jonesville and occupied the place. On the morning of the 3d he was attacked by Gen. W. E. Jones' cavalry brigade and, after a spirited resistance, continuing nearly the entire day, in which he lost 10 killed and over 40 wounded, was finally surrounded and obliged to surrender. The Confederates reported that he surrendered 383 officers and men, 45 of whom were wounded, 3 pieces of artillery and 27 wagons. The Confederate loss was about 30 killed and wounded. Consult 'Official Records,' (Vol. XXXII).

JONGE, yŏng'e, **Johannes Cornelius de,** Dutch historian: b. Zierikzee, 9 March 1793; d. Zeeland, 11 June 1853. He was educated at Leyden and in 1831 succeeded Van Wijn, whose assistant he had been, as keeper of the Dutch archives. The most important of his historical works are 'Verhandeling over dem oorsprong der Hoeksche en Kabeljaauwsche twisten' (1817); 'Het derde Staat in de Statenvergaderingen' (1824); and 'Geschiedenis van het Nederlandsche Zeewezen' (1833-48; 2d ed., 1858). He also published a biography of Van Wijn in 1832.

JONGKIND, yŏng'kĭnt, **Johann Barthold,** Dutch landscape painter: b. Latrop, near Rotterdam, 1819; d. 1891. He received most of his instruction in art from Isabey of Paris, where he became acquainted with Zola, Corot and others of the élite of that period. His life was one of great privations and misery and during the last 30 years of his existence he was insane. He was equally proficient in oils, water color, etching, lithography or pencil. In etching he was one of the great lights of the century. He is well represented in the galleries of Amsterdam, in the Louvre and at Brussels. Consult Frantz, 'Johann Barthold Jongkind' (in *International Studio,* Vol. XXXVI, New York 1908–09).

JONGLEUR DE NOTRE DAME, zhŏñ'-glĕr dĕ nō'tr'dâm, **Le,** 'The Juggler of Our Lady,' an operatic miracle play by Jules Massenet, libretto by M. Lena; first produced at Monte Carlo on 18 Feb. 1902; in New York, 27 Nov. 1908. The story is based on a play by Anatole France entitled *Etui de Nacre,* 'The Mother-of-Pearl Box.' The scene is laid in Cluny; time, Middle Ages. A poor young street mountebank, Jean, amuses the villagers with his tricks in front of the monastery. The prior of the abbey threatens him with eternal punishment for his ungodly trade and advises him to enter the monastery, which the boy agrees to do. Anxious to do something to please the Holy Virgin, he bemoans his inability to the cook, Boniface, who tells him a fable, "The Legend of the Sage-Brush" and assures him that every sincere offering meets with divine acceptance. In the final scene the young novitiate stands before the altar in the chapel, having doffed his monk's garb and resumed that of his old trade. Standing before the image of the Virgin he performs his street tricks and is surprised in this occupation by the entrance of the prior and the monks, horrified at the act of sacrifice. They attempt to seize and throw him out when the figure of the Virgin assumes life and blesses him. He falls back dying and happy.

JÖNKÖPING, yön'chö-pĭng, Sweden, a town located at the southern end of Lake Wetter, about 170 miles southwest of Stockholm. The town is beautifully situated in a valley between Lake Wetter and two smaller lakes, and is backed by pine-clad hills. The chief building is the church of Saint Christina. The manufacturing industries of the town are of considerable importance; the largest single industry is match-making, the safety-matches made here being used throughout the world. There are also manufactures of machinery and arms, perfumes, cigars, snuff, paper and wood-pulp, etc. The maritime trade was greatly increased by the completion of the Göta Canal in 1832, connecting the Baltic and North seas (Göteborg with Stockholm), thus making Jönköping a seaport. The town's record goes back to legendary times; it is named in history in the early part of the 13th century; and in 1284 received its town charter. In 1357, 1439 and 1599 Parliament met here; in 1448 occurred the conference of the Swedish and Danish plenipotentiaries; in 1612 the town was destroyed

by order of Gustavus Adolphus to prevent it from falling into the hands of the Danes, but was soon afterward rebuilt; and in 1809 a peace treaty was signed here between Denmark and Sweden. Pop. 26,969.

JONQUIÉRES, zhŏn'kyār, Canada, town in Chicoutimi County, Quebec, 10 miles east of Chicoutimi, on the Quebec and Lake Saint John Railway. It contains sash and door factories, planing mills, pulp and paper factories, foundries and furniture factory. Pop. 2,354.

JONQUIL, jŏn'kwĭl. See NARCISSUS.

JONSON, Ben or Benjamin, English poet and dramatist, contemporary and friend of Shakespeare: b. 1573; d. 6 Aug. 1637. According to his conversations with Drummond, his father was a gentleman, who lost his estate under Queen Mary and then turned minister. Benjamin was born after his father's death, and his mother afterward married a bricklayer, an occupation in which Ben Jonson was engaged for some time, and with which he was frequently taunted by his enemies. He was educated at Westminster School, under the instruction of William Camden, whose scholarship and friendship he afterward praised in the highest terms. He proceeded to Cambridge but remained there for only a short time, later receiving the degree of master of arts from both universities "by their favour, not his studies." After his return to London, he seems to have worked for a time at his father's trade, then to have served as a soldier in the Low Countries, after which he returned to England, married, and by 1595, became an actor and playwright.

In 1598, his famous comedy 'Every Man in His Humour' was acted by the Lord Chamberlain's servants (Shakespeare's company). This play marks the full beginning of his dramatic career; it is the first of his long series of humoristic comedies, and is the first outcome of his life-long effort to infuse into the drama critical consciousness and painstaking art. In the same year Jonson quarreled with a well-known actor, Gabriel Spenser, and killed him in a duel on 22 September. Jonson escaped serious penalty by pleading benefit of clergy; and in the following year his 'Every Man Out of His Humour' was acted before the queen. Jonson's quarrelsome temper was apparently little abated by his recent imprisonment, for his 'Cynthia's Revels,' acted 1600, satirized Marston and Dekker, and 'The Poetaster,' 1601, provoked by retorts actual or intended, continued the attack in unmistakable terms. Dekker retorted in the same year with his 'Satironmastix, or the Untrussing of the Humourous Poet.' But this "war of the theatres" shortly subsided.

The accession of James I in 1603 brought a great improvement in Jonson's circumstances through the patronage of the court, exhibited in various employments, honors and eventually a pension. Henceforth he counted among his friends and patrons the most distinguished men of the time, and he was able to devote his prodigious energies to scholarship and poetry without leaning too heavily upon the stage for pecuniary aid. His immediate access to royal favor seems to have been maintained by his success in writing masks. These musical and spectacular entertainments assumed an elaborate form at the court of James, and Jonson at once became the chief literary purveyor to this fashion, a position which he maintained until his quarrels with Inigo Jones and the supersedence of the literary by the scenic elements of these shows put an end to his employment. The first half of the reign of James was also the time of Jonson's dramatic masterpieces. His tragedies, 'Sejanus' and 'Catiline' were acted in 1603 and 1611, and the greatest of his comedies came in the same period, 'Volpone,' 1605, 'The Silent Woman,' 1609, 'The Alchemist,' 1610, and 'Bartholomew Fair,' 1614. During the same years, Jonson was maintaining many friendships with scholars and poets, with Camden, Selden and Bacon, with Chapman, Beaumont, Fletcher and Shakespeare; and he was becoming the recognized chief of the wits whose gatherings have made the Mermaid Tavern famous in literature.

Jonson's life however, was by no means free from vicissitude. In 1605 he was imprisoned along with Marston and Chapman on account of a passage reflecting on the Scotch in 'Eastward Hoe,' a play on which they had collaborated. He had become a Roman Catholic in 1598, but after 12 years returned again to the Protestant faith. In 1613 he was in France as tutor of the son of Sir Walter Raleigh; and in 1618 he made a pedestrian expedition to Scotland. Here he was received with honors and banquets, and entertained for several weeks by the poet, William Drummond, at his seat, Hawthornden. Drummond's notes of his conversations with Jonson furnish us with most interesting and valuable records of Jonson's character and opinions, but it must be remembered that Jonson was talking with great freedom and with no idea of being reported, and that the reports were doubtless colored by the temper and prejudices of the reporter. Some of Jonson's weaknesses as well as his host's sourness of temper are to be found in Drummond's well-known postscript: "He is a great lover and praiser of himself; a contemner and scorner of others; given rather to lose a friend than a jest; jealous of every word and action of those about him (especially after drink, which is one of the elements in which he liveth); . . . he is passionately kynde and angry; careless either to gain or keep; vindictive, but, if he be well answered, at himself."

From 1616 to 1625 Jonson wrote no plays for the public stage but he wrote numerous masks and remained in high favor at court. After the death of James he seems to have fallen on unprosperous days; his occupation as a writer of masks ceased, and he turned again to the stage. His 'Staple of News' was acted in 1625, and 'The New Inn,' 1629, the latter proving an utter failure. He had suffered an irreparable loss in the burning of his library which included many manuscripts of his incompleted works as well as a notable collection of books in which he had a scholar's pride. Want and disease added to his troubles, and we have many appeals for aid addressed by him to his noble patrons. Fortunately these met with response and King Charles increased his annuity. The few plays and entertainments composed at this time give evidence of his failing powers; and give force to the conjecture that the beautiful pastoral drama, 'The Sad Shepherd,' left unfinished at his death, must have been written

at a much earlier date. In old age and sickness, however, Jonson held his place at the head of English men of letters. 'The Mermaid' had given place to 'The Devil Tavern,' and the old friends to a set of young disciples who sealed themselves "of the tribe of Ben." But his literary dictatorship was recognized outside of this intimate circle, and contemporary literature abounds in tributes of respect and admiration. The most famous of these is the brief epitaph carved on the stone that marks his grave in Westminster Abbey: "O rare Ben Jonson."

Jonson's character is better known to us than that of any of his literary contemporaries. Combative, arrogant, opinionated, outspoken and generous, he drank deeply, swore freely, learned his Latin thoroughly, wrote his plays carefully, went to prison for his friends and fought every fight to the finish. His failings were due to excess not weakness; his virtues were full-grown; whatever he did, he did vigorously, ponderously perhaps, but always wholeheartedly. To scholarship, to criticism, to poetry and the drama, he brought this vehement positiveness and this whole-hearted laboriousness. His personality is stamped on all his work, but in the enjoyment of some of its salient manifestations, one must not lose sight of the range and power and fineness of his literary achievement as a scholar, a critic, a translator and a lyric poet as well as a dramatist, nor the great importance of his 40 years of activity in the development of the drama and the history of literature. His non-dramatic work includes an 'English Grammar,' 'Discoveries,' a prose tract treating among other matters of literary and dramatic criticism, 'The Forest,' a collection of his epigrams and other poetry, and 'Underwoods,' another collection of minor poems and translations. His dramatic work comprises masks, tragedies and comedies, three forms that Jonson kept distinct.

His influence upon the drama was in large part that of a critic and a reformer. He began his important work at a time when, through the efforts of Shakespeare, Marlowe, Lyly and others, the popular drama had already attained eminence as a form of literature; and Jonson was ardent to advance and secure this eminence. In the preceding drama he saw much that was crude and absurd, and from the start he urged an abandonment of the incongruities of the chronicle plays and the romantic comedies, and the adoption of fixed rules and more regular models. In the reliance of the dramatists upon the applause of unlettered audiences, he saw a menace to the highest development of the drama; hence he constantly advocated the appeal to the taste of the more judicious through an elevated purpose and a conscientious art. Recognizing that the English drama had already attained greatness under conditions so different from those of antiquity that they forbade the rigid application of the precedents of the classic drama, he nevertheless believed that improvement could be secured by intelligent adoption of classic rules and models. He insisted therefore upon the discrimination between tragedy and comedy and the recognition of the purpose and function of each species according to the precepts of Aristotle, protesting pedantically enough, not only against the incongruities of the old histories but also against such combinations of comedy and mask as Shakespeare's 'Tempest.' A more coherent construction and the application of the unities of time and place, so far as the English stage would permit, were other articles of his theory which he supported by precept and practice. Still farther, he contended that characterization should not depend on an impossible plot or a hap-hazard collocation of heroism, sentiment and nonsense, but upon a careful representation of certain types as illustrative of human motive, such as the tyrant or the conspirator in tragedy, or the braggart soldier, the gull or the cheat in comedy. In opposition to the extravagant romanticism that had prevailed up to 1600, Jonson stood for a comedy that should attempt the realistic portrayal of manners. In dramatic criticism and practice Jonson was consequently at most points on the other side from Shakespeare, though he bore splendid testimony to his appreciation of Shakespeare's friendship and genius.

His masks and entertainments, so famous in their day, have little interest now, except as they illustrate the curious literary fashion, or as they exhibit Jonson's charming lyrics. Of the 34 complete, some of the most notable are, 'Hymenæi,' 'The Mask of Queens,' 'The Penates,' and 'The Metamorphosed Gypsies.' His two tragedies, 'Sejanus' and 'Catiline,' are thoroughgoing attempts to present a scholarly and accurate view of history, a penetrating study of historical characters, and to retain as much as possible of classical decorum while conforming in the main to the form of tragedy established by his great Elizabethan predecessors. But his genius found its best field in comedies. Though modeled on the comedies of Plautus and Terence, they fulfil his promise to show an image of his own times, its fads and follies, or "humours"; and though their plots are constructed overelaborately, their artificiality is redeemed by an abundance of humor. The 'Alchemist' with its extraordinarily skilful structure, and 'Bartholomew Fair' with its broad and lively presentation of the London of the day are perhaps the greatest English masterpieces of the strict comedy of manners. Jonson's example turned comedy for a while from romantic to realistic, and satirical themes and treatment; and the influence was potent at least into the 18th century. In humor and the delineation of character, Jonson ranks first of English dramatists after Shakespeare.

His plays, excluding masks, are 'Every Man in His Humour,' 'Every Man Out of His Humour,' 'Cynthia's Revels,' 'The Poetaster,' 'Sejanus,' 'Volpone,' 'Epicæne,' 'The Alchemist,' 'Catiline,' 'Bartholomew Fair,' 'The Devil Is An Ass,' 'The Staple of News,' 'The New Inn,' 'The Magnetic Lady,' 'A Tale of a Tub,' 'The Case is Altered' (unavowed by Jonson and perhaps an early play), 'The Sad Shepherd' (incomplete), 'The Fall of Mortimer' (a fragment). See ALCHEMIST, THE; VOLOPONE; DRAMA; ENGLISH LITERATURE — ELIZABETHAN DRAMA.

Bibliography.— Jonson edited a folio of his works which appeared in 1616; a second folio in 1640. The standard edition is that of Gifford, 1816 (9 vols., frequently reprinted). The separate plays have often been reprinted, and recently with extended introductions and notes in 'Yale Studies in English.' For criticism

ASHLEY H. THORNDIKE,
Professor of English, Columbia University.

JOPLIN, Mo., city and a county-seat of Jasper County, 155 miles south of Kansas City, on the Missouri, Kansas and Texas, the Southwestern Missouri, the Southern Pacific and other railroads. The city contains several noteworthy buildings, including the Federal building, the Carnegie library, municipal market house, police building, the opera house and the courthouse. It has two business colleges, a high school and several public and parochial schools. Joplin is a distributing centre for a wide agricultural area and has extensive mining interests, being the centre of the zinc and lead industries of southwestern Missouri. The city's industrial establishments include smelting, white lead and paint works, foundries and machine shops, iron works, wagon and cooperage factories and flour mills. There are three national and four State banks and the value of the taxable property is $33,000,000. The general revenues amount to about $240,000 annually. Joplin adopted the commission form of government in 20 April 1914. The city owns one of the lighting plants. Joplin was settled about 1870 and was incorporated in 1873. Pop. 45,000.

JOPPA. See JAFFA.

JORAM, or JEHORAM, name of two Hebrew kings, one of Israel (852–842 B.C.) and the other of Judah (849–842 B.C.). (1) JEHORAM, king of Israel, was the second son of Ahab, and succeeded his brother Ahaziah. He was not sincere in his transient repression of Baal worship, and was rebuked by Elisha. He joined with the king of Judah in a war with the Moabites. In his reign Benhadad, king of Damascus, invaded Israel, and besieged Samaria, but retreated to meet a hostile invasion in his own country. In a battle with Hazael, king of Syria, Jehoram was wounded and retired to Jezreel, where he was slain by Jehu whom Elisha had anointed king over Israel, thus fulfilling Elijah's prophecy (1 Kings, xxi, 21–29).

(2) JORAM, king of Judah, eldest son and successor of Jehosaphat, regent in 854 on his father's alliance with Ahab against the Assyrians (2 Kings i, 17; iii, 1; viii, 16), then king in the 23d year of his father's reign (849), ruling eight years. After his father's death, he slew his six brothers and other men of influence, and led a life of wickedness. The Edomites revolted, also Libnah and Jerusalem was captured by invading Philistines and Arabians. Jehoram died of an incurable disease, as foretold by the prophet. He was buried in the city of David, but not in the sepulchres of the kings (2 Chron. xxi, 19, 20).

JORDAENS, Jacob, yā'kōb yōr'dāns, Flemish painter: b. Antwerp, 19 May 1593; d. there, 18 Oct. 1679. From his early boyhood in 1607 he was the pupil of Van Noort, whose daughter he afterward married, and in 1615 was made master in the Guild of Saint Luke at Antwerp. He was the most eminent painter of the Flemish school next to Rubens to whom, however, he was inferior in force and conception. The most renowned among his religious pictures are 'The Last Supper' in the Antwerp Museum; and 'The Martyrdom of Saint Apollonia' in the church of the Augustines, Antwerp. Consult the monograph by Max Rooses (1908).

JORDAN, Camille, French politician: b. Lyons, 11 Jan. 1771; d. Paris, 19 May 1821. He was a pupil of the Oratorians at Lyons and when still young became imbued with Royalist principles, later developing into an active opponent of the French Revolution. When only 20 years of age he published a pamphlet satirizing the Constitutional Church, entitled 'Histoire de le conversion d'une dame parisienne' (1792). When Lyons fell in October 1793, Jordan was proscribed by the Directory for his participation in the insurrection and fled to Switzerland, subsequently passing six months in England. In 1796 he returned to France and in 1797 was sent by Lyons to the Council of Five Hundred. In the Revolution of 4 Sept. 1797 Jordan escaped to Basel and later went to Germany where he met Goethe. In 1800 he returned and in 1802 exposed the schemes of Bonaparte in a pamphlet 'Vrai Sens du Vote National pour le Consulat à Vie.' From that time till 1814 he devoted his time in retirement to literature, but at the Restoration was made a councillor of state by Louis XVIII, and from 1816 till his death represented Ain in the Chamber of Deputies. Besides the above mentioned works he wrote 'Lettre à M. Lamourette' (1791); 'La Loi et la Religion Vengées' (1792); 'Adresse à ses Commettants sur la Révolution du 4 Septembre 1797' (1797, translated into English by J. Gifford, London 1798); 'Sur les Troubles de Lyon' (1818); 'La Session de 1817' (1818). A collection of his 'Discours' appeared in 1818. Consult Boubée, R., 'Camille Jordan à Weimar — Lettres Inédites'. (in *Correspondant,* Vol. CCV [U. S. Vol. CLXIX], p. 718, Paris 1901); Sainte-Beuve, C. A., 'Jordan et Madame de Staël' (in *Revue des Deux Mondes,* Paris 1868).

JORDAN, jôr'dan, **Conrad N.,** American financier: b. New York, 20 April 1830; d. there, 26 Feb. 1903. He entered a printing office, but soon exchanged this for a banking establishment, was cashier of a New York bank in 1864–80, and in 1880–84 was treasurer of the New York, Ontario and Western Railroad. In

1885–87 he was Treasurer of the United States, and introduced in the accounts of the Treasury a revised form of debt and cash statements by which the exact condition of the Treasury might be readily ascertained. He was an organizer of the Western National Bank of New York and for a time its president. In 1893 at the recommendation of all important New York banks, he was appointed Assistant United States Treasurer in New York, and this post he held until his death. He rendered important services during the monetary crisis of 1893–95.

JORDAN, David Starr, American educator and naturalist: b. Gainesville, N. Y., 19 Jan. 1851. He was graduated from Cornell University in 1872 and was instructor in botany there 1871–72. He was professor of natural history at Lombard University, Illinois, 1872–73, and taught the same subject in the Indianapolis High School, 1874–75. From 1875 to 1879 he was professor of biology at Butler University, Indianapolis; professor of zoology at Indiana University 1879–85, and president of the last named institution 1885–91. From 1891 to 1913 he was president of Leland Stanford Junior University, and from 1913 chancellor, the office being divided to enable him to undertake in Europe and America work in the interest of international conciliation and peace. In 1906–09 he was International Fish Commissioner for Canada and the United States, having the purpose of the unification of the fishing laws of the boundary waters. Since 1909 he has been director of the World Peace Foundation, and has spoken and written largely in opposition to the war system of the world. Beside some 400 scientific monographs and reports, among which may be named 'Synopsis of the Fishes of North America' with C. H. Gilbert (1882); enlarged in 1896 with the aid of B. W. Evermann to 'The Fishes of North and Middle America'; and 'Report of Fur Seal Investigations'; he has published 'Science Sketches' (1896); 'Footnotes to Evolution' (1898); 'Imperial Democracy' (1899); 'Evolution and Animal Life' (1908); 'Animal Life' (1900); 'The Heredity of Richard Roe' (1909); 'The Blood of the Nation' (1900); 'The Human Harvest' (1907); 'War and the Breed' (1915); 'Ways to Lasting Peace' (1916); 'The Strength of Being Clean' (1900); 'The Stability of Truth' (1909); 'The Fate of Iciodorum' (1908); 'Guide to the Study of Fishes' (1908); 'Food and Game Fishes of North America,' with B. W. Evermann (1908); 'War and Waste' (1912); 'Fish Stories' (1910), etc. He was president of the California Academy of Sciences at intervals from 1896 to 1909, and has been in charge of the United States Fish Commission investigations in the Pacific Ocean from 1901–04 and of the salmon investigations for Alaska 1903–04.

JORDAN, Dorothea, English actress: b. Waterford, Ireland, 1762; d. probably at Saint Cloud, near Paris, 3 July 1816. Her mother was an actress whose husband is said to have been an army captain. Dorothea made her first stage appearance in Dublin in 1777 as Phœbe in 'As You like It.' In 1782 she appeared at Leeds and subsequently toured the English provinces. In 1785 she appeared at Drury Lane in 'A Country Girl.' She was most successful and remained at Drury Lane until 1809. In 1811 she appeared at the Covent Garden, excelling in comedy rôle. She retired from the stage in 1815. Her private life was a scandal. She had four children by Sir Richard Ford, and for several years was known as Mrs. Ford. In 1790 she became the mistress of the Duke of Clarence, afterward William IV, by whom she had 10 children, who were ennobled under the name of FitzClarence. William IV erected a statue of her in 1831. Consult Boaden, James, 'Life of Mrs. Jordan' (1831) and Tate Wilkinson, 'Memoirs and Amorous Adventures by Sea and Land of King William IV' (1830).

JORDAN, Elizabeth Garver, American journalist: b. Milwaukee, Wis., 9 May 1867. She was educated at the convent of Notre Dame, Milwaukee, was for 10 years on the editorial staff of the New York *World*, assistant editor of the *Sunday World* for three years and editor of *Harper's Bazaar* from 1900 to 1913, when she became literary adviser to Harper and Brothers. She is a member of the National Institute of Social Sciences and regent of the National Woman Suffrage Association. She has published 'Tales of the City Room' (1898); 'Tales of the Cloister' (1901); 'Tales of Destiny' (1902); 'May Iverson, Her Book' (1904); 'Many Kingdoms' (1908); 'May Iverson Tackles Life' (1913); 'May Iverson's Career' (1914); 'The Lady from Oklahoma,' comedy in 1911, 1912 and 1913, also in book form; 'Beauty is Skin Deep,' play produced in 1913 and 1914; 'Lovers' Knots' (1916); 'The Story of a Pioneer,' with Anna Howard Shaw; 'The Whole Family,' with Henry James, William Dean Howells and others, and numerous short stories to leading American and English magazines.

JORDAN, John Woolf, American librarian and editor: b. Philadelphia, 14 Sept. 1840. He was graduated at Nazareth Hall in 1856 and since 1888 has edited the *Pennsylvania Magazine of History and Biography*. He is also librarian of the Historical Society of Pennsylvania and vice-president of the Colonial Society of Pennsylvania since 1895. He is the author of 'Narrative of John Heckewelder's Journey to the Wabash in 1792'; 'Bethlehem during the Revolution'; 'The Military Hospitals at Bethlehem and Lititz during the Revolution'; 'Bishop Spangenburg's Notes of Travel to Onondaga in 1746'; 'Notes of Travel of John Heckewelder to Ohio, 1797'; 'Franklin as a Genealogist' (1895). In 1902 he received the degree of LL.D. from Lafayette College.

JORDAN, Jules, American composer: b. Willimantic, Conn., 10 Nov. 1850. He first became known musically as a tenor singer, afterward as a conductor and finally as a composer. Among his compositions are the romantic opera, 'Rip Van Winkle,' produced in Providence 1897, and several cantatas, including 'Barbara Frietchie' and 'Wind Swept Wheat'; and many sacred and secular songs.

JORDAN, Louis Henry, Canadian clergyman: b. Halifax, Canada, 27 July 1855. He was educated at Dalhousie University, Princeton, Oxford, Marburg, Leipzig and Berlin. In 1882–85 he was minister of Saint Andrew's, Halifax; in 1885–90 minister of Erskine

Church, Montreal; in 1894–1900 at Saint James Square Church, Toronto. From 1887 to 1889 he was lecturer on church polity at the Montreal Theological College, was special lecturer on comparative religion at the University of Chicago, in 1902. He has published 'Comparative Religion: Its Genesis and Growth' (1905); 'Comparative Religion: A Survey of its Recent Literature' (1906; 1910; 1914); 'Comparative Religion: Its Methods and Scope' (1908); 'The Study of Religion in the Italian Universities,' with Labanca (1909); 'Modernism in Italy: Its Origin, its Incentive, its Leaders and its Aims' (1909); 'Comparative Religion: Its Adjuncts and Allies' (1915); contributions to the *Review of Theology and Philosophy, the Expository Times, Hilbert Journal, Princeton Theological Review, Biblical World,* etc.

JORDAN, Marie Ennemond Camille, French mathematician: b. Lyons, 1838. In 1860 he was graduated at the École des Mines of Paris; in 1861 became engineer of mines and in 1885 became chief engineer. In 1872 he became a teacher of mathematics, succeeding Liouville in 1883 as professor at the College de France. He made several important discoveries in geometry and analysis and is perhaps the world's greatest teacher of *n*-dimensional geometry. His memoirs are over 100 in number and have appeared in all the principal mathematical journals of Europe. He wrote 'Théorie des substitutions et des équations algébraiques' (1870); 'Cours d'analyse de l'École Polytechnique' (3 vols., 1882–87; 3d ed., 1909).

JORDAN, Thomas, American soldier: b. Luray, Va., 30 Sept. 1819; d. New York, 27 Nov. 1895. He was graduated from West Point in 1840; and distinguishing himself in the Mexican War, was promoted captain in March 1847. He was stationed on the Pacific coast in 1856–60, during which time he introduced steam navigation above the Dalles, on the Columbia River. He served in the Confederate army during the Civil War and was promoted brigadier-general for gallantry at the battle of Shiloh. In 1869 he went to Cuba, where he was made chief of the general staff of the insurgent army and soon afterward commander-in-chief of the revolutionists, winning a battle at Guarmaro, in January 1870. In the following year he resigned and settled in New York, where he became editor of *The Financial and Mining Record.* He published 'Campaigns of Lieutenant-General Forrest' (with J. B. Pryor, 1868).

JORDAN, William George, American journalist: b. New York, 6 March 1864. He was graduated at the College of the City of New York; became editor of *Book Chat* in 1884, later became editor of *Current Literature,* became managing editor of the *Ladies' Home Journal* in 1897 and was editor of *The Saturday Evening Post* in 1898–99. In 1899–1905 he was editor and vice-president of the Continental Publishing Company, and in 1905–06 edited *The Search-Light.* In 1907 he proposed the organization of the governors of the country as a house of governors to work for uniform legislation between the States; this led to the call by President Roosevelt of a convention of the governors at Washington in 1908, at which a committee was appointed to arrange for a permanent organization, the first conference being held in January 1910. He has published 'Mental Training by Analysis, Law and Analogy'; 'Mental Training a Remedy for Education' (1896); 'The Kingship of Self Control' (1899); 'The Majesty of Calmness' (1900); 'The Power of Truth' (1902); 'The House of Governors' (1907); 'The Crown of Individuality' (1909); 'The Power of Purpose' (1910); 'Little Problems of Married Life' (1910); and 'The Wood-Carver' (1915).

JORDAN, United States of North America, a river in the State of Utah which drains Utah Lake and also the north central part of the State, follows a northerly course and flows into Great Salt Lake after a course of 40 miles. It is utilized as a feeder for irrigation systems.

JORDAN, the largest river of Palestine and one of the most celebrated in the world, called Esh-She-riah or Esh-Sheriah-el-Kebir by the Arabs. It rises from three main sources at the foot of Hermon, and these upper streams unite in Lake Huleh, the ancient Waters of Merom. From this point it sinks with a rapid current in a narrow rocky bed below the level of the sea, and falls after a course of nine miles into the Lake of Galilee. Shortly after leaving the south end of this lake it enters a broad valley called by the Arabs Ghôr, and in the Bible "the plain"; and continuing a singularly crooked course of about 65 miles direct distance, or 200 including windings, falls into the north end of the Dead Sea, having received the Zerka or Jabbok and numerous smaller affluents. The Ghôr expands at Bethlehem and Jericho into a wide plain, but elsewhere is from three to five miles across. The upper part of the valley of the Jordan is hilly, arid and barren, but it becomes more level and fertile as it approaches the Zerka. The river is muddy and full of small fish. In the dry season it is shallow, with an average width of from 30 to 50 yards. At its mouth it is about 180 yards broad and about three feet deep. It is subject to great inundations during the winter season. The climate is tropical. Cereals, chiefly barley, are raised in some parts of the river's valley. The valley of the Jordan forms one of the most remarkable depressions in the world, the Dead Sea being 1,312 feet below sea-level, and the total fall of the river being about 2,300 feet. Molyneux and Lynch made explorations of the river in 1847–48. Consult 'Official Report' (Washington 1852); 'Survey of Western Palestine' (London 1859); Smith, 'Historical Geography of the Holy Land'; Molyneux (in the *Journal* of the Royal Geographic Society 1848); Lynch, 'Narrative of the United States Expedition to the River Jordan and the Dead Sea' (1849); McGregor, 'Rob Roy on the Jordan' (1870); Costello, 'Gospel Story'; Macmillan, 'Guide to Palestine and Egypt'; Thomas, 'Two Years in Palestine.'

JORDANES, jôr-dā'nēz, historian of the Gothic nation; flourished about the middle of 6th century; by birth a Goth, or both of Alan and of Gothic descent. He was first a notary, but afterward became a monk, and is supposed by some to have been made bishop of Croton, in Italy, but of this there is no certain evidence. He wrote two historical works in the Latin language; the first 'De Regnorum ac Temporam Successione,' is a short compendium of the

most important events in history from the creation to A.D. 552; but the work is valuable only from its accounts of several barbarous northern nations. His other work, 'De Getarum Origine et Rebus Gestis (concerning the origin and deeds of the Goths), has obtained great renown, chiefly as our only source of information about the Goths and other barbarian tribes, except when they are casually mentioned by some Greek or Latin historian. The work is, however, full of inaccuracies, both of time, place and person; and it is evidently based upon, or copied from, the 12 lost books of the Roman senator Cassidorius. There are many editions of both works, the best being Mommsen's in 'Monumenta Germaniæ Historica, Auctores Antiquissimi' (Vol. V, Berlin 1882).

JORIS, yō'rĭs, or **JORISZOON,** yō'rĭs-zōn, **David,** leader of the Anabaptists: b. Bruges, 1501; d. Basel, 25 Aug. 1556. In 1524 he settled in Delft as a glass painter; sometime afterward he embraced the Reformed faith and for an attack upon a religious procession was banished for three years in 1528. He returned to Delft in 1536 and established a sect. He pretended to be the Messiah, denied the Resurrection and held various heretical opinions. The sect existed in Holland nearly a century after his death. In 1544 he fled to avoid persecution and lived quietly at Basel under the pseudonym of John of Bruges, as a member of the Reformed Church, unsuspected by the magistracy of being the notorious sectary. In 1559 the truth came out, whereupon his body was exhumed and burned. See ANABAPTISTS.

JORN UHL, yĕrn-ool, by Gustav Frenssen is one of those novels, found in the literature of every nation, in which not a man but a well-established national type is the hero. The author who makes such a type the central figure of a romantic story is sure of popular approval in just the proportion in which his character is true to life and recognizable, emphasizing the universal in the portrait, distinguishing the typical, shading down the personal. Gustav Frenssen was peculiarly successful in his attempt to create, through Jorn Uhl, the picture of the young German peasant-farmer, industrious, idealistic, imaginative, doing his duty not only with patience but with high courage, loving the land, but loving the stars more, and with a vision of something even beyond the stars. Contrasted with him are the equally life-like figures of his drunken, pompous, spend-thrift father, his drunken, idle, thieving older brothers, who waste the land beyond all power of Jorn Uhl's labor to redeem it. Together they are the personification of a German peasant family a generation ago. The straightforward, provincial simplicity of Frenssen's style is thoroughly in harmony with the story and the character of the hero and deepens the sense of reality. It undoubtedly contributed to the almost unprecedented popularity of the book in Germany, a success which has never been duplicated outside. One chapter of the book, detailing the drafting of the young peasant for war service and his experience in the battle of Gravelotte, has the quality of permanent international literature, and has been translated for use in schools; the rest of the story, besides its undoubted value as pure fiction, is interesting principally for that very quality of sincere but limited nationality which has narrowed its audience to Germany.

EDITH J. R. ISAACS.

JORTIN, John, English clergyman of French Huguenot parentage: b. London, 23 Oct. 1698; d. Kensington, 5 Sept. 1770. He was educated at the Charterhouse School, and at Jesus College, Cambridge, where he held a fellowship 1721–28. He was ordained in 1723–24. At first, 1723–26, he held the living of Sevanesey near Cambridge, but resigned and removed to London and became the preacher in a chapel in New street, 1731–47. He was editor of a magazine *Miscellaneous Observations upon Authors Ancient and Modern* (1731–33); preacher in a chapel in Oxenden street (1747–50); assistant to Dr. Warburton at Lincoln's Inn (1747–50); rector of Saint Dunstans in the East, 1751 until his death; also vicar of Kensington, prebend of Saint Paul's and chaplain to the bishop of London from 1762 and archdeacon of London from 1764. He was Boyle lecturer in 1749. He was considered one of the great scholars of the time credited with liberal views. He was the author of a notable volume of Latin poems, and his principal works include 'Truth of the Christian Religion' (1746); 'Remarks Upon Ecclesiastical History' (5 vols., 1751–73); 'Six Dissertations' (1755); 'Life of Erasmus' (2 vols., 1758–60); 'Sermons' (7 vols., 1771–72); 'Tracts, Philological, Critical and Miscellaneous' (2 vols., 1790). Consult Disney, N., 'Memoirs of the Life and Writings of John Jortin' (1792); also the memoirs prefixed to the 'Sermons,' 'Tracts' and 'Remarks.'

JORULLO, hō-rool'yō, a volcano of Mexico in the state of Michoacan, 160 miles southwest of Mexico, and 80 miles from the Pacific. The district had continued undisturbed from the discovery of the New World when, in June 1759, earthquakes occurred, followed 29 September by one more violent. On the line of a chasm which was made, six volcanic cones were formed, the loftiest, Jorullo, 1,600 feet above the plain. The total height of the volcano above the sea is 4,265 feet. It shows but few signs of activity at present.

JOSÉ, hō-sā'. The 'José' ('Joseph,' first published at Madrid 1885) of the contemporary Spanish novelist, Armando Palacio Valdés (born 1853) is not one of the more ambitious of his works. An interesting novelette of manners, portraying actual conditions of life in the northern maritime districts of Spain, it tells in simple and direct fashion of the tribulations encountered by two lovers of humble station, whose union is thwarted for a while by the machinations of the girl's avaricious and heartless mother and by the operations of a national law which gives parents a tyrannical control over their children contemplating matrimony. The characters are presented in vivid colors on a background of sea and shore, and even the figure of the decayed gentleman, the modern Don Quixote, here called Don Fernando de Meira, escapes the charge of conventionality by conforming so naturally to type. One might wish, however, that the author had not seen fit to make Fernando's end so wretched; perhaps, notwithstanding, he felt it imperative to drive home the lesson that for the melancholy aberra-

tions of hidalgism a corrective is not easily found. In some of the scenes in which the fishwives play a part with their wordy quarrels and hair-pulling exercises, Valdés must perforce descend to the vulgar; but he realizes the danger of the situation and never ventures too far into repugnant detail. Taking him all in all, Valdés, as the author of this successful little idyll and of about a score of novels of the acknowledged worth of his 'Marta y María,' his 'Majos de Madrid' and his 'Alegría del Capitán Ribot,' has proved himself a talent of high order among our modern writers of prose fiction and has well merited the generous meed of praise accorded him by so competent a judge as Mr. Howells.

JEREMIAH D. M. FORD.

JOSEFFY, yō-sĕf'ĭ, **Rafael,** Hungarian-American pianist: b. Miskolcz, Hungary, 1853; d. 1915. He was a pupil of Moscheles at the Leipzig Conservatory and of Tausig at Berlin, won distinction in a concert tour of Holland and Germany, and later appeared with large success throughout Europe and the United States. For several years he was a professor in the National Conservatory at New York, where he resided from about 1880. He was a member of the faculty of the National Conservatory of Music, New York, from 1885 to 1906. As a virtuoso he evinced great facility and technical finish, and won particular recognition through his interpretations of Chopin. His compositions include 'Ungarisches Album' (6 works for pianoforte); 'Die Mühle' (op. 23), a 'Marche Turque,' and 'Conzert-Studien nach Chopin.' He is also the author of the popular work 'School of Advanced Piano Playing' (1892).

JOSEPH, a son of the patriarch Jacob by his favorite wife, Rachel. His father's preference for him and his own relation of dreams which predicted his future exaltation above those of his household drew upon him the envy of his brothers, who sold him to Ishmaelitish and Midianite slave-dealers, by whom he was sold to Potiphar, a captain of the guard in Egypt. The story of his condemnation to prison on the false accusation of Potiphar's wife, of his release and subsequent elevation to the position of vice-regent of Egypt and the final settlement there of his father and brothers is related in the book of Genesis. Authorities still differ as to the period in Egyptian history to which Joseph's life belongs, but the majority agree in placing it under the Hyksos or shepherd kings.

JOSEPH, North American Indian chief of the Nez Percé tribe: b. about 1830; d. Nespelim, Colville Reservation, Wash., 21 Sept. 1904. Of remarkably fine physical build and endowed with superb mental gifts, Joseph (Hinmaton-Yalatkit) was one of the most remarkable men of his race. In 1863 he refused to recognize the treaty by which the whites obtained entry to the Wallowa Valley, the ancient home of his people, in northeastern Oregon. Many of the Indians sympathized with him and continued to dwell there in spite of frequent bickerings with the white settlers. The government undertook to remove these Indians to the Lapwai Reservation in Idaho, and things were proceeding peacefully when outrages by the whites drove the Nez Percés to fury and caused them to attack the settlements. A declaration of war ensued and Joseph skilfully led his people in a memorable retreat to within 50 miles of the Canadian border, when his retreat was cut off by fresh troops and on 5 Oct. 1877 he was forced to surrender. His skill won praise from his conquerors, General Howard, Colonels Miles, Sturgis, etc. The promises made to Joseph and his people were ignored, and the Indians, numbering 431, were removed to Fort Leavenworth, Kans., and afterward to Indian Territory, where they remained for many years, always yearning for the mountains and valleys of Idaho. In 1883 the government permitted a party of 33 women and children to go back to their old home and in 1884, 118 others were allowed to go. Joseph, however, and 150 others were not permitted to return to Idaho but were sent to Colville, Wash. Chief Joseph visited President Roosevelt and General Miles at Washington in 1903. In his later years he had become reconciled to civilization and encouraged education among the children of his tribe.

JOSEPH, Father (FRANÇOIS LECLERC DU TREMBLAY), French propagandist and statesman: b. Paris, 4 Nov. 1577; d. Rueil, 18 Dec. 1638. He belonged to a distinguished family, traveled much in his youth, and served in the army under an assumed name, but in 1599 he entered the Capuchin order, in which he subsequently attained a high position. Attracting the attention of Cardinal Richelieu, in 1611, that statesman made Father Joseph his secretary and confidential adviser. In this capacity, and as provincial of his order in France, he wielded immense influence and power for many years and ably seconded the cardinal's efforts to convert the Huguenots. He was eager for the defense of Christianity against the Turks and advocated a crusade against them. He left several volumes of memoirs which are still in manuscript in the Paris Library. Consult O'Connor, R. F., 'His Grey Eminence, the true Friar Joseph: An Historical Study' (Philadelphia 1912).

JOSEPH, Saint, the husband of Mary the mother of Jesus Christ, was a descendant of the house of David, born at Bethlehem, but resident at Nazareth, where he practised the trade of a carpenter. Tradition and art represent him as an old man at the time of Christ's birth and he is said to have died before the beginning of Christ's public ministry. His day in the Roman Catholic calendar is 19 March.

JOSEPH I, emperor of Germany: b. Vienna, 26 July 1678; d. 17 April 1711. He succeeded his father, Leopold I, and was employed for nearly the whole of his reign in war. With England and Holland he continued the war against France, to seat the Archduke Charles on the throne of Spain. The great victories gained by the allies under Marlborough in the Low Countries and Prince Eugene on the Rhine made the reign of Joseph especially noteworthy. He was equally triumphant in Italy and Hungary; in the latter kingdom driving the revolted Bagotski from the country and forcing him to seek safety in Turkey; while in the Italian peninsula great cities from Mantua to Genoa were laid under heavy contributions.

JOSEPH II, German emperor, oldest son of Francis I and Maria Theresa: b. Vienna, 13 March 1741; d. there, 20 Feb. 1790. He was

elected king of the Romans in 1764, and on the death of his father, 1765, German emperor. His mother declared him coregent in the hereditary states of the house of Austria and gave him the command of the army; but the real authority remained in her hands. In the earlier part of his reign he employed his time in traveling and becoming acquainted with his estates. He visited his sister, Marie Antoinette, at Paris, and Catherine of Russia in 1780. It was also in those years that he began his intimacy with Frederic II of Prussia, resulting later in the partition of Poland. In November 1780 Maria Theresa died and Joseph came into the possession of full dominion over his hereditary states. He allowed a greater freedom of the press, put an end to the connection between Rome and the religious orders, diminished the pensions, placed the Jews on a better footing, abolished bondage, suppressed all nunneries and many monasteries, particularly those of the purely contemplative orders. All branches of the government, public education, the police and the peasantry were reformed. By a new code of laws capital punishments were abolished. On 9 Feb. 1788 he declared war against the Turks. By the defeat at Lugos (20 Sept. 1788) the army was obliged to retreat, but in the following year fortune favored the Austrian arms and Belgrade surrendered. With the tax law, introduced in November 1789, nobility and peasantry showed themselves equally dissatisfied and the signal was given for open rebellion. The Netherlands declared themselves independent and expelled the imperial forces from all the provinces, and Luxemburg alone remained in the possession of the imperial troops. The Hungarians also rebelled and demanded the restoration of their ancient rights and constitution. Joseph, in January 1790, declared all the acts of his government in that country revoked, even to the edict of toleration (22 June 1781). Joseph was a man of considerable ability, but arbitrary and despotic. Whatever his own reflections or his knowledge of other countries showed to be useful he wished to introduce. But he did not sufficiently consider that he had to do with men who would not see things in the same light as himself; and that long habit rendered it difficult to change, at once, usages sanctified by time. Being a freethinker he often grossly overrode the rights of the Church. Toward the end of his reign his friends and even members of his own family treated him with cruel neglect and he died a disappointed, broken-hearted man. There is a large literature on his rule, much of which consists of his correspondence. Consult Arneth, A. von, ed., 'Marie Antoinette, Josef II und Leopold II, Ihr Briefwechsel' (Vienna 1866); id., 'Maria Theresia und Josef II, Ihre Korrespondenz, etc.' (Vienna 1867–68); id., 'Josef II und Katharina von Russland, Ihr Briefwechsel' (Vienna 1869); id., 'Josef II und Leopold von Toskana, Ihr Briefwechsel von 1781–1790' (2 vols., Vienna 1872); Beer, A., ed., 'Josef II, Leopold II und Kaunitz, Ihr Briefwechsel' (Vienna 1873); id., 'Josef II' (Vienna 1882); id., 'Joseph II und Graf L. Cobenzl, Ihr Briefwechsel' (Vienna 1901); Bright, J. W. V., 'Frederic the Great and Kaiser Joseph' (London 1915); Wendriski, J., 'Kaiser Josef II' (Vienna 1880); Wolf, A., and H. von Zwiedeneck-Südenhorst, 'Oestereich unter Maria Theresia, Josef II und Leopold II' (Berlin 1882–84); Wolf, G., 'Das Unterrichtswesen in Oesterreich unter Josef II' (Vienna 1880).

JOSEPH OF ARIMATHÆA, member of the Jewish Sanhedrim, who believed in Jesus, but had not the courage to make profession of faith. He was born in Rathaim, a city of Benjamin, near Lydda. After the crucifixion he went to Pilate, begged the body of Jesus, wound it in fine linen and buried it in his own new tomb. According to tradition he came as apostle to Glastonbury, England. His day is 17 March in the Roman Catholic calendar and 31 July in the Greek Church.

JOSEPHI, jō-zĕf'ī, **Isaac A.,** American artist: b. New York, 1859. His artistic education was obtained at the Art Students' League, New York, and with Léon Bonnât, Paris. He is a painter of miniatures and landscapes, has exhibited at many exhibitions, receiving honorable mention at the Paris Exposition of 1900 and a silver medal at the Charleston Exposition of 1902.

JOSEPHINE (Fr. zhō-zĕ-fēn), or **MARIE ROSE,** empress of the French: b. Trois Islets, Martinique, 23 June 1763; d. Malmaison, near Paris, 29 May 1814. She was the daughter of Lieut. Joseph Tascher de la Pagerie and was married in 1779 to Vicomte Alexandre de Beauharnais, by whom she had two children, Eugène and Hortense. In 1794 her husband, who had been commander of the army of the Rhine, was executed by order of the Convention. She herself had a narrow escape, having been included in the list of proscription. After the fall of Robespierre she is said to have paid a visit to Napoleon to thank him for restoring the sword of her husband, and so pleased him that he soon after married her (1796). When Napoleon became emperor in 1804 she was crowned with him. But the fact that the union was childless stood in the way of Napoleon's ambition to become the founder of a dynasty, and accordingly in 1809 Josephine was divorced, retiring to her seat of Malmaison with the title of empress-queen-dowager and an annual grant of 2,000,000 francs. Though frivolous, extravagant and flirtatious, her influence on Napoleon seems to

have been on the whole for his benefit. He greatly appreciated, not only her beauty, but her tact and common sense, which he proved by maintaining friendly relations with her even after his second marriage and by treating her two children as if they had been his own. (See FRANCE; NAPOLEON I). Consult Abbott, J. S. C., 'Kings and Queens, etc.' (New York 1848); id., 'History of the Empress Josephine' (New York 1863); Aubenas, G. A., 'Histoire de l'Impératrice Joséphine' (2 vols., Paris 1858–59); Hall, H. F., ed., 'Napoleon's Letters to Josephine, 1796–1812' (New York 1903); Headley, P. C., 'The Life of the Empress Josephine' (Auburn 1853); Imbert de Saint-Amant, A. L., 'Josephine' (translated into English by T. S. Perry, 4 vols., New York 1891–99); Le Normand, M. Fraser, Philadelphia 1912); Ober, F., 'Josephine, Empress of the French' (London 1901); Pichevin, R., 'L'Impératrice Joséphine' (Paris 1909); Rémusat, Madame de, 'Mémoires' (London 1880); Sergeant, P. W., 'The Empress Josephine' (2 vols., London 1908); Tarbell, I., 'Life of the Emperor Napoleon' (New York 1901); Turquan, J., 'La Générale Bonaparte' (Paris 1895); id., 'L'Impératrice Joséphine' (2 vols., Paris 1895–96); Welschinger, L., 'Le Divorce de Napoléon I' (Paris 1889).

JOSEPHINITE. A natural iron-nickel alloy, Fe_3Ni_3, found in placer washings on Josephine Creek, Josephine County, Ore.

JOSEPHUS, jō-sē'fus, **Flavius** (Jewish name, JOSEPH BEN MATTHIAS), Jewish historian: b. Jerusalem, 37 A.D.; d. about 95 A.D. He was carefully educated and in 64 A.D. he made a journey to Rome. On his return he found his countrymen preparing to throw off the Roman yoke, and having tried in vain to persuade them of the hopelessness of such a struggle, accepted the post of defending the province of Galilee, and actually held the fortified town of Jotapata against the whole Roman army for 47 days. He was captured at the fall of the city, was afterward present in the Roman army at the destruction of Jerusalem (70 A.D.), and went with Titus to Rome, where, assuming the family name of his patron, Flavius, he lived in learned leisure. Here he wrote (in Aramaic and Greek) 'The History of the Jewish War,' in seven books, and 'The Antiquities of the Jews,' in 20 books; giving a history of the Jews from the earliest times to the reign of Nero. He also wrote an autobiography and a work entitled 'Against Apion,' in two books, which was a defense against false accusations raised against the Jews. He was a fluent, graceful writer and, on the whole, a truthful, accurate historian. That part of his work referring to Christ is no longer considered genuine. There are many editions of his two major works and the autobiography, the most important of which are by B. Niese (7 vols., Berlin 1885–95), and by T. Bekker and S. A. Naber (6 vols., Leipzig 1888–96). There are also many translations into different languages, both of the collected and of single works. A good list of these will be found in British Museum, 'Catalogue of Printed Books' (London 1889). The most important English translation is that by Whiston, 'The Works of Flavius Josephus' (5 vols., London 1889–1900). There is a very complete bibliography in Schürer, E., 'History of the Jewish People in the Time of Christ' (5 vols., New York 1896). Consult Arnold, C., 'Die Bibel, Joseph und Jerusalem' (Leipzig 1865–66); Bärwald, A., 'Josephus in Galiläa' (Breslau 1877); Bentwich, N. de M., 'Josephus' (Philadelphia 1914); Bloch, H., 'Die Quellen des Josephus in seiner Archäologie' (Leipzig 1879); Böttger, G., 'Topographisch-Historisches Lexicon zu dem Schriften des Josephus' (Leipzig 1879); Destinon, J. von, 'Die Chronologie des Josephus' (Kiel 1880); id., 'Die Quellen des Flavius Josephus' (Kiel 1882); Drüner, H., 'Untersuchungen über Josephus' (Marburg 1897); Krauss, S., 'Josephus Flavius' (in 'Jewish Encyclopedia,' Vol. VII, New York, 1904); Krenkel, M., 'Josephus und Lucas' (Leipzig 1894); Mez, A., 'Die Bibel des Josephus' (Basel 1895); Müller, G. A., 'Christus bei Flavius Josephus' (Freiburg 1895); Müller, J. G., 'Des Flavius Josephus Schrift Gegen den Apion' (Basel 1877).

JOSH BILLINGS. See SHAW, HENRY WHEELER.

JOSHUA, the leader of the Israelites after the death of Moses. He was the son of Nun, of the tribe of Ephraim, and upon him fell the task of conducting the people over the Jordan, and commanding their armies in battle against the heathen they were ordained to dispossess. He succeeded in ravaging a large portion of Palestine, and dividing it among the people. He died at the age of 110 and was buried at Timnath-Serah, in Mount Ephraim.

JOSHUA, Book of. The first 12 chapters of the book of Joshua continue the history of Israel from the point reached at the end of Deuteronomy, the death of Moses, to the conclusion of the conquest of western Palestine; and chapters xiii–xxi tell of the division of the land among the tribes. The remaining chapters, xxii–xxiv, constitute an appendix, giving various details concerning the closing days of Joshua, including his death and the death of Eleazer the son of Aaron.

It is now generally agreed that the documents found in the Pentateuch are to be discerned also in Joshua. This results from evidence of the same kind as in the Pentateuch. Their distribution, however, is peculiar. The bulk of chapters i–xii is from JE, and of xiii–xxi from P. A considerable part, in detached portions, of i–xii is from D, but very little in xiii–xxi. All three sources are found in considerable measure in the appendix xxii–xxiv. The JE source shows evidence of being composite, especially in double accounts of the same event, but most of it cannot be separated definitely into the J and E portions, in this respect differing from the Pentateuch. The D and P portions are probably not from the same documents as those which are called by these terms in the Pentateuch, but from writings by other authors of these schools. Concerning the details of the compilation of the book there is much difference of opinion. The best opin-

ion seems to be that the book was never actually joined with the Pentateuch, but always an independent book. It is often joined with the Pentateuch under the term Hexateuch because of the use of the same or similar documents.

There are various indications in the book itself that portions of it, at any rate, were written considerably later than the events described. The idealizing of the history, which will be mentioned later, is such an indication. Such also is the reference to "until this day" in Joshua xv, 63, and the reference to the book of Jashar, x, 13, which was a book of poetry later than David. The evidence of the documents indicates that the book contains portions written at various times. The final compilation, however, must have been as late at P, i.e., as late as 500 B.C. Some think it was considerably later, but there is no strong evidence of this, although some slight additions may very possibly have been made considerably later.

The degree of historicity of the book varies with the documents. The presumption would be that the JE portions are more fully historical, a presumption which is confirmed by a detailed examination. In the D and P portions the history is strongly idealized. Especially, the D and P portions present the view that the conquest of the land was completed by Joshua, the inhabitants exterminated, and the land divided among the tribes. Scattered notices from JE, however, in agreement with Judges i, 1–ii, 5, teach that the conquest was effected only gradually by the individual tribes. The view of JE is the earlier, historical one; the other, of D and P, is later and much idealized. The historical data of the book need careful examination in order to ascertain the probable facts. Further, the history of the book is fragmentary, the omission of any account of the conquest of central Palestine being especially remarkable. The D portions present the same religious view of the history that is found in the book of Deuteronomy.

Bibliography.— Blaikie, W. G., 'Joshua' ('Expositor's Bible,' New York 1893); Maclear, G. F., 'Joshua' ('Cambridge Bible,' Cambridge 1897); Robinson, H. W., 'Deuteronomy and Joshua' ('Century Bible,' Edinburgh).

GEORGE RICKER BERRY,

Professor of Old Testament Interpretation and Semitic Languages, Colgate University.

JOSIAH, king of Judah. He succeeded his father, Amon (638 B.C.). He is said in the Scriptures to have done "that which was right in the sight of the Lord." He took an active part in the reform of temple worship, and in the abolition of idolatry throughout the land, and commenced the restoration of the temple, during the progress of which the high-priest Hilkiah discovered the book of the law, that is, the book of Deuteronomy. In his 30th year he marched out against Pharoah Necho, king of Egypt, who was on his way to attack the kingdom of Assyria. Josiah was slain in the battle at Megiddo where he had attempted to check the northward march of the Egyptians. Consult Wellhausen, 'Israelitische und jüdische Geschichte' (7th ed., Berlin 1914).

JOSIAH ALLEN'S WIFE. See HOLLEY, MARIETTA.

JOSIKA, yō'shĭ-ka, **Miklós,** BARON, Hungarian novelist: b. Torda, Transylvania, 28 April 1794; d. 27 Feb. 1865. He entered the army, reaching the rank of Captain, in 1818 turned to politics, and finally in 1834 devoted himself to literature. He took an active part in the Hungarian uprising of 1848, fled in 1850 to Brussels, and went in 1864 to Dresden, where he died. In September 1851, he was, with Kossuth and 35 others, hanged in effigy at Pest. Although the government subsequently offered him amnesty he never returned to Hungary. Up to 1848 he produced 60 volumes of romances, illustrating Hungarian life and history. His principal works are 'Abafi' (1851); 'Zrinyi a költö' (1843); 'Az utólsó Bátory' (1840); 'A Csehek Magyaro szágban' (1845); 'Egymagyar család a forradalom alatt' (1851). Most of his novels have been translated into German, and one — 'Familie Mailly' — was written in Uno language. Profoundly versed in the life of his people, and master of a pleasing style, he was very popular. Four volumes of memoirs appeared soon after his death (Pest 1865).

JOSS, a Pidgin-English term derived from the Portuguese "deos," meaning God. The word denotes a Chinese god or idol. A Joss-house is the place or temple where the idol is worshipped. There are three such houses in San Francisco, one in Chicago and two in New York. Joss paper refers to the gold and silver paper ornaments which are burned as sacrifice to the gods. Joss stick is a small stick made of a paste formed by compounding the dust of various scented woods mixed with clay. These are burned in the temples as incense for the gods.

JOSSELYN, jos'lĭn, **John,** English traveler: b. England, early in the 17th century. He sailed for New England on 26 April, arriving in Boston on 2 July 1638, and "presented his respects to Mr. Winthrop, the governor, and to Mr. Cotton, the teacher of Boston church, to whom he delivered from Mr. Francis Ouarles, the poet, the translation of several Psalms into English meter." He returned to England in October 1639, and made a second voyage on 23 May 1663, to New England, where he spent eight years. On his return in December 1671 he published a book entitled 'New England's Rarities Discovered in Birds, Beasts, Fishes, Serpents and Plants of that Country, etc.' With a picture of Boston in 1663 (London 1672; reprinted in Boston 1865). He also wrote 'An Account of Two Voyages to New England, etc.' (1674) and 'A Chronological Table of the Most Remarkable Passages from the First Discovery of the Continent of America to 1673.' Reprints were issued in Boston (1865).

JOTHAM, king of Judah, who succeeded (735 B.C.) Uzziah, his father, after having acted as regent for a number of years previously as a result of his father's illness. He ascended the throne at the age of 25 and reigned 16 years. He vanquished the Ammonites and furthered public works in Jerusalem to a considerable extent. The prophets Isaiah, Hosea and Micah lived during his reign. Consult Graetz, H., 'History of the Jews' (Vol. I, London

1891); Young, R., 'Analytical Concordance to the Bible' (New York 1893).

JOUBERT, yow'bĕrt, **Petrus Jacobus,** Boer military officer: b. Kongo, Oudtshoorn district, Cape Colony, 20 Jan. 1834; d. Pretoria, 28 March 1900. After an elementary education he settled as a farmer in the Wakkerstroom district of the Transvaal, about 1863 was elected for that district to the Volksraad, and in 1870 became attorney-general of the South African Republic. During the visit of President Burgers to Europe in 1875 he was acting President. In 1880 he became one of the triumvirate administering the provisional Boer government and commander-in-chief of the Boer forces at the outbreak of the war with England, and three times defeated the British, at Laing's Nek, Ingogo and Majuba Hill, the last battle (27 Feb. 1881) deciding the war in favor of the Boers. He was again acting President during the absence of President Kruger in Europe in 1883–84. Three times he unsuccessfully contested the presidency with Kruger, the vote being 3,431 to 1,171 in 1883; 7,911 to 7,246 in 1893; and 12,858 to 2,001 in 1898. In the second Boer war also he was commandant-general, and directed the campaign in northern Natal which resulted in a succession of disasters for the British. He became ill early in 1900, however, and was obliged to withdraw from active service. He was in many ways the ablest of the Boer military leaders, though his excessive caution, lack of determination and ready willingness to compromise with the opinions of other Boer leaders frequently resulted in his failure to carry his successes against the British to their logical conclusions. However, his valor, strict honesty and generosity brought him well-deserved admiration even from his enemies. Consult Anon., 'General Joubert' (in *Review of Reviews,* Vol. XXI, p. 574, New York 1900); Maurice, Sir F., ed., 'History of the War in South Africa 1899–1902' (4 vols., London 1906–10).

JOUETT, jow'ĕt, **James Edward,** American naval officer: b. Lexington, Ky., 7 Feb. 1827; d. Sandy Springs, Md., 30 Sept. 1902. He entered the navy in 1841, served with distinction during the Mexican War, was promoted to passed midshipman in 1847, in 1861 with a detachment of marines entered Galveston Harbor and destroyed the Confederate war-vessel *Royal Yacht,* and for his services was appointed to the command of the United States steamship *Montgomery.* As lieutenant-commander, he was prominent in Farragut's entrance of Mobile Bay (August 1864), and in 1885, when in command of the North Atlantic squadron he opened the transit across the Isthmus of Panama, closed by the enemy. He was promoted rear-admiral in 1886, subsequently president of the Board of Inspection and Survey, and in 1890 was retired. By a special act of Congress, passed March 1893, he was granted full pay during his retirement in appreciation of his great services to his country. Consult Anon., 'J. E. Jouett' (in *United Service,* Vol. XVI, p. 523; Vol. XVII, p. 17, Philadelphia 1896–97); Baber, G., 'Rear Admiral J. E. Jouett' (in *Kentucky State Historical Society Register,* Vol. XII, No. 35, p. 9, Frankfort 1914); Clark, C. E., 'Prince and Boatswain' (Greenfield 1915); United States, Navy Department, 'Memorandum in the Case of Captain J. E. Jouett' (Washington 1880).

JOUETT, Matthew Harris, American artist: b. Mercer County, Ky., 22 April 1788; d. Lexington, Ky., 10 Aug. 1827. His ancestors were Huguenots, who emigrated to North Carolina, and finally settled in Virginia. They were staunch patriots during the Revolution. His father eluded the British commander Tarleton, and gave the alarm to the legislature, then in session at Charlottesville, Va., for which action he received complimentary resolutions from Congress. Matthew was educated for the law, but devoted much time to drawing and painting. He enlisted in the War of 1812 as lieutenant of the 28th Infantry, serving in the Northwest, and was appointed captain. In 1815 he taught himself portrait and miniature painting, but in 1816 went to Boston, where he studied four months under Gilbert Stuart. In October 1816, he returned to Lexington, achieving reputation as a portrait painter, practising his art with success in New Orleans and Natchez, and throughout Kentucky. He painted more than 300 portraits, among which one of Lafayette was ordered by the legislature of Kentucky. In the Metropolitan Museum of New York is preserved his portrait of John Grimes.

JOUFFROY, zhoo'frwä, **François,** French sculptor: b. Dijon, 1806; d. Laval, 1882. He studied under Ramey and won the Roman prize in 1832 with 'Capanée foudroyé sous les murs de Thèbes.' In 1857 he was made member of the Institut and officer of the Legion of Honor in 1861. Two years later he was appointed professor at the École des Beaux-Arts. His best works are 'Caïn maudit'; 'Jenne fille confiant son premier secret à Vénus'; 'Lamartine'; 'La Désillusion,' for the Dijon Museum (1840); bust of 'Merlin' (1844); 'Printemps et l'Automne' (1845); 'Erigone'; holy-water font at Saint Germain l'Auxerrois, Paris; marble group of three children (1843); group in the portal of Saint Gervais (1854); 'Le châtiment' and 'La Protection' for the Palais de Justice, Paris (1865); a marble Saint Bernard for the Panthéon.

JOUFFROY D'ABBANS, Claude François Dorothée, klōd frăn-swä dō-ro-tā zhoo-frwä dăb-băn, MARQUIS DE, French inventor: b. Roche-sur Rognon (Haute-Marne), 30 Sept. 1751; d. Paris, 18 July 1832. He is claimed by the French as the inventor of steam navigation. He served in the army, and in 1783 succeeded in propelling a small paddle-wheel steamboat up the Rhone at Lyons — the connection between piston and paddle-wheel axle being rack-and-pinion. However, he found it impossible to get either the scientific or financial backing necessary to develop his idea and to commercialize it. In 1816 he attempted again to get the necessary support. This time he succeeded in founding a stock company. He built another boat, but its lack of success deprived him of further financial support. In 1830 he was admitted to the Invalides where he died from an attack of cholera. A statue was erected in his memory at Besauçon in 1884. He published 'Des Bateaux à Vapeur' (Paris 1816). Consult Jouffroy d'Abbans, A. F. E. de, 'Des Bateaux à Vapeur; Précis Historique de leur Invention, etc.' (Paris 1841); Jouffroy d'Abbans, S. de, 'Une Découverte en Franche-

Comté au XVIIIe Siècle' (Besançon 1881); Pradel, P. de, 'Le Marquis de Jouffroy d'Abbans' (Paris 1890); Prost, J. C. A., 'Le Marquis de Jouffroy d'Abbans' (Paris 1889); Swiwny, S. H., 'Jouffroy, the Inventor of the Steamboat' (in *Gentleman's Magazine*, n. s. Vol. XXXIV, p. 78, London 1885).

JOUKOVSKY, zhu-kôf'skē, **Vasily Andreievitch,** Russian poet and translator: b. 1783; d. 1852. He was the son of a country land-owner and a Turkish slave named Salkha. The father, Bounine, turned the child over to Andrew Grigorovitch Joukovsky, who ultimately gave him into the care of Madame Iouchkov, sister of Bounine, a rich and talented lady of great musical ability living at Tula, where she was the life of an artistic circle. Music, literature, plays, concerts were of frequent occurrence and awakened the latent talent of the boy who wrote two plays, 'Camilla,' and 'Paul and Virginia,' both of which were presented on the stage. In 1797 Joukovsky was sent to school in Moscow, where he at once began contributing to the local papers poems that attracted attention; and making translations for publishers to meet expenses, as his aunt died soon after his arrival at college. Among his translations were Kotzebue's entire plays and most of his novels. Becoming editor of the *European Messenger*, he proceeded to write each complete edition himself, making up the contents of translations, sketches, stories, criticisms and poems. In 1810 his natural father gave him money enough to buy a small landed property on which he settled. There he found congenial neighbors in a rich land-owner named Pletchéieve and his wife who were fond of literature, music, poetry and the drama. Madame Pletchéieve was musical and Joukovsky wrote poems and ballads which she set to music. The poet left with the national forces for the defense of the country in 1812; and his poem, 'The Bard in the Russian Camp,' descriptive of the first battle, became immensely popular throughout Russia. A second poem addressed to the Tsar on the capture of Paris in 1814 increased his reputation and brought him into direct contact with the court, where he became first reader to the empress and, later on, tutor to the royal children. There he acquired a reputation as a great teacher, a master translator and a good poet. He was a great favorite with the whole royal family who paid him liberally for his services. Joukovsky, judging from his original work, was possessed of considerable poetical feeling, but of comparatively little originality. Thus he fell short of rising to real greatness. His translations introduced to Russia some of the best Romantic literature of Germany, France and England which he admired very much himself without apparently entering into the true spirit of the revival which this literature represents. However, his long and enthusiastic labors and translations inspired succeeding Russian writers who were destined to enter more fully into the spirit of the western Romanticism. A master of poetical and literary form, Joukovsky was rather inclined to be conservative, though his friends have, somewhat inadvisedly, claimed for him the honor of having been the leader of the Romantic movement in Russia. His classical taste is shown in his excellent translation of the 'Odyssey.' By his distribution throughout Russia of translations of English and German literature and his presentation of the authors and the interpretation of their work he proved himself an even more successful teacher of the literary part of the nation than he had been of the children of the court. His influence upon Alexander II and the literary genius, Pouchkine, was alike strong and, in a sense, epoch-making, perhaps more so than that of any one other contemporary personage. Consult Grot, 'Sketches of the Life and Poetical Works of Joukovsky'; Jarintzov, N., 'Russian Poets and Poems' (New York 1917); John, 'Specimens of the Russian Poets'; Seidlitz, 'W. A. Joukovsky, ein russisches Dichtersleben' (Mittau 1870); Waliszewski, K., 'A History of Russian Literature.'

JOULE, James Prescott, English physicist: b. Salford, Lancashire, 24 Dec. 1818; d. Sale, Cheshire, 11 Oct. 1889. He was educated by private tutors at his father's house near Manchester and also received special instruction in chemistry from John Dalton (q.v.). His father, a brewer, was a man of considerable wealth. This enabled young Joule during his early manhood to pursue scientific research for which he quickly developed great enthusiasm. As early as January 1838 he described in the 'Annals of Electricity' an electromagnetic engine he had invented. While it was afterward found that this invention was impracticable as a substitute for the steam-engine, the further investigation to which it led brought to light many important facts concerning the laws of heat, its electrical and mechanical nature and evolution, chemical affinity as related to heat, etc. The mechanical equivalent of heat (see HEAT) was first ascertained by Joule, who also, in 1847, announced the doctrine of the correlation and conservation of energy, in a paper read at Manchester which failed at the time to impress men of science, as did also an address of like import before the British Association, but which was taken up by William Thomson (Lord Kelvin) (q.v.), with whom, from that time on, he collaborated to a considerable extent and by whom its momentous significance was brought home to the scientific world. No principle of science is now more fully established than Joule's law for determining the energy developed by an electric current in overcoming the resistance of a circuit, a law which he verified by experiment. He received the highest honors of scientific bodies and universities, amongst which were a gold medal from the Royal Society in 1852, the Copley Gold Medal from the same body in 1866, and the Albert Medal from the Society of Arts in 1880. In 1872 and 1887 he was made president of the British Association for the Advancement of Science. A statue has been erected to his memory in Manchester and a tablet in Westminster Abbey. His writings are to be found mainly in the proceedings of scientific societies and in English periodicals, but were collected and published by the Physical Society of London as 'The Scientific Papers of J. P. Joule' (2 vols., London 1884 and 1887). Consult Kelvin, Lord, 'J. P. Joule' (in *Cassier's Magazine*, Vol. VI, p. 405, New York 1894); Reynolds, O., 'Memoir of J. P. Joule' (in *Memoirs and Proceedings of the Manchester Lit. and Phil. Society*, Series

IV, Vol. VI, Manchester 1892); Tyndall, J., 'The Copley Medalist of 1870' (in *Nature*, Vol. V, p. 137, London 1872).

JOULE, International. See ELECTRICAL TERMS.

JOURNAL OF THE REV. JOHN WESLEY, The. "It was in pursuance of an advice given by Bishop Taylor . . . that I began to take a more exact account . . . of the manner wherein I spent my time, writing down how I had employed every hour." From the 'diary' kept as a result of this advice John Wesley "transcribed from time to time the more material parts" in order that he might "openly declare to all mankind, what it is that the Methodists (so-called) have done and are doing now; or rather what it is that God hath done and is still doing in our land." That is the origin and scheme of 'The Journal' as set forth by the Rev. John Wesley himself. It begins with the entry of Tuesday, 14 Oct. 1735, the day he and his brother, Charles, "took boat for Gravesend, in order to embark for Georgia," and ends with Sunday, 24 Oct. 1790, about four months before the author's death, covering a period of almost exactly 55 years. 'The Journal' is "a curious, monotonous, wonderful narrative" of the goings and comings, the manner of life, the mental attitude toward the world, rubric, religious doctrine and practice; the temperament, the ideas, the whole purpose of this most itinerant of all itinerant preachers. With the exception of the first part which deals with his visit to America, and a few pages covering his trip to Germany, taken in the hope that a stay among the Moravian Brethren would bring order out of the chaos of religious emotions and notions which filled his soul, this journal of nearly 2,000 closely printed pages is devoted to Wesley's unceasing and unparalleled activities throughout the whole of Great Britain and Ireland. Perhaps no journal of so public a man ever reflected so little of the general life, or contained less information concerning the men and events of the time. For example, there is not a word referring to the epoch-making struggles of the American Revolution. It is the journal of a man who could see only the religious scheme which filled his whole being. It is a carefully prepared record of when he preached and where, what he preached about, the size and the character and conduct of the audiences and the influence of his preaching upon them, together with remarks upon the difficulties and personal damages encountered. The brief and frequent mention of the opposition of the clergy of the "Church as by law established in England," of which he considered himself to be a true and loyal member, and the controversies with all other sectaries make 'The Journal' of value for the study of religious persons and institutions other than John Wesley. Although one must needs go to other sources to get a well-balanced and true measure of Wesley and his religious movement. 'The Journal' must needs be carefully and sympathetically read by anyone who would know the author and Methodism from the inside. Singularly enough, no one would ever suspect, from the reading of this journal, that Wesley had any social or home life; perhaps he didn't. His religion was all in all to him. The people he talked and associated with are presented either as believers or unbelievers. All the events through which he and others passed and even natural phenomena are set forth in such a way as to make them appear as the workings of providence or the activities of demons, and all this is done with a modesty and reverence that is both attractive and surprising. Had it not been for what Wesley believed was wilful misunderstanding and malicious misrepresentation it is hardly likely this journal would have been prepared and published, in which case the world would have lost an intimate and revealing history of one of the most conspicuous figures and important religious movements of the world. Unquestionably 'The Journal' is *just* John Wesley. What of his life is not here he counted as being of no value and so not worth being recorded. The last section, covering the period from 29 June 1786 to the end was prepared for publication by some one after the death of the great Wesley and so is of different value from the other portion.

CHARLES GRAVES.

JOURNALISM. Journalism is a comprehensive term which signifies the business of producing a public journal. In a general way it is applied to the vocation of making newspapers. Broadly speaking it is both a business and a profession, though the name of journalist as commonly understood is limited to those who are engaged on the editorial or news or literary side of the production rather than on the business side. While editor and journalist are not strictly synonymous — the former meaning the head of a paper or a department and the latter any literary worker on a newspaper — they are often used as convertible terms.

In a large sense the subject involves the functions of journalism as collector and purveyor of news and as leader and exponent of public opinion; the ethics of journalism in its various fields of political, religious, literary, social and commercial aim and representation; the relations of the counting room to the editorial department; the training and qualifications of the journalist; in short, the mission, methods, responsibilities and obligations of journalism. All of these general phases are deeply affected by the physical conditions of the business. During the closing years of the 19th century these conditions were practically revolutionized. In the mechanical facilities of production, in the cheapening of white paper and in the instrumentalities of news collection there has been an extraordinary advance. This great change in the material factors wrought a corresponding change in the scope and character of journalism. Not only as a business enterprise but as a public influence it took on new aspects.

The remarkable development of later years touches every side of the material production of a newspaper. The old, limited, slow-moving printing press has been transformed into the ingenious and gigantic quadruple or octuple which converts the plain white roll into complete, folded papers at the rate of 30,000 to 40,000 an hour. The number of pages may be determined at will, even at the last moment before going to press, thus responding to the exigencies of the news; and the application of the half-tone and of color at undiminished speed

permits pictorial effects. Simultaneously with this improvement in the printing press has come the linotype which substitutes machine typesetting for hand composition. A third vital advance has been the perfection of the process of making paper out of wood-pulp, which has vastly increased the supply and greatly decreased the cost of white paper.

These radical changes in the elemental business factors have largely modified the conditions of journalism. They have opened the way to unlimited production and have enormously cheapened the cost of the single copy. Penny and two-cent papers have become the prevailing rule. Immense circulations have thus been rendered possible, and where, about 1875, the edition even of the most widely read papers was comparatively limited not a few now issue scores and even hundreds of thousands of copies a day. At the same time the initial cost of the newspaper plant with its expensive machinery and the magnitude of the daily transactions require a far larger outlay than in the earlier time and the business has come to be one demanding much greater capital.

All of these circumstances have inevitably and powerfully molded the course and character of journalism. They have given increased importance to its business side, and have tended to make business considerations in the publication still more dominant. The effect has been twofold and somewhat contradictory. The great capabilities of the business with the reduced cost of telegraphing have stimulated and quickened journalistic enterprise and have broadened the range of the journalistic field. The scope of journalism has been enlarged and in many cases its standard has been elevated. Within a sphere, perhaps too limited, the best and worthiest effort is accepted as the best business. But, on the other hand, the competition for great circulations has bred sensationalism and a pandering to the taste for personal and piquant matters. There is an eager and feverish struggle for the unusual, the dramatic and the spectacular, a constant straining for effect, a lavishness of "scareheads" and garish pictures, a studied and persistent search for objects of criticism and attack. The appetite for the effervescent grows by what it feeds on, and must be met by new excitation. This rivalry of explosive and paroxysmal journalism is carried on with too little sense of responsibility and verification, and while the notable manifestations are exceptional and it would not be just to say that the infection has extended through journalism, it is nevertheless true that its injurious influence is widely perceptible.

In one important and conspicuous respect the development of journalism as a business has palpably improved its character. It has produced a greater degree of independence than ever distinguished it before. In the earlier days political and official advertising might be a large item in the income of a newspaper. Its monetary value gave it potency in controlling editorial policy. But in the expansion of the business under modern conditions official patronage is unimportant compared with general commercial advertising, and its relative decline in value has greatly reduced its power of influencing newspaper expression. The favor of the public is far more advantageous than that of the party manager. It brings popular circulation and consequently business advertising, and there is less concern about the crumbs that fall from the official table. Even party journalism has greatly advanced in independence. While standing as the recognized exponents of party principles and policies the important party papers have become much more free in their judgment of men, methods and measures. A more critical standard is applied and a more rigorous public accountability is enforced under which there has been a visible improvement in general civic administration.

Under the same influences distinctive independent journalism has increased. It professes to have no connection with any party and disclaims a representative party position. Its theory is that it addresses itself not to party sentiment but to independent public judgment, and its claim for support is based on its journalistic quality without regard to political association. It is the extraordinary advance of newspaper-making as a business that has rendered independent journalism on a large scale possible. A quarter of a century ago it would have been difficult to name more than two or three important examples in the United States. Now there are many conspicuous and successful papers which are thus classed, and even more significant of the change in journalism is the greater independence of the party journals already referred to. Indeed, in essential independence, which consists of free judgment and candid expression on public questions, the line of demarcation between the better class of party papers and the professedly independent papers is scarcely perceptible and it would be hard to distinguish between them.

There has been a signal advance in other directions. Against the false and meretricious tendencies to sensationalism which have been indicated must be placed a higher and broader treatment of all the varied interests of life. In news collection the journalism of to-day is as much ahead of that of 1875 as the railroad express is ahead of the stage coach. It spares no expense, reaches everywhere, sends its correspondents to all parts of the world, employs the best experts and specialists, caters equally to the lover of literature and the lover of sports, keeps pace with scientific discovery and development, rivals the best periodicals in commanding the most famous writers and artists, makes its own special missions of public service, reports all business, social, educational, philanthropic and religious movements, and, in short, treats whatever concerns mankind as within its boundless domain. Its range, enterprise and comprehensiveness are a constant marvel. With all its faults the breadth, fullness and accuracy which are combined with so much celerity of action attest a thoroughness of organization and extent of resources never before equalled.

There are marked differences, however, in its development in different lands. Continental journalism in Europe is of a type quite distinct from English journalism, and that again is unlike American. In Paris the news is not the conspicuous feature of the newspapers. It holds a subordinate place and is limited in its quantity. Literary and dramatic criticism and political discussion command the first rank, and

the feuilleton is a popular and important part. Literary excellence with a flavor of characteristic French wit is the dominant trait. The Parisian type with variations, generally soberer and heavier, is the prevailing Continental model. English journalism is weightier and more enterprising in news. It covers the field of international politics and war with special thoroughness. It lacks the variety and vivacity of American newspapers, but within its chosen and more limited range it is more complete. Its reports of parliamentary proceedings and of important political, social and scientific meetings are copious and intelligent, and its discussions are distinguished by sobriety and information.

In life, spirit, minuteness of news gleaning, emphasis of display and preponderance of personal flavor American journalism far outstrips all others. It does not surpass, oftentimes does not equal, British journalism in the presentation of great events, but in the multiplicity of its news of all sorts not only from its own country, but from all the world, there is no approach to it elsewhere. Its dominant tone is a light and airy freedom. There is a manifest tendency even on the part of the most respectable newspapers to avoid being heavy. The general aim is to be breezy, pungent and picturesque, and this often leads to the flippancy which is remarked in American papers. Perhaps the public taste which is thus indicated and cultivated will serve to explain in part why there are no serious and masterful weekly journals of literary and political discussion in the United States like the *Spectator* and the *Saturday Review*, and why even the monthly periodicals run chiefly to fiction and light matter. There are excellent trade journals of a high grade, showing a demand for the searching and careful treatment of special interests, but outside of these immediate representatives of the stupendous material enterprises of the land, the trend is toward the lighter vein.

Somewhat analogous is the explanation of the fact that journalism has grown more impersonal in its sources and impress. It is no longer distinguished by the great overshadowing personalities which marked it a generation ago. No editorial chief puts his individual stamp on a paper as Horace Greeley did, with his controversial power, his moral earnestness and his incisive force, which seemed to make the whole paper breathe his spirit and speak his voice. There are no successors to Raymond, Bennett, Weed, Bowles and Dana. Henry Watterson is perhaps the only survivor of the old school of journalists. The difference is due, however, not so much to the lack of men as to the change of conditions. In its immeasurably wider range and larger demands the great journal of to-day is the product of no single mind, but of a vast organization and of a whole galaxy of stars. The elder journalism was largely political pamphleteering. The later journalism is the complete mirror of daily life, and no individual throws so great a shadow across its comprehensive face.

It is a question much mooted whether journalism has declined in influence. It never was as universally read as now; it never was so much a common practice to read several newspapers; and whether in this multiplicity of reading and frequent contrariety of representation as serious an impression is made as when the appeal was more earnest and less divided may well be doubted. The editorial page has not actually fallen off in interest and importance; on the contrary, it is all in all better written, more varied and more instructive than when it had more of a polemic character. But in the broad development and great advance of the news departments the editorial page has receded in relative importance, and the drift to the light treatment of topics has tended to detract from its distinct and superior position. The greater absorption of the public mind in multiplied interests operates in the same direction. In the stress of modern business life and in the variety of diversions the body of readers have less time to follow public discussion. If it be true, as it often is, that the favorite journal does the thinking for its readers on current questions, it is equally true that many of the questions take less hold than when life was more simple and feeling more tense. When the press is in substantial accord on any public matter, except where party tradition rules, it generally carries the public judgment, and united expression makes it invincible; but when there is a discord of journalistic voices little heed is apt to be paid to any. The power of the press in its aggregate force, in the sweep of its activities and in a certain apprehension of its publicity, has steadily augmented; but at the same time the impression that it is too intrusive, too little restrained, too little governed by a just sense of responsibility, has grown and has impaired the influence it would otherwise exert.

It remains true, however, and probably grows more true with the decadence of other influences, that the press is the most effective force in protecting the moral and social well-being of the community. It is the belief of many observers that under our modern conditions the weight of mere authority is declining. In the intense strife and eagerness of the times the efficacy of the old standards in enforcing true principles and restraining wrongdoing grows weaker. With this advance of individual assertion and independence the power of public opinion is becoming the surest defense of social and business morality. The blaze of publicity gives a protection which nothing else furnishes. In the financial and social world there is a wide margin along the shadowy and undefined line between law and lawlessness, between ethical duty and questionable interest where the search-light of exposure is the only security. Much would be done under cover of darkness which fears the light. Despite a freedom which often degenerates into license the press is thus recognized not only as the most effective safeguard against political and administrative debauchery but as the best bulwark against that social and business misconduct which becomes a public offense.

The relation of the counting-room to the editorial department involves both the business and the ethics of journalism. The business side cannot be disregarded. In its ultimate purpose it is a commercial proposition. Newspapers are published to make money. The counting-room considers both income and outgo. It adjusts expenditures to receipts. It properly

studies to augment revenue in every legitimate way. But while newspapers are business enterprises they are such with recognized limitations and obligations. They are not simply business undertakings but public representatives, and the former object, while consistent with the latter, is subordinate to it. The foundation of the newspaper is the confidence of the public. It is the history of yesterday and the interpreter and teacher of to-day. In the very nature of the relation it assumes distinct obligations. It is bound to give the news and to treat public questions in absolute good faith. The counting-room is warranted in doing business in every way compatible with the fulfilment of that duty, but in all legitimate journalism it is a fundamental rule that editorial opinion and news publication must be beyond the reach of any questionable influence. The editorial department must be entirely free from commercialism. Public confidence and moral power depend on full faith that editorial and news conduct is honest, fearless and upright. The publication of a newspaper, like any other enterprise, is founded on business principles; its sphere or field of operations, whether general, political, literary or other, is chosen; the relation of counting-room and editorial-room in organizing and maintaining it on a sound business basis is of the most intimate character; but when the general lines of the enterprise are determined, the independence and integrity of the editorial management and fidelity to its declared aim as a public representative within its chosen sphere are absolutely indispensable. This rule lies at the foundation of the whole ethical code of journalism.

The question of the training and qualifications of the journalist has assumed new interest and importance both through the general growth of the profession and through special movements for its advancement. Schools or chairs of journalism have been established in a few instances and in a limited way, and the munificent endowment by Mr. Pulitzer of a college of journalism in Columbia University — the first large and distinct project of the kind — has presented the proposition in a practical and definite form. There are two systems of thought on the subject. The first holds that the best and most efficient school of journalism is the newspaper office. It believes that the true journalist is born, not made; that knack, aptitude, native talent, the sense of news and proportion lie at the foundation of success; and that the most useful training is that of actual experience. It does not dispute that broad education and culture are essential to the journalist, and recognizes that particular studies, like history, political economy, the fundamentals of law, social science and kindred matters, may be followed with special advantage. But it urges that these may be gathered from the general college course, and that the college or university has no distinctive professional knowledge to teach journalists in the special sense that it has to teach lawyers or physicians. The technicalities of the newspaper art — a suitable style, phonography, proof reading, the treatment of news and the like — are best acquired in practice, and the rest is the quickest and surest application of knowledge which is power, and of instinct or intuition which in dealing with public intelligence and currents is no less power, to the activities of the world.

The other system of opinion is represented in the scheme and scope of Mr. Pulitzer's College of Journalism. It is based on the theory that the journalist can be prepared for his vocation, like the lawyer, by a special course of study adapted to its requirements. Its aim and its tendency are to elevate and dignify the profession, and to establish a higher standard both of obligation and of performance. It seeks to teach not merely the technical necessities in newspaper-making but the true ideals of public service to which the newspaper should be dedicated, and the wide range of knowledge with which the journalist should be equipped. This includes style, ethics, law, literature, history, sociology, statistics and particularly the principles and methods of journalism. It embraces an examination and comparison of existing newspapers by experts, an exposition of the functions of editor, correspondent and reporter, and the production of an experimental journal under the necessary limitations with its practical application of the instruction. In its main features this plan is an enlargement of the ordinary academic course directed to a particular end, and it is claimed that the establishment of such a college with liberal endowment would not only provide a large body of trained journalists but would set a standard for the profession.

On the whole, notwithstanding the faults of the "new journalism," the position of the press in the public estimate is increasing. One evidence of this truth is the more liberal character of libel legislation. In some States the greater license has prompted efforts at more restrictive measures, but the general trend of legislation has been toward reasonable liberality with just accountability. The prevailing movement has been to provide reparation for any wrong or injury that may be done, to assure just restitution for actual damages, but not to permit punitive damages to trammel the free expression of opinion. Journalism is advancing and is acquiring a higher position and recognition as a distinct profession. With the enlightened spirit of the age and with the marvelous agencies of instant and united expression the power of public opinion steadily grows, and the journalist is its medium and prophet. See AMERICAN NEWSPAPERS; PERIODICAL LITERATURE.

CHARLES EMORY SMITH,
Late Editor of 'The Press,' Philadelphia.

JOURNALISM, Agricultural. As with the press in general, agricultural journalism has grown in this country as nowhere else in the world. This is due, of course, to the widespread literacy of our people, as compared with the general agricultural populations of other modern countries. But it is also due to the demands of the new farming and rural life. The extension of the reading habit among farmers has undoubtedly furthered the rapid expansion of agricultural journalism. Its growth in this country really began about the middle of the last century, but since 1900 there has been a tremendous growth in the number, the variety, the circulation and the influence of the farm papers and journals of all kinds.

This period of most rapid expansion is coincident with that of the extension of public education and the various phases of rural progress. Until recent years there have been few books that treated the farmer's problem from his point of view. Moreover, he had to learn the habit of dependence upon books. The farmer now can find specific help in books, for farm experience is rapidly being put into print. The present-day farmer who would succeed among his fellows must read. The reading habit has naturally developed. The experience of the experiment stations as indicated by their "lists" shows the demand for the ordinary bulletins growing quite rapidly, but not so universal as could be wished. The extension departments have sought to encourage the reading habit by the development of farmers' reading courses. The agricultural colleges have also widely cultivated the habit of "correspondence" in their constituents.

The sympathetic editor of an agricultural paper has an even greater opportunity. An important phase of the work of the farm journals is nearly always this "correspondence" feature. They also bring to the farmer digests of the books and bulletins elsewhere appearing which might be of interest to him. They thus furnish to the farmer practically the only literature adapted to his needs and tastes except the technical agricultural books and bulletins. The proportional scarcity of books and papers in the farm home is a result of the lack of adaptation of general literature to the farmer's special needs. The daily newspapers — and especially the weeklies and semi-weeklies — have to some degree adapted their columns to the needs of their farmer readers, by, in many cases, pages and supplements which practically amount to farm papers. The farmer's need for suitable reading matter is thus rapidly and successfully being met.

In 1918 there were listed in the various annual newspaper directories some 400 specifically agricultural journals. From 1908 the number had increased by nearly 100 (25 per cent). This rate of increase was much more rapid for this and other special journals and periodicals than for the press of the country in general, and is indicative of the adaptation of the American press to the special needs of the various classes and occupations of our people. The number of those which the directories call agricultural publications, and which have some agricultural material and interest, but are often agricultural only in name, is much larger, probably 900. This listing does not include the very large number of government bulletins and other publications which might legitimately be added. The "weekly" seems to be the most popular form of American journalism, in general, for of the 25,000 newspapers and periodicals published nearly two-thirds, or more than 16,000, are weeklies. This is even truer of the more specialized periodicals, and specifically of the agricultural press. "Quarterlies" are rare, as are "bi-monthlies"; but "monthlies" are fairly common; the "semi-monthly" or "bi-weekly" much less so; the "weekly" by far the most common. There are also "dailies," but they are only in the form of brief bulletins of information. The weeklies also have by far the larger circulations, indicating that they best meet the popular demand. The agricultural press has specialized with amazing rapidity, showing the intensive special and local interest of the farmer. The number, variety and circulation of the papers that cannot be classed as agricultural, but are devoted to forestry, horticulture, floriculture, stock and stock-raising, irrigation, poultry, bee-keeping, dairying, as well as to a multitude of still more special interests, steadily increases.

The foreign language press appears also in agricultural journalism. There are already a score and more in Hungarian, Japanese, Swiss-Italian, Bohemian, Hollandish, Finnish, Swedish, German, Polish. The largest number hitherto are in German.

No attempt has been made to arrive at the total circulation of farm papers. There is a full score of them with sworn circulation of more than 500,000; probably one-quarter of all have a circulation of more than 100,000. The more special and local papers naturally have the smallest circulation. The more important of the farm papers thus equal in circulation the greatest city dailies. In general, they are largely confined to State areas for their respective constituencies, but a number are regional in influence. There are none that approximate to the status of a national farm journal. There has, however, been some approach to such in the case of the *Orange Judd Farmer* with its various regional editions.

Thus, while its latter-day expansion has been most noticeable, agricultural journalism has nevertheless had a long history and a sound development and evolution. It is by no means of such recent appearance as is so often suggested. While there was no sign of an agricultural paper until the beginning of last century, the rise of the agricultural societies at that time brought such into existence in the form of the regular organs of the societies for collecting and distributing information. Such were, however, rather in the nature of a "record" than in the form of a "journal." Probably the first of these was the *Massachusetts Agricultural Repository and Journal* of the Massachusetts Society for Promoting Agriculture, established in 1793.

Agricultural journalism in this country is usually, however, dated from 1819 when the *American Farmer* was established in Baltimore as an eight-page weekly. This lasted till 1862. Other notable early farm papers were *The Plough Boy*, of Albany, New York; the *New England Farmer*, of Boston, 1822; the first *New York Farmer*, New York, 1827. Few of these early publications have survived. The *Country Gentleman*, originating in 1853, has probably had the longest continuous history. But a number of farm papers, appearing first about the middle of the century, still survive, and have given a substantial nucleus to the rapidly expanding agricultural press. From 1850 the development has been rapid. Independent horticultural papers began to appear about 1835 and other special journals rapidly followed. Agricultural journalism has doubtless played its part in the adjustments necessary under the rapidly changing conditions of agriculture and rural life in the United States. Its prints have doubtless taken the place of traditional experience, so important a factor in agricultural progress in other lands. It has served as a neces-

sary and invaluable link between the progressive leaders of American agriculture in the government offices, the colleges, and on the farm, and the general farm population. It has served to distinguish and dignify the farmer's occupation and life by its recognition of his special needs and tastes. Its greatest lack at present seems to be that it is still largely devoted to the technical and economic aspects of the farmer's life and fails to devote sufficient attention to the social. This defect is, however, being remedied by the development of special farm home and family journals.

WILLIAM L. BAILEY,
Associate Professor of Political Science, Grinnell College.

JOURNALISM, Class Publications. The story of American journalism is incomplete without consideration of the influence of magazines as distinguished from newspapers, of technical and trade papers, foreign language papers, college periodicals, and a long line of what are called "Class Publications," ranging all the way from religious papers and women's magazines to medical journals and anarchistic periodicals. All these are a part of journalism, and each class contributes its share to the molding of public thought and action. For it must be admitted that the republic is largely governed by its journalism; this has come to be the accepted mode of interchanging thought, and when many great newspapers or magazines or periodicals act in unison on definite lines, public thought is molded, and action results. We have to judge our public men mainly by what the press says of them; we have to form opinions of our industries largely by the trade papers; we have to measure the work of colleges in considerable degree by the sort of college papers they create. The great divines, the great surgeons, the great scientists have to be made by the press or remain unknown. So, whether we like it or not, we are forced to the conclusion that the charge that America is governed by its press is largely true; hence the great importance of keeping that press pure and devoted to the highest ideals. Magazines of nation-wide circulation have come to exercise a strong influence on national policies and the government at Washington. They thus serve as a wholesome balance to the influence of a local press that must largely represent its own locality rather than the people as a whole. The religious press has a wide influence on the development of the churches, which are generally recognized as the saving element of every community that makes for advance in morality and ideals. The agricultural press is almost as numerous, and has undoubtedly had a large share in the movement to make farming more profitable and to rescue agriculturists from handing all their profits to middlemen. Through public agitation and development of granges, selling societies and the Farmers' National Congress the farmer has taken his rightful place as a business man, and seems likely to maintain it in spite of industrial trusts. The technical and trade press has had a tremendous development, belonging almost wholly to the period since 1880. Every great industry has numerous important periodicals, and the minor industries have from one to half a dozen each. These have come to wield a wide influence, and are very informative to the outside world, as well as the special industry concerned. They afford a field for discussing and thrashing out differences of opinion in the trades, both as to business measures and mechanical and technical problems. This sort of journalism has reached its highest development in America, and has done a large share toward bringing together the active men in each industry and helping them to work on harmonious lines. College journalism was long looked upon as amateurish, and merely illustrative of boyish effort and imitation; but it is now apparent that it has found a deeper and fuller meaning. In the colleges are developed most of the men who are to be the leaders of the coming business generation. Their college papers are the trying-out ground, where young college men first test themselves against the world, and begin to learn something of the conditions of life and society under which each must work out a place for himself, if at all. They afford a much needed expression of the younger minds, and dull is the college professor who cannot gain lessons from the sprightly scribblings of his own students. The foreign language press was regarded by most journalists as being a wholly negligible feature in American journalism until the advent of the war. Then it became apparent that visitors to our shores who clung to their mother tongues were largely influenced in their views by our foreign language papers, and that many of them were quite un-American in tone and utterance. It is well that the eyes of the great public were opened to what is the average character of foreign language papers, because an understanding of their position and influence carries its own remedy for any abuses of the power to influence those on American soil, where Liberty should be maintained as the national watchword and the ideals of the Fathers of the Republic upheld at all costs. The number and importance of these various class papers can be ascertained by reference to the article on NEWSPAPERS, AMERICAN. They are a permanent addition to Journalism, and must be reckoned with in any broad-minded effort to judge of the influence of the press on the peoples of the New World.

CHARLES H. COCHRANE,
Formerly of the Editorial Staff of Newspaperdom.

JOURNALISM, School of, a college of journalism, endowed by a gift of $2,000,000 by Joseph Pulitzer, editor and proprietor of the New York *World,* to Columbia University, New York, in 1903. With the advance of civilization and general culture and intelligence the demands upon the journalists of the present day are constantly becoming greater and this college is the recognition of the importance and place of journalism as a profession, and a practical endeavor to equip those who adopt it, by a course of thorough instruction, for its exacting and laborious duties. Mr. Pulitzer considered the creation and rendering effective of public opinion a task of which the press alone is capable of successfully accomplishing. The College of Journalism is therefore a means to an end — to raise the character and standing of journalism, to increase its power and prestige, and to attract to the profession men of

the highest capacity and the loftiest ideals, who, because of special training, will advance the professional to a higher standard of thought and action. This school was the first institution of the kind in the world. It opened 30 Sept. 1912. On 1 Nov. 1916 there were in all 180 students, of whom 36 were women. Students of maturity, experience and marked fitness are admitted without examination. The degree of bachelor of literature in journalism was conferred on 24 students in 1916. While there are universities and colleges which give courses in various phases of journalism, no other school is so well endowed, none has a course giving so much time to the solid study needed for the training of the journalist, and the school has also the crowning advantage of a metropolis like New York in which to train its students in reporting by sending them to see and to write upon events as they come in the life of a great city. Attendance on first-night performances is employed in training for dramatic criticism. This practical training in the work of the journalist comes in the last two years, but of the four years' course four-fifths are devoted to the study of history, constitutional law, political science, economics, statistics, American and European literature, etc.; a mastery of either French or German is insisted on. In 1918 the school will be placed on a full professional standing. Five years will be required for a degree from the high school, the first two in college and the last three in the School of Journalism. See JOURNALISM.

JOURNALISTS, The ('Die Journalisten'). This comedy of four acts in prose was played for the first time in 1852, the year in which it was written. It originated in the personal experience of its author, Gustav Freytag, who from 1848–70 had been a partner and joint-editor of the *Grenzboten*, a German weekly for literature and politics. The scene is laid in a provincial town in Germany, and the significance of journalism in politics is dealt with, as well as the character and the social position of journalists. In the electoral campaign between the Conservative and the Liberal party — the pivot of the plot — victory for Oldendorf, the candidate of the Liberals, is won through Bolz, one of the editors of the Liberal paper *The Union*. Bolz is the hero of the play. He can get along well with any one, he is never upset, least of all when he pretends to be, he is humorous and peppery, he can even venture on risky enterprises, for his heart is and always remains in the right place. In his person the journalists are also granted their esteemed place in modern society, for Adelheid Runeck, a young lady of wealth and noble birth, gives him her hand in marriage.

The strength of this comedy lies largely in a clearly drawn up scheme, a quick, witty dialogue, a smooth delineation of characters, and a sympathetic insight into human nature whose weaknesses are smiled at rather than satirized. Consult G. Freytag's works (Leipzig, 1887–88, Vol. III, pp. 1–112); English translation in 'The German Classics' (Vol. XII, pp. 10–108); Seiler, F., 'G. Freytag' (1898, pp. 81–91); Stern, A., 'Studien zur Literatur der Gegenwart' (Vol. I, 3d ed., 1905); Lindau, H., 'G. Freytag' (Leipzig 1907).

EWALD EISERHARDT.

JOURNEY AROUND MY ROOM (Voyage au tour de ma chambre). We owe this "exquisite morsel," as the French admiringly call it, to a happy accident. Xavier de Maistre (1763–1852) having been arrested as a young officer for duelling was sentenced to confinement for six weeks. He wrote 42 chapters, one for each day, descriptive of his wanderings around his room. He had no thought of publishing the work, but his elder brother, the philosophic writer, Count Joseph de Maistre, secured its publication. It is a little the irony of fate that, as David says in his introduction to the volume containing it in the French series known as the 'Library of the Bibliotheque Nationale,' the younger brother's unvalued literary diversion promises to outlive the elder brother's philosophic speculations. The book is known particularly for its sympathetic treatment of the duality of man's nature. His animal body is in prison, but his mind can go wandering far beyond the walls. His mind can occupy itself satisfactorily while his animal is doing the ordinary things of life. His mind watches his animal make coffee in the morning, and sometimes, lost in happy memories or occupied with poetic distractions, permits the animal without sense in such matters to burn itself with the fire irons or do something equally foolish. A favorite mode of journeying, since he is not hurried, is while seated on an armchair to lift the forelegs a few inches from the floor and then, swinging backward and forward, to move gradually, almost imperceptibly, around the room. Almost invariably his animal makes his way toward the portrait of a charming lady that hangs on the wall. Thirty years after 'The Journey Around My Room,' its author wrote 'The Nocturnal Expedition Around My Room' in the same vein and, surprisingly enough, with equal charm. Consult Sainte-Beuve, 'Portraits Contemporains'; Bibliotheque Nationale Collection des Meilleurs Auteurs Anciens et Modernes (complete works in single small volume); Eng. translation, Philadelphia 1829; New York 1907.

JAMES J. WALSH.

JOUTEL, zhoo'tĕl, **Henri,** French pioneer in America: b. Rouen, late in the 17th century; d. there early in the 18th. He was a soldier in early life. When La Salle was commissioned in 1684 to reconnoitre the mouth of the Mississippi by sea, Joutel accompanied him as intendant. In 1685 he was appointed by La Salle to finish Fort Saint Louis, which the latter had begun. After the departure of La Salle on his expedition, two of the colonists formed a plot to murder Joutel, but he discovered it in time, and, having received an order to join La Salle with all his force, he delivered the criminals to the latter. In October, Joutel was again made commander at Fort Saint Louis with 34 men under him, and was again disturbed by plots to kill him or deprive him of his office. He set out for the Illinois on 12 Jan. 1687, with La Salle, and, after the assassination of the latter on 19 March, Joutel's death was also decided on, but his life was finally spared. Not long afterward he set out for Illinois accompanied by six other Frenchmen and after various adventures reached Fort Saint Louis on 14 September, and arrived in Mackinaw on 10 May. Joutel went to Montreal and Quebec shortly afterward and em-

barked for Rouen, where he appears to have spent the rest of his life. Charlevoix saw him there in 1723. Joutel was the only one of La Salle's party on whom that explorer could rely and his account of the last expedition of La Salle is the only trustworthy one. This work is entitled, 'Journal historique du dernier voyage, que feu M. de la Salle fit dans le Golfe de Mexique, pour trouver l'embouchure et le cours de la Rivière de Saint Louis, qui traverse la Louisiane. Au l'on voit l'histoire tragique de sa mort et plusieurs choses curieuses du nouveau monde' (Paris 1713; Eng. translation by H. R. Stiles, Albany 1906).

JOVANOVIĆ, yō-vä'nō-vĭch, **Jovan** ("Zmaj"), Serbian journalist and poet: b. Novi Sad, Neusatz, 1833; d. 1904. He studied law in Pest, Prague and Vienna and returned to his native place to practise his profession. There he drifted into journalism, becoming editor of the *Javor (Acorn)* in 1861. In 1862 he returned to Pest to study medicine in which he graduated six years later. All the while he continued to contribute to the press humorous and other articles in prose and verse which attained considerable popularity. In 1864 he founded the *Zamaj (Dragon)*, which served as the medium of publication of some of his best work. Two years later his successful play 'Saran' was presented. His growing reputation led him more and more insensibly into literature. Part of this activity resulted in the founding of *Starmali*, a humorous periodical (1878), and *Neven*, a juvenile publication (1880). In addition to his extensive creative poetical and prose work Jovanovic was a very active and successful translator into Serbian of the literary productions of other poets. Good editions of his own works were published in 1880 and in 1887.

JOVANOVIĆ, Stephan, Baron von, Austrian general: b. Pazariste, 1828; d. 1885. Entering the army young and without any previous military education, he rose rapidly by his application and ability. In 1848 he took part in the Italian campaign; and in 1852 he went to Turkey, where he ultimately became consul-general with headquarters at Bosnia (1861–65). He served in the army in Italy in 1865–66, and was commander in Dalmatia in 1869. Nine years later he became military governor of Herzegovina; defeated the revolutionists in Krivosije in 1882 and returned to Dalmatia as civil governor the following year.

JOVANOVIĆ, Valdimir, Serbian statesman and author: b. Shabatz, 1833. Studying in Vienna and Berlin, he obtained a position in the Department of Finance, which he soon lost on account of his radicalism. He ventured into journalism with the same result. He was finally forced into exile, going to Switzerland. Returning to Serbia he became leader of the younger and more radical element. In 1869 he was arrested and tried for the murder of Prince Michael, but was acquitted. His radical views gradually changing, he was elected a member of the Skupshtina in 1872 and appointed Minister of Finance four years later. The latter position he held until 1889 when he became a member of the Council of State (1889–93). Among his works are 'The Serbes and their Mission in Europe and the East' (1870); and 'Emancipation and Unity of Serbia' (1871). He also made extensive translations into Serbian.

JOVEITE, jōv'īt, is a nitro-substitution explosive used in blasting, and as charges for high-explosive shells, which was invented by J. E. Blomen, Washington, D. C. It consists of nitro-naphthalenes 6 to 8 per cent, nitrophenols 16 to 30 per cent, and nitrate of soda 64 to 76 per cent. It is made by melting the nitro-naphthalenes in a steam-jacketed kettle, adding the nitro-phenols and continuing the heating until they are melted, and then stirring into this liquid mixture the solid nitrate of soda in a finely ground and perfectly dry condition until each of the solid particles of the nitrate is coated and impregnated with the liquid. On cooling, the particles of the nitrate are protected from deliquescence by the coating of scarcely soluble nitro-substitution compounds, while on explosion, the nitrate causes the reaction to be most complete. For blasting purposes this explosive is used in a granulated condition, but in loading armor-piercing projectiles it is poured into the shell while in the plastic condition and on cooling sets to a hard mass which completely fills the cavity except for a canal in the centre where the fuse is placed. For blasting purposes the explosive is fired by means of a mercuric fulminate detonator, but the charges in shells are fired by means of gunpowder fuses. In tests of the explosive by the United States navy, made at Indian Head, Md., in 1897, a 10-inch Carpenter armor-piercing shell containing 8.25 pounds of joveite, fired with a velocity of 1,860 foot-seconds at a Harveyized nickel-steel armor plate, 14.5 inches thick, passed completely through the plate and burst on the other side. See Explosives.

JOVELLANOS, hō-vĕl-yä'nōs, **Gaspar Melchior de,** Spanish statesman and writer: b. Gijon, Spain, 5 Jan. 1744; d. Vega, Spain, 27 Nov. 1811. He was educated at the universities of Oviedo, Avila and Alcalá, became in 1770 a member of the Royal Academy, in 1778 chief justice of the Criminal Court at Madrid and in 1780 a member of the council of state. Subsequently he was for a time Minister of Justice, but in 1801, through the agency of his enemy, Don Manuel Godoy, was imprisoned at Majorca. Released at the French invasion (1808), he joined the patriots and became a member of the supreme junta. His writings are various, including treatises on political economy, a dissertation on English architecture, a 'Memoir on Law Applied to Agriculture,' the tragedy 'El Pelayo,' and 'El Delincuente Honrado' ('The Honorable Delinquent'), a comedy.

JOVELLAR Y SOLER, hō-vä-lyär', **Joaquin,** Spanish statesman and soldier: b. Palma de Majorca, 1819; d. 1892. He saw military service in Cuba (1842–49); later in Spain (1849–53); and afterward in Morocco (1853–60). In all of his military campaigns he made a brilliant record and rose to the rank of colonel. In 1863 he was made brigadier-general and the following year he became assistant Secretary of War. He left Spain on the proclamation of the republic; but he was induced to return and was appointed governor-general of the island of Cuba, a position he gave up to become Minister of War under Alfonso XII. But he was needed in Cuba and he again became governor-general of the island.

He was very largely instrumental in bringing the Ten Years' War to a close (1878). On his return to Spain he became captain-general of the Spanish army and head of the Spanish forces in the Philippines.

JOVIANUS, jō-vī-ā-nŭs, **Flavius Claudius,** Roman emperor: d. Dadastana, Bithynia, 17 Feb. 364 A.D. He was originally captain of the household troops of the Emperor Julian, whom he accompanied in the disastrous campaign against the Persians in which Julian lost his life (363 A.D.). After Julian's death he was proclaimed emperor by the troops, but could only extricate his army by ceding to the Persian monarch the five provinces beyond the Tigris. He was succeeded by Valentinianus I.

JOVINIAN, an Italian opponent of the regular form of the Christian Church who flourished in the 4th century. He was one of the first great protesters in that body. He opposed the celibacy of the priests, though he never was himself married. He also opposed fasting and penance and the adoration of the Virgin. Driven out of Milan for his opinions he went to Rome, where he and his followers were excommunicated (388). On the confirmation of this sentence by the Pope, Jovinian was banished to the island of Boa by the Emperor Honorius, where he remained until his death in 406. But notwithstanding the banishment of Jovinian his ideas continued to spread. But the activity of Augustine and Jerome, their strong defense of the ascetics, their thunders against Jovinian and the support of the temporal authorities were ultimately successful in stamping out the Jovinian sect. Consult Karnack, Adolf, 'History of Dogma' (Boston 1894–1900); Jerome, 'Adversus Jovinianum' (Nicene and Post-Nicene Fathers, Vol. VI, 2d series, New York 1893).

JOWETT, Benjamin, English scholar and educator: b. Camberwell, London, 1817; d. 1 Oct. 1893. He studied at Oxford, was ordained in 1842, and became regius professor of Greek in 1855. In 1855 he published a notable commentary on the Epistles of Saint Paul. In 1860 he contributed an essay 'On the Interpretation of Scripture' to the celebrated volume 'Essays and Reviews,' for which he was tried on a charge of heresy before the Chancellor's Court, but was acquitted. In 1870 he became master of Balliol College, and in 1871 published his most important work, a translation of the 'Dialogues of Plato,' of which a fifth edition was issued in 1892. He subsequently published translations of Thucydides (1881) and the 'Politics' of Aristotle (1885). He was vice-chancellor of the university (1882–86). Consult 'Life and Letters' (edited by Abbott and Campbell, 1897); Tollemache, 'Benjamin Jowett, Master of Balliol' (1895).

JOWETT, John Henry, English clergyman: b. Halifax, England, 25 Aug. 1864. He was educated at the University of Edinburgh and Oxford University. In 1890 he was ordained a Congregational minister and became minister of Saint James Church, New Castle-on-Tyne 1890–95; minister of Carr's Lane Church, Birmingham, England, 1895–1911; pastor of the Fifth Avenue Presbyterian Church, New York city, 1911–18; returned to England in 1918 and became pastor of Westminster Chapel, London. He is author of 'Apostolic Optimism and Other Sermons' (1901); 'Brooks by the Traveller's Way' (1902); 'Thirsting for the Springs,' (1903); 'Yet Another Day' (1905); 'Passion for Souls' (1905); 'Folly of Unbelief and other Meditations' (1906); 'Daily Altar' (1907); 'The Silver Lining' (1907); 'The High Calling' (1909); 'From Strength to Strength' (1910); 'Our Blessed Dead' (1910); 'School of Calvary' (1910); 'The Transfigured Church' (1910); 'The Preacher: His Life and Work' (1912); 'Easter Morning' (1912); 'Things that Matter Most' (1913); 'My Daily Meditation for the Circling Year' (1914); 'Spirit of Christmas' (1914); 'The Whole Armor of God' (1916).

JOWF, or **DJOWF,** jouf, oasis in northern Arabia between the Syrian and Shammar deserts. It is also the name of a district of South Arabia. The oasis, which is really what its name implies, a fertile spot in the desert, produces a variety of products peculiar to the climatic conditions of that region, among them being excellent dates. Pop. about 40,000. The capital, El-Djof, contains about 4,000 people, while Sekakah has a population of about 5,000.

JOY, Charles Arad, American chemist: b. Ludlowville, N. Y., 1823; d. 1891. He was educated at Union College and the Harvard Law School. He also studied at Berlin and Göttingen and received the degree of Ph.D. from the latter in 1852, and after a few years spent as professor of chemistry at Union, became in 1857 professor of chemistry at Columbia, where he remained for 20 years. In 1866 he became president of the Lyceum of Natural History (later the New York Academy of Sciences) and was long one of the editorial staff of the *Scientific American.*

JOY, George William, English painter: b. Dublin, Ireland, 1844. He was educated at Harrow and studied art at Kensington, at the Royal Academy and under Charles Jalabert and Bonnat, at Paris. His principal pictures are 'Domenica'; 'Chess Players'; 'Laodamia'; 'Young Nelson's First Farewell'; 'Wellington at Angers'; 'Prince Charlie and Flora Macdonald'; 'The Death of General Gordon'; 'Princess Alice of Albany' (for Queen Victoria); 'Reverie'; 'Truth'; 'Joan of Arc'; 'Lear and Cordelia,' etc. He has also painted many portraits.

JOY, Thomas, American colonist: b. Norfolk, England, 1610; d. Boston, 1678. Upon emigrating to America in 1635 he established himself in Boston as an architect and builder and in 1657 erected the townhouse of Boston, the earliest civic structure of any note in New England. In 1646 for his share in the 'Child Memorial,' protesting against both the civil and ecclesiastical government of the Bay Colony, he was fined and imprisoned.

JOYCE, Isaac Wilson, American clergyman: b. Coleraine Township, Ohio, 11 Oct. 1836; d. Minneapolis, Minn., 28 July 1905. He was educated at Hartsville College of the United Brethren Church and was first licensed as a local preacher in that Church. In 1859 he entered the ministry of the Methodist Episcopal Church, joining the Northwest Indiana Conference. He served as pastor of several important churches and a term as presiding elder, the

last churches located in the Cincinnati Conference. He was elected bishop in 1888. In 1886 he was fraternal delegate to the Canadian Methodist Church. He was president of the Epworth League (1900–04). In 1892 he had supervision of the missions in Europe; Mexico in 1895; China, Japan and Korea (1896–97); South America (1903–04). He was a preacher of an intense evangelical type. Consult Sheridan, Wilbur F., 'The Life of Isaac Wilson Joyce' (Cincinnati 1907).

JOYCE, Robert Dwyer, Irish poet and physician: b. in County Limerick, September 1836; d. Dublin, 23 Oct. 1883. In 1866 he came to the United States and practised medicine for several years in Boston, Mass., contributing during that period to the *Pilot* and other Irish journals. He published 'Ballads, Romances, and Songs' (1872); 'Deirdré,' a much-admired epic poem, which appeared anonymously as one of the 'No Name Series' (1876); 'Legends of the Wars in Ireland' (1868); 'Fireside Stories of Ireland' (1871); 'Blanid,' a poem (1879); 'The Squire of Castleton,' etc.

JOYEUSE ENTRÉE, zhwä-yėz ŏn-trā, the name given to the important privileges of the estates of Brabant and Limburg, with Antwerp, which the dukes were obliged to swear to maintain before they were allowed to enter the ducal residence, from which circumstance the name was taken. It dates from 3 Jan. 1356, from the entry of Duke Wenceslas into Louvain. The most important of these privileges was that the people were released from an allegiance whenever the duke should attempt to violate their rights. So important were these privileges considered that many women went to Brabant to be confined there, that their children might enjoy the rights of a citizen of Brabant. See Boulger, D. C., 'History of Belgium' (London 1902).

JOYNES, Edward Southey, American educator: b. Accomac County, Va., 2 March 1834. He was educated at the University of Virginia and at Berlin, in 1858 was appointed professor of Greek at William and Mary College, in 1866–75 was professor of modern languages at Washington College (now Washington and Lee University, Lexington, Va.), and subsequently held chairs in Vanderbilt University and the University of Tennessee. In 1882 he became professor of modern languages in South Carolina College (Columbia), retiring as professor emeritus in 1908. He published textbooks of French and German, most important of which is the 'Joynes-Meissner German Grammar' (1887).

JOYOUS ENTRY. This became a custom in the Belgic Low Countries and the occasion of concessions and privileges in the northern Netherlands also. That of Queen Wilhelmina into Amsterdam, the political capital of the kingdom and in which she was inaugurated queen, was on 31 Aug. 1898. At The Hague, the seat of administration, a similar function, with spectacles, was given with unusual demonstrations of joy, the inauguration festivities lasting in the two cities a fortnight. In this modern instance, 100 invited foreign journalists as guests participated. The joyous entry of Leopold and those of his successors in Belgium were each made the theme of paintings by first-class artists.

JUAN DE BAENA, Hwän dā bā-ā'nạ, a Spanish writer and editor of the 15th century who made an anthology of the writings of contemporary literary men. Baena was a converted Jew who seems to have entered heart and soul into the life of the Christian community in which he lived. He rose to be one of the secretaries of John II. His 'Cancionero,' as his anthology was called, seems to have been composed between 1449 and 1454, as the author himself states in his preface, chiefly to please the king, but with an eye to pleasing also the queen, the heir-apparent and the court and nobility. It contains 384 manuscript pages and gives extracts from the works of nearly 60 Spanish writers, some of them dating back to the reign of Henry III. The 'Cancionero de Baena' is interesting and valuable historically, not on account of the literary and critical ability of the author, which was certainly not very great, but rather because of the light it throws upon the literary condition of the first half of the 15th century and the list of writers which it furnishes. Consult Castro, 'Biblioteca Española' (Madrid 1784, Vol. I); Ochoa, 'Manuscritos' (Paris 1844); Puybusque, 'Histoire Comparée des Littératures Espagnole et Française' (Paris 1843); Ticknor, G., 'History of Spanish Literature' (New York 1854).

JUAN FERNÁNDEZ, joo'an fĕr'nän-dēz (Sp. hoo-ān' fĕr-nän'dēth), a group of islands in the south Pacific Ocean, 300 miles west of Chile and belonging to that country. They are named from a Spanish pilot who discovered them in 1563 and obtaining a grant from his country started a settlement. There are two principal islands, Mas a Tierra (nearest to land) and Mas Afuera (farther out), the latter 90 miles west of the former, both on lat. 33° 40′ south. Mas a Tierra is 12 miles long, 3⅓ miles wide, of rugged configuration with its higher peak, El Yunque (the anvil), rising 2,500 feet above sea-level. Cumberland Bay, or bay of San Juan Bautista, on the north side is the principal harbor, but the water is too deep for safe anchorage in bad weather. This island was occupied by the Spanish in 1750 and taken by Chile when that country became independent in 1818. It was used as a penal colony prior to 1840. It has a population of about 300 which lives mainly by supplying water, wood and food to whaling and other vessels. Parts are fertile and produce vegetables, peaches, figs, grapes, etc., and originally there was considerable sandalwood, but it has all been taken. Plenty of fish are obtained from the surrounding waters and also a lobster (*Palinurus frontalis*) which is an important source of subsistence and also is canned for export in two factories. In 1914 a wireless station was erected. Just off the southwest corner of Mas a Tierra is the small, rocky island of Santa Cruz. Mas Afuera, six miles long by three and one-half miles wide, is very mountainous, its highest summit being 5,300 feet above the sea. It presents fine scenery and its remarkable flora makes a most distinctive landscape. The islands consist of Tertiary volcanic rocks in thick layers comprising a succession of lava flows and tuffs, mostly horizontal. The climate is more humid than that

of Valparaiso, with mild winters, moderate summers and frequent gales. The islands had no original wild land animals, but the flora is unique. Some Megallanic types have recently been found high on Mas Afuera. One remarkable plant, *gunnera*, has leaves 10 feet in diameter. The 'Robinson Crusoe' of Defoe is said to be based on the experiences of Alexander Selkirk, a Scotch sailor, who lived alone on the larger island from 1704–09.

JUAN DE FUCA, joo'ăn dĕ fū'kȧ (Sp. hoo-ăn' dā foo'kä), **Strait of,** an ocean passage between the State of Washington and Vancouver Island. It connects the Pacific with the Strait of Georgia on the north and Puget Sound on the south. It is 100 miles long and about 15 miles wide. It contains several islands, some of which were at one time in dispute between the United States and Great Britain.

JUAREZ, Benito Pablo, bä-nē'tō päb'lō hoo-ä'rĕth, Mexican statesman: b. San Pueblo Guelatao, Oajaca, 21 March 1806; d. Mexico, 18 July 1872. He was admitted to the bar in 1834; became a judge of the Civil Court in 1842; in 1847–52 was governor of the state of Oajaca, in which post he greatly improved provincial conditions; and after a period of exile (1853–55) joined the revolutionists under Alvarez, by whom he was later made Minister of Justice and Ecclesiastical Affairs. In 1855 he was appointed provisional governor of Oajaca by Comonfort, the successor of Alvarez, and in 1857 elected constitutional governor. He was made Secretary of the Interior and chief justice in the latter year (the office of chief justice being by the constitution the equivalent of a vice-presidency), and when Comonfort was driven from power (1858) duly succeeded to the presidency, was recognized by the Mexican states and the United States, but was opposed by the Conservatives in a long civil war and did not enter Mexico City until 11 Jan. 1861. In March he was elected President for a four-years' term. The bankrupt government published a decree suspending for two years the payment on the foreign debt and an alliance of intervention was at once entered into by England, Spain and France. On Juarez' agreement to protect the interests of foreign debtors, the English and Spanish troops evacuated the country, but France proceeded to a war of conquest. Juarez was driven to the extreme north and Maximilian assumed imperial power. Upon the interference of the United States, however, the French troops were withdrawn in 1867 and in the same year Maximilian was executed and Juarez elected President. He was re-elected in 1871. His vigorous and liberal policy was of great benefit to the nation and he has sometimes been called the "Mexican Washington." Consult Baz, 'Vida de Benito Juarez' (1874); and the 'Life' by Burke (1894).

JUAREZ CELMAN, Miguel, mē-gĕl' hoo-ä'rĕth säl-măn', Argentine statesman: b. Córdoba, Argentina, 29 Sept. 1844. He was graduated from the University of Córdoba in 1870 and after holding several political posts became governor of his province of Córdoba and in 1884 a senator in the national Congress. In 1886 he was chosen President and the speculation rife during his administration, as well as the inflation of the currency and the magnitude of the public works undertaken at this time, induced a financial panic in 1890. The Celman administration was held responsible for this disaster and the President himself charged with having amassed a fortune from sums known to have been taken from the treasury. The cabinet resigned, but revolt broke out in Buenos Aires 26 July 1890, and fighting in the streets continued for several days. On 6 August, however, the President resigned and the Vice-President, Pellegrini, assumed his duties for the remainder of the term.

JUBA, jōō'bă, an Afriçan king who flourished during the supremacy of Cæsar in the affairs of Rome. He was ruler of Numidia. When open hostilities broke out between Pompey and Cæsar he sided with the former and defeated the forces of Cæsar under Curio (49 B.C.). He also extended aid to two of Pompey's other backers, Scipio and Cato. He committed suicide, after the battle of Thapsus, which marked the definite defeat of the Pompeian party (6 April 46 B.C.).

JUBA, a Numidian king, son of the preceding ruler of the same name: d. 19 B.C. After the suicide of his father, he was taken to Rome by Cæsar where he was given an excellent education. Octavius, by whose good will he had been enabled to marry a daughter of Antonius and Cleopatra, sent him back as king of Numidia (30 B.C.). This latter country was made a Roman province in 25 B.C. and Juba was made king of Mauretania. Apparently the exchange suited him as he was very much given to literary pursuits. Although all his works have been lost, he is known to have written extensively on philology, Roman history and painting. He was especially interested in the languages of Assyria, Libya and adjoining countries. Consult Lübker, 'Reallexikon des klassischen Altertums' (Leipzig 1914); Sandy, 'History of Classical Scholarship' (Cambridge 1908).

JUBA ISLANDS. See DUNDAS ISLANDS.

JUBA RIVER, East Africa, flows into the Indian Ocean at about lat. 0° 5' S., formed to the north of 3° N., by the junction of several streams, mainly the Webi Ganana or Ganale Gudda, rising about 7° N., 38° E., and forming from 6° N. downward, S.E. and S., part of the frontier of British East Africa. By the Anglo-Italian agreement of 1891 all the seaboard north of the Juba was ceded to Italy, and the river became the dividing line between British territory and Italian Somaliland. It is navigable by small steamers to about 20 miles above Bardera (Bal Tir).

JUBÆA, a genus of palms named after Juba, king of Numidia (q.v.). It is closely allied to the coconut. The Jaggery palm of Chile which belongs to this family often is 60 or more feet in height. From the sap of this latter plant the native Chilean palm honey (miel de palma) is made. The Jubæa also furnishes an edible nut.

JUBAINVILLE, zhu'băn'vēl, **Marie Henri d'Arbois de,** French historian and philologist: b. Nancy, 1827; d. 1910. Graduating from the Collège Royal at Nancy and the University of Königsberg he entered upon the practice of law in Paris (1850), where he became archivist for the department of Aube (1852–80), and professor of Celtic languages and literature at the

Collège de France (1882). He edited 20 volumes of the *Revue Celtique*. He was the recipient of numerous honors and distinctions, among them being that of Officer of the Legion of Honor, and member of the Académie des Inscriptions et Belles-Lettres. Among his published works are 'Etudes sur les abbayes cisterciennes' (1858); 'Répertoire archéologique du départment de l'Aube' (1861); 'Histoire des duces el Comtes de Champagne' (7 vols., 1859–66); 'Cours de littérature celtique' (12 vols., 1883–1902, with the help of other writers); 'Eléments de la grâmmaire celtique, déclinacion, conjugaison' (1903); 'Les Celtes depuis le temps les plus anciens jusque en l'an 100 avant notre ère' (1904); 'La famille celtique' (1905); 'Les Druides et les dieux celtique à forme d'animaux' (1906).

JUBAL, joo'bal, or **JABAL,** son of Lamech and Adah. According to Genesis iv, 21, the inventor of the reed-flute and harp, or lyre, and the father, or predecessor, of all those who play upon such instruments, that is, the discoverer of musical science.

JUBILATE, jū'bĭ-lā'tĕ, third Sunday after Easter. The name is derived from the opening words of the 66th psalm, which forms part of the Mass on that occasion. In the Church of England and the Protestant Episcopal Church the same name is given to the 100th psalm which is chanted at the morning service immediately before the Creed.

JUBILEE, an observance among the Jews (from Heb. *Jobel,* i.e., the "ram's horn") which recurred every fiftieth year; the land was to rest, as in sabbatical years; land and houses in the open country and in unwalled villages reverted to their original owners or the heirs of such; all slaves were to go free. The law as a whole was distinctly theocratic; it vindicated the absolutism of Jehovah; it meant that Hebrews were the servants of Him, and could not therefore continue to be the slaves of their fellow-men; the land belonged to Him, and was only lent to the Hebrew tribes and families, who could not therefore be driven out by any human arrangement.

In the Roman Catholic Church a jubilee occurs every 25th year in which the Pope proclaims a remission, from Christmas to Christmas, of the penal consequences of sin, on condition of repentance, restitution and the performance of certain pious works. The first Roman Catholic jubilee was given in 1300. Ordinarily, the term is applied to any 50th anniversary.

JUBILEES, Book of. A pseudepigraphal production written in Hebrew by a Pharisee sometime between the accession of Hyrcanus to the priesthood 135 B.C. and his breach with the Pharisees 105 B.C. It is an attempt to rewrite the history of Israel and include with it a vast amount of traditional lore. The object of the author was, as R. H. Charles states it, to "defend Judaism against the attacks of the Hellenistic spirit that had been in the ascendant one generation earlier and was still powerful, and to prove that the law was of everlasting validity." The book has been known by other titles: 'Jubilees'; 'The Little Genesis'; 'The Apocalypse of Moses'; 'The Testament of Moses'; 'The Book of Adam's Daughters,' and 'The Life of Adam.' It consists of 50 chapters and besides the historical element it introduces the Messianic hope of Israel. It was translated from the Hebrew into the Greek and may also have been in the Aramaic. Four manuscripts of the book are preserved in the Ethiopic. C. F. A. Dillman has translated it into the German and G. H. Schodde and R. H. Charles have each translated it into English. R. H. Charles lists a bibliography of 31 titles of "Critical inquiries" concerning the book. Consult especially Charles, R. H., 'The Book of Jubilees' (London 1902); also Vol. II of his larger work on 'The Apocrypha and Pseudepigrapha of the Old Testament' (Oxford 1913).

JUCHEREAU, zŭsh'rō', **Louis, Sieur de Saint-Denis,** a French-Canadian soldier: b. Quebec, 1676; d. 1731. He became a soldier in Louisiana, where he served, on several occasions, as intermediary between the representatives of the government and the Indians. He became commander of the fort at the mouth of the Mississippi (1700). Later on he went to Mexico where he arranged a treaty with the viceroy for the encouragement of commerce (1714–16). Three years later he was in command of a band of Indians at the battle of Dauphin Island where the Spaniards were defeated (1719). He became commander of Nachitoches fort in 1720 and 11 years later he defended it from an attack of Naches Indians whom he overwhelmingly defeated.

JUDAH (Hebrew, Yehūdāh, celebrated), fourth son of Jacob and Leah, and the traditional ancestor of the tribe which bears his name. In Genesis he is said to have advised the selling of Joseph into Egypt. That the Biblical account given of Judah was derived from traditional history there seems little doubt; but these latter accounts appear to have been dressed up to suit the readers of the times in which the commitment to paper was made. Just how much, therefore, of the account of Judah, that has come down to modern times is historical, semi-historical or purely traditional or mythical it is very hard to determine. According to the Biblical record Judah married a woman of the Canaanites by whom he had three children, Er, Oman and Shelah. By his daughter-in-law, Tamar, he also had two sons, Pharez and Zarah. See JUDAH, TRIBE OF.

JUDAH I, a noted Jewish rabbi, scholar and expounder of the law: b. about 175; d. 219. He was the son of Simon II, and on the death of the latter he became president of the Sanhedrin to which he had been admitted in his youth on account of his extensive knowledge of Jewish law. His wealth, position and talents enabled him to control, in a thoroughly arbitrary manner, all the actions of the Sanhedrin which he made the centre of much of his religious activity. His home at Sepphoris became the shrine to which thousands went in search of knowledge. From there he exercised a strong and widely extended influence. There he lectured and the textbook which he wrote for these lectures ultimately acquired such an authoritative position that it was used as the basis for the compilation of the Talmud. Judah was known, during his life, as "The Rabbi," and as the prince (Ha-Nasi); and after his death he was remembered as "the holy one" (Ha-Kadosh).

JUDAH, Ben-Samuel (Arabic Abu'l-Hasan), a Spanish-Jewish poet and philosopher: b. Castile, about 1086; d. after 1140. Graduating in medicine he practised his profession for a while, but he seems to have finally abandoned it to devote his time to philosophy and poetry. His reputation as the greatest Hebrew poet of the Middle Ages was gained largely through his poems of longing for the home of his race. Finally he set out from Toledo in 1140 with the avowed intention of visiting Jerusalem, a journey from which he never returned. In his own day and for many years afterward he was looked upon as a great philosopher; but his fame to-day rests almost entirely upon his poetical work; for he was too much of a poet to be a deep and formal philosopher or theologian. His principal philosophical work is 'Al-Kha-zari,' which purports to expound, in Arabic, the principles of Christianity, Islam and Judaism and to present the philosophy of Aristotle. There are two translations of this work in German, the better of which is by Hirschfeld (Breslau 1885). Many of his poems have also been published in German and Emma Lazarus has translated some of them into English (Boston 1899). Others are also to be found in 'Songs of Exile,' by Nina Davis (Philadelphia 1901). Consult Kaufman, David, 'Jehuda Helewi' (Breslau 1877).

JUDAH, Ben Samuel, Jewish mystic: b. Speyer, probably about the middle of the 12th century; d. 1217. His school at Ratisbon, founded in 1195, became noted far and wide and was attended by many pupils destined to become famous and influential. So noted did he become as a moralist and mystic that many works appear to have been ascribed to him in which he had no part. Among the numerous works attributed to him, he appears to be the author of 'Sefer ha-kabod' (the 'Book of the Divine Majesty'); 'Sefer Hasidirn' (the 'Book of the Pious'); and a commentary on the Pentateuch. The latter, which has been lost, is known only by references to it in more recent works and in citations from it in later commentaries. The 'Book of the Pious,' which is considered his most important work, is partially a treatise on morality and mysticism; in which a fine distinction is made between the "divine Majesty" which is revealed to angels and men, and the "divine Being," who is not so revealed to humanity because he is too infinitely great for all human conception. This work became the text for the Judah sect which placed great stress on this fanciful distinction between the "divine Majesty" and the "divine Being." Critics are now inclined to dispute Judah's authorship of all of this work except the first 26 sections. Judah Ben Samuel had a great influence over his followers, not so much on account of the originality of his thought and the accuracy of his reasoning and philosophical speculations as because of his deep earnestness, his loftiness of aspiration and his real nobility of character. This influence was increased by his strong desire and tireless efforts to discover the great truths of the Bible and the hidden meaning of its priests, prophets and philosophers. Consult Grätz. 'Geschichte der Juden' (Vol. VI, Leipzig 1894); Schlossinger, 'Juda Ben-Samuel' (in the 'Jewish Encyclopedia,' New York 1914); Zung, 'Literaturgeschichte der Synagogalen Poesie' (Berlin 1864).

JUDAH, Tribe of, one of the Israelitish clans most frequently mentioned in the Bible. It is supposed to have had a strong Canaanitish admixture; and by some critics the story of Judah's marriage to a Canaanitish woman is believed to be but an anecdotal method of recording this fact of the introduction of foreign blood into the family. In the days of David the tribe of Judah comes, for the first time, into prominence. The book of Joshua states that the land of Judah extended from the Mediterranean to the Dead Sea, including in its territory the plain of the Philistines. It bordered on the land of Benjamin on the north. The land of Judah, of a rugged, hilly character, tended to separate the tribe from the other Israelitish clans; and this may account for the fact that it does not receive prominence earlier in Biblical history. The kingdom of Judah, brought into prominence by David, does not correspond in extent to that recorded in the book of Joshua, since the latter embraced the Jerahmeelites, Kenites, Kenizzites, part of the original tribe of Judah and some other small tribes. At no time in history is there a verified record of the tribe of Judah having actual possession of the plain of the Canaanites; though they may have done so in prehistoric times and have still preferred a claim against it. This seems probable from the aforementioned statement in the book of Joshua. The tribe of Judah, which was among the Jews who were carried into Egypt, seems to have prospered there, for when the Israelites left the latter country, it outnumbered all the other Jewish tribes, having 74,000 adult males, this being 12,000 more than Dan, the next most numerous tribe. After the hardships of the long journey home through the desert, the tribe of Judah still numbered 76,500 able-bodied men of fighting age. The clan totem of the tribe of Judah was a lion's whelp, which was later on converted into a standard with the motto "Rise up, O Lord, and let thine enemies be scattered!" In the person of David, the tribe of Judah became the ruling clan; but this superiority was disputed by Ephraim, especially after the removal of the head sacerdotal functionaries to Jerusalem; and the result was the setting up, by the latter, of a separate ecclesiastical establishment. Judah lost its identity as a tribe under Rehoboam and Jeroboam, when the ancient kingdom was divided and the clan of Judah became identified with the kingdom of Judah, which included the tribes of Judah and Benjamin and a large body of Levite priests. Consult Haupt, 'Studien' (Giessen 1914); Meyer, E., 'Die Israeliten und ihre Nachtbarstämme' (Halle 1906); Schmidt, N., 'The Jerahmeel Theory and the Historical Importance of the Negeb' (in the *Hibbard Journal,* 1908, pp. 322-342); Wellhausen, 'De gentibus et familiis Judæorum' (Göttingen 1869); Winckler, 'Geschichte Israels' (Berlin 1895). See JUDAH; BENJAMIN; JEWS AND JUDAISM.

JUDAISM. See JEWS AND JUDAISM.

JUDAIZERS, jū'dā-īz'-erz, certain early Christian converts who insisted on retaining the rites and ceremonies of the Jewish law. They were naturally Jews; and among the concessions that they insisted should be made to them

as new Christians was permission to observe the rite of circumcision. The Apostolic Council decided that these Jewish customs were not binding on Christians under the new gospel dispensation. Paul opposes the views of these Jewish converts very strongly in the letter to the Galatians. See PAUL; EBIONITES; NAZARENE.

JUDAS, JUDA, or **JUDE,** one of the brothers of Jesus. Practically nothing is known concerning him save the meagre details found in the New Testament and what has come to us from tradition. Some scholars assume that, according to John vii, 7, Judas and the other brethren did not believe in the Messiahship of Christ until after the Resurrection (Acts i, 14). That he was a married man we would infer from Paul's writing (1 Cor. ix, 5). Scholars ascribe to him the authorship of the Epistle of Jude wherein he speaks of himself as "the servant of Jesus Christ." See JUDE, EPISTLE OF.

JUDAS, or **JUDE,** one of the 12 apostles. He appears in the apostolic catalogue of Saint Luke as "Judas of James" that is, son or brother of James; in Saint Mark's and Saint Matthew's list he is styled Thaddæus, of which Judas may be an abbreviation. Nothing is known of his life except what is ascribed to him by widely spread tradition. According to Western legend he went in company with Simon the Canaanite to evangelize the Persians, and closed his life by martyrdom.

JUDAS BARSABBAS, the companion of Silas in the bearing of a decree from the apostles and elder brethren to the brethren in Antioch, Syria and Cicilia, according to Acts xv, 22–23. He has been supposed, without satisfactory proof, to have been a brother of Joseph Barsabbas. All that is definitely known of him is that he was a member of the Jerusalem church, that he was a man of influence in his community and that, furthermore, he was looked upon as a prophet.

JUDAS OF GALILEE, a Jewish popular leader who led an uprising against the Roman power about 6 or 7 A.D. According to Acts v, 37, he was killed and his followers dispersed; but Josephus, who records the insurrection, which according to the Acts was at the time of the census, states that Jacob and Simon, two sons of Judas, were put to death; but he gives no information as to the fate of Judas himself.

JUDAS ISCARIOT, ĭs-kăr'ĭ-ŏt (that is, of the family of Cariot in the tribe of Judah). One of the 12 apostles of Christ. He is styled the son of Simon, and was treasurer to the little company that attended Jesus, whom he betrayed, with a kiss, into the hands of the Jewish priests, for 30 pieces of silver. His divine Master addressed to him the mild reproof—"Dost thou betray the Son of Man with a kiss?" Remorse drove him to suicide.

JUDAS MACCABÆUS, Jewish warrior and national hero, who flourished in the 2d century B.C. He was one of five sons of Mattathias, a Joarib priest of Modin, not far from Jerusalem. The father, in 168, killed the officer in command of the troops sent to Modin to overthrow the Jewish religion, and, with his five sons, took to the mountains. On the death of Mattathias, shortly afterward, Judas became the recognized leader of the revolt, which he managed with very great skill and military wisdom which enabled him to defeat, in succession, four Syrian armies, each of them much stronger and better armed than his own mountaineers. After three years' successful warfare he again established the headquarters of the Jewish faith in the temple at Jerusalem. Judas Maccabæus disputes with David the honor of being the greatest of the Jewish national military heroes. In so high esteem was he held that the memory of his great achievement was kept green by means of a commemoration service in the annual Feast of Dedication. His brothers, too, seem to have been highly honored on account of the heroic part they had all played in the war of liberation; and one of them, Jonathan, became high priest. Under the leadership of Judas Maccabæus, the Jews undertook extensive military campaigns against their enemies on all sides, and with signal success which resulted in the conquest of some and the punishment of others. These warlike expeditions reached into the territory of the Arabs. In 164 B.C. Lysias, the guardian of Antiochus V, determined to punish this activity of the Jews; and to this end he marched against Jerusalem with a picked force of 100,000. Judas found himself unable to oppose a force so much larger than his own. But chance came to his aid in the shape of troubles in Antioch which forced the return of Lysias. Taking advantage of the circumstance and the occasion, Judas secured from the Syrian government recognition of the rights of the Jews to exercise their own religious worship. In the eyes of his followers, this was perhaps his greatest victory. But not content with this, he attempted to secure the recognition of the political independence of his country. But the intrigues of the Syrian party in Jerusalem and the quarrels among his own people weakened his own power in both a moral and a military sense. Though he signally defeated a Syrian army under Nicanor and fought a very successful campaign (163–62 B.C.) the discontent at home increased and tended greatly to weaken his organization and military strength to resist a second and still more formidable Syrian army, against which he fell in battle at Elasa (161 B.C.). He was succeeded by his brother Jonathan, the high priest (q.v.). See MACCABEES.

Bibliography.—Josephus, 'Antiquities, XII'; 'Maccabees I and II'; Schürer, Emil, 'History of the Jewish People in the Time of Jesus Christ' (5 vols., New York 1896); Stade, 'Geschichte des Volkes Israel' (Berlin 1888); Streane, 'The Age of the Maccabees' (London 1898); Weirs, H., 'Judas Makkabæus' (Freiburg 1897); Wellhausen, 'Israelitische und Jüdische Geschichte' (Berlin 1898).

JUDAS MACCABÆUS, an oratorio of Handel which was first produced in London in April 1747; and in Boston, United States, in December of the same year. See HANDEL.

JUDAS TREE, a tree so named because of the tradition that upon one of this family Judas hanged himself. The *Cercis siliquastrum,* the common European Judas tree, is to be found throughout southern Europe and Asia; while the American member of the family,

Cercis canadensis, is a much hardier tree and is found in northern regions. It is, however, very similar to the Old-World species. The dark-veined wood of both species takes a fine polish. Two other species are known in the United States, the *Cercis occidentalis*, found in the West, and the *Cercis chinensis* introduced into the country from Japan.

JUDD, Charles Hubbard, American psychologist: b. Bareille, British India, 1873; and at the age of six he was sent to the United States, where he graduated from the Wesleyan University 15 years later. After a two years' course in philosophy in Leipzig he taught philosophy in his native college until 1898, when he became professor of psychology in New York University. From 1901 until 1909 he was successively in Cincinnati and Yale universities, when he went to Chicago University as director of the school of education. Among his pubished works are 'Genetic Psychology for Teachers' (1903); 'Psychology' (1907); 'Laboratory Manual of Psychology' (1907); 'Laboratory Equipment for Psychological Experiments' (1909); 'Psychology of High School Subjects' (1915).

JUDD, Garritt Parmlee, Hawaiian statesman: b. Paris, Oneida County, N. Y., 23 April 1803; d. Honolulu, Hawaiian Islands, 12 July 1873. In 1828 he went to Honolulu as a medical missionary, and in 1842 was appointed recorder and interpreter to the native government. He organized the first Hawaiian ministry for Kamehamaha III in 1843, and held the portfolio of finance from 1844 until his retirement in 1853. He placed Hawaiian finance on a sound basis.

JUDD, Norman Buel, American statesman: b. Rome, N. Y., 1815; d. 1878. He began the practice of law in Chicago in 1836, where he soon became city attorney and was a member of the State legislature from 1844 to 1860. Going over from the Democrat to the Republican party in 1856, he became prominent in local politics and chairman of the Illinois State Central Committee, a position which gave him great influence at the Second National Convention at Chicago which, in 1860, nominated Abraham Lincoln for the presidency. Lincoln sent him, the following year, as Minister to Prussia, where his influence, for over four years, prevented the recognition of the Southern Confederacy. On his return home (in 1865) he was re-elected to Congress for two successive terms; following which he became collector of United States customs at Chicago. In his capacity of railway and corporation lawyer, in which he stood in the fore rank, he was closely connected with the projection and development of most of the great railways of the United States in his day. He was also a very active figure in the legislature. He took a prominent part in the impeachment of President Johnson and he was the author of the act which created inland ports of entry and provided for the shipment, in bond, of goods into the interior.

JUDE. See JUDAS, one of the brothers of Jesus.

JUDE, Epistle of. One of the so-called Catholic (i.e., general) epistles of the New Testament, whose author names himself "Jude, a servant of Jesus Christ, *but* a brother of James," thus reverently contrasting his blood-relationship to James, the head of the Jerusalem church (Acts xv, 13; xxi, 18; Gal. ii, 9, 12) with his higher relationship to Jesus (Mark iii, 34–35), who also was his and James' own brother (Matt. xiii, 55; Mark vi, 3; Gal. i, 19; 1 Cor. ix, 5) according to the flesh. The author describes his document as being an exhortation to his readers to "contend earnestly for the faith once for all delivered unto the saints," (3) and as taking the place of a treatise of a more general doctrinal character, on which he was engaged when occasion arose for this more direct form of address. That a dangerous situation had developed quite as ominous as that of which Paul forewarned both the Ephesians (Acts xx, 29–31) and the Philippians (iii, 18–19) "with tears," is obvious from the heightened tone of indignation, grief and loathing in which he refers to these latter day "wolves" who have "entered in, not sparing the flock." By what new system of theological doctrine the contagious immorality of the intruders was supported, the author assumes as too well known to his readers to require any detailed statement, but only a delineation of its fruits in resultant character and retribution. Only a precarious basis can, therefore, be found for any identification of the heresy with that of the Cainites, the Carpocratians or other Gnostic sects of the post-apostolic age. Similarly indecisive as to a late date are the citations in verses 9 and 14f. from such apocryphal books as *The Assumption of Moses* (7 to 30 A.D.) and *The Book of Enoch* (written before 170 B.C.); the necessary uncertainty as to the local habitat of the readers, whether Palestine, Syria or the Diaspora; and, the intimate relation of this document to the text of 2 Peter, in casting suspicion upon the claim made in verse 1 as to authorship.

In its biting invective and hortatory fervor this epistle equals if it does not surpass Galatians and 2 Corinthians. The interlopers are characterized as ungodly persons who, profesing godliness, have "crept in privily" to the "love-feasts" of the readers (iv, 12) only to "turn the grace of our God into lasciviousness" and to "deny our only Master and Lord, Jesus Christ" (consult Phil. iii, 18–19); as pretending to have received divine revelations, which their conduct demonstrates to have been vile, lascivious dreams (8); as flouting all authority, even that of angels, and railing at sacred mysteries which their carnal minds cannot understand (8–10); as continually swayed by ungodly lusts (16, 18) and sensual rather than spiritual in their judgments (19); as comparable therefore, to sunken reefs in a ship's channel or a foaming surf (Is. liii, 20) casting up mire and dirt; to clouds that bring no rain, or to fruit-trees fruitless in autumn, and fit only for winter's fire-wood (12) and to meteors disappearing in eternal night (13). The dissolute character and the impending doom of these corrupters of the Church, prefigured in the punishment of Israel in the wilderness (5); the fall of the angels (6); the fate of Sodom and Gomorrah (7); the legend of the archangel Michael (8–9); and the history of Cain, Balaam and Korah (11); were foretold in the prophecy of Enoch (14–15) and were explicitly

confirmed to them by the apostles of Christ (17–18). Re-enforced by this tragic warning, the epistle ends with a tender exhortation and a triumphant doxology (20–25).

Bibliography.— Introductions: T. Zahn (Eng. tr., 1909); H. J. Holtzmann (1892); A. Juelicher (Eng. tr., 1904); J. Moffatt (1911). MARCUS D. BUELL,
Professor of New Testament Greek and Exegesis, Boston University School of Theology.

JUDEICH, yōō'dik, **Johann Friedrich,** German forester: b. Dresden, 1828; d. 1894. After extensive experience in the forestry departments of Saxony and Bohemia he finally became director at Tharandt, where he made his name widely known in forestry. Among his published works are 'Die Forsteinrichtung' (1903); and contributions to Lorey's 'Handbuch der Forstwissenschaft' (1887–88). He wrote for numerous periodicals and edited Ratzebury's 'Die Waldverderber und ihre Feinde' (7th ed., 1876; 8th ed., 1885–95); and other publications.

JUDGE, William Quan, Irish-American theosophist: b. Dublin, 1851; d. 1896. Coming to America in 1864 with his father he studied law and entered into legal practice with him in New York city in 1872. He was one of the founders of the Theosophical Society of America, to which he finally gave up all his time, traveling, as its secretary, throughout Europe and the American continents. See THEOSOPHICAL SOCIETY.

JUDGE, public officer to whom is committed the exercise of judicial power of the state in the administration of justice in its courts. It is his province to decide questions of law, and in cases in which facts are to be decided by a jury to instruct the jury as to the law which is applicable and to point out to them what the exact questions for their determination are. (See JURY). He pronounces the sentence, or enters the judgment, of the court.

The word is not a technical one. The officers of the King's Court, when that tribunal began to take definite shape, were known officially as justices. Until the recent Judicature Acts in England it was customary formally, as well as popularly, to speak of the judges of the superior courts at Westminster, though the members of the courts of King's Bench and Common Pleas were properly justices, and of the Court of Exchequer barons, and at the present time the members of the Supreme Court of Judicature, including the Lord Chancellor, the Lord Chief Justice, the Master of the Rolls and the Lords of Appeal are spoken of as the judges of that court. English judges are appointed by the Crown (this patronage being exercised by the Lord Chancellor, who is the head of the legal profession) from the leaders of the bar, and hold office during good behavior.

In all the Federal courts, in all the higher courts of the several States and in most of the inferior courts, judges must be trained in the law, though lay judges were common in the State courts of first instance until quite recent times. Federal judges are appointed by the President, by and with the advice and consent of the Senate, and hold office during good behavior, being removable only by impeachment. Any Federal judge who has served for 10 years and is 70 years of age may retire on full pay for life. The choice of judges in the States is determined by the State constitutions. As a general rule they are elected for a term of years. The fear was quite generally expressed at the time the tendency to make the office an elective one became general, that judges so chosen would be inferior to those appointed by the State governors, but does not seem to have been justified by the result. In most of the State courts the small salaries paid and the limited terms of office prevent the leading members of the bar from seeking, and in many cases from accepting, the office of judge.

A judge must be impartial and any interest in the cause or the parties will disqualify him from presiding at the trial. While in office he is precluded from practising before the court of which he is a member, and he is commonly, and should be universally, precluded from practising before any court. He is not answerable to any suitor for the correctness of his rulings or decisions, and in the absence of positive fraud is not answerable in damages for any decision he may render. Every judge has power to punish for contempt of court in case of acts committed during the court's session, and even of such acts committed outside the court, though this latter power is to be exercised with care, and its limits are naturally not defined with certainty. For the peculiar functions exercised by American judges as interpreters of the Federal and State constitutions, see JURISDICTION.

JOHN DOUGLASS BROWN.

JUDGE-ADVOCATE, a title given the prosecutor in a court-martial or military commission. In the United States the judge-advocate is generally a member of the judge-advocate-general's department. In Great Britain the duties of judge-advocate usually devolve upon a detailed staff officer, or the prisoner's commanding officer. The prisoner has a right to call on any regimental officer to speak in his behalf. See LAW, MILITARY.

JUDGE-ADVOCATE-GENERAL, the head of the United States army bureau of military justice. He has the rank of brigadier-general and officiates as the legal adviser of the Secretary of War and of the Department of War. All European armies have a similar functionary and a similar department. The Judge-Advocate-General is the legal custodian of all general courts-martial, military commissions, courts of inquiry and papers relating to title of land under control of the War Department, except the public buildings and grounds in the District of Columbia.

JUDGE LYNCH. See LYNCH LAW.

JUDGES, Book of. This book in the Hebrew Bible derives its name from the deliverers whose exploits it records. In its present form,

the book is the product of that active era of historical interpretation inaugurated by the publication of Deuteronomy in 621 B.C. (See DEUTERONOMY). The narrative of the struggle between the Hebrews and the earlier inhabitants for the possession of the land furnished material especially adapted to exemplify the doctrine of Deuteronomy, that Israel's prosperous possession of the land was contingent upon her faithfulness to Jehovah. It was one of the first tasks of the historians who were dominated by the thought of the great law book to edit the stories of the Judges and compose the book now contained in chapters ii, 6–xvi. They had at hand for their purposes a history of the early heroes, which may have formed a part of the great, composite work already compiled from the histories of Judah and Ephraim (JE), or may have been a separate work. In any case, the earlier document contained some of the oldest and most authentic historical traditions of the nation. The Song of Deborah (Chap. v), for example, is the oldest considerable composition preserved in the Hebrew Bible. It must have been sung immediately after the events which it celebrates. Taking this priceless collection of hero tales, that had been gathered and combined in the three centuries preceding their time, the Deuteronomic editors introduced a heading and conclusion for each tale designed to enforce the great doctrine which they found so well exemplified in the varying fortunes of the times. When Israel forgot Jehovah and turned to other gods, her enemies prevailed; when she returned to him in penitence, a deliverer was raised up and peace secured throughout his rule. They introduced their readers to this new interpretation of the old stories by a summary statement of the facts and principles (ii, 6–iii, 6) which they were to find fully illustrated in the separate stories and their interpretation of each. Seven principal stories form the main body of the work, those of Othniel, Ehud, Deborah and Barak, Gideon-Jerubbaal, Abimelech, Jephthah, Samson. Of these leaders, Abimelech is styled a prince and king, rather than a judge; in truth the brief hereditary rule set up by this man and his son may be counted the first attempt at establishing a monarchy in Israel. Between the longer narratives short notices of six other judges are inserted. The little that is told of them is in the characteristic language and style of the editors. Perhaps they were included in order to bring the number of the judges to 12. To this original book, edited not far from 600 B.C., there was prefixed as an historical introduction an ancient account of the entrance into Canaan and of the failure of the tribes to dispossess the inhabitants (i, 1–ii, 5), and there were added two appendixes (xvii–xviii, xix–xxi) which did not receive the editorial interpretation characteristic of the body of the book. The former of these, telling of the migration of Dan to the northern borders of Israel's territory, is obviously a very old narrative, but the latter, the story of the outrage at Gibeah, gives many indications of a relatively late date.

Fortunately the exilic editors confined their interpretations of the history to the framework which they composed and left the stories themselves in their ancient form, so that they afford the student of Israel's early political, social, and religious development a mine of information and preserve for the general reader the rugged spirit of the pioneer days of struggle against many and varied dangers. The chronology of the book belongs to the editorial framework; it is based on the theory that the heroes ruled united Israel, whereas the stories themselves reveal the fact that the judges were local leaders in their different tribes and districts. Their lives may have been, in some cases, contemporaneous. An historical use of the book requires careful discrimination between its earlier and later elements, varying in date of composition by as much as 500 years.

From a literary point of view, the older portions of the book give some of the best specimens of rapid, picturesque narrative, full of human interest and of simple loyalty and faith toward Jehovah, which make Israel's early prose so vital, while the Song of Deborah ranks as one of the finest examples of a victory ode preserved in the early literature of any language. On the other hand, the completed book is a monument of great interest in the art of historical composition. It is perhaps our first important example of a deliberate interpretation of events long past from the standpoint of a conscious philosophy of history. The distinction so clearly visible between the naïve stories themselves and the rigid, solemn interpretation of the editors marks a great transition in the development of historical writing in Israel. Since Israel was the first people to develop a true historical literature, this transition is an important landmark in the story of the world's historical writing.

JUDGES, Recall of. See RECALL.

JUDGES' CAVE, a crevice between some large fallen rocks on West Rock, New Haven, Conn., now a municipal park, which in 1661 was a temporary hiding-place for Goffe and Whalley, two of the English regicides.

JUDGES OF ISRAEL (Hebrew, shōphĕtīm), the leaders managing the affairs of Israel from Joshua to Saul. Their position was partially judicial and partially one of leadership, though the former function, as time went on, seems to have gained in importance at the expense of the latter. The names of these judges usually given are Othniel, Ehud, Shamgar, Barak, Gideon, Tola, Jair, Jephthah, Ibzan, Elone Abdon and Samson, an account of whose deeds and various administrations may be found in the books of Judges and First Samuel.

Some accounts add to these names those of Eli, Samuel, Deborah and Abimelech, making 16 in all. The recorded exploits and actions of these judges seem to be more tradition than real history. According to the records, these "judges" are supposed to have covered a period of 400 years, or an average of 25 years for each functionary, a considerable length of time for the conditions under which they must have held office and the dangers of the age. This average length of time is increased if the estimated period of 480 years for 12 judges is accepted, making 40 years of government for each individual. The functions, characters and actions of these judges were so different in individuals that modern critics are inclined to look upon them rather as legendary traditional or mythological heroes rather than as sober historical characters. Notably Samson has been looked upon as an old sun god; and Deborah, the prophetess, and Samuel, the powerful and influential seer, might well be traditional types of early semi-religious, semi-tribal leaders. See JUDGES, BOOK OF.

JUDGMENT, the decision rendered by the authority to which a question or issue has been submitted for determination. In a more restricted sense, the decision by a court of law of an issue raised by parties litigant, or the determination and declaration by such court of a legal right. There are many rulings by such a court which are not judgments, but determine merely some incidental question, and there are judgments which are interlocutory, as well as final judgments which put an end to the controversy. But every judgment in a judicial proceeding is an adjudication by the court of some right of a suitor, and until set aside or reversed, is the law governing such right.

In early times the solemn character of a court record and the means which the law furnished for the enforcement of an obligation thus established caused such a record to be adopted for the purpose of entering into an obligation as distinguished from resort to a court for the vindication of the obligation when disputed by the other party. A modern survival is found in the confession of judgment, by which a man causes his obligation to pay a sum of money to be entered upon the court records in the form of a judgment against him for the amount due. In consequence of the early practice — aided also by the fact that a judgment may be sued upon outside the jurisdiction of the court in which it was entered, like a contract — the older legal writers speak of judgments as a species of contract. But this classification has been shown to be unscientific by recent writers, since the courts have pointed out that these obligations are not contractual in either their origin or their incidents, and it is now customary to speak of them as *quasi*-contracts.

It is stated above that a judgment is interlocutory or final. In a suit for partition of real estate a judgment that partition be made is interlocutory, and is the basis of further proceedings which result in the final judgment establishing the partition. A final judgment is one which ends the controversy, at least as to some of the parties. It is a general rule that no appeal can be taken, except from a final judgment, and while there can rarely be a case of doubt as to the finality of a technical judgment, that is the decision rendered by a court of common-law jurisdiction, questions frequently arise as to the finality of decrees (which correspond to judgments) entered by courts of equity. The test is whether the right is finally settled by the decree; for example, when a creditor has claimed to intervene in an equity proceeding to establish his right to share in a fund being distributed, a decree excluding him is final as to him and appealable, though in all other respects the suit remains undetermined by the court below.

A judgment of a competent court having jurisdiction of the parties and the subject matter is conclusive, except so far as it may be the subject of appeal to a higher court. The direct issue thus determined will not be retried by another court, and such a determination cannot be attacked collaterally except on the ground of fraud or lack of jurisdiction of the court in which the judgment was rendered. A judgment *in personam* binds only parties to the cause and those in privity with them; a judgment *in rem*, which is a judgment determining the *status* of person or property, binds all the world. Decrees of courts of admirality are judgments *in rem* and conclusive of the *status* of the subject matter of the cause upon every one. Decrees of divorce are judgments *in rem*, and determine the *status* of the parties to the proceeding. In the United States they are pronounced by the State courts in the administration of very diverse statutes relating to the subject of divorce, and as the courts of all the States, in addition to the general principles of comity observed between courts of different jurisdictions, are bound by the mandate of the Federal Constitution requiring that "Full faith and credit shall be given in each State to the public acts, records and judicial proceedings of every other State" many perplexing questions have arisen. These cases afford good illustrations of successful collateral attacks upon judgments on the ground of fraud or lack of jurisdiction of the court entering the judgment. It is now well settled that a decree of divorce may be successfully attacked collaterally on the ground of fraudulent collusion between the parties or lack of jurisdiction of the court pronouncing it over the person of the defendant. It is to be observed that a final judgment is conclusive of the particular cause, and finally determines the right therein litigated, and may be pleaded in bar of any future attempt to assert the right, except in a case in which there has been no determination on the merits; as for example, where the plaintiff has suffered a voluntary non-suit, that is, has elected in advance of a verdict to abandon his case. He loses that particular case and must pay the costs, but is not prevented from bringing another action.

In most of the United States a judgment for a sum of money found to be due, from the date of its entry, and without the issuance of a writ of execution, constitutes a lien upon the real estate of the judgment debtor; that is, a claim which must be paid out of the proceeds of any judicial sale of the property in its due order of priority as compared with other liens upon the same property. This lien usually extends only to real estate within the jurisdiction

of the court in which the judgment was entered with provision for filing a transcript to create a lien in other countries of the same State in which the debtor owns real estate. A foreign judgment, in which are included the judgments of others of the United States, must be sued on and a judgment recovered upon it to make it effective in any of the States. In such suit no defense which could have been interposed in the original suit will be allowed to the judgment debtor.

JOHN DOUGLASS BROWN.

JUDIC, zhu'dīk, **Anna Damiens,** French actress: b. Semur, 1850; d. 1911. In 1868, shortly after her graduation from the Conservatoire, she became very popular at the Eldorado Theatre. In 1871 she visited Belgium; and then returned to the Gaité and other Parisian theatres where her popularity increased by leaps and bounds. Among her notable creations were Niniche, Mimi, Lili and Mademoiselle Nitouche. She made a two years' tour (1885–86) of the principal cities of Europe and the United States. Retiring from the stage for some time, she returned to it in 1898.

JUDICA, joo'dī-ka ("judge," or "give sentence"), the first word in the 43d Psalm, used as an introit in the Church of England (1549) for the 3d Sunday in Lent, and in the Roman Catholic Church for the 5th Sunday in Lent. Hence "Judica Sunday" as a term to designate those several days.

JUDICATURE ACTS, *in English law,* a number of statutes, dating from 1873, simplifying procedure and consolidating numerous courts into one Supreme Court of judicature. Demurrers were abolished, and important changes made in the rules as to the right of trial by jury. The acts in question are 36 and 37 Vict., c. 66, and 38 and 39 Vict., c. 77, with various amendments. A 12th amending act was passed in 1899. By the first of these acts the Court of Queen's (or King's) Bench, the Court of Chancery, the Court of Exchequer, the Court of Common Pleas, the High Court of Admiralty, the Court of Probate and the Court of Divorce and Matrimony were consolidated into one Supreme Court of Judicature, consisting of a High Court of Justice and a Court of Appeal. By these acts laws and equity were administered by the same court, and equitable defenses allowed in legal actions. Another object of these acts was to simplify pleading and practice, and this was done by abolishing the old forms of action. The former arbitrary modes of pleading were supplanted by concise statements of claim or defense. The House of Lords under these acts remains the highest court of appeal. In case a point of law is raised by the pleadings, it is left for settlement until the trial or until after the issues of fact have been disposed of. It is claimed by some that the abolition of demurrers and settling questions of law after the beginning of the action has led to great laxity and inaccuracy in pleading. Upon notice without order, either party has a right to trial by jury in actions of false imprisonment, malicious prosecution, slander, libel, seduction or breach of promise of marriage. By the act of 40 and 41 Vict., c. 57, a Supreme Court of Judicature was established in Ireland in 1878, and by this act and later ones, a substantially similar system to that of England is now in effect.

JUDICIAL DECISIONS, Recall of. See RECALL.

JUDICIAL DISTRICT. See DISTRICT.

JUDICIAL NOTICE, recognition by a court of some certain feature involved in an action as being self-evident and, therefore, in no necessity of proof. It is a very old doctrine in English and American law. The determining of what facts come under the term judicial notice is almost altogether in the hands of the court which is generally supposed to take judicial notice of the common and the public statute law, the public offices and officers, rules of courts, matters of public record in its own State, the State and the United States political constitutions; and, in addition, all other factors or claims which might, in reason, affect any decision to be made, such as the existence and title of foreign state and sovereign recognized by the United States and public proclamations of the national or State chief executive. In short, the court, in making its decision in case of judicial notice, is supposed to be fully and truly possessed of all the facts, conditions and bearings of the question at issue. The judge must at some time either previous to the trial or during it become convinced that the fact in question is self-evident and that it therefore does not admit of dispute nor require proof. This condition also applies to courts and juries, but the jury cannot take cognizance of a law without instruction from the court, since such is not the function of a jury. An appeal may be made to the appellate court against the decision of the court, and it may, if it finds reason therefor, reverse the judgment and order a new trial. See EVIDENCE.

JUDICIAL SEPARATION, the termination by process of law of the conjugal rights and obligations of husband and wife. In many countries where divorce is either not recognized at all or is very difficult to obtain, judicial separation affords a legal relief against, if not a remedy for, intolerable marriage conditions. It is therefore frequently resorted to in countries that are strongly Roman Catholic, owing to the stand taken by that Church against the dissolution of the marriage contract, which is considered in the light of a sacrament of religion. In most of the countries of Europe, where old customs, laws and traditions change slowly, the securing of a divorce is a very difficult matter, even where the provisions of the law make it possible; and here judicial separation is resorted to as affording quicker and easier relief and less public notice. This condition obtains in England and her colonies. In the United States, however, where many attempts have been made by the various States of the Union to regulate the question of the legal separation of man and wife, more or less liberal divorce laws have been placed upon the statute books of most of the States. In the legal sense of the term judicial separation is not a divorce since it does not dissolve the marriage bonds, but simply requires the contracting parties to live apart as though they were not husband and wife. Divorce, on the other hand, is the dissolution of the marriage ties. The parties to the divorce are generally

permitted to marry again, though the divorce decree sometimes prohibits one or both of them permanently, or for a certain specified time. In effect the judicial separation is, in many respects, similar to that of the decree of divorce. It destroys the right of husband and wife to cohabit (*consortium*) or to enjoy one another's society as married parties. As it has the result of making the parties to the judicial separation, in a legal sense, individuals, it relieves the husband of the support of his wife or of the payment of all debts and obligations contracted by her. But as the parties to the decree of judicial separation are still husband and wife, in the eyes of the law, neither, under the terms and intent of the decree, can marry again. Any such attempt would be legal bigamy and adultery. Nor does legal separation generally interfere with the property relationship of husband and wife or any business contracts, obligations or relationships they may have entered into previous to the decree of judicial separation. The husband, as the head of the family, is still the legal guardian of his children unless expressly deprived of this, or having voluntarily resigned it in the legal process of the securing of the decree. Although legally separated, the wife, on the death of her husband, has the same relation to him and his estate and other possessions as though no separation had taken place. The husband, in the same manner, in the case of the death of his wife, has all the rights given by the marriage contract. See DIVORCE.

JUDICIARY, the body of judges or magistrates who exercise their authority either singly or as tribunals, interpreting the laws which the legislatures make and the executives execute. The highest courts in all countries, and those mostly of an intermediate character, are held by a bench of judges, rather than by a single magistrate. Dominating all is usually a supreme court which determines all legal controversies of national concern. In nations under a federal system of government, the judicial power is usually divided between two separate and distinct classes of courts: federal courts exercising judicial power in respect to questions of national concern and state courts established for the determination of legal controversies of a local character.

The Judiciary Act of the United States Congress, 24 Sept. 1789 (1 Stat. 73), is nonembodied with the amendments in the provisions of the United States. The act established the Federal courts of the United States, defined their jurisdiction and powers and regulated procedure. The basis of the whole legal system of the country is the common law (q.v.), without which there would be an extraordinary variety of judicial organization and procedure throughout the nation, each State having its own separate and distinct judicial system and procedure; framed according to its own notions of its local needs and conditions. Above all other governmental departments the Federal judiciary especially, and the judiciary in general, command popular confidence and respect. The importance and political influence the judiciary possesses have been largely increased from the power which the American courts have attained in declaring statutes null and void when they are found to conflict with the Constitution. From the beginning this power has been recognized almost without dispute. While State judges are for the most part elected by the people, all Federal judges are appointed by the President with the advice and consent of the Senate. In regard to terms of judicial tenure, there is a great variety of opinion and practice throughout the United States. See COURT; JUDGE; SUPREME COURT OF THE UNITED STATES.

JUDICIARY AND EXECUTIVE. See EXECUTIVE.

JUDITH, Jewish heroine. She was the widow of Manasses, a citizen of Bethulia. When Holofernes, general of King Nebuchadnezzar, according to the book of Judith, besieged Bethulia, a city of unknown geographical position, she went armed with faith in Jehovah to the tent of the invader and was admitted because of her stately beauty. While he slept she cut off his head with his own sword and thus delivered Israel. This incident has been a favorite subject with artists, for in the first place the book of Judith is written with abundant literary point and skill and is naturally suggestive to the sculptor or painter. It is the subject of Donatello's bronze group in the Lanzi palace at Florence, and of many pictures, notably that of Cranach in the Dresden Gallery, and those of Horace Vernet, 'Judith on Her Way to Holofernes' and 'Judith in the Tent of Holofernes.'

JUDITH, zhŭ'dēt', **Julie Bernat,** French actress: b. Paris, 1827; d. 1912. She was a relative of Rachel (q.v.). She played in the principal theatres of Paris, making her début at Les Folies in 1845. Among her many successful rôles were Pénélope, Alcemène, Rosine, Charlotte Corday and Mademoiselle Aïsé. She was married to Bernard Derosne and with him made translations from English into French. Under the pen name Judith Barnard she wrote 'Le Chateau du Tremble' (1872).

JUDSON, Adoniram, American missionary: b. Malden, Mass., 9 Aug. 1788; d. at sea, 12 Aug. 1850. He was a member of the first American Board of Commissioners of Foreign Missions, consisting of five members. Sent to London to confer with the London Missionary Society, he was captured, on the way, by a French privateer and imprisoned at Bayonne. Released, later on, he proceeded to London and accomplished his mission. Returning to America, he and four other missionaries, Hall, Newell, Nott and Rice, were sent to India (or Burma) by the American Board of Foreign Missions (February 1812). In Calcutta Judson and his wife joined the Baptists, and their activities resulted in the formation of the American Baptist Missionary Union (1814). After considerable wandering, Mr. and Mrs. Judson settled in Rangoon (1813). Although they do not seem to have had very great success in gaining converts among the natives, the government, nevertheless, did not show itself at all friendly toward their efforts, which had netted them a score or more of converts in 11 years. On the breaking out of war between Burma and the East India Company, Judson was imprisoned for a year and seven months, and even then was released only on a peremptory demand on the part of Gen. Sir Archibald Campbell. After a year at Amherst in Lower Burma, he went

to Maulmain, where he was successful in founding a church. Returning to America in 1845 on account of his own ill health and that of his family, he went back to Rangoon in 1847, where he occupied a goodly part of his time in the preparation of a dictionary. Forced by returned ill health to leave the country, he was carried on board ship at Maulmain and died on the voyage four days later. His body was buried at sea. Judson was an indefatigable and tireless worker, and his work must be judged from two points of view, the aims actually accomplished and the general results of his labor upon conditions not only in the country in which he labored but upon all of India and Further India. In his 37 years of missionary labor he succeeded in gradually working up a sentiment in the East in favor of religious toleration which is to-day bearing fruit in many quarters. One of his most successful efforts was the organization of an extensive, trained body of native assistants to aid him in the translation of the Bible and other works into Burmese, and in the compilation of his Burmese-English and English-Burmese dictionary, Burmese grammar and Pali dictionary. These works, though intended primarily as aids for missionaries in Burma and the India countries generally, have been great aids to the study, by students and scholars of the languages of the East, in which Judson's missionary efforts and the publicity they had received had helped to increase the growing interest. Consult lives of Judson by his son, Edward Judson (New York 1883 and 1898); and by Wayland. See JUDSON, ANN HASSELTINE; JUDSON, SARAH HALL; JUDSON, EMILY CHUBBOCK.

JUDSON, Adoniram Brown, American surgeon: b. Maulmain, Burma, 7 April 1837; d. New York, 21 Sept. 1916. He was a son of the missionary Adoniram Judson. His mother was Sarah Hall Boardman Judson. He was graduated from Brown University in 1859, Harvard Medical School in 1860, Jefferson Medical College in 1865 and College of Physicians and Surgeons in 1868. He became assistant surgeon in the United States navy in 1861; surgeon in 1866 and resigned in 1868. Since then he had engaged in the practice of medicine in New York city. He was a specialist in orthopedic surgery, inspector of the New York board of health from 1869 to 1877; pension examining surgeon from 1877 to 1884 and from 1901 to 1914; medical examiner of the New York State Civil Service Commission from 1901 to 1909; orthopedic surgeon to the out-patient department of New York Hospital from 1878 to 1908. Dr. Judson was president of the American Orthopedic Association in 1891, member of the American Medical Association, Fellow of the American College of Surgeons, American Academy of Medicine and the Academy of Medicine and was a member of Lafayette Post, G. A. R. He wrote on medical and surgical subjects.

JUDSON, Ann Hasseltine, American missionary to India: b. Bradford, Mass., 22 Dec. 1789; d. Amherst, Lower Burma, 24 Oct. 1826. She was the wife of Adoniram Judson (q.v.), whom she accompanied on his first visit to India (1812) and with whom she labored as a missionary. She published a 'History of the Burma Mission.' Consult Knowles, 'Life of Ann Hasseltine Judson.'

JUDSON, Edward, American Baptist clergyman: b. Maulmain, Burma, 27 Dec. 1844; d. New York, 23 Oct. 1914. He was the son of Adoniram Judson (q.v.) and came to the United States in 1850 after the death of his father. He studied at Madison (now Colgate) University and was graduated from Brown in 1865. He was principal of the academy at Townsend, Vt. (1865–67) and subsequently professor of Latin at Madison (now Colgate) University. In 1875 he accepted the pastorate of the Baptist Church at Orange, N. J., then became pastor of the Berean Baptist Church, New York city, and later secured a site on Washington square, New York, and erected the Judson Memorial Church (in memory of his father), of which he was pastor. Here he built up an institutional church, with many different lines of work, including gymnasium classes, a dispensary and a children's fresh air fund. He lectured on theology at the University of Chicago, 1904–06, and on Baptist principles and polity at Union Theological Seminary, 1906–08, and was made professor of pastoral polity at Colgate in the latter year. In 1899 he published a 'Life' of his father, and he wrote also 'The Institutional Church.'

JUDSON, Emily Chubbock, American writer and missionary: b. Eaton, N. Y., 22 Aug. 1817; d. Hamilton, N. Y., 1 June 1854. She was the third wife of Adoniram Judson (q.v.) whom she married in 1846, and at once accompanied to India. Even at this time she had attained a reputation as a writer under the pen name of Fanny Forester. She wrote the life of Sarah Hall (Boardman) Judson, second wife of Adoniram Judson. On the death of her husband she returned to America in 1850. Ill-health prevented her continuing her literary labor. She, however, assisted Dr. Wayland in writing the biography of Judson. Consult Kendrick, A. C., who has written her biography.

JUDSON, Frederick Newton, American author, lawyer and educator: b. Saint Mary's, Ga., 1845. Graduating from Yale University and the Saint Louis Law School (1871) he became private secretary for Gov. Gratz Brown, when he entered upon the practice of law. He lectured at Washington University (1903), and was Storrs lecturer at Yale (1913). He has been counsel for the United States on several important occasions, and acquired a reputation as a corporation lawyer. Among his published works are 'Law Practice of Taxation in Missouri' (1900); 'The Taxing Power, State and Federal, in the United States' (1902); 'The Law of Interstate Commerce' (1905); 'The Judiciary and the People' (1913).

JUDSON, Harry Pratt, American educator: b. Jamestown, N. Y., 20 Dec. 1849. He was graduated from Williams College in 1870, was professor of history in the University of Minnesota 1885–92, professor of international law and head of the department of political science since 1892 in, and president since 1906 of, the University of Chicago. He is a member of the General Education Board since 1906, and member of the Rockefeller Foundation since 1913. He was chairman of the China Medical Commission 1914, and is a member of the China Medical Board since 1914. His works include 'Cæsar's Army,' a study of the military art of the Romans (1888); 'Europe

in the Nineteenth Century' (1894); 'The Growth of the American Nation' (1895); 'The Higher Education as a Training for Business' (1896); 'The Government of Illinois' (1900), etc.

JUDSON, Sarah Hall (BOARDMAN), American missionary to Burma: b. Alstead, 4 Nov. 1803; d. Saint Helena, 1 Sept. 1845, while on way home to United States. She married Rev. George Dana Boardman in 1825 and went with him to the Baptist missionary work in Burma. On the death of Boardman she was married to Dr. Adoniram Judson (q.v.) in 1834. She helped the latter in his religious and literary labors and acquired such a good knowledge of Burmese that she translated into it numerous tracts, Biblical selections and a part of the 'Pilgrim's Progress.' She also made a hymn-book in Burmese and supervised the translation of the New Testament into Peguan. Consult her life by Emily C. Judson.

JUDY, the wife of Punch, in the puppet show, Punch and Judy. See PUNCH AND JUDY.

JUEL, Jens, jōōl, yĕns, Danish statesman: b. 15 July 1631; d. 1700. He joined the suite of Count Christian Rantzau, with whom he visited Vienna and Ratisbon in 1652. Five years later Juel was sent as minister to the Polish court. Here he was not successful in deterring King John from making a separate treaty with Sweden. On Juel's return to his native country he was made privy councillor. About this time the misunderstanding between his uncle, Hannibal Sehested and Frederick III was composed and Juel's prospects were enhanced thereby. As his uncle's representative he negotiated the Peace of Copenhagen with Charles X. From 1660 to 1668 Juel was Danish minister to Sweden. Griffenfeldt, the chancellor, was a great admirer of Juel and on two occasions (1672 and 1674) sent the latter on special missions to Sweden with the avowed object of cementing closer relations between Sweden and Denmark but really to form an alliance with the former. Juel admired his chancellor's policy, which aimed at the weakening of Sweden and so forming a just balance between her and Denmark. Juel desired by all means to avoid a war with Sweden, the latter state being far the superior of Denmark in military strength. Despite his endeavors the unfortunate Scanian war broke out in 1675 and lasted for four years. At its close Juel was one of the Danish representatives who signed the peace treaty at Lund. At that conference he still aimed at the formation of an alliance with Sweden and afterward followed out this policy even bringing about the marriage of Charles XI and Ulrica Leonora, daughter of King Christian V. In 1680 Juel's plans for an amicable understanding with Sweden were upset by the death of Gyllenstjerna, the Swedish statesman who shared his views. In 1697 Juel represented his country at the coronation of Charles XII at which time he concluded a new treaty with Sweden. Juel was the shrewdest diplomatist of his time, taking for his motto: "We should wish for what we can get." He was greatly worried over the state of his country which he regarded as placed at the mercy of the Great Powers, a mercy as tender then as now! He opposed the establishment of an elastic political system and did all in his power to advance commerce and industry. The emancipation of the serfs Juel thought impracticable and about the only reforms he championed were a few petty changes in the agricultural system. He showed himself a faithful friend by remaining steadfast to Griffenfeldt in the latter's days of adversity. Consult article "Juel" in Bricka, 'Dansk biografisk lexikon' (Copenhagen 1887 et seq.).

JUEL, Niels, jōōl, Danish admiral: b. Christiana, 1629; d. 1697. Going to Holland in 1650, he served under De Ruyter and Tromp in the war against England and the Barbary states. He also fought with allied Dutch fleets against Sweden in 1659, and also in the later war with the same country in 1676, when being himself in command at the battle of Jassmund, he defeated, and swept the enemy's fleet out of the sea with a very much smaller number of vessels. The following year, with 25 ships to the Swedish 36, he again obtained the victory at the battle of the Bay of Kjöge.

JUENGLING, yŭng'lĭng, **Frederick,** American wood engraver: b. 1846; d. 1889. He was one of the founders and the first secretary of the American Society of Wood Engravers (1881). In his art he was one of the most consistent advocates and practicers of the new American system of wood engraving which substituted short broken lines, dots and so forth for the regulation long lines and regular sweep of the graver. He was a bold and clever workman and met with very considerable success. Consult Weitenkampf, Frank, 'American Graphic Art' (New York 1912).

JUG, a vessel of earth, glass or metal, used for holding liquids and characterized by having one handle and a lip for ease in pouring. The origin of the word is uncertain. In slang the term is employed to denote a prison, and there is not wanting evidence that in this latter sense it is an adaptation of the Latin *jug-um,* a yoke. In the United States the word pitcher has superseded jug to a great extent. The Metropolitan Museum, New York, and the British Museum, London, contain very fine examples of this kind of vessel, in the latter is a remarkable bronze jug found at Kumasi in 1896. It was made in England in the reign of Richard II, whose arms and badge it bears. It is furnished with a lid, handle and spout. The ewer is a jug with a broad lip and was formerly in general use at table for pouring water over the hands after meals, a practice very essential when we remember that table forks were still unknown. Much variety in form and design appears in the early specimens, some are balanced on three feet and some take the form of animals. The 18th and 19th centuries saw the production in England of pottery vessels known as "Toby Jugs," "Nelson Jugs," etc., usually in the form of a stout old man with a hat the corners of which form the spouts.

JUGGERNAUT, jŭg'ẽr-nât. See JAGANNATH.

JUGGLER (Old French, *jangleur,* Latin, *joculator,* joker, jester), a skilful and dexterous performer of feats of different kinds, including slight of hand (legerdemain). The juggler is or was to be found in all lands. He was a favorite with the Greeks and the Romans, and has been, for centuries, with the

Japanese and Chinese; and he has long been an institution in India, Further India, Persia and Tibet. The Aztecs and many other American native races had very skilful jugglers who seem to have been frequently connected with the religious or mythological beliefs of the peoples. Very skilful jugglers formed one of the most striking features of the elaborate court entertainments of Montezuma II, who was so fond of this sport that he had his own favorite private jugglers, some of whom were dwarfs and people otherwise deformed. See LEGERDEMAIN; FAKIR; FIRE-EATERS; JONGLEUR.

JUGLANDACÆ, the walnut family, dicotyledonous plants, native of the north temperate zone. Most of the 40 or more species of this family consist of trees, all nut-bearing and producers of excellent wood for cabinet and other work. The most valuable in this respect is the black walnut. The best known and most extensive genera are the *Juglans* or walnuts, and the *Hicoria* or hickories. The family is distinguished by alternate compound leaves.

JUGOSLAVIA, or **YUGOSLAVIA,** a term signifying the Southern Slav State (*jugo* comes from *jug* or *yug,* meaning south). The word derives from the geographical situation of the country, and includes the three branches of a single people known under the names of Serbians, Croatians and Slovenians. The area of the new state is about 75,000 square miles (nearly as large as England and Scotland together, or about two-thirds of the size of Italy). Its boundaries are formed by the Adriatic Sea and Isonzo River on the west, and the Hungarian Republic on the north. On the east it is bounded by Rumania and Bulgaria, and on the south by Greece and Albania. The provinces included in Jugoslavia are Serbia, Montenegro, Macedonia, Bosnia-Herzegovina, Croatia-Slavonia, Dalmatia, Carniola, Bachka, Banat and parts of Istria, southern Styria and southern Carinthia. The population within the border limits given above is estimated at 14,000,000 inhabitants, of whom 90 per cent are Slavs and 10 per cent belong to other nationalities, scattered on the borders: Rumanians, Albanians and Bulgarians.

The first attempt at Jugoslav unity, which the European War has consummated, dates from the 9th century. Ljudevit Posavski roused the Slavic people, fought the Franks and assembled under his authority the Croatians of Pannonia, the Slovenes and the Serbians of the Danube region (819–22.) During a very short time all the Jugoslav countries situated between the Sava and the Timok recognized a common sovereign. But this ephemeral realm was soon destroyed by the Frank and Byzantine powers. However, even discounting enemies from without, its existence would not have lasted long. Difficulty of relationship and communication in the Middle Ages prevented different parts of the same kingdom from becoming acquainted and known to each other. The least natural obstacle was an insurmountable barrier separating members of a single race.

It was thus that the Jugoslav provinces continued like fiefs hidden away in their geographical limits, ignorant of one another. Everything held them apart; the numerous rivers and mountains of the rough, hilly country; the ambition and independence of their grand feudal chiefs, for whom the natural isolation of their subjects was a necessity; rivalry between the two churches: the Catholicism of Rome and the Orthodoxy of Byzance, which split up and disputed over the Jugoslavs placed under their two-fold influence. But in spite of all these obstacles, a feeling for inter-communication was to be noted among the southern Slavs every time an idea of centralization agitated Europe. A Jugoslav prince arose who tried to realize the union of Serbs, Croats and Slovenes, Zvonimir, king of Croatia (1076–88), as also Dushan the Mighty (1331–55), emperor of Serbia, and Tvrtko (1351–91), king of Bosnia, who reunited for a little while the three crowns of Bosnia, Serbia and Croatia.

From the 16th to 18th century most Jugoslav provinces fell under the Turkish rule, and the only link which kept the southern Slavs together was their language and common literature, known under the name of the Ragusan literature. The feeling of national unity was reflected in the writings of Ivan Gundulić (1588–1638), George Križanić (1617–86), Jovan Raić (1726–1801), Urban Jarnik (1784–1844), Dositheus Obradović (1739–1811) and many others. Thanks to the efforts of all these writers and thinkers, the idea of southern Slav unity was already widely disseminated among the people. Religious intolerance had lost much of its force. Liberal and democratic ideas prevailed for the moment, and the principle of nationality was proclaimed. Not long afterward the introduction of railroads facilitated communication between the different provinces, heretofore divided by impassable mountains. From this time onward the idea of Jugoslav unity showed itself not only in the works and thoughts of individual men of letters but in the great achievements of militant nationalism as well. Serbia emancipated herself politically (1804) and with Montenegro became the centre toward which the eyes of all the southern Slavs involuntarily turned. Side by side with great political events arose an intellectual movement of equal importance and likewise tending strongly toward emancipation and national unity. The celebrated scholar, Vuk Karadžić (1787–1864), completely reformed the Serbian literary language by his introduction of the vernacular into literature as the only fit and worthy vehicle of the written thoughts of the nation. His reform found an echo in Croatia where Ljudevit Gaj (1809–72) and his fellow-workers adopted the same tongue. Among the Slovene writers, Stranko Vraz (1810–51) and other contemporary authors endeavored to adopt the Serbo-Croat tongue as their literary language. Thus the three separate literatures, known before as the Serbian, the Croatian and the Slovenian, were unified and have since then formed one southern Slav literature. The mental and spiritual union between the different branches of the nation assumed a definite form and at the end of the 19th century attained its full development.

At the beginning of the 20th century the Jugoslav movement was more intensively felt throughout all the provinces. In Serbia the Austrophile parties with the dynasty of Obrenović were overturned in 1903. In Croatia the movement was marked by the fall of the reactionary Ban Khuen-Hedervary, who for 20

years had tyrannized over this sorely-tried country. Bosnia-Herzegovina was freed from the absolutism of its administrator, Benjamin Kalay, by his death. In 1905 Dalmatia rid herself of the obnoxious rule of the governor, Baron Handel; and in Montenegro a constitution was introduced. Soon after these events economic relations with Vienna and Budapest were discontinued. Austria-Hungary annexed Bosnia-Herzegovina (1908), which action stirred up all the Jugoslav people. The approach of the storm was felt more and more. The Serbian national organizations openly demanded the evacuation of the annexed country by the Habsburgs. To justify its régime, Austria established a reign of prosecutions and false trials. She proposed to unite all the Jugoslav provinces, including Serbia and Montenegro, under the Habsburg sceptre. The southern Slavs became wrought up by such actions and avowed vengeance among themselves. In 1912 the Balkan Confederation was formed against both Austria and Turkey, and Turkish rule subsided with the ending of the Balkan wars. Whereupon Austria-Hungary wanted to fill the vacancy and to bridge over Austro-German rule into Asia Minor. To accomplish this purpose the government of Vienna induced the Bulgarians to break the Balkan League and to separate from the Slavic nations, which they accordingly did.

After the Sarajevo tragedy in 1914, the war between Austria and Serbia began. In the beginning of the war Serbia twice defeated the Austrian army, but in 1915, attacked by Bulgaria in the rear, and by the Austro-German forces to the north, she succumbed. The country was occupied by the enemy for three years. In 1918 Bulgaria was the first of the Central Powers to surrender to the Entente Powers. Whereupon the Austrian army was forced to evacuate not only Serbia and Montenegro but all the other Jugoslav provinces. National councils of the Serbs, Croats and Slovenes elected a central executive committee to establish a sovereign Jugoslav state. This convention was held in Geneva during November 1918, bringing a resolution to set up a national government representing all the Jugoslav provinces and preparing ground for the election of a constituent assembly. In Montenegro a National Assembly met in the city of Podgorica, dethroned its king, Nicholas, and decided to join the Jugoslav union. The Allied Powers, Great Britain, France and the United States, first encouraged the unification of Jugoslavia, and later on gave a more definite form to their recognition. On 7 Feb. 1919 the United States government, through its Secretary of State, issued a formal statement of the following content: "On 29 May 1918, the Government of the United States expressed its sympathy for the nationalistic aspirations of the Jugoslav races, and on 28 June declared that all branches of the Slav race should be completely freed from German and Austrian rule. After having achieved their freedom from foreign oppression, the Jugoslavs, formerly under Austro-Hungarian rule, on various occasions expressed the desire to unite with the kingdom of Serbia. The Serbian government, on its part, has publicly and officially accepted the union of the Serbian, Croatian and Slovenian peoples. The Government of the United States, therefore, welcomes the union, while recognizing that the final settlement of territorial frontiers must be left to the Peace Conference for adjudication according to the desires of the peoples concerned."

MILIVOY S. STANOYEVICH.

JUGULAR (joo'gū-lạr) **VEIN,** one of the large trunks by which the greater part of the blood that has circulated in the head, face and neck is returned to the heart. There are two on each side, an external or superficial and an internal or deeper.

JUGURTHA, joo-gėr'thạ, king of Numidia: d. Rome, 104 B.C. He was a natural son of Masinissa. Micipsa, his father's brother, and king of Numidia after Masinissa (149 B.C.), adopted him and brought him up with his own sons, Adherbal and Hiempsal. Micipsa did his best to conciliate him, and declared him joint-heir to the crown with his two sons. But after the death of Micipsa, Jugurtha had Hiempsal murdered and drove Adherbal from the country. Adherbal appealed to Rome, and after several Roman expeditions into Numidia, Jugurtha was captured (106 B.C.), led in the triumph of Marius at Rome, and finally thrown into a dungeon, where he was starved to death.

JÜHLKE, yul'kĕ, **Ferdinand,** German horticulturist: b. Barth, Pomerania, 1815; d. 1893. In 1854 he became royal horticultural inspector in charge of an experimental station; and four years later he became owner of a private horticultural establishment in Erfurt, which he han-

dled so successfully that he was appointed director of the Prussian Royal Gardens (1866–91). Among his numerous and important works are 'Gärtnerische Reiseberichte' (1853); 'Gartenbuch für Damen' (1874, 3rd edition); 'Ueber die Stellung der Botanik zur Landwirtschaft und zum Gartenbau' (1865); 'Die königliche Gartnerlehranstalt und Landesbaumschule' (1872). He edited the *Eldenaer Archiv* (1854–59); and Schmidlin's 'Blumenzucht im Zimmer' (1880, 4th ed.).

JUIF ERRANT, zhwēf ĕr-ăn, **Le,** a romance written by Eugène Sue in 1845. It has been translated into all the languages of Europe; and in English it bears the title 'The Wandering Jew.' See WANDERING JEW, THE.

JUJUBE, joo'joob, a spiny and deciduous shrub of the family *Rhamnaceæ, Zizyphus jujuba,* a native of Syria, whence it was introduced into Europe. The fruit is blood-red or saffron-colored, with a sweet, granular pulp. The species of the genus are numerous, and of several the fruit is wholesome and pleasant to eat, both fresh and dried, and forms an article of commerce; and in southern Europe it is used at table in desserts as a dry sweetmeat. *Z. lotus,* which gave its name to the ancient Lotophagi, a shrub 2 or 3 feet high, is a native of Persia and the north of Africa. Its berries, which are about as large as a cherry, are collected for food by the Arabs of Barbary, are made into cakes, and a kind of wine is sometimes made from them. *Z. spina-christi,* or Christ's thorn, is said to have furnished the branches of which Jesus' crown of thorns was made.

JUJUY, hoo-hwē', Argentina, a province situated in the extreme northwest of the republic, between Bolivia and the province of Saltá. Nearly the entire area, estimated at 18,977 square miles, is occupied by mountains in which are extensive deposits of gold, silver, copper, mercury, salt, petroleum and asphalt. This mountainous section is a continuation of the great Bolivian table-land, and here the climate is cold, and the vegetation poor. Fertile valleys in the eastern part of the province produce sugar-cane, wheat, tobacco and rice. The climate in this portion is hot and moist. There are immense forests and an abundant supply of water. The Rio Grande de Jujuy traverses the province and reaches the Paraguay, through the Rio Bermejo. In the elevated plateau known as the Puna de Jujuy are two large lakes, Toro and Casabindo, the latter of which produces great quantities of salt. The provincial capital, also called Jujuy, a town of about 6,000 inhabitants, is connected by railway with Buenos Aires, and has two banks, a custom-house, a national college, a normal school for girls, and seven public schools. The population of the province is about 65,000.

JUKES, The, the name given to a family of New York State that had an unusual record of crime and pauperism. In 1874, Mr. R. L. Dugdale, while making investigations in behalf of the New York Prison Association, found several of the same family imprisoned for various crimes. Becoming interested in the subject, he traced the history of the family through several generations; they were descendants of the two sons of a backwoodsman, called Max, who married two of the Jukes sisters, one of whom is known as "Margaret, the Mother of Criminals." Exact information was obtained in relation to 709 out of the 1,200 descendants and blood relations; of these, 140 had been imprisoned for crime, 280 had been paupers, dependent upon public support, and the large majority were of low physical and moral standard. Consult Dugdale, 'The Jukes.'

JUKES, Joseph Beete, English geologist: b. near Birmingham, 1811; d. 1869. He became geological surveyor of Newfoundland (1839–40); and, in 1842, naturalist to H. M. S. *Fly* engaged in exploring the east coast of Australia and part of New Guinea. Four years later he did excellent work on the Geological Survey of Great Britain (1846–50); and on that of Ireland; after which he became professor of geology in the Royal Dublin Society and the Royal College of Science of Dublin. Among his numerous published works are 'Excursions in and about Newfoundland' (2 vols., 1842); 'A Sketch of the Physical Structure of Australia' (1850); 'Popular Physical Geology' (1853); 'Students' Manual of Geology' (1857), of which numerous editions have been issued.

JUKES-BROWN, Alfred John, English geologist: b. Penn Fields, 1851; d. 1914. He was a member of the Geological Survey most of his active life (1874–1902). He investigated the upper cretaceous rocks of Great Britain and the geology of the Barbadoes. Among his published works are 'Student's Handbook of Physical Geology' (1884); 'Historical Geology' (1886); 'Stratigeographical Geology' (1902); 'The Building of the British Isles' (1888); 'The Cretaceous Rocks of Great Britain' (3 vols., 1902).

JÜLG, yulk, **Bernhard,** German philologist: b. Ringelbach, 1825; d. 1886. He was educated at Heidelberg and Berlin, graduating in 1848. He became a teacher and finally professor of classical philology at Lemberg (1851), Cracow (1853) and Innsbruck (1863), where he made a special study of comparative philology and Oriental folklore. Among his published works are 'Litteratur der Grammatiken, Lexika und Wörtersammlungen aller Sprachen der Erde' (1847); 'Die Märchen des Siddhi-kür' (1866); 'Mongolische Marchen' (1867); 'Ueber Wesen und Aufgabe der Sprachwissenschaft' (1868); 'Die griechischen Heldensagen im Widerschein by den Mongolen' (1869); 'On the present State of Mongolian Researches' (1882).

JULIA, only child of the emperor Augustus: b. 39 B.C.; d. 14 A.D. She was his daughter by his second wife Scribonia, and was first married (25 B.C.) to her cousin, the young Marcellus, and afterward to Marcus Vipsanius Agrippa, to whom she bore three sons and two daughters. On Agrippa's death, in 12 B.C., she was married to Tiberius, who left her on account of her licentiousness. Augustus banished her to Pandataria, a desolate island on the coast of Campania, ultimately allowing her to live in Rhegium. After the death of the emperor, Tiberius treated her with great severity. She died in poverty and distress. Her son, Agrippa, had been put to death by Tiberius shortly before.

JULIA DOMNA, Roman empress: b. Emesa, Syria, 170 A.D.; d. 217 A.D. She was the second wife of the Emperor Severus, and

mother of Caracalla and Geta, and a distinguished patroness of art and science.

JULIAN, joo'lyan (FLAVIUS CLAUDIUS JULIANUS), Roman emperor, surnamed the Apostate: b. Constantinople, 17 Nov. 331; d. 26 June 363. When hardly six years old his father and several members of his family were murdered by the soldiers of his cousin, the Emperor Constantius. He was brought up in the Christian religion, studied philosophy and letters, and resided in Athens, where he was induced to embrace Paganism. Having received command of an army against the Germans, he defeated them at Strassburg and drove them beyond the Rhine. He also displayed great talent as an administrator in Gaul. The emperor now became jealous of Julian, and recalled his best troops under pretense that he wanted to employ them against the Persians. This order caused a rebellion among the soldiers, who proclaimed their leader, Julian, emperor in March 360, in spite of his own resistance. Constantius prepared to proceed against him, but soon after died, and Julian was generally recognized as emperor. He began by putting a stop to many abuses and limiting the splendor of the court, and was thus able to remit to the people the fifth part of all their taxes. He sought to restore the heathen worship in all its splendor, and on that account opposed Christianity as much as was in his power, without, however, persecuting the Christians themselves. In 363 he headed an expedition against the Persians and took several cities. He was an able ruler, and had also a reputation as an author. Some of his works have come down to us, including speeches, letters and satirical pieces; the latter are distinguished for wit and humor. He wrote also a work against the Christian religion, of which some extracts remain. Consult Gardner, 'Julian: Philosopher and Emperor' (1895); Hoffmann, 'Julianus der Abtrünnige' (1880); Negri, 'Julian the Apostate' (1905); Rendall, 'The Emperor Julian, Paganism and Christianity' (1879).

JULIAN (Cesarini), Cardinal, churchman: b. Rome, 1398; d. in or after battle of Varna, 10 Nov. 1444. Born of noble family and educated at the University of Perugia, he became professor of jurisprudence at Padua. Through the good will of the Pope he was advanced rapidly, finally being made Cardinal Bishop of Frascati. As president of the Council of Basel, he attempted to win over the Hussites, after having first attempted, unsuccessfully to coerce them. He attempted to hold an even way between them and Pope Eugenius; but when he found that this was not possible he became a strong supporter of the Pope. He continued prominent in the negotiations carried on with the Eastern Church until the Pope sent him to stir up a crusade in Hungary against the Turks. Consult Jenkins, 'The Last Crusader' (London 1861); Pastor, Ludwig, 'History of the Popes' (London 1899).

JULIAN, George Washington, American politician: b. Centerville, Ind., 5 May 1817; d. Irvington, Ind., 7 July 1899. He studied law and was admitted to the bar at the age of 21. In 1845 he was elected to the State legislature, as a Whig, but being a strong opponent of slavery he severed his party connection with the Whigs and became one of the founders of the Free Soil party in 1848. In 1849 he was elected to Congress; in 1852 was candidate of the Free Soil party for Vice-President, and in 1856 a delegate to the first national convention of the Republican party, where he was vice-president of the convention and chairman of the committee on organization. In 1860 he was again elected to Congress, and served continuously for ten years. He was a member of the committees on the conduct of the war, on reconstruction, on the preparation of the articles of impeachment against President Johnson, and on public lands, being chairman of the latter. He opposed any monopoly of the public lands, was an advocate of the homestead system, and strongly favored giving the franchise to the negro. In 1868 he proposed a constitutional amendment providing for woman's suffrage. In 1872 he joined the Liberal Republicans, and after that became a Democrat; in 1885–89 was surveyor-general of New Mexico; and after 1889 retired from public life. He published 'Speeches on Political Questions' (1872); 'Political Recollections' (1884); and 'Life of Joshua R. Giddings' (1892).

JULIAN ALPS, the southern extension of the Eastern Alps, from the Venetian Alps, on the northeast of Italy, through Austria to the neighborhood of Trieste. The highest peak, Triglave, is 9,395 feet. The whole range which is very rough and broken is covered largely with handsome forest. Among them are rich valleys.

JULIAN CALENDAR. See CALENDAR; EPOCH.

JULIANNUS SALVIUS, Roman jurist: b. about 92; d. about 155 A.D. He held offices under Hadrian and Antoninus Pius, and codified Roman equity and succeeded in having his codification officially accepted and made binding upon prætors and other government officials. He was an extensive writer; but most of our knowledge of his works is obtained through quotations from them contained in the writings of later writers. Consult Buhl, 'Salvius Julianus' (Heidelberg 1886); Schanz, 'Geschichte der römischen Litteratur' (1905).

JÜLICH, yu'lik (Juliers, in French), town on the Roer 18 miles northeast of Aix-la-Chapelle. It has some interesting old buildings and modern schools and churches. It is a centre of considerable industry, among its chief manufactures being paper, sugar, silk and leather. It was once a strongly fortified city and the capital of a district and an independent duchy. It was successively in the hands of Holland (1610), Spain (1622), France (1794–1814), when it was joined to Prussia. Pop. about 7,000.

JÜLICHER, yu'lik-ĕr, **Gustav Adolf,** German biblical authority and scholar: b. Falkenberg, 1857. Graduated from the University of Berlin (1888), he became a preacher and finally docent of church history in the University of Berlin and later professor of the same subject at Marburg. Among his works are 'Die Gleischnissreden Jesu' (1888); 'Einleitung in das Neue Testament' (1894). This latter, which is of very real value, was translated into English by Janet Ward in 1904.

JULIE OU LA NOUVELLE HÉLOÏSE, one of Jean Jacque Rousseau's most famous

works. It is a novel of the sentimental kind that pleased the reading public of his day and for a generation later, when Goethe and his school carried sentimentality to the highest pitch of art and incidentally of artificiality. The story, which is told in the form of love letters which passed between Julie d'Etanges and Saint-Preux, her lover-tutor, was written between 1557 and 1559. It therefore preceded by 15 years Goethe's famous 'Sorrows of Werther' upon the conception and form of which it undoubtedly had a strong influence. The same sickly sentimentality pervades both; and in both cases it is expressed in the form of letters. Goethe's work was the culmination of the Rousseau literary idea. All over Europe in the original German and in all the languages of the Continent, people "sorrowed" with Werther, and a wave of suicide swept over the land, a hysterical imitation of the tragic exit from this earthly sphere of action of the hero of the 'Sorrows.' This sentimentality of 'Julie,' which had so strongly affected the earlier work of Goethe and the German writers of his day, continued to retain a strong hold upon European writers well on past the middle of the 19th century; and in one form or another it marks the work of the romantic writers of this period. It is especially noticeable in the best of the novels of Hugo. It was one of the literary spots at which the realists, especially those of the French school of the latter half of the 19th century, pointed the finger of scorn.

JULIEN, Alexis Anastay, American geologist: b. New York, N. Y., 13 Feb. 1840. He was graduated at Union College in 1859, studied chemistry there for a year, and in 1860–64, while resident chemist on the Guano Island of Sombrero, carried on a variety of scientific researches. He served on the Michigan Geological Survey in 1872 and on the North Carolina Survey in 1875–78, but from 1865 to 1909 was regularly connected with the School of Mines, Columbia University, as assistant in chemistry, instructor in biology, and (1897–1911) curator of geology. He retired in 1911. His writings include a report on "Lithology" in the Michigan Geological Survey's 'Geology of Michigan' (Vol. II, 1872); a "Microscopic Examination of Eleven Rocks from Ashland County, Wis.," in the Wisconsin Geological Survey's 'Geology of Wisconsin' (Vol. III, 1880); "On the Geological Action of the Humus Acids," in the Poceedings of the American Association for the Advancement of Science (1880); and "Building Stones, Elements of Strength in their Constitution and Structure," Journal of the Franklin Institute (1899).

JULIEN, zhü-lĭ-ăn, **Stanislas Aignan,** French sinologist: b. Orleans, 20 Sept. 1799; d. Paris, 14 Feb. 1873. Possessed of an extraordinary linguistic faculty, he taught himself Greek, English, Italian, Spanish, Portuguese and German, and in 1823 commenced the study of Chinese. At the end of a year he published a Latin translation of the philosopher Mencius. Henceforth ancient and modern Chinese, Manchu, the Mongolian tongues, and Sanskrit, were the subjects of exact and profound study. In 1832 he became professor of Chinese at the Collège de France; librarian at the Bibliothèque Nationale, 1839; president of the college, 1855; commander of the Legion of Honor, 1863. His most important works are 'Voyages des Pérelins Boudhistes' (1853–58); 'Syntaxe nouvelle de Langue chinoise' (1869–70). Julien was the foremost Chinese scholar of his time.

JULIEN, one of Charpentier's more recent operas, first presented at Paris (4 June 1913), and in New York the following February.

JULIET, one of the two leading characters in Shakespeare's tragedy of 'Romeo and Juliet' (q.v.). Juliet also appears in another of Shakespeare's plays, 'Measure for Measure' (q.v.), as the lady beloved of Claudio.

JULIUS I, Pope: d. 12 April 352. He became Pope in February 337, and was a staunch defender of Athanasius, who, under the protection of Julius, sought refuge in Rome against the enmity of the Eastern prelates.

JULIUS II, Pope (GIULIANO DELLA ROVERE): b. Albezuola, 1443; d. Rome, 21 Feb. 1513. He was elevated by his uncle Sixtus IV to the rank of a bishop and cardinal in 1471, and subsequently held eight bishoprics and the archbishopric of Avignon. He was appointed papal legate to France in 1480 and in 1503 was elected Pope. Immediately on his elevation to the pontificate he planned the complete re-establishment of the papal sovereignty in its ancient territory, and the extinction of foreign domination and influence in Italy. Refusing to attend the Council of Pisa convened by the King of France, he in 1511 formed the "Holy League," to which Spain, England and Switzerland were parties. In 1512 he made open war against Louis XII, and the Fifth Lateran Council was convoked by him in the same year. The French defeated the papal army near Ravenna, but were soon after driven out of Italy. He was a far-sighted and patriotic sovereign, and a liberal and judicious patron of art and literature, Michelangelo, Raphael and other great artists of the time receiving commissions from him. To procure means for building Saint Peter's he ordered the preaching of indulgences, which was one of the immediate causes of the Reformation. Consult 'Life,' by Du Mesnil (1873); Brosch, 'Papst Julius II, und die Gründung des Kirchenstaates' (1878).

JULIUS III, Pope (GIOVANNI MARIA DEL MONTE): b. Arezzo, 10 Sept. 1487; d. Rome, 23 March 1555. He was made archbishop of Siponto in 1512 and of Pavia in 1520 and was appointed cardinal by Paul III in 1536. He took an active part in the Council of Trent as papal legate, was elected Pope in 1550, and in the following year reopened the Council of Trent, which had been suspended for two years. He endeavored to effect a union with the Nestorians, and commissioned Cardinal Pole to organize, in conjunction with Mary, the reunion of England with Rome.

JULIUS, DUKE OF BRUNSWICK, a German prince and ruler: b. 1528; d. 1589. He succeeded his father as Duke of Brunswick in 1568. He made himself prominent in Europe by reversing the Catholic policy of his house and becoming himself the backer of the Reformation. He founded the University of Helmstedt as a foil to the great Catholic educational interests with which he was contending.

JULIUS CÆSAR. See CÆSAR, GAIUS JULIUS.

JULIUS CÆSAR. This play was first produced about 1601, though not printed until 1623 with the publication of the first Folio. It is in a sense a continuation of the historical plays, the background of Rome being substituted for that of England. At the same time it is the first in the series of great tragedies. Based upon the lives of Brutus, Julius Cæsar and Mark Antony in North's translation of Plutarch's 'Lives,' it is a striking illustration of the way in which Shakespeare closely followed his original in spirit and sometimes in language, while at the same time he organized this material into a dramatic whole. If one compares Plutarch's text with the play itself, he can best see the dramatist in the very act of dramatic construction.

"The little more and how much it is
The little less and what worlds away!"

In the play we find ourselves in Rome about 44 B.C.: we see the Roman populace running here and there through the streets; we hear the voices of Brutus and Antony in the forum or catch glimpses of Cicero and Cassius on a stormy night; when the scene shifts from Rome, we see the battlefield of Philippi—and along with all these men and guiding the destiny of events, we see and feel the presence of the mighty Julius. The question inevitably arises as to why Shakespeare named the play after Cæsar, who disappears in the middle of the play. Unquestionably the impression gained from what he says as well as from what others say about him would not indicate that the dramatist thought of him as highly as passages in other plays, notably 'Hamlet,' 'Antony and Cleopatra' and 'Richard the Third,' would indicate. He is rather presented as one whose bodily presence is weak and whose mind is declining in strength and in sure-footed energy. Emphasis is placed upon the weakness rather than strength of this character. But that is not all of Cæsar. There may be a sort of irony in the presentation of him; for after his murder the speech of Antony serves to set him before the imagination of the reader as a mighty spirit whose power was to be sought, not only in the days of his earlier conquests, but in the drift toward imperialism which the conspirators tried in vain to resist. Brutus realizes the futility of his efforts when he cries out on the battlefield of Philippi, "O Julius Cæsar, thou art mighty yet!"

Whatever may be said of Shakespeare's conception of Cæsar, there can be no doubt that Brutus is the tragic figure of the play—a forerunner of that group of tragic heroes so soon to be created. A student of philosophy, a lover of books and fond of the quiet domestic scenes which had connected him with one of the noblest of women, and above all, a devoted citizen with an instinctive love of the old republic, he is totally unfitted for the stirring scenes into which he is drawn. His lack of knowledge of human nature makes him an easy prey for a more calculating man, while his failing to understand the drift of history brought upon him and his country tragic consequences. He is caught in the tangled web of things. The rare nobility of his soul combined with his tragic end raises the question of the burden of the mystery, the heavy and the weary weight of all this unintelligible world. Of the other characters of the play Mark Antony, Cassius and Portia are drawn with consummate art. Their words have by frequent quotation become so hackneyed that the reader is apt to miss their greatness. Charles Lamb's remark about the frequent acting and reciting of Shakespeare's plays applies with special force to 'Julius Cæsar'; "The very custom of hearing anything 'spouted' withers many a fine passage." Brutus' speech to the Roman citizens justifying the murder of Cæsar, Antony's funeral oration, the appeal of Cassius to Brutus, the dialogue between Portia and Brutus and Antony's tribute to Brutus are among the glories of human speech.

EDWIN MIMS.

JULIUS ECHTER VON MESPELBRONN, yoo'lĭ-us ĕk'tẽr fŏn mĕs'pĕl-brŏn', German Catholic prelate: b. Mespelbronn Castle, 1545; d. 1619. He received a Jesuit education at Paris and Rome and became the leader of the Counter-Reformation in his own country. Owing to his religious zeal he was made bishop of Würzburg with princely powers. He set to work to eradicate Protestantism from his see by removing all the Protestant clergy and by other coercive means; and it was his boast that he had accomplished his aims and had made more than 60,000 converts to Catholicism in three years. He founded schools, colleges and charitable institutions, among the most notable of which were Julius Hospital (1579) and the University of Würzburg (1582). Thus he became noted as one of the most active and constructive members of the Catholic League.

JULLIEN, zhu'lyăn, **Adolphe,** French musical and dramatic critic: b. Paris, 1845. He graduated in law taking, at the same time, very extensive studies in music which he continued after graduation. He began writing for musical journals, and in addition to musical criticisms and chronicles he contributed short stories to the *Français,* the *Moniteur Universal* and other periodicals. Among his published works are 'La Musique et les philosophes au XVIII ème siècle' (1873); 'Histoire du théâtre de Mde. de Pompadour' (1874); 'La comédie à la cour de Louis XVI' (1875); 'Goethe et la Musique' (1880); 'L'Opera secret au XVIII ème siècle.'

JULY, the seventh month of the calendar, which in the Roman year bore the name of *Quintilis,* as the fifth in the computation of Romulus, even after Numa had prefixed January and February. Mark Antony effected a change in its name in honor of Julius Cæsar, who was born on the 12th of the month, and thenceforth by a decree of the senate it was called Julius. It originally contained 36 days. It is said that Romulus reduced them to 31 and Numa to 30. Julius Cæsar fixed the number at 31, which is still retained. The Dog-days are supposed to commence on the 3d of this month.

JULY, Column of, a bronze column erected on the Place de la Bastille, Paris, 28 July 1840, to the "French citizens who fought for the defense of the public liberties on the memorable days of the 27th, 28th and 29th of July, 1830."

On four bands encircling the column are the names of 615 victims of the revolution.

JULY, Revolution of, the uprising in 1830 which overthrew the Bourbon dynasty and restored the house of Orléans to the throne of France. This was the natural outcome of the reactionary tendency which had been the governing principle of the sovereigns in France since 1814. Revolutionary France was not dead and the democratic spirit was far from being smothered. But the rulers of the country seemed to believe that their own safety and that of the stable government of the country depended upon the establishment of as much arbitrary rule and autocracy as could be achieved. The Church and the extreme royalists were in the saddle; and they proposed to make the best of their opportunities to strengthen their position for all time. Louis XVIII (1814–24), with whom the restoration began, had some little ability and the advantage of having a more or less fixed policy whose one great objective was to restore the power of his family and to consistently offer opposition to the growth of the influence of the bourgeoisie. To secure his ends and bind the nobility to himself he had been forced to make a partial restoration of the property, titles and positions of influence of the "exiles" in the face of strenuous opposition on the part of a strong and influential section of the population. The backing which the Church had given the royal family made the interests of the sovereign, the nobility and the clergy one in common. In order that these common interests and objective might be strengthened by the education of the masses in the right direction, from the view point of the Crown, all public and private instruction was placed in the hands of the Church, which proceeded to carry out an aggressive program which ran counter, at every turn, to the ideas of the strong revolutionary and democratic part of the population, the natural and legitimate heirs to the sentiments and aims of the Revolution of 1789. This ever-growing revolutionary body could only be kept from expressing itself, in a manner dangerous in the extreme to the ruling house, by the enforcement of severe laws against the liberty and freedom of the press. The Jesuits, who had been readmitted to the country following the restoration, became very active, not only as educators, but as propagators of royalist teachings, all of which were radical and extreme. Louis XVIII managed to maintain his position as head of the nation in the midst of many threatening dangers. But his successor, Charles X, who had been educated under clerical influence to the most extreme of royalistic views, was a man of little ability, weak will and poor judgment, warped by his training. He was, therefore, incapable of judging of the magnitude of the dangers by which he was surrounded. At the most critical moment in his career, when only the coolest and most liberal judgment could have saved the situation for him, he made his confident and representative Count Jules Polignac (9 Aug. 1829), the most bigoted royalist and churchman among the French nobility, a man who could only see one side of the question and that only through his colored glasses. He succeeded in antagonizing the opposition as even the unwise and undemocratic acts of the sovereigns had not done. The assemblies which met the following year (March 1830), both upper and lower houses, demanded the dismissal of the new and actively royalist ministers, who largely represented clerical influence and interests. Charles' answer, dictated by the court party, was the immediate prorogation and final dissolution of the Chambers. The natural result was that the new election increased the strength of the Anti-royalist party. This the king realized and he determined to anticipate the trouble he saw coming by the suspension of the liberty of the press and declaring the elections null and void (26 July 1830). To make sure that the next Chambers should not prove dangerous or obstructive, the edict of dissolution of the new Chambers prescribed changes in the franchise which practically restored arbitrary government. The newspapers defied the government to carry out the edict of the suspension of the liberty of the press, and the trouble at once began in Paris. Barricades were thrown up everywhere in the eastern section of the city and the city hall and Notre Dame Cathedral were seized by the revolutionists. After three days' fighting under Lafayette and Laffitte, the revolutionists held possession of all of Paris. Suddenly, the king realizing the strength of the revolution and his own danger, withdrew his various edicts. But it was already too late and he was forced to abdicate in favor of his own grandson, the Duke of Bordeaux. Fearing the temper of the revolutionists, he fled across the border. But the Duke of Bordeaux was not destined to become sovereign of France, if for no other reason, because he was the choice of the late king. On the night of 30 July Louis Philippe, Duke of Orléans, arrived in Paris, at the call of Talleyrand, one-time minister of Napoleon I, and other prominent men of his party who had been intriguing for some time in his favor. He was at once made lieutenant general of the realm. But the choice of Louis Philippe as sovereign was opposed by Lafayette, commander of the National Guard, and his faction, who favored a republic. However, the necessity of not antagonizing the powerful Royalist party, and the diplomatic conduct of Louis Philippe, finally won over the Republicans to a continuation of the monarchy on a restricted and constitutional basis, and the Chambers bestowed the crown upon Louis Philippe (7 Aug. 1830). Although the principal part in the revolution had been played by the workingmen of Paris, still it was represented for the country as a whole by the middle classes who were still royalist in sentiment. A knowledge of the general feeling of the country induced Lafayette and the municipal committee who were, like the Paris workmen, strongly republican, to accept the compromise offered by Laffitte, Thiers and the Orleanists. But in this compromise the laboring class was singularly forgotten, an act which was pregnant with future trouble. According to the agreement with Louis Philippe a new constitution was adopted. This recognized a property qualification which gave the middle classes a very strong voting power and, consequently, influence in the affairs of the nation. But it shut out the laboring classes, who found that they

still had their battle to fight for political freedom. The Belgian and Polish revolutionary movements were more or less directly the result of the success of the July Revolution in France. Consult Fyffe, 'History of Modern Europe' (Vol. II, London 1886); Hazen, 'Europe Since 1815' (New York 1911); Lavisse and Rambaud, 'Histoire générale' (Vol. X, Paris 1898); Seignobos, 'Political History of Europe since 1814' (New York 1899); Robinson and Beard, 'Development of Modern Europe' (Boston 1908).

JUMBO, the name of a large African elephant for 25 years on exhibition at the Royal Zoological Gardens in London. The animal was purchased in 1882 by P. T. Barnum (q.v.), American showman, for $10,000, and for three years was exhibited in the United States. Jumbo was killed in 1885 by a railroad train in Canada. He was 11 feet 6 inches in height and weighed six tons. His skeleton is preserved at the Smithsonian Institution, Washington, D. C.

JUMEL, zhū'mĕl, **Eliza,** American heiress: b. at sea, 1769; d. New York, 16 July 1865. Her maiden name was Capet, and after her mother's death she was adopted by Mrs. Thompson, of Newport. She was a wayward, beautiful girl; at 17 she eloped with a British officer named Peter Croix, with whom she lived in New York. There she was greatly admired, and soon after her first husband's death married Stephen Jumel, who took her to Paris, where her social success was as great as in New York. After Jumel's death she married at 61 Aaron Burr (q.v.), from whom she separated soon afterward. Her home during her last years was the famous Jumel mansion, built by Roger Morris in 1758, the home of Mary Philipse Rogers and Washington's headquarters during the New York campaign. It was bought by Madame Jumel in 1810, and is still preserved, its site being the Roger Morris Park, New York, which was opened 28 Dec. 1903.

JUMET, zooh'mā', a town in Belgium, about three miles northwest of Charteroi. It is the centre of numerous industries, including iron and coal mines, smelters, foundries and glass factories. Pop. about 30,000.

JUMILLA, hoo-mē'lyă, a city in Murcia, Spain, on the river Juá, 35 miles northwest of the city of Murcia. It is the centre of vineyards and fruit orchards, and possesses a few industries, among them being soap, cognac and wine factories. Pop. about 20,000.

JUMNA, or JAMNA (Sanskrit YAMUNA), a river of India which rises in the Himalayas, at the height of 10,849 feet. It flows in its upper course in a generally southwest direction, then bends to the southeast and, passing the cities of Delhi and Agra, falls into the Ganges, of which it is the chief tributary, at Allahabad, after a course of 860 miles. Important irrigation works derive their supply of water from this river.

JUMPERS, a class of religionists who manifest their devotion and feeling by jumping from the ground during the time they are assembled for worship and exhortation. They are said to have originated in the Methodist congregations of Wales during the preaching of Whitfield (1760). They were also called "Barkers" from the incoherent guttural sounds they uttered during their excitement. They still exist in some parts of the eastern States, having emigrated to America after being repudiated by English Methodists.

JUMPING BEANS, the fruits of certain euphorbiaceous plants of the genius *Sebastiana,* infested with the larvæ of certain small moths (*Carpocapsa saltitans* and *Grapholitha sebastianæ*), which by their movements make the capsules roll, and even jump as if alive. The larvæ spin cocoons in the capsules, a large part of the interior of which they have devoured, and when ready to emerge as adults, push open a previously cut circular door which has been held shut by silken threads. Several species are found in Central America and Mexico, where they are called "broncho beans."

JUMPING FISH. See MUD-SKIPPER.

JUMPING FROG OF CALAVERAS, The Celebrated, one of the earliest works of Mark Twain. It was published in the *Californian* and attracted considerable attention to the author, since it was at once taken up by the general public as a piece of good humorous writing. It made its way into recitation books and was widely read on public and private stages by elocutionists and other public readers. It was also widely quoted.

JUMPING HARE, or **SPRINGHAAS,** a jerboa-like animal (*Pedetes caffer*) of South Africa, as large as a hare, and much resembling one, which is now set apart in a family (*Pedetidæ*) by itself. It will leap 25 or more times its own length, and where numerous does great damage at night to growing crops.

JUMPING MOUSE. See JERBOAS.

JUMPING PLANT LOUSE, an insect belonging to the *Psyllidæ* family. It receives its name on account of its prowess as a jumper. The majority of the members of this family pass their lives upon the leaves of various kinds of vegetation. Some, however, live in gulls. The adults sleep through the winter, but become very active with the return of warm weather when breeding begins, resulting in several successive families during the season.

JUMPING SHREW, a curious little animal of Africa, one of the insectivora of the Elephant-shrew family (*Macroscelidæ*), which has very large hindquarters and moves by leaping like a jerboa. They inhabit rocky and desert places, remain in holes and hiding places during the day and go abroad at night in search of insect food. The best known perhaps is the Cape jumping-shrew of South Africa (*Macroscelidus typicus*), which is tawny brown, about five inches in length, has a long, flexible proboscis and a long naked tail.

JUMPING SPIDERS, small spiders of the family *Attidæ,* which dwell in low vegetation, and are exceedingly agile. They are usually short and stout in form, rarely more than a quarter of an inch long, and are often brightly colored, especially in the case of the males, which take curious attitudes in order to display their ornaments to the females. Consult Emerton, 'Common Spiders of the United States' (1902).

JUNAGARH, joo'nă-gŭr', a native Gujarat state, Kathiawar peninsula, Bombay, India. The surface of the country which contains an area of 3,284 square miles, is comparatively level, except to the north where it is broken by hills (Girnar), the highest of which rise about three-quarters of a mile above sea-level. Its capital bears the same name as the state. Since 1808 the interests of Junagarh, which ranks as a first class native state, have been closely identified with those of the British. Among its products are cereals, sugar cane, rice and cotton. Consult 'The Imperial Gazetteer of India' (Oxford 1908).

JUNAGARH, capital of the state of the same name (q.v.), in Bombay, India. It is picturesquely situated on the Rajputana Railway, about 45 miles north of Verawal. The city possesses fortifications built in 1472, and a very ancient fortress said to date back to 250 B.C. Among its modern buildings are the palace of the Nawab, hospital, public library and College of Arts. Pop. 36,000. Consult Burgess, 'The Antiquities of Cutch and Kathiawar' (London 1887); 'The Imperial Gazetteer of India' (Oxford 1908).

JUNCO, a genus of slate-colored and white sparrows, present in the United States mostly in winter. See SNOWBIRDS.

JUNCOS, hoon'kōs, a town and district in the eastern end of Porto Rico. Both are engaged in the production of tropical fruits, tobacco and sugar cane and the manufacture of the products of the latter. Population of the district about 14,000; of the town about 6,000.

JUNCTION CITY, Kan., city and county-seat of Geary County, at the junction of the Republican and Smoky Hill rivers, 135 miles west of Kansas City; and on the Missouri, Kansas and Texas and the Union Pacific railroads. The two rivers here form the Kansas River, and make an important shipping point for grain, flour, live stock and limestone. It contains boot and shoe factories, glove, cigar, sheet metal, cement-block and harness factories, and flour mills and lumber yards. A government military post, Fort Riley, is located three miles east of the city. It was settled in 1858 and adopted the commission form of government in 1911. The city owns the waterworks. Pop. 5,598.

JUNE, Jennie. See CROLY, JANE C.

JUNE, the sixth month in the calendar. The etymology is uncertain. Vossius gives three etymologies of the name — one from Juno; another from *jungo* (to join), referring to the union between the Romans and Sabines under Romulus and Titus Tatius; a third from *juniores* (the young men), Romulus having been said to have assigned the month of May to the elders, and that of June to the young men, when he divided the people into these two great classes, the former to serve in counsel, the latter in war. The name has also been traced to Junius Brutus, the first consul. It consisted originally of 26 days, to which it is said Romulus added four, and Numa took away one. Julius Cæsar again lengthened it to 30 days, and it has ever since remained unaltered.

JUNE BEETLE, or **FIG-EATER,** a green and brown beetle (*Allorhina nitida*) of the family *Scarabæidæ* common in the central and southern United States. The adults often eat figs, peaches, small fruits, corn, etc. The larvæ are white grubs which resemble their northern relatives (see MAY BEETLE), but are far less injurious since they normally feed upon decaying vegetable matter in the soil and not on living roots of plants. The adults may be decoyed away from ripe fruit by placing little piles of decaying fruit within their reach: but since they are probably beneficial they should not be destroyed.

JUNE BERRY. See AMELANCHIER.

JUNE BUG. See MAY BEETLE.

JUNE GRASS. See BLUE GRASS; GRASSES IN THE UNITED STATES.

JUNEAU, joo-nō', **Laurent Solomon,** American pioneer: b. L'Assumption parish, near Montreal, Canada, 9 Aug. 1793; d. Shawano, Wis., 14 Nov. 1856. He emigrated to Green Bay, Wis., and thence in 1818 to Milwaukee, where he was active in trade with the Indians. He was not, as has been sometimes stated, the first white settler on the site of Milwaukee. A grant of considerable land had there been made by the Indians to one Mirandeau, a previous resident, and of this grant, Juneau, on Mirandeau's death, secured possession. Juneau made the first survey of Milwaukee village, was its first postmaster and president, and the first mayor of the subsequent city. On ground presented by him, he helped to build the first court-house in the State. For years he was agent for the American Fur Company. A heroic statue of him was placed in Juneau Park, Milwaukee, in 1884.

JUNEAU, Alaska, city in the southern district, on a promotory between the Taku River and Lynn Canal, opposite Douglas Island, about 100 miles north of Sitka. It was settled in 1880, is incorporated, and has been selected by Congress as the capital of Alaska. From its situation in the mining region it has become a centre of trade in outfitters' articles and general supplies; while its exports, including gold, furs and other products of Alaska, have grown to a considerable commerce. Among the manufactories are iron-works, breweries, sawmills, cigar factories, etc. In the vicinity are the Treadwell gold mine and the Silver Bow mine. Villages of the Auk and Taku Indians in the neighborhood are of interest to tourists. At Juneau are located the Territorial Legislature and courts and Federal officials. Its public schools are well conducted, there are several churches, hospitals, newspapers, a fire department, police, drainage, and waterworks and electric-light systems. These and other public improvements give it all the essential conveniences of a modern American city. Cable service is established here. Steamship lines connect it with Seattle, Sitka, Skagway, and all parts of the Copper River, Prince William Sound, Cook Inlet, and Unalaska. Over $60,000,000 of gold have been mined in the Juneau region and there is room for even greater development. Consult Greely, A. W., 'Handbook of Alaska' (New York 1914). The population is estimated at about 4,000

JUNG, zhŭn', **Henri Félix Théodore,** French writer and military man: b. Paris, 1833; d. 1896. Educated for the army he entered upon a military career on graduation, from

Saint Cyr in 1853. After spending five years in the artillery in Africa and taking part in the campaign in Italy, he became a member of the war council (1869). He fought through the Franco-Prussian War; became brigadier-general in 1887 and Governor of Dunkirk, a position he resigned in 1891. He frequently wrote under the nom de plume of "Mustapha." Among his published works are 'Le depôt de la guerre' (1872); 'La république et l'armée' (1872); 'La vérité sur le masque de fer' (1873); 'France et Rome' (1874); 'Bonaparte et son temps' (1881); 'Lucien Bonaparte et ses mémories' (1883); biography of Dubois-Crancé (1884).

JUNG, yŭng, **JUNGE,** or **JUNGIUS, Joachim,** German naturalist: b. Lübeck, 1587; d. 1657. He was professor of mathematics at Giessen (1609–14). He received his doctor's degree in medicine from Padua in 1618. He was professor of mathematics at Rostock in 1625 and rector of the Hamburg Johanneum (1628–40). He was one of the first consistent students of the natural sciences more particularly physics, entomology and botany. He attempted to make a classification of plants by genera and species and to provide nomenclature. Consult Goethe, 'Fragmente über Jungius' (Stuttgart 1850); Martini Fogelii, 'Memoria J. Jungii' (Hamburg 1657); Avé-Lallemant, 'Des Dr. Jungius Briefwechsel' (Lübeck 1863); 'Das Leben des Dr. Jungius' (Breslau 1882).

JUNG, jŭng, Sir **Salar,** East Indian prince: b. 1829; d. 1883. He came of a notable family and he became Premier of the Deccan in 1853. He was faithful to the government during the Indian mutiny (1857–58); thus his relations with the British continued to be very cordial. He proved an excellent ruler and succeeded in organizing the country and government committed to his care. Much attention was paid to him by the British public on his visit to England in 1876, when he was knighted with the order of Knight Grand Commander of the Star of India.

JUNG BAHADUR, bă-hă'dŭr, Sir **Maharajah,** East Indian ruler: b. 1816; d. 1877. After holding various important offices, he became Prime Minister of Nepal. Several attempts were made to assassinate him; but he succeeded in getting the better of his enemies, of becoming practicaly an absolute ruler and of establishing order throughout his domains. He supported the British during the Indian mutiny (1857–58).

JUNG-DEUTSCHLAND, more properly **DAS JUNGE DEUTSCHLAND,** a literary and political movement in Germany culminating in 1835, and not related with the simultaneous and more important movements known as Young Italy and Young Europe. There never was much organization or consultation between the writers composing it (Heine, Laube, Gutzkow, Mundt, Wienbarg), but they were connected by the similarity of their aims and methods, and by the fact that the Bundestag at Frankfort in 1835 (having read a denunciation of these men, written by Wolfgang Menzel), issued a decree forbidding the circulation of all past and future writings of the five men concerned, and characterized their movement as "Jung-Deutschland," a term first used by Wienbarg in his 'Æsthetische Feldzüge.' Basing their principles on stimulus received from recent emancipated French writers, these Young Germans opposed, in a literary way, the political reaction in Germany, the predominant tendencies in literature, and the sectarian Christianity of their day. Both Jesuitism and Protestant orthodoxy were then very strong in Germany, and to these influences the Young Germans opposed the socialistic tendencies emanating from the French July Revolution (1830). Their chief object was to reinvigorate both State and Church by the injection of an esthetic culture, thus making both institutions more accessible to larger outlooks. Soon, however, the free unfolding of the individual character became their principal goal. State and Church came to be regarded as mere hindrances, and national affiliation was considered to be a base ideal, in no way comparable with Goethe's great conception of a world literature (*Weltlitteratur*). The immediate demands of the Young Germans included an emancipation of the Jews and complete freedom for women. Consult Houben, H. H., 'Jungdeutscher Sturm und Drang' (Leipzig 1911); Bloesch, H., 'Das junge Deutschland in seiner Beziehung zu Frankreich' (Bern 1903); Proelss, Johann, 'Das junge Deutschland' (Stuttgart 1892); Brandes, Georg, 'Das junge Deutschland' (Leipzig 1891).

Jacob Wittmer Hartmann.

JUNGBUNZLAU, yung-bunts'lau, Bohemian town on the Iser 30 miles northeast of Prague. It consists of two parts, the old and the new towns. Among the activities of the city are factories for the making of earthenware, glass, woolens, textiles, carriages, carwheels, liquors, candles, soap and starch.

JUNGFRAU, yoong'frow (Ger. "virgin," or "maiden"), a mountain of Switzerland, in the Bernese or Helvetic Alps, on the frontiers between the cantons of Bern and Valais, 12 miles southeast of Interlaken. It is one of the most magnificent mountains in Switzerland; height 13,670 feet. It was first ascended in 1811.

JUNGFRAU VON ORLEANS, Die (The Maid of Orleans), one of Schiller's most noted tragedies which was finished in 1801.

JUNGHANS, yoong'häns, **Sophie,** German novelist: b. Cassel, 3 Dec. 1845: d. 1907. She became well known by the publication of 'Kathe, the Story of a Modern Maid' (1876). Later works of hers are 'The House of Eckberg,' a study of life during the Thirty Years' War (1878); 'Die Erbin wider Willen' (1881); 'Die Gäste der Madame Santines' (1884); 'Der Bergrat' (1888); 'Zwei Brüder' (1889); 'Zu rechter Zeit' (1892); 'Um das Glück' (1896); 'Junge Leiden' (1900); 'Hymen' (1902); and posthumously, 'Wisel' (1908); 'Gerübde' (1908); 'Der geraubte Schleier' (1910).

JUNGLE BOOKS, The, that is to say, the two volumes entitled, 'The Jungle Book' and 'The Second Jungle Book,' in which Rudyard Kipling has collected most of his stories wherein animals are leading actors, were originally published 2 June and 16 Nov. 1894. The first volume, 'The Jungle Book,' narrates in nine magical tales the history of Mowgli, reared from babyhood in the jungle by fostering wolves — how he is adopted as one of the wolf-

pack, how he is instructed and befriended by Baloo the wise bear, Kaa the python and Bagheera the black panther, how he is rescued from the Bandar-Log or Monkey People, how he slays Shere Khan, the tiger, how he becomes the acknowledged master of the jungle, and finally how he returns to his own kind, yet still remains in touch with the jungle-dwellers. The collection is diversified by interludes in verse, such as "The Law of the Jungle" and the "Road-Song of the Bandar-Log" which accentuates the satire embodied in the description of the boastful, scatterbrained Monkey Folk. 'The Second Jungle Book' contains seven stories, among them that of "Rikki-Tikki-Tavi" the mongoose, "Toomai of the Elephants," "The Undertakers"—which is concerned with three sinister scavengers, the crocodile, the jackal and the adjutant crane,—and "The Miracle of Purun Bhagat," a beautiful tale of an old recluse and the beasts that loved him. "To those who read between the lines," says Frederic Taber Cooper, "the Jungle Books are far more than a new childhood classic. They are the life of modern India, told in allegory, and in Kaa and Bagheera and all the rest we have the types of native life, with its stored-up wisdom of old, primeval instincts, its simplicity of outlook upon the present-day world." Kipling's animals are peculiarly convincing. They act and talk—when they do talk,—in accordance with their animal characteristics, and never give the impression that they are humans masking in fur, feathers or scales.

ARTHUR GUITERMAN.

JUNGLE-CAT, or **CHAUS,** the common wildcat of India (*Felis chaus*). It is 26 inches long in head and body, has a short tail, reaching only to the heel, and is yellowish gray, more or less dark and unspotted, tinged with reddish on the sides, marked by a dark stripe from the eyes to the muzzle, and with reddish black ears slightly tufted. Another Indian "jungle-cat" is the handsome *F. ornata,* which is profusely spotted; it dwells in the desert regions of the Northwestern provinces. Both these cats are said to interbreed with domestic cats, and thus no doubt long ago influenced the varieties of the tamed stock.

JUNGLE-FEVER, a severe variety of remittent fever, prevalent in the East Indies and other tropical regions. It is characterized by the recurrence of paroxysms and of cold and hot stages. The remissions occur usually in the morning and last from 8 to 12 hours, the fever being mostly typically developed at night.

JUNGLE-FOWL, the English book-name of a genus of pheasants, the source of domestic fowls, characterized by a fleshy frontal comb and wattles and the peculiarly laterally compressed tail with its long, drooping, curved feathers. This genus (*Gallus*) is represented by several species in southern Asia, especially India and the Malay and Philippine Islands. The common jungle-fowl (*Gallus gallus* or *bankiva*) is especially noteworthy as the original stock of our barnyard fowls. The wild birds, which are quite common in cultivated parts of central India and about the bases of the Himalayas up to an elevation of 5,000 feet, closely resemble some of the varieties of game cocks and hens. The sexes differ as in the domestic birds in size, character of tail feathers, combs, wattles, spurs and color. Although naturally living in flocks in the jungles and forests, these haunts are often forsaken for the purpose of feeding upon grain in the cultivated fields. They run with great speed, are tolerably good flyers and roost in trees. The cock crows and the hen clucks and cackles much as domestic fowls do. In the wild state the jungle-fowl is said to be monogamous; eggs to the number of 10 or 12 are laid in a simple depression in the ground lined with leaves and grass. Consult Darwin, 'Animals and Plants under Domestication'; Tegetmeier, 'Ibis' (1891); and Blanford, 'Fauna of British India.'

In Australia this name is often given to the mound-birds.

JUNGMANN, yoong'măn, **Jozef Jakob,** Czech philologist and literary man: b. Hudlitz, Bohemia, 1773; d. 1847. Graduated from Prague in law and philosophy, he became a teacher in the gymnasium at Leitmeritz (1799–1815); and in the same capacity at Prague (1815–35). He was rector for the following 10 years. He attempted to awaken the Czech spirit of nationality and to interest the people as a whole in their national language, to prove the literary capacity of which he made translations from English, French and German, among his translations being Milton's 'Paradise Lost,' Chateaubriand's 'Atala,' and Goethe's 'Hermann and Dorothea.' His original work consisted of 'A History of Czech Literature and Language' and a dictionary of the Czech language. His influence for good was very powerful on his own language and his help to philology very considerable.

JUNIATA, joo-nī-ăt'ă, borough in Blair County, Pa., close to Altoona on the Pennsylvania Railway. Among its industrial establishments are railway repair shops and silk mills. Pop. 6,000.

JUNIATA, joo-nī-ăt'ą, a river of Pennsylvania formed at Petersburg, about six miles northeast of Huntingdon, near the centre of the State, by two streams rising in the Alleghany Mountains — the Little Juniata and the Franks-town Branch. Its course is winding, but it flows in a generally eastern direction for about 150 miles, entering the Susquehanna at Duncannon, 14 miles above Harrisburg. Along the greater part of its course the scenery is picturesque, often marked by grandeur where the river breaks through the mountains that rise in parallel ridges across its path. The Juniata is not a navigable stream, but from its source to its mouth its banks are followed by the Pennsylvania Canal and the Pennsylvania Railroad, the latter crossing the river several times.

JUNIATA COLLEGE, a coeducational institution, located at Huntingdon, Pa.; established in 1876 under the auspices of the German Baptist Brethren. Special attention is given to the religious education of the students; one of its principal courses is the history and literature of the Bible. It has art, music, normal and commercial departments, also a preparatory school. The courses lead to the degrees of bachelor of arts and of English and sacred literature. In 1917 there were in attendance 341 students and 23 professors and instructors were connected with the school. There were about 28,000

bound volumes and over 4,000 pamphlets in the library. The endowment was about $185,000 and the college property was valued at $250,000.

JUNILIUS, an African bishop of the 6th century. He was the author of 'Instituta Regularia Divinæ Legis,' written about 550. This work is of importance on account of being one of the earliest known introductions to the sacred writings, and also to the fact that Junilius does not include among the canonical books Chronicles, Ezra, Nehemiah, Job, Judith, Esther and the Maccabees. Consult Becker, 'Das System des Kirchenvaters Junilius' (Lübeck 1787); Klim, 'Theodor von Mopsuestia und Junilius Africanus' (Freiburg 1880).

JUNIN, hoo-nēn, Peru, department in the interior, bounded on the north by Huanuco, east by Cuzco, south by Ayacucho and Huancavelica and west by Lima. It has an area of 23,347 square miles. It is located in the wildest parts of the Cordilleras. The western portion is more elevated than the eastern, but the latter is densely wooded. Agriculture is neglected and large deposits of silver, copper, coal and salt remain unworked. Cereals, coffee and sugar are the principal crops. A railroad connects the southern part with Lima on the coast. The capital city is Cerro de Pasco. Pop. of the department 394,393.

JUNIN, or **CHINCHAYCOCHA,** chēn-chī-kō'chă, a Peruvian lake situated at an altitude of 13,000 feet in the department of the same name. It is 37 miles long and about seven miles wide and the waters from it find exit through the Mataro River.

JUNIOR ORDER OF UNITED AMERICAN MECHANICS. See UNITED AMERICAN MECHANICS, JUNIOR ORDER OF.

JUNIPER, a genus (*Juniperus*) of ornamental evergreen trees and shrubs of the family *Juniperaceæ,* consisting of about 40 species, distributed mainly throughout the cooler parts of the northern hemisphere. The species have branches which spread in all directions from the main trunk and limbs, small, rigid, needle-like or scale-like, opposite leaves; unisexual flowers, the two sexes usually upon separate plants, the staminate yellow and in catkins, the greenish pistillate ones followed by fleshy or dry, berry-like cones containing from one to six, sometimes 12 seeds, which may not attain maturity until the second or third year. The best-known species in the United States is probably the Virginia juniper, red cedar or savin (*Juniperus virginiana*), to be found widely dispersed east of the Rocky Mountains, upon rocky and sandy soils, mountain sides, etc. It sometimes attains 100 feet in height, its upright or spreading branches forming a handsome conical head. Its numerous attractive horticultural varieties are largely planted in parks and cemeteries. The trunks are highly prized for fence posts, being exceedingly durable; the handsome red heartwood is valued for turning, cabinet-work, cooperage and especially for lead pencils; but the tree is looked upon with disfavor by the orchardist, because it is one of the hosts of apple rust. See APPLE, paragraph *Diseases.*

The common juniper (*J. communis*) is a smaller species, rarely reaching 50 feet in height and usually less than 25 feet tall, and many of its numerous varieties less than 10 feet. It is widely distributed throughout the northern hemisphere, especially in the colder latitudes and altitudes. Like the preceding species its wood is valued, when of sufficient size, for posts, veneers, pencils and for turning. The tree itself is also used for ornamental planting. Its bark is sometimes twisted into ropes and its long, tough, fibrous roots are used for making baskets. Its blue-black fruit, which it yields profusely, is used for flavoring certain liquors, as is also the oil obtained from them and from the twigs by distillation with water. This oil has been used in medicine as a stimulant, but is less popular than formerly. The Bermuda cedar (*J. barbadensis*) resembles the Virginia juniper, but is of stouter build, though it rarely exceeds 40 feet in height. Its wood is rather more fragrant than that of the preceding species like which it is used. Formerly it was employed in the ships built in the Bermudas, but the forests which supplied this industry were mismanaged and the industry perished. Several other species are of more or less economic importance; for instance, the Spanish juniper (*J. oxycedrus*), a shrub which attains a height of about 12 feet, whose fruits yield a disagreeable smelling oil (oil of cade), used in veterinary medicine; and African juniper (*J. procera*), a useful timber species and probably the largest of the genus, often attaining heights of 150 feet in the mountains of eastern Africa, where it is native. A number of species occurring in western North America are of great economic importance.

Junipers succeed best in moderately moist, sandy loam in open, sunny situations. They make excellent windbreaks and shelter belts, especially where the soil is too dry, rocky, or gravelly for other trees. They may be propagated by seeds which, however, usually require two, sometimes three, years to germinate. Cuttings of almost mature wood may be taken in the autumn from the needle-leaved kinds and grown under glass or in the open; species with scale-like leaves are generally side-grafted in the greenhouse during winter. Some of the shrubby species are propagated by layers.

JUNIPERO, Miguel José Serra, mē-gĕl hō-sā' sĕr'rä hoo-nē'pä-rō, Spanish missionary in America: b. island of Majorca, 24 Nov. 1713; d. Monterey, Cal., 28 Aug. 1784. He became a member of the Franciscan order in 1729, in 1750 arrived in Mexico City as a missionary and in 1750–69 was active among the native tribes. In 1769 he went to the site of San Diego, Cal., where he founded a mission. He gathered about him a band of 16 of his order and these missionaries converted over 3,000 Indians, of whom Junipero himself is said to have baptized more than 1,000. He instructed the natives in the arts of civilization and the colonies which assembled about the mission stations constituted the first settlements in California. His headquarters were at Monterey, but he founded several other missions. Bret Harte incorrectly gives his name as Serro.

JUNIUS, yoo'nē-ŭs, **Franciscus,** known as THE YOUNGER, German philologist: b. Heidelberg, 1589; d. 1677. The boy was brought to Leyden when three years old and there he was educated under his brother-in-law, Gerhard Vossius, a noted philologist. In 1821 he went to England, where he became librarian to the

Earl of Arundle, a position he held for 30 years. During these and following years he devoted his time to study, research and writing. Among his works are 'De Pictura Veterum' (with an English version, 1637); 'The Gothic Gospels of Ulfilas' (1665); and 'Glossarium Goticum' (1664–65). This latter is in five languages. These and other valuable manuscripts of his are in the Bodleian Library, Oxford.

JUNIUS, Letters of, a remarkable series of political letters that were published in the London *Public Advertiser* over the pseudonym of "Junius," between 21 Jan. 1769 and 21 Jan. 1772. These epistles greatly stirred the English political world, for they were written with a wide and intimate knowledge of affairs, shrewd political sagacity, literary felicity and a certain waspish malignity. No bolder or more audacious comments on the actions and characters of public men have ever appeared in the English language. So merciless were they in their cold-blooded vivisection and more or less polished abuse of the policies of Granby, Bute, Grafton, Bedford, Mansfield and, to Burke's horror, scathing even the sacred majesty of the king, that extraordinary efforts were made to discover their author. But Junius, whoever he was, escaped detection in his lifetime and, since the days of George III, the question of his identity, though frequently raised in England and America, has never been satisfactorily settled. At the close of his correspondence Junius edited the letters for the publisher of the *Public Advertiser,* Henry Sampson Woodfall, with an explanatory preface and a "Dedication to the English Nation." He also included a few letters he had written under other pseudonyms than "Junius." The whole was published in two volumes by Woodfall in 1772. A later edition, published by Woodfall's son and edited by Dr. Mason Good, appeared in 1812. Good introduced 113 extra letters; some of these had passed between Woodfall senior and Junius, but the majority had been collected by Good from the *Public Advertiser* and attributed to Junius without the slightest proof of their authenticity. It was these interpolated letters that gave rise to the accusation of inconsistency frequently leveled against Junius. Some 40 different individuals have at various times been brought forward as the real Junius, among them being Edmund Burke, Edward Gibbon, Lord George Sackville, Lord Chatham, Sir Philip Francis, Colonel Barré, John Horne Tooke, Lord Temple, General Charles Lee, Hugh M. Boyd, Lord Chesterfield, Horace Walpole, etc. Junius wrote his letters in a disguised hand; he described himself as "a man of rank and fortune," asserted that he was the sole depository of his own secret, and that it should perish with him. From external evidence and fortuitous coincidences, plausible cases have been made out to establish the identity of at least 10 different contemporaries with the unknown Junius. From internal evidence, however, including style, ability, circumstances, ages, chronology and motives, in addition to solemn denials by several reputed authors of the letters, the claims and pretensions of any of the remainder have hitherto failed to obtain a unanimous verdict. Curiously enough, all the advocates base their evidence on similarity of handwriting. Apparently the strongest claim was that made on behalf of Sir Philip Francis (1740–1818) by Taylor in 1816 and elaborated by a grandson, H. R. Francis, in 'Junius Revealed' (London 1894). The publication of 'The Francis Letters' (2 vols., London 1901), a mass of private and public correspondence, went some way, negatively, to prove that Sir Philip was not Junius. The best criticisms on the disputed authorship may be found in C. W. Dilke's 'Papers of a Critic' (Vol. II, London 1875) and the *North American Review* of October 1829 and April 1832. Consult Britton, J., 'The Authorship of the Letters of Junius Elucidated' (London 1848); Chabot, C., 'Handwriting of Junius' (London 1871); Coventry, 'Critical Inquiry into the Letters of Junius' (1825); Dwarris, Sir F., 'Some New Facts as to the Authorship of the Letters of Junius' (London 1850); 'Junius Unmasked' (Boston 1828); Jacques, 'History of Junius' (1843); Newhall, I., 'Letters of Junius' (Boston 1818); Parke and Merivale, 'Life of Francis' (London); Vicarius, 'The Junius Letters' (London 1903); Wade, J., 'Junius' (2 vols., London 1850), generally called *Woodfall's Edition,* and occasionally reprinted; based entirely upon Good (1812) it contains all his blunders. Waterhouse, B., 'An Essay on Junius and his Letters' (Boston 1831).

JUNKER, yŭn'kĕr, **Wilhelm,** Russian explorer: b. Moscow, 1840; d. 1892. Educated at Saint Petersburg, Göttingen, Berlin and Prague, he visited Iceland (1869), Western Africa (1873), Tunis (1874), lower Egypt (1875), and went up the Blue Nile to Khartum (1876). After three years spent in this region, he returned to Europe, but went back the following year (1879) to continue his explorations at the head waters of the Nile. In 1886, after numerous adventures, he reached Zanzibar. On his return to Germany he published 'Reisen in Afrika' (Vienna 1889–91), in which he gives an account in three volumes of his travels and adventures.

JUNKERS, yoong'kĕrz, a name given to the younger members of the nobility of Prussia and the adjoining states. "Junkerthum" (aristocratic manners) was a term of reproach used in the 19th century to designate the party of reaction in Prussia, which found its most strenuous supporters among the nobility. "Junkerei" signifies the behavior of young aristocrats; aristocratic arrogance; in German slang a baker's apprentice is sometimes called a junker.

JUNKIN, George, American Presbyterian clergyman: b. near Carlisle, Pa., 1790; d. 1868. He was graduated from Jefferson College (Pa.), in 1813 and entered the Presbyterian ministry in which he became prominent as a leader of the party known as Old School Presbyterians. He founded Lafayette College at Easton, Pa., in 1832, and was its president till 1841; returning thither in 1845, after three years spent as president of Miami College at Oxford, Ohio. In 1848 he became president of Washington College (now Washington and Lee). He was an outspoken upholder of slavery, but was opposed to secession, and on account of his Union sentiments resigned the presidency of the college in 1861. He spent over $10,000 of his own and his wife's fortune to meet the current expenses of Lafayette College. He was the

father-in-law of Gen. "Stonewall" Jackson. He published 'Political Fallacies' (New York 1863) and several religious works. Consult 'Life' by D. X. Junkin (Philadelphia 1871).

JUNKS, large flat-bottomed vessels, ranging from 100 up to 1,000 tons burden, used by the Chinese. They have three masts, and a short bowsprit placed on the starboard bow. The masts are supported by two or three shrouds, which, at times, are all carried on the windward side. On the fore and main mast is a sort of lug-sail, of cane or bamboo matting.

JUNO, the most exalted divinity of the Latin races in Italy next to Jupiter, of whom she was the sister and wife; the equivalent of the Greek Hera. She was the queen of heaven, and under the name of Regina (queen) was worshiped in Italy at an early period. She bore the same relation to women that Jupiter did to men. She was regarded as the special protectress of whatever was connected with marriage. She was also the guardian of the national finances, and a temple, which contained the mint, was erected to her under the name of Juno Moneta on the Capitoline.

JUNOT, Andoche, ăn-dōsh zhu-nō, DUKE OF ABERANTES, French marshal: b. Bussy-le-Grand, Côte d'Or, 23 Oct. 1771; d. Montbard, 22 July 1813. He was intended for the bar, but on the outbreak of the revolution joined a volunteer battalion, and soon attracted notice. At the siege of Toulon, in 1793, he became secretary to Napoleon, and went with him into Italy and Egypt in the capacity of aide-de-camp. In Egypt he was advanced to the rank of general of brigade. In 1800 he was made commandant of Paris, and he particularly distinguished himself at the battle of Austerlitz in 1805. In 1807 he was sent with an army into Portugal, and made his entry without opposition into Lisbon, his success being rewarded with the title of Duke of Abrantes. On the arrival of the British he was defeated at Vimeira, and was then obliged to submit to the humiliating convention of Cintra. Although he subsequently took part in the campaigns (1809) against Austria, (1810) against Spain and (1812) against Russia, he failed to retrieve his reputation. In 1813 he became insane, and lost his life by leaping from a window.

JUNOT, Laure, DUCHESS OF ABRANTES, a French writer: b. 1784; d. Paris, 1838. Her real name was Laurette de Saint-Martin-Permon. She was married to General Junot in 1799; and she eventually became a social leader at the court of Napoleon I. Her extravagance ruined her husband who died in 1813. About this time she turned to literature of a historical and reminiscent nature; and succeeded in keeping herself, for some considerable time, in the public eye. Her 'Memoires' (1831–35) consist of 18 volumes of diffuse material, much of it of interest as reflecting the manners and customs of the times. She also published other works of a like nature from which she earned considerable income; but her boundless extravagance finally left her penniless and she died in a charitable institution.

JUNTA, hoon'ta, Spanish assembly; a high council of state; a term common in all Spanish-speaking countries. It is generally also applied to any gathering or body of men. It was originally applied to an irregularly summoned assembly of the states, as distinguished from the cortes or parliament regularly called together by the authority of the king. In Cuba the term was adopted by the insurgents before the Spanish-American war, to designate the general legation of the Cuban republic abroad. This legation or junta was first appointed 19 Sept. 1895, by the Constituent Assembly that formed the insurgent Cuban government, which at the same time made T. Estrada Palma head of the junta and chief Cuban representative abroad, with authority to appoint ministers to all governments and to have control of Cuba's diplomatic relations and representatives throughout the world. See CUBA.

JUNTO, The, a club formed in Philadelphia by Benjamin Franklin for mutual improvement. Morals, politics and natural philosophy, as well as the social well-being of man, were the main subjects discussed. It continued for about 30 years. The name was also applied to an English Whig ministry in the reign of William III, the chief members of which were Admiral Russell, Somers, Lord Wharton and Montague, the great financier. This was the first ministry ever made of one and the same party politics. It was the suggestion of Robert, earl of Sunderland, to William III, who shrewdly said, if all the ministers were of one party they would pull together.

JUON, yoo'ŏn, **Paul,** Russian musician: b. Moscow, 1872. Educated in music in Moscow and Berlin, where he won the Mendelssohn scholarship, he became a teacher in the Baker Conservatory. In 1906 he became professor of Musical composition in the Hochschule at Berlin. As a composer he has paid considerable attention to the folk-lore of Russia. He has inventive power and originality, and his music covers a wide range; but throughout it is Slavic in character. His chamber music is undoubtedly his best; for in this he is unsurpassed by any of his contemporaries.

JUPATI, joo'pä-tē, a palm (*Raphia tædigera*) of the tide-flooded lands of the lower Amazon and Pará rivers, remarkable for its leaves, probably the largest in the vegetable kingdom. The trunk is only six or eight feet high, and one foot in diameter. The leaves rise nearly vertically from the trunk, bending out on every side in graceful curves, forming a magnificent plume 70 feet in height and 40 in diameter. Leaves have been measured 50 feet long, and the leaf-stalk is often 12 or 15 feet long below the first segments of the leaf, and four or five inches in diameter, perfectly straight and cylindrical, and when dried light and strong as the quill of a bird. The Indians split it into laths for a variety of purposes — window-shutters, boxes, bird-cages, partitions, and even entire houses being constructed of it with the addition of a few supporting posts at the angles. The fruit, a large oblong drupe, has a bitter oily flesh.

JUPITER, joo'pĭ-tẽr, or **JUPPITER,** the supreme deity of ancient Rome, the same as the Greek Zeus. As the supreme deity Jupiter received from the Romans the title of *optimus maximus* (best greatest), and as the deity presiding over the sky he was considered as the originator of all the changes that took place in the sky. From him accordingly proceeded

CHANGES IN THE ASPECT OF THE PLANET JUPITER OBSERVED AT VARIOUS TIMES

rain, hail and the thunderbolt, and he it was that restored serenity to the sky after it had been obscured by clouds. Hence the epithets of Pluvius (rainy), Tonans (thundering), etc., were applied to him. The most celebrated of his temples was that on the Capitoline Hill dedicated to him as Jupiter Optimus Maximus, jointly with Juno and Minerva. He was represented with a sceptre as symbolical of his supreme authority. He was the guardian of all property; and every Roman was believed to be under his protection and that of his consort Juno, the queen of heaven. White animals were offered up to him in sacrifice, his priests wore white caps, and his chariot was represented as drawn by four white horses. See JUNO.

JUPITER, the largest planet of the solar system, and the fifth (excluding the asteroids) in order of distance from the sun. Its mean diameter is about 86,500 miles; polar diameter about 83,000; its mean distance from the sun 483,300,000 miles; its period of revolution round it 11 years 10⅓ months; its orbit is inclined to the ecliptic at the angle 1° 18′ 40.3″. The inclination of its axis is 3° 5′ 30″, so that changes in the seasons must be almost unknown; its volume is 1,309 times that of the earth, but its mass is only 317.7 times.

Jupiter's satellite system is the most interesting of that of any of the planets. Altogether, nine moons are known; the four brightest, which were discovered three centuries ago, are visible in a very small telescope and even in a good field glass; the others are far too faint to be seen in any but the very largest telescopes, and there is indeed one of them so faint that it cannot be viewed visually with any telescope now in existence: it can only be detected by the employment of the photographic plate. The four brightest satellites were discovered by Galileo in 1610, and are sometimes referred to as the Galilean Stars. They are very large objects, their diameters ranging from 2,100 to 3,550 miles; the largest of them thus exceeds Mercury and approaches closely to Mars in size. These moons are comparatively very close to the planet, yet in 1892 Barnard, at the Lick Observatory, discovered a fifth, excessively faint, satellite whose orbit lies so far within all of them that this moon is but 69,000 miles from the planet's surface. The remaining four were discovered by photography. The sixth, seventh and ninth were found at the Lick Observatory, the first two by Perrine and the last by Nicholson, while the eighth was discovered by Melotte at the Observastory of Greenwich. It is remarkable that no less than four of the Jovian satellites were thus discovered at a single observatory. The orbits of the four newest satellites differ greatly from those of the older ones. While the five inner moons form a compact system whose nearly circular orbits all lie very approximately in one plane, the outer ones move in highly eccentric orbits which are greatly inclined to the planes of the others, and at great distances from the planet. Thus the ninth satellite is nearly twenty times as far away as the outermost of the older satellites; moreover, the eighth and ninth satellites revolve about Jupiter in a retrograde direction. This last fact raises interesting questions as to the mode of development of the system and even suggests the possibility that these fainter satellites may originally not have belonged to the system, but that they may be outriding members of the asteroid swarm, or some other bodies which approached so near to Jupiter that they were captured and forced to revolve around the planet. The following table contains the principal data referring to the nine known satellites.

SATELLITE	Discoverer	Distance from planet in miles	Period
Nameless....	Barnard, 1892...	112,500	11 h. 57 m.
Io.....	Galileo, 1610....	261,000	42 h. 28 m.
Europa.....	Galileo, 1610....	664,000	171 h. 43 m.
Ganymede...	Galileo, 1610....	415,000	85 h. 14 m.
Callisto.....	Galileo, 1610....	1,167,000	400 h. 32 m.
VI.....	Perrine, 1904....	7,110,500	251.0 days
VII.....	Perrine, 1905....	7,273,800	259.7 days
VIII.....	Melotte, 1908...	17,042,000	2.55 years
IX.....	Nicholson, 1914.	18,993,000	3.0 years

The disk of Jupiter is crossed in a direction parallel with the equator by three or four vividly marked bands or belts; other of these belts vary in density and distinctness. Spots also appear and remain for some time on its surface. In particular, a large red spot of varying dimensions has been observed from time to time. Prof. George Washington Hough sums up the results of his 23 years of observations of Jupiter somewhat as follows: First, its equatorial belt changes both in size and position slowly and gradually. Second, the fainter belts also vary. Third, the circular white spots are very permanent in latitude, but are not fixed in position one with another. Fourth, the dark spots of the same size as the circular white spots are not so stable as they, and probably lie at the level of the equatorial belt. Fifth, the large, irregular white spots near the equator make one rotation in 9 hours 50 minutes. As to the constitution of the planet, Professor Hough concludes that the matter at the visible boundary of Jupiter has a density about half that of water (the average density of the planet is 1.37 times that of water). The medium at the boundary is in the nature of a liquid. In it the great red spot and the circular white spots are located. In such a medium all motions would be slow and gradual and the shape and size of an object would be very permanent. The equatorial and polar belts may be located on the surface or at a higher level than the red spot. In middle latitudes within 20° of the equator the higher atmosphere carries a layer of dark matter. In this envelope are formed the openings that we call white spots, and by unequal distribution black spots. The belts may be assumed to be some sort of vapor of considerable density. The planet is at a high temperature, but not noticeably self-luminous.

JUPITER CAPITOLINUS, Temple of, the national shrine of ancient Rome. Situated on the Capitol, it was dedicated to Jupiter Optimus Maximus, Juno and Minerva. It is said to have been built by Tarquinius Superbus and completed in 509 B.C. It was built against the side of Monte Caprino, the southern summit of the Capitoline Hill and was supposed to stand on sacred ground. On account of its

position it could be approached only from one side. Owing to the early date of its structure it was Etruscan in style and had three rows of columns in front, to represent the trunks of the trees of the ancient forest shrines. This huge primitive building, which was destroyed by fire (83 B.C.) was rebuilt by Sulla and Cæsar. Augustus also rebuilt it in 9 B.C., and Vespasian restored it in 74 A.D., and Domitian in 82 A.D. It was finally plundered in 455 by the Vandals, who left it a ruin. Some of its buried remains have been unearthed at the foot of the hill. Consult Lanciani, R., 'Pagan and Christian Rome' (Boston 1893); Platner, S. B., 'The Topography and Monuments of Ancient Rome' (Boston 1911).

JUPITER SERAPIS, Temple of, a building at Pozzuoli, near Naples, which was at one time supposed to be a temple, and now popularly so called. It is now believed to be a market. The base of the building is now and apparently has been long under water. It at one time had 46 very high pillars of which only three are now standing.

JUPITER STATOR, Temple of, a religious edifice at Rome said to have been vowed by Romulus to Jupiter the "stayer of flight," so called because he answered the supplication of the Romans and restrained the flight of the latter before the Sabines, according to Livy (Book 1-12). Romulus apparently was not able to carry out his vow. But this was done, several hundred years later, by M. Atilius Regulus who erected the Jupiter Stator in 296 B.C. This, which was in the Corinthian style, is believed to have stood east of the Arch of Titus and close to the Sacred Way. Consult Lanciani, R., 'The Ruins and Excavations of Ancient Rome' (Boston 1897).

JURA, zhū'rą, a department of France situated on the eastern frontier. It is bounded on the north by Haute-Saône, on the east by Switzerland, on the south by the department of Ain and on the west by the department of Côte-d'Or and Saône-et-Loire. It is generally of a rugged nature, over two-thirds of its territory being covered by the Jura Mountains, which rise, in places, to over 5,000 feet. The lower level lands are on the west. Here the regular crops of France are grown in abundance. Among the industries of Jura are the mining of rock salt, coal, iron, marble and various other classes of stone, the manufacture of cheese and the cutting of timber. Area, 1,952 square miles. Pop. 153,000.

JURA, joo'rä, a chain of mountains in central Europe, partly belonging to France, partly to Switzerland, between which they form a sort of natural barrier, extending from southwest to northeast, and exhibiting a number of parallel ridges. The greatest length is nearly 200 miles, from Belley in France, department of Ain, to the banks of the Rhine; and the greatest breadth about 60 miles, between the Lake of Geneva and the banks of the Doubs. The principal geological formation is the Jura limestone, with greensand, belonging to the lower Cretaceous series. Stalactite caves are numerous. The two chief rivers having their source in the chain — the Ain and the Doubs — are both French. They descend from its western slopes, and belong to the basin of the Rhone. The highest peaks of the Jura are Crêt de la Neige, Reculet, Mont Tendre and La Dôle, all over 5,500 feet.

JURASSIC, a term used to indicate the second period of the Mesozoic era and the system of rocks formed at that time. Jurassic is preceded by Triassic and followed by Cretaceous. The formations of this period take their name from their prominent exposure in the Jura Mountains; but are known in Great Britain as the Oölites because there made up of granular (oölitic) limestones below the Cretaceous and above the Lias, from the latter of which the series is separated by no very definite boundary. In portions of America, Triassic and Jurassic are not easily differentiated and the inclusive term Jura-trias is often used. No definitely recognizable Jurassic rocks are known in United States east of the Mississippi River. In the Rocky Mountain region, the area was above water throughout early Jurassic as in Triassic, but late in the period an arm of the sea encroached from the Arctic, extending as far south as Wyoming, and thin marine limestones, sandstones and shales were laid down. These contain many fossils of Arctic relationships. Before the end of the period this sea had again retreated. On the Pacific Coast, marine conditions prevailed over the present site of the Sierra Nevada Ranges. The period was brought to a close by a great mountain-making revolution that upheaved the Sierra Nevadas and Cascades. At the same time great masses of granite (batholiths) were intruded.

Life of the Period.— During the Jurassic the most notable development of invertebrate life was among the Ammonite Cephalopods, which differentiated rapidly, and hence formed valuable time markers. Among vertebrates, the reptiles are easily dominant. The dinosaurs developed along several lines. Bipedal forms were common and were of two groups, the carnivorous and the herbivorous. Quadrupedal forms grew to be of enormous size, brontosaurus reaching a length of 60 or 80 feet and weighing over 30 tons. Strange armored forms also developed with long spikes on their tails. Marine reptiles also were abundant, ichthyosaur (fish reptile) having a truly fish-like tail and fins. Flying reptiles, known as pterosaurs (wing reptiles) became common. The larger ones had a wing spread of 20 feet and had hollow bones as do birds. The first true bird (*Archæopteryx*) (q.v.) has been found preserved in Jurassic rocks. It had feathers like modern birds, but was furnished with long, sharp teeth. A few minute remains believed to represent mammals have been found, the earliest remains of the mammal group. The plant life was very similar to that of the Triassic (q.v.).

JUREL, joo'rĕl, or **XUREL,** a fish of the genus *Caranx,* especially *C. crysos,* more widely known as the yellow mackerel and hard tail. Unlike most members of this tropical genus, the jurel is common as far north as Cape Cod. In Florida and the Gulf States it is an important food-fish, caught in seines during the spring and summer when in shallow water for the purpose of spawning. It is migratory, and like most wandering fishes carnivorous and voracious.

JURI, zhoo-rē', a once powerful Indian tribe belonging to the Arawakan family. They

are closely related in customs, racial appearance, traits and language to the Passé. Their territory once extended from the Lower Putumayo and Japurá into the northern tributaries of the Amazon. They are experts in the use of the canoe and were at one time very much feared by neighboring tribes on account of their deadly blowpipes. Their extensive dwellings are constructed of poles thatched with palm or other leaves, much like those in use everywhere throughout tropical America.

JURIEN DE LA GRAVIÈRE, zhū'rē'ăn' dĕ lă grȧ've'ăr', **Jean Pierre Edmond,** French writer and soldier: b. Brest, 1812; d. 1892. He began his active life in the sea service and became rear-admiral in 1855. He had charge of the French naval interests in the expedition to Mexico in 1861. The following year he arranged the Treaty of La Soledad with the other sharers in the expedition, Spain and England. On his return to Europe he was put in command of the Mediterranean fleet (1868–70). He prepared all the plans for the escape of the empress in 1870. The following year he became director of charts in the Naval Office and in 1888 he was made a member of the Academy on account of his literary and other services to his country. Among his published works, which are all on naval subjects, are 'Guerres maritimes sous la République et sous l'Empire' (1847); 'Voyage en Chine pendant les années 1847–50' (1854); 'Les Campagnes d'Alexandre' (1883–84); 'Les gloires maritimes de la France' (1888); 'L'Amiral Roussin' (1889); 'Les Anglais et les Hollandais dans les mers polaires et dans les mers des Indes' (1890); 'Le siège de la Rochelle' (1891); 'La flotille de l'Euphrate' (1892); 'Les Gueux de mere' (1892).

JURIEUX, zhū're'ę', **Pierre,** French writer and theologian: b. 1637; d. 1713. Although a voluminous writer and bitter controversialist in behalf of Protestantism, he is remembered now for two works, 'Histoire du Calvanisme et celle du Papisme' (1682) and 'Histoire critique des dogmes et des cultes' (1704).

JURISCONSULT (French *jurisconsulte,* Latin, *jurisconsultus,* one skilled in the law), one who gives opinion on cases of law; one learned in the law; and, specifically, a master of civil law. During the Republican period of Rome the jurisconsults, who were almost always men of independent means and good family, trained in the law, gave their legal advice free of charge as a means of adding to their friends and influence to aid them in securing some elective office. Under the Empire certain men were given the right to respond (*jus respondendi*) by the emperor. As these were among the most noted of Roman jurists, their decisions were ordered to be followed by the judges. Before long the jurists thus honored were almost all selected from the members of the Imperial Auditory; and as this was the highest court of appeal there arose the custom of making the lower courts follow the decisions of the higher; a custom now universally followed. The famous digest of Justinian was compiled from the writings of the imperial jurists, who had left, in a digested form, the case law of the latter part of the Republic and the first part of the Empire. Throughout the Latin countries the term jurisconsult is used in the sense of jurist. See CIVIL LAW; JURISPRUDENCE; ATTORNEY AT LAW. Consult Muirhead, 'Historical Introduction to the Private Law of Rome.'

JURISDICTION includes both the right to exercise authority (*imperium*) and the field within which such authority may properly be exercised (*dominium*), whether its limits be territorial or personal. In early law, jurisdiction in the second sense was rather personal than territorial, and the same must be true wherever distinct races occupy together the same territory. While the tendency is to gradually work out a system of law applicable to all inhabitants, the state must of necessity recognize the fact that its subjects of different races will consent to be governed only by separate and often contrasting systems. Such is the case, for example, in British India to-day. So, too, jurisdiction was divided according to the subject matter, and the Church secured and jealously maintained authority over all matters of conscience, and managed to extend the jurisdiction of the Ecclesiastical Courts to very important questions, including marriage, legitimacy, wills and administrations, and to actions affecting the personal rights of the clergy.

The Constitution of the United States discriminates clearly and sharply between the executive, the legislative and the judicial powers of government, and its provision that the Constitution and the laws of the United States made in pursuance thereof shall be the supreme law of the land, taken in connection with the provision that the judicial power shall extend to all cases arising under the Constitution, forms the basis of a jurisdiction which, at least in the extent to which it has been carried, is without precedent outside of the United States. It is by virtue of these provisions that the Federal courts exercise the power of declaring void acts of Congress or of the State legislatures which conflict with the Constitution of the United States. To this power and the energy and ability of the Supreme Court in its exercise are due the vigor and efficiency of the Federal government and the establishment of its supremacy within the field of its jurisdiction. This feature has been imitated in the several State constitutions with results unquestionably beneficial as a whole, and so important that the courts have come to be spoken of as the guardians of the constitution. But one result not so fortunate is that the legislative branch of the government, though in theory as much bound by constitutional restrictions as though there were no authority to which an appeal against the validity of its enactments can be taken, is manifesting a disposition to disregard them altogether, leaving the whole question of constitutionality to the courts. As our system of government provides no method by which the question can be raised, except in the course of a litigation in which one party relies upon the right conferred by such a statute, there are possibly many unconstitutional acts in force in the various States. A more important consideration is that a disposition on the part of the judiciary to interfere with matters properly legislative may thus be created, and lead to forced constructions by which any law which the judges believe to be bad is held obnoxious to the Constitution — resulting in illogical and

inconsistent decisions and a weakening of the authority of the courts.

The Constitution provides that the judicial power of the United States shall extend to controversies "between citizens of different States." The purpose was to open the way for legislation which would provide a tribunal in which the right of a citizen of any State to pursue his legal remedies could not be denied; probably, too, to afford him a tribunal less likely to be affected by local prejudice than a State tribunal of first instance, probably a County Court. It is not contended that anything further was designed, but upon this clause depends the most extensive and, except for the provision as to constitutional interpretation which we have just considered, the most important body of Federal decisions. The tendency of the Supreme Court was at first to hold that the Federal court should administer the law of the State in which it was sitting and that while a citizen of Pennsylvania, for example, having a claim against a citizen of New York, might, if he saw fit, bring his action in the Federal, rather than in the State, court — the law to be applied would be the law of the State of New York. But this rule has been departed from in the later decisions, and while the Federal courts still hold themselves bound to follow the interpretation put upon State statutes by the State courts (unless, of course such statutes are attacked as in conflict with the Constitution of the United States), they hold themselves free to disregard the interpretation of the common law by the State courts, and the system of law built up within the State by the adjudications of its courts, and to adopt their own interpretation, and follow their own judgment. That the Federal courts are popular is shown by the fact that the most important litigation, estimated on the basis of the amount at stake is, where possible, usually brought before them, notably proceedings against corporations and especially the foreclosure of corporation mortgages where it is quite common for the trustee for the bondholders to be a corporation or individual of another State, or where a committee of bondholders, or even a single bondholder, residing outside the State which is the domicile of the debtor corporation, is the plaintiff. This is sufficient to give jurisdiction to the Federal court.

We have therefore a most interesting condition of concurrent jurisdictions applying to every inhabitant of the United States. The Federal courts are courts of limited jurisdiction — limited to authority expressly conferred by the Constitution and laws of the United States, but once jurisdiction is established, unlimited in the scope of its exercise. Congress has prescribed that the jurisdiction shall only exist when the matter in controversy has a pecuniary value exceeding $2,000, and that actions shall be brought only in the district within which the plaintiff or the defendant resides and has made provision for the removal from the State courts of causes which might originally have been brought in the Federal courts. Some of the States have attempted to prevent this increasing jurisdiction of the Federal courts; for example, by the passage of acts providing as a condition of a license to a foreign corporation to do business within the State, that such corporation, if sued, would not remove the cause into the Federal court.

The field in which a State of the American Union may exercise its political or judicial authority is circumscribed by its geographical boundaries. The process of its courts can reach only persons who reside in, or voluntarily come into, their jurisdictional limits, or property which is located in, or is brought into, the territory of the State. An action for debt against a non-resident can be conducted only as a proceeding *in rem* against his property found in the State and held by writ of attachment; a judgment *in personam* against a non-resident defendant, who had not been served with initiatory process within the State or voluntarily entered an appearance, would be a nullity. A suit for divorce is a proceeding *in rem*, the *res* being the status of the parties; and, when brought in the proper matrimonial domicile, substituted service of the summons and bill outside the State will give the court jurisdiction. Criminals, who have become fugitives from justice, are brought into the State from which they have fled on requisition to the governor of the State in which they have taken refuge.

National governments are similarly restricted, though their jurisdiction has wider limits. These may extend far beyond their national frontiers to lands and peoples over which the governments hold complete sovereignty or even a mere suzerainty or protectorate. Or the *dominium* of a government may extend to persons of its own nationality living abroad, over whom, or in whose behalf, it claims extra-territorial rights. The extra-territorial jurisdiction formerly exercised by the nations of European race in the non-Christian and imperfectly organized polities of the Orient and the Far East has been greatly narrowed. It was abolished in Japan by treaties; it was declared no longer existent in Turkey by the law suppressing the capitularies and without regard for treaties. In Persia, China and a few other countries it is still the rule that nationals of European and American states can be tried for crime only in the consular courts of their own nationality; likewise these courts have exclusive jurisdiction in civil actions in which their nationals are defendants, or which involve their civil status. Controversies between natives and extraterritorialized foreigners are sometimes triable in mixed courts. The most important of these was the one long maintained in Egypt, and to which the principal nations, including the United States, each appointed a judge. There is a regularly organized United States District Court at Shanghai, forming part of the Federal judiciary system.

Some national governments claim permanent *dominium* over their nationals wherever they go and contest the jurisdiction even of the countries to which their former subjects have emigrated, and in which they have become naturalized. The Italian government, for instance, declined several years ago to surrender to the American authorities a former Italian subject, who had fled to Italy to escape trial in the United States for a crime alleged to have been committed by him in the latter country; the ground of refusal being that an Italian by birth or descent was answerable to courts of Italy alone for his delicts. His liability was not di-

minished by or altered by long absence from Italy, or by a voluntary change of civic status or allegiance, nor even by the accident of having been born in another country. The locus of the crime was considered quite immaterial. To prove its consistency the Italian government about the same time declined to accept jurisdiction in a case involving a young American, the body of whose wife had been put into a trunk and thrown into Lake Como. The nativity of the offender, not the place of the offense, fixed the jurisdiction; let American courts try Americans and the Italian courts administer correction to Italians. This is the American and English rule of jurisdiction turned upside down and inside out. The Italian government receded somewhat from its position, but from considerations of comity, and without abandonment of its principles. The rule of *dominium in personam* also permits the French and other Continental European courts to take criminal jurisdiction over persons who are not, and never were, within the orbit of their territorial authority, and to try and convict such persons in their abscence — which is the direct opposite of one of the fundamental principles of the common law.

STEPHEN PFEIL.

JURISPRUDENCE. The use of this term as an equivalent for "Law" is confusing and apt to conceal its real import. "Medical Jurisprudence," so called, is not even law, but a compilation of facts, taken from the science of medicine, which may be useful in the determination of questions of law. The title "Equity Jurisprudence" on a book generally indicates that it is a treatise on pleadings and procedure in the Court of Chancery, and when one speaks of American jurisprudence what is usually meant is the administration and practice of the law in America, specifically in the United States. These and many other similar uses of the term are incorrect. Jurisprudence is the science which concerns itself with the discovery and presentation in a systematic manner of the relatively few and simple ideas underlying the infinite variety of legal rules. In making its observations and deductions jurisprudence recognizes no limits of time and place; a rule stated in, or inferred from, a section of the Code of Hammurabi (B.C. 2340) is within its sphere of inquiry just as much as one declared in an act passed by Congress or a State legislature during the present year. Nor does the science take cognizance of the different classes of people whose wants were satisfied by the invention of a legal rule, nor the circumstances under which it was invented. The general rules of *hypothec* are applicable alike to a bottomry bond, a mortgage on land or a pledge of chattels; the general rules of possession, ownership and contract are applicable alike to mariners, landlords or pawnbrokers. Jurisprudence should not be confounded with the history of laws or of the law; a science which reduces legal phenomena to order and coherence is obviously something quite different from an historic exposition of the law of one or of many countries, or even the juxtaposition for the purpose of comparison of the rules embodied in various systems of law. The comparative study of laws engrossed the attention of Roman jurists, and in the *jus gentium* they put together the rules which they found to be common to a great number of legal systems. Their ideal was a universal code, from which all systems were imagined to be derivable, or toward which they were supposed to tend. It was in their efforts to realize this ideal that the Romans made a discovery of far greater importance than that of a merely material unity in the laws of many nations. There was disclosed to them a formal unity which enabled them to rubricate the essential principles of their ideal or "Natural law" in spite of the heterogeneous origin of their material and the differences of the methods of grouping the topics adopted in the various legal systems. In a word, the Roman jurists invented the science of jurisprudence, which differs from comparative law as much as it differs from legal history. In making this invention the Romans did a service for law, parallel to the service done by the Alexandrian Greeks for language when they invented grammar. The difference between comparative law and our science is well stated by Dr. T. E. Holland in his 'Elements of Jurisprudence' by the following illustrations: "It is the office of comparative law to ascertain what have been at different times and in different communities the periods of prescription or the requisites of a good marriage; it is for jurisprudence to elucidate the meaning of prescription in its relation to ownership and to actions at law, or to explain the legal aspects of a marriage and its connections with property and the family." A science of jurisprudence, to be sure, might be deduced from the observation of the laws of a single nation, just as the Alexandrian Greeks deduced a science of grammar from Greek, the only language they familiarly knew — and just as the general formulæ of grammar thus derived are applicable to all languages, so would a formal science of jurisprudence, though deduced from but one system of laws, be of universal application. While comparative law and legal history are not prerequisites, nevertheless they are invaluable aids toward the formulation of the science. Comparison of the laws enforced in the same country at different times, or of similar though not identical laws of various countries, greatly improves the possibility of separating the essential elements of the science from their historical accidents, and of discovering the relative importance of human wants by the universality (or the reverse) of legal provisions respecting these wants. The means whereby humanity has satisfied its wants are as infinite in number as the wants themselves, but humanity has not always, nor often, had clear conceptions of the ends to be attained by the means employed. Legal history, therefore, is a vast accumulation of complex and perverse facts. Jurisprudence obtains unity out of this complexity by observing the human wants for the satisfaction of which laws have been invented, and the modes in which such wants have been actually satisfied; by collating and digesting the facts observed, with no regard for their historical or geographical associations, and arranging the formal rules deduced from this matter in categories, according to logical principles derived from other practical sciences.

A formal science must necessarily begin with an understanding of the character of the phenomena about which it rationalizes; it can have no coherence if the thing with which it is concerned is given a name with complex and

shifting meanings. A discussion of the great variety of ideas expressed by the word "Law" is deferred to another part of this work. (See LAW). It must suffice here to define "Positive Law," with which alone the science of jurisprudence is concerned, as "a rule of external human action, recognized and enforced by a sovereign political authority." This definition is narrow enough not only to exclude the conceptions expressed by such terms as the "laws of nature" where the word "law" is used merely figuratively, but also to differentiate positive law from moral law, ethics, etiquette or the "code of honor." It is broad enough, on the other hand, to include rules established by custom when they have obtained recognition from the State, and regulations made by municipalities, corporations or other agencies, to which the sovereign political power has delegated some part of its authority. The action regulated must be a human action and it must be external; i.e., it must affect a thing or a person other than him who does the act. A thought is not an act until it finds expression in words or deeds. An omission, however, may be an act in law. Jurisprudence naturally falls into two divisions, public and private. The latter comprises the rationale of legal rules governing the relations of individuals among themselves. Public jurisprudence is that division of the science which is concerned with the rationale of the legal rules which govern the relations between individuals and the State. A third division of the science is sometimes made to include the rules governing the interrelation of States. Inasmuch, however, as there is no supernational authority to compel observance of these rules by mutually independent sovereignties, international law is lacking of the fundamental characteristic of positive law. It, therefore, fits only imperfectly into the scheme of our science. "The most obvious characteristic of the law is that it is coercive; it was invented because of transgressions. Even when it operates in favor of the legitimate action of individuals, the law does so by restraining interference with such action." This carries us forward to the subject of legal rights, the creation and protection of which are the primary objects of law. The elements of a right are, the person entitled, the act or omission, the object and the person obligated. A right has been defined by Holland as "one man's capacity of influencing the acts of another, not by his own strength, but by means of the opinion or force of society. When one is said to have a right to anything, or over something, or the right to be treated in a certain way, what is meant is that public opinion would regard with approbation, or acquiescence, his doing the act or his use of the thing, and would reprobate the conduct of any person who should prevent his doing the act or using the thing, or who should fail to treat him in the manner to which he is believed to be entitled." A right thus sanctioned is a moral right. When the capacity residing in one man to control a thing or the action of another is exercised with the assent and assistance, if need be, of the State, it becomes a legal right — and this irrespective of the moral sanction of the community. The distinction between public and private rights lies upon the surface. The State has the right not to be conspired against or not to have its peace disturbed. An act of treason is a violation of a public right residing in the State, and the State intervenes not only to punish the traitor, but to protect itself — for the State is to be regarded as a "person" by analogy, with rights that need to be safeguarded by itself as well as it safeguards the rights of private persons. Some trespasses are violative of a private as well as of a public right. A libel or an assault, for instance, infringes upon private rights and, also, upon the public right of the State not to be disturbed by acts constituting, or tending toward, breaches of the peace. All legal rights fall into one of the two categories, public or private. The division of the science of jurisprudence in two corresponding departments is, therefore, logically consistent. It commends itself also by the convenience of an arrangement whereby constitutional, ecclesiastical, criminal and administrative law, on the one hand, and the law of contracts, property, succession and torts, on the other hand, fall into groups, to one or the other of which all legal topics may be referred. The classification of rights under the heads, "Rights of Persons" and "Rights of Things," is logically imperfect as well as inconvenient in practice. The right to receive rent does not depend upon some distinctive characteristic of landlords as a class; nor would this right be affected because the landlord should happen to be following an occupation, say that of a pawnbroker, whose business is conducted under some special kind of administrative regulations. These regulations of the pawnbroking business in no way increase or impair the right of a pawnbroker, as landlord, to rent from a tenant. If a landlord should be an infant, however, a whole set of legal disabilities would come into play, affecting and modifying the antecedent right of this specific landlord to receive rent or the remedial right of the infant to enforce payment thereof. These modifying causes, affecting the relations between an infant landlord and his tenant, are entirely unconnected with the general rules of possession, ownership and contract, which govern the relations between landlord and tenant — and when both parties concerned are normal the "personal dimensions" of a right need not be considered at all. In most cases they could be utterly disregarded, for the conditions of abnormability in natural persons are not numerous. They are lunacy, infancy, coverture, alienage, outlawry and a very few others. By abstracting the rubric "rights of persons," which means nothing more than the law relating to varying legal capacities, and relegating this topic to a separate head — such as "the law of abnormal personality" — the definition and consideration of legal rights would be greatly simplified.

A legal right is either antecedent or remedial. An antecedent right is an exceptional advantage enjoyed by the person clothed with it. The right of an heir to a house and land devised to him, or the right of a merchant to goods purchased by him, are antecedent rights; and they are exclusive, because they are enjoyed by nobody else. Antecedent rights may be *in rem*, meaning that they are available against the whole world, as in the cases just mentioned; or they may be *in personam*, meaning that they are available only against a par-

ticular person. The right of ownership is a right *in rem*, it is available against the whole world; the right of a landlord to rent is a right *in personam*, for it is available only against his tenant. A remedial right arises when an antecedent right is violated. It is available only *in personam*, that is to say, against the person by whose infringement of an antecedent right the remedial right comes into being. Public as well as private rights may be either antecedent or remedial. The right of the State not to be betrayed is antecedent and is a right *in rem* because it is available against the whole world. When a traitor violates this antecedent right a remedial right *in personam*, available against the offender, is created. Antecedent private rights *in rem*, available against the entire world by those entitled to the enjoyment thereof, are: (1) The right to personal safety and freedom; (2) to the society and control of one's family and dependents; (3) to reputation; (4) to advantages open to the community generally, such as the free exercise of one's calling; (5) to possession and ownership; (6) to immunity from damage by fraud. Many of these, of course, become the objects of particular legal intervention only when they are infringed, as the right to personal safety is infringed by a menace, an assault or an act of negligence. Antecedent rights when not infringed, or when they are not "in motion"—meaning in process of creation, devolution or extinction—are said to be "at rest." When at rest such rights are, nevertheless, under the protection of the State through its powers of police. The State not merely punishes stealing, it prevents it. Every right has relation to some thing, and the object of a right may be tangible or intangible. The "bubble, reputation," is an intangible thing, to the enjoyment of which a man has a right, but which he cannot reduce to possession. The rights of possession and ownership, generally speaking, are extensions of the power of a person over tangible physical objects. Possession and ownership are not identical. The Roman jurists even maintained that the custody of a thing by a bailee did not constitute possession, and that the abstraction of the thing from his custody did not give the bailee any remedial right against the abstractor—no more than a servant could claim legal recovery of his master's goods left in his care and stolen by a thief. The modern English law holds just the opposite, as also did the ancient Teutonic law. "Violations of possession give rights of action independently of rights of property. Such rights of action are extensions of the protection which the law throws around the person." (13 Meeson and Wellsby, 581). The Salic law gave the person from whose custody cattle had been taken the sole right of recovery, exclusive even of the owner. To be in possession of a thing one must have it sufficiently in one's control to exclude others; but possession may be symbolical. By entry on any part of an estate an heir will be assumed to be in possession of the whole, and one who buys goods in storage may be put into possession by receiving the keys of the warehouse wherein they are stored, or by the transfer to himself of a warehouse receipt. The essentials of possession are the will and the power to possess and the exercise of both. "Neither the mere wish to catch a bird out of reach, nor the mere power to take a horse standing unguarded will suffice to put one in possession of the bird or the horse." The will to possess, or *animus domini*, rather than mere physical possession, is "nine points of the law." It is manifested in the largest and the smallest human relations—by a nation, which fights the world to keep a province, down to the individual, who defends property in his hands in the honest belief that he owns it, and the thief, who knows perfectly well he does not. The incidents of ownership are the right to possess, the right to enjoy and the right to dispose of property. The right to possess is lost or suspended by letting, lending, pledging or mortgaging property. The right to enjoy includes the right to the increase—growing timber, accretions of alluvion, the young of cattle, etc. The right of ownership is limited by the State through taxation, the prohibition of obnoxious use, or by taking in virtue of eminent domain; or it may be limited by individuals, as coparceners, neighbors having rights of way, rights of access to water or other easements, or right of support from adjacent soil. The right of disposal includes the right to destroy what one owns. A few kinds of things other than physical may be objects of ownership—patents and copyrights, for instance. Property is either movable or immovable—the distinction between real and personal is not quite the same, though nearly so. Property may be lawfully acquired by purchase, succession or prescription. Gift is a mode of succession. The right of ownership is terminated by the death of the owner. A dead man is not a legal person.

In the foregoing is shown the method whereby scientific jurisprudence prepares its material by formulating the myriads of juristic facts in a relatively small number of statements, capable of orderly arrangements within the compass of a single volume of moderate size. The nomenclature of the science, though an important element thereof, has not always been adhered to. It could have been adhered to strictly only at the sacrifice of popularity in treatment. Clarity seemed more desirable than profundity. It was possible to deal with only one class of private rights, and antecedent rights *in rem*, more specifically rights of possession and ownership, were selected for illustration because they present the fewest difficulties. A very much larger class of private rights than the one discussed are the rights *in personam*. To this class belong all the rights conceded by contract and, though these really partake of the character of antecedent rights, they are never available *in rem* against the world, but always against specific individuals. Under the general title "rights *in personam*" are gathered also all other remedial rights, whether they arise from breaches of contract or out of what the Roman jurists call "obligations *ex delicto*," which our lawyers classify as the laws of torts. A further division of law must still be considered. The rules wherein are defined the rights, whether public or private, which the State will support or protect, constitute the "substantive law." The rules prescribing the modes of aiding or protecting either public or private rights are classed as "adjective law" or procedure. Ju-

dicial intervention may be either preventive, as by injunction, or redressive. Redressive intervention is by far the more frequent mode, and in respect to private rights the redress usually takes the form of indemnity or damages. In some cases, however, the remedy is more direct, as when a nuisance is ordered abated, or the specific performance of a contract is decreed, or a mortgagor is put in possession of the property mortgaged by summary process. Rights of action are extinguished by release, waiver or condonation; by bankruptcy of the person liable; by set-off; by merger, as in the case of the substitution of a covenant or a judgment note for a simple contract — the substantive right is not extinguished, but the right of action on the less solemn evidence of the debt or obligation would be merged. Estoppel by judgment for the defendant, and by prescription or limitation, are the remaining modes of extinguishing remedial rights. The death of the person of incidence, i.e., the plaintiff in an action for tort, not merely extinguishes the procedural remedy, but the right itself. To this there is an exception when death caused by negligence or other tortious act is the ground of action. In such case the right and the remedy pass to the executor or administrator. Remedial rights may be suspended without being lost — as, when an action is pending in a court of concurrent jurisdiction, another court will not proceed with a suit to enforce the same right. Finally there is a private, as well as a public, international law. The questions that arise in this department of the law are mainly jurisdictional. When parties are nationals of, or are domiciled in, different countries a suit may be brought in a court of the country where the plaintiff is domiciled; where the defendant is domiciled; where the object of the controversy is situated; where a marriage, a will or other agreement, whereby a right was created, was performed or made; in a court of the country where a contract was to produce results or of the country where the plaintiff chooses to bring his action. The courts of the situs of the object of a controversy (*forum rei*) have always assumed jurisdiction in such cases. Jurisdiction is declined by the English courts in suits for divorce if the husband is not domiciled in the country, but there is no uniform rule on this subject in the United States. English and American courts will take jurisdiction in actions on contracts no matter where they have been made or where they are to be executed, provided the parties are within reach of their process. More complex than the question of the competency of the court is the question as to what country's law should be applicable in any given case. Some states claim exclusive rights to punish persons of their nationality for crimes, no matter where committed. There is such diversity in the rules that have been applied that a basis for general formulæ can hardly be said to have been laid in this department of jurisprudence. The formulation of the science was practically completed by the Roman jurists, who invented it, in the domain of private law at least. The 'Institutes' of Gaius, whereof those bearing the name of Justinian and produced four centuries later are merely a recension, are still the point of departure for all scientific studies of the law. Among English writers Jeremy Bentham (1748–1832) was the first to bring really scientific methods to bear on the subject. He was followed by John Austin, Sir Henry Maine and others. Thomas Erskine Holland in his 'Elements of Jurisprudence,' which first appeared in 1880, and whose arrangement of the topics and definitions have been followed herein, has set forth the subject in an exhaustive yet very compact form.

STEPHEN PFEIL.

JURUA, zhoo-roo-ă', a tributary of the Amazon rising in the Andes of Peru and flowing northeast through Brazil toward the Amazon, which it joins at Fonteboa after a meandering course of 1,200 miles, about one-third of which is navigable. The country along the greater part of its course is subject to great floods during the rainy season. The vast districts of the upper waters of Jurua and its many tributaries have been little explored; and some of it is still unvisited by white men.

JURY, 12 impartial men, legally competent to act, who, under the sanction of their oaths, determine by their unanimous verdict the innocence or guilt of the accused in a criminal trial, or decide the issues of fact which are contested between plaintiff and defendant in a civil trial.

The jury is the characteristic feature of English or common law, distinguishing it from the systems of continental Europe derived from the law of the Roman Empire. It is peculiar in itself and incidentally it has produced characteristic developments of our law not found in the Roman or civil law systems, of which perhaps the most noteworthy is our law of Evidence. The history of the jury system has been most thoroughly and ably investigated, especially in recent years.

Its function has completely changed. Originally those persons from the vicinity who had knowledge of the subject matter were summoned to court to state, upon their solemn oaths, what the common opinion of the neighborhood was as to those facts which formed the basis of the criminal charge to be tried, or the basis of the right to possession or enjoyment of land which was at issue, which were the typical cases of early days. It seems to have been soon established that 12 substantial men were a sufficient number to determine this question. As the judicial system developed,

courts came to have more extended territorial jurisdiction, and litigation grew more extensive. Attendance of 12 persons acquainted with the facts of each cause to be tried would impose an intolerable burden upon the community, and our forefathers worked out the plan of submitting their legal controversies to the decision of an impartial jury sworn to determine the facts in issue upon testimony given under oath by witnesses summoned by the parties.

Students of English and American history would probably unanimously agree that as a part of our system of civil government the jury has been a valuable institution. There can be no doubt of its educational value, and of its importance in making each freeholder who served on a jury feel that he was individually performing an important public duty. Juries played a conspicuous part in defense of popular rights against attempts at tyrannical exercise of authority by the executive government. In the libel cases of the 18th century the contest was bitterly fought, the judges, under the lead of Lord Mansfield, maintaining that whether a document was libelous or not libelous was a question of law for the court (that is, for the judge) to determine, the jury being limited to finding affirmatively or negatively the fact of publication; while the juries, on the other hand, contended for their right to find general verdicts ("guilty" or "not guilty"). The contest was settled by Fox's Libel Act in favor of the right of the jury to determine the guilt or innocence of the accused.

Students of law differ as to the merits of the jury system. Arguments drawn from the supposed mental inferiority of juries need not be considered, since this is not an inherent defect, and there is no more reason why a community should have inferior jurymen than inferior officials of any other class. But weighty objections of an essential character have been suggested. The chief is as to the requirement of an unanimous verdict, which, it is argued, must constantly produce a disagreement and failure to reach a conclusion, or the sacrifice of opinions conscientiously held by some of the jurors. There is no doubt that this requirement is an essential feature of the jury system as known to English law; it has been expressly so decided by the Supreme Court of the United States which, in interpreting the cl use of the Federal Constitution which provides that in civil suits in the Federal courts "the right of trial by jury shall be preserved," has held that this requires the unanimous verdict of 12 men. A small number of the States have modified the system by providing for juries of less than 12, or of verdicts rendered by a vote less than unanimous. When such legislation is not in conflict with the State constitution it is lawful, as is doubtless the provision authorizing the service of women on juries.

Another objection is the doubt as to whether the jury is the best means of arriving at determinations of fact. This controversy has been bittery fought, one side maintaining that the jury is not fitted, either by training or capacity, to decide fairly and intelligently doubtful questions of fact, and that one of its most important functions, that of assessing damages, is not properly performed, especially where the requirement of unanimity necessarily leads to compromise verdicts. On the other hand it is argued that the jury, if properly drawn, represents the average intelligence of the community, and that when it does so, no fairer tribunal can be discovered, and not, perhaps, very consistently, that in civil matters control of the case is really in the judge, who by careful instructions can usually so direct the jury as to bring about an intelligent verdict, or, as a last resort, can set aside one which is clearly wrong, and award a new trial.

A verdict of acquittal in a criminal proceeding finally disposes of the charge against the defendant both by the common law and, in this country, by the provisions of the Federal Constitution (and of most, if not all, of the State constitutions) that no person shall "be subject for the same offense to be twice put in jeopardy of life or limb." Doubtless from this arose the doctrine that in criminal cases the jury are judges both of law and fact, which caught the popular fancy, is not without the weight of respectable judicial authority to sustain it, from the time of Junius, who upheld it in opposition to Lord Mansfield, has been a favorite doctrine of popular leaders, and only in recent years may be regarded as finally disposed of. The doctrine was discussed by Chief Justice Mitchell, of Pennsylvania, in a capital case in 1891, and pronounced by him to be "unsound in every point of view, historical, logical, or technical," and in 1895 the Supreme Court of the United States (speaking by Mr. Justice Harlan) reached the same conclusion and held that in the courts of the United States it is the duty of the jury in criminal cases to receive the law from the court, and to apply it as given by the court, subject to the condition that by a general verdict a jury of necessity determines both law and fact as compounded in the issue submitted to them in the particular case. Mr. Justice Gray filed a long and able dissenting opinion concurred in by Mr. Justice Shiras, and in this case, reported in 156 United States Reports (page 51), all the arguments on both sides can be found.

The grand jury is, historically, a sort of representative committee of the people of the district throughout which the jurisdiction of the court extends, charged with the duty of reporting to the court offenses which have been committed which they consider should be inquired into, and persons whom they believe to have committed criminal acts for which they should be punished. Its development into the modern grand jury is not well understood. The highest authorities on our early legal history say of it, "The details of this process will never be known until large piles of records have been systematically perused. This task we must leave for the historian of the 14th century."

The grand jury as an existing institution consists of a number of persons drawn from the same class as the ordinary or petit jurors. At the common law the number summoned was 23. They are sworn to the faithful discharge of their duties, and the court then delivers a charge to them, calling their attention to the duties they are to perform, either generally or with reference to any matters of special public interest falling within their jurisdiction to which the court thinks proper to direct their attention, and they can then proceed to business. All indictments are submitted to them and, according

as they determine, after hearing the prosecutor's evidence, whether they are well founded or not, they endorse them "true bill" or "ignoramus" (or equivalent words). In the former case the accused is held for trial, in the latter discharged. It is the custom for them to make report to the court on such matters as seem to them of public interest and importance, and to make such recommendations as seem good to them. The report made by them of any offense from their own knowledge or observation, without a bill of indictment laid before them, is called a Presentment. See VERDICT.

For the history of the origin and development of the jury, consult Pollock and Maitland, 'History of English Law' (Boston 1899); Thayer, 'Preliminary Treatise on Evidence at the Common Law' (chaps. ii–iv, ib. 1898); Stephen, 'Commentaries on the Laws of England' (Bk. V., ch. xiv); Stubbs, 'Constitutional History of England' (Oxford 1883); Cooley, 'Constitutional Limitations'; Lesser, 'Development of the Jury System' (1893); Forsyth, 'Trial by Jury'; Edwards, G. J., 'The Grand Jury Considered from an Historical, Political and Legal Standpoint' (Philadelphia 1906); Hamilton, T. F., 'Handbook for Grand Jurors' (Albany 1906); Sackett, Frederick, 'Instructions to Juries' (3 vols., Chicago 1908); Train, A. C., 'The Jury System: Defects and Proposed Remedies' (Philadelphia 1910). For a discussion of the merits of the institution under modern conditions which is generally accepted as full and impartial, consult 'The System of Trial by Jury,' by the late Mr. Justice Samuel F. Miller (21 Amer. Law Review, 859). For the origin of the grand jury, Pollock and Maitland, 'History of English Law' (Bk. II, ch. ix, § 4).

JOHN DOUGLASS BROWN,
Attorney at Law, Philadelphia.

JURY, a temporary contrivance employed to replace some part of a ship which has been lost or disabled. The word is supposed to come from the old French *mast d'ajuirie* (helping mast); but its origin is uncertain. The terms jury mast, jury rig, jury rudder, jury anchor all designate temporary structures. The word is usually used as an adjective.

JUS GENTIUM, jŭs jĕn'shĭ-ŭm, a term which, in its broader sense, means international law. Among the Romans the "law of nations" was used with a very wide application, including the laws observed by the civilized nations with whom they came into contact, that is, had relations with. It extended not only to diplomatic but also to commercial relationships. At a later period jus gentium became restricted to the rules and regulations observed by independent governments in their dealings with each other. See CIVIL LAW; INTERNATIONAL LAW; JUS NATURÆ.

JUS NATURÆ, or **NATURALE,** natural law, the principles believed to be common to all minds and necessary to the comfort and progress of humanity. The Romans sometimes confounded the jus naturæ with the jus gentium, or law of nations (q.v.). The Stoics developed the idea of the jus naturæ as an altogether ethical conception to designate the law as it should be for the benefit of humanity as contrasted with the law as it existed with its many imperfections and injustices.

JUS PRIMÆ NOCTIS, the privilege granted to other persons than the husband to cohabitate with the bride on the first one or several nights after the wedding. That such a custom existed there seems to be plenty of evidence; but that it was ever a law of tribes, peoples or nations is, at least, unproved. That there was a time in the history of humanity when the marriage custom did not exist and men and women cohabitated promiscuously seems almost certain, and it may be that the custom of jus primæ noctis was a survival of this more primitive condition of human society. There is considerable evidence to prove that this right was allowed and exacted among certain savage tribes, the favored persons being the high priests and chiefs. In most cases the conditions of society where this privilege prevailed permitted a husband to have as many wives as he could support. In general, as a race advanced in civilization and culture and monogamy became a fixed institution the custom of jus primæ noctis became more and more frowned upon. Consult De Labessade, 'Le Droit du Seigneur' (Paris 1878); Schmidt, K. J. L., 'Jus Primæ Noctis' (Freiburg 1881); Westermark, E., 'History of Human Marriage' (London 1908).

JUS RELICTÆ, in Scots law, the share of the widow in the movable property of her husband after his death, amounting to one-third if there are surviving children or grand-children and to one-half if there are none. The husband by will could not take this share away from the widow, but by express contract she could accept an equivalent provision. However, if the husband dies insolvent, the creditors must be paid in preference to the widow.

JUSSERAND, zhu's'-răn', **Jean Adrien Aubin Jules,** French philologist, historian and diplomat: b. Léon, 18 Feb. 1855. He graduated in law and, entering the diplomatic service in 1876, he became legal adviser to the French embassy in London in 1887; Minister to Denmark in 1898; and Ambassador to the United States in 1902. He is vice-president of the Historical and Literary Society of France, Grand Officer of the Legion of Honor and Corresponding Fellow of the British Academy. Among his published works are 'Le Téâtre en Angleterre depuis la Couquête Jusque aux prédicesseurs immediats de Shakespeare' (1878); 'Les Anglais au Moyen Age' (1884); 'Le Roman Anglais' (1886); 'A French Ambassador at the Court of Charles II' (1892); 'L'épopée mystique de William Langford' (1893); 'Histoire du peuple Anglais' (3 vols., 1895–1909). His 'History of the English in the Middle Ages,' which was crowned by the French Academy, was translated into English under the title of 'English Wayfaring Life in the Middle Ages' (1889) by Lucy T. Smith; and the 'Roman Anglais' was also translated into English by Miss E. Lee in 1890. In 1913 he published 'Rousard.'

JUSSIEU, zhu'sē-ĕ', **Laurent Pierre de,** a French writer: b. Villeurbanne, 1792; d. 1866. A nephew of Antoine Jussieu and grandnephew of Joseph, Bernard and Antoine (the elder) de Jussieu, he inherited much of the talent of his illustrious ancestors. After the Revolution of 1830 he became secretary-general of the Seine and in 1839 a member of the

Chamber of Deputies. After the fall of Louis Philippe he retired to private life. He was a strong and consistent advocate of general primary instruction and fought for the extinction of illiteracy from among the French laboring classes. He wrote extensively for the public press and published numerous educational works that had wide circulation and extended influence. Among the latter are 'Simon de Nantua' (Paris 1818), which has been published many times and in all kinds of editions and translations into several foreign languages; 'L'Abbé Gauthier, de Montègre, Moreau de Saint Méry et Mesnier' (Paris 1819); 'Le village de Valdoré' (Paris 1820); 'Antoine et Maurice' (Paris 1821), which was crowned by the Society for the Improvement of Prisons; 'Exposé analytique de l'Abbé Gauthier' (Paris 1822); 'Pierre de Giberne' (Paris 1825); 'Œuvre Posthumes de Simon de Nantua' (Paris 1829), which won the Montyon prize of the Academy; 'Les Petits Livres du père Lami' (6 vols., Paris 1830–42); 'Fables et contes en vers' (Paris 1844); 'Cloud Grangambe' (Paris 1854).

JUSTE, zhüst, **Theodore,** Belgian historian: b. Brussels, 11 Jan. 1818; d. August 1888. He was secretary of the Belgian Board of Education and as such made many beneficial changes in the national methods of instruction. He was a prolific writer on Belgian and French history, the most noteworthy of his works being 'Histoire élémentaire de la Belgique' (1838); 'Histoire de la révolution Belge de 1790' (1846); 'Précis de l'histoire du moyen âge' (1847–49); 'Le soulèvement de la Hollande en 1813, et la fondation du royaume des Pays-Bas' (1870); 'Guillaume de Taciturne' (1873); 'Léopold I et Léopold II, rois de Belges' (1878); 'Les fondateurs de la Monarchie Belge' (27 vols., 1865–81); 'La révolution de juillet, 1830' (1883), etc.

JUSTI, yūs'tē, **Ferdinand,** German writer and philologist: b. Marburg, 1837; d. 1907. Educated at Göttingen, he became professor of comparative philology in his native town in 1865. There he devoted his time to the study of Oriental languages. Among his published works are 'Ueber die Zusammensetzung der Namen in den indogermanischen Sprachen' (1861); 'Handbuch der Zundsprache' (1864); 'Geschichte des alten Persiens' (1879); 'Dictionnaire Kurd-française' (1879); 'Kurdische Grammatik' (1880); 'Geschichte der Orientalischen Völker im Altertum' (1884); 'Iranisches Namenbuch' (1895); 'Hessisches Tractenbuch' (1900); 'Geschichte Irans von den ältesten Zeiten bis zum Ausgan der Sassaniden.'

JUSTICE (French, *justice,* Latin, *justitia*), one of the cardinal virtues of the Greeks and the Romans. It seems to have been a personification of social and moral duty, that is, of the moral law, which might or might not correspond with the temporal law. Justice was the highest idea of the correct bearing of all the members of a community to one another and of the law of the state to the individuals constituting its population. An action or condition might be legally right and morally wrong, as the holding of slaves, the torturing of prisoners taken in war, the exactions often made by the ruling classes upon the peasantry, the persecution of the members of one sect by those of another. The customs, conditions and laws of states and communities change with the changing times; but Justice remains the same in all ages and among all peoples, since it is based neither upon man's conception of what justice really is nor upon his administration of what he calls justice, but upon the intrinsic and inherent rights of all, born of the social equality of all before the law. Thus the ancient conception of justice, carried to its natural conclusion, was purely democratic; and among the philosophers it maintained this complexion even in the most autocratic periods in the life of Greece and Rome. But as the conception of Justice as one of the graces was largely academic, autocracy had little to fear from it. Yet to this persistent personification of Justice later democracy owes much of its ability to state concisely and clearly its position as champion of the rights and obligations of humanity as a whole. The conception of absolute justice as the securing to humanity security of possessions, freedom of action and the right to realize expectations in so far as these do not conflict with similar rights and privileges of the community as a whole is not new. It is as old, at least, as the struggle of the upper and the lower classes in Rome, and probably much older; but it has remained for the present age to analyze more closely the attributes, functions and field of action of ideal justice, which, from the very fact of its being ideal, is never fully attainable, since there is and cannot be any such a thing as absolute justice, the administration of which would presuppose absolute perfection in the human race. Justice, as an ideal virtue (or as the personification of such), is therefore an aim in the administration of the law to be continuously striven for with the hope of getting constantly nearer to it; but also with the moral certainty of never ultimately reaching it in this world. See ETHICS.

JUSTICE. John Galsworthy's play 'Justice' belongs to that imported school of drama that found some lodgment in England and America during the first years of the 20th century and accompanied the movement for repertory theatres to play to the few rather than to the many. While it deals with English characters the spirit and the manner of attack are characteristically continental. In no respect does this play nor the class to which it belongs connect with the historic strains of the English theatre. This isolation from English manners and molds of thinking in the theatre is revealed as much in the extraordinary technical

and moral honesty of the work as in its divergence from conventional British themes. As a novelist Galsworthy had been influenced in turn by French and Russian schools of literary manners. From the first he derived a certain scholarly detachment, a certain lack of heat in dealing with pregnant topics; from the second a brooding note of high cosmic seriousness. Clearly as he sees facts, and few modern writers are better students of detail than he, Galsworthy is most interested in the truth behind the facts. The pressure of larger issues governs the plots of most of his novels and all of his plays, and provides the explanation of that "locked" type of the tragedy of footless discontent that he has written so much. In the handling of the characters, in the display of the petty lives of infinitesimal men and women working under the sway of mighty forces the play is like many of Hauptmann's. In attacking a code of justice it is like Brieux's 'The Red Robe.' Really it lies between these two, between a diatribe against man's injustice under the name of law and a dispassionate etching in cold black and white. There are in it some points of resemblance to the same writer's earlier 'The Silver Box' in that this also is a study of the improper balancing of the scales of the law. Neither in action nor in its message does 'Justice' command a large audience. This fact should not blind us to the unusual claims of the play for high consideration as a stage work. For sheer vividness of unliterary appeals, for the power to project an impression without words and even without movement, for the power to turn the glass on nature and make even dull hours intense with interest the play takes high rank. There can be no question as to the effectiveness of the author's artistry. Whether his general theme has the relevancy he attaches to it may be open to question. 'Justice' was presented as the first play of Frohman's Duke of York's Repertory Theatre under the direction of Granville Parker, 21 Feb. 1910. It has often appeared in the repertories of "new" theatres, and was given a distinguished production in 1916 in New York city. Consult Dukes, A., 'Modern Dramatists' (1912); Herford, C. H., 'Essays and Studies' (1914); Galsworthy, J., 'The Inn of Tranquillity' (1913).

THOMAS H. DICKINSON.

JUSTICE, Department of, in the United States, an executive branch of the government, the supreme head of which, the Attorney-General, is appointed by the President and confirmed by the Senate. He is a member of the Cabinet, according to the provisions of the Act of Congress of 19 Jan. 1886, ranking fourth, after the Vice-President, in the line of succession to the Presidency in case of a vacancy in that office, and his salary is $12,000 a year.

The office of Attorney-General was established in 1789, almost at the beginning of the government, being provided for by the great act that established the Federal courts, but the Department of Justice was not organized into a separate department nor placed under the charge of the Attorney-General until 1870, when by the act of 22 June of that year the establishment of this department brought under his control all United States district attorneys and marshals and secured uniformity in the trial and prosecution of cases. By this act the solicitors from the Interior, Navy and Treasury departments and the examiner of claims of the State Department were also brought under the control of the Department of Justice.

As head of the Department of Justice, the Attorney-General is the chief law officer of the government, is the legal adviser of the President on any questions of law which may arise in the conduct of administrative affairs, and is also required by statute to give his advice and opinion, when requested, to the head of any executive department on any question of law arising in his department. The Attorney-General represents the government in all cases at law to which it may be a party, but he rarely argues the case in person, this work being performed by his subordinates, whom he appoints, or by special counsel whom he is authorized to employ in cases of especial importance to the government. The Attorney-General passes upon the validity of the title to public lands or other property to be purchased by the government for the erection of public buildings or for other public purposes; he also exercises general superintendence and direction over the attorneys and marshals of all the districts in the United States and the Territories as to the manner of discharging their respective duties, and makes an annual report to Congress on the business of the Department. The supervision of the penal and reformatory institutions of the United States, the supervision of the revision and codification of the criminal and penal laws, the recommendation of judicial appointments, the administration of the national bankruptcy laws, investigation of applications for clemency, etc., are other duties which come under the direction of the Department of Justice. Two assistant attorney-generals were provided for in 1868 — one of whom was placed in the Supreme Court, the other in the Court of Claims. There is also an assistant for the Interior Department, one for the Post-Office Department, and one to handle Indian depredations claims.

The solicitor-general, whose office was created in 1870, ranks as second officer of the Department of Justice; takes the place of the Attorney-General in the latter's absence, and also has charge of the conduct of cases in the courts at Washington.

JUSTICE, Legal, a term used in two senses, one of which makes it equivalent to the justice meted out by the administration of the law, and the other of which considers it as the equivalent of the moral right in a question at issue, irrespective of the attitude taken by the law itself or its administrators. A decision may be, and sometimes is, legally correct, but morally unjust. In this latter sense there is a survival of the classical idea of justice personified as a cardinal virtue. Legal justice, in adjudging a case, is required to take into consideration all the facts and circumstances in the case and their bearing upon one another and upon the individuals and rights and other matters concerned in the legal decision or decree. All this must be done in conformity with the law and its particular bearing on the case. The object of the law is to do justice to the individual while protecting the community as a whole. Through its inflexibility the law may occasionally work a hardship upon the individual. This

is because it is finite and the ever-changing conditions of humanity are infinite. The tendency of the whole body of the law is gradually to provide a fuller and freer administration of justice to the members of all classes of society. But one of the troubles in the administration of strict legal justice is the fact that the various parts and sects of society have, more especially in the past, had a tendency to be notoriously unjust to one another. The upper classes have exploited the ignorance and impotence of the lower classes. In modern times men with vast capital at their command have been able to secure legal decisions that were not conducive to the general good of the community and which worked hardships on individuals. Under the shadow of the law powerful financial concerns have driven weaker ones to the wall and made their possessions their own in as joyfully a freebooter's way as the barons of the Middle Ages gathered to themselves, by the sovereign right of might, the possessions of their neighbor, including his men-servants and his maid-servants. Legal justice aims at administering right to all; but the imperfection of its machinery makes the attainment of these aims not always possible. The law has within in itself the power to remedy the evils inherent in itself. This makes possible the continuous improvement in the administration of justice. See LAW; JURISPRUDENCE; JUSTICE.

JUSTICE, Lord, a person invested with royal authority in England for limited purposes and for a short period, during the absence of the monarch. The practice has entirely fallen into desuetude. Queen Victoria and her successors have never appointed lord justices in their absence; George IV was the last king of England to do so. The powers of lord justices have been confined to pardoning or reprieving convicts, summoning or proroguing Parliament, disposing of treasury funds, and making Church preferments. In the absence of the viceroy from Ireland lord justices have sometimes been appointed to perform his functions.

JUSTICE, Lord Chief, the title of the chief judge of the King's Bench division of the High Court of Justice in England. Before the abolition of the Common Pleas division of the High Court in 1881 the title lord chief justice was also used to designate the chief judges of the latter.

JUSTICE OF THE PEACE, minor magistrates in English-speaking countries appointed to keep the peace in the jurisdiction to which they are assigned. In England these officials are appointed by commission of the Crown, by act of Parliament, or by charter, with well-defined duties "to keep all ordinances and statutes for the good of the peace, and for the good rule and government of all the people." In the United States, in some cases justices of the peace are appointed by the executive, in others they are elected by popular suffrage. Their powers and duties differ somewhat in the several jurisdictions, but in general they have jurisdiction in minor civil and criminal cases, their powers being expressly defined by statute. They also conduct a preliminary inquest or examination of offenders charged with felony and hold such for the upper court, bail being allowed in nearly all cases except murder. Consult Baylies, E. (ed.), 'Bender's Justices Manual of Civil and Criminal Law and Practice for Justices of the Peace and Police Justices in New York' (3d ed., New York 1913); and Haines, E. M., 'Practical Treatise on Powers and Duties of Justices of the Peace and Police Magistrates' (16th ed., Chicago 1905).

JUSTICES' CLERK, an officer in England who assists the justices of the peace. He is always a lawyer and generally has much influence owing to the fact that many of the justices of the peace fall short of the requirements of their office in so far as familiarity with the law is concerned. Though the justices' clerk is not looked upon as a public officer, he has a certain legal standing and is permitted to collect fees for the business of his court.

JUSTICIARY, High Court of, the supreme criminal court of Scotland, having authority to try all crimes except those excluded by statute. It is said that decisions of this court are not subject to appeal or review, but it is probable that the House of Lords could hear an appeal on a question of law. The lords of judiciary hold circuits twice a year, there being three circuits, the northern, southern and western.

JUSTIFICATION. Under this head fall many intricate problems toward the solution of which theology contributes in its discussions of that very abstract subject: Grace. The term explains itself and no matter where it is applied the fundamental idea is the same and means pardon, acquittal, readjustment, restoration. In divinity it aligns itself very closely with atonement and imputation (q.v.). No matter how opinions may differ as to its nature, there is agreement on this, that justification may be defined as that process whereby fallen man is forgiven his transgression and restored as much as is compatible with his changed condition to the state and privileges which were his before his disobedience. All Christians admit that this repristination came and comes through Christ. It has been and is the duelling ground of the two religions which have most largely divided the world. Relating to this topic the attitude of Catholics and Reformers is antipodal. The leader of Protestantism is clear in his affirmation. Catholic teaching and dogmatic enunciation is not one whit less positive. The question is cardinal for both. In the process of justification the agent is God through Christ; the object, man. The crux of the difficulty is how does God effect it and how is man affected by it. Is righteousness imparted or infused? Luther and his disciples consider justification as imputed to the individual. This restored condition is something outside himself, with which he has nothing to do. "The justified man is not only acquitted as innocent but regarded as having perfectly obeyed the Law in the person of Christ. There is to him the non-imputation of sin and the imputation of righteousness." "The faith doth not shut out repentance, hope and the fear of God in every man justified, but it shutteth them out from the office of justifying." (Church of Eng. Homily). It becomes imperative for every attempt to solve this problem to consider man's will and divine grace. Luther apprehensive lest by any concession he might minimize the value of the latter denied free will in human nature and asserted that by

faith, a strong faith in the special mercy of God, and by that alone man was justified. To use his own words (Cap. 2 ad Galat.): "Faith, without and antecedently to charity, justifies." Faith does not cause justice in any way — it is not the cause but the organ of justification. Man is in no way intrinsically affected by it and its essence is in the imputation of the justice of Christ. Calvin referring everything to the elect teaches that faith once received can never be lost, that is, a man justified is so forever, independently of his actions. Baptism is not necessary for salvation. The predestination of the elect is their salvation. The breaking up of Protestantism into the many denominations which now exists necessarily brought variants in this doctrine, yet it may be put down as the generally accepted formula. The idea was not new if we are to credit what Saint Augustine says (De fide et oper. 14) wherein he remarks that even in the time of the apostles some, not understanding, concluded from the epistles of Saint Paul that faith alone was necessary for salvation, whereupon Peter, James and Jude wrote to instruct the faithful that such was not the meaning of Saint Paul's words. The Catholic theology has been reproached with emphasizing the worth of man's works to the detriment of divine grace. The doctrine of Catholics is that Pope, councils, the fathers, the doctors and the apostles, and hence Christ, affirmed that justification is of a nature to require, except in infant baptism, good works on the part of man to ripen unto salvation. Faith alone will not suffice. It is gratuitous and unmerited save through Christ. It is supernatural. It is a created gift and when bestowed, as in justification, the recipient becomes inherently just, not accidentally nor vicariously. Initial justification is infused in baptism, which sacrament incorporates the one baptized into and with the mystical body of Christ, his church, and lives by grace, which is living of the life of Christ as an engrafted branch lives the life of the vine. In this incorporation, since Christ is Son of God, is founded the adoption and heirship of the baptized as sons of God. What is said of baptism is held concerning justification as administered by the other sacraments. It is not contended that by it sin is blotted out "historically," that is, sins committed do not cease to be part of man's past, but are remitted inasmuch as they are provocative of God's anger and as truly pardoned as if the sinner had never rendered himself guilty of them; they are effaced in the moral order and in the physical order the stains they leave on the soul are washed out, stains which make the soul displeasing to God. Natural powers, no more than the Mosaic law, suffice for salvation which is to be reached through Christ only and for which in the adult some disposition of his own contributing is requisite. Moreover, while by justification sin is remitted, this remission calls for an interior disposition and renovation of soul, whence justification is a quality superadded to the soul to which it is inherent and therefore is more than transference or imputation. The fruits of justification are the rendering of man pleasing to God, just, beautiful, like unto Christ, a living member of Christ and God's son by adoption, heir to the kingdom of heaven, a participant in the divine nature (*Consors divinæ naturæ*) and capable of condign merit. When a man is justified there is within him a special indwelling of the Holy Spirit. There is no understanding with accuracy these different theories of justification save by a thorough inquiry into the views of theologians on the very abstruse questions of the incarnation and grace.

PATRICK A. HALPIN,
Professor of Ethics, New Rochelle College.

JUSTIFICATION (Latin, *justificatio*, justification), a defense in a civil or criminal action showing that the defendant was legally justified in doing what, it had been admitted in court, he did do, and that, therefore, the alleged cause of action is not legally sufficient. All the facts to be used in the justification must be legally set forth as such and as constituting an answer to the action; and the conclusion to be drawn therefrom depends upon those having the legal power of decision in the case. The presentation of facts of justification is common in cases of accusation of crime. A man accused of homicide may plead that the act was committed in self-defense, or in the execution of the law by an officer of the law or his aiders or assistants. A policeman may plead that he killed a man to prevent his escape or because he showed fight, or because he refused to surrender when called upon to do so. An automobile driver may defend himself against an action for homicide on the ground that he had taken all possible care, that he had not exceeded the speed limit and that the death of the party in the case was due to his own carelessness, or to some accident or condition over which the accused had no control.

JUSTIFICATION, or **PROOF BY SURETIES,** is a term employed in the legal action taken by the said sureties on a bond or undertaking to prove that they possess the requisite legal property qualifications.

JUSTIN (MARCUS JUSTINIANUS JUSTINUS), a Latin historian, who probably lived at Rome in the 2d or 3d century A.D. He made an epitome of the general history of antiquity by Trogus Pompeius, a native of Gaul, who lived in the time of Augustus, and whose work is no longer extant. This epitome, although incorrect in detail, is valuable for its compressed reproduction of the old histories. The first English version, by Goldingé, appeared in 1574.

JUSTIN I, Byzantine emperor: b. 450; d. 1 Aug. 527. He was a peasant of Dacia and rose from the rank of a common soldier to the commander of the imperial guard, and on the death of Anastasius I in 518 became emperor. He relegated the civil administration to the quæstor Proclus, and between them the empire was governed with a fair amount of success. Consult Bury, 'Later Roman Empire' (1889).

JUSTIN II, Byzantine emperor: d. 5 Aug. 578. He succeeded his uncle Justinian I in 565. In 574 his difficulties led him to abdicate in favor of Tiberius, captain of the guard. During his reign northern Italy was conquered by the Lombards, and the Persians took pos-

session of several Asiastic provinces of the empire.

JUSTIN MARTYR (JUSTINUS MARTYR), a Christian apologist and martyr: b. Flavia Neapolis, Shechem, Palestine, 100 A.D.; d. Rome, 165. He began active life as a professor of Platonic philosophy, and subsequently embraced Christianity without abandoning Platonism. He was a staunch adherent of the Christian party in the empire, a keen confuter of Gnosticism and an unwearied defender of the Christian doctrine of the Logos. In every department of Christian dogmas he stood foremost as a teacher. Eventually he went to Rome (150 A.D.) and during 10 years of activity he wrote his 'Apology,' with a supplement known as the 'Second Apology,' addressed to the Emperor Marcus Aurelius. He afterward had a controversy with a Jew, an account of which is embodied in his 'Dialogue with Trypho the Jew.' He was put to death for his faith, and his day on the Church calendar is 31 April. Consult Migne, 'Patrologia'; Semisch, 'Justinus der Märtyrer'; Aubé, 'Justin, Philosophe et Martyr' (1874).

JUSTINA, the second wife of Valentinian I, and mother of Valentinian II. She was successful in her efforts to restore her son to the throne. Her influence was not powerful enough to prevent Valentinian from accepting baptism at the hands of Ambrose, in spite of her sympathy with the Arians and her antipathy for Ambrose.

JUSTINIAN I (FLAVIUS ANICIUS JUSTINIANUS), surnamed THE GREAT, emperor of the East: b. of Gothic peasant parentage at Tauresium, Illyricum, probably 11 May 483 A.D.; d. 14 Nov. 565. Patronized by his uncle, Justin I, who, from a Thracian peasant, had become emperor, he so flattered the Senate and dazzled the people that he was made consul, and took the title of *Nobilissimus*. On the death of his uncle, with whom he had latterly shared the imperial power, he was proclaimed emperor, and married an actress named Theodora. During his reign the party disputes of the Greens and the Blues became so violent, that in his attempt to quell the tumults the emperor's own life was in jeopardy, and a great part of Constantinople was destroyed by fire in 532. Aided by his generals, he was able subsequently to restore to the Roman Empire a part of its former possessions, as when Belisarius in 523 and 529 defeated the Persians, and achieved victories in Africa, and when Narses put an end to the Ostrogoth rule in Italy. Turning his attention to the laws, Justinian commissioned 10 learned civilians to draw up a new code, and the result was the 'Corpus Juris Civilis,' or body of civil law. He took great interest in building cities, fortifications and churches; among the latter he rebuilt the church of Saint Sophia at Constantinople. To maintain his public munificence he oppressed the people with taxes. Consult Finlay, 'History of Greece' (1880); Hodgkin, 'Italy and her Invaders' (Vol. IV, 1880); Bury, 'Later Roman Empire' (1889); Hutton, 'The Church in the Sixth Century' (1897); Gibbon, 'Decline and Fall of the Roman Empire' (ed. by Bury 1896–1900).

JUSTINIAN II, surnamed RHINOTMETUS, Byzantine emperor: b. 669; d. December 711. He succeeded his father, Constantine IV, in 685, and was deposed and banished for his cruelty, by his general, Leontius, in 695. He regained his throne 10 years afterward, and was overthrown by Philippicus Bardens and killed.

JUTE. Two species of plants yield the jute of commerce, *Corchorus capsularis* and *C. olitorius.* They are tall shrubs, 8 to 15 feet high, the fibre being produced in the bark, and known as bast fibre. Supposed to be indigenous to India, where the species grows wild, cultivated to a limited extent by other Eastern people, as the Chinese and Malays, *C. olitorius* is naturalized in all parts of the tropics to the shores of the Mediterranean. Jute was introduced into the United States by the Department of Agriculture in 1870 (consult various articles in Monthly Reports of department 1870–75), and was found to be adapted to cultivation along the line of Gulf States from Texas to South Carolina. It should be noted that the China jute of commerce is not jute at all, but a similar bast fibre derived from *Abutilon avicennæ.* This plant was experimented with in New Jersey 25 years ago, though unsuccessfully, the fibre being wrongly called American jute. In India many kinds of jute are recognized, all being known under local trade names, which are unimportant here. The value of jute as a textile lies wholly in its fineness, silkiness and adaptability to spinning, low cost of the raw material being another advantage. Several American fibre plants classed as weeds yield a better, whiter and stronger fibre, though they cannot be utilized for economic reasons. (Consult special report on bast fibres, No. 6, Office of Fibre Investigations of Department of Agriculture). The fibre of jute, compared with other textiles, is quite inferior, the bleached filasse soon losing its whiteness and becoming a dingy, dirty brown, while its strength rapidly deteriorates. Nevertheless it may be regarded as one of our most useful fibres — too useful in certain directions, as its fineness and lustre, as well as cheapness, adapt it most readily to purposes of adulteration, and as it takes colors easily it can be stained or dyed to imitate many of the other fibres, though such frauds can be readily detected. The uses of the fibre are many, and it enters into all classes of textiles from woven fabrics of great beauty to coarse ropes and bagging. In the manufacture of fabrics it goes into curtains, chair coverings, and other forms of upholstery, carpets, webbing, burlap and bagging (especially cotton bagging), and it has been employed for imitation silk fabrics, although for this purpose the fibre requires a special treatment in order to subdivide it more finely and render it more glossy. The fibre is also made into all kinds of cordage, either honestly, as jute, or as an adulterant, considerable quantities having been used in past time for the manufacture of binding twine. It is largely employed for fine and coarse twines, small rope, sash cords, etc., and where cheapness is a desideratum it fills the demand. The commercial use of jute dates back less than a century, the first exports in noticeable quantity (about 18 tons) having been made, to England, in 1828. By 1850 the exports had reached 30,000 tons; in 1871, 310,000 tons. Now some 3,500,000 acres are cultivated in jute in India. Both high and low lands are employed

for this culture, although the larger part of the crop is produced upon the "churs" or lands of recent alluvial formation along the rivers In this country the "river bottoms" would be favorable for the culture, in localities of the South, where the requisite conditions of heat and moisture prevail.

Twelve to fifteen pounds of seed is the average quantity sown per acre, though Spon gives nearly double this amount. In India the yield is about 400 pounds of fibre per acre. Little or no cultivation is given the crop save thinning out where overcrowded. The plants mature in three months and the crop is harvested with a bill hook and sickle at the time when the flowers have begun to show and the seed has not yet appeared. If the plants are allowed to seed, the fibre will be stronger and heavier, but harsher. In some districts, after harvesting the stalks are stacked in the field until the leaves drop off, while in other localities stacking is not practised. The stalks are sorted as to length into three sizes, and made into bundles that one man can carry. The extraction of the fibre is accomplished by steeping the bundles in stagnant water, covering them with jungle plants, clods of earth or cow dung. When the setting is completed the ryots go into the water waist deep, and by thrashing the surface of the water with the stalks, assisting the loosening of the bark with the fingers, the fibre is separated from the wood. Afterward it is wrung out and hung upon lines to dry. It is next made into drums of 70 or 80 pounds. If for exportation, it is pressed into bales of 300 pounds or over. Little may be said regarding jute culture in this country. At the low prices which prevail for the imported jute, it is doubtful if it could be made a paying crop. The plant is adapted to cultivation in the United States and produces a superb fibre, but it would not be able to compete with India jute at 1½ to 2½ cents per pound. Jute is treated by processes similar to those employed in turning flax into linen. Special machines are used for the various processes, such as heckling, spreading, drawing, roving and spinning. Hand looms have long been used in India for weaving jute. Since 1857 a great number of jute mills have been fitted with modern textile machinery. There are now over 60 such mills in India, employing over 200,000 hands. The production of fibre is about 4,215,000,000 pounds annually. In 1914 the United States imported 242,711,237 pounds of jute and jute butts, valued at $12,273,422. Jute bags were imported to the value of $4,250,000, and other jute fabrics to the value of $38,000,000 in the same year. There are about 33 establishments manufacturing jute products in the United States. These employ 7,000 hands and turn out a product valued at $11,000,000 annually. Consult Special Report (No. 8) office of Fibre Investigation of Department of Agriculture; 'Dictionary of the Economic Products of India' and various Bulletins of the Royal Gardens, Kew, England. See CORDAGE; FIBRE; INDIA.

JUTES, or JUTS, one of the Low German tribes who share in the occupation and conquest of England in the 5th century A.D. They came from the European continent but from just what part of its western coast is not certain. It has been customary to identify their original habitat with that of modern Jutland. It is contended, however, by some investigators that the Jutes spoke quite a different tongue dialectically from that of the people of modern Jutland, which is Danish. An attempt has been made to identify the Jutes with the Frisians and to thus reconcile the apparently conflicting statements of Bede, who states that the invading tribes of England were Angles, Jutes and Saxons; and of Procopius who asserts that they were Angles, Saxons and Frisians. Modern research has attempted, with more or less satisfactory results, to identify the Jutes, with the roving Low German bands who, spreading over the North Sea and adjacent islands and British coast to the west, took possession of much of the south of England, parts of the Lowlands of Scotland, the Shetland, Orkney and Hebrides islands. The same investigation identifies them with Teutonic bands that landed, about the same time, on the Irish coast. Efforts have also been expended in attempting to prove the persistence of the Jute type in southern England and the Lowlands of Scotland to-day, as distinct from other English types, existing or supposed to still exist from the days of the Germanic and other tribal invasions, occupations and conquests. It has been claimed by investigators that the traditions of the settlement of Jutes around Canterbury in Kent, on the Isle of Wight and in South Hants are still sustained by the presence in these regions of physical types, in certain ways distinct from those of neighboring districts. Consult Ripley, W. Z., 'Races of Europe' (London 1913).

JUTLAND, the peninsular portion of Denmark (q.v.).

JUTLAND BANK, Battle of, the greatest naval battle in history, also known as the battle of the Skagerrak, was fought in the North Sea on 31 May–1 June 1916 between the British and German fleets. According to the German Admiralty, the High Sea Fleet was bent on "an enterprise directed northward" — probably to support Hindenburg in the Baltic. There is little reason to believe that it was the German intention to challenge the entire, overwhelming naval power of Britain. Admirals Von Scheer and Von Hipper encountered the Battle Cruiser Fleet under Admiral Beatty, who was steaming north to rejoin the Grand Fleet of Sir John Jellicoe. The battle opened at 3.30 P.M. and lasted throughout the night. Though German reports at first claimed the victory, the result failed to raise the blockade and only confirmed the Allied command of the sea. A remarkable exposé on the battle of Colonel Von Schroeder was published in the *New York American* on 15 Dec. 1918. See WAR, EUROPEAN — NAVAL OPERATIONS.

JUTURNA, Fountain of, a spring at the foot of the Palatine Hill, Rome, which tradition says was named by Jupiter after a water nymph with whom he was in love. The spring or fountain was just south of the celebrated temple of Castor and Pollux, where it is said that these two appeared, in 496 B.C., to announce the defeat of the Latins at the hands of the Romans at the battle of Lake Regillius. The spring, though neglected and partially filled up, is still active. (See CASTOR AND POLLUX; NYMPHS). Consult Hülsen-Carter, 'The Roman Forum' (Rome 1906); Macaulay, 'Lays of

Ancient Rome'; Virgil, 'Æneid, XII'; Wissowa, 'Religion und Kultur der Römer' (Munich 1912).

JUVARA, yoo-vä'ra, **Filippo**, Italian architect: b. Messina, 1685; d. Madrid, 1735. He was a pupil and follower of Carlo Fontana, but developed considerable individuality. In an age when ornamentation ran to the grotesque and delighted in the extravagance of Baroque, he led a reaction for more plainness and simplicity. Among the edifices planned by Juvara are a dozen or more in Turin, among them being the Superga church and the Palazzo Madonna; and the Royal Palace at Madrid constructed for Philip V (1734).

JUVENAL (DECIMUS JUNIUS JUVENALIS), a famous Roman satirist. The evidence for his life, while fairly abundant, is of so dubious and conflicting a character that it is impossible to reconstruct the poet's career with any certainty. It is probable, however, that he was born at Aquinum, about 55 A.D., and that he was known during the first half of his life, simply as an accomplished declaimer and rhetorician. After the accession of Trajan in 98, he began to publish satires in which, with extraordinary force and indignation, he described the conditions of life at Rome, for the most part as they existed during the reign of Domitian, 81–96. An inscription found at Aquinum records an offering to Ceres by a certain Junius Juvenalis (the stone was broken, so that the first name is lacking), tribune of the first cohort of Dalmatians *duumvir quinquennalis* of the town, and priest of the deified Vespasian. This man has been generally identified with the poet (cf. 'Sat.' 3, 319–320), but may be only a kinsman of his. There is a consistent tradition that he was banished for a number of years because of offense given to an imperial favorite, the actor Paris, but neither the time nor place can now be determined. He was apparently an intimate friend of Martial (who mentions him in three epigrams, VII, 24 and 91; XII, 18), though the two men were widely different in their outlook upon human life. The date of Juvenal's death is not known, but the fifth and last book of satires, comprising 13–16, was published in 128, and he may have lived seven or eight years thereafter.

In the hands of Juvenal, satire becomes almost a new literary type. Horace, who brought to perfection the method and manner of Lucilius, the first of the Roman satirists, says of his art ('Sat.' 1, 10, 9–14) that it aims at terseness, at a style that changes from grave to gay, that suggests now an orator who is a poet also, now a polished and witty talker who masks his strength. But Juvenal's passionate revolt against the hideousness of a time of which he could see only the dark side, gives to his verse one unchanging tone. For him satire is invective, biting, pitiless and unrestrained, the expression of a towering moral indignation. Such humor as there is is always grotesque or of the grimmest kind. This is true, at least, of the first nine poems, which alone are really satires upon the Roman life that he knew. The remaining seven (the sixteenth is, of course, a mere fragment) are rather moral essays of a general character. He is, however, singularly deficient in power to discriminate. Mere offenses against good taste are classed with atrocious crimes; "Orestes (unlike Nero) did not mix poison for any of his relatives; he never sang upon the stage; he did not write an epic upon the Fall of Troy" ('Sat.' 8, 219–221). Such passages (and they are numerous) have raised at times the question of Juvenal's sincerity. But this should not be doubted. He was, on the one hand, swayed by the intense and narrow prejudices of a Roman of the old school; on the other, his long rhetorical training had developed to the utmost an inborn capacity and love for epigrammatic phrase. The possession of this power, while it sometimes led him astray, is one of his just claims to greatness. No Roman writer lends himself more admirably to effective quotation; none can describe a scene with more graphic realism. See JUVENAL'S SATIRES.

Bibliography.— The best text is the Jahn-Bücheler (Berlin 1893). There are excellent editions by J. D. Lewis, with a translation (2d ed., New York 1882), J. E. B. Mayor (London, Vol. I, 4th ed., 1889; Vol. II, 3d ed., 1881); Pearson and Strong (Oxford 1892); L. Friedländer (Leipzig 1895); J. D. Duff (Cambridge 1900); H. L. Wilson (New York 1903). Dryden translated five of the satires. There is a spirited verse translation by Gifford (London 1817); and good prose translations by Strong and Leeper (New York 1882), and S. G. Owen (London 1903). Dr. Samuel Johnson's paraphrases of the third and tenth satires in his 'London' and 'The Vanity of Human Wishes' are deservedly as famous as the originals. Consult also Dürr, J., 'Das Leben Juvenals' (Ulm 1888); Martha, C., 'Les Moralistes sous l'Empire Romain' (Paris 1865); Boissier, G., 'La Religion .Romaine' (Paris 1884), and 'L'Opposition sous les Césars' (Paris 1892).

NELSON G. MCCREA,
Professor of Latin Language and Literature, Columbia University.

JUVENALIA (Latin, meaning youthful), the private scenic games which Nero established at Rome to celebrate his attaining his age of manhood (59 A.D.). About this time the Palatine games at the beginning of the year also began to be called Juvenalia, if indeed they had not been so designated earlier as emblematic of the youthful year. The most noted private actors took place in the Juvenalia, among them being Nero himself.

JUVENAL'S SATIRES. The 16 satires of the Roman poet Juvenal (about 55 to 135 A.D.) were the product of his maturer life. None of them was with certainty composed before the year 100 A.D. For the most part, they are poems of moderate length, seldom exceeding 300 lines. Several are much briefer.

The Satires deal with the social defects of the times, and cover a fairly extensive range of topics. The first satire gives the poet's excuse for writing. Everyone else is composing. Why should not he! Moreover, whoever contemplates the social degeneracy of the day must naturally feel impelled to write in arraignment of existing conditions and tendencies. "Indignation forces composition." The second satire deals with a phase of sexual perversion more characteristic of antiquity, probably, than of modern times. In the third, Juvenal deplores the fact that Rome is no longer an en-

durable place of residence for an honest man. Only he who will lie, cheat, steal, murder, can win advancement in the Rome of Juvenal's day. Foreigners,— especially Syrians and Greeks — have invaded the capital in such numbers that it is no longer Roman but Greek (non possum ferre, Quirites, Græcam urbem). Houses are so poorly constructed that they often fall in ruins. Rent and provisions are high. Conflagrations are common. The noise of traffic has become unbearable; while theft and assault are the order of the day. The fourth satire touches upon the degeneracy of the Senate. In the reign of Domitian, this body had so deteriorated in dignity, that Juvenal represents senators assembling in a council of state to discuss the fitting way of serving an unusually large turbot at the imperial table. The fifth satire deals with the trials and indignities of clients or parasites. A large class of dependents had sprung up in the empire, men often of respectable antecedents but now in reduced circumstances. These clients danced attendance on the great men of the day, and in return received a small daily dole of money and an occasional invitation to their patron's table. The studied discrimination of which they are made the object on such occasions is the special theme of the satire. The sixth satire deals with the license practised by a certain class of the women of the day. The seventh bewails the unfortunate lot of literary men. Poets, historians, orators, rhetoricians, teachers alike are all ill paid, neglected and unhappy. The eighth satire arraigns the pretensions of those who pride themselves on their descent. Virtue alone, says the poet, is true nobility. Noble birth should impose responsibilities, but the nobles of Juvenal's day go on the stage and appear as gladiators in the arena. The theme of the ninth satire is similar to that of the second. The tenth (probably the most famous of the whole collection) is on the vanity of human wishes,— the desire for power, for money, for office, for long life, for beauty. The emptiness of all these is illustrated by examples. Shall we then pray for nothing? Yes, "a sound mind in a sound body" (mens sana in corpore sano), a contempt for death, and a willingness to endure toil. The eleventh satire exalts the "simple life" and country joys. The twelfth is aimed at the legacy-hunter. The thirteenth returns to the general degeneracy of the times and pictures the torments of a guilty conscience. The fourteenth emphasizes the contagion of a bad example, especially in the home, and exhorts parents to be worthy of imitation by their children. The fifteenth aims to illustrate Egyptian barbarity by an account of an Egyptian custom. The sixteenth (a fragment) enumerates some of the advantages of the soldier's life and status.

Juvenal lacks the urbanity of Horace. Conscious of his own rectitude, he is unscathing in his denunciation of the faults of others. At times he almost deserves the name of scold. Yet his purpose was lofty and he not infrequently rises to great nobility of sentiment and expression. The three satires in which he descants on certain of the more odious forms of vice (2, 6, 9) probably give an entirely incorrect picture of the prevailing morality of the day.

The third and tenth satires have been imitated in Johnson's 'London' and 'Vanity of Human Wishes.' A recent translation is that by S. G. Owen (London 1903).

CHARLES E. BENNETT,
Professor of Latin, Cornell University.

JUVENCUS, Gaius Vetticus Aquilinus, an early Christian poet, generally supposed to have been a native of Spain: b. about 290; d. about 331. His style, which is excellent, and his poetical form, which is classical, show that he must have received an excellent education. He was a Spanish presbyter and it has been claimed for him that he was of noble family. The only work of his known to have survived to the present is his 'Historia Evangelica: Versus de Quattuor Evangelicis,' which is supposed to have been written about 330. In this he imitates the best of the Latin poets, with considerable show of originality. In this version the author seems to have made use of both the 'Jala' and the original Greek version. Consult Hatfield, 'A Study of Juvencus' (1890); Mantius, 'Geschichte der christlich-lateinischen Poesie' (Stuttgart 1891); Teuffel, 'Geschichte der römischen Literatur' (Leipzig 1913).

JUVENILE OFFENDERS. See CHILDREN, DELINQUENT.

JUVENILE WATER. See GROUND WATER.

JUVENTAS, the goddess of youth, in Roman mythology. Her shrine was in the temple of Jupiter, on the Capitol. All Roman young men, on coming of age, paid their respects at the shrine of Juventas, on whose altar they laid offerings. Juventas and the Greek goddess Hebe, which seem to have had much the same functions and attributes, and probably had the same primitive origin, became confounded in Rome early in the 3d century B.C., and the temple of Juventas, near the Circus Maximus, was dedicated to Hebe, with apparently the same functions and attributes as Juventas (about 218 B.C.). Consult Wissowa, 'Religion und Kultur der Römer' (Munich 1912).

JUXON, William, English prelate, archbishop of Canterbury: b. Chichester, Sussex, 1582; d. London, 4 June 1663. He was educated at Oxford, took orders and after holding church livings (in 1609 at Oxford, and then in 1614 at Somerton) in 1621 succeeded Laud as president of Saint John's College. In 1627 he was appointed vice-chancellor of the university, and about the same time chaplain in ordinary to Charles I, who gave him the deanery of Worcester, and then the bishopric of London (1633). He attended the king on the scaffold. His fidelity cost him his bishopric, but at the Restoration he was made archbishop of Canterbury. of

K

K the 11th letter in the English and other alphabets of the modern languages of western Europe.

The character is derived, through the Greek from the alphabet of the early Phœnicians, where its form is that of *K* reversed, ϗ. The *k* represents the sound produced when the back of the tongue is brought into contact with the palate and the breath expelled. The sound-value of *k* is the same in all languages; but *k* is not employed in the modern Latin languages save in spelling foreign words or names. Nor does it occur in Latin save as an abbreviation (K or Kal.) for Kalendæ, K for the name Cæso, or for Carthago, etc.

In English the *c* of the Latin orthography of words from the Greek is always retained, even when it represents the sound of *k*, for example, *sceptic*, pronounced *skeptic;* and we are beginning to pronounce *ceramic, keramic.* We even substitute *c* for *k* in Greek words and names, though in reading Greek we give to the *k* always its hard guttural sound; hence for us *Alkibiades* is (in sound) *alsibiades*, and even *Kimon* is *simon.*

The *k* in Greek names suffers a similar change in the modern Latin languages; but in German speech the true *k* sound and spelling in such names is retained: *Ankyra*, not *ansyra; Korkyra*, not *corsyra; Kephalos*, not *sephalos.*

In Anglo-Saxon and in Gaelic the *k* is always represented by *c.*

The guttural sound of *k* seems to have stood unchanged in ancient Greek and Latin, whether represented by that letter or by *c;* but in the modern languages derived from the Latin the *k* sound underwent great changes, becoming a sibilant equal to *s*, as "*sezar,*" for *Cæsar*, or being "palatized" into the sound *tsh*, for example, Gr. *kyriake*, Ger. *kirche*, Scotch *kirk*, Eng. *church;* to produce this change the middle of the tongue, instead of the back of it, is brought into contact with the palate; in French pronunciation the *k*-sound of *c* in Latin words, as *camera, carbo, carnalis*, is changed to *sh*, and the words are written *chambre, charbon, charnel.*

K AS A SYMBOL. It has numerous significations, according to the connection in which it is used. Thus, for instance, K in chemistry stands for kalium or potassium. In heraldry and titulary honors it stands for knight, as for example, K.B., Knight of the Bath; K.G. Knight of the Garter. In the expression O. K. the K stands for correct or right, in sense at least, whatever be the derivation of the expression itself. K2 is a sign sometimes used to represent Mount Godwin-Austen, while Ka, in Egyptian mythology, represents the spirit of the dead. See KA.

KA, the spirit of the dead, the second self, which formed a very important part of the religious belief of the Egyptians. Each Egyptian was thought to possess his own particular *Ka*, which constituted the spirit of his life in the future world where all the inhabitants, whether earth-born or heaven-born, possessed each his *Ka.* To this rule not even the gods were exempt, the Creator of the universe and of men being as much dependent upon "his second self" as earth-born mortals. Every human being, while on earth, according to Egyptian belief, possessed two spirit beings, the *Ka*, which remained in the future world, and the *Ba*, which accompanied the body on earth and deserted it at death. The *Ba* was thought to be the earthly being or soul of man; and the root form of the word and its signification are suggestively like the form and use of the Indo-European root word for being or to be. As the *Ba* was the essence of life in this world, so was the *Ka* believed to be the essence of life in the world to come. This is why its possession could not be dispensed with even by the gods of creation. The *Ba* and the *Ka* were, therefore, both used as the symbols of being or existence, each in its own sphere. The substantive or copulative verb to be, though lacking in many languages, is a very pronounced feature of the Indo-European tongues, the race-possessors of which had early highly developed the idea of the spirit or soul within the earthly body. The similarity between the root *be*, expressing existence, and the Egyptian *ba*, is very striking, and it becomes still more so when the comparison is made with the various forms of the root throughout all the languages of the Indo-European family. From the Sanskrit bhū it glides into bă and bĭ (as in Russian bĭt), everywhere retaining the primitive idea of existence. So strongly has this idea persisted that some branches of the family even to-day, as Spanish, for instance, have developed two verbs to express the English "to be." One of these expresses the idea of existence pure and simple and *unlimited*, except by the condition of earthly life. The second verb to be expresses a condition that is limited and dependent upon the idea of existence, but not forming an essential part of it. Thus, man is an animal (El hombre *es* un animal) expresses a condition of man's existence throughout life, or in other words, of his *being.* "The man is in his house" (El hombre *está* en casa) expresses only a temporary condition and one in no way essential to being. It is therefore expressed by the second Spanish verb to be (*estar*) which is purely locative in use and derivation. These two sentences bring out strongly, by contrast, the idea of life-long existence and accidental occupation or position. Man *exists* all his life

as an animal; but he *stands* (the original root sense of the verb) or is located in his house. In the second case there is none of the spiritual sense of existence, since the verb expresses simply location in time.

The Royal Ka.— The Egyptians carried this idea of relation of time to existence to a conclusion that legitimately followed their belief in the divine character of their sovereigns. They represented their king as possessing, while on earth, both a *Ba* and a *Ka*, ever present in his person. Being of earth, the sovereign must, while on earth, possess his *Ba*, or second earthly person; but being, at the same time, the heaven-born child and the representative upon earth of the divine power, and not having relinquished his heavenly or future-world estate, he necessarily also had to possess his *Ka*, without which he could not retain his future world connections. This endowing of their sovereigns by the Egyptians with the earthly and the heavenly "second self," the *Ba* and the *Ka*, throws a light on these two much-disputed terms. The *Ba* was the breath of earthly life; the *Ka* was the breath of heavenly or divine life; and the sovereign, forming the link between earth and heaven, between the temporal and the divine, could do so only by virtue of possessing the essential animating forces of both. Each dead person was euphemistically said to have "gone *to* his *Ka*," that is, to have died or "departed this life." But the sovereign, when he died, was picturesquely said to have gone *with* his *Ka*, that is, to have accompanied the *Ka* to the future world. This shows the popular Egyptian belief that the heavenly "second self" never for a moment deserted the heaven-born sovereign, either in the future world from which he had come, or while on his earthly mission, as the heaven-sent ruler of the people. When a mortal left this earth, be he sovereign, potentate, noble, priest or common laborer, mechanic or tradesman, "his *Ba* flew away, at death, as a bird," and the departed went on to take possession of his new "second self," or *Ka*. With the disappearance of this earthly life, sovereign, noble and commoner were alike in possessing but one spiritual self. But, for all that, they were not placed on an equality in the future life; for the king, being of divine origin, returned to the society of the gods from which he had come when he appeared upon earth. There his earthly rule was transformed into a spiritual one.

Apparently the Egyptians had the idea that the unity of all the *kas* constituted the vital forces, which they seem to have represented by the plural of *Ka*. If this interpretation is correct, then the *Ka* would seem to have been closely connected with the granting of life upon earth. Just as it constituted the essence of life in the world to come. The *Ka* seems to have been able to move about, at will, throughout the universe. It was believed to enter the statue of the deceased, to animate it, at times, and to receive the mortuary offerings, or the essence or spirit thereof, which were made in behalf of the deceased. On accompanying to earth the new-born royal infant and destined future sovereign, the *Ka* continued to be his guardian and protecting spirit throughout his earthly career. Thus, too, the gods, when they visited the earth, as they were believed to have done in the earlier days of Egyptian national life, came, each accompanied by his *Ka*.

The Guardian Ka.— The *Ka* seems also to have, in the popular belief, descended from the heavenly regions to become the guardian companion through life of certain favored beings who were neither gods nor sovereigns, though they would appear to have acquired god-like qualities. They seem to have been the forerunners of the saints in the more modern religions, to whom were accorded preferential places in the future world on account of their earthly virtues and divine accomplishments. The presence of the symbol of the *Ka* was expressive of protection or blessing in the case of the sovereign, a favor not granted to other mortals. Hence the symbol of the *Ka* seems to have acquired the general signification of good luck or divine favor, just as the swastika or cross of the rain gods was thought to be a potent sign of good fortune. It would seem, therefore, that though the *Ka* generally remained in the future world, it nevertheless had some influence in the affairs of terrestrial life, if not on all occasions, at least under special conditions. That the *Ka* was believed to have influence on earth would seem to be further indicated by the fact that it was customary, in Egypt, to erect "Ka Chapels." Khnemu-hetep, so a surviving record states, built a Ka chapel to the memory of his royal father and appointed to take charge of it a "priest of the double," endowing both priest and chapel richly with lands and servants and providing for regular stated offerings for all time to come. The symbol of the *Ka* was inscribed prominently on the standard of this same filial and pious sovereign, perhaps as a talesman, or as a symbol of his divine origin. The kings of Egypt possessed several names, one of which was known as their "Ka" or "banner" name. This signified that they were the representative on earth of Horus. It seems to have been customary in Egypt to pray to the "Ka" or soul of the king which was believed to take a special interest in the accomplishment of all that pertained to the work and glory of the sovereign. Una (one of the most trusted and capable of the "royal servants" of Pepi I) a noted soldier and administrator (about 3233 B.C.) states explicitly that he was able to work efficiently for the glory of his king and to perform the great and many duties confided to him "because he prayed unto the '*Kas*' of the king more than to any other god and, for this reason, everything happened as it had been commanded to happen by the double or *Ka* of the king." Every Egyptian sovereign prepared his own monumental tomb and provided for the perpetual performance, at stated periods, in his Ka chapel, of mortuary services supposed to be necessary to maintain the power and influence of the deceased in the future world, and perhaps even his spiritual existence. Nobles and people of wealth generally followed the example of the king, while similar services were performed for the deceased of humble rank by his direct descendants. Thus it was a great misfortune for an Egyptian, in the lower walks of life, to die without leaving a son behind him to perform for him these pious offices. The statue of a deceased sovereign or person of high rank was frequently placed in his tomb. On each such

statue were represented the characteristic symbols of the *Ka* and also the *Ka*-name of the deceased potentate.

Disagreement of Critics.— Among writers on Egypt there has been much confusion as to the meaning and place of the *Ba* and the *Ka* in Egyptian religion. This want of agreement still continues; and it is due to lack of complete documentary evidence on the subject; to inadequate study of the documents already acquired, to want of co-ordination in the work being done to elucidate the subject; and to an inability to comprehend the signification of the information already acquired and the relation of its parts to one another. This has led some writers to represent the *Ka* as being an earthly spirit and an inhabitant of the temporal body, under more or less the same terms and conditions as the *Ba*, the latter being treated as a sort of wandering spirit while the *Ka*, they regarded as more stationary and domesticated. This view of the relation of the *Ba* to the *Ka* has led to learned discussion which has failed to take into account that there is apparently no evidence to support the view that the *Ka* was in any way a spirit of living body except in the case of sovereigns and specially favored persons, as already indicated. On the most primitive tombstones of the 1st dynasty the *khu* bird is depicted between the arms of the *Ka*, indicating that the shining, glorious intelligence dwelt in the *Ka*. Already at this early date all funeral offerings seem to have been made to the *Ka* or in the name of the *Ka*, which was thought to possess all the bodily perceptions and power of enjoyment. It is this connection of the *Ka* with these temporal qualities, its supposed presence in the tomb and the personal interest it took in the sovereign or other favored person, probably, that have given rise to the belief that the *Ka* was one of two spirits possessed by every mortal while on earth.

Development of the Ka.— There is no Egyptian religion that covers the period from 7,000 to 9,000 or more years of the life of the Egyptian people. During most of this long period there was no one form of religion supreme or anything like to nearly supreme. The various beliefs were constantly changing, with the centuries. There was an ever-present tendency for certain more powerful gods to become still more powerful and to take to themselves the powers and attributes of other less fortunate deities who had lost out in the race of time. Local gods became lost in the more powerful state deity, much as the local Hindu gods were incarnate in Vishnu, who was represented as having had many reincarnations, each of which probably represented one of these local deities. The Egyptians seem to have incorporated into the victorious god the *Kas* of all the local or other deities displaced by him. This accounts for the fact that *Ra*, for instance, was represented as having 14 *Kas*. Some of the divine kings of Egypt seem to have had as many *Kas* as the deities they represented on earth. Thus Rameses II is represented as possessing 30 *Kas*. The later Egyptian belief, which was the result of an evolution of 7,000 years, seems to have held that the *Ka* was a god-like principle, the presence of the divine dwelling in and saving the soul. Thus it ultimately came very close to the Jewish conception of the Holy Ghost. There seems to be plenty of evidence to demonstrate that Jewish and Egyptian doctrines concerning the soul acted and reacted upon one another from the first years of the contact of the two nations until the decline of Egypt. The mystical and imaginative Egyptian doctrine of the *Ka* and its interest in the affairs of the individual together with its relation to the *Ba* exercised a strong influence on early Christian religious thought and the development of the religious dogma of the soul. John's description of the Holy Ghost might have been the late Egyptian definition of the *Ka* as the indwelling divine principle whose presence saved the soul. This is essentially the doctrine of the *logos* in its highest development. Both the *logos* and the *Ka* came ultimately to signify a saving, divine principle. From this to the conception of the *Ka* immortal principle or soul was but a step, which had been already taken in Egypt before Christianity had put in its appearance. See EGYPTIAN RELIGION AND SOCIOLOGY; SOUL; BOOK OF THE DEAD.

F., 'Egyptian Tales' (London 1895–99); 'History of Egypt' (Oxford 1902); Wiedmann, 'Religion of the Ancient Egyptians' (New York 1897).

JOHN HUBERT CORNYN.

KAAB IBN ZUHAIR, käb ĭbn zoo'hār, an Arabian poet contemporary with Mohammed, and thus flourished in the 7th century. He was the son of a poet of some note, Zuhair ibn Abi Sulman Rabia at Muzani. All the members of the family became converts to the preaching of Mohammed, except Kaab, who was finally outlawed on account of his hostility to the latter. Later on he became reconciled to the prophet, with whom he seems to have become a favorite. One of the most famous of Kaab's poems is an eulogy on Mohammed, entitled 'Bānat Su'dād,' which has been translated into German by Brockleman, and into Italian by Gabrieli.

KAABA, or CAABA, properly a quadrangular structure, but a name particularly applied to a celebrated temple at Mecca. According to Mussulman tradition, the first Kaaba was built by the angels on the model of the pavilion which surrounds the throne of the Most High; the second was built by Adam, with whom it was removed to the skies, where it still exists in a right line above the Kaaba of Mecca; the third was built by Seth, but perished in the deluge; the fourth, which now exists, was built by Abraham and Ishmael. The name is specially given to a small oratory in the temple in the centre of a large space surrounded by galleries. It is an irregular cube, 40 feet long, 33 feet in width and about 50 feet in height. This is the point toward which the prayers of all Mussulmans are directed. In a corner (the southeast) fixed at a height of five feet from the ground is the famous black stone, believed to be one of the precious stones of paradise, and to have been brought by the angel Gabriel to Abraham,

when he was constructing the Kaaba. At first, according to one version, of a dazzling whiteness, the Moslems say that it grieved and wept so long for the sins of the human race that it became gradually opaque, and at length absolutely black; or, in another version, that it has been blackened by the tears of pilgrims, shed for sin. It is an object of profound veneration to the pilgrims who resort to the sacred city. This inner Kaaba is surrounded with a veil of black silk, and is opened but three times a year, and none but the faithful are permitted to approach it. The temple of the Kaaba is older than the time of Mohammed, previous to whom it was the Arab pantheon, containing the nation's idols. The Prophet destroyed the idols, but suffered the most characteristic form of worship to remain—the tawaf, or sevenfold circuit of the sanctuary. In the Prophet's day the outer walls were covered by a veil of striped cloth. This gave way under the caliphate to a covering of figured brocade and the Khedive of Egypt still sends such a covering with each pilgrim caravan. A broad band on these coverings is embroidered with inscriptions from the Koran. The door as well as the posts and lintel is of gilt silver. Modern descriptions of the interior do not always tally, which difference is due to the difficulty of observation. It is well agreed, however, that little change has been made since the days of Ibn Jubair, who speaks of the upper parts of the walls as plated with silver and gilt, the roof veiled with silk and the floor and lower part of the walls covered with rich marbles. He also mentions windows of stained glass but modern travelers appear to have overlooked these. Thirteen silver lamps hung between the teak pillars. A silver-plated door opens on a stair leading to the roof. The caliph Mahdi expended lavishly on the decorations and in beautifying the place of prayer around "the Ancient House." He brought pillars from Egypt and Syria. The work was extended by his successors and repairs continued down to Turkish times.

Bibliography.— Burckhardt, 'Travels in Arabia' (London 1829); Burton, 'Pilgrimage to El-Medinah and Meccah' (ib. 1855); Wüstenfeld, 'Die Chroniken der Stadt Mekka' (Leipzig 1861); Snouk-Hurgronje, 'Mekka' (The Hague 1889); Sahib Soubhi, 'Pélerinage à la Mecque et à Médine' (Cairo 1894); Wellhausen, 'Skizzen und Vorarbeiten' (Berlin 1897); Grimme, 'Mohammed' (Munich 1904); Huart, 'Histoire des Arabes' (Paris 1912).

KAALUND, kä'lŭnd, **Hans Vilhelm,** Danish poet: b. Copenhagen, 1818; d. 1885. He studied painting and sculpture, and wrote poetry at the same time. But his success in the latter so far surpassed his achievements in the former that he decided in 1838 to make literature his life work. For 20 years, however, he published poems with just enough success to warrant his continuing with the prospect of ultimately achieving the success he so much desired and had so earnestly worked for. In 1858 a collection of his best poems 'Et Foraar' (spring) written to the date of publication, was received with warmer welcome than had been given to previous editions of his works. In 1875 he published a drama 'Fulvia'; and two years later, another volume of poems, 'En Eftervaar' ('A Second Spring'). Among his other works are 'Fabler og blandede Digte' ('Tales and Mixed Poems,' 1844), and 'Fabler for Börn' ('Stories for Children,' 1845). Consult Nielsen, 'Hans Vilhelm Kaalund' (1886).

KAALUND, Peter Erasmus Kristian, Danish philologist: b. Söllested (in Laaland), 1844. He made a special study of Northern philology, sagas and learning while at the university of Copenhagen. After graduation he continued studies of a similar nature. He gave special attention to the sagas of Iceland in 'Historisk-topografisk Beskrivelse af Island' (1877–82). His appointment as librarian of the Arnamagnæan Collection of Manuscripts (Copenhagen) gave him special facilities and incentive to continue his life work. His catalogue of this collection (1888–94) and his catalogue of the Icelandic manuscripts of the Royal Library, his edited sagas and his 'Palæografisk Atlas' (1903–07) have done much for the study of the wide field of Danish, Norwegian and Icelandic lore and manuscripts.

KAARTA, kär'tą, territory in Senegal, West Africa, having an area of about 21,000 square miles. The east is fertile and most of the country is fairly level. Population about 300,000 natives belonging to Soninkis and Bambaras. The capital, Kuniakari, has about 5,000 inhabitants. Nioro, in the north, a town of about like proportions is an important centre of trade. The original rulers of Kaarta within historical times were the Soninkis who were overcome by the Bambaras. In 1855 the country became a part of Segu and in 1891 it came under the control of the French.

KABALASSOU, kă-bą-läs'soo, the native name of a large armadillo, native of Brazil, which feeds upon carrion and termites. It is from three to five feet long from nose to end of tail.

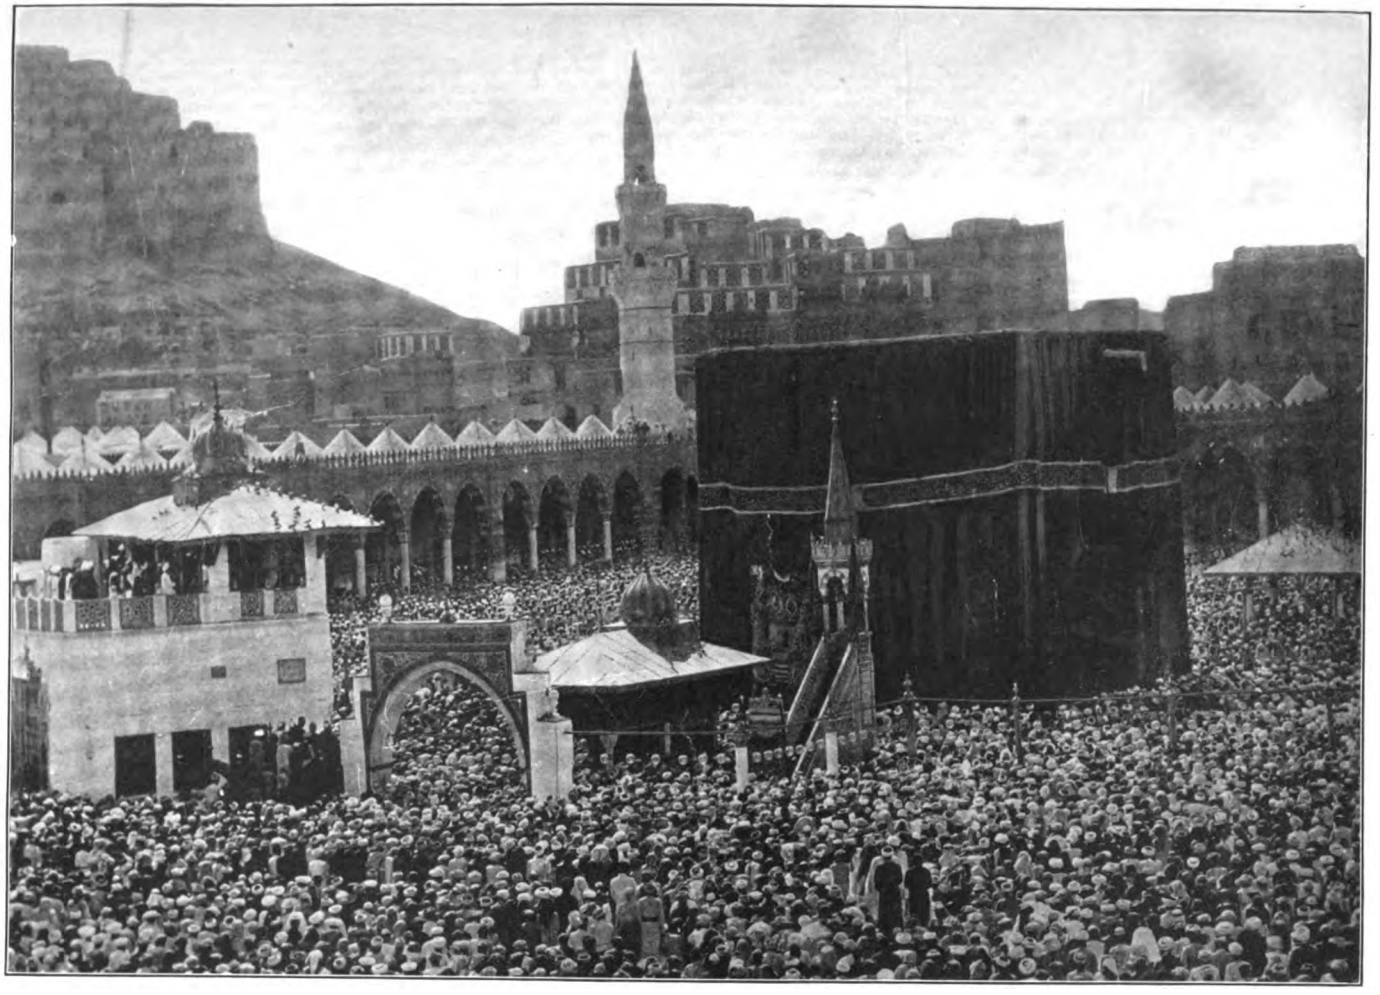
KABALE UND LIEBE, ką-bā'lĕ ŭnt lē'bĕ, one of the earliest dramas of Schiller published in 1784. It has been translated into English under the title of 'Intrigue and Love.'

KABARDS, or KABERTAI, ką-bĕr'tī, an independent Circassian family of about 30,000 people, most of whom are Mohammedans. They live in the central and western Caucasus on an upland broken plateau-like country at an elevation of some 5,000 feet above sea-level.

KABASSOU, ką-bäs'soo, **CABASSOU,** a native South American armadillo of the genus Kenurus noted for its curious movable plates and by the extra long first two digits. Like the Kabalassou (q.v.), the Kabassou is fond of burrowing at which it is quite adept.

KABBALA, kăb'ą-lą. See CABALA.

KABUL, ką-bool', or **CABOOL,** Afghanistan, capital of the country and of the province of Kabul, situated at the western extremity of a spacious plain, in an angle formed by the approach of two ranges of hills, and (with the exception of a suburb) on the right bank of the Kabul River, which is spanned, in or near the city, by several bridges. It is a place of great strategic strength, and stands at a height of about 6,900 feet above sea-level. It has a delightful summer climate, but the winter is severe. Since the eighties of last century great improvements have been effected in the city, and under the enlightened rule of Abd-ur-Rah-



PILGRIMS AROUND THE CAABA

man (died 1901) important industries were introduced and electrical powers developed under European tutelage. Good highways have also been constructed, and a local railway has been built. The mosques are spacious and commodious, and the town is an important centre of trade with India and central Asia. Kabul has had a stirring and eventful history. It fell to the arms of Tamerlane in 1394. It was captured by Nadir Shah in 1739, whose son, Ahmed Khan, founded the Durani dynasty. The city was taken by the British in 1839; was the scene of the capitulation of British forces in 1842, who, guaranteed safe conduct to the frontier, were brutally massacred, only one man out of a total of 16,000 soldiers and camp followers reaching safety. In retaliation the city was again occupied by British troops, and on evacuation partially destroyed by them. It afterward became the centre of a dynastic struggle between rival claimants to the throne of Afghanistan. In 1879 the British resident and his staff were massacred, and this was followed by General Robert's march on the city, the defeat of the Afghan forces at the battle of Charasaib, and occupation of the city for a twelve month. Pop. 180,000.

KABUL, a river in Afghanistan which rises in the Paghman Mountains in the northeast at an altitude of 8,400 feet above sea-level. It is about 300 miles in length at its junction with the Indies at Attock (in the Punjab). It supports considerable commerce carried on in small boats and rafts. On its shores are Kabul and Jelalabad.

KABYLES, ka-bīlz'. See BERBERS.

KACZKOWSKI, käch-kŏf'skē, **Zygmunt,** Polish historical writer and novelist: b. Bereznia (Galicia), 1826; d. 1896. He showed himself an ardent revolutionist in the outbreak of 1848. In 1861 he was imprisoned for treasonable writings, but was liberated on his agreeing to leave the country. Going to Paris he continued his literary work there for considerable time. After his return to Vienna he gave all his attention to literature, which was the gainer thereby. His extensive historical studies helped to give true local color, incident and truthfulness to his brilliant historical novels, among which are 'Bitwa o Horonzanken' (1852); 'Le tombeau de Nieczuii' (1858); and 'Le portefeuille de Nieczjua' (1883). His novels of modern life include 'The Strange Woman' ('Dziwozona,' 1855); 'Bajronista' (1855); 'Grandsons' ('Wnuczenta,' 1858); 'Anuncyata' (1858); 'Sodalis Marianus' (1858); and 'Le Comte Rak' (1862).

KADELBURG, kä'dĕl-burk, **Gustav,** Austrian actor and dramatist: b. Budapest, 1851. Making his début in Vienna in 1868, he went to Berlin three years later, where he remained 12 years, gaining in power and reputation; after which he returned to Vienna as stage manager of the Vcîks theatre only to make his way back to Berlin, where he found the life more congenial. He successfully toured the United States for two seasons. He was the author of many farces and comedies and collaborated in the writings of others and translated dramatic works from English into German. His works were published in 1899 under the title 'Dramatic Works of Franz von Schönthan und Gustav Kadelburg,' in four volumes.

KADEN, kä'dĕn, **Waldemar,** German writer: b. Dresden, 1838; d. 1907. He was a teacher by profession but gave all his spare time to folklore and literature. Among his published works are 'Wandertage in Italien' (1874); 'Unter den Olivenbäumen' (1880); 'Skizzen und Kulturbilder aus Italien' (1884); 'Pompejanische Novellen' (1882); 'Die Riviera' (1888); 'Italienische Gypsfiguren' (1891); 'Auf Capri' (1900); 'Volkstumliches aus Suditalien' (1896–1900); and numerous works dealing with folklore.

KADESH-BARNEA. The name of a place mentioned as a stopping-place for the Children of Israel on their way to Palestine. For 38 years it was the centre of the activities of the budding nation. Here the tabernacle was set up. Many fateful affairs occurred here, including the death of Miriam, the sister of Moses, the serious rebellion of Korah and the disobedience to divine command of Moses himself. From this place the spies were sent to make their survey of Palestine, and here their report was made. Then the march was resumed from this point. The exact site of Kadesh-Barnea has been the subject of much conjecture and considerable controversy. It was not until 1842 that anything like certitude was attained. Rev. John Rowland, then residing at Gaza, was directed to the spot by some Arabs. The adoption of the site, however, was met by the objection of Edward Robinson, Dean Stanley and others. Many scholars of equal authority defended Rowland's discovery. It remained for H. Clay Trumbull to establish the correctness of this site, which he did in 1883, publishing his results in what is considered "the most important work yet published on the subject," 'Kadesh-Barnea' (1884). It is located in the Badiet et-Tih, "the great expanse of treeless limestone plateau which intervenes between the valley of the Arabah, opposite Mount Hor on the east, and the coast of Philistia about Gaza on the West."

KADIAK, kăd-yăk'. See KODIAK.

KADIAK BEARS. See BEARS.

KADMONITES, people of the land of Kedem, the "Children of Kedem" (Bene Kedem). Jacob went to the land of Bene Kedem (Gen. xxix). The Kadmonites have, by some writers, been held to be the ancient Aramæans.

KAFFA, a tributary state of Abyssinia, toward the southern part of the country. It is mountainous for the most part and covered with thick forests in the higher regions. Capital, Araderacha; other important cities, Bonga and Jimma; area, about 5,000 square miles. No census of the country has ever been taken.

KAFFA, kăf'fā. See FEODOSIA.

KAFFRARIA, a part of the province of the Cape of Good Hope east of the Kei River. It became a part of Cape Colony in 1875 and now forms East Griqualand, Transkei, Pondoland and Tambuland, comprising a total area of about 22,000 square miles and having a population of about 850,000. Like most of the southern and western country of Africa which has had a considerable native population the principal industry is the raising of grain and cattle.

KAFIR-BREAD, kăf'ẽr-brĕd, the edible spongy pith of the stems and cones of any of several species of cycads (q.v.) growing in South Africa, especially *Encephalartos caffer.* This substance resembles sago in its farinaceous character.

KAFIR-CORN, Indian millet (*Sorghum vulgare*) extensively cultivated by the half-civilized negroes of south-central Africa. It is called kaoliang by the Chinese. See GRASSES; MILLET.

KAFIRISTAN, kä-fē-rĭs-tän' (Persian, "land of the infidels"), a region of central Asia northeast of Afghanistan, on the south slope of the Hindu Kush, and having as its southern boundary the Kabul River. Formerly the name was vaguely given to a much greater territory; it is now restricted to a country with an area of about 5,000 square miles, nominally under the government of the Amir of Afghanistan, but virtually belonging to an independent people. In the northern portion, which is mountainous, the surface is rugged and broken; in the south the land is mostly level or moderately undulating. Much of the soil has a high degree of fertility and is adapted, especially in the valleys, to the cultivation of fruits and cereals of various kinds. Grapes are largely produced, from which is made an excellent wine. They are said to be skilful workers in wood and metals, but their main pursuits are agriculture and stock-raising. In features and complexion, as well as in beliefs, manners and customs, they differ much from neighboring tribes. They appear to be of Aryan extraction and claim descent from soldiers of Alexander the Great. They are not without dissensions in the various tribal divisions in which they exist, but their isolation in a region of natural strength has enabled them to maintain a kind of political unity despite internal discords, as well as to preserve their independence against the invasions of other tribes. They have no literature, and in their language appear mingled traits of the Indo-Iranian dialects in their Iranian and Indian divisions. In religion they withstood Mohammedan influences until in 1895 they became subjects of Afghanistan, when Mohammedanism was imposed upon them outwardly; but they cling with fondness to their old superstitious beliefs. Consult Biddulph, 'Tribes of the Hindu Kush' (1880); Leitner, 'Kafiristan' (1881); McNair, 'A Visit to Kafiristan' (Proc. Royal Geog. Soc. 1884); Robertson, 'Kafirs of the Hindu Kush' (1896).

KAFIRS, kăf'erz, **KAFFIRS, KAFFRES,** or **CAFFRES** (from Arabic *Kafir,* infidel or unbeliever), the principal race inhabiting southeastern Africa, a branch of the great Bantu family. The name is now chiefly restricted to the tribes occupying the coast districts between Cape Colony and Delagoa Bay. They differ from the negroes in the shape of the head, being more like that of Europeans; in the high nose, frizzled hair and brown complexion, which becomes lighter in shade in the tribes of the more southern districts. They are a tall, muscular race, the average height being from 5 feet 9 inches to 5 feet 11 inches, and frugal and simple in their habits. Their chief occupation is raising and tending cattle, and hunting; they are also employed in the mining industry; garden and field work is mainly performed by women. They are of a peaceful disposition, but in times of war they display considerable bravery, tactical skill and dexterity in the handling of their assagais or spears, shields and clubs, as has been shown in their engagements with the British forces. There are several distinct branches or families of Kafirs, but the tribes which recent events have specially brought to the front are the Pondos, the Fingoes, the Zulus and the Swazi. Kafirs, especially of the Zulu tribe, are distributed in large numbers over Natal and Cape Colony, and have become to some extent civilized. There were frequent wars between them and the Dutch and British.

KAGA, kä'gą, or **KASHU,** province in the west of the Japanese island of Hondo, and forming a part of the ken of Ishikawa. It is a place of very considerable industry, which embraces the manufacture of silk yarns and goods, inlaid and other bronzes of very beautiful designs, Kaga porcelains and many other distinctly native products. Kanazawa, the capital of Kaga, which has a population of about 115,000, is situated five miles inland from its port, Takama, a place of considerable shipping activity.

KAGOSHIMA, kä'gō-shē'mą, Japan, a city in the island of Kiushiu, capital of Satsuma province and of the prefectural ken of the same name, on the northwest shore of Kagoshima Bay. The town it well built and is an important industrial centre with a considerable export trade. The celebrated Satsuma porcelain is manufactured in suburban Tanoura. Kagoshima was the feudal seat of the powerful Shimadzu daimios, and in 1863 was bombarded and destroyed by the British, owing to the murder of an Englishman; the reigning daimio refusing satisfaction. Here in 1877 Saigo (q.v.) set up the standard of rebellion, and here also he was overwhelmingly defeated a few months later. A great disaster took place on 12 Jan. 1914, when the volcano of Takurajima, situated on a small island directly facing the city, after being quiescent for 130 years, burst into flame, rendering 100,000 people homeless and compelling the inhabitants of Kagoshima temporarily to vacate the city. Pop. 75,907.

KAGU, kä'goo, the native name of the remarkable bird (*Rhinochetus jubatus*) peculiar to New Caledonia, where it was discovered only in 1860 and is now rapidly disappearing. It is the only species of a distinct family most nearly related to the sun-bitterns. The kagu is about the size of a domestic fowl, with short wings, rather long legs, a ralliform beak and a long crest. When the wings are folded, the colors are mottled gray, the wings and tail barred with a darker shade; but when they are spread the wings are seen to be barred and spotted with white and black arranged in a conspicuous pattern. The kagu is noteworthy for the extraordinary dances and antics which it performs.

KAGUAN, kä-goo-ăn'. See COLUGO.

KAHLENBERG, kä'lĕn-bẽrg, Louis, American chemist: b. Two Rivers, Wis., 1870. Educated at universities of Wisconsin and Leipzig, he became professor of physical chemistry in the former in 1897 and head of the chemical department 10 years later. He has been asso-

ciate editor of the *Journal of Physical Chemistry* and of the *Journal de Chimie Physique* and president of the Wisconsin Academy of Science, Arts and Letters, and vice-president of the American Electro-Chemical Society (on several occasions). Among his published works are 'Laboratory Exercises in General Chemistry'; 'Outlines of Chemistry'; 'Qualitative Chemical Analysis.'

KAHN, kän, **Gustave,** French poet, novelist and literary critic: b. Metz, 1859. During his school days he began contributing poems, short stories, sketches and reviews to the newspapers and journals, and this he continued actively from 1880 on. He took a trip to Africa of which he made good literary use; and on his return to France in 1886, he joined hands with Moréas and Paul Adam founding *Le Symboliste* and *La Vogue.* From this time on he took a very active part in the "Symbolistic" movement of which he became, in a sense, the most active leader. With Catulle Mendes and others he organized, in 1897, the "Matinées of poets," with the avowed object of encouraging the younger symbolistic writers to become still more symbolistic. These matinées were held successively at the Odéon, Antoine and Sarah Bernhardt theatres. Kahn has been largely interested in the *vers libre* movement, and he has been put forward as the inventor of this form of poetry which has been so much abused, especially in the United States; and which has consequently born such notoriously bad fruit. This claim, however, has been strenuously contested. There is something attractive about much of the symbolistic *vers libre* of Kahn; but the brood that he and his symbolistic followers have encouraged in the journals and reviews under their control or at their disposition, have proved scarcely worth the rearing, since most of them are compelled to limp through their literary life in a manner painful to themselves and to their readers. In recognition of his services to literature Kahn has been made an officer of the Legion of Honor. Among his published works are 'Les palais nomades' (1887); 'Chansons d'amant' (1891); 'Premiers poèmes' (1897); 'Le roi fou' (1895); 'Les fleurs de passion' (1900); 'L'Adultère sentimental' (1902); 'Symbolistes et décadents' (1903); 'Contes Hollandais' (1904); 'L'Esthétique de la rue' (1905); 'Boucher' (1909).

KAHN, Otto Hermann, American banker and promoter of opera: b. Mannheim, Germany, 1867. He came to the United States in 1893 to the banking firm of Speyer and Company, after five years in the Deutsche Bank branch in London and he joined Kuhn, Loeb and Company, five years later. There he soon became prominent in railroad and corporation finances. Of a strong musical disposition he has long taken a very prominent part in the encouragement of grand opera in this country. He has been chairman of the board of directors of both the Metropolitan and Century Opera companies, vice-president of the Chicago Grand Opera Company and one of the directors of the Boston Opera Company.

KAHOKA, kä-hō'kạ, Mo., city and county-seat of Clark County, on the Burlington route, 20 miles west of Keokuk, Iowa. It is an important shipping point for a large farming and stock-raising region and there are numerous grain elevators, besides flour-mills, cement-block factories, brick yards and fruit canning establishments. The city is governed by a mayor and council elected biennially and owns the water and electric-lighting plants. Pop. 1,758.

KAI-PING, kī-ping', China, town in the province of Pe-chi-li, 80 miles northeast of Tien-Tsin. It is the centre of a large coal field, over 11,000 persons being employed in the mines. The output in 1911–12 was 1,461,822 tons. A branch railroad connects Kai-ping with the Trans-Siberian Railway.

KAI-POMO, kī-pō'mō, a tribe of Athapascan Indians who formerly inhabited the Cahto Valley, Mendocino County, California. See KATO.

KAIANIAN, kī-ān'ī-ân (Persian *kai,* king), an ancient Iranian dynasty belonging to the early days of the history of the country. It bridges over the semi-historical, semi-traditional and semi-mythical period extending between the shadowy mythical age of Iran and the time when the country emerges into the light of formal history and loses itself in the later Archæmenian sovereigns. According to a Persian account, which is probably more mythical than historical, the dynastic Kaianians began with the establishment on the throne of Iran of Kai Kobad by the great legendary Persian hero, Rustam. All the succeeding members of this royal family bore the title "Kai" thus giving rise to their titular dynastic designation. The Kaianian rule came to an end with the conquest of Persia by Alexander the Great, in the 4th century B.C., after a little less than 700 years' duration, if the semi-legendary records on the case are to be accepted as authoritative. Throughout this long period certain names stand out so prominently that they have given their titles to families or dynasties; as seems to have been the case in early Biblical chronological records. Thus Kai Vishtasp is gravely recorded to have reigned 120 years; and other Kaianian sovereigns are credited with like unnatural age. (See PERSIA — HISTORY). Consult Dubeux, 'La Perse' (Paris 1881); Jackson, 'Zoroaster, the Prophet of Ancient Iran' (New York 1889).

KAIETUR (kä-ę-toor') **FALL,** a famous waterfall in British Guiana, on the Potaro River, a tributary of the Essequibo. It was discovered in 1870. Its total height is over 800 feet, and the sheer descent of the water 741 feet, the width of the hard rock over which it plunges being 370 feet. The water has worn a great cavern in the softer underlying layers, and against the dark background thus formed the whiteness of the spray is contrasted with magical effects. The scenery about this great waterfall enhances its beauty and grandeur.

KAIFUNG, kī-fŭng', or **K'AI-FENG-FU,** China, a walled city, capital of the province of Ho-nan, 450 miles southwest of Peking, and 11 miles distant from the Ho-ang-ho, or Yellow River. It was the capital city of China from 960 to 1129 and was then known as Pien-liang. The city has been visited 14 times by flood, 9 times by earthquake and 6 times by fire. Kaifung is a station on the new Hankow-Peking Railway. It has a large commercial trade with

the interior. A colony of Jews, established here about 1163 A.D., for hundreds of years maintained itself apart from the other inhabitants, but has now almost entirely lost its identity. The city was taken by assault by the insurgents in the Taiping rebellion of 1853. The inhabitants are mainly Mohammedan. Pop. about 200,000.

KAILAS, kī'läs, the highest summit of the Gangri Mountains in Tibet, between the sources of the Indus and the Brahmaputra, having an altitude of over 20,000 feet. It is a sacred mountain of the Hindus, who formerly regarded it as the abode of their gods.

KAILASA, kī-lä'sa, the best known of the rock-temples of Ellora. It stands not far from Aurangabad, completely separated by a passageway of considerable extent, from the mother rock from which it was cut probably about the 10th century A.D. The main chamber of the temple which is 244 by 137 feet is approached by a corridor or entrance hall 137 by 88 feet. The former is the sanctuary. Another room 100 by 56 feet forms the temple proper which rises in a magnificent dome, the summit of which is 90 feet above the floor and supported by four rows of handsome columns with sculptured elephants. Sculptured figures and painted designs cover the greater part of the whole vast edifice adding to the grotesque yet grand effect of the ensemble. Consult Ferguson and Burgess, 'Cone Temples of India' (London 1880).

KAILYARD SCHOOL, a popular name used to designate the Scotch writers who deal with Scotch peasant life. The use of the term is said to have had its origin in the motto used by Ian Maclaren for his 'Bonnie Brier-Bush,' "There grows a bonnie brier-bush in our Kailyard."

KAIN, kān, **John Joseph,** American Roman Catholic archbishop: b. Martinsburg, W. Va., 31 May 1841; d. Baltimore, 13 Oct. 1903. Educated at Saint Mary's Seminary he was ordained priest in 1860 and was for several years stationed at Harpers Ferry, W. Va. In 1875 he was consecrated bishop of Wheeling, and in 1893 he was appointed titular archbishop of Oxyrychia as coadjutor to Archbishop Kenrick of Saint Louis, succeeding to the archbishopric of Saint Louis on the death of Archbishop Kenrick in 1895. Owing to failing health, Bishop Glennon of Kansas City was made coadjutor in 1902, and succeeded him.

KAINITE, kī'nīt, **KAINIT** (Greek, *kainos,* new) a hydrous magnesium sulphate with potassium chloride. An impure kainite containing 12 per cent or over of potash is used extensively as a fertilizer. Kainite is a natural salt containing, when pure, 35.1 per cent of potassium sulphate, 24.2 per cent of magnesium sulphate, 18.9 per cent of magnesium chloride and 21.8 per cent of water of hydration. The fertilizing kainite is used for the production of potash and magnesium compounds. See FERTILIZERS.

KAINZ, kīnts, **Joseph,** Austrian actor: b. Wieselburg, Hungary, 1858; d. 1910. He was popular in Austria and Germany and played leading rôles at Vienna, Munich and Berlin, and visited the United States several times. Among his many rôles were Romeo, Mortimer in 'Maria Stuart' (Schiller); Ferdinand in 'Kabale und Liebe' (Schiller), and Alceste in 'Misanthrope' (Molière).

KAIPING, kī'ping', a city in the Liaotung peninsula, Manchuria, 30 miles southeast of Niuchwang. It is one of the towns captured by the Japanese in 1904 during the Russo-Japanese War. Kaiping is on the Port Arthur Railway.

KAIRA, kī'ra, a district and capital in northern Bombay, British India. The foundation of the city is supposed to date back to 1400 B.C., and it is definitely known to have existed as a flourishing commercial centre in the 5th century A.D. Pop. about 10,000.

KAIRWAN, kīr-wān', Tunis, a town 80 miles southeast of Tunis the capital, situated in a barren, sandy plain, and surrounded by a wall; founded about 670. It is connected by rail with Tunis and with the port of Susa, 30 miles distant. It ranks next to Tunis in population and trade, and is one of the sacred cities of Islam; it was formerly almost inaccessible to Christians. Under the administration of the French, by whom it was taken in 1881, many modern improvements have been made, among which not the least important is a good water supply. It has a variety of useful manufactures, including morocco, carpets, copper utensils, saltpeter, etc. Kairwan was the first seat of Saracenic empire in Barbary, and still has many fine relics of its ancient grandeur in the fragments of beautiful architecture which abound there, besides a number of interesting mosques. One of them, the Okbah mosque, rebuilt in 827, is a noble edifice, and is held in great veneration as one of the reputed four gates of Paradise. Pop. 25,000.

KAISARIEH, kī'sa-rē'ĕ, a town in the Vailayet of Angora, Asiatic Turkey. It is partially surrounded by the walls of an ancient fortification rampart, and most of its streets are narrow and crooked, thus betraying its antiquity. The town is the centre of extensive trade which reaches over a very considerable extent of local country. Hides, carpets, cloth, fruits and raisins are among its chief exports. It is a place of numerous bazars and mosques, one of the later of which dates back to 1238. Religious interests are strongly represented in Kaisarieh, the city being the seat of Greek and Roman Catholic bishops and of an Armenian archbishop. Thus it maintains the very ancient tradition that it occupies the site of Cæsarea (in Cappadocia). Pop. 50,000, half of whom are Turks.

KAISER, Isabelle, Swiss writer: b. Beckenried (on Lake Lucerne), 1866. With a command of French and German, she has written in both languages, though most of her writing has been done in French so successfully that she received the prize of the French Academy. Among her published French works are 'Ici-bas' (1888); 'Sous les étoiles' (1890); 'Des ailes' (1897); 'Le jardin clos' (1912), all poems; 'Cœur de femme' (1891); 'Sorcière' (1895); 'Héro' (1898); 'Notre père qui êtes aux cieux' (1899); 'Vive le roi!' (1903); 'L'Eclair dans la voile' (1907); 'Marcienne de Fluë' (1909), novels and stories. Her works, written in German, include 'Wenn die Sonne untergeht' (1901), a novel; 'Mein

Herz' (1908), poems; 'Die Friedensucherin' (1908), a romance; 'Der wandernde See' (1910), and 'Von ewiger Liebe' (1913).

KAISER, kī'zėr, a title, the German equivalent for emperor. The Romans added the name of Cæsar to their own kings in honor of the "divine Julius." Diocletian first made it a distinctive title, and in 395 A.D., on the division of the empire, the title was borne by both the Eastern and Western emperors. It lapsed in 476 A.D. with the last emperor, but was revived in 800 A.D. by Charlemagne, who was crowned emperor of the West at Rome in that year, after which the title was associated with the king of the Franks and after 962 with the Germans, whose kings became emperors of the Holy Roman Empire. The kings continued to be crowned by the Roman pontiffs at Rome, or at least in Italy, until 1530, when Charles V was crowned at Bologna. On the fall of Constantinople in 1453 the sultan assumed the title, but his claim was not recognized by the Holy Roman emperors until 1718. In 1721 the title of czar was assumed by Peter the Great of Russia. In 1806 the title of Holy Roman emperor was dropped by Francis II of Austria, who retained that of emperor of Austria. After the Franco-Prussian War of 1871 William I of Prussia assumed the title of German emperor, and this title is distinct from the older title of emperor of Germany. See CÆSARISM; CZAR; EMPEROR.

KAISER-FRANZENSBAD. See FRANZENSBAD.

KAISER WILHELM, or KIEL, CANAL. One of the important ship canals of the world, extending from the mouth of the Elbe, on the North Sea, to Kiel, on the Baltic, a distance of 61 miles. The military policy of Germany, however, has played a larger part in the purpose behind the digging of this canal than have the advantages to shipping. When Bismarck provoked the war with Denmark in 1864 it was generally considered that one of his main motives was the acquisition of such territory in Holstein as it would afford a suitable terminal for a canal connecting the Baltic with the North Sea and so permit German vessels, and more especially German war vessels, a means of passing from the one sea to the other without making the dangerous coastal voyage around Denmark, a distance of nearly 600 miles. Wilhelmshafen on the North Sea, and Kiel, on the Baltic, each an important naval station, have been the centers of gravity of the German naval war strategy, which has oscillated between the North Sea and the Baltic. The canal effects an inland passage between these two naval bases, so that in case of need the forces stationed at one base can quickly support those at the other, or the entire German naval power can be readily mobilized, at short notice, either in the Baltic or in the North Sea.

The digging of the canal was begun in June 1887 and completed, as first planned, in June 1895. The depth then was 29½ feet and the average width at the bottom was 72 feet, while the width at water level was 220 feet. The locks, as first constructed, were 492 feet long, 82 feet wide and 32 feet deep.

Then came the advent of the dreadnought, a war vessel of a size and draught which had not been contemplated at the time the canal was originally planned. This brought before the German strategists the need of having the canal widened and deepened, a work which was begun in 1907, and which is supposed to have deferred the great European War for some years.

In 1914 the alterations were completed, the canal having then cost upward of $55,000,000. The waterway is now 335 feet wide at water level, 144 feet wide at the bottom and 36 feet deep. The locks are 147½ feet wide and have an available length greater than the big locks on the Panama canal; 1,082½ feet. It is now possible for two of the largest ocean liners to pass each other in the canal and still leave 200 feet to spare between them. The official opening was celebrated 24 June 1914. Consult Wharton, A., 'Kiel: its Naval and Engineering Features,' (in the *Engineer*, London, Vol. 120, p. 20, 1915).

KAISER WILHELM DER GROSSE, a German converted liner of 14,350 tons which escaped from Bremerhaven at the beginning of the World War and, eluding the British squadrons, reached the South Atlantic. After two weeks of commerce raiding she was sunk by H.M.S. *Highflyer* off Cape Verde Islands on 27 Aug. 1914. See WAR, EUROPEAN — NAVAL OPERATIONS.

KAISER WILHELM LAND. See NEW GUINEA.

KAISERSLAUTERN, kī'zėrs-lau'tārn, a city of Bavarian Palatinate, Germany, about 40 miles west of Mannheim. It is the centre of spinning and weaving interests and possesses factories for the production of structural steel, car wheels, boiler engines, safes, sewing machines, furniture, clothing, shoes, bells, bricks, oils and blank-books. In the neighborhood are extensive quarries of fine stone and forests that supply building and cabinet lumber. The city is also the centre of iron works and railway shops. It possesses the usual schools, churches and public buildings of German and Austrian cities of its size. The town dates back to 1152 when Frederick Barbarossa built a magnificent palace there. In 1357 the free imperial city of Kaiserslautern became subject to the Palatinate. The French took it in 1801; Bavaria seized it in 1816; and it returned to the Palatinate in 1849, while still remaining an integral part of Bavaria. Pop. about 60,000.

KAJANUS, ką-yä'nŭs, **Robert**, Finnish composer and orchestral leader: b. Helsingfors, 1856. Graduating from the Leipzig Conservatory in 1880 and finishing his musical course in Paris and Dresden, he began the production of orchestral works which soon attracted attention. Returning to Helsingfors in 1886 he founded there a native orchestral association which was destined soon to achieve a more than national reputation. His appointment as director of music at the University of Helsingfors helped greatly the national musical movement that he was striving to encourage. Much of his music he has consciously and deliberately made national in subject and character. This covers a pretty wide range, including symphonic poems, rhapsodies, orchestral suites and numerous cantatas, songs and piano pieces.

KAKA, a large, slow-flying, brownish parrot (*Nestor meridionalis*) of New Zealand, which inhabits forests, where it goes about in

noisy flocks, and nests in hollows of trees. Its food is miscellaneous, but consists principally of nectarous flowers and of the grubs hiding under bark, which it tears away by its powerful hawk-like beak. A near relative is the Kea (q.v.), and other species on New Zealand, Norfolk and neighboring islands have become wholly extinct since the occupation of those islands.

KAKABEKA FALLS, a cataract of the Kaministiquia River, Ontario, Canada, 14 miles west of Port Arthur. The falls, which are noted for their picturesqueness, have a height of 130 feet, and their width is about 450 feet.

KAKAPO, the Maori name of a large, ground-keeping, owl-like parrot (*Strigops habroptilus*), which is now nearly extinct, owing to its inability to withstand the dogs, cats, rats, etc., introduced by civilization, in addition to which its flesh is good to eat. Its terrestrial habits have led to such a reduction of the wing-muscles that the keel has nearly disappeared from the sternum. Consult Hutton and Drummond, 'Animals of New Zealand' (1905).

KAKAR, a sportsman's name for a muntjac (q.v.).

KAKARALI, kăk-ą-răl'ī, a South American tree (*Lecythis ollaria*), whose timber is much used in British Guiana for piling and structures exposed to salt water, since it endures well, and resists the boring of shipworms and the attacks of barnacles. The Indians beat its bark until it separates into thin layers convenient for use.

KAKHYENS, kąk-hī'ĕnz, **Kahyen, Kakan,** the Burmese designation of certain, more or less primitive, tribes inhabiting the mountain districts of Arakan and northern Burma to the frontiers of Assam and Tibet. See CHINS.

KAKKE, kăk'kā', a Japanese disease believed to be identical with or very similar to the beriberi of India and the Malay peninsula. It is endemic in parts of Japan and is to be found occasionally all over the country. Sometimes it becomes epidemic. It is not known when the disease appeared in Japan or from whence it came. Kakke results, at times, in the loss of motive power from an affection of the lower extremities of the body which presents itself in the shape of swelling of the legs, numbness of the skin, cramps in the calf of the legs and, in the more extreme cases, dropsy and even heart failure. (See BERIBERI). Consult Anderson, 'Kakke' (in *The Transactions of the Asiatic Society of Japan,* Vol. VI, Yokohama 1878); Chamberlain, 'Things Japanese' (London 1891); Miura and Baelz, 'Beriberi oder Kakke' (in Mense's 'Handbuch der Tropenkrankheiten,' Leipzig 1905).

KALAAZAR FEBRILE, Tropical, a feverish disease prevalent in India and the east, generally from the west of northern Africa to southern China. It is accompanied by sores and pimples and is frequently fatal. It is also found among camels and they are believed to help propagate it. It is also known to be conveyed by bedbugs.

KALAFAT, kä'lą-făt', a fortified Rumanian town on the Danube, about 150 miles southwest of Bucharest with which it is connected by rail. At Kalafat the Russians lost over 10,000 men during the Russo-Turkish War of 1828-29. Pop. about 8,000.

KALAHARI (kä-lä-hä're) **DESERT,** a region of South Africa, extending from the Orange River to Lake Ngami, and from lon. 26° E. nearly to the west coast; situated in the Cape Province, Rhodesia, and German Southwest Africa. It occupies an elevation of 3,000 to 4,000 feet, and is called a desert because it contains little water; but besides grass and creeping plants there are large growths of bushes, and also trees; great herds of antelopes roam over its plains; and on the game thus provided, as well as on the vegetable products, particularly water-melons and large tubers, a great number of Bushmen and Bakalahari subsist. The Kalahari is remarkably flat, and is intersected in different parts by the beds of ancient rivers. The soil is in general a light-colored soft sand, but in the ancient river-beds there is a good deal of alluvium, which, when baked hard, is so retentive that in some cases pools formed by the rain contain water for several months.

Recent studies have brought to light very interesting facts regarding the limestone basins of this region — peculiar formations, in which can be traced the influence of higher animal life on the shape of the earth's surface. These crater-like depressions served as watering-places for the larger wild animals, and the crowding of great herds to these places, to drink and bathe, changed them from simple depressions to the walled basins which they now are. Elephants and other animals, by rolling in the mud and rubbing against the walls, gave to the hollows their depth — sometimes 20 to 30 feet — and a diameter commonly of several hundred yards. The water in these basins contain lime carbonate in solution and with the water drunk by the animals this carbonate disappeared, and the fresh spring-water absorbed another supply from the rock, thus deepening the depression. Scientists estimate that 600 to 800 years may have passed before the natural water-pools became basins. It is surmised that similar depressions in calcareous districts of the American prairies are due, in the same way, to the enormous herds of bisons which formerly inhabit them.

KALAKAUA (kăl-ą-kow'ą) **I, David,** king of Hawaii: b. 16 Nov. 1836; d. San Francisco, Cal., 30 Jan. 1891. He was the son of Kepaakea and Keohokalole, the niece of Kamehameha I, and was elected, 12 Feb. 1874, to succeed Lunalilo, and reigned till his death. In 1887 he was compelled to grant a new constitution, which very greatly restricted the royal authority.

KALAMATA, kä'lą-mä'tą, a seaport of Messenia, Greece, near the mouth of the Nedon. It is on the Gulf of Messenia, and is the centre of an extensive industrial activity and commerce in oranges, figs, mulberries, olives, silk and food-stuffs. It was in Kalamata that the first Grecian National Assembly was held (1821). Pop. about 16,000.

KALAMAZOO, kăl-ą-mă-zoo, Mich., city, railway centre and county-seat of Kalamazoo County; on the Kalamazoo River and on the Michigan Central, the Lake Shore and Michigan Southern, the Kalamazoo and South Haven, the Grand Rapids and Indiana and the Chicago, Kalamazoo and Saginaw railways; 143 miles west of Detroit, 60 miles southwest of Lansing

and 45 miles south of Grand Rapids. It is in a rich agricultural region, the chief products of which are celery, fruit and grains. Unlike the average city in western Michigan, Kalamazoo never was a lumber town. Located in the midst of a broad area of prairie land and oak openings, it was from the beginning an agricultural centre with fresh water, inland lakes in all directions, and with the Kalamazoo River flowing along its eastern portion. Few cities of the United States of a corresponding population show such a diversity of industrial corporations. There are over 276 factories employing about 10,000 persons, and representing an investment of $28,745,000. The chief manufactures of the city are paper, medicines, women's clothing, wagons and carriages, machinery, caskets, coffins, foundry products, windmills, furniture, stoves, corsets, shoes, automobiles and motor-trucks and regalia. The 13 paper mills employ more than 5,000 workers; the regalia and clothing factories, 1,000. The celery raising industry, by which Kalamazoo is perhaps best known, employs more than 700 skilled workmen, chiefly from Holland, and represents an annual output valued at nearly $3,000,000.

The four national and savings bank reported in 1916, $1,000,000 capital; $539,367 surplus; $9,804,867.62 loans, discounts and stocks; and $10,455,063.15 deposits. The total bank clearings were $38,650,359. The freight shipped and received in 1915 aggregated 876,432 tons. The total postal receipts were $461,044.26. Some of the prominent public institutions are the Kalamazoo College, opened in 1855 under the auspices of the Baptist Church; Nazareth Academy, Roman Catholic; Western State Normal School, Borgess and Bronson Hospitals, Tuberculosis Hospital, Saint Anthony's School for Feeble-Minded Children, Michigan Asylum for the Insane, Academy of Music, Fuller Theatre and the public library. Other prominent buildings are the Y. M. C. A., the City Hall, several fine churches and the high school, also the County Court House and the Masonic Temple. The government is vested in a mayor, public commissioners and a council of nine members, elected annually. The school board is chosen by popular election. Kalamazoo was settled in June 1829 by Titus Bronson of Connecticut. It was incorporated as a village in April 1843, and for many years enjoyed the distinction of being the largest village in the United States. It was made a city in April 1884. The waterworks and electric-plant are the property of the municipality. Pop. 48,200.

KALAMAZOO, a river which has its rise in the northwestern part of Hillsdale County, Mich., and flows west and northwest into Lake Michigan. From the source to the city of Kalamazoo it makes three southward curves, but from Kalamazoo the course is generally northwest. Its whole length is about 200 miles, only 50 of which are navigable. At the mouth is a good harbor for vessels of about 100 tons. The water-power is extensive, and has been of great value in the development of the southwestern part of Michigan. Allegan, Kalamazoo, Battle Creek and Marshall are on this river.

KALANGS, kạ-lăngz', one of the primitive races of Japan who have now become pretty nearly extinct partially through intermingling with and absorption into the Japanese people. Consult Meyer, 'Die Kalangs auf Java' (Leipzig 1877).

KALAPUYA, kā'lą-poo'yą, CALLAPOOYA, the family name of a group of Indians tribes in northwestern Oregon, principally in the Willamette River valley. They were of a decidedly peaceful character and consequently have not figured prominently in the history of the country. Never very numerous in historical times, the Kalapuya are represented by descendants who are for the most part American citizens who have adapted themselves to the ways of civilization. The Takmint, Mary's River, Santiam, and Yamhill on the Grande Ronde Reservation belong to this group. Consult Lewis, 'Tribes of the Columbia Valley and the Coast of Washington and Oregon' (Lancaster, Pa., 1906).

KALAT, KELAT, KHELAT, kā-lăt', capital of state of same name in Baluchistan. It is about 90 miles in a southerly direction from Quetta. It has grown rapidly since 1900 when it numbered less than 2,000 inhabitants. It was a walled town, but the population has lately spread beyond the walls. The residence of the Khan, a combined castle and fortress, is an imposing structure, but the town has nothing of the picturesque or prosperous about it. The British have retained a garrison at Kalat since 1854 and a resident agent with military escort since 1877. The town has become the centre of considerable local trade and is growing in importance as the centre of the caravan routes to Quetta, Khozdar, Gondava, Nushki and other centres of traffic. Kalat has a bazar which does an extensive local trade in the produce of the surrounding country and in native goods. Pop. about 18,000.

KALB, Johann, BARON DE. See DEKALB, JOHANN.

KALBECK, kăl'bĕk, Max ("JEREMIAS DEUTLICH"), German dramatist, poet and critic: b. Breslau, 1850. In 1880 he went to Vienna with the intention of making literature his life work. There he became a journalist, working on several of the chief newspapers of the capital and contributing lyrical and other poems to them and to magazines. He had already published a book of poems, 'Aus Natur und Leben' (1870), before he had thought of going to Vienna. But the favorable reception accorded this first work stirred his ambition to be a lyrical poet. His newspaper work, however, insensibly made him a critic ranking among the best in the capital, and this in its turn gave him an interest in the stage, which resulted in his becoming a successful dramatist and librettist. His work as a critic had been begun before he went to Vienna and the result was the publication of 'Neue Beiträge zur Biographie des Dichters Gün, ther' (1879). This was followed by numerous other critical articles of a higher order than is generally produced by even good newspaper critics. These embraced, among others, Wagner's 'Nibelungen'; 'Parsifal'; 'Wiener Opernabende' and 'Opernabende.' Among his original productions are 'Die Maienkönigen' (1888) and 'Das Stille Dorf' (1898). He translated or adapted to German numerous foreign dramas and works of librettists, among them being Massenet's

'Le Cid' and 'Werther'; Verdi's 'Otello,' and characteristic and popular productions of Smareglia, Smetana, Mascagni and Tschaikowsky. He also wrote an appreciative and critical biography of Brahms (1904).

KALCKREUTH, kälk'roit, **Stanislaus,** COUNT, German landscape painter: b. Kozmin, 1821; d. 1894. He began life as a soldier and served as lieutenant in the First Guards Regiment from 1840 to 1845. Resigning from the service he went to Berlin and there studied painting under some of the most famous German teachers. He possessed a certain poetical and mystical bent which became early evident in his paintings which were highly idealized. This gained him great popularity and won for him the appointment of art professor from William IV of Prussia (1859) and permission to organize the new art school, opened the following year in Weimar. He became director of this school, upon which he stamped his individuality for 16 years; during which he had considerable influence on the trend of art in Germany and Austria. But the day of Kalckreuth is already past, for his artificiality has become apparent to modern art critics. Among his best known and most popular paintings are 'Lac de Glaube' (1855); 'Canigai Valley' (1856); 'Rosenlaui Glacier' (1878), all three in the Berlin National Gallery; 'Lake in the Pyrenees' (1858), in the Königsberg Museum, and a notable series of landscapes in the Orangery near Potsdam.

KALE, or **BORECOLE,** a cruciferous plant (*Brassica oleracea,* var. *acephala*), differing from cabbage most strikingly in the nonformation of heads, the leaves being loose and free. It is largely cultivated as a pot-herb, especially in the South, where it generally withstands the winter. It is rather coarse in texture and flavor, but frosts modify both somewhat. In some sections it is extensively used for cattle-feeding. One of the largest producing regions is that in the vicinity of Norfolk, Va., which ships about 200,000 barrels to the markets each year. The varieties cultivated in America are nearly all treated as annuals, being grown from seed much like late cabbage. Some varieties, however, are perennial and may be propagated by cuttings, etc. For cultivation see CABBAGE.

KALEEGE, kạ-lēj, or **KALIJ, PHEASANTS,** a sportsmen's name in India for the pheasants of the genus *Genæus,* which range along the foot-hills of the Himalayan range and eastward to the China and down the Malay peninsula to Java. They are of medium size, richly dressed, with flattened crests, naked cheeks and spurs on the male. White is conspicuous in the plumage of most, so that they are sometimes called silver pheasants, especially the Chinese species (*G. nycthemerus*), frequently seen in parks and menageries. All are attractive as game birds, especially the Himalayan white-crested and black-crested.

KALEIDOSCOPE, kạ-lī'dō-skōp, an optical instrument invented by Sir David Brewster in 1817. It consists of a tube through the length of which pass two mirrors or reflecting planes, which are hinged together along one edge, and make with each other an angle of 180 degrees; while the one end is fitted up with an eye-glass, and the other is closed by two glasses, at a small distance from each other, between which are placed little fragments of glass or other colored objects. The eye looking into the tube perceives these objects multiplied, and the slightest moving of the instrument produces new figures.

KALENDS. See CALENDAR.

KALERGIS, kạ-lĕr'gēs, **Demetrius,** Greek soldier and statesman: b. on the island of Crete, 1803; d. 1867. Educated at Saint Petersburg, he studied medicine at Vienna and Paris, but left his course unfinished to take part in the Greek War of Independence (1821), during which he was taken prisoner by the Turks. He took part in the revolution of 1845 and was forced to exile himself, spending the next three years in London. After the residence of some time in Paris, he became Minister of War in the Mavrocordatos Ministry (1854–61), after which he was sent as Ambassador to Paris, where he played an important part in the negotiations which finally bestowed the throne of Greece on Prince George of Denmark.

KALEVALA. The Romantic movement, which in Germany began by the collection of folk-songs and fairy-tales, frequently led in the outlying countries to literary creations of national epics on the basis of actual epic songs. Thus arose in Finland the 'Kalevala,' systematically arranged by Dr. A. Lönnrot in 1835, and in 1849 totally rearranged and enlarged to 22,800 verses. Almqvist showed how Lönnrot had eclectically glued together actual variants, sometimes composing himself a few lines in order to bridge over discordant passages, more frequently rejecting verses which clashed with the general scheme he had in mind. However, if we disregard the unity of the Kalevala as a whole and the unimportant literary transitions, we have in Lönnrot's production an extremely valuable collection of Finnish heroic and magical songs, which throw a light upon the formation of a popular literature among the Finnish tribes. Some archæologists have assumed that in this 'Kalevala' we have a documentary record of a primitive state of society, but Comparetti, with far more justice, holds that it is not an invariable document of antiquity, but reflects, in ever changing form, the intellectual condition of the simple folk not far removed from the time when these songs were written down. Therefore it is not correct to speak of the 'Kalevala' as an epic, especially since the indeterminateness of images represented and the arbitrary personification of nature permit no set classification. The Finnish mythology is based on shamanistic polydaemonism and is not as highly developed as it was among the Romans, Assyrians or other cultured nations of antiquity, hence it yields no well-defined theogony. Similarly the hero is not always to be separated from the poet and magician, and his chief exploit consists in song competitions, as is the case with the shamanic wizard, or in wooing of the bride. The most cherished possession of such a hero is the sampo, a treasure which is hazily identified with a precious casket or a mill, but which Comparetti takes to be a Scandinavian word meaning "the commonwealth," and which

here has become a concrete object to be striven for. Just as indefinite is the Kalevala, the country of Kaleva, one of the heroes, though some authors take it to be "Finland," while the Pohjola, with which it is in conflict, has been supposed to represent the country of the North or the abode of the dead. But, while the Kalevala loses in importance as a national epic with a well-sustained plot, it justly maintains its place in popular literature, on account of the vivid imagery displayed by the popular poet.

The poem is now accessible to English readers in several translations: 'The Kalevala, the Epic Poem of Finland,' rendered into English by J. M. Crawford (2 vols., New York 1888); 'Kalevala, the Land of Heroes,' translated from the original Finnish by W. F. Kirby (London 1907, in 'Everyman's Library,' 2 vols.). Selections from the 'Kalevala' are given in 'Selections from the Kalevala,' translated from a German version by J. A. Porter (New York 1868); 'People of Finland in Archaic Times,' by J. C. Brown (London 1892); 'The Sampo, Hero Adventures from the Finnish Kalevala,' by James Baldwin (New York 1912). The best study of the poem is still that by Comparetti, 'The Traditional Poetry of the Finns,' translated by Isabella M. Anderson, with introduction by Andrew Lang (London 1898). The obligation of Longfellow's 'Hiawatha' to the 'Kalevala' was early pointed out by Th. C. Porter (in the *Mercersburg Review*, Vol. VIII, 1856).

LEO WIENER,
Professor of Slavic Languages and Literatures, Harvard University.

KALEVIPOEG, kạ-lā'vē-pĕg (son of Kalev), the chief Esthonian epic poem, based upon popular songs collected by Kreutzwald (1857–59). As the material used by the collector was destroyed, much discussion has resulted as to the position occupied by the poem among real national epics. Consult Kirby, 'Hero of Esthonia and Other Studies' (Vol. I, London 1895); Reinthal, 'Kalewipoeg, eine estniche Sage' (including the text of the poem with a German translation, Dorpal 1857–61).

KALGAN, kăl-găn' (Chinese, *Chang-Kia* K'ow), a walled city in the province of Pechili, China, about 125 miles northwest of Peking and at an elevation of 2,800 feet above sea-level. With a population of 80,000 or more, it is an important centre of local trade and the district centre of the overland tea commerce which is carried on by the use of immense caravans of camels. Its local trade extends into the Mongolian territory and to Shensi and Kansu to the west, and to Peking, with which it is connected by rail to the southeast.

KALHANA, kăl'hạ na, a noted Sanskrit writer, author of 'Rājataraginí,' the chronicle of the kings of Kashmir.

KALI, kā'lē, a Hindu goddess represented with four arms, wearing a necklace of skulls, and the hands of slaughtered giants round her waist as a girdle. Her eyebrows and breast appear streaming with the blood of monsters she has slain and devoured. One hand holds a sword, another a human head. She is the goddess of death and destruction, and goats and other animals are sacrificed on her altars.

KALIDASA, kä-lī-dä'sä, the greatest poet and dramatist of India and one of the great world poets. Native tradition assigns him to the 1st century B.C., but western scholars place him as late as the 6th century A.D. He was one of the nine "gems," or poets, at the court of King Vikramanditya, in Ujjain, but the fact that several monarchs were so named makes his date no more definite. The present tendency of scholars is to place him earlier than the 6th century but not so early as the traditional date. His most famous work is the drama 'Sakuntalā,' translated by Sir William Jones in 1789 and highly praised by Goethe. This translation helped to call the attention of the Occidental world to Sanskrit studies. Kalidasa wrote two other plays, the 'Vikramorvasī' and 'Mālavikā and Agnimitra.' His great lyrical masterpiece is the 'Megha-duta' (Cloud Messenger), in which a cloud is made the envoy of a lover to his absent sweetheart. Other poems are 'Ritu-samhāra,' a poem on the seasons; the 'Kumara-sambhava,' in 18 cantos, and the 'Raghuvamsa,' a eulogy of the great house of Rama, Prince of India. Many other works have also been attributed to him with various degrees of probability. His literary value has long been conceded. He excels in artistic form and his conceptions are full and rich. Editions and translations of Kalidasa have come forth in great number within recent years. Consult Schuyler, 'Bibliography of the Sanskrit Drama' (New York 1906); Foulker, 'Kalidasa: A Complete Collection of the Various Readings of the Madras Manuscripts' (4 vols., Madras 1904–07); Pansikar, 'Kumarasambhava,' with the commentary of Mallinath and Sitaram (5th ed., Bombay 1908); Cappeller, 'Sakuntala, kürzere Textform mit Anmerkungen' (Leipzig 1909); Hultzsch, 'Meghaduta' (London 1911). Of the English versions of the 'Sakuntala' the following are of importance: Jones, Sir William, 'Sacountala, or the Fatal Ring' (Calcutta 1789; London 1790; 1870); Monier-Williams, 'Sakuntala, or the Lost Ring' (6th ed., London 1890); Edgren, 'Shakuntala, or the Recovered Ring' (New York 1894). There is a fairly complete bibliography of Kalidasa and a discussion of his date in Macdonell, 'History of Sanskrit Literature' (London 1913). For details of Kalidasa's life and period, consult Beckh, 'Ein Beitrag zur Texthritik von Kalidasa's Meghaduta' (Berlin 1907); Bhao Daji, "On the Sanskrit Poet, Kalidasa," in *Journal* of the Bombay Branch of the Royal Asiatic Society (Bombay 1860); Huth, 'Das Zeitalter des Kalidasa' (Berlin 1892); Seviratne, 'Life of Kalidas' (Colombo 1901); Ray, 'Age of Kalidasa,' in *Journal* of the Asiatic Society of Bengal (Vol. IV, Calcutta 1908).

KALINGA, kä lĭng'gạ, a sub-province in northern Luzon and also a tribe inhabiting it. Part of the tribe has become partially civilized. Among the members of this part agriculture is practised and metal work is carried on successfully. They adhere to the Catholic faith and live much as the natives do on other parts of the island. Other members of the tribe live in the interior where they have little communication with the whites and are, therefore, but imperfectly known. They are reputed head-hunters and tree-dwellers. The Kalinga are closely

related linguistically and racially to the Tinguians of the Abra.

KALINITE, a natural potash alum, $K_2SO_4.Al_2(SO_4)_3.24\ H_2O$ occurring at various places in California and Nevada, but apparently not in sufficient amount to be a source of potash.

KALINJAR, or CALLINGER, kăl-lĭn-jar′, India, a town locally known as Tarahti and a hill fort in the United Provinces, division of Allahabad and district of Banda, 90 miles southwest of the town of Allahabad. It is a very ancient fort of Bundelkhand and its history reaches back through the three prehistoric periods of Hindu chronology; and its present name of Kalinjar is very ancient. The summit of the hill on which it stands is about 1,200 feet above the plains below. At the southeastern base of the hill is a decaying village, which was formerly a place of considerable importance and the capital of a rajahship. The whole summit of the hill, comprehending a plain five miles in circuit, is encompassed by an immense rampart of Mohammedan construction. It was surrendered to the British in 1812. There are a number of interesting caves, tombs, temples and statues here. Very early in history it is recorded as one of the sacred places of India and pilgrims came to the shrine from far-distant places. The hill was covered with temples long before the erection of the present fort; and in the ramparts of the latter are carved stones from the ancient buildings. It was captured by the Mohammedans toward the close of the 13th century and since that date it has been the scene of many conflicts.

KALISCH, kä′lĭsh, Isidor, American rabbi and author: b. Krotoschin, Prussia, 15 Nov. 1816; d. Newark, N. J., 11 Nov. 1886. Educated at the universities of Berlin, Breslau and Prague, on the outbreak of the revolution of 1848, he left Germany and after a brief stay in London came to New York in 1849. For some years he officiated as rabbi in Cleveland, Cincinnati, Milwaukee, Indianapolis, Detroit and Leavenworth, Kan. In 1868 he established a school in New York, which did not succeed. In 1870 he was called to Newark, N. J., as rabbi, and two years later to Nashville, Tenn. In 1875 he returned to Newark, where he devoted himself until his death mainly to literary work. He was a versatile author and his works cover a wide field, from a volume of German poems and a translation of Lessing's 'Nathan the Wise' to a decipherment of a Phœnician inscription found near Sidon, a sketch of the 'Sefer Yetsira,' a Kabbalistic work. He took an active part in the American Jewish reform movement and was a frequent contributor to the Jewish press.

KALISH, kä′lĭsh, a part of Russian Poland, occupying the most western section of the country, which is quite flat and watered by the Prosna and the Warta. Agriculture is the chief occupation of the inhabitants and the land, which is fertile, is generally fairly well cultivated. Little attention has been paid to agriculture. Area 4,377 square miles; population over 1,300,000, principally Poles. The capital is Kalish, which is in the valley of the Prosna, not far from the Prussian frontier. It is noted for its annual fairs. Among its industries are milling, weaving, distilling, sugar refining and tobacco raising. It also produces excellent leathers and woolens. Pop. 55,000, mostly Poles. Kalish, which was occupied by the Germans in 1914, was the scene of considerable severe fighting.

KALISPEL, or PEND D' OREILLE, păn dō′ rā′y′ a Salishan tribe formerly living in Idaho and Washington about Pend d' Oreille lake and river. When they became known to the whites they had already attained to considerable advancement along the lines of civilization. This was largely increased through contact with the Jesuit missions which began to be established among them shortly before the middle of the 19th century. A few are still in Washington, but most of the tribe live upon the Flathead Reservation in Montana. Pop. about 600.

KALISPELL, county-seat of Flathead County, Montana. It is on Flathead Lake and the Great Northern Railroad in a region of notable scenic beauty. Boulevards constructed at the expense of the city connect it with the Glacier National Park, some 37 miles distant. Farming, mining, lumbering and horticulture constitute the chief activities of the town and county. Pop. 6,000.

KALIUM, another name for the metal potassium, whence its symbol K is derived.

KALIYUGA, kä′lē-yōō′gą (Sanskrit word meaning age of strife), the fourth and last of the Hindu ages contained in a mahayuga or great yuga. According to the Hindu belief each succeeding age marked the increased moral and physical degeneration of all created things. Naturally, therefore, the kaliyuga being the last of the ages of this constant degeneration, is the worst. It is believed to have begun in 3102 B.C. According to the followers of the Tantras, the Kaliyuga is the age of Kali, the goddess of epidemics and diseases of all kinds and more especially of cholera.

KALK, kälk, town on the Rhine, in the Rhine provinces, Prussia, across the river from Cologne. It is the scene of a large annual pilgrimage. Since 1910 it has formed a part of the incorporated city of Cologne with which it is connected by a fine bridge. It formed a part of Deutz until 1881 when it became a separate corporation.

KALKAR, or CALCAR, käl′kär, **Jan Stephan von,** German painter: b. Kalcar, Cleves, 1499; d. Naples, 1550. He eloped to Venice with the daughter of an inn-keeper or Dordrecht (1536) and there became a pupil of Titian. Sometime later he went to Naples, where he continued to reside and to paint excellent portraits whose coloring were, at their best, little inferior to the best done by Titian. Quite a number of his works have survived and bear testimony to the high esteem in which he was held by his fellow painters in his own day and in succeeding generations.

KALKAS, käl′kąz, a people who at one time formed a section of the eastern Mongols, but who now dwell in northeastern Mongolia. They are nomadic in habits and typical of the nomadic inhabitants of the steppes. They are supposed to number about a quarter of a mil-

lion; but no definite census has been taken of them. Consult Haddon, 'The Races of Man and their Distribution' (London 1910).

KÁLLAY, kŏl'lī, **Benjamin von,** Austrian statesman: b. 1839; d. 1903. He was Consul-General at Belgrade (1869–75). In 1879 he became departmental chief in the Foreign Ministry, and in 1882 Minister of Finance. In this connection it fell to his lot to have charge of the reconstruction of Bosnia and Herzegovinia which had been recently occupied. This latter office he held until his death; and in the administration of it he showed much foresight and constructive ability. Among his numerous published works is a good 'History of the Serbs' (1877).

KALLINIKOV, kä-lĭn'ĭ-kôf', **Wassili Sergeivich,** Russian musician: b. Voina, Orlov, 1866; d. Yalta, 1901. Graduating from the Philharmonic Society Music School at Moscow in 1892, he conducted the Italian opera there the following year. He also became active as a composer, but consumption forced him to the Crimea, where the disease finally took him off at the early age of 35; but not before he had shown signs of becoming one of the greatest of Russian composers. His work includes symphonies, symphonic poems, intermezzi, orchestral suites, songs and quartet and piano music.

KALMAR, käl'mär, or **CALMAR,** Sweden, city, the capital of Kalmar Län (county), on Kalmar Sound, at a place where the distance to the island of Oland is not more than five miles. Kalmar is about 190 miles, in direct line, southwest of Stockholm. A part of the city is on the mainland and a part on two small islands. The town, which was formerly strongly fortified, though the fortifications are now in great part leveled, has a good harbor, a handsome cathedral, and a fine castle dating partly from the 12th century, in which, on 20 July 1397, the "Union of Kalmar" was signed, which settled the succession to the kingdoms of Sweden, Denmark and Norway upon Margaret of Denmark and her heirs. The commerce of the town is considerable, and it has manufactures of matches, chicory and tobacco, paper and some shipbuilding. Pop. 15,796.

KALMIA. See MOUNTAIN-LAUREL.

KALMUCKS, a nomadic, warlike Mongol race, inhabiting parts of the Chinese Empire, Siberia and European Russia. They have been great warriors from very early times, fought many bloody battles with the Tartars, with the Chinese and among themselves, and made predatory expeditions as far west as Asia Minor. They are intrepid soldiers, splendid horsemen, and troops of them are attached to almost every Cossack regiment. Physically the Kalmucks are small of stature. They number altogether perhaps 700,000.

KALNOKY, käl'nō-kē, **Gustav,** COUNT: b. Lettowitz, Moravia, 1832; d. 1898. At the age of 22 he entered the diplomatic service and was successively at Munich, Berlin, London, Rome and Copenhagen. Finally in 1880 he became Ambassador at Saint Petersburg, and the following year Minister of Foreign Affairs for Austria-Hungary, a post he held until 1895 when he became life member of the upper house. He bent all his energies to strengthening the friendly relations of his country with Russia and Italy, the latter of which he was instrumental in bringing into the Triple Alliance (Austria, Germany and Italy).

KALOCSA, kŏ'-lō-chŏ, a Hungarian grand commone near the Danube and 100 miles south of Budapest, with which it is connected by rail. Population about 12,000, principally Magyars. Fishing and cattle-raising are the principal industries of the inhabitants, the fishermen plying their trade in the waters of the Danube. The town has the usual buildings of a place of its size, among them being a handsome cathedral.

KALONG. See FLYING-FOX.

KALP, kălp, **Charlotte von,** a German literary woman: b. 1761; d. 1843. She was a great friend of Schiller whom she first met at Mannheim in 1784. Three years later she was instrumental in having him come to Weimar, which he and Goethe were destined to make one of the most famous literary centres of Europe. Schiller wanted to marry her, but she refused him. She was also a close friend of Jean Paul Richter, who portrays her as Linda in 'Titian.' Later in life she met with misfortunes which were made all the more unbearable on account of complete blindness. She finally found a protector in the Princess Marianne in Berlin. She left a novel, 'Cornelia,' which was published by her daughter Edda in 1851, eight years after her death. This is believed to be, in part, an autobiography. Consult Boy-Ed, 'Charlotte von Kalb' (Jena 1912); Klarmann, 'Geschichte der Familie von Kalb auf Kalbsrieth' (Erlangen 1902); Köpke, 'Charlotte von Kalb' (Berlin 1852).

KALPA, in Hindu chronology, a day, or a day and night of Brahma, or a period of 4,320,000 or 8,640,000 solar-sidereal years. A great kalpa comprises the life of Brahma.

KALPA SUTRA, kăl'pă sōō'tră (Sanskrit ritual manual), the Sanskrit work treating of the ceremonial governing the performance of Vedic sacrifice. It is also the name of the most sacred of all the Jainas religious works. This work, which was written by Bhadra Bahu in the 7th century A.D. is still held in the greatest reverence. Consult Jacobi, 'The Kalpa-Sutra of Bhadra bahu' (Leipzig 1879); Macdonell, 'History of Sanskrit Literature' (London 1913); Stevenson, 'The Kalpa-Sutra and Nava Tava' (London 1848).

KALPI, kăl'pē, or **CALPEE,** British India, a town in Jalaun district, United Provinces, on the right bank of the Jumna, about 45 miles south-southwest of Cawnpore. The original town stood near the river on an elevated site, but repeated Mahratta incursions induced the inhabitants to remove it to its present position among extensive ravines, where there is a small fort, which commands the navigation of the Jumna. After a long period of decay it is again reviving, and it carries on a considerable trade, principally in cotton, and is noted for its manufactures of paper and refined sugar, the latter said to be the finest in the world, but too high-priced to be in general demand. During the Sepoy mutiny Kalpi became a principal rendezvous of the revolted Gwalior contingent, which was signally de-

feated, first by Sir Colin Campbell, in the vicinity of Cawnpore, on which it had previously made an unsuccessful attack, and afterward at Kalpi itself by Sir Hugh Rose, 26 May 1858.

KALSOMINE, or **CALCIMINE** (Latin, *calx,* lime), a name given to the more common preparation used to whiten or otherwise finish the walls and ceiling of a house. The usual composition of kalsomine is zinc white and glue sizing mixed with water.

KALTAG, kăl-tăg', an unimportant Alaskan Indian village on the Yukon River where it forms the east end of the Kaltag-Unalaklik portage on the land route to Nome and the Seward Peninsula by way of the Yukon Valley.

KALTENBRUNNER, Karl Adam, kăl'tĕn-brun'nĕr, an Austrian dialect poet: b. Enns, 1804; d. 1867. In addition to his dialect poems, which are still popular in Austria and Germany, he wrote a successful drama and considerable formal poems much inferior to his dialect writings. Consult Wihan, Josef, 'Karl Adam Kaltenbrunner als Mundartlicher Dichter' (Linz 1904).

KALUGA, ka-lōō'ga, a government of Great Russia, situated between the governments of Moscow, Tula, Orel and Smolensk. For the most part the country is flat and inclined to be sandy; for this reason the chief product is hemp, though there is also considerable agriculture along other lines. Vast extents of primeval forests which cover many parts of the country have as yet been exploited but comparatively little. Mining is being carried on to some considerable extent, especially in iron and copper ores. Of late years the manufacturing interests of the country have expanded and broadened in variety. They include the making of paper, matches, leather goods, iron products, leather, linseed oil and furniture. The yearly increasing commerce of Kaluga is carried on principally by waterways, the chief of which is the Oka River which traverses the country for over 200 miles. The capital of the district is Kaluga, a commercial centre of about 50,000. Area of government of Kaluga 11,942 miles. Pop. 1,500,000.

KAMA, kä'mä, the largest tributary of the Volga, rises in the Ural Mountains, on the eastern frontiers of the government of Vyatka, in eastern Russia; flows first north, then northeast into the government of Perm, then circuitously south-southeast to the town of Perm, then southwest into the government of Kasan, and about 40 miles below the town of that name, after a course of about 1,200 miles, joins the left bank of the Volga, almost doubling its volume. It is navigable almost throughout its whole course, and a canal connecting it with a tributary of the Dwina, gives water communication between the Caspian Sea and the Arctic Ocean.

KAMA, or **KÂMADĪVA,** in Hindu mythology, the god of love and marriage. The accounts of his origin vary in the sacred writings of India. According to one authority he sprang from Brahma's heart. His wife is Rati or "Pleasure."

KAMAKURA, kä-mä-koo'rä, Japan, village, about 11 miles south of Yokohama. It is said to have been founded in the 7th century. From about 1190 for 400 years it was the political centre of Japan, the residence of many of the shoguns and frequently the battle-ground for supremacy and power. Since the adoption of Tokio as the capital it has lost its political importance; but it is still much visited on account of its beautiful surroundings, with many interesting relics of antiquity. See DAIBUTSU.

KAMAL-UD-DIN, Isma'il Isfahani, kä'mäl-ud-dēn ēs'mą-ēl ēs'fą-hä'nē, a Persian poet active during the first half of the 13th century; d. 1237. He was born at Ispahan, but the date of his birth is uncertain. His father, Jamal-ud-din Abdur Razzak, was also a poet of some considerable reputation. After enjoying to the full the pleasures of the world for a time, he finally turned his back on his wealth and high family connections, assumed the garb of a Sufi and took up his abode in a hut on the outskirts of Ispahan. There he was finally tortured to death when the city fell into the hands of Uktai Khan, son of Genghis Khan. His most famous work is 'Dīwān' a collection of poems, chiefly in praise of his patrons. He was noted for his beautiful love poems. Consult Browne, 'Literary History of Persia' (New York 1906); Gray and Mumford, 'One Hundred Love Songs of Kamal-ud-Din of Ispahan' (New York 1904).

KAMALA, a drug known, under various names, to Indian and Arab physicians, as a specific against the tapeworm. It occurs as a brick-red powder, adherent to the fruit of the euphorbiaceous plant *Mallotus philippinensis,* formed by minute roundish, semi-transparent granules, mixed with stellate hairs. The active principle of the powder lies in the 80 per cent of resin it contains, which also supplies the coloring matter, called rottlerin, used as silk dye.

KAMBALU, kăm-bă'lōō (meaning in Mongol, "the Khan's City," *Kanbaligh*), the capital of China during the Mongol dynasty founded by Kublai Khan. The city was captured by Genghis Khan in 1215, and 51 years later his son, Kublai, made it his capital; and it continued to be the seat of Mongol government for 108 years until Hung-wu finally succeeded in expelling the Mongols from the "Tartar City," which later came to form a part of Peking. Marco Polo, who visited it in the 13th century, has left an interesting description of it. Consult Marco Polo, 'Travels' (New York 1904); Yule, Henry, 'Cathay and the Way Thither' (Hakluyt Society, London 1866). The city is also variouslv known as Kambaluc, Kanbalu, Cámbalu and Cambálech.

KAMBODJA, kăm-bō'ja, a Burmese tree (*Plumeria acutifolia*) related to the oleander, which is commonly used as a shade-tree in the villages of that country.

KAMCHATKA, kăm-chăt'kä, or **KAMTCHATKA,** Siberia, a large peninsula of the Russian Empire, situated between the 50th and 60th parallels of latitude, 850 miles long from north to south, and of irregular breadth, the maximum being about 250 miles. It has an area of 104,260 square miles. The coasts are dangerous of approach on account of outlying reefs. A lofty range of volcanic mountains traverses the country in a southwesterly direc-

tion, with many peaks between 7,000 and 17,000 feet high. The snow line, in lat. 56° 40′, is at an elevation of 5,260 feet. Dittmar, a Russian traveler, devoted three years to the exploration of the geology of Kamchatka. He traced five successive formations, and found 17 volcanoes in active operation. Numerous rivers have their rise in the heights. The Kamchatka, with its affluent the Yelovka, is navigable for 150 miles. The most fertile portion of the peninsula for agricultural purposes lies along the valley of this river. The Russian settlers here raise oats, barley, rye, potatoes and garden vegetables, but the rest of the country is little adapted for culture. The climate is very severe; the winter lasts nine months, and frost is common at all seasons. The mean annual temperature at Petropavlovsk on the east coast is 28.5°, while at Tigil on the west is 43°. The average temperature of summer at the former place is 55.5°, and that of winter 19°, but the thermometer has been known to fall as low as 25°. Earthquakes are frequent and violent. Animal life is very abundant, and fish swarm in the seas and rivers. The wild animals, still abundant in the more sequestered localities, are bears, wolves, reindeer, argalis or wild sheep, black, red and gray foxes, ermines, sables and otters. Wild fowl are very numerous. The principal varieties of fish are herrings, cod and salmon. Whales are numerous in the adjacent seas. The mountains are covered with forests of birch, larch, pine and cedar, of considerable size in the south, but diminishing northward until the northernmost portion of the territory is covered only with reindeer moss.

The Kamchadales, the principal native tribe, are of diminutive stature, but stout, with flat features, small eyes, thin lips, lank black hair, and scarcely any beard. They are a peaceable, honest, lazy and intemperate race. In winter they reside in sunken huts, in summer in dwellings elevated on poles some 13 feet from the ground. Their dress is well adapted to the changes of temperature, being of fur in winter and nankeen in summer. They are nominally governed by their own chiefs, under the jurisdiction of the Russian *ispravnik* or chief judge, and the most of them are Greek Catholics. Dog trains are used as the means of transport. The other principal tribe are the Koryaks, who live north of lat. 58°. While the Kamchadales are hunters and fishermen with fixed habitations, the Koryaks are a wandering tribe, subsisting on the produce of the reindeer, and differing from the Kamchadales in language and mode of life. The commerce of Kamchatka is chiefly with Okhotsk. Its exports are furs, skins, oil, etc. Its imports are flour, sugar, dry goods, whisky, rice and coffee, almost all passing through the port of Petropavlovsk, the capital, on Avatska Bay. Pop. of peninsula, 7,270. Consult article by Barett-Hamilton in the *Scottish Geographical Magazine* (Vol. XV, pp. 224–56), in which there is a bibliography.

KAME, low hills of glacial sands and gravels arranged in stratified order. These hills are more or less isolated and frequently form ridges sometimes reaching about 100 feet in height above the surrounding level country. They are frequently found in the vicinity of the terminal moraines along the line of retreat of the Pleistocene continental ice sheets. See DRIFT, GLACIAL PERIOD.

KAMEHAMEHA, kä-mā″hä-mā′hä or kä-mĕ-hä′mĕ-hä, the name of five kings of the Sandwich or Hawaiian Islands. KAMEHAMEHA I, surnamed the "GREAT": b. 1753; d. Kailua, Hawaii, 8 May 1817. As head chief of part of the island of Hawaii in 1781 he subdued the entire group of islands and became ruler of the whole in 1811. He was progressive in his views and encouraged intercourse with Europeans. He was succeeded by his eldest son, KAMEHAMEHA II (LIHOLIHO): b. Hawaii, 1797; d. London, 14 July 1824. He was intemperate but treated the missionaries kindly, professed Christianity, and recommended his subjects to do likewise. Anxious to secure the friendship of England he went thither with his queen, Kamamalu, but both died soon after arriving in London. He was succeeded by his brother, KAMEHAMEHA III (KAVIKEAOULI), surnamed the "GOOD": b. 7 March 1814; d. Honolulu, 15 Dec. 1854. He came to the throne in 1833, the islands having been ruled by a regency since 1824. He introduced a constitutional form of government in 1840, and the independence of the islands was acknowledged by the United States in 1842 and by Belgium, Great Britain and France in 1844. The more important public offices in his reign were filled by foreigners. He was succeeded by his adopted nephew, KAMEHAMEHA IV (ALEXANDER LIHOLIHO): b. 9 Feb. 1834; d. Honolulu, 30 Nov. 1863. He married in 1856 Emma, adopted daughter of Dr. Rooke. In 1860 he founded the Queen's Hospital in Honolulu, personally soliciting subscriptions for this object, in which he took the deepest interest. His elder brother, Lot Kamehameha, succeeded him as KAMEHAMEHA V: b. 11 Dec. 1830; d. Honolulu, 11 Dec. 1872. He proclaimed a new constitution (less democratic than its predecessor), in 1864, satisfactory to the majority of the Hawaiians but distasteful to the foreign population. He never married and left no heir to the throne.

KAMEHAMEHA, Order of, an Hawaiian secret society founded in Honolulu in 1864 by Kamehameha V, the then reigning king of the Sandwich Islands. The order is divided into three classes. The badge of the order is a white enameled cross with gold rays surmounted by a crown.

KAMENETZ-PODOLSK, kä-mĕ-nyĕts′ pō-dōlsk′, capital of Podolia, Russia, situated on the Smotritch River, 235 miles northwest of Odessa. It was, at one time, one of the strongest fortresses in Poland, and to the west of the city there still stands an ancient and massively-built castle, the fortifications of which, together with those of the city, were destroyed in 1813. It was held by the Turks in the 17th century and became part of Russia in 1795. At present it is divided into two distinct parts, one of which lies at the foot of the mountain and the other of which crowns the heights above. It is an important religious centre, being the residence of a Roman Catholic and a Greek Church bishop. Pop. 50,000, about half of whom are Jews.

KAMERUN, kä-mĕ-roon′. See CAMEROONS.

KAMES, irregular hills of stratified drift formed near the ice front, either from superglacial or subglacial drainage. In rare cases they may have been formed under the ice. They are frequently associated with eskers, though the two terms are not to be confused.

KAMES, Lord. See HOME, HENRY.

KAMICHI, kä-mē'chē, the horned screamer (*Palamedea cornuta*). See SCREAMER.

KAMIMURA, Hikonojo, BARON, Japanese admiral: b. Kagoshima, 1849; d. 7 Aug. 1916. He joined the navy in 1871, rose to commander and was later captain of the cruiser *Akitsushima* in the war with China. He was rear-admiral in 1899, and in 1903 became vice-admiral and Chief of the Educational Bureau. As commander of the armored cruiser squadron he served in the Russo-Japanese War, defeated a Russian fleet off the coast of Korea and later took a prominent part in the battle of Tsushima, when the Russian fleet under Rojdestvensky was destroyed. He spent three years in England (1900–03) as chief Japanese naval inspector. He was created a baron in 1907 and became admiral in 1910. It is believed that he led the attack on Tsingtau against the Germans in 1914.

KAMINISTIQUIA, ka-mĭ-nĭs-tikē'a, a river in Canada which has its rise near Lake Nipigon in the province of Ontario, and flows south into Thunder Bay, an inlet of Lake Superior. The town where the Canadian Pacific Railroad crosses this river is named after the river. Along its course are several expansions of the river or lak , and the Kakateka Falls. Before the railroad entered this section this river and its tributaries formed important routes of travel to the northwest.

KAMLOOPS, Canada, city in the province of British Columbia; on the Thompson River at the junction of the north and south branches, and on the Canadian Pacific Railroad; about 255 miles northwest of Rossland and 250 miles northeast of Vancouver. The place where the city now stands was once used as a trading post by the Hudson's Bay Company, but a permanent settlement was made in 1820. Its growth was slow until mining began in the vicinity, and in 1892 it was incorporated. It has lumber mills, railroad and machine shops, foundry, brick-yard, cold storage and ice plant, brewery and a sash and door factory. The waterworks and the electric-light plant are owned by the city. The government seat for the Yale District is Kamloops, and the Dominion and Provincial governments have here land and registry offices. It has a mild climate, and in the vicinity in the river valley are many fine farms. Nearby are mountains and small lakes noted for the beauty of their scenery. Pop. 3,772.

KAMLOOPS TROUT, a name given to a variety of the Steelhead of the rivers of British Columbia. See STEELHEAD.

KAMPANERTHAL, kăm-păn'ĕr-tăl', a work on the immortality of the soul by Jean Paul Richter.

KAMPEN, käm'pĕn, or **CAMPEN, Jacob de,** Dutch Anabaptist leader. When he and his followers were driven out of Upper Germany, they attempted to diffuse their dogmas over the low countries. In 1534 John of Leyden nominated him bishop of Amsterdam, but on attempting to take possession of his see, he met with a cruel death at the hands of the people.

KAMPEN, or CAMPEN, Jan van (so called from the town of Kampen), Dutch scholar: b. Kampen, Holland, about 1490; d. Freiburg, 1538. He was professor of Hebrew at Louvain, 1519–31. He wrote a Latin paraphrase of the Psalms, which has been translated into the chief European languages.

KAMPEN, Nikolaas Godfried van, Dutch historian: b. Haarlem, 15 May 1776; d. Amsterdam, 15 March 1839. He became professor of English and German in the University of Leyden in 1815. Among his historical and literary works, many of which were translated into German, are: 'History of the Literature of the Netherlands' (1812); 'History of French Domination in Europe' (1815–23); 'History of the Influences of the Netherlands Outside of Europe' (1831–33). Consult: 'Life,' by S. R. Von Campen (1887).

KAMPEN, or **CAMPEN,** Holland, a town and port in the province of Overyssel, 45 miles east-northeast of Amsterdam, on the Yessel near its influx into the Zuyder Zee, and where it is crossed by a bridge. Its principal buildings are a church of the 14th century, an elegant town-house, built in an antique style, and a theological school is located here. Anciently it was one of the most flourishing of the Hanse towns; the silting up of the Yessel caused it to decline in importance; but its commerce after a period of decline has again to some extent revived. It produces machinery, steam-engines, hosiery, paper, harness and bricks, etc. It has also ship-building yards. Steamer service connects it with Amsterdam and other important centres, several canals intersect it, and a railway line from Germany through Zwolle terminates here. Pop. 19,745.

KAMPERS, Franz, German professor and author: b. Oesede, Hanover, 16 Oct. 1868. He was educated at the gymnasia of Meppen and Essen-an-der-Ruhr and at the universities of Münster and Munich. From 1894 to 1902 he served as academic assistant at the Royal Public Library of Munich. In 1902–03 he was special professor, and since the latter year has been professor of mediæval and modern history at the University of Breslau. He is the author of many important historical works, including 'Die tiburtinische Sibylle des Mittelalters' (1894); 'Kaiserprophetien und Kaisersagen in mittelalter' (1895, 2d ed., entitled 'Die deutsche Kaiseridee in Prophetie und Sage,' (1896); 'Mittelalterliche Sagen vom Paradiese und vom Holze des Kreuzes Christi' (1897); 'Die lehninsche Weissagung über das Haus Hohenzollern' (1897); 'Alexander der Grosse und die Idee des Weltimperiums in Prophetie and Sage' (1901; 2d ed., 1912); 'Dantes Kaisertraum' (1908); 'Karl der Grosse' (1910). He collaborates in and is joint editor of the *Historisches Jahrbuch der Görresgesellschaft* and contributes to the *Kölnische Volkszeitung.*

KAMPF, kämpf, Arthur, German painter: b. Aix-la-Chapelle, 1864. Educated in art at the Düsseldorf Academy, he soon showed strong individuality and attracted attention both as a portrait and historical painter. He is an excellent draftsman and has a good com-

mand of coloring. Among his historical paintings are 'Blessing the Volunteers of 1813' (Karlsruhe Gallery); 'Frederick the Great Addressing his Generals' (Düsseldorf Gallery); 'A People's Sacrifice' (Leipzig Museum); and among his other paintings are several portraits of Kaiser William II; 'Two Sisters' (Ravené Gallery, Berlin); 'Benevolence'; 'Before the Chapel of Kevelaer' (Dresden Gallery); 'Bridge Building.' Kampf has also done some very fine mural painting, the most notable examples of which are in the Kreishaus at Aix-la-Chapelle and in the Royal Library, Berlin.

KAMPF UM ROM, Ein, 'A Struggle for Rome,' one of the most noted of the novels of Felix Dahn (q.v.).

KAMPHAUSEN, Adolf Hermann Heinrich, ä'dōlf hĕr'män hīn'rĭH kamp'how-zĕn, German theologian: b. Solingen, 10 Sept. 1829; d. 1909. He was educated at Bonn, in 1855 became secretary of Karl Josias Bunsen, whom he assisted in the latter's 'Bibelwerke,' and in 1863 was appointed professor of theology at Bonn. In 1871–90 he was active as a member of the theological commission for the revision of Luther's translation of the Old Testament. He resigned all professional duties in 1901. His publications include 'Das Lied Moses' (1862); 'Die Hagiographen des Alten Bundes nach den überlieferten Grundtexten übersetzt' (1868); 'Das Buch Daniel' (1893); 'Das Verhältnis des Menschenopfers zur israelitischen Religion' (1896). He also edited Daniel (1896) for Haupt's 'Polychrome Bible.'

KAMPTULICON (Greek *kamptos,* flexible, and *oulos,* thick), floor cloth made from rubber and powdered cork, the two substances being heated and pressed into sheets after mixing by being pressed between steam-heated cylinder rollers.

KAN-SU, kän-soo', an inland province of China, in the northwestern part; area, about 125,450 square miles. At one time Shan-Si, on the east, was a part of Kan-Su, and until 1865 its jurisdiction extended over a much greater extent of territory than at present. The capital is Lan-Chau. The province is rich in coal fields and in deposits of copper ore. Copper smelting works have been established at Yaokai, 70 miles west of the capital under government auspices and hunting for the sake of the fur is one of the chief occupations. Tobacco of a superior quality is raised in this province. Pop. about 3,810,000.

KANĀDA, kă-nä'dă (Sanskrit *kana,* atom, *ad,* eat, atom eater), Hindu philosopher and founder of Vaiseshika (atomic school) in Hindu philosophy. He held the individuality of single spirits to be distinct from the supreme spirit. The name Kanāda, which was given him in derision of his theories, by his enemies, was so descriptive of his philosophical methods, that it finally supplanted his real name. It has now become synonymous with deep and exact thinking. Consult Macdonell, 'History of Sanskrit Literature' (London 1913).

KANAGAWA, kă-nä-gä'wă (Japanese, golden stream), a Japanese town on the Bay of Tokio, not far from Yokohama. The seat of a prefecture, it was formerly of more importance than now. It was also at one time the official site of a treaty port. But in this latter office it has given way to Yokohama. Pop. about 20,000.

KANAKAS, kạ-nak'ạz, a popular name given the natives of Hawaii, New Caledonia, New Hebrides and other islands in the South Seas.

KANANUR, kä-nạ-noor', or **CANNANORE,** British India, a seaport town in the district of Malabar, presidency of Madras, 44 miles northwest of Calicut. It became an important centre of trade in the 12th and 13th centuries, and was visited by Vasco da Gama in 1498. It has somewhat lost importance as a trade centre, ranking fourth among the ports of Malabar. Pepper, grain, timber and cocoanuts are its main products. There is a fort of triangular area, built by the Dutch and occupied by them till 1766. It was taken by the British in 1783. Pop. 28,957.

KANARESE, kăn'ă-rēs', a part of the Hindustan Dravidians who inhabit the Mysore table-land, a section of southern Bombay and a part of the Kanara territory. Their language which is highly developed and the vehicle of a very ancient civilization, possesses a literature of some considerable extent and importance and serves as the popular speech of the 10,000,000 people of the Kanarese, who are ranked among the civilized races of India. See DRAVIDIANS.

KANARI, or **CANARI,** a tree of the genus *Canarium* (q.v.), many species of which flourish from India to Australia and the Philippines. The foliage is abundant and handsome, and the wood is hard, heavy and suitable for cabinet work, house-trimming, etc. The fruit is a drupe with a hard oily kernel, which forms the particular food of the great cockatoos of the region. The kernel of *C. commune,* known as Java almond, is eaten by the natives either fresh or roasted; and the Amboinese dry it, grind it and bake the flour. Some other species also furnish edible kernels; and from all an oil may be pressed, said to be better than cocoanut oil, both for cooking and for use in lamps. An oil is obtained from the bark resembling balsam copaiba (see COPAIBA). These trees also yield the medical resin elemi, and a gum called black damar.

KANARIS, Konstantine, Greek soldier and statesman: b. on the island of Ipsara, in the Grecian archipelago, 1790; d. 15 Sept. 1877. He has been magnified into a sort of modern edition of the ancient Greek hero, on account of his venturesome deeds during the Greek War of Independence. Among his exploits were the blowing up of the staff ship of the Turkish admiral in the Strait of Chios (June 1822); the burning of the ship of the Turkish admiral in the harbor of Tenedos (November 1822); the burning of a Turkish frigate and transport ships carrying troops to Samos (August 1824); attempting to burn the whole Egyptian fleet in the haror of Alexandria where it was making ready to transport troops to the Peloponnesus (1825). He was elected a member of the national legislature in 1827, and held important military positions up to 1848 when he became Minister of Marine and president of the Cabinet. At the age of 72 he took an active part in the revolution of 1862,

and even after this he held numerous important offices under King George. At the time of his death when he was 87, he was still president of the Cabinet and Minister of Marine.

KANAUJ, kạ-nouj', or **KUNNOJ,** ancient capital of the pergunnah of same name, in Farrukhabad District, India. The ruined village which to-day represents its ancient greatness is situated on the Kali Nadi near its junction with the Ganges. Kanauj (Kanyakubja) one of the oldest and greatest of early Indian cities, dates back to 900 B.C. Even at this early date, and for over 2,000 years afterward, it continued to be the centre of intense Brahman activity. This and its other energies made it the chief of the cities of India. But from its conquest in 1193 by the Sultan of Delhi, it suffered one disaster after another until to-day it is simply a great ruin amidst which live a miserable straggling population.

KANAWHA (kạ-nâ'wạ) **RIVER,** a tributary of the Ohio River, has its rise between the Blue Ridge and Iron Mountains in the northwestern part of North Carolina, flows northeast by north through the southwestern part of Virginia, then changes its course northwest and west into West Virginia, and flows into the Ohio River at Point Pleasant. It receives the Gauley River in Fayette County, West Virginia, and from thence to its mouth is known by the name of Great Kanawha. The river, at a cost of over $4,000,000, has been made navigable from the Ohio to Great Kanawha Falls, about three miles from the mouth of the Gauley River. It is about 450 miles in length.

KANAZAWA, kạ-nạ-zä'-wạ, the largest city on the western coast of Japan, on the main line railway, five miles from the sea. It was founded in 1583 and the fief, given by Hideyoshi to Mayeda, one of his captains, made thus feudal ruler of Kago, Noto and Etchiu (one city, eight counties, and 774,091 inhabitants), the wealthiest of all in Japan. Like other cities in Japan, it declined after the fall of feudalism, in 1871; but, like most of them also, regained prosperity with the help of Yatoi or foreign assistants, through manufactures, modern improvements and increase of the output of bronze and lacquer work, red decorated pottery (kutani), and habutai (see FUKUI) silk. Its public buildings are notable and its renowned public gardens are the finest in Japan. The Kenroku Park of the Six Combinations — vastness, solemn solitude, labor bestowed, venerable moss-covered appearance, running water and charming prospect, is one of several places of recreation. Public library, commercial museum, and most of the features of a modern city are here. Hakusan, or White Mountains, and one of the most noted in all Japan (8,794 feet high), is in view. The thousands of pilgrims annually ascending it usually start from this place. Consult Guide to Eastern Asia, Vol. III (1914). Pop. 129,084.

KANCHIL, the smallest species of chevrotain (q.v.). It inhabits Java and neighboring islands, is less than a foot tall, and is proverbially quick and clever in its movements and hiding in the forest. Its scientific name is *Tragulus javanicus.*

KANDAHAR, kän-dä-här', or **CANDAHAR,** Afghanistan, one of the largest cities of the principality, on a fertile and well-cultivated plain, 3,462 feet above the sea, 313 miles southwest of Kabul. It is enclosed by a mud wall 27 feet high, with a large tower at each of the four corners, 54 semi-cylindrical bastions, and a broad and deep ditch in front, capable of being filled with water from the river. There are six gates, each protected by double bastions. The circumference of the city is over three miles. One of the most imposing buildings is the octagonal, domed structure containing the tomb of Ahmed Shah. There are 180 mosques in the city. It is claimed that this city was founded by Alexander the Great. Kandahar is famous for the fruits grown in the vicinity, and tobacco is cultivated for export supported by the transit trade, but it has important manufactures of felt and silk. It was held by the British in 1839–42, and again in 1879–81. Pop. estimated at 31,000.

KANDY, kän'dē, or **CANDY,** Ceylon, one of the chief towns on the island, is situated near the centre, 72 miles northeast of Colombo, at the height of about 2,000 feet. "Kandy is uniquely beautiful — the most charming little town in the world," travelers usually describe it. It is situated in a valley surrounded by hills, and boasts an artificial lake, Buddhist and Hindu temples, including the Daladá Máligáwa, the most sacred Buddhist temple in the world. This contains the so-called relic of Buddha's tooth, and also many ancient manuscripts written in Pali and Sanskrit. "The Pavilion," or official residence of the governor, is one of the finest structures in Ceylon. Kandy is connected by railroad with Colombo. The botanic gardens of Peradenia are three miles from Kandy. Kandy was the capital of the ancient kings of Ceylon. Pop. 30,148.

KANE, Elisha Kent, American Arctic voyager: b. Philadelphia, 20 Feb. 1820; d. Havana, Cuba, 16 Feb. 1857. He was graduated as M.D. in the University of Pennsylvania in 1842, and shortly afterward became surgeon to the American embassy to China. After extended travels in India, Egypt, and the continent of Europe he returned to America in 1846, and was employed in the government survey of the Gulf of Mexico. In 1850 he obtained the appointment of senior medical officer to the expedition of two vessels, the *Advance* and the *Rescue,* which sailed from New York on the 22d of May in that year in search of Sir John Franklin. On the return of the expedition Dr. Kane published 'The United States Grinnell Expedition in Search of Sir John Franklin — a Personal Narrative.' On the 31st of May 1853, the *Advance* alone, under Dr. Kane's command, sailed again from New York to resume the search, and proceeding up Baffin's Bay and through Smith's Strait, reached lat. 78° 43' N. Here the *Advance* remained frozen up for 21 months, and was finally abandoned because provisions were becoming scarce and scurvy and other diseases had made their appearance. The object now was to reach the Danish settlements in Greenland, about 1,300 miles distant. This long and perilous journey, partly in boats and partly in sledges, was accomplished, after 10 weeks of severe privation, with the loss of only one man, and that by an accident. In 1856 Dr. Kane published 'The Second Grinnell Expedition,' and was awarded

gold medals from Congress, the New York legislature and the Royal Geographical Society. Consult Elder, 'Biography of Elisha Kent Kane' (1857); Greely, 'American Explorers' (1894).

KANE, John Kintzing, American jurist: b. Albany, N. Y., 16 May 1795; d. Philadelphia, Pa., 21 Feb. 1858. He was graduated from Yale in 1814, was admitted to the bar in 1817, entered practice in Philadelphia, was elected to the Pennsylvania legislature as a Federalist in 1823, later became a Democrat, and supported Jackson in the canvass of 1828. In 1845 he became attorney-general of Pennsylvania, in 1846 United States district judge for Pennsylvania, in 1856 president of the American Philosophical Society. He won distinction by his legal attainments and his decisions in patent and admiralty law, but his commitment of Passmore Williamson for contempt of court in an action under the Fugitive Slave Law was attacked by the Abolitionists.

KANE, Paul, Canadian artist: b. Toronto, 1810; d. 1871. He received his early art education at Upper Canada College, and was inspired with the ambition to depict the Indians. After spending some years in the United States, he went to Europe in 1841, studied art in Italy, and returned to Toronto in 1845. He made a transcontinental journey in 1846–47, in the course of which he visited many of the western tribes, and brought back with him some hundred sketches of great ethnological value, and developed later into an important series of paintings of Indian life and western scenery. In 1859 he published the literary result of his travels, 'Wanderings of an Artist among the Indian Tribes of North America,' illustrated by his own sketches.

KANE, Sir Robert John, Irish chemist: b. Dublin, Ireland, 24 Sept. 1809; d. there, 16 Feb. 1890. He was educated for the medical profession and in 1832 became a member of the Royal Irish Academy. In the same year he founded the *Dublin Journal of Medical Science* and was its editor for two years. From 1834 to 1837 he was professor of natural philosophy to the Royal Dublin Society; in 1846 originated the Museum of Industry in Ireland. He was knighted the same year, was president of Queen's College, Cork, for several years prior to his resignation in 1873, and in 1876 was elected president of the Royal Irish Academy. He wrote 'Elements of Chemistry' (1842); 'Industrial Resources of Ireland' (1884), etc.

KANE, Pa., borough in McKean County, on the Baltimore and Ohio, the Pennsylvania and other railroads, 95 miles southeast of Erie, 175 miles north of Pittsburgh and 122 miles from Buffalo. There are here several of the largest window glass factories in the world, plate glass and bottle factories, lumber-mills, wooden-ware factories, saws, cutlery, screen doors and window factories and other flourishing industries. There are extensive natural gas and oil wells and deposits of silica in the surrounding country which are of great commercial benefit to the town. On account of its elevation of 2,200 feet, Kane is an attractive summer resort, with good hunting and fishing grounds in the vicinity. It was first settled in 1859 and became a borough in 1887. The government is vested in a burgess and a council of nine members, elected every three years. Pop. 6,626.

KANEKO, kä'nā-kō (Viscount) **Kentaro,** Japanese statesman: b. Fuknoka, 1853. He came of an old Samurai family, and received foreign education in the United States, being graduated from the Harvard Law School in 1878. He began his career as a professor in the school that was the forerunner of the Tokio Imperial University. In 1885 he became private secretary to Prince Ito, then Premier of Japan; was sent abroad for the purpose of investigating constitutional systems; served as president of the Privy Council (1888–90), and chief secretary of the House of Peers, 1890. Two years later, he was a delegate to the International Law Conference in Switzerland. He was vice-minister for agriculture and commerce in 1894; minister of the same department in 1898, and in 1900 Minister of Justice. During the Russo-Japanese War (1904–05) he was non-official representative of his government in this country, and a powerful factor in effecting the peace negotiations at Portsmouth. In 1890 Kaneko was made baron, after the war, was created viscount, and appointed Privy Councillor.

K'ANG-HI, or **KANG-HSI,** the second emperor of the Ta Tsing dynasty established in China by the Manchu Tartars: b. 1655; d. 1722. He began to reign in 1661, under a regency and assumed the reigns of government in 1669, when only 14 years of age. When he was 19 he was forced to face a rebellion of the Chinese under Wu San-Kuei, which spread throughout the whole vast empire. But K'ang-Hi struggled against many very great difficulties and was finally successful in restoring the country to order and in even extending his authority to Khokand, Badakhshan and Thibet. He proceeded to consolidate his power by increasing the number of provinces to 18 and extending his dominion most intimately over each of them. The Jesuits, who were welcomed by him, contributed to his victories by supplying him with the most modern cannon and arms then in use in Europe, and to the scientific glories of his court by the reformation of the calendar (1669), the taking of a complete census and the surveying of the whole empire. Under these and other influences K'ang-Hi became a great and consistent patron of art and literature. In this field his energies, very active at court, extended to other literary centres of the empire. So strong became the influence of the Jesuits that Christianity was officially recognized in 1692. A break, however, occurred with Rome in 1698, when the Pope decided against ancestor worship to which the emperor clung tenaciously as a vital part not only of his religious faith but also of his family creed. The breech between the emperor and Rome continued to widen until finally the former issued an edict banishing from the country all the Christian missionaries who dared to differ from his own expressed opinion on these or other matters. Among the literary activities patronized by K'ang-Hi and supervised by him were the great Imperial Dictionary of Chinese; a concordance to all Chinese literature ('Pei-Wên-Yun-Foo') in 110 large volumes; two great encyclopædias, the largest of which (the 'Ku-Kin T'oo Shu-Tseih-Ching') consists of

over 5,000 volumes. For this latter vast undertaking movable copper type was used. These, though the most notable, were only a few of his many art and literary activities. He encouraged commerce with foreigners and granted permission to the East India Company to establish an agency in China (1677). Consult Giles, 'China and the Manchus' (Cambridge 1912); Rémusat, 'Nouvelles Mélanges asiatique' (Paris 1829).

K'ANG-WA, käng'wä', or **KANG-HOA** (Japanese at the river mouth), an island situated at the mouth of the Han River, Korea. From a military point of view it is held to be of great importance, guarding as it does the waterway to Seoul, the capital. Modern warfare methods have rendered it of much less military value than it possessed in the past when it formed the one great fortified place of refuge of the court in times of extreme danger due to the many invasions suffered by the country. During the independence of Korea it formed the place of deposit (in duplicate) of the archives of the government, which were kept in a strongly fortified Buddhist monastery and guarded by clerical militia. So strong was this place that the French, who had captured K'ang-wa, under Admiral Rose, were unable to take the island by storm and suffered a severe defeat and great loss though it was defended by only 5,000 Koreans. Five years later, however, the American Admiral John Rodgers, whose survey boats of the United States squadron then in Korean waters, had been fired upon, landed a force commanded by Winfield Scott Schley and captured all five of the forts. In September 1875, the Japanese, under similar conditions, stormed the place and dictated a treaty of peace. Naturally, being so intimately connected with the life of the court and the nation, K'ang-Wa and the immediate neighborhood are rich in historical and other monuments. Consult Griffis, W. E., 'Corea, the Hermit Nation' (New York 1911); Hamilton, 'Korea' (New York 1907).

K'ANG-YU-WEI, käng' yōō'wā', Chinese scholar and reformer: b. Canton, 1858. Coming under the influence of the missionaries he became greatly interested in western civilization which he studied deeply. This led him to become the leader of the Reform party in China. His influence spread to all the provinces where it was especially strong in the schools of higher learning. This brought him to the attention of the court and he became the chief adviser of the emperor and the very spirit of the reform movement of 1898, the failure of which forced K'ang into exile. Wandering about from Hongkong, to Singapore and other places in the east he organized the «Pao Huang Hwei» or Empire Reform Society, the object of which was to modernize China. It was extended to England, America and wherever Chinese were in strength, and played a very considerable part in the overthrow of the monarchy and the establishment of the republic (1911). K'ang Yu-Wei and his associates had a powerful influence in Republican China, especially in 1913. Among his published works are a 'New Commentary on the Chinese Classics,' and 'Modern Japan.'

KANGAROO, an Australian marsupial of the family *Macropodidæ*. The word is derived from a native name of the giant kangaroo. The *Macropodidæ* are readily distinguished from other marsupials by their shape. The head is small, with large mule-like ears; the neck slender, the trunk narrow before and very massive behind; the fore limbs small and weak with five toes and used chiefly as hands; the hind limbs long, extremely powerful, four-toed and serving as the chief organs of locomotion; and the tail thick, heavy and muscular, serving to support the body, in combination with the hind legs, as on a tripod. The dentition is noteworthy, having a somewhat rodent-like appearance. There are three pairs of incisors above, presenting a sharp cutting edge which the single pair of lower incisors passes like the blade of a shears. The molars are flat-crowned. The kangaroos are strictly vegetarian, and in Australia represent the deer, antelopes and hares of other regions. About 50 species belonging to 12 or 15 genera have been described from Australia and the neighboring islands. The giant kangaroo (*Macropus giganteus*), the largest, is frequently exhibited in zoological gardens. This, the first of the kangaroos known to white men, was discovered by Captain Cook during his exploring voyage in 1770, and was described under the name *Didelphys gigantea* from specimens brought home by him. When standing erect in the attitude of scenting danger it is nearly as tall as a man, and when in full flight propels itself by bounds of 12 to 15 feet. It often gathers into large bands, or did so formerly, when more abundant. On account of its destructiveness to herbage on the sheep-ranges, as well as for sport, it is much hunted by the colonists, a favorite method being coursing. When brought to bay by the hounds it proves no mean antagonist, and frequently kills a dog by seizing it in its arms and ripping it open with the great hind toe. As in other kangaroos the hind feet have a peculiar structure; the fourth toe is enormously developed and furnishes almost the sole support; the fifth is of moderate size; in sharp contrast the second and third toes are minute, slender and bound together so that only their sharp claws project from the skin, their only function being to comb and cleanse the fur. The one or two young are born in an exceedingly helpless state, and after being placed in the pouch of the female remain attached by their mouths to the nipples for several weeks or months; at first they are quite incapable of sucking, and the milk is injected into their mouths by the periodical contraction of the muscles of the mammary glands. Even after they are able to run about, they return to the mother's pouch for temporary rest and shelter. Closely related are the red kangaroo (*M. rufus*) and other species inhabiting the mountains, and the numerous species of large and small wallabies or brush-kangaroos, some of which inhabit New Britain and New Guinea, as well as Australia. The genus *Dendrolagus* includes the arboreal tree-kangaroos. The large rock-kangaroos (genus *Petrogale*) dwell among rocks, leaping about them with great agility and using their long tails like a balancing-pole. The rat-kangaroos (sub-family *Potorinæ*) are a small group of species somewhat resembling rats and rabbits in size and habits. They are nocturnal and obtain their food largely by digging roots. Fossil forms are exhumed from the Pleistocene rocks of Australia

GIANT KANGAROO (*Macropus rufus*)

6 Pademelon Wallaby

very similar to modern genera, but some of the older ones were much larger than any existing species. Consult Waterhouse, 'Nat. Hist. of the Mammalia' (London 1846); Gould, 'Monograph of the Macropodidæ' (London 1841); and 'Mammals of Australia' (London 1863); Flower and Lydekker, 'Mammals Living and Extinct' (London 1891); Ingersoll, 'Life of Mammals' (New York 1906), and systematic works.

KANGAROO GRASS (*Anthistriria ciliata*), an Australian fodder grass cultivated there and in India where it is highly esteemed. It, like all its family, is very nutritious and affords excellent pasture, the plant growing not only high but thick.

KANGAROO-RAT, a small and pretty jerboa-like rodent of the southwestern United States. It has very long and strong hind legs, and runs by a series of leaps with great swiftness. It inhabits arid regions, dwells in extensive burrows of its own digging, and feeds mainly upon sunflower-seeds, great quantities of which are stored up for winter use, when the burrows are warmly furnished with grass. It belongs to the pocket-mouse family (*Heteromyidæ*) and is named *Perodipus ordi* by systematists. Consult Stone and Cram, 'American Animals' (1902).

Kangaroo-mice are smaller American rodents of the genus *Perognathus*. See POCKET-MICE.

KANITZ, kä'nĭts, **Felix Phillip,** Hungarian archæologist and ethnologist: b. Budapest, 1829; d. 1904. Well educated and possessing private means, he traveled through Germany, Belgium, France and Italy and the south Slavic countries, devoting his time and attention, for the most part, to the study of the archæology, art and ethnology of these countries. Finding his greatest interest, in these studies, in Albania, Herzegovinia, Serbia and Bulgaria, he deliberately determined to concentrate his studies and investigations on these countries. Among his published works are 'Die römischen Funde in Serbien' (1861); 'Serbiens byzantinische Monumente' (1862); 'Reise in Südserbian und Nordbulgarien' (1868); 'Serbien' (1868); 'Donau-Bulgarien und der Balkan' (1882); 'Katechismus der Ornamentik' (1896); 'Römische Studien in Serbien' (1892).

KANKAKEE, kăn-kạ-kē', Ill., city, county-seat of Kankakee County; on the Kankakee River, and on the Illinois Central and the Cleveland, Cincinnati, Chicago and Saint Louis and other railroads, about 133 miles northeast of Springfield and 56 miles south of Chicago. It was settled in 1850 and incorporated as a city in 1854. The water power of the Kankakee River is extensive at Kankakee, and as a result the city is largely engaged in manufacturing, and the water power is also used for electric-lighting plants and electric tramways. It is situated in an excellent agricultural region, and its good railroad facilities make it an important commercial centre for a large extent of country. The chief industrial establishments are agricultural implement works, piano factories, furniture factories, knitting works, sewing machines and stone quarries. Some of the other manufactures are starch, flour, wagons, bricks, tiles, nails, foundry products, mattresses, cigars, some dairy products. The churches are two Methodist Episcopal, one Presbyterian, four Roman Catholic, one Lutheran, one German Methodist, one Reformed Lutheran, one Seventh Day Adventist and one Christian Science. The educational institutions are the public and parish schools, Saint Joseph's Seminary, a Conservatory of Music and in Bourbonnais Grove, a suburb of the city, Saint Viateur's College and Notre Dame Academy. It has the Illinois Eastern Hospital for Insane and the Emergency Hospital, a public library, the Y. M. C. A. building, and the city buildings. There are two national banks and two savings banks with a combined capital of over $300,000. The government is vested in a mayor, who holds office two years, and a council of 10 members, one-half of whom are elected each year. The council elects the administrative officials and the health and local improvement boards. Pop. 14,150.

KANKAKEE, a river of northern Illinois, which has its rise in English Lake, Starke County, in northern Indiana, flows west and southwest and enters Kankakee County in Illinois. From where it receives the waters of the Iroquois from the south, the course changes to the northwest until it enters Grundy County, where it unites with the Des Plaines River and forms the Illinois. Consult Twenty-second Annual Report of the State Geologist of Indiana (1898, pp. 55–65).

KANNEGIESER, kăn'nē-gē'sĕr, **Karl Friedrich Ludwig,** German author and critic: b. Wendemark, 1781; d. 1861. Educated at Halle, he was a teacher from 1807–43. He wrote spirited lyrics and successful dramas; but much of his literary activity was given to translations from ancient and modern languages. Among these are the 'Divina Commedia'; Beaumont and Fletcher (1808); Dante's lyrics (1842); Horace's 'Odes'; and selections from the works of Byron, Anacreon, Sappho, Chaucer and Scott. He was one of the most skilful and extensive of the interpreters of the works of Goethe.

KANO, kä-nō', in the British protectorate of northern Nigeria, (1) the chief town and a province of the extensive Sudanese sultanate annexed by Great Britain in 1903. Kano is the point of convergence of many caravan routes and is the principal market and centre of trade for the interior of Africa. Leather and cotton goods are extensively manufactured and dyeing is carried on. On account of its industries Kano has been called the Manchester and Birmingham combined of the Dark Continent. The annual attendance of the market at Kano exceeds 1,000,000 persons from all parts of Africa; Morrell estimates the attendance as twice as large. The market is held daily throughout the year and is believed to have existed at this place for over 1,000 years. Sign language is largely used by the heterogeneous crowd in making bargains. In addition to native wares and produce, such as ivory and ostrich feathers, European merchandise and ammunition are on sale. The objectionable feature of the old market was the trade in slaves, but that has disappeared under British rule. The wall surrounding Kano is 11 miles in circumference, is 40 feet thick at the base, and from 40 to 50 feet in height. The houses are chiefly of

adobe and the streets are wide and clean. Kano was occupied by a British punitive expedition in 1903. Pop. about 100,000. (2) The province of Kano has an area of 31,000 square miles, and a population of 2,250,000. See also Sokoto.

KANSA, or KAW, kăn'să, kă, a Siŏuan tribe, formerly living on the lower Kansas River in Kansas. See Kaw.

KANSAS, the 21st State admitted into the Union, has been an important pivot in American history for more than half a century. The activities and achievements incident to its formation and development caused George Bancroft, the historian, to designate Kansas as "the miracle of the age." Exclusive of Alaska, and the island possessions recently acquired, Kansas is the geographical centre of the United States, which fact inspired Senator Ingalls' characteristic simile: "Kansas is the navel of the Nation." The name of the State is derived from the Sioux Indian word "Kanza," meaning "swift wind" or "smoky wind," the latter significance being associated with an early period when prairie fires raged over the plains. In the beginning Kansas was referred to as the "Sunflower State," on account of the rank growth of that plant on the unbroken sod, but this distinction no longer applies because the sunflower is now a cultivated rather than a voluntary product. Another designation is the "Jayhawker State," derived from a marauding bird indigenous to the locality. This nickname is perpetuated in the college yell of the University of Kansas, "Rock-Chalk-Jay-hawk-K-U." The motto of the State is *Ad Astra per Aspera,* and its meaning exemplifies the State's history — "Through difficulties to the stars." The State is situated in latitude 37° to 40° N., long. 94° 40′ to 102° W.; is bounded on the north by Nebraska, on the northeast and east by Missouri, on the south by Oklahoma, and on the west by Colorado.

Topography.—Although a part of the great plains which form the eastern slope of the Rocky Mountains, the physical character of the Kansas country is best described as rolling prairie. There are no mountains, and no marshes. The altitude varies from 750 feet in the eastern to 4,000 feet in the western part of the State. The bulk of the land is tillable, but crops are uncertain in the western third of the State on account of deficient rainfall. In this deficient area the vast stretches of prairie are largely used for grazing purposes. The rivers are the Kansas, Arkansas, Republican, Smoky Hill, Solomon, Saline, Neosho and Verdigris — none of them navigable. There are numerous smaller streams, giving abundant water and drainage in the eastern two-thirds of the State. The land area comprises 82,080 square miles (52,531,200 acres), extending 408 miles from east to west and 207 miles from north to south.

Climate.— The climate is mild, the great proportion of the days being fair and sunny. In summer the temperature ranges from 80° to 100°, with cool nights, and dry, pure air. In winter it rarely falls below zero. The violent winds of winter and spring, known to the early settlers, have been greatly mitigated by the cultivation of the soil and the planting of trees.

Mineral Resources.— These consist principally of coal, zinc, lead, natural gas, petroleum, cement and gypsum. With the exception of the three last-named commodities the mining industry is chiefly located in the southeast corner of the State, embracing the counties of Cherokee, Crawford, Labette, Bourbon, Montgomery, Chautauqua, Neosho and Allen. Extensive mines of coal are also found in Leavenworth and Osage counties. The principal salt mines are in Reno County, and there are limited mines in Ellsworth, Harper, Kingman and Rice counties. Building stone of excellent quality is found in various parts of the State. Underlying the surface of Kansas are the three common formations known as the Carboniferous, Triassic and Cretaceous systems, running from north to south, and dividing the State into three belts of nearly equal extent. In the year 1914 the values of the mineral products of Kansas were: Coal, $11,238,253; brick and tile, $1,905,961; salt, $924,550; stone, $825,607; lead, $194,043; zinc, $2,338,796; gypsum, $308,308; cement, $3,180,669; natural gas, $3,340,025; petroleum, $2,433,074; total, $26,689,286.

Kansas now ranks ninth among the States in the production of petroleum, her output for 1916 being estimated at 7,500,000 barrels. New fields recently developed in Butler County have a daily capacity of more than 35,000 barrels, from upward of 600 producing wells. Additional development is in progress in other parts of the State, both in oil and gas. At the close of the year 1916 there were more than 3,500 wells in active operation and fully 300,000 acres of oil lands under lease.

Agriculture and Stock-raising.— The yields and values of the crops and products for the year 1917 were:

		Value
Winter and spring wheat, bushels	41,563,387	$85,679,211
Corn, bushels	106,166,517	120,540,411
Oats, bushels	60,611,849	36,612,776
Rye, bushels	1,293,371	2,203,521
Barley, bushels	4,010,860	4,013,793
Emmer ("Speltz"), bushels	5,234	3,466
Irish and sweet potatoes, bushels	3,592,231	5,183,229
Cowpeas, tons	3,575	57,200
Flax, bushels	357,043	964,016
Broom corn, pounds	18,571,095	2,495,999
Millet, tons	128,419	1,280,641
Sugar beets, tons	108,699	694,754
Sorghum for syrup, gallons	422,118	295,483
Kafir, bushels	11,818,215	16,809,378
Milo, bushels	3,327,329	4,753,391
Feterita, bushels	1,715,379	2,481,448
Sorghum hay, forage and stover, tons	4,802,380	27,986,475
Saccharine sorghum for seed, bushels	598,235	966,264
Jerusalem corn, tons	3,507	25,936
Sudan grass, tons	62,065	574,038
Alfalfa, tons	3,069,548	56,570,863
Tame hay (not alfalfa), tons	*486,174	7,896,851
Prairie hay, tons	1,031,986	14,782,475
Wool clip,* lbs.	360,857	101,040
Cheese, pounds	49,605	8,465
Butter, pounds	43,813,454	13,923,875
Condensed milk, pounds	10,749,605	644,976
Milk sold, other than for butter and cheese	.....	1,654,962
Animals slaughtered or sold for slaughter	.....	81,289,411
Poultry and eggs sold	.....	14,159,909
Horticultural products*	.....	2,251,434
Honey and beeswax, pounds	1,256,836	227,921
Wood marketed	.....	92,476
Total value of all farm products		$507,225,488

* Product of 1916.

Sheep	180,877	1,989,647
Swine	1,356,703	27,812,411
Total value of livestock		$352,664,883

Kansas ranks high in the production of fruits, the horticultural products for the year 1916 aggregated a value of $2,251,434. The State is also a leading one in the growth of nursery stock.

Timber.— The forest tracts of the State are of limited extent, mostly confined to the intervals of the larger streams. In these are found elm, oak, black walnut, hickory, sycamore, cottonwood, catalpa and basswood, none of them in sufficient quantity to supply building or manufacturing material, but affording a considerable amount of fuel. During the past year most of the walnut trees were utilized by the government in the manufacture of gunstocks for the use of the American army.

Animals.— Formerly the Kansas plains swarmed with buffalo, elk, deer and antelope, making a vast hunting-ground. All of these have disappeared with the advance of civilization, and are now found only in parks.

The prairie chicken, quail, wild turkey, wild goose, squirrel and other small game, together with many varieties of birds, still are to be found.

Manufactures.— Kansas is an agricultural rather than a manufacturing State. The natural resources for manufacturing are limited, there being no timber lands of consequence, and no deposits of iron. The principal manufacturing is represented by the flour milling and meat packing industries. New establishments such as brick plants, foundries, car shops and glass factories, have recently been attracted to the State by reason of the abundant supply of natural gas for fuel. The government census report for the year 1914 gives this summary for Kansas: Number of manufacturing establishments, 3,136; value of products, $323,234,000; capital, $163,790,000; salaried employees, 7,526; salaries paid, $9,013,000; wage earners, 41,259; wages, $25,970,000; cost of materials, $261,148,000.

Banking.— There are 1,043 State and private banks and trust companies in Kansas, with deposits amounting to $266,290,140; and 236 national banks, with deposits amounting to $179,700,000; total deposits, $445,990,140.

Wealth and Property Values.— With a per capita wealth of $2,652, Kansas ranks eleventh in the list of States, coming between Illinois and New York. The aggregate value of all property in Kansas is $4,581,091,918, inclusive of property exempt from taxation. The values of property as assessed for taxation are: Lands and improvements, $1,447,882,799; lots and improvements, $457,924,219; personal property, $635,283,766; public service corporations, $439,803,853; total taxable wealth, $2,980,894,637. Kansas has no State bonded indebtedness.

Railroads.— The total mileage of railway tracks operated in Kansas is 9,572. The prominent lines and systems are Atchison, Topeka and Santa Fe, Union Pacific, Chicago, Rock Island and Pacific, Missouri Pacific, Saint Louis and San Francisco, Missouri, Kansas and Texas. The gross earnings of all Kansas railroads for the year 1916 were $87,885,658. No statistics of the roads are available for the period in which they have been under Federal control.

Education.— The higher institutions of learning maintained by the State are the University of Kansas, State Agricultural College, Emporia Normal School, Hays Normal School, Pittsburg Normal School and the Kansas School of Mines, Weir City. These are managed by a single board of administration, which also has charge of the schools for the blind and the deaf. The public schools proper are under the direction of a State Superintendent of Public Instruction and a State Board of Education. In 1897 the legislature prescribed State uniformity of school books, fixed the subjects and established prices. In 1913 provision was made for the State publication and distribution of such books, and a State School Book Commission was created. It is estimated that 1,000,000 school textbooks were printed by the State during the year 1917. There are 8,636 school districts in Kansas; school population, 507,601; enrollment, 394,823; average attendance, 308,892; number of teachers employed, 15,009; annual cost of public schools, $12,573,540; value of public school buildings, $27,927,740. The percentage of illiteracy in the State, 2.2, is smaller than that in any other State in the Union excepting Iowa, 1.7, Nebraska 1.9 and Oregon 1.9.

The colleges in the State are Baker University, Baldwin; Bethany, Lindsborg; Bethel, Newton; Campbell, Holton; Cooper, Sterling; Emporia, Emporia; Fairmount, Wichita; Friends, Wichita; Highland University, Highland; Kansas City University, Kansas City, Kansas; Kansas Wesleyan, Salina; Midland, Atchison; Ottawa University, Ottawa; Sisters of Bethany, Topeka; Southwestern, Winfield; State Agricultural, Manhattan; Saint Benedict's, Atchison; Saint John's, Salina; Saint Mary's, Saint Marys; University of Kansas, Lawrence; Washburn, Topeka.

Religion.—A careful estimate shows the religious population to be 475,000. All of the denominations are represented, the Methodist being the largest numerically, followed in order by the Roman Catholic, Baptist, Lutheran, Disciple, Presbyterian, United Brethern, Congregational, Friends, African M. E. and Evangelical Association. The moral standard of the population is very high, Kansas being one of the first States to adopt an amendment to its constitution prohibiting the manufacture and sale of intoxicating liquors. The State has also taken the lead in the adoption of many laws for safeguarding the public health and for the promotion of civic betterment.

Charitable and Penal Institutions.— The State institutions of this class and the number of inmates of each are: Insane Hospital, Topeka (1,550); Insane Hospital, Osawatomie (1,363); Insane Hospital, Larned (102); Epileptic Hospital, Parsons (523); Home for Feeble-Minded Children, Winfield (627); Sanatorium for Tuberculosis, Norton (23); Orphans' Home, Atchison (187); Soldiers'

Home, Dodge City (650); Deaf and Dumb School, Olathe (267); Blind Asylum, Kansas City (85); Mother Bickerdyke Home for Soldiers' Widows, Ellsworth (87); State Penitentiary, Lansing (841); Industrial Reformatory, Hutchinson (420); Industrial School (girls), Beloit (152); Reform School (boys), Topeka (251). The Federal government maintains a military prison and a branch of the National Soldiers' Home at Leavenworth.

Newspapers and Libraries.— Kansas has 727 newspapers, inclusive of 45 dailies, 565 weeklies, 2 semi-weeklies, 98 monthlies, 9 semi-monthlies, 8 quarterlies. Of public, institutional and college libraries there are 193, with a total of 1,244,794 volumes. Incomplete reports from 6,638 public school libraries increase this total by 669,821 volumes. There are 58 Carnegie-built libraries in the State, valued at $957,700, and 32 publicly-built libraries, valued at $1,076,350; total valuation of these buildings, $2,034,050.

Early History.—As early as 1541 Francisco de Coronado, commanding a Spanish expedition, marched across the plains which are now a part of the State, and there are evidences of French and Spanish adventures in subsequent years. French fur traders from Louisiana and Canada were in the country in 1700. In 1719 Du Tissenet, a French explorer, visited the valley of the Missouri, and he was followed by Spaniards from Santa Fe, who came to the present site of Leavenworth, where they were destroyed in a battle with Indians, this being the last attempt at Spanish occupation of the territory.

The Lewis and Clark expedition, planned by President Jefferson, reached Kansas in June 1804, and, two years later, the expedition commanded by Zebulon Montgomery Pike, who gave his name to "Pike's Peak," crossed the territory from the Missouri River to the Rocky Mountains. The expedition of Maj. Stephen H. Long was made in 1819, and in 1824 was established the "Santa Fe Trail," the famous highway of Kansas, extending 400 miles directly across the Territory, and from Independence, Mo., to Santa Fe, a distance of 780 miles. Col. John C. Fremont made his first expedition across the plains in 1842, blazing the way for an extensive overland travel to Oregon, California and Mexico.

The territory forming the present State of Kansas was a part of the Louisiana Purchase of 1803, except a fraction in the southwest corner acquired from Texas in 1850. Following the several expeditions referred to, and the opening of the Santa Fe trail, Kansas became Indian Territory, and remained such from 1830 to 1854. Within this period the outposts of civilization were being extended from the Mississippi River. The Indians of Missouri and other Mississippi Valley States were concentrated and combined with the tribes already occupying the country west of the Missouri River. These included the Osage, Shawnee, Pawnee, Delaware, Kicapoo and Kansas tribes, to which were added the Cherokee and other tribes from the States of the south, the Ottawas, Pottawatomies, Wyandottes and others from Ohio, Michigan and Indiana. Occupation of the country by white settlers was fraught with peril and hardship, and only accomplished by marvelous heroism, perserverance and endurance. To aid in the work of civilization missions were established on the frontier, and military posts located at Fort Leavenworth, Fort Scott and Fort Riley. These missions and posts are rich in historical and romantic incidents.

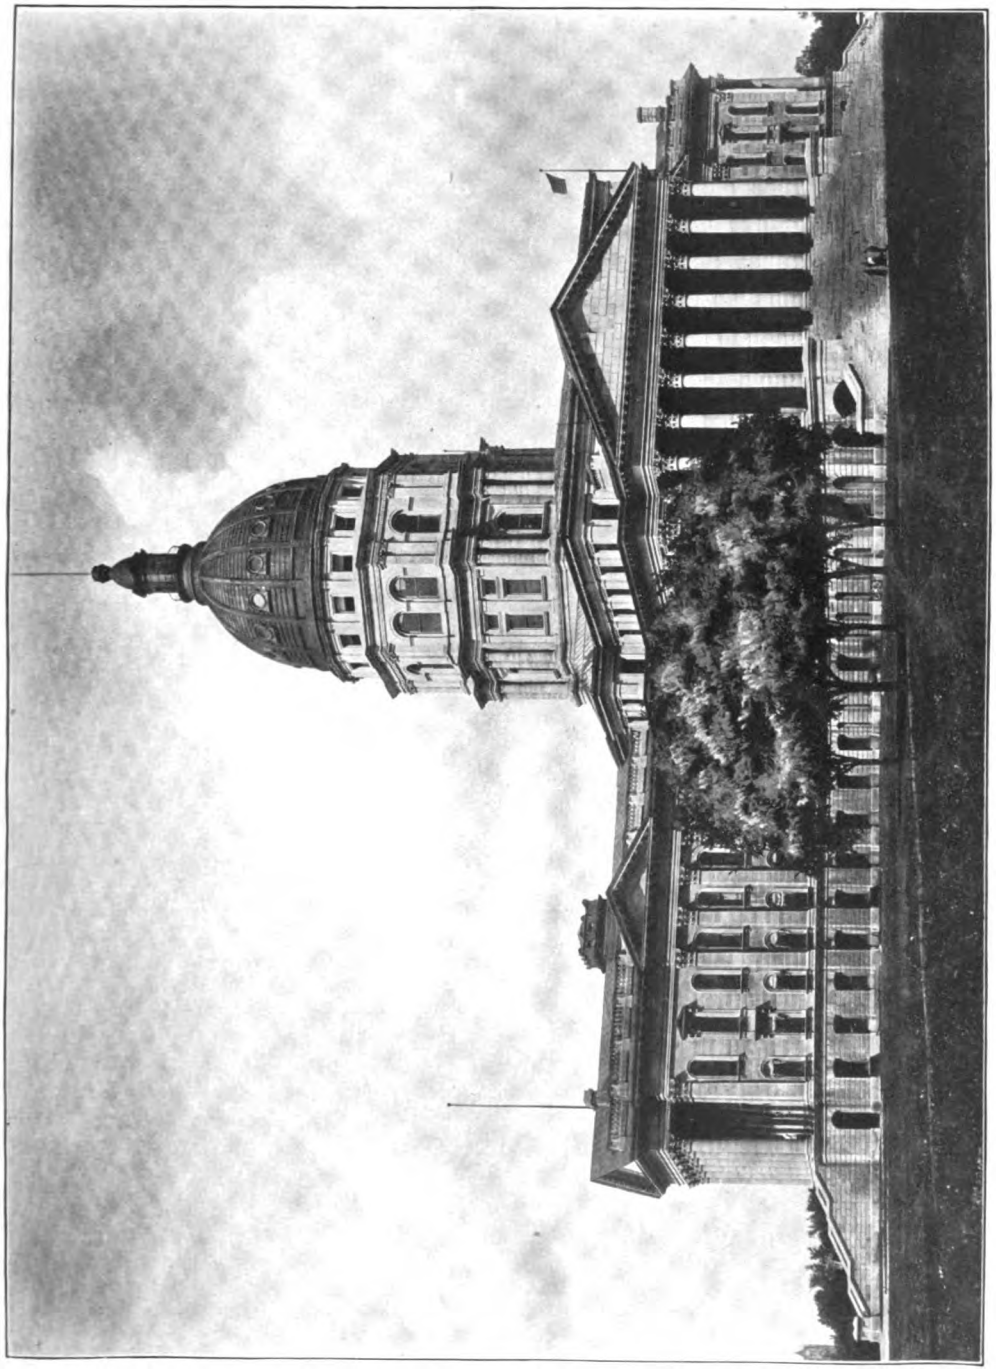
Territorial Days.— The admission of Kansas as an organized Territory dates from 30 May 1854, when President Pierce signed the Kansas-Nebraska Act. This brought on the political troubles of Kansas, and later, as a result of the slavery agitation, precipitated the great armed conflict between the North and the South in 1861–65. It was on Kansas soil that the first battle was fought for the freedom of the negro, and it was Kansas that developed the heroic figure of John Brown, who struck hard for human liberty, and of whom a local poet, Eugene F. Ware, pronounced this epitaph:

"JOHN BROWN OF KANSAS:
HE DARED BEGIN;
HE LOST,
BUT LOSING, WON."

From the time Congress took the first step for the admission of Kansas, with or without slavery, the Territory became the scene of contention, pillage and bloodshed. The pro-slavery men of Missouri endeavored to gain control of the Territory in 1854, and established the first city, Leavenworth. Soon afterward an anti-slavery colony from Massachusetts settled at Lawrence. No more bitter factions ever struggled for supremacy on this continent.

Andrew H. Reeder, of Pennsylvania, was appointed to be the first governor of the Territory. At the first contest for territorial delegate to Congress the slavery men of Missouri crossed the river and participated in the election, the candidate of the pro-slavery party being successful by reason of these illegal votes. The Free-Soilers protested and held indignation meetings at Lawrence and other points. At the election in the spring of 1855 for representatives to the legislature, the Missourians repeated the same tactics. When the legislature met at Pawnee the Pro-Slavery members were in the majority, and controlled the proceedings, even going to the extent of driving out the Free-Soil members and changing the seat of government.

The Free-Soil party repudiated the acts of the legislature and refused to abide by them. Governor Reeder was removed from office and succeeded by Wilson Shannon, of Ohio. John W. Whitfield was elected delegate to Congress by the Pro-Slavery party, and ex-Governor Reeder chosen to the same position by the opposition, but Congress refused to give either delegate a seat. A Free-Soil constitution was adopted in December 1855, under which Charles Robinson was elected governor, but the election was repudiated by President Pierce, who had recognized the "bogus" legislature. The Free-Soil legislature ignored the action of President Pierce, and, to meet this and other menacing circumstances, the military forces of the United States government were placed in command of Governor Shannon, and Governor Robinson and Congressman-elect Reeder were indicted for high treason. The Pro-Slavery party received large accessions from Georgia, Alabama and South Carolina. In the troubles resulting from this conflict of authority the Emigrant Aid



Capitol at Topeka

Society Hotel and the *Herald of Freedom* and *Kansas Free State* printing offices at Lawrence were destroyed, and the town of Osawatomie — the home of John Brown — was sacked and burned.

Struggles for Statehood.—A bill for the admission of Kansas as a State was passed by the Lower House of Congress in June 1856, but was defeated in the Senate on account of the recognition it gave to the Free-soil Constitution. A meeting of the Free-soil legislature in Topeka was dispersed by United States troops acting under orders from President Pierce. By this time the interest in the Kansas struggle became general throughout the United States. The suppression of slavery became a national instead of a State issue. While Congress debated and legislated, the Pro-slavery and Free-State factions continued to war against each other for possession of the Territory and control of the law-making machinery. Conflicting constitutions were adopted, rival legislatures elected, and civil government overthrown. Public meetings were held in all parts of the North to lend encouragement to the movement for making Kansas a free State. Similar sympathy and help came to the Pro-slavery party from the States of the South. Horace Greeley and Abraham Lincoln visited the Territory and made speeches in opposition to the further extension of slavery on American soil. Governor Shannon was removed from office, and the several governors appointed to succeed him found the duties of the position so dangerous that they resigned in rapid succession.

After numerous battles, elections and vicissitudes a constitutional convention was called to meet at Wyandotte 5 July 1859. It was composed of 35 Free-State and 17 Pro-slavery delegates, who were now known as Republicans and Democrats, respectively. Under the constitution adopted by this convention slavery was prohibited and Kansas admitted as a State 29 Jan. 1861. Although the act of admission was signed by President Buchanan, Kansas was by association and sentiment Abraham Lincoln's State. The seat of government was located at Topeka. At the election held in December 1859, under the Wyandotte constitution, Charles Robinson was chosen to be the first governor of the State, and Martin F. Conway the first representative in Congress. When the first State legislature assembled at Topeka in March 1861, James H. Lane and Samuel C. Pomeroy were elected the first two United States senators from the new State.

In the Civil War which followed the inauguration of President Lincoln in 1861, Kansas showed its loyalty to the Union by furnishing 20,000 trained soldiers out of a total population of but little more than 100,000 — a number greatly in excess of her quota, none of them drafted, and in proportion exceeding the enlistments from any other State. A large part of this force was employed in defending the borders of the State from invasion by southern troops, Indians and guerrillas. During one of these border raids a force of 400 men under command of Quantrell invaded Lawrence, burning and pillaging the town and killing 150 defenseless citizens. The war and the troubles with the Indians, together with a visitation of drought in 1860, greatly retarded the growth of Kansas, but when these obstacles were overcome an era of progress and development set in which has never since abated. The splendid soil and auspicious climate and the general adaptability of the State to farming and stock-raising purposes have attracted thousands of settlers to the State, and the advancement in all lines has been rapid, substantial and permanent.

Arthur Capper	Republican	1915–19
Henry Allen	"	1919–

For limited periods during the official interruptions incident to the organization of the Territory the following persons served terms as acting governor: Daniel Woodson, Frederick P. Stanton, James W. Denver, Hugh S. Walsh, George M. Beebe.

United States Senators.— James H. Lane (1861–66), Samuel C. Pomeroy (1861–73), Edmund G. Ross (1866–71), Alexander Caldwell (1871–73), Robert Crozier (1873–74), James M. Harvey (1874–77), John J. Ingalls (1873–91), Preston B. Plumb (1877–91), William A. Peffer (1891–97), Bishop W. Perkins (1892–93), John Martin (1893–95), Lucien Baker (1895–1901), William A. Harris (1897–1903), Joseph R. Burton (1901–06), Chester I. Long (1903–09), Alfred W. Benson (1906–07), Charles Curtis (1907–13), Joseph L. Bristow (1909–15), William H. Thompson (1913–19), Charles Curtis (1915—), Arthur Capper (1919—).

State Government.— The State legislature consists of 40 senators and 125 representatives. Sessions are held biennially in odd-numbered years. Political complexion of the legislature of 1917: Senate, 31 Republicans, 9 Democrats. House, 86 Republicans, 37 Democrats, 2 Socialists. The elective State officers include governor, lieutenant-governor, secretary of state, auditor, treasurer, attorney-general, state superintendent of public instruction, commissioner of insurance, state printer and seven justices of the Supreme Court. Supreme Court justices are elected for a term of six years, and other State officers for two years. United States senators are chosen by the primary election method. In 1917 Kansas adopted the State manager plan of governing the various State institutions and the experiment has been uniformly successful. Kansas is divided into

eight congressional districts, of which six are now filled by Democrats and two by Republicans. At the November 1918 election the Republicans gained control of seven congressional districts, leaving one district in control of the Democrats. At the general election of 1914 Kansas women were given the right of unrestricted suffrage, the vote on the proposition being 175,246 for and 159,197 against. In nearly every county in the State women have been elected to county, municipal and school offices.

National Defense.—The State of Kansas furnished a total of 82,000 soldiers, sailors and marines during the progress of the great World War, including National Guard units, enlistments in the regular army and men drafted for the service. A record equal to that of any other State was made in all of the miscellaneous activities connected with the war. One of the largest cantonments in the United States was maintained by the government at Camp Funston, Kansas, adjacent to Fort Riley.

Every demand made upon the State in the form of popular subscriptions for the support of the war and the relief and comfort of the military and naval forces was promptly met, and in amounts exceeding the apportionment, the investment subscriptions showing a percentage of 120 plus. The principal subscriptions are comprised in the following table:

	Quota	Subscription
First Liberty loan	$11,108,750	$13,967,250
Second Liberty loan	27,840,000	30,104,500
Third Liberty loan	30,301,900	47,390,700
Fourth Liberty loan	67,413,900	72,807,100
Total	$136,664,550	$164,269,550
First Red Cross drive	800,000	2,058,000
Second Red Cross drive	1,854,000	2,829,107
First Y. M. C. A. drive	75,000	76,000
Second Y. M. C. A. drive	525,000	675,000
War Savings stamps	37,000,000	37,000,000
United war work	2,850,000	2,976,000
Miscellaneous	500,000	500,000
Grand total	$180,268,550	$210,383,657

Population.—Statistics of 1855 gave Kansas a population of 8,501; this increased in 1860 to 107,206; in 1870 to 364,399; in 1880 to 396,096; in 1890 to 1,427,096; in 1900 to 1,470,495; in 1910 to 1,699,944.

There are 134 cities and towns having a population of 1,000 or more, the number of inhabitants in cities of 10,000 or more being 393,490, or nearly 23 per cent of the total population. The 12 largest cities and their present population are Kansas City, 93,121; Wichita, 62,404; Topeka, 40,624; Hutchinson, 23,401; Leavenworth, 21,849; Pittsburg, 18,048; Parsons, 17,286; El Dorado, 16,246; Atchison, 15,300; Coffeyville, 13,465; Lawrence, 13,456; Salina, 13,278.

JAMES L. KING,
Kansas State Librarian.

KANSAS, University of, a State educational institution, situated at Lawrence, Kan. The establishment of a State university was provided for in the State constitution, and an act of the legislature incorporated the university in 1863. In 1865 a preparatory department was opened, and in 1866 one building was erected and the collegiate department established; in 1891 the preparatory department was discontinued. The present organization includes the school of arts, with classical and literary courses leading to the degree of A.B. and A.M.; the school of engineering conferring the degree of B.S. in engineering; the graduate school giving advanced courses in arts and engineering; the school of law; the school of fine arts, offering courses in music painting and elocution; the school of pharmacy; the school of medicine, offering a regular four-year medical course; the school of education and the summer session of 10 weeks. The university is the head of the State's public school system, and is in direct connection with the high schools, admitting those who have completed the high school course, or a similar course, without examination; a minimum tuition is charged, and the university is open to both men and women. The library contains about 107,000 volumes and 44,000 pamphlets; $15,000 are annually appropriated for the purchase of books; the natural history museum contains over 250,000 specimens. Number of students (1915–16) 2,950; number of professors and instructors, 218.

KANSAS CITY, Kan., city, county-seat of Wyandotte County, on the Kansas and Missouri rivers, and on the Union Pacific, the Missouri Pacific, the Chicago, Rock Island and Pacific, the Chicago Great Western and the Atchison, Topeka and Santa Fé railroads. Branches of other railroads enter the city and the nearby towns are connected by electric-

trolley lines. Kansas City, Mo. (q.v.), continuous on the east is one with Kansas City, Kan., in commercial development, but each has an independent municipal organization. Several bridges connect the two cities. In one part of the city, east of the Kansas River and south of the Missouri, the dividing line between the two cities is a street.

Kansas City is the largest city in the State. It was formerly known as Wyandotte, until in 1886 the municipalities of Armourdale, Armstrong, Wyandotte and Kansas City united under the name of Kansas City. The area is 10½ square miles. A portion of the city is built on the river bottoms, and many fine public and private buildings are on the high bluffs and extend back on the level land. The city is on both sides of the Kansas River, so the boundary line between the States of Missouri and Kansas is in part the boundary line between the twin cities. It is noted for its live-stock and meat-packing industries; but the second largest live-stock-interest establishments in the country are on the boundary dividing the two cities. Some of its other chief industrial establishments are railroad car shops, machine shops, grain elevators, smelters, iron and steel works, flour mills, soap and candle factories, box and barrel factories, foundries, wholesale grocery houses, slaughter yards, lumber and brick yards. The manufacturing interests of the city represent a capital investment of $45,000,000, an annual production of $175,000,000, giving employment to over 15,000 persons. The city is the seat of Kansas City University (Methodist Episcopal), established in 1896; Western University (colored); the State Institution for the Blind; College of Medicine and Surgery; Saint Margaret's and Bethany hospitals, and Carnegie Library. It has fine public parks, high schools and excellent public and parish schools. The waterworks representing an investment of over $2,000,000, and the electric-light plant are civic property. Since 1909 the city is administered under the commission form of government. Pop. 94,300.

KANSAS CITY, Mo., the second in the State of Missouri and the 20th in population in the United States, is located in the northwestern part of Jackson County in the angle formed by the Kansas River at its junction with the Missouri. Kansas City, Kan., while in an adjoining State, is served by the same railroad terminals, the same street car service and the same telephone system. These two cities are contiguous, their only division being an imaginary State line. At the intersection of Fourteenth and Washington streets the latitude is 39° north and the longitude is 94° 36′ 16.18″ west.

Topography.— The original site of Kansas City presented a rugged, precipitous and uninviting aspect,— high bluffs composed chiefly of limestone facing the Kansas River as it sweeps in from the southwest, thence veering west of north till it empties into the Missouri River, thence continuing along the south bank of the Missouri River four miles to the valley of the Big Blue. Owing to the changeable nature of the Missouri River in cutting through the bottom land on either side of it, the town had to be built between the river and the bluffs, along the deep ravines and on the hills. Persons who see the city as it is now can scarcely realize the obstructions that had to be removed in grading down streets to a level and in filling cuts. The city is topographically divided into three parts, one, the largest, including all that part of the town on the highlands, extending east and south into level upland which is of great beauty; the West Bottoms, including the lowlands lying between the State line on the west and the east bluff of the Kansas River, and the East Bottom which takes in all the lowland lying east of the foot of Grand avenue where it runs to the Missouri River. All of the site was originally covered with dense forests, and it was not till after the Civil War that the timber was cut off the West Bottoms; since then it has become the busiest part of Kansas City, in which are located the stock-yards, elevators, most of the local freight depots and a large part of the wholesale business houses of the city. From its earliest history as Westport Landing, Kansas City was noted for its steamboat traffic. Here were landed the goods from the Mexican and Indian trade, west and southwest, and in exchange were received the wool, furs, buffalo robes and other articles for the Eastern markets. The location of the city at the most southern bend eastward in the Missouri River, even before the age of continental railroads, was the natural route through which the Santa Fé and the Indian trade of the west and southwest must pass to be exchanged for the products these people desired.

Commerce.— The men who contributed so much toward making Kansas City the metropolis of the Missouri Valley turned their attention to the grain and produce market of this vast region in the 70's of last century. From a small local trade in 1871 of a few hundred thousand bushels of grain handled that year, the business has grown now to 100,000,000 bushels annually. In a recent year there were received 77,786,650 bushels of wheat, 22,186,250 bushels of corn, 7,961,100 bushels of oats, 414,700 bushels of rye, 2,043,000 bushels of barley and 436,000 tons of hay (it is the largest hay market in the world), while the export of grain was 36,206,400 bushels. In the elevators and mills the storage capacity is 24,165,000 bushels, while the total mill products aggregate 2,900,000 barrels. The numerous grain elevators enable the railroads to handle the transport grain to other points with facility and dispatch. Its title as the "greatest winter wheat market" is known in foreign countries, to which millions of bushels of Kansas, Nebraska, Missouri and Oklahoma grain are annually shipped by Kansas City exporters. It is not alone as a centre for the accumulation of wheat, corn and oats that it is famous, but also as a distributing point for cereals to be consumed in the South, East and in foreign countries. Kansas City's bank clearings in 1918 were $9,940,881,940 and the bank deposits were about $280,000,000. At present Kansas City occupies the second position in the world as a live-stock market. The stock-yards are the most convenient for the quick and safe handling of stock in the United States. The aggregate value of live-stock handled annually is about $200,000,000. The packing-houses are eight in number, having a combined capacity for daily slaughter of 15,000 cat-

tle, 50,000 hogs and 15,000 sheep. These products are marketed in every civilized country. The stock-yards cover 207 acres, containing 3,688 cattle-pens. The receipts of cattle at the stock-yards for 1918 were 2,993,776; hogs, 3,327,722; sheep, 1,667,463; horses and mules, 84,628; shipped in 161,812 cars. The cost of the packing plants is estimated at $15,000,000 and the number of hands employed approximates 20,000; while the annual value of the output is over $231,150,000. In 1918 the wholesale trade exceeded $629,000,000.

Railroads.— Thirteen different railroad systems enter the city, operating 30 different lines, representing more than 50,000 miles in length. The magnitude of this business may be inferred from the fact that 260 passenger trains arrive and depart daily from the Union Station, which is the third largest in America, costing $6,000,000, while $54,000,000 more is invested in the city's terminal facilities. Two thousand five hundred cars of freight come into and go out of the freight yards every day, thus rendering Kansas City one of the great transfer and distributing points on the continent. Two railroad bridges span the Missouri River. In telegraphic communications Kansas City is only surpassed by New York and Chicago in the number of wires entering the city and in the volume of business transacted.

Manufactures.— The manufacturing industries of Kansas City developed in less than three decades to a position where the city is ranked as the 10th manufacturing city in America. Statistics gathered at the close of the year 1918 show that Greater Kansas City's plants turned out more than $677,000,000 worth of products during that year or more than $2,000,000 worth for each working day. There are more than 1,250 manufacturing plants in the city, the principal products being automobiles, chemicals, flour, iron and steel products, crude and refined oil, packing-house products and soap.

Distributing Point.— In addition to Kansas City's position as a manufacturing city, it is also a very large wholesale market, being the natural gateway to the great southwest territory. Kansas City's jobbing trade for the year 1918 amounted to more than $629,000,000. Many eastern manufacturing concerns maintain distributing plants, and over $90,000,000 worth of agricultural implements and farm tractors and $70,000,000 of automobiles and accessories were distributed through Kansas City alone, in 1917. The rapid growth and development of the southwest territory, to which Kansas City is the gateway, is likewise responsible for the city's growth. Kansas City's standing with other American cities is indicated by the following: First — in Pullman business, sale of agricultural implements, yellow pine lumber, hay market, farming territory, tributary trade, miles of park boulevards, winter wheat, stock and feed cattle. Second — as a railroad centre, live-stock market, packing centre, horse and mule market. Third — in flour-milling capacity and production, grain market, lumber, poultry and egg business, telegraphic business. Fifth — in bank clearings and grain-elevator capacity. Tenth — in manufacturing pursuits.

Government.— At the head of the city government are the mayor whose term of office is two years; upper house aldermen consisting of 16 members whose term of service is four years, elected at large; lower house councilmen, 16 members whose term of service is two years, elected one from each ward; city treasurer, comptroller and police judges elected biennially. The other officers are nominated by the mayor and confirmed by the upper house. The board system is used to some extent, there being a hospital and health board, board of park commissioners, board of public works, fire and water board, board of public welfare and board of civil service. The police department is controlled by a board of police commissioners of three members, two of whom are appointed by the governor of the State, and the third of whom is the mayor of the city. Kansas City has a degree of home rule under the State constitution which at the time of its adoption was very advanced but which is now considered restrictive. Efforts are being made to secure a constitutional amendment to extend the city's power of self-government.

Public Service.— The assessed valuation of taxable property was $270,000,000 in 1918, 40 per cent of the actual value. The bonded indebtedness of the city is $7,590,000, not including school debt. The city is also the owner of much valuable property, valued at $22,000,000, not including street improvements, sewers, bridges, etc. The comptroller's last report, 1917, shows the expenditures for operating expenses of the several departments: Police department, $683,798.62; fire department, $475,453.25; hospital and board of health, $464,076.08; board of public works, $496,207.86; street lighting, $187,224.00; parks and boulevards, $415,443.39; water department, $1,447,121.66; other administrative expenses, $672,453.45. The city purchased the waterworks in 1895. The street railway service, which traverses all parts of the city, has 302½ miles of track, connecting with all suburban trolley lines. The city has an area of 75¼ square miles, with 1,075 miles of streets, of which about 500 are paved.

Parks and Cemeteries.— The city has spent nearly $16,500,000 for its park and boulevard system which contains 3,400 acres and 71 miles of continuous boulevards and are divided into seven park districts. The system is divided into 21 different parks, nearly all of which are connected by an extensive system of boulevards. Located in different parts of the city and easy of access are eight cemeteries, the largest of which are Mount Washington, Elmwood, Saint Mary's and Forest Hill.

Public Buildings.— Among the public buildings are Convention Hall, which will seat 12,000 persons, city hall, county courthouse, postoffice, public library, many large modern office buildings, large theatres and also libraries and reading-rooms. The public library, art gallery and museum, located at Ninth and Locust streets. cost $500,000 and is under the management of the board of education. There are 260,000 volumes in the library, paintings in the art gallery of the value of $200,000 and a rare collection of natural history specimens in the museum which is especially rich in Indian curios. There are 40 hospitals, asylums and homes.

Public Schools.— The present public school system was organized August 1867 and in October of that year the schools were formally opened in rented rooms. Bonds were issued, sites were purchased and schoolhouses erected.

1 Along the beautiful Cliff Drive

2 Old Santa Fe Trail. The beginning in Penn Valley Park

Sixteen teachers were employed during the first year and about 1,200 pupils were enrolled. From this small beginning the school district has been enlarged till there are 130 elementary and high schools, including a junior college, with buildings, including sites valued at $11,500,000; with an enrolment of 51,994 pupils, of whom 6,427 are in the four high schools, being the largest per cent of high school pupils in any city in the United States having a population of more than 100,000 inhabitants. There are 1,400 teachers employed in the public schools. The public library in which there are 105 persons employed is also under the control of the board of education. In addition to the public school system there are 60 other schools of various kinds, including private and parochial schools, medical and dental colleges, commercial schools, a school of oratory, fine arts and an excellent school of law. The cost of operating the schools and public library is $2,575,000.

Religion.— The number of churches in Kansas City is 379. The religious organizations now number: Baptist 78, Catholic 46, Christian 28, Church of Christ Scientist 6, Congregational 13, Jewish 9, Lutheran 17, Methodist Episcopal 82, Presbyterian 27, Protestant Episcopal 15, Reorganized Latter Day Saints 15, miscellaneous 43.

History.— The name is derived from an Indian tribe that formerly occupied and owned much of this section of the country, their title to which was extinguished in 1808, except for a narrow strip of land 24 miles wide lying eastward of the State line from Fort Clarke, later known as Fort Osage, and extending southward to the Arkansas River. The Indians relinquished their title to this strip of land in 1825 and in it lies nearly all of Jackson County. Trading-posts had been established at different points along the Missouri River from 1765 to 1809 as far upward as what is now Saint Joseph by adventurous French trappers and traders who first explored much of this western country. The settlers who had been checked at the eastern limit of the Kansas Indian Reservation made a general rush into the newly-acquired purchase. In 1826 a census was taken with the view of forming a county organization, which was effected 15 December in the same year. Prior to this date, however, Daniel Morgan Boone, third son of Daniel Boone, the noted pioneer, came from Kentucky in 1787 to Saint Louis, where he made his home for 12 years, residing there during the summers, but in winters hunting and trapping beaver chiefly on the Big and Little Blue, in Jackson County. It was reserved for Lewis and Clarke to give the first distinct account of the country at the mouth of the Kansas River, dated 26 June 1804. In 1800 Louis Barthelot, known in the early history as Grand Louis, moved from Saint Charles, Mo., and settled at the mouth of the Kansas River, his wife being the first white woman to have a home on the present site of Kansas City. In 1821, the Chouteaus (q.v.) established a fur-trading camp opposite Randolph Bluffs. In 1825 the Jesuit fathers organized a mission near the mouth of the Kansas River and built a small log house near the foot of what is now Troost avenue, just below the bluff, where they worshipped for several years. A flood in 1826 destroyed Chouteau's trading-post, the first permanent white settlement within the corporate limits of Kansas City. These settlers were trappers, traders, laborers and voyagers with their families. Father Roux came in 1830 and took charge of the congregation and five years later he purchased from a Canadian Frenchman a tract of 40 acres upon the hill adjoining the present site of the Roman Catholic cathedral and the bishop's residence. A part of this tract was cleared of the heavy timber and a log church was erected, and here the congregation, composed chiefly of French-Canadians and half-breeds, scattered over more than 400 square miles, worshipped for 20 years. As soon as the Indian land was purchased settlers poured into it from the settlements east of it. What is now the busiest part of Kansas City was called at first Westport Landing. The town of Westport was platted in 1833 and lies about four miles south of the landing on the Missouri River. Kansas City proper, that is, 250 acres of land, was laid out in town blocks and lots in 1838, but owing to a disagreement among the stockholders the project was abandoned till 1846, when a new company was formed who advertised and sold 150 lots. The town began to grow and soon had 600 inhabitants. At this time the chief agency in building up the new town was the trade with the Indians and with New Mexico. Besides the French settlers who had established themselves in the vicinity of what is now Kansas City was James H. McGee, who came here in 1828 and whose family was prominently identified with the early history and development of this part of Missouri. Prior to 1828 the only means of crossing the Missouri River at this point was by canoes, but that year a ferry was established, so that the few settlers could cross the river to take their corn to a horse-mill on the north side of the river.

Population.— The population in 1838 was 300; 1880, 55,785; 1900, 163,750; 1918, 313,785. The population of Greater Kansas City, which includes Kansas City, Kan., Independence, Mo., and Rosedale, Kan., is 450,000. Consult Case, 'History of Kansas City' (1888); Miller, 'History of Kansas City' (1881).

E. W. MENTEL,
Industrial Commissioner.

KANSAS INDIANS, a Siouan tribe which formerly occupied territory on the lower Kansas River in Kansas. See KAW.

KANSAS-NEBRASKA BILL, a bill passed by Congress in 1854; the last of three compromises between the aggressive slavery expansionists of the South and their anti-slavery opponents in the North. It is famous because, by its repeal of the first, the Missouri Compromise (q.v.), it precipitated the organization and rapid growth of the Republican party and especially incited the radical abolition sentiment of the North to aggressive action, thus causing or hastening the secession of the Southern States and the resulting Civil War. Its passage was mainly due to the leadership of Stephen A. Douglas (q.v.), of Illinois. The second compromise occurred when New Mexico and Utah came to be organized as Territories in 1850. The compromise consisted of the provision, which was also one of the two principal features of the Kansas-Nebraska

Bill, that when these Territories came to be admitted as States they should come in with or without slavery as their constitutions, which would be framed by the people, might prescribe. The strengthening of the Fugitive Slave Law was the other feature of this compromise. This settlement of 1850 was the first step toward the final compromise, the Kansas-Nebraska Bill.

As early as 1844 Stephen A. Douglas introduced in the House of Representatives a bill "to establish the territory of Nebraska," and Douglas afterward asserted that he took this method of serving notice on the Secretary of War to discontinue using that Territory as the dumping-ground for Indians. In 1848 Douglas, now chairman of the Committee on Territories in the Senate, introduced in that body a bill for the same purpose. In December 1851 Willard P. Hall of Missouri gave notice in the House of a bill for the organization of Nebraska; but none of these bills got beyond the committee stage. On 2 Feb. 1853 William A. Richardson of Illinois, the leading lieutenant of Douglas in the House, introduced still another bill "to organize the Territory of Nebraska." This bill, which, like all of its predecessors in question, made no reference to slavery, passed the House, 10 Feb. 1853; but in spite of the strenuous endeavors of Douglas in its behalf, it failed of consideration in the Senate. The long debate over this bill in the House disclosed clearly that the primary object of members from the Northwest, who were its champions, was to protect and encourage travel over the great upper line to the Pacific Coast and make way for the ultimate construction of the already much talked of Pacific Railroad; while members from the South, and especially from the Southwest, were bent on keeping this northern region open for the colonization of their undesirable Indian tribes, with the purpose of securing travel and the railroad to the Pacific Coast through their own country.

Early in the session of the next Congress — 14 Dec. 1853 — Senator Dodge of Iowa, a coadjutor of Douglas in this enterprise, introduced "a bill to organize the Territory of Nebraska." This bill also originally contained no reference to slavery; but by amendment it became the famous Kansas-Nebraska Bill, which finally became a law 30 May 1854. On 4 Jan. 1854 the Senate Committee on Territories, through Douglas, reported a substitute for the Dodge bill which contained the compromise provision of the Utah and New Mexico acts; namely, that "the Territory of Nebraska, or any portion of the same, when admitted as a State or States, shall be received into the Union with or without slavery, as their constitutions may prescribe at the time of their admission." In his famous report, accompanying this bill, Douglas points out that "eminent statesmen hold that Congress is invested with no rightful authority to legislate upon the subject of slavery in the Territories, and that therefore the 8th section of the Missouri Compromise is null and void; while the prevailing sentiment in large sections of the Union sustains the doctrine that the Constitution of the United States secures to every citizen the inalienable right to move into any of the Territories with his property of whatever kind or description, and to hold and enjoy the same under the sanction of law." The report pointed out also that under this section it was a disputed point whether slavery was prohibited in the new country by valid enactment, and advised against the undertaking by Congress to decide these disputed questions. The bill was further amended so as to provide that all questions pertaining to slavery in the Territories and the new States to be formed therefrom be left to the decision of the people residing therein; that cases involving title to slaves be left to the courts; and that the provision of the Constitution in respect to fugitive slaves should be carried out in the Territories the same as in the States. On 16 January Senator Dixon of Kentucky offered an amendment, which was accepted by Douglas, expressly repealing the slavery restriction clause of the Missouri Compromise; and the bill passed with these amendments.

The repeal of the Missouri Compromise restriction was hotly denounced by the anti-slavery element and was seized with alacrity and used with great effect as a political weapon by anti-slavery agitators and politicians; and Douglas was also savagely denounced for selfish subserviency to the South for the sake of winning the Presidency. But Douglas and his friends ably and plausibly defended the repeal of the Missouri restriction on the ground that it was consistent with and the natural sequence of the popular sovereignty compromise of 1850; that there was danger that it would be held unconstitutional by the courts; that there was ground for fear that Dixon's amendment, as he proposed it, would legislate slavery into the Territories, and that on the whole Douglas, as leader of the dominant party, and having regard to the preservation of the Union as well as to the vexatious slavery question, made the safest and best terms practicable in securing the right of the people to decide the question of slavery for themselves. In the course of the debate on the bill Douglas, as well as Thomas H. Benton, who was opposed to the repeal of the Missouri restriction, insisted that, left to the people, slavery could never be successfully introduced into Kansas or Nebraska.

Impartial consideration of all the facts bearing upon this phase of the question leaves no ground for the charge preferred by leading historians and others that the proposed Nebraska Territory was at last divided into Kansas and Nebraska at the instance of Southern members to gain opportunity to make Kansas a slave State. The "provisional" delegate in Congress at that time from Nebraska well known by contemporary citizens of the Territory as a reliable man, in his published account of his part in the transaction asserts that, before he went to Washington to attend the session of December 1853, it was agreed among the enterprising citizens of western Iowa — there were then no citizens of Nebraska — who were pushing the project for Territorial organization, that division was desirable so that one of the Territories might be directly opposite their State, and that he urged this change upon Douglas, who assented to it. In the debate on this feature of the bill Senator Dodge of anti-slavery Iowa and Representative Henn of the Iowa district bordering on Nebraska urged the

division for the frankly expressed reasons that it would be to their advantage to have the capital of an important commonwealth opposite them and would aid in securing the route of the Pacific Railroad through their part of the country; while the representatives of slave-holding Missouri were indifferent to the question of division. Douglas himself specified the wish of the Iowa members as the basis of his reason for the division of the Territory. It is significant, moreover, that Douglas had always stood for a northern Territory, as shown by his original bills of 1844 and 1848. It is a very significant fact that the northern boundary of the Territory in each of these bills was the 43d parallel, which is identical with the northern boundary of the present State; and that the southern boundary described in the bill of 1848 was also identical with the same boundary of the State, while the southern boundary described in the bill of 1844 was only two degrees farther south. These and other incidents of a like kind show a remarkable prescience and a persistent consistency in interpreting the wishes and interests of those most directly interested in the Territory opposite the State of Iowa and on the line of the great natural highway connecting Chicago, the commercial mart of the Northwest, and the home of Douglas, with the Pacific Coast. Mr. Henn in resenting "the unjust charge made on this floor by several that it (the proposed division) was the scheme of Southern men whereby one of the States to be formed out of these Territories was to be a slave State," put the case concisely: "The bill is of more practical importance to the State of Iowa and the people I represent than to any other State or constituency in the Union."

The Kansas-Nebraska Bill was also distinguished by more completely safeguarding the rights of Indian occupants than any previous Territorial organic acts had done; and likewise in being the first Territorial bill of that class which provided for the choice of the members of both houses of the legislature by popular election, to drop the provision requiring the submission of all acts of the legislative assembly to Congress for approval. The Territory organized by this bill comprised all of the unorganized part of the Louisiana Purchase north of the 37th parallel, which comprised all of the purchase north of that line except the States of Iowa and Missouri, and that part of the Territory of Minnesota between the Mississippi River on the east and the Missouri and White Earth rivers on the south and west.

ALBERT WATKINS,
Editor 'History of Nebraska.'

KANSAS RIVER, a river in the State of Kansas, formed in Geary County by the junction of the Smoky Hill and Republican rivers. The direction of its course is mainly east; but it makes one gradual curve toward the north between Junction City, at the source, and Topeka. After a course of about 250 miles through a rich agricultural region, the river flows into the Missouri at Kansas City. The largest tributary is the Little Blue River from the north. Several small tributaries enter the Kansas from the south.

KANSAS STATE AGRICULTURAL COLLEGE, a coeducational institution, located at Manhattan, Kan.; established in 1863 by the presentation to the State of Bluemont College. The college has excellent opportunities for experimental works as it cultivates 1,270 acres of land; 748 acres of which is owned by the college, and 522 acres leased. A branch station is located at Hays, Kan., with about 3,500 acres of land; two with 320 acres each at Colby and Garden City, and two of 160 acres each at Dodge and Tribune. It is not a classical school; the departments, the courses of which lead to the degree of bachelor of science, are agriculture, English, civil and highway, mechanical and electrical engineering, home economics, agricultural engineering, general and domestic science. It has also a preparatory department, a music school and a trade school. It has several short courses, as dairying, 12 weeks in winter; agriculture and mechanics, 12 weeks in winter, for two years; horticulture and mechanics, 12 weeks in winter, for two years; and domestic science, 12 weeks in fall, for two years. The faculty numbered in 1917 190, and the number of pupils in attendance was over 3,000. The school has an income from tuitions: from the State; from the "Land Grant Fund" of 1862; and by the United States Appropriation Act of 30 Aug. 1890, with a total annual revenue of about $870,000. A weekly periodical, devoted to the interests of the subjects taught in the school and called the *Kansas Industrialist*, is published by the faculty. The library has about 47,400 volumes and 25,000 pamphlets, and the value of the college property is about $1,980,000.

KANSAS WESLEYAN UNIVERSITY, a coeducational institution, founded in 1886 under the auspices of the Methodist Episcopal Church, at Salina, Kan. It maintains college, academic, education, elocution and art departments and colleges of music and commerce. The endowment is about $110,000, total enrolment about 1,400 students and 47 professors and instructors. There were in the library 12,000 volumes.

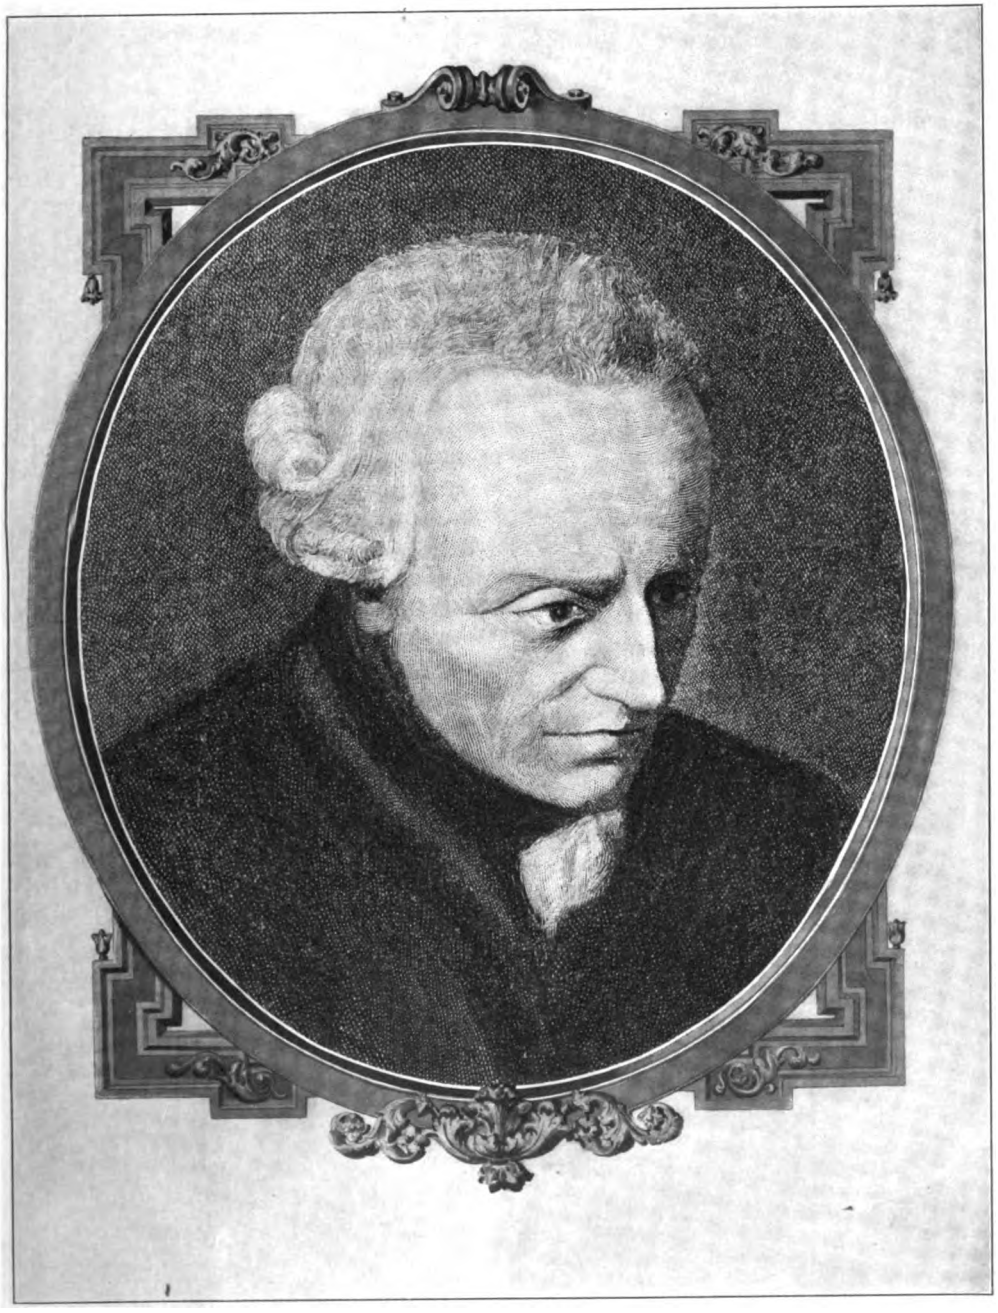
KANSU, kăn'soo', the most northwesterly of the Chinese provinces. It once formed a part of Shensi which lies to the east of it. It is bounded on the north by the Ordos Mongols territory and the desert of Gobi; on the south by Szechwan, and on the southwest by Ko-Konor. Sinkiang (New Frontier), which now forms the western boundary of Kansu, made a part of Kansu previous to the Mohammedan rebellion of 1865. Present area 125,400 square miles. Pop. 5,000,000.

KANT, Immanuel, one of the greatest of modern philosophers; b. Konigsberg, Eastern Prussia, 22 April 1724; d. there, 12 Feb. 1804. His father, who spelled his name Cant, was a poor saddler, and was said to be of Scottish origin, though this is denied by some authorities. Kant was educated in his native city at the Collegium Fredericianum and the university. After the completion of his studies at the university in 1746, he was a tutor in private families until 1755, when he became a teacher in the university. He did not receive a professorship, however, until 1770, when he was appointed to the chair of logic and metaphysics. In 1797 he retired from teaching. In the university he lectured at first on mathematics and physics in addition to the various philosophical subjects, and later added courses

on physical geography and anthropology, lecturing also occasionally on pedagogy. He was small and weak physically; but by imposing upon himself a strict regimen he was able to accomplish a vast amount of work, and to live to be 80 years of age.

Kant's Critical Philosophy is contained in his three Critiques—'Kritik der reinen Vernunft' (1781) ('Critique of Pure Reason, most important of all'); 'Kritik der practischen Vernunft' (1788) ('Critique of Practical Reason'), and 'Kritik der Urtheilskraft' (1790) ('Critique of Judgment'). In these works Kant passed beyond the Rationalism (q.v.) of Wolff, in which he had been educated, and the Empiricism (q.v.) of Hume (q.v.), to which he had for a time been inclined, and originated the transcendental method of philosophy. For him there is no knowledge without experience; but experience is a compound, and implies not only a matter given in sensation, but also forms and principles of arrangement and synthesis which come from the mind. Experience gets its character from the knowing mind, and to understand the objects of ordinary experience it is necessary to know what forms and principles the mind employs in constructing them. Kant's transcendental inquiry, then, asks what the nature of the mind must be, our experience being as it is. He finds that experience can be understood only on the assumption that the mind has certain *a priori* forms and principles which belong to its very nature. These Kant calls transcendental elements of experience, and the procedure by means of which he attempts to discover these and demonstrate their application in experience he names a transcendental method of inquiry. It is necessary carefully to distinguish Kant's use of "transcendental" from what he calls "transcendent." As we have seen, transcendental elements do not themselves depend upon experience, but belong to the mind as the forms and principles which all experience presupposes, and through which alone it is possible. The transcendent, on the other hand, is that which lies beyond the sphere of all possible experience, and consequently that which can never be known. Kant's purpose in the 'Critique of Pure Reason' is at once to discover the transcendental forms of experience and thus justify its validity, and to criticize and overthrow the false pretense of knowledge which professes to deal with transcendent objects. With respect to the first of these purposes Kant's undertaking was epoch-making, for he introduced a change in the point of view which he himself likens to that which Copernicus effected in astronomy. Whereas it had previously been held that the object had a fixed form and constitution which the mind in knowing had to passively copy, Kant teaches that objects to be known at all must conform to the concepts and principles of the knowing intelligence. In order to understand the nature of experience, then, it is necessary to ask what are the mind's ways of knowing, and what are the *a priori* forms and concepts under which it brings objects? In answering this question Kant makes a sharp division between perceptive knowledge and knowledge gained through concepts. It is true that he goes on to break down the grounds for this distinction by showing that neither perception nor thought can give knowledge apart from the other,—that "concepts without perceptions are empty, and perceptions without concepts are blind." Nevertheless, he himself always maintains this dualism in the constitution of experience. The transcendental basis of each form of knowledge is therefore investigated under a separate division of Kant's work, that of Perception in the 'Transcendental Aesthetic,' and that of conceptual experience in the 'Transcendental Analytic.' In Perception the transcendental forms are found to be space and time. Space and time are not objective entities existing apart from the mind; nor are they concepts or general ideas. Kant shows that perceptive experience such as ours is only possible if we regard space and time as belonging to the mind as forms of perceptive arrangement. Space and time do not belong to objects in themselves, therefore, apart from their being known, but are the universal forms under which all perceptive experience is known. But, for experience, objects must be *thought* as well as perceived. That is to say, what we call experience is not a mere series of perceptively arranged objects, but a unity whose parts have been systematized by thought in accordance with certain principles or points of view which it supplies. These transcendental principles, or points of view, Kant calls the Categories of the Understanding. Since to think is to judge in order to discover the complete list of categories he falls back upon Aristotle's classification of judgments under the headings of Quantity, Quality, Relation and Modality. To each of these general divisions again three categories belong, so that Kant presents his list of 12 categories with a great show of system and completeness, which however has no real warrant. Apart from the fact that there are several obvious repetitions and some omissions in the list, Kant does not find any organic relation between the different categories, such as might be shown to exist, for example, by exhibiting them as successive stages in the evolution of thought. It is true that Kant tells us that all of the categories are subordinated to the central unity of consciousness, the "transcendental Ego" or "transcendental unity of Apperception," but he never explains concretely the relation of the various categories to each other and to this unity. The "transcendental Ego," the supreme category, is not a thing or an unchanging soul-substance, but an immanent and ever active principle of organization. It is impossible to make an object of it, or to describe it as something existing by itself; for it exists only in relation to experience. It is at once the presupposition and the necessary correlate of a coherent and unitary experience of objects, a universal principle, not a particular substance.

The world of objects which is thus constituted through the forms of perception and the categories is only phenomenal; that is, only the world as it appears to us, not the world of but we are obliged to *think* things-in-themselves always remain for Kant a real background with which he contrasts the world of phenomena. We can *know* only phenomena, but we are obliged to *think* things-in-themselves as existing, though we cannot give them any positive determination. Kant seems to re-



IMMANUEL KANT

gard them as the causes of the sensations which arise in the mind. But, since casuality is a category supplied by the mind, it can only apply to objects as known, and hence cannot consistently be taken to apply to things-in-themselves. It is very difficult to make Kant consistent on this point. It is certain that he continues to contrast the world as known with a more ultimate form of reality which remains beyond the sphere of knowledge but whose certainty is guaranteed by faith or practical reason; and it is equally certain that the spirit of his philosophy tends to break down the very opposition which he has set up so carefully.

The Understanding (*der Verstand*), as Kant says, is the faculty of rules. It is its function to reflect on the objects presented to it by sense-perception in order to find the rule or category according to which one part can be united to another. But its objects must always be given to it in sense-perception, and it can do nothing but unite one object as given in space and time with another according to some general rule. From the very nature of the case, then, it can never complete its task and rise to deal with and determine the nature of a real totality. Its concern is always with phenomena, with objects in space and time and their synthesis; and, as these extend indefinitely, the understanding, therefore, never can find rest in the establishment of a completed totality. Now for Kant the limits of the Understanding are the limits of valid knowledge. We cannot know anything but phenomena and the laws of their connection. But there is another theoretical faculty which he opposes to Understanding under the name of Reason (*die Vernunft*). This is the great source of illusion. Reason transcends the sphere of the Understanding and attempts to find for objects an unconditioned basis in the ideal or Idea of an absolute and non-phenomenal unity. In this it has a certain justification as affording an ideal of unity toward which the Understanding must always strive in its investigations; but it leads to illusion when this idea of a unity is taken as a real object of knowledge and positive determinations are ascribed to it. Kant proceeds to apply this criticism in detail to the so-called sciences of the Rationalism (q.v.) of his day,— psychology, cosmology and theology,— pointing out that all these are illusory, since they are based on concepts of objects (the soul, the world, God) that lie beyond the sphere of possible experience. The conclusions drawn by rational psychology regarding the simplicity and immortality of the soul Kant rejects as "paralogisms." For, as he shows, we have no valid concept of the soul as a thing or substance, upon which to base our conclusions. The "transcendental ego" is not something which can be determined as a soul-substance or an object of a particular kind. It is always subject and never object,— the universal presupposition of experience, not an experienced thing; for an object can only be known when a sensation corresponding to it is given or may be given in experience. All the wisdom of rational psychology, which is based on the pure concept of the soul, Kant therefore rejects. In the same way he shows that over against the various theses demonstrated by rational cosmology regarding the nature of the world as a whole (that it is limited in time and space; is composed of simple parts; that in addition to natural causality it admits of free causality; that it has a necessary ground), the antithesis or direct contradictory of each proposition can be demonstrated with equal cogency. The inevitable contradictions which thus result in the field of cosmology when we attempt to go beyond possible experience and make assertions regarding the world as a whole, Kant names the "Antinomies of Pure Reason." Those regarding the extension and divisibility of the world disappear as soon as we remember that space and time do not belong to things-in-themselves, but are only forms of perceptive experience. With regard to the possibility of freedom Kant points out that although the principle of natural causation must hold without exception of phenomena, the question still remains open whether freedom may not find place in the intelligible world of things-in-themselves. This question cannot be answered on theoretical grounds but remains a mere possibility which can only be settled by appealing to practical considerations. Kant's criticism of theology is still more famous. He finds that all the proofs for the existence of God may be classified as the Ontological, the Cosmological and the Teleological. He shows that none of these proofs is valid from a logical point of view, and that the existence of God is therefore incapable of theoretical demonstration.

These negative conclusions are not, however, the goal of Kant's inquiry. As he himself said, he sought only to remove the false pretense of knowledge in order to prepare the way for rational faith. Knowledge, as we have seen, deals only with phenomena; regarding the nature of ultimate realty cognitive experience is silent. In the 'Critique of Practical Reason' Kant shows that our experience as practical and moral beings, which recognizes an absolute obligation to obey the moral law has implied in it certain presuppositions regarding our own nature and the nature of ultimate reality. In the first place, our recognition of the absolute authority of the moral law and our obligation to obey it presupposes that we have the power to do so. Moral obligation would have no meaning for a being whose will was not free. In the same way, Kant shows that moral experience implies a belief in God as the moral governor of the universe, and in immortality as affording an opportunity for the demands of the moral law to be progressively realized. Thus these problems which cannot be demonstrated on theoretical grounds find their solution from the point of view of practical experience. God, Freedom, and Immortality are never matters of knowledge or science, but moral certainties or matters of faith. One constantly finds in Kant's writings a tendency to make sharp divisions, to separate experience into different spheres. He contrasts and opposes to each other a "phenomenal" and an "intelligible" world, and again, "knowledge" and "faith" without any effort to bring these divisions again into relation. It is true that in the 'Critique of Judgment' (where he discusses the nature of æsthetic experience, and the question whether we can apply the conception of purpose to the interpretation of the organic world), Kant does at least suggest a synthesis

of the two opposing points of view. The spirit of his philosophy really transcends the opposition between phenomena that can only be *known* through mechanical categories, and an unknowable ultimate reality where we may *believe* that freedom and the realization of ideals are possible. But, even in the third 'Critique' his formal treatment is unsatisfactory, and at least the letter of his treatment appears to maintain the opposition to the end.

In addition to the three Critiques, Kant's most important works are the 'General History of Nature and Theory of the Heavens' (1755), in which Laplace's mechanical account of the evolution of the planetary systems is anticipated (translation by W. Hastie with an introduction under the title of 'Kant's Cosmogony,' 1900); the 'Dissertation' of 1770, which inaugurates the critical movement; and the 'Prolegomena,' published in 1783, as a popular exposition and defense of the first 'Critique.' See CRITIQUE OF PURE REASON.
